could be made from the tubing shown in these three photographs, which show over 700 miles of Standard Tubing in transit from one department to another. None of them is of our stock room which contains more tubing than is shown in all three photos.

The illustrations are not retouched and if you will look closely you can see in the lower view the blurred outlines of the draw bench operators who were moving continuously during the photographing of the scene.

This is to impress upon your mind the magnitude of the cycle industry and to illustrate if possible our statement that Standard Tubing is used in the construction of over 75 per cent of the cycles built in this country.

The Tale of a Motorcycle Tire

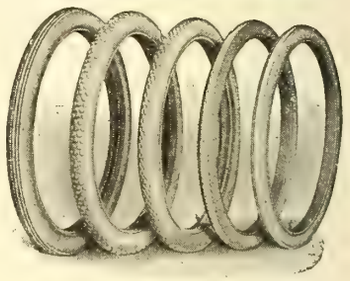
The Brief Story of a Wonderful Tire Achievement

One year ago, we began building motorcycle tires. Today our motorcycle tires stand without equal. All the leading motorcycle manufacturers have specified them for their 1912 output. In 1912, one out of every three motorcycles you see, will be equipped with Goodyear Tires. They raced their way to the top — hold all world's records in speed and endurance — offer motorcyclists greatest service at least expense. Specify — demand Goodyears.

These Leading Motorcycle Makers Have Specified Our Tires for Their 1912 Output:

Aurora Automatic Machinery Co., Thor.
Black Hawk Motor Co., Black Hawk.
Consolidated Mfg. Co., Yale.
Emblem Mfg. Co., Emblem.
Excelsior Supply Co., Excelsior.
Flanders Mfg. Co., Flanders.
Harley-Davidson Motor Co., Harley-Davidson.
Hendee Mfg. Co., Indian.
Miami Cycle & Mfg. Co., Merkel.
Minneapolis Motorcycle Company, Minneapolis.
Thiem Mfg. Co., Thiem.
Wagner Motorcycle Co., Wagner.

The Strongest Tires in the World and the Speediest



Goodyear Motorcycle Tires are built on tried-out principles proved correct by over 13 years' auto-tire building experience.

The tires were a success from the start. We had the equipment — the men — the enormous **purchase** power acquired through the manufacture of Goodyear No-Rim-Cut Automobile Tire - the most successful tire today.

What experimental work had to be done to perfect these top-notch Motorcycle Tires was **finished** before the tires were ever placed on the market. We did not ask the customer to share with us the expense of making them perfect. We did not sell our tires and base our improvements upon faults that the motorcyclist had to pay for.

Instead of that we **anticipated** every **need.** We built the tires with thicker tread to obviate the danger of punctures. We built them bigger than most others to take care of over loads. We built them by a process of our own that banished weak spots and blow-outs and gave the tires a uniform strength throughout the entire surface — moulded them, semi-cured, to exact duplicates of the rims to be fitted. And we built the tires of the best fabrics and the best rubber that money can buy because that is the Goodyear policy.

The Goodyear Quintette

A Tire for Every Road Condition

1—Goodyear Corrugated Tread Tires—for the average give and take road.

2—Goodyear Studded Tread Tires—for mud, sand, snow and ice travel.

3—Goodyear Non-Skid Tires—for use on slippery pavements.

4 & 5—Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

GOODYEAR
Motorcycle Tires

So whether you are buying for yourself or specifying for others just bear in mind these vital facts:

That the Goodyear Trade Mark on the side of a tire is a **promissory note of maximum service**—

That in choosing these tires your good judgment is **confirmed** by the action of all the leading motorcycle makers who have **done likewise**—

That in spite of the guarantee of extra service Goodyear Motorcycle Tires cost **nothing extra.** The price is only what you would expect to pay for **any** standard make.

There's a Goodyear Tire for every road and every rim.

Our handsome booklet on Motorcycle Tires goes into details. It's yours for the asking.

Send for our Motorcycle Tire Book tonight.

BICYCLING WORLD and MOTOR CYCLE REVIEW
(FOUNDED 1877)

Vol. LXIV. New York, U. S. A., Saturday, December 9, 1911. No. 12

TRADESMEN'S WINTER MEETING

Motorcycle Makers, Cycle Parts and Accessories Association, and Cycle Jobbers to Assemble in New York.

The annual meetings of the Cycle Parts and Accessories Association, also of the National Association of Cycle Jobbers, will be held Thursday, January 11, 1912, at 10 o'clock in the morning, at the Hotel Astor, New York City. This is during the first week of the automobile show, and also the week in which the motorcycle manufacturers will exhibit at Madison Square Garden. Jobbers from all over the country will attend, and there promises to be a large gathering at both of these meetings.

Wednesday, January 10, at two o'clock in the afternoon, there will be meetings of the executive committee of the National Association of Cycle Jobbers, also a joint meeting of the Jobbers and Parts Association committee, at the Hotel Astor.

The Motorcycle Manufacturers' Association will also hold its meeting Thursday, January 11, at the Hotel Astor.

Immediately after these meetings the Cycle Parts and Accessories Association will give a luncheon to the members of the Jobbers' Association, and also to the bicycle and motorcycle manufacturers.

Pennsy May Have Another Factory.

Waynesboro, Pa., may have a real motorcycle factory soon, with inky black smoke pouring from a stack, and a whistle, and a railroad siding, and all the other frills and ruffles which a well ordered motorcycle plant should have. This new infant industry will be hatched if the good citizens of Waynesboro, citizens of other places also are invited, will come forward with enough of the genuine lucre from the Bureau of Printing and Engraving, Washington, D. C., to form a company to manufacture the motorcycle.

M. F. Jurick, a European mechanic, now of Reading, Pa., is the inventor of the machine. He and his associates, Paul K. Leinbach and Lewis Beon, have been wooing the Waynesboro board of trade for several months. Sketches were submitted, and the proposition outlined, and things now are beginning to boil in the business kettle. Jurick, is said to have had long experience with gasoline motors.

His creation is said to be radically different from present day motorcyclists. The frame is an open one, being equally suited for men or women. It will have a free engine device, a two-speed gear, and hand and foot starting mechanism for the motor. New types of front fork and wheels also are used. The price, it is stated, will be on a par, with present listings, and possibly lower.

Tichenor Joins Iver Johnson Forces.

J. Ford Tichenor, for several years manager of the general sporting goods, bicycle and motorcycle business of C. B. Vaughan, Paterson, N. J., has been appointed to a position in like capacity with the Iver Johnson's Arms and Cycle Works at the New York City headquarters of the Fitchburg concern, succeeding C. G. Moore who recently resigned to enter the retail trade in another line. Buckingham will continue as assistant manager and in charge of the mechanical department.

Adams, Mass., Also Looks Likely.

Prospective manufacturers of a $175 motorcycle are flirting with the good citizens of Adams, Mass. It is understood that the company already is organized, and is debating on a suitable building for its factory. Interests connected with the Siro Carbureter Co., of Springfield Mass., are believed to be back of the project, for that concern also has about decided to move to Adams, and a Siro corbureter will be used.

AMERICAN AND FOREIGN TIRES

Vice-Pres't. Butler of U. S. Tire Co. Says European Makers Have Nothing on Us—Good Highways Needed.

After a two month's sojourn in Europe during which he visited England, Scotland, France and Germany, C. J. Butler, vice-president of the United States Tire Company, has returned to Detroit, and feels well satisfied with trade conditions. Mr. Butler's trip was ostensibly for pleasure and recreation, yet he took occasion while traveling to familiarize himself with the industry abroad. Through a process of comparison between the best Europe is able to produce in the way of tires and other accessories, and the highest standards prevailing in this country, he came home convinced that American manufacturers have cause to feel proud of their accomplishments.

"But," said Mr. Butler, in commenting on his trip, "I'll have to admit that they have it on us in the matter of roads. We toured something like 1,800 miles, and in all that distance I don't recall a single stretch of road that could be called bad. In fact, their highways were a revelation to me, although I had heard a great deal about them before going over.

"For a long time I have been greatly interested in the good roads movement, particularly in the State of Michigan, so naturally the universal excellence of the highways over there appealed to me very strongly. Of course the old countries have had hundreds of years the start of us in road building, so comparison of American and European highways does not reflect any discredit upon us. Furthermore the popularity of motoring in this country is bound to bring about uniformly improved road conditions in time. This is the only

way to make the United States a touring field compared with Europe. It is a proposition that is worth pegging away at with unceasing persistency.

"European rubber manufacturers do things in a very thorough manner, but I fail to see wherein their methods excel our in any important particular. In the matter of equipment our factories rank with theirs in every way, and in many instances we employ machinery to great advantage over their hand labor, and our output is many times greater than they can lay claim to. So far as pneumatic tires are concerned they certainly do not build them any better in Europe than we do in America. I am sure if you would run European tires over the roads in this country they would not show anywhere near the mileage our tires yield.

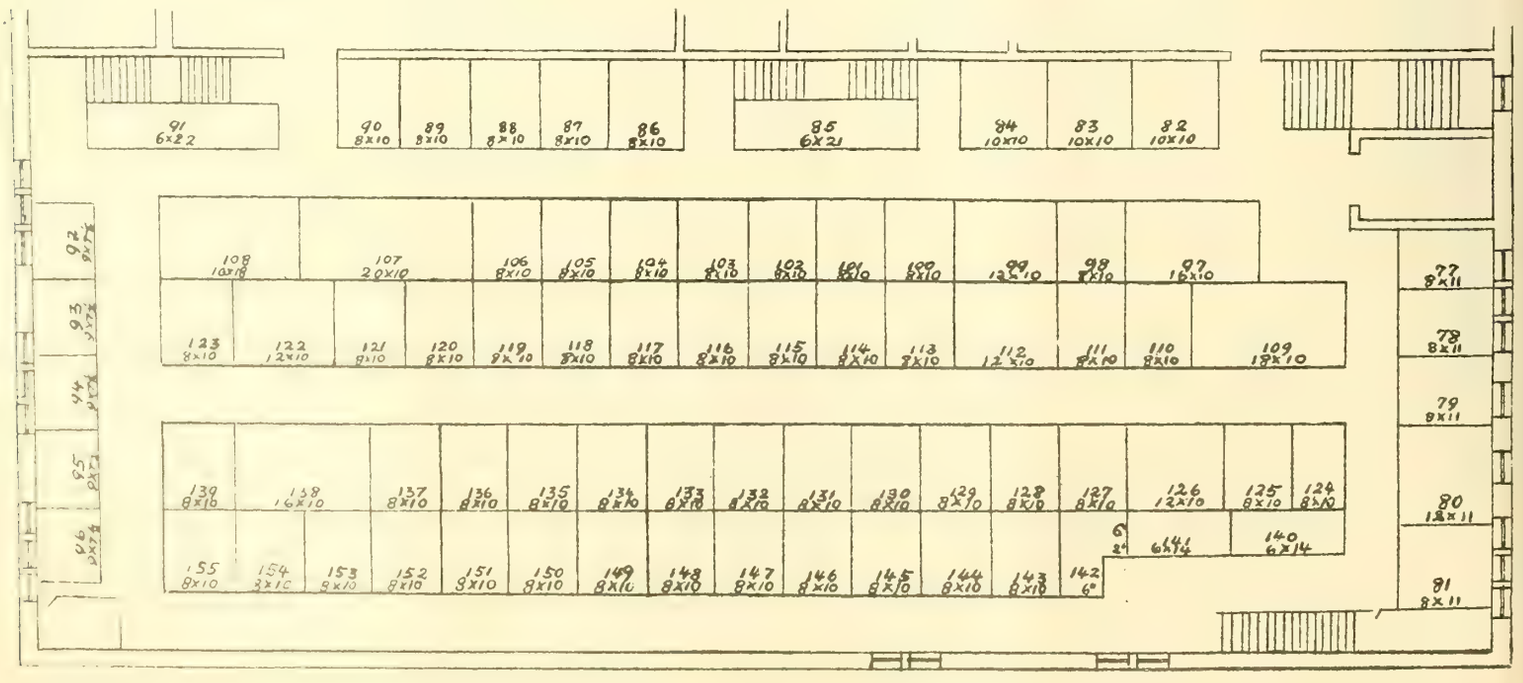
"All things considered, I came home thoroughly convinced that American manufacturers have very little to learn from the producers of Europe."

Space Allotments for the Chicago Show.

F. J. Weschler, chairman of the Motorcycle Manufacturers' Association show committee, has announced the space allotment for the exhibitors in the motorcycle section at the Chicago automobile show, which will be held in the Coliseum and First Regiment Armory, February 3-10, inclusive. This year the motorcycles will be exhibited during the first week of the show in company with pleasure cars. The exhibitors, their space numbers, and their locations are shown on the accompanying diagram of the motorcycle section:

Minneapolis Motorcycle Co..... 79
Flanders Mfg. Co..... 80-81
Aurora Automatic Machinery Co... 94-95
Bicycling World Co..... 96
Hawthorne Mfg. Co..... 113
Henderson Motorcycle Co..... 114
Nathan Novelty Mfg. Co..... 117
Harley-Davidson Motor Co.....124-126
Consolidated Mfg. Co.....127-129
Wagner Motorcycle Co..... 130
Excelsior Supply Co.....131-132
Reading Standard Co.....133-135
Hendee Mfg. Co.....136-139
Motorcycle Publishing Co..... 140
Motorcycling 141
New Era Autocycle Co..... 142-144
Pope Mfg. Co.....145-146
Emblem Mfg. Co.....147-150
Pierce Cycle Co.....151-152
Miami Cycle & Mfg. Co.....153-155

Hendee Opens Branch in Denver.



The Hendee Mfg. Co., Springfield, Mass., announces the opening of a branch house in Denver, Colo., at 138 Sixteenth street. W. E. Johnson, long on the Hendee staff, will be manager. In addition to serving local trade, the new establishment also will take care of the requirements of the states of Colorado, western Kansas, southern Wyoming, New Mexico, Nebraska and Arizona. Stock and service facilities will be maintained at the usual Indian branch standard. This will make the third American branch which the Hendee company has established, the others being located in Chicago and San Francisco.

Brazenor Now Harley-Davidson Agent.

Robert Brazenor, formerly of the firm of Brazenor & Rudeman, has been appointed representative for the Harley-Davidson motorcycle for Brooklyn, N. Y., and has opened a large store at 1507 Bushwick avenue, where, in addition to handling the Harley-Davidson exclusively, he will also carry a full line of parts and accessories. He is prepared for a heavy season's trade.

"H-D" Service Depot for New England.

Better to develop and take care of its New England trade, the Harley-Davidson Motor Co., Milwaukee, Wis., has established a service depot at Danvers, Mass. It will be in charge of W. J. Walker, a prominent dealer who is a veteran of the bicycle business and a pioneer in the handling of motorcycles. Walker, who some months ago took over the Crouch Motor Co., when that concern wound up its affairs, and therefore is peculiarly well fitted for the berth, knows the New England trade as few dealers do. In no sense will the depot be a branch, but purely a distributing station, to give dealers and owners in that territory factory service at short range. Large stocks of machines and parts will be carried, so that orders can be filled at short notice, and all New England business henceforth will be handled by the depot instead of the factory. In fact the intention is to eliminate the New England territory from the factory sales organization absolutely. Walker will keep in close touch with his trade, the geographical arrangement of New England being so advantageously situated as to permit of any or all States being visited in a day. In the summer Walker will cover the district by motorcycle, of course. It is understood that the prime reason for the locating of the depot is to overcome the New England prejudice to Western machines on the ground that the factories are located too far away to give good service on deliveries and parts. Under the new arrangement the Harley-Davidson plant is brought to Danvers insofar as service is concerned. It is the first time such a selling plan has been tried in the motorcycle industry, and the outcome will be watched with interest.

CHICAGO · NATIONAL · AUTOMOBILE · SHOW
2ND FLOOR ANNEX

NEW FACTORY OF FEDERAL RUBBER MFG. CO., CUDAHY, WIS.

Federal Now Housed in New Home.

Possession has been taken by the Federal Rubber Mfg. Co., Milwaukee, Wis., of the newly remodeled plant formerly operated by the Federal Rubber Co., at Cudahy, a suburb of Milwaukee. Immediately after acquiring the plant last July the new owners immediately turned it over to the contractors for remodeling and enlargement. In its present state the new factory is claimed to be one of the best equipped tire plants in the country, and that it has a capacity of 1,000,000 tires a year, a large part of which will be motorcycle and bicycle products.

In its executive staff, the Federal Company is well equipped with experienced tire men, the administration heads formerly having occupied positions with the G. & J. Tire Co., Indianapolis, Ind., similar to those which they at present hold. The officers of the Federal Rubber Mfg. Co., are as follows: Byron C. Dowse, president; Herbert A. Githens, vice-president and sales manager; Richard Ward, secretary-treasurer.

Many New Harley-Davidson Dealers.

The following recent additions have been made to the list of Harley-Davidson motorcycle dealers: Arcade Cycle Exchange, Minneapolis, Minn.; Ira R. Alberts, Waterloo, Iowa; A. E. Bakeman, St. Cloud, Minn.; Baker-Ossman, Concordia, Kansas; G. A. Beard & Co., Evansville, Ind.; Bedford Road Garage, Schenectady, N. Y.; Z. L. Bedford, Lima, O.; D. W. Behn, Pontiac, Mich.; Barry & Richards, Kansas City, Mo.; Bischoff & Alof, Holland, Mich.; Bruce & Lawrence, Wooster, Ohio; M. Canutson, Saginaw, Mich.; S. S. Carroll, Jr., & Co., Hartford City, Ind.; B. Castle Co., Atlanta, Ga.; City Bi. Hospital, Portland, Ore.; R. J. Cowen, Mechanicsville, N. Y.; Druid Bros., Danville, Kans.; Allentown Motorcycle Co., Allentown, Pa.; Gordon Bent Co., Green Bay, Wis.; George S. Burroughs, Fond du Lac, Wis.; D. K. DeLong, Chillicothe, O.; Harry L. Dipple, Indianapolis, Ind.; C. C. Donahue, Pittsburgh, Pa.; Drouhard Motorcycle Co., Wichita, Kan.; Elmira Arms Co., Elmira, N. Y.; A. F. Ferriss, Utica, N. Y.; Hagedorn & Webster, South Bend, Ind.; J. W. Harper, Miami, Fla.; P. I. Haynes & Co., Columbus, O.; A. S. Hitchcock, Toledo, O.

Henderson Sales Manager of Detroit Co.

T. W. Henderson has resigned from the Detroit Branch of the Winton Car Company, to take effect on January 1, and will take the position of sales manager of the Henderson Motorcycle Company, Detroit.

McClean Toronto Haverford Agent.

Toronto, Ont., Dec. 7.—Alex. McClean, local agent for Marvel motorcycles, has added the Haverford, and will push both lines hereafter.

WHO ARE SECOND-HAND DEALERS

Status of Motorcycle Dealers Who Handle Used Machines to Be Defined by the Courts.

The Corporation Counsel's office of New York City is using a number of special officers to canvass all motorcycle dealers of the city to ascertain whether they deal in second-hand machines. Upon an affirmative answer to this question the dealer is asked if he has a license and if not, he is summoned before a magistrate, to show cause why he has not a license, or pay a fine of $50, or be imprisoned for ten days, or both. According to Mark Eisner, counsel for the Motorcycle Dealers' Association of Greater New York, the ordinance under which these officers are working is as follows:

"Anyone dealing in the purchase or sale of second-hand furniture, metal, clothes, and other articles shall be deemed to be a dealer in second-hand articles, and every such dealer in second-hand articles shall give a bond to the City of New York in the penal sum of $100."

Offering an opinion on this matter, Counsellor Eisner states that this ordinance applies to such persons as are in the second-hand business as a business, and not to such as only do an occasional trade as incident to their regular business. Mr. Eisner further states that a similar ordinance in Chicago has been so construed by the Supreme Court of Illinois. H. A. Gliesman, of the New York Motorcycle Company, and president of the Motorcycle Dealers' Association of Greater New York, has been summoned and his case will come up for decision on Monday, December 12, Mr. Gliesman's will be a test case.

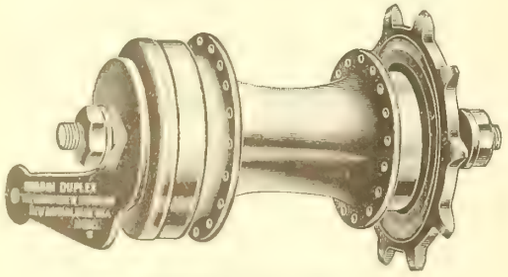
CORBIN
Two-Speed Coaster Brakes

—and just why they should be the first thought of when choosing

For Motorcycles and Bicycles



Corbin Two-Speed Coaster Brake for Motorcycles—Chain or Belt Drive

In Corbin Two-Speed Coaster Brakes the change from high to low speed or vice versa is automatic and instantaneous—no back pedaling.

Danger of broken gears is eliminated by the fact that the change of speeds is made without shock to any part of the mechanism.

Corbin Two-Speed Coaster Brakes can be run either backward or forward. There are no shifting levers, and the hub may be used simply as a coaster brake by removing the high speed clutch.

Safety — Simplicity — Sound Construction — Reliability — Strength

NEW YORK, DECEMBER 9, 1911.

A Word to the Six-Day "Fans."

It is conservatively estimated that 100,000 people will attend the six-day race which starts to-night for probably the last time in Madison Square Garden, New York. Every one of these one hundred thousand are interested in cycling as a sport or they would not be interested in the six day race, and every one of these hundred thousand people are more or less patriotic. As reported more fully on another page, the United Cyclists, a new, most progressive and fast becoming an organization of national scope, is arranging to send the twelve best amateur bicycle riders of this country to represent America in the two hundred mile road race to be run in connection with the Olympic games, in Stockholm, Sweden, next July.

The riders who will be sent will not be selected for popularity or for past performances, but will be the winners of elimination races, similar to the event for which they are trying, and held in all parts of the country with finals probably in New York, and the assertion that the team picked will be made up of the twelve best riders of the country is true in every respect.

For the expenses of this team, transportation, accommodations abroad, etc., a fund of about $4,500 has to be secured, and secured quickly—for the United Cyclists must know by January whether or not they can send a team of bicycle riders. These elimination and final races that will be held in all parts of the country will be by far the greatest events ever held in the history of American cycling. Every one that is at all interested in cycling will want to see these contests and the winners who will represent this great sports loving country in the race against representatives from other nations.

First, you are interested in the sport of cycling, or you would not be interested in the six day race, and being interested, you should be willing to do your share toward having American bicycle riders declared the best in the world by winning this great road race—the world's greatest cycling event, and secondly, every one is more or less patriotic, and would like to see the American flag lead the way across the tape, not only in the bicycle race but in every other event connected with the Olympic games, so that the supremacy of the American athlete over the athlete of every nation will be acclaimed.

Of course, if every one of the hundred thousand who will attend the six day race could be reached and would read these columns and then each contribute but a few cents apiece the necessary fund would be raised in a few days, but this is impossible. Every one who does read these columns should respond to the appeal of the American Olympic Bicycle Race committee at once and send to R. F. Kelsey, who is chairman of the Board of Control of the National Cycling Association and also treasurer of the American Olympic Bicycle Race Fund, a contribution of twenty-five, ten, five, or one dollar, according to their means and their love for the sport and their patriotism. Don't put it off and say that you will do it later, but send in what you can to-day. Every one who is truly interested in the sport and has the slightest pariotism will contribute something to this fund and do it now, so that the committee can assure the General Olympic Committee that twelve Yankee bicycle riders will carry Old Glory across the tape first in the Olympic Road Race. Prove your sportsmanship and prove your patriotism by sending in your contribution to-day to the treasurer of the fund, 914 Tribune building, New York City.

The Story the Speedometer Tells.

Is the speedometer waning in popularity among motorcyclists? Perhaps the sales records would deny the insinuation, but somehow, it seems that there are less instruments in use now than there were some months ago. At a recent race meet, in a count of 342 machines there were 19 equipped with speedometers. Evidently the other 323 riders regarded the speedometer as a luxury that very well could be dispensed with. And yet, next to a horn and a lamp, a speedometer seems to be the most desirable accessory that can be invested in by the motorcyclist.

Practically all motorcyclists regard a speedometer as purely a speed indicator, but in reality it is much more. Here are some of the things a good speedometer will tell, and in the telling enable the rider to keep down the maintenance cost of his machine, and at the same time have it run sweetly and smoothly. It will tell how many miles to the gallon and to the tankful of gasoline the machine will run on an average. If the consumption increases the speedometer will show it. Similarly with oil, with chains, with belts, with tires. The latter is especially important, for if a tire does not give its normal mileage, and its actual service is checked by speedometer, it is much easier to secure an equitabel adjustment from the tire companies, than if the mileage is merely guessed at

Every so many miles the crank case should be drained of old oil, washed out with kerosene, and charged with fresh oil. Every so many miles axle and fork grease cups should be screwed down a quarter turn or so. Every so many miles the chains should be washed in kerosene, and lubricated. Every so many miles the two-speed gear box should be flushed and charged with fresh lubricant. And so on. Little and often and regularly is the first commandment in lubrication, and the only way to keep it is by the aid of a speedometer.

With spark and throttle grips or levers in certain positions, the machine under normal conditions will show a certain speed. If the speed drops below the average with other conditions normal the speedometer will show it.

December 11-16, New York City, N. Y.—Madison Square Garden—Nineteenth annual international six days' professional bicycle race.

December 16, Brooklyn, N. Y.—First annual smoker-stag of the Atlas Bicycle Club at Stoetzer's Hall, 1213 Fulton street.

December 16, New York City—Fall athletic games, Fourteenth Infantry Athletic Association, at Armory, Eighth avenue and Fifteenth street, Brooklyn. Open bicycle event, two miles handicap, N. C. A. sanction.

December 31, Brooklyn, N. Y.—Annual New Year's Eve midnight scorch from Bedford Rest to Coney Island and return.

January 1, Buffalo, N. Y.—65th Infantry A. A., Arsenal, bicycle races and athletic games.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 10, New York City — Hotel Astor, 2 P. M., meeting of Executive Committees of the Cycle Jobbers' Association and Joint Committee of Cycle Jobbers' and Cycle Parts and Accessories Association, followed by a luncheon tendered the Jobbers', Bicycle and Motorcycle Manufacturers, by the Cycle Parts and Accessories Association.

January 10, New York City—Banquet of United Cyclists to manufacturers and visiting bicyclists and motorcyclists at Hotel Earlington.

January 11, Hotel Astor, New York City—Meeting of the Motorcycle Manufacturers' Association.

January 11, New York City — Hotel Astor, 2 P. M., joint meeting of Motorcycle Manufacturers' Association, Cycle Parts and Accessories Association and Cycle Jobbers' Association.

January 13, New York City—Annual ball of the Century Road Club of America at Lyric Hall, Sixth avenue and 42d street.

January 13-27, Philadelphia—Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

February 3, New York City—Company "K," 22d Regiment and Morningside Athletic Club, bicycle races and athletic games.

February 3-10, Chicago, Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory.

February 10, Chicago—North Shore Motorcycling Club show wind-up smoker.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

New Number Plates for Maine.

Like the zebra Maine has changed its stripes for 1912. Not its convict stripes but the colors of its motorcycle number plates to be exact. In doing so the secretary of (the Pine Tree) State has paid a delicate compliment to the F. A. M. by adopting its colors, blue and yellow. The new numbers will be of raised blue enamel on a yellow field. Down Easters have not indulged in motorcycles very strong as yet, so the s. o. s. thinks that the supply of 999 plates which he has ordered will be enough to supply the demand and some then. Private owners numbers will start at A1 and dealers at B1. For the benefit of those who have forgotten their "jography" the s. o. s. is located in the State capitol at Augusta.

Club Pass Resolutions Against Cut-Out.

The resolutions suggested by the Bicycling World and Motorcycle Review against the use of the muffler cut-out on motorcycles was recently passed unanimously by the motorcycle clubs in Erie, Pa., Salina, Kan., and Louisville, Ky. The Erie Club intends to fine a member $10 for using the cut-out upon a first offense, and provides for a dismissal for a repetition. The Salina resolutions call for a fine.

Accident Insurance for Motorcycle Police.

Minnesota motorcyclists won't have to register or take out new license tags for three years hereafter. A new law goes into effect January 1, by which annual registration is abolished and the registration period extended to the term mentioned.

CONNECTICUT LICENSES DOUBLED

Thrifty Nutmeg State Legislature Wants More Money from Motorcyclists—Must Carry Two Markers.

Connecticut motorcyclists will have to pay more for registration and carry larger number plates in 1912, in accordance with the motor vehicle law passed at the last session of the General Assembly this year. Registration has been raised from $1 to $2, and the number plates will be furnished by the State without extra cost other than express charges.

Secretary of State Rogers is sending out the following circular to motorcyclists:

All registrations of motorcycles for the year 1912 will be numbered consecutively from "one" upwards. Numbers will be assigned to each owner in the order in which applications are received at this office, regardless of the number that has previously been carried on the motorcycle.

The motor vehicle law passed by the General Assembly of 1911, provides for an annual registration fee of two dollars ($2) pro rated after the last day of March of each year, and also provides that the secretary shall furnish one set of markers with each registration, such markers to be carried, one on the front, the other on the rear of each motorcycle, horizontally, and so fastened as not to swing.

Heretofore riders have been required to carry but one number, to be furnished by themselves, and to be placed anywhere on a motorcycle.

Section 4 of the motorcycle law, regarding size of motorcycle numbers, reads as follows: "The figures of the register number on motorcycle number plates shall be 2½ inches high, each stroke ⅜ of an inch wide, and each digit shall occupy a space not less than 2 inches in width."

With the announcement of the new motorcycle regulations of the Connecticut motor vehicle law for 1912, it is pertinent to ask what were the F. A. M. State and local commissioners, the local dealers and riders doing when this measure went through. Registration fees have been doubled, and hereafter motorcyclists will have to carry larger number plates, and two instead of one, and pay express charges on them when shipped.

Registration of Motorcyclists Abolished.

Members of the Dayton (O.) motorcycle police squad are discussing the outlook for a benevolent society. There are 14 men in the motorcycle brigade and they maintain that as they are more exposed to illness or injury than the ordinary "pavement pounder," they should protect themselves against such misfortune by creating a fund to be used to aid any of their number who may become disabled while on duty.

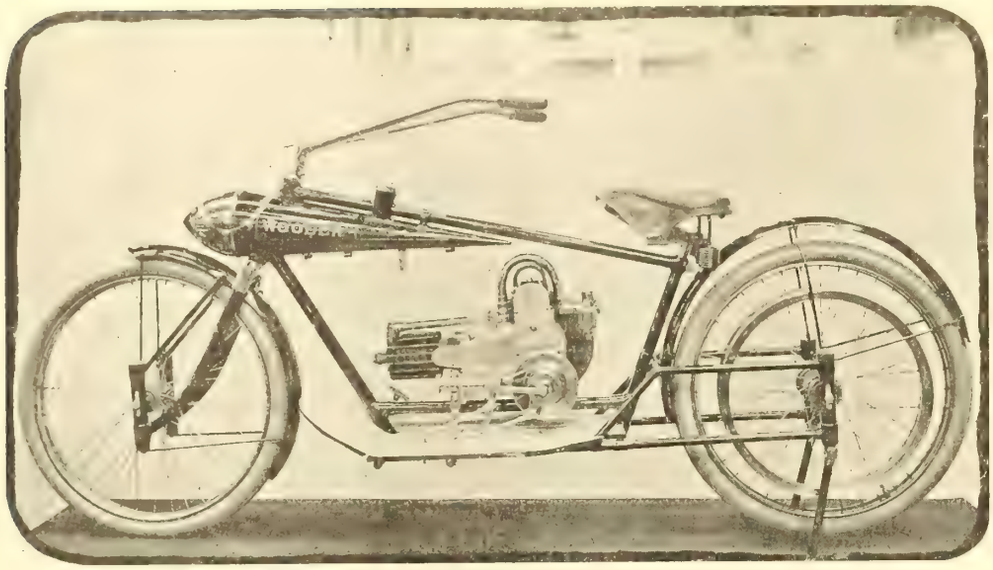
PROGRESS SHOWN AT BRITISH MOTORCYCLE OLYMPIA

Big London Exhibition Replete With New and Advanced Features—American Type Chain Drive and Two-Speed Makes Big Gains—Foot and Hand Starters Plentiful—Standardization General.

London, Eng., Nov. 24.—It is not to be denied that the second annual British motorcycle exhibition at Olympia is a great success. The large daily attendance affords ample evidence of the ever increasing public interest in motorcycles. After a careful survey of the show the visitor is impressed with the fact that design, construction and finish show a higher expression than ever before, and also that the improvements and new features are born of practical riding experience and not of untried drafting room theories.

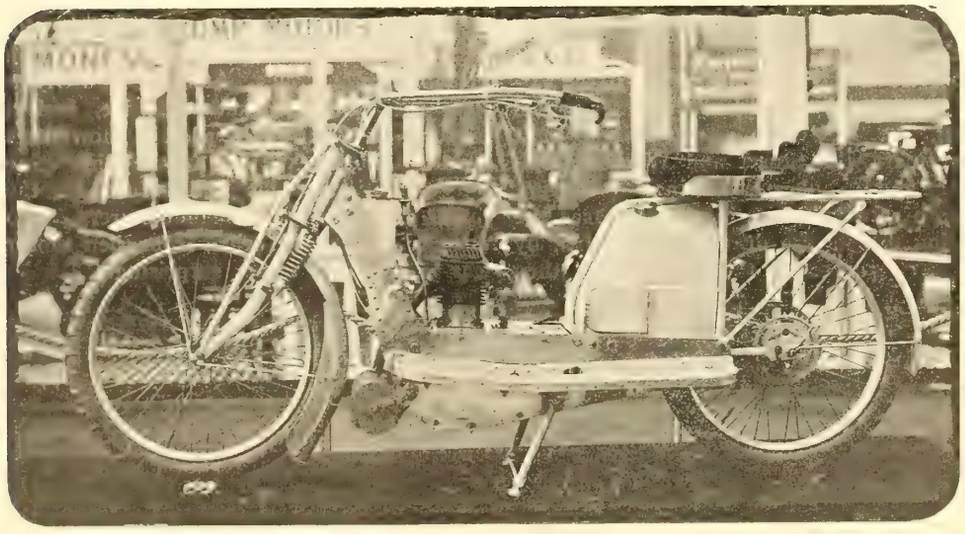
In motor design no radical changes are apparent. In the single cylinder class the 3½ horsepower size is predominant, and for higher powers the V twin is employed. It is almost a unanimous verdict among makers that for sidecar work the twin is indispensable. Lubricating systems show marked improvement, and in quite a few instances the decompressor is introduced to render starting easier. There is a slight but growing tendency to lead the oil to bearings through hollowed passages, particularly in the main and crank shafts and the wristpin.

This centrifugal system has much in its favor and is used on the two-cycle Levis and on the Excelsior. A mechanical oil pump is used on the Veloce lightweight. In the new Wartnaby-Draper motor, the lubricating system is patterned closely after motor car practice. A sump is cast in the lower part of the crankcase, which feeds a gear pump that forces oil to all the bearings, including the little end of the connecting rod.



Of course, four-cycle motors are overwhelmingly in the majority, although the two-cycle is well represented. In the latter class is the well-known water-cooled Scott, the Levis, and two British built newcomers, the Stuart and Wooler. Cylinder and crankcase castings run very smooth as a rule, but in several cases the cooling flanges are drawn so fine that, by the very nature of their brittleness they must chip off easily when subjected to much impact.

With very few exceptions flywheels are enclosed, and the ball bearing crankshaft is almost universal. Likewise air cooling continues in general favor, but there are a few water coolers. For example, the Coventry Rex people have brought out a four-horsepower single with thermo-siphon water cooling. Thermo-siphon sounds terrifying to the uninitiated, but in ordinary language it means natural water circulation as distinguished from the pump system, which is forced.



Although the slide valve is gaining with automobile constructors, it is retrograding in motorcycle circles. At last year's Olympia, the Corah, a new machine, had a rotary valve, but at the present show there is not a single exponent of the slide valve on exhibition. This indifference on the part of motorcycle manufacturers, who usually are keen to learn from their motor car brethren, is rather surprising.

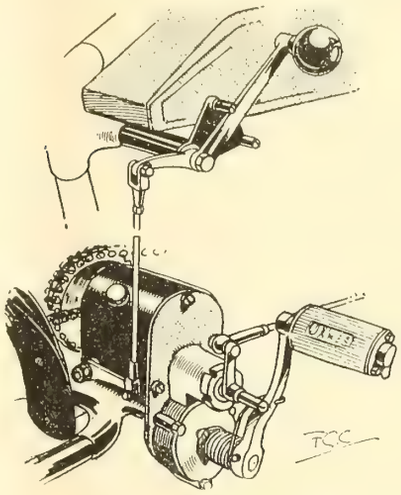
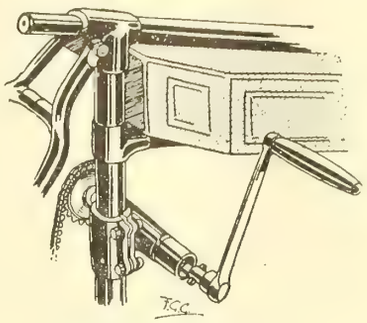
In the twin-cylinder class the only maker who refuses to flock with the V brigade and strikes out for himself in arranging his cylinders, is the French Alcyon. It has its cylinders cast vertically in a pair and set transversely in the frame. As usual, the F. N. has the four-cylinder field to itself. It is rather curious to note that in America the four-cylinder type has several advocates. Last year the British built Wilkinson four-cylinder was exhibited, but it is missing this year. It was rated at seven horsepower, and there are rumors that it will be water-cooled for 1912.

Float feed carbureters are on the top wave of popularity, and honors are practically monopolized by two makes, Brown and Barlow, and Amac. These devices owe their popularity to their simplicity and compactness. Save for the new scent-spray type there is nothing strikingly new in the carbureter field.



In choice of transmission, the belt has a big lead. However, the success of the chain-driven American Indian, with its sliding clutch two speed cradled in the bottom bracket, draws its followers from such well known British makers as Triumph, Singer, James, A. J. S. and Douglas. This seems like an ideal location of the gear set. It certainly imparts greater strength to the frame, and also leaves the rear wheel easily accessible. Nearly all of the chain driven machines are provided with starters, so that the motors may be turned over with the rear wheel on the road.

The Scott, Royal Enfield, Clyno and Phelon & Moore are good examples of the double chain drive with expanding clutches. Detachable starting cranks are seen on one or two machines. One of the noteworthy innovations is the rubber cushion rear drive sprocket on the Royal Enfield. A series of rubber blocks are set in the middle of the sprocket to absorb the shocks from the motor. Few of the direct drive machines but incorporate a free engine device. Also there are a very respectable number of two and three speed gear models. Sliding gear and individual clutch transmissions are the favorites.



In number of speeds there is no standard as yet. The new chain drive Clyno has four speeds. For the large increase in chain drives the Indian may be said to be chiefly responsible. It has remained for the Dallison, which is making its debut, to offer the greatest innovation in transmission. It has what may be termed a lantern pinion and peg disk drive, which gives five forward speeds and a similar number of reverse ratios. The teeth in the lantern pinion, which, as usual, is movable across the face of the peg disk, are capable of being withdrawn into the shell which houses them, and the final drive is through a side propeller shaft to an overhead worm and worm wheel on the rear axle. It is a plausible invention, but by reason of its delicate and complex nature, not to men-

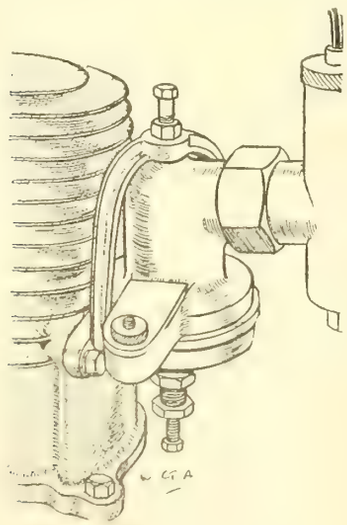
tion its cumbrous appearance, its commercial success seems doubtful.

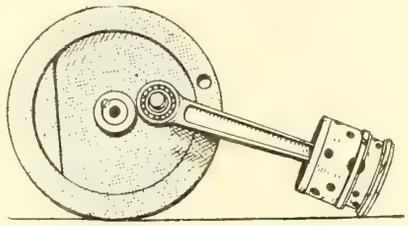
Rubber belts of the V type are in most general use and idler pulleys are little



Wall Inclined Power Plant

used. The adjustable pulley is the prevailing type. N. S. U. and Puch, both from Germany, stick to the undergeared drive, which has its advantages of a larger

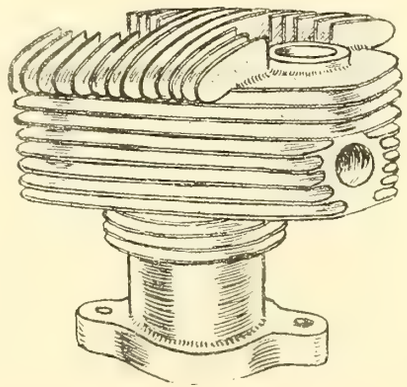
Overhead Vaives on Moto-Reve



front and smaller rear pulley, and less cramping of the belt on a small disk. This year there is a marked tendency to mount a separate hollow spoked wheel on the

Inlet Dome and Transfer Port on Stuart Two-Cycle

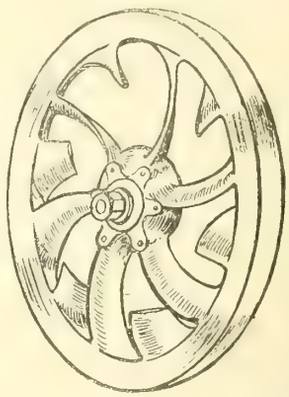
rear hub in place of the usual belt pulley. The Armstrong three speed hub is a notable example. Coincident with this new practice it is noticeable that some designers have not discarded the old type belt rim but have found a new place and use for it by attaching it to the spokes on the right side of the rear wheel and using it for a brake drum for a V shoe brake, which is either hand or foot operated. Band brakes on the wheel axles, as used by Alldays, promise to become more popular.



Coming to ignition it truly may be said that the motorcycle without the high tension magneto is obsolete. The favorite instrument is the Bosch, of course, and this is driven, as a rule, through a train of enclosed spur gears. Some makers prefer to drive the magneto by an enclosed chain, and a few are so careless as

Baby Premier Reciprocating Parts

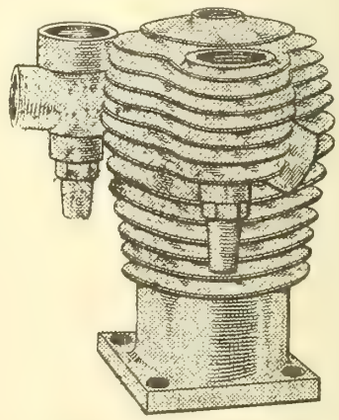
to expose the chain. The most popular location for the magneto is inside the frame back of the motor, but in several cases it is mounted in front of the motor and outside the frame where it is protected to some extent by enclosing in a waterproof cover.



There is a striking augmentation of development in the sidecar. It has strong rivals in the Morgan, Eric and other three wheel semi auto runabouts, but nevertheless seems to hold its own and a little more. Sidecar body builders have taken a leaf from the motor car builders and developed cute little enclosed bodies which resemble

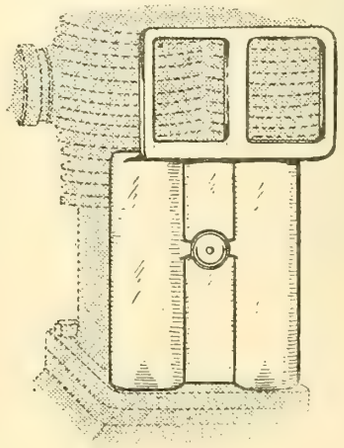
A. C. Cooling Fins

minature bathtubs, and in some types the motor car prototype is followed to the small details.



Although comfortable enough, the modern sidecar is not wholly pleasing in appearance. This criticism immediately raises price considerations, for with the increased equipment now included, no reduction in price is apparent, or naturally to be expected. On the other hand, prices have increased with the introduction of such expensive items as multi speed gears and other similar luxuries. The result is, that despite the superior speed of the motorcycle, potential buyers are turning

A. C. Cooling Fan in Flywheel



longing eyes on the light car instead, as offering more enjoyment at less cost.

Not unnaturally there are many who

Unusual Valve Ports on Quadrant

argue that the cost and maintenance of powerful sidecars is becoming so prohibitive, that they may more profitably spend a slightly larger sum for a two-seated motor car. It is only the youthful, en-

Valve Housing and Clothing Guard on Singer

thusiastic and sporting class who seem at all inclined to invest in the fast three-wheel low built "cycle cars" of the hybrid types on view.

(Continued on Page 538)

Now Comes the Annual Six-Day Classic

There is a fascination amounting almost to enchantment about a six-day bicycle race. That this is true despite all that has been said and written to the contrary, one has only to give a moment's thought to the vast amount of interest evidenced in the annual recurrence of New York's now famous endurance contest. For weeks previous to the date invariably fixed, the second week of December, inquiries pour in from all directions to those who are supposed to know, requesting information as to the make-up of the different teams. Will this or that former contestant ride this year? Will champion so-and-so ride? And so on—suggesting teams, officials, new rules and plans for management. The newspapers that in the course of the year give sparingly of space to other and more meritorious cycling affairs, clamor for and publish columns of matter concerning the riders, their prospects, etc.

And when the great day comes, when the doors of the "Garden" are thrown open, the struggle to pay admission; the rush for vantage points from which to get the most comprehensive view of the yellow pine saucer in the vast amphitheater; the cosmopolitan character of the crowd, for all are there, from every strata of society, the devotees of every sport; men who ride bicycles, men who once rode bicycles, men who never rode bicycles and who never expect to ride them; all will stand in line in some cases for hours awaiting their turns to enter, then immediately to take up each with his neighbor, the discussion of the merits of the various riders, of other races, of other days, and when the riders are sent fairly away on the 142-hour journey, this same crowd can be seen for hours sitting or standing, waiting, waiting for the ever expected sprint—the attempt to gain the all important lap, a distance of a mere 176 yards—then to shout encouragement to the point of exhaustion, or howl with disappointment to a state bordering on frenzy, according to the degree of success of the attempt; to subside again into that expectancy that apparently knows no tiring; that is the typical six-day crowd, a most remarkable study of human nature.

Where Six-Day Racing Was Started.

Six-day cycle races date almost from the year 1 Bi. Cycle. The first one of which there is any account, having taken place about thirty-five years ago during the middle seventies in Birmingham, England. It was of the twelve-hour-a-day variety; some of the riders who took part were George Waller, George Edlin, Dinken Derker and Harry Higham.

The next, which followed closely, was for eighteen hours a day, and was held at the Aquarium, in London. The feature of this event was the performance of Waller who rode for eighteen hours without dismounting. and on one of the old high "ordinaries," of course, equipped with a saddle fashioned from solid wood.

In 1879 Jack Haverly, of minstrel fame, and Peter Duryea brought over a team to this country from Europe and gave exhibitions and rode six-day race of three and six hours per day on roller-skating floors in New York, Boston and Chicago.

Many of the races were ridden in conjunction with the skating events; the cyclists riding outside the skaters on the floor. During the summer of 1886, Tom Eck constructed the first track having banked or raised corners in a hall at Springfield, Ill., and for the first time the riders and skaters were able to take the turns at full speed. Until that year all records from the quarter-mile to 1,044.5 miles (144 hours) were held by Europeans.

Continuous Races of American Origin.

The first actual continuous six-day race in America was held in the Washington Rink, Minneapolis, Minn. It started Sunday, midnight, December 19, and continued 142 hours, finishing Saturday, December 25. There were three riders: Albert Shock of Chicago, W. J. "Senator" Morgan, and Louise Armaindo of Montreal, said to be the most accomplished woman bicycle rider in the world. Shock won the race with a score of 1,405 miles, establishing a world's record; second, Morgan, 1,165 miles; third, Armaindo, 1,050 miles. The stakes were $2,500 which went to the winner with 50 per cent. of the "gate;" second, 30 per cent.; third, 20 per cent. In this race Morgan put up a remarkable ride, albeit he did not win; in one stretch of twenty-six hours he was off the wheel but eighteen seconds.

This race was preceded and followed by many of the "little" or abbreviated sort in various cities, especially in the middle west, in which in addition to the above named riders, there also competed Jack Prince, Tom Eck, W. M. Woodside, J. Merrill, W. Bovee, Tim Hardwick, E. H. Bullock, C. Frazier, R. A. Neilson and other early day professionals.

Tom Eck managed the first race in Madison Square Garden, 1891; 17 riders started and rode 20 hours per day. The winner was "Plugger Bill" Martin. That year, as was all the previous events, the race was won on a high bicycle, but the following year the much ridiculed, at that time, safety bicycle, ran away with first honors. From its inauguration until 1899 the six-day race was contested by individuals, but in that year the New York State Legislature awoke to the fact that it was a brutal contest and passed a law prohibiting bicycle racers from riding more than 12 hours out of 24 in a race. Since that time team racing has been in vogue. This year's race will be the 19th annual, the winners of previous races, and mileage.

1891—"Plugger Bill" Martin, America. 1,466 miles.

1892—Albert Shock, Germany, 1,600 miles 3 laps.

1893—At Philadelphia, Ashinger and Foster sole survivors.

1894—No race held.

1895—Frankie Nelson (first and only six-day race for women).

1896—Terry Hale, Ireland, 1,910 miles 9 laps.

1897—C W. Miller, America, 1,983 miles.

1898—C. W. Miller, America, 2,007 miles 4 laps.

1899—Miller-Waller, America, 2,733 miles 4 laps.

1900—MacFarland-Elkes, America, 2,608 miles 7 laps.

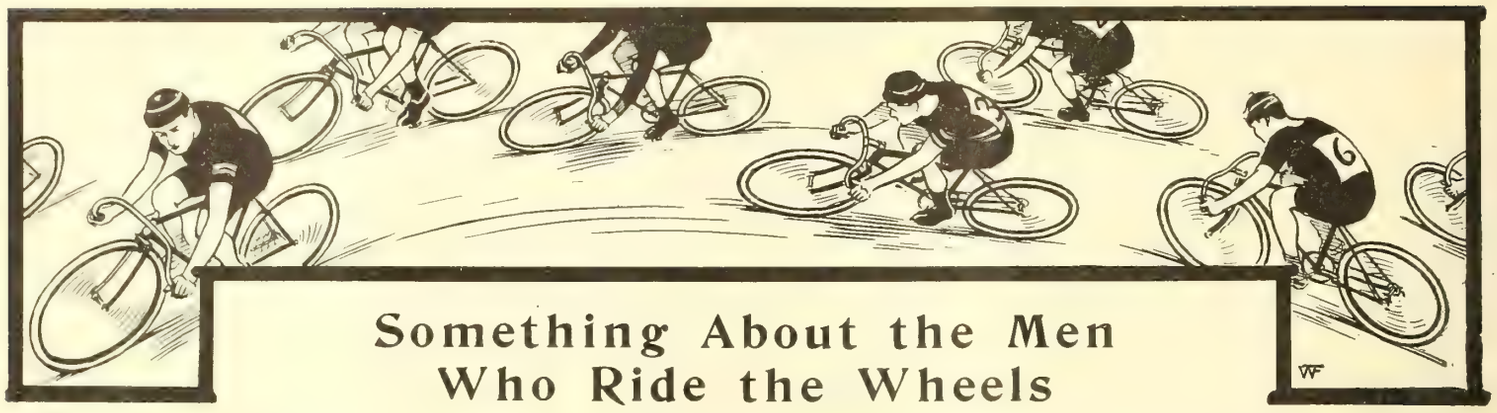
1901—Walthour - McEachern, America, 2,555 miles 4 laps.

1902—Leander-Krebs, America, 2,477 miles, 3 laps.

1903—Walthour-Munroe, America, 2,318 miles 3 laps.

1904—Root-Dorlon, America, 2,386 miles 6 laps.

1905—Root-Fogler, America, 2,260 miles 6 laps.



1906—Fogler-Root, America, 2,292 miles 2 laps.

1907—Rutt-Stol, Germany-Holland, 2,312 miles 5 laps.

1908—MacFarland,Moran, America, 2,737 miles 1 lap (world's record).

1909—Rutt-Clark, Germany - Australia, 2,660 miles 1 lap.

1910—Root-Moran, America, 2,545 miles 3 laps.

Something About the Men Who Ride the Wheels

In compiling a short resume of the accomplishments of the many men composing the teams competing in a big six-day race like the one that starts on Monday morning, there is necessarily much preliminary work, and some changes are liable to occur in the make-up of the teams within a day or so of the event, through accident, illness or other causes.

One change has already occurred in the teams since the original arrangement, Ernest Jokus meeting with an accident to his foot in training. As a consequence, his partner, Martin Ryan, is slated to ride with Frank Cavanagh, Norman Anderson withdrawing.

Brief sketches of the men composing the original teams follow:

Kramer and Moran.

Frank L. Kramer was born in Evansville, Ind., November 21, 1880. During his early life, Kramer was in delicate health and it was thought at the time he was threatened with tuberculosis. In accordance with the suggestion that a change of climate might prove beneficial, he was sent east to the home of his father's partner, the late Dillon B. Burnett, at East Orange, a suburb of Newark, N. J., and ever since has made his home there, making occasional visits to his parents who yet reside in the town of his birth. With the hope that the outdoor exercise would be of assistance in the combat with the dread disease, Kramer learned to ride a bicycle at the age of 12 and soon became an enthusiastic expert. His first attempt in competition was in a century run through which he went with flying clors. Road riding engaged his attention until the season of 1896 when he won his novice race at the old Clifton, Newark, N. J., track, at a meet under the auspices of the Union Cycle Club. On the Fourth of July of the following year, the coming champion first jumped into national prominence when he made a grand clean-up in the amateur events at a big meet at White Plains, N. Y., following this up with a number of successes in and around New York City. In 1898, after two seasons' preparation, Kramer made a determined bid for the amateur championship under the rules of the League of American Wheelmen and won it in a walk; he repeated the performance in 1899, riding under the rules of the National Cycling Association. He made his debut as a professional in 1900, being matched with the then professional champion, the late Tom Cooper, at the old Vailsburg track. Kramer won, and at once became a serious contender for the title. Major Taylor, the famous colored rider, was then in the heyday of his career and with his cunning and speed took the mantle with the blond boy a close runner-up. The season of 1901 saw Kramer under the protecting wing of the masterful MacFarland who later in the season formed an alliance with Iver Lawson who at the time, with his speed, threatened disaster to Kramer's aspirations, and together they succeded in defeating and disheartening Taylor, and eventually landing Kramer in his first professional championship. Since that time, he has won the title for each of the succeeding years, ever developing and improving the speed, craft and track generalship that has made him world-famous in his chosen sport, and ranking him as one of the most wonderful athletes of all time. Twice he has invaded Europe, in 1905 and 1906, and, although he did not take part in the world's championships, he met and decisively defeated on several occasions, the various title holders of all nations in match and open races. In the years Kramer has been riding he has won over 500 firsts, a record surpassing that of any other athlete, and, in view of the fact that he yet is in his prime, this record has every prospect of being very materially added to. Kramer attributes his remarkable success absolutely to his consistent moderation in his manner of living, enjoying life to the full in every particular, but never indulging to excess in any of the varied forms of pleasure which have been the pitfalls of so many brilliant athletic performers. This will be Kramer's first race of the 142-hour variety, although he started in the race of 1903 with Willie Fenn as partner; it was only for the purpose of setting the pace for the first six hours; an experiment tried by the management and found to be unsatisfactory, and which has not been repeated.

James F. Moran is a native of Chelsea, Mass. He has been riding a bicycle in competition since 1897, and in the time intervening has taken part in no less than eight of the big grinds, the first being the race of 1902. Moran also has participated in a number of six-day events of the abbreviated style, throughout the United States and Europe. With Floyd A. Macfarland as partner, in March, 1909, he won with a lap to spare, the 144-hour contest in Berlin, Germany. Together with Macfarland, he holds the record for six-day team racing, 2,737 miles 1 lap, made in the Madison Square Garden race of 1908. His wide and varied experience and undoubted ability at the game has won for him the reputation of being the best all-round six-day rider the sport has ever produced. As an amateur, Moran developed rapidly, meeting the best riders in that class on the New England tracks during the seasons of 1897, '98, '99 and 1900. He was particularly good in handicaps and early in his career, by the process of consistently winning from ever decreasing allowances from the handicapper, soon reached the honor mark, thenceforth until he turned professional in 1901, he was a familiar figure on scratch with James F. Ingraham, of Peabody, Mass. In the professional ranks, Moran has elected to follow the motors, and as a paced rider has met many of the foremost riders of the world in that department, both at home and abroad, invariably giving a good account of himself, having proven a performer with remarkable staying powers and a bulldog determination that has earned for him the wholesome respect of all, including champions, who have matched strides with him trailing the roller. In six-day grinding, Moran is a glutton for work ,is always ready when the "jams" are started, sprinting with the field as long as there is a sprint left and then, when all of the others are exhausted, he contributes further to the excitement by starting in afresh. Another favorite diversion of his is that of starting false sprints in quick succession, keeping the field in a state of constant anxiety and the spectators primed with expectation.

Clark and Fogler.

A. J. Clark, popularly known as "Jackie" Clark, and as the Australian "Rocket," was

born at Camperdown, Australia, March 2, 1886. In 1903 he rode his first bicycle race at Melbourne. He continued to ride in his native country until 1906, winning many important races, the principal one being the Austral Wheel Race of 1904. In 1906 Clark came to America and rode with Pye in the Garden six-day race of that year, finishing in fifth place. In 1907 he rode in Salt Lake City, returning to Australia for the winter of 1907-8, and winning the Australian championship. Returning to America the following spring, he rode at the Saltair (Utah), Coliseum, and won 25 races. In the fall of that year he came east and rode at the Vailsburg track, and in Madison Square Garden, displaying championship form. During the season of 1909 he rode at Vailsburg, and gave Kramer the closest fight the champion ever had for his honors. That year he, with Walter Rutt as a partner, won the six-day race, the two forming a new team after having lost their partners —Macfarland and Stol, respectively. Not only did they make up the lap which they were penalized under the rules, but they finished a lap ahead of the field. Immediately afterward Clark with Rutt as a team mate went to Berlin, Germany, and won the six-day race there. In 1910 Clark rode the season at Salt Lake City, and finished second, with Rutt as partner in the Garden six-day race of that year. He was a competitor during the present season at the Newark Velodrome (Vailsburg), finishing second to Kramer in the championship table. Clark holds a large number of sprinting records, and has become an American citizen through naturalization.

Joseph Fogler, of Brooklyn, N. Y., has always been a consistent performer at track racing. He became noted as an amateur about 1900-1901, and after joining the professional class, showed such rapid progress in form that he soon became a popular favorite at six-day racing. In 1905 and 1906 with Root as a partner, he won the six-day events of those years, and in 1907 with Moran as a running mate he finished second. In 1908 Fogler teamed up with Lawson and rode up till the third day, when a disagreement with his team mate broke the team to pieces. He again teamed with his old partner, Root, in 1909, and they landed second position in the final score. With Fred Hill as a partner last year he finished third. Fogler has shown considerable class as rider of match races, and has had some success behind motor pace. With Root upon a tandem they make an unbeatable pair to-day, and hold the tandem competition record for two miles, of 3:40, made from scratch in a handicap at Newark, September 23, of the present year. Fogler represents the American Racing Cyclists' Union on the N. C. A. Board of Control.

Root and Hill.

Edward F. Root is a native of New England, and hails from Winchester, Mass., a suburb of Boston. He made his first successes as an amateur on the eight-lap track at Revere Beach in 1901-2, entering the professional class in 1903, in which year he commenced his career as a six-day rider with Galvin as a partner. He teamed with Oliver Dorlon, of Brooklyn, in 1904, and won the race that year after a determined struggle to the tape with Stol, the Dutch team mate of Vanderstuyft. In the contests of 1905 and 1906 he was teamed with Joe Fogler and on both occasions the team was victorious. In 1910 Root teamed with Moran, and in the finishing lap unwound a sprint that landed his team in first place once more, making him a four-time winner of the Madison Square Garden classic—a record performance in wins. In addition to being a good plugger, Root has exceptional ability in being able to make up lost distance during a long race. He is a picturesque rider, and makes very clean and legitimate pickups with his partners. Root has been quite successful as a rider of short handicap races, and has done well in pace-following contests.

Fred Hill is also a New Englander, hailing from Watertown, Mass. He first rode as an amateur at the Revere track, Boston, and in 1908 was a competitor for amateur championship honors at the Vailsburg, N. J., saucer. At the close of that season he entered the professional class, and competed in the six-day race with Walter DeMara as a partner. The team finished in third position. In 1909 Hill had Stein for a partner and the final score showed them in fourth place; 1910 witnessed a return to third position in the final sprint with Fogler as his running mate. Hill has been a consistent performer since his advent into the game. With Drobach for a partner he won the six-day race at Buffalo in 1910, and in November of the present year with Clark as a partner, Buffalo was again the scene of a first place victory. Hill is a good rider in handicap events and has been quite successful in scratch races.

Georget and Brocco.

Leon Georget, of France, is one of the famous Georget brothers, who have been notable in their native country for the past decade as contestants in endurance races, both indoors and out. Leon has been three times a winner of the famous Bol d-Or 24-hour race, and with his brother Emil, he first competed in a Garden six-day event in 1906, finishing in eighth place. In 1907 he was paired with Victor Dupre, the team finishing third. In 1908 Dupre was again his partner, but becoming ill during the week he was compelled to retire. In 1910 he was again a competitor, with Julien Pouchois as a partner, but the latter failed to keep up to Georget's standard, and caused the withdrawal of the team. Leon Georget is the holder of practically all the world's human-paced records in the professional class.

Maurice Brocco is a native of LaBelle, France, and comes to this country with a good record in track work, especially tandem-paced competition. He first rode in a six-day race in 1908, with Labrousse as a partner, but the latter failed to make any showing and Brocco was forced to withdraw for lack of support. With the veteran, Georget, as a running mate, he expects to make a fine showing in the present contest.

Lorenz and Saldow.

Willy Lorenz is a six-foot German, and although a stranger to the American public, he is well known as one of the best of European six-day riders. With his present partner, Saldow, they won one Berlin race in 1909, and the year before that they were second. Both started in the Berlin race of last year, but an unfortunate accident put them out. Lorenz is the sprinter of the pair, and is 21 years old.

Karl Saldow is another six-foot German, and is the steady plugger of the team. His history as a six-day rider is practically the same as Lorenz's, and his age is 22.

Bedell and Bedell.

The Bedell brothers—John and Menus, were born at Baldwin, L. I., John, the older, is 30 years of age and Menus is two years younger; after they became proficient in the pedal pushing game over the world famous level highways of Long Island, the brothers took up their residence in Newark, N. J., but are yet proudly considered fellow townsmen by the residents of the little Long Island village. The Bedells have been riding in the professional class with excellent results for more than ten years. John is the sprinter, while Menus has shown great aptitude at following pace. Their six-day experience has been a long and varied one, in which they have given ample evidence of their staying powers, although their record is marred, due largely to the invariable streak of hard luck that hitherto has pursued them and in spite of which, their perseverence, in again entering the big grind after a two year's lay-off, is not the least of the commendable characteristics of this favorite pair. Seven times in all have they faced the starter in the 142-hour "mill"; six times as a team and once, in 1908, Menus ,at the last moment was teamed with Edward Rupprecht owing to a broken collar bone sustained by John in a "little" six-day race held just previously in Boston. The net result of their first attempt, 1902, was fourth position; the next year they finished seventh; 1904, they joined in the ill-advised "strike" of that year and consequently did not finish; by far their best performance was that of 1905, when they gained a lap on the field on Tuesday night and held that advantage until early Friday morning, as the result of a famous "jam" then, the Root-Fogler team was placed on an equal footing and in the final dash for the tape, brother John had to be content with second. In less than 200 miles, the following year, Menus fractured his collar bone and John was teamed with

Walthour, on the elimination of the latter's partner, MacLean, by the accident route, and tenth place was the portion of the reconstructed team. The illness of Menus on Monday of the 1907 race put them out of the running. As previously noted, Menus was teamed with Rupprecht, and started only to be laid low himself with a broken collar bone when caught in a big spill the first afternoon of the next and last year in which they entered until the present event. Truly a remarkable record of "stick-to-it-iveness."

Collins and Pye.

Elmer L. Collins hails from Lynn, Mass. He has the characteristic Yankee aptitude for hard work, and when but an amateur was noted for the vim and snap that he put into his struggles on the Boston tracks for supremacy. In the fall of 1905 he entered the professional class as a follower of motor-pace, and made good in his first race at Revere Beach track, landing a place position from such riders as Moran and Hugh McLean. He continued pace following with much success, and for the years of 1909, 1910 and 1911 has secured the motor-paced championship of America by hard and consistent riding. In 1908 with Worth Mitten as a partner he landed in fifth place in the six-day race. In 1909 he had Bobbie Walthour for a team mate and finished in third place. Collins has a much larger proportion of grit to his physical size than many followers of the six-day game. He never knows when he is beaten and can be depended on to stick to the finish or drop in his tracks.

Ernest A. Pye was born April 21, 1880, at Swan Hill, Victoria, Australia, and begun his career as a bicycle rider in his native country, January 1, 1897. He won the Australian championship three times, 1902 being his banner year for wins, 32 victories, including the "A. and A. Wheel Race." He also won the latter event in 1903, and was the only one to win this event for two consecutive years. He made his advent in America in 1906, riding at Salt Lake City that year and in 1907, returning to Australia for the winter season. He first rode in the six-day race in 1906 with Clark as a partner, taking sixth place. In 1909 he rode again, with Hehir, but was retired with a broken collar bone. Walker, another Australian, was his partner in 1910, but he was put out of the race by injuries to his partner which broke up the team. During the past season Pye was manager of the Salt Palace track, in Salt Lake City.

Wiley and Galvin.

George Wiley, now 24 years old, is a graduate of the "messenger boy" class, he having made his mark as rider when employed as a messenger by the Western Union Telegraph Company, in his native city, Syracuse, N. Y. When an amateur Wiley had the faculty of showing up at the important race meets in different parts of the United States, just because he liked to ride and see the country. In 1906 he took up riding as a profession, spending the summer season at the Revere Beach track, Boston. In December of that year he entered the six-day race with Galvin as a partner, and landed in twelfth place. The following year they again rode together and captured fifth place. In 1908 they again rode together, capturing seventh place. In 1909 he had Drobach for a partner, but in the first hour of the race, he fell and dislocated his right shoulder, putting the team out of commission. Last year he had Lawrence for a partner, but the team withdrew on the third day. For the past three seasons Wiley has followed motor-paced racing with much success, running second to Collins in the struggle for the American championship.

J. Frank Galvin first achieved prominence as a cyclist in his native town of New Milford, Conn., by winning numerous road races in that vicinity some 15 years ago. He was easily the champion of western Connecticut at this class of riding, and ranked with the scratch bunch in the big New England road races then the popular thing. His name first appears in the final score sheets of the six-day race of 1905, when he teamed with Arthur McDonald, a Boston youngster, and the pair landed in eighth place. Thereafter in 1906-7-8 he rode with Wiley as his partner. In 1909 he had the veteran, Patsey Keegan, as a partner, but the team went out on the third day on account of Keegan's illness. Last year Galvin teamed with Anderson, and as the latter withdrew on the second day Galvin had to stop for lack of a riding partner. The race would seem incomplete without the name of Frank Galvin. He is easily tthe "dean of the six-day racers" by dint of continuous annual entry, and priority of birth.

DeMara and Lawrence.

Walter DeMara, though for a number of years a resident of California, was born at Providence, R. I., June 8, 1883. His first riding was done in the vicinity of San Francisco in the famous road races over the San Jose course, and he had several successful seasons as an amateur on the Salt Lake City track. He was a partner of Fred Hill in the six-day race of 1908, and was one of the three teams leading at the end of that record-breaking race, finishing in third place to McFarland and Rutt in the finishing sprint. In 1909, with Iver Lawson as a partner, they finished in seventh place. In 1910 he was a team mate of Fred West, but the team did not finish the race. DeMara made a European trip early in the present year, returning about the middle of the summer. He was quite successful on the Paris tracks, and made good in a number of events at Newark after his return.

Percy O. Lawrence also hails from the Golden Gate City, being a native son of California. Salt Lake City proved the magnet that attracted him in 1907, and he jumped into fame as a sprinter there, making a number of amateur records there, some of which he holds today. He is also holder of the one-sixth mile amateur competition record of :20⅘, which he made at the old Vailsburg track, September 5, 1909. It was in the spring of that year that he made his advent in the east, capturing the N. C. A. amateur championship. He entered the six-day race in December, with Halstead as his partner, but was forced to withdraw on the fifth day with a badly injured knee. In 1910, with Wiley as his partner, he rode until the third day, when the team retired.

Cameron and Magin.

George Cameron is a New Yorker to the core, and for a number of seasons was an amateur star in the metropolitan district, flat floor riding being his specialty. For about ten years he held his own against all comers. In 1908 he was one of the American team that went to London to compete in the cycle races at the Olympic games. Later in the same year he became a professional, but did not ride in the Garden race. Early in 1909, with Mitten as a partner he was third in a six-day event at Atlanta, Ga., and in December rode at the Garden with Floyd Krebs as a partner. Krebs retirement put the team out of the contenders. As a teammate of Halstead in the race of 1910, he finished in seventh place.

Jacob Magin is a son of Newark, the home of sprint racing. He was one of the famous team of National Turn Verein Wheelmen amateurs of that city, that for several seasons scooped in the majority of prizes given on the local track, and became a professional in 1910. This is his first appearance in a six-day race in New York and he ought to make good. He has done well in handicap races during the past season at the Newark Velodrome.

Halstead and Drobach.

Alfred Halstead is a native of England, but he has been somewhat of a world's citizen in the course of his career, having spent a considerable portion of his early youth in South Africa. He did considerable road riding in California in the vicinity of San Francisco, and spent a couple of seasons on the saucer track at Salt Lake City as an amateur before coming east in the fall of 1908. His advent as a six-day rider was in the race of 1908, with Lawrence as a partner, but when the latter retired he formed a partnership with Hehir, who had also lost his partner, and the two finished in fifth place. With Cameron as a partner in 1910 he finished in seventh place. During the past summer he rode at Salt Lake City, returning in September to finish the season at the Newark Velodrome.

Peter Drobach hails from the classic shades of Boston, the peninsula of South Boston being his home. Like many other good riders he received his first lessons in

speed on the track at Revere Beach, and was always considered a strong contender. In 1908 he made his debut as a six-day rider, and finished in eighth place with "Pedlar" Palmer as a teammate. Early in 1910 he won the "little" six-day event at Buffalo, Fred Hill being his partner. In the 1910 race he broke his collar bone in a fall, which put him out of the running. Drobach is a consistent rider, and has made a good record in handicap and other events requiring strength and grit. His 1911 season at Salt Lake City was very successful.

Palmer and Wells.

William Palmer, Jr., often erroneously called "Pedlar," an abbreviation of "Pedalier," a sobriquet first applied to him in 1904 on his arrival in this country by some one evidently in a spell of imitative near-humor, with the result that Palmer, the rider, often since has been confused with the pugilist, Pedlar Palmer—no relation—is a native of Australia, and is one of the active invading contingent from that continent which has so materially taken part in the making of cycling history in the United States during the past decade. Palmer's first season in America, 1904, at Salt Lake City, gave him considerable experience, and he started in the Garden race that year with Emil Agraz as partner; finishing eighth. Returning to Australia, Palmer rode for three seasons with marked success in sprint races there and again appeared at Salt Lake City in 1908. That year he teamed with a fellow countryman, Gordon Walker, until Wednesday, and finished the week with Peter Drobach, in eighth position. Since then he has been a consistent performer at Saltair, Vailsburg and in various "little" six-day races.

Fred Wells, like his partner, is an Antipodean, and also rejoices in an apparently ill-fitting handle to his name—"Jumbo"—as he is far from being of elephantine proportions, being in the welter weight class when following his other vocation, boxing. Wells developed his strength riding a bicycle over the mountainous roads of his native New Zealand and once won the title of road champion of that progressive country, which goes with the winning of the time prize in the elimination race held annually to determine the State representative in the great Warrnambool road race of Australia. At the behest of Ernie A. Pye, he came to America for the 1910 season at Salt Lake City; migrated East when that track closed on Labor Day, and for the remainder of that season and all of the one just ended, he has ridden at the Newark Velodrome. Wells, in this race, makes his debut in the long distance game, and no doubt will prove an interesting proposition to the other [illegible] he is a good mixer when the going is rough, is always ready when hard riding and the consequent stamina is called for, and by his willingness and ability in the heavy work, "out in front," has earned the appreciation and respect of his fellow cyclists and followers of the sport.

Anderson and Cavanagh.

Norman Anderson, once of Denmark, but now a full-fledged New Jerseyite, with Newark as his home, came to America in 1907 to enter the Garden grind. Through some misunderstanding, he failed to secure a partner in time for the start, but he liked this country so well that he concluded to remain here, and he has ridden with considerable success on the local tracks during the outdoor seasons since that time. In the race of 1908 he had Vanoni for a partner, and the pair was instrumental in making the race that year a record event, as they certainly stirred up a pace that kept everybody guessing. Frequently they started sprints they could not finish, and as a consequence were lapped more than once, but for all that they finished seventh. In 1909 they finished last. In 1910 he had Galvin for a partner but withdrew on the second day of the contest.

Frank Cavanagh, of Newark, N. J., is the latest addition to the ranks of the professional riders, he having been an amateur until the start of the present race. Cavanaugh has shown surprising form during the present year at the Newark Velodrome. At the beginning of the season he was a mere novice and started from practically the limit mark in the handicaps. By a few decisive wins he worked his way down to scratch mark, and might have won this year's amateur championship had he been earlier to estimate his ability. He won the one mile N. C. A. Championship event from a field of the best in the amateur class. He is a big, strong fellow, who does not seem to realize how powerful he is, and should he suddenly grasp his possibilities in the coming race he is liable to make things lively for the older hands at the game.

Stein and Thomas.

Charles Stein is a blond-haired Brooklyn youngster, who first acquired prominence as a cyclist in road races on his native heath and graduated to the board tracks at Vailsburg and Clifton in 1908, captured the American amateur championship for that year. Stein did not take kindly to being transferred to the professional class by the sport governing body in the fall of that year, and did not take part in a six-day race until 1909, when with Fred Hill as a partner they finished in fourth place. In 1910 Stein did not compete. During the past summer he followed sprint racing on the Salt Lake City track.

Lloyd Thomas is a promising young rider from the Pacific Slope, San Francisco being his native city. He is but 20 years old, but he has already competed in one six-day race at the Garden—that of last year—and finished in fifth place with Mitten as a partner. He was considered an excellent amateur when he rode for a couple of seasons at Salt Lake City, before coming East, and was very much in the running at the Newark track prior to his advent into the professional ranks in 1910. His first six-day experience was in November of that year in Boston, in the eight-hour-day grind, when he and Fred McCarthy finished ninth.

Lapize and Von Houwaert.

Octave Lapize is a native of Paris, France, and was born in 1887. He started his bicycle career some six years ago, and has developed into one of the best long distance riders that that country has furnished for the six-day race, according to reports from across the water. During the present year he has captured a number of big races, and established a new human-paced record, covering a little more than 50 kilometers within the hour. The former mark was 49 kilometers, held by Brocco. One of his best victories was on August 15, at Brussels, when he won a 400-kilometer race on the track in that city. He is a new hand at the six-day type of racing, but should make a strong showing.

Cyrille Van Houwaert is the champion of Belgium and has been riding since 1905, and he has twice won the Paris to Bordeaux road race in France. With Verlinden, who rode here last year, he won a 24-hour race in Brussels this season. He is a giant in size, looking to be the largest of the foreign contingent. Should Van Houwaert land in first, second or third place in the race he is to be rewarded by the hand of his prospective bride immediately upon his arrival home, instead of having to wait until next June, the date originally set for his wedding. So he has a double object in making a splendid effort to win—wedding bells and the wherewithal to celebrate the happy event.

Ryan and Jokus.

Martin Ryan, popularly known as "Grassy," is a development of the Newark tracks, and ever since he can remember he has attended every bicycle race meet held in that city, either in the capacity of spectator, rider or trainer. The old quarter-mile board track, and the six-lap that later replaced it on the Vailsburg grounds, and the new Newark Velodrome, represent the stepping stones in the path of "Grassy's" career to cycling fame, and he has now graduated into a full-fledged six-day rider. With Carslake as a partner he rode in the recent eight-hour-a-day race at Buffalo, finishing in fifth position. He is what is known as a "contender" all the way to the tape.

Ernest Jokus, also of Newark, was for several years one of the leading riders of the National Turn Verein team of that city, and has been a consistent prize winner, both in the amateur and professional classes. With Fred Jones, of Clifton, N. J., as a partner, he finished in eighth place in the recent Buffalo race. He has always been known as a good handicap rider, usually going for the front right from the crack of the pistol, a feature that has won his considerable prize money.

Goodwin Scores Again in "Journal" Meet.

Eddie Goodwin, I. A. A. C., proved invincible in the one flat-floor bicycle event on the lengthy athletic program of the benefit meet for the Christmas Fund under the auspices of the New York Evening Journal, held Tuesday, December 5, at Madison Square Garden, New York City. Two preliminary heats of one mile each were required to sift the sixteen starters down for the three miles final; the first heat was won by William VanDen Dries, N. Y. A. C.; second, Walter Raleigh N. Y. A. C.; third, C. Hausenbauer, Atlas B. C.; time, 2:54. Second heat won by Eddie Goodwin I. A. A. C.; second, J. Murphy Atlas B. C.; third, J. Townsend I. A. A. C.; time, 2:50. The final heat was marked with some very sensational riding, culminating in a killing of the old-fashioned kind when Goodwin succeeded in lapping the field and in winning added another half lap as a clincher; second, VanDen Dries; third, Hausenbauer; time, 8:01⅗.

Here's a Chance to Get a Medal.

Sol Lazarus, of New York, has offered a handsome gold medal to the member of any organized cycle club making the best time before January 1st, from the Courier Cycle Club headquarters, 1058 First avenue, New York City, to the monument on Hillside avenue, Jamaica and return, a distance of 22 miles. The best time to date for the route is one hour and 17 minutes, held by Vincent Falnotico of the Courier Cycle Club. Each competitor must give due notice of his trial to Mr. Lazarus.

Bobby Walthour's Little Daughter Dies.

Word just has been received here from Dresden, Germany, that Bobby Walthour, the popular American pace-follower who just has completed a very successful campaign on European track the past season, has met with a very grievous misfortune during the last week in the death of his second eldest daughter, Nona, and the serious illness of his wife and youngest child, Blanche. The mother and child are now in the hospital in Dresden.

Baltimore Races Indefinitely Postponed.

The motorcycle races scheduled in Baltimore, Md., on Thanksgiving Day were postponed to the following Saturday, on account of rain; but, on that day, the track at Electric Park was in such a poor condition that the meet was called off inde-

Bicycle Exports Increase Heavily.

Bicycle exports from the United States during September, 1911, showed a very material increase over those of the corresponding month of last year; the valuations being $90,620 and $58,098 respectively.

ALL INTERESTED IN CYCLING SHOULD CONTRIBUTE

Sportsmanship and Patriotism of Cyclists Appealed To — Small Contributions as Well as Large Ones Acceptable — How to Help Without Personal Expense Explained — Big Dinner at Hotel Earlington January 10th.

Subscriptions Pledged to the American Olympic Bicycle Race Fund.	
B. A. Swenson, Providence, R. I.	$10.00
H. A. Gliesman, New York	10.00
C. T. Kilborne, East Orange, N. J.	5.00
United Cyclists (Collection)	10.00

J. A. Hall, Brooklyn, N. Y.	5.00
M. J. Zulzer, Brooklyn, N. Y.	5.00
New England Wheelmen	20.00

The fund for the purpose of sending an American bicycle team to compete in the Olympic road race at Stockholm, Sweden next July seems to be assured, if the correspondence being received at the headquarters of the committee can be taken as a forecast. A big meeting is to be held at Baltimore in the near future for the purpose of organizing a branch of the United Cyclists, and raising funds in that city. The New England Wheelmen of New York have pledged $20 to the fund. A large number from all parts of the country have signified their intention to contribute. The manuafcturers are becoming enthusiastic over the project, and no doubt will be liberal in their contributions. It is evident, however, that the shortness of time in which to raise the necessary $4,500 has not been realized; and it is necessary for this point to be impressed very strongly on all who desire to see an American team victorious in this race. James E. Sullivan of the General Olympic Committee has stated that in his opinion America can sweep the boards in the Olympic games of 1912, and there is not an American who would not become enthused if the wires were to tell us next July that America lead the way in every Olympic event in which this country was represented. How much more so would they feel if they had contributed to the fund for sending one of the teams over. It is not necessary that everyone should contribute $100 or even $10, or to come down lower still, $1. If every bicyclist in the country would send in 25 cents at once, the United Cyclists could tell the General Committee that a team of 12 bicycle riders would be provided for. It is now planned to hold some kind of a benefit in practically every large city of the country during the latter part of January, and the committees are now working on the plans. The oldest cycling organization—the Boston Bicycle Club—through the activity of Will R. (Happy Days) Pitman, is planning to make a substantial contribution to the fund.

Dinner to be Held at Hotel Earlington.

The plans for the dinner to be tendered by the United Cyclists in conjunction with the Motorcycle Dealers' Association of Greater New York to the bicycle, motorcycle and accessory manufacturers on January 10th are progressing rapidly, and the tickets will probably be sent out within the next week. It will be held at the Hotel Earlington, on West 27th street, New York. Prominent men in public life and the trade signify their intention of being present. Borough President Steers, of Brooklyn, has already sent in a definite acceptance of the committees' invitation. Acceptances from prominent men to serve on the Honorary American Olympic Bicycle Race Committee have also been received as follows:

"Your favor of November 29 addressed to Mr. Hamilton is before me. In connection will say that Mr. Hamilton is now in the West. I am accepting your invitation on behalf of Mr. Hamilton, and we are sure that he will be willing to co-operate with you and act on your Committee."—Fred I. Willis.

"On my return from Savannah, I found your letter of November 24th awaiting me with its very flattering invitation to be present at your banquet on January 10. You must realize how busy we newspaper men are around show time, but my interest in bicycles has lapped over to its younger brother, the motorcycle. I will somehow manage to drop in around cigar and coffee time to meet, no doubt, many old friends of bicycle days gathered round your social board, and shall also feel honored to serve on your Honorary Committee. Best wishes to your association."—John C. Wetmore, of the Evening Mail, New York.

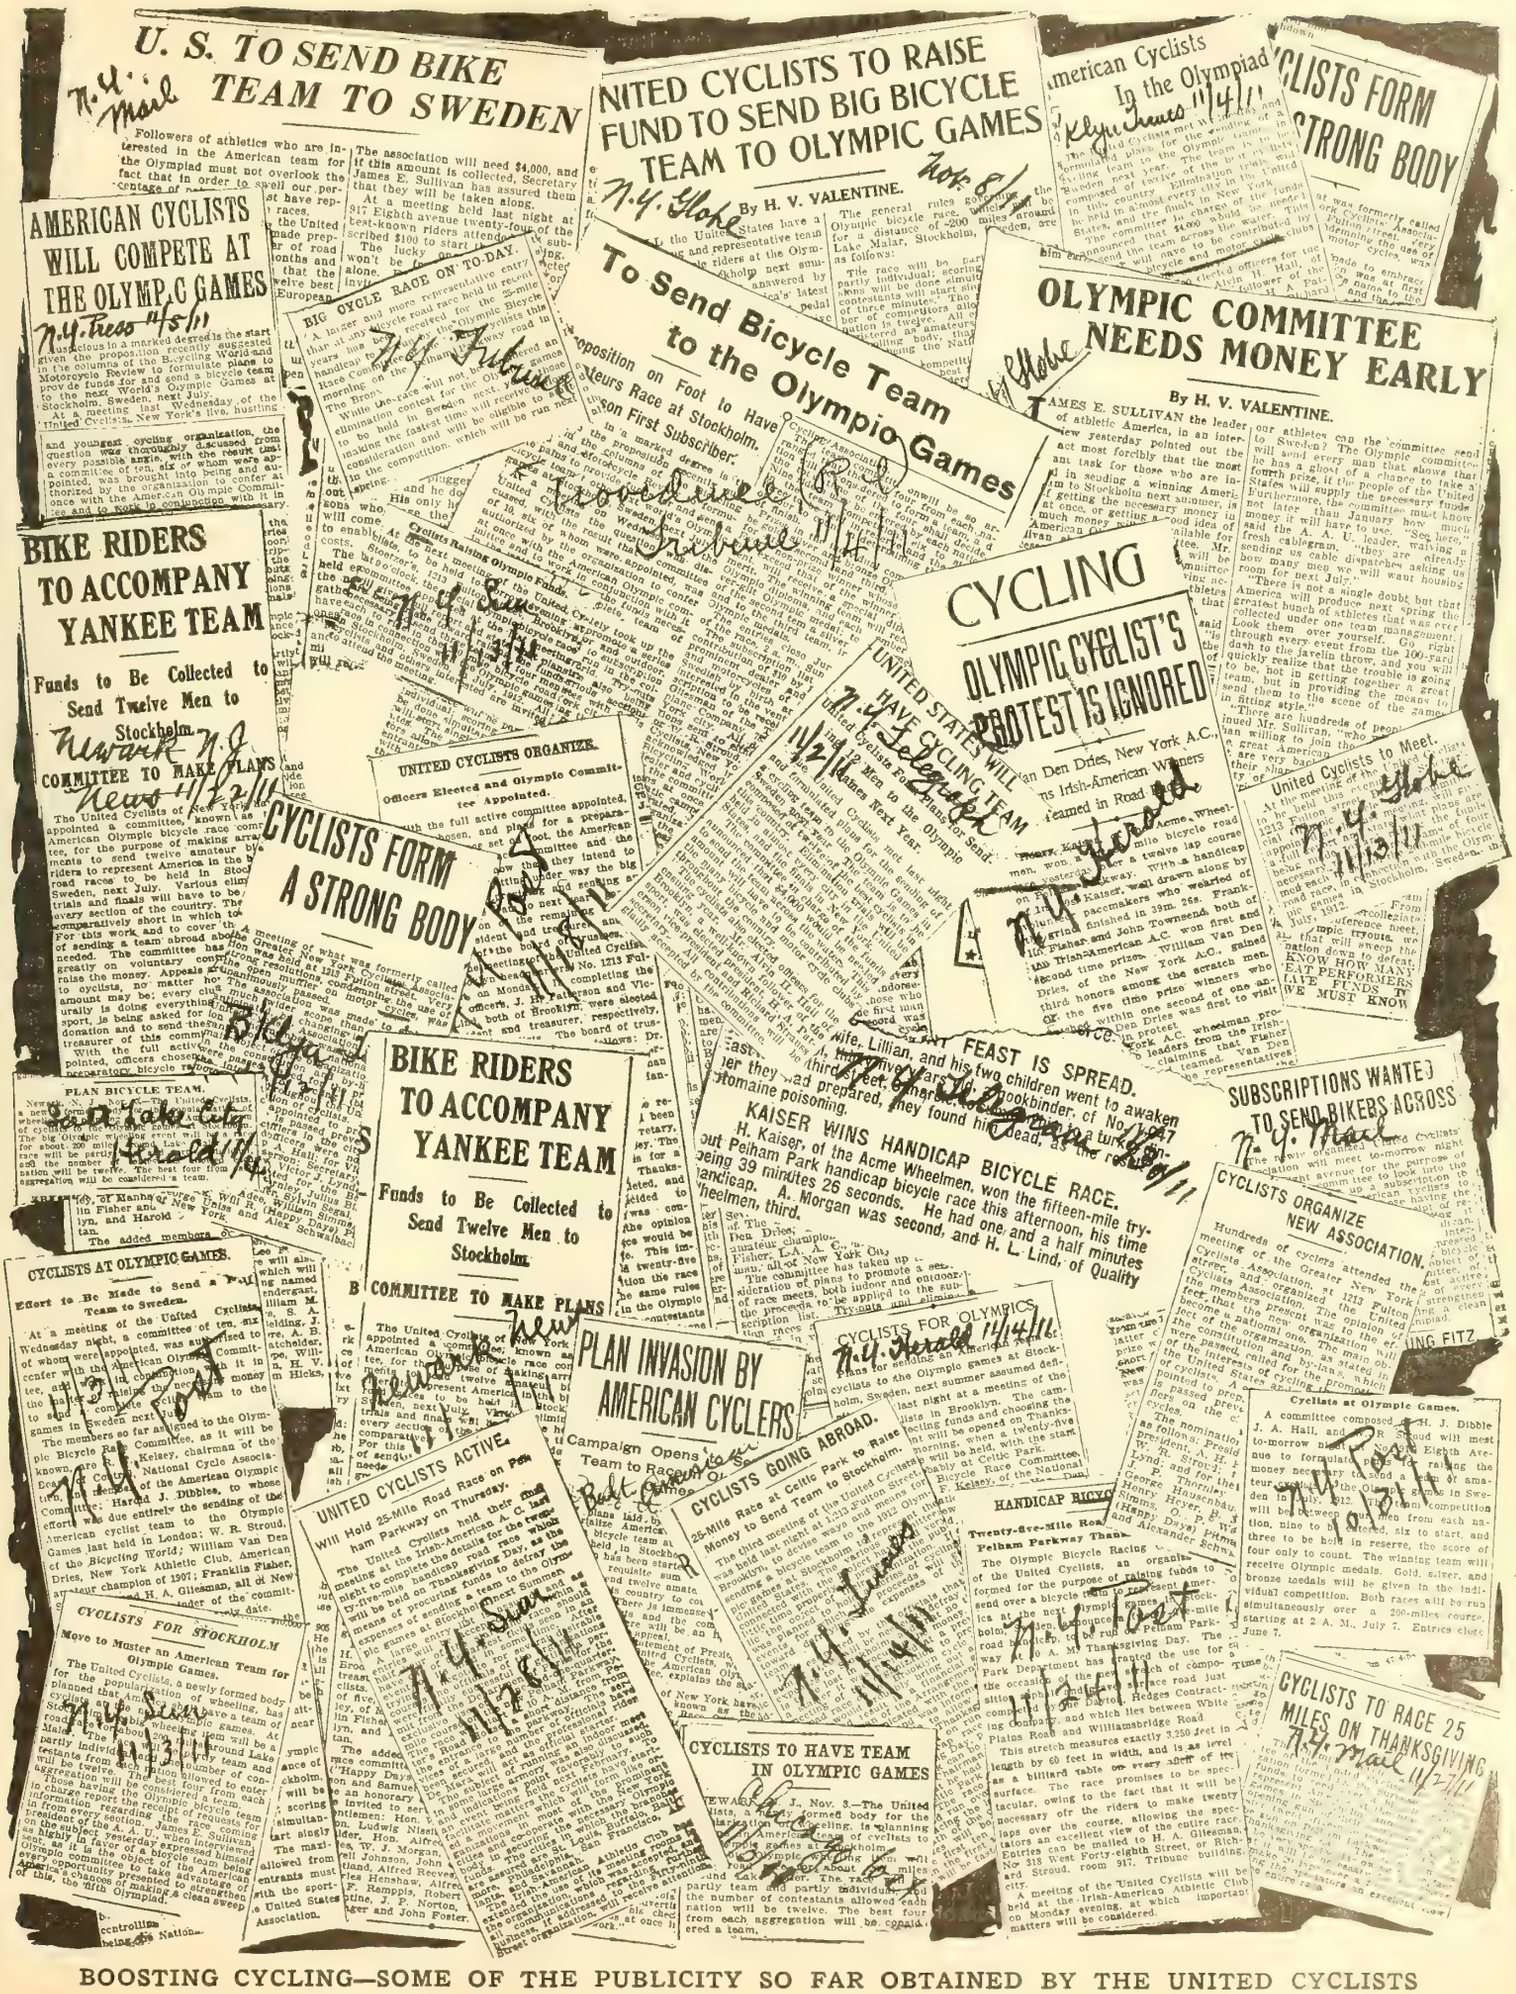
"I have your favor of November 29 regarding the serving on the Honorary Committee of the United Cyclists, and will state that I shall be pleased to accept this appointment, and thank you for your consideration."—George M. Hendee, of the Hendee Manufacturing Co.

"I have your letter of November 21 in regard to being a member of the Honorary Committee in reference to selecting a bicycle team for contest in Europe next year, and in reply will say that I will be glad to have you use my name."—J. Lovell Johnson, of the Iver-Johnson Arms and Cycle Works.

"I am in receipt of your favor of November 21st asking me to allow my name to be used as a member of the Honorary Committee which you wish to appoint in connection with the participation you contemplate in the Olympic games to be held in Sweden next year, and in answer will say that you may have the privilege of using my name in that way."—Ludwig Nissen, New York.

"I shall be pleased to be with you at your dinner on the evening of January 10, and if you think that the inclusion of my name in your Honorary Committee in connection with the cycling representation at the Olympic games will be of any value, I shall be glad to have you use it.'—A. G. Batchelder, New York.

Governor Dix Extends Best Wishes.



"The Governor directs me to extend to you his very best wishes for a very successful banquet on the evening of January 10."—Harry G. Underwood, Secretary to Governor John A. Dix, New York.

"In reply to your favor of the 21st ult., requesting me to serve on the Honorary Olympic Bicycle Race Committee, I will say that I am most heartily in favor of America sending a bicycle team to ride in the Olympic Road Race and therefore take pleasure in accepting the appointment.

"I have always taken great interest in cycling, and, now, of course, am more interested than ever before. The United Cyclists and the American Olympic Bicycle Race Committee of that organization have my very best wishes for success."—A. B. Swetland, President Bicycling World Co.

Tremendous Amount of Publicity Obtained.

The value of this event, and the preliminary elimination, trials and contests through the publicity obtained in the newspapers throughout the country is beyond any price to the manufacturers and the dealers. The number of these press notices that have already appeared in the various papers is nothing less than remarkable. The reproduction of a few will be found on the next page. All this has been secured in practically a month's time. Press notices are being sent out weekly to 500 newspapers in all parts of the country. This is positively the best kind of advertising for cycling that could possibly be secured

BOOSTING CYCLING—SOME OF THE PUBLICITY SO FAR OBTAINED BY THE UNITED CYCLISTS

at any cost. To-day, in this country, bicycling is in such a position that it simply needs some big move, such as these Olympic games will be and the attending publicity, to make it even more popular with the general public as a sport than it has ever been, even in the booming days of a few years ago. At that time, it was a fad. To-day, with its revival, it will be on a healthy basis, and mean a continued steady growth for the trade. The wise manufacturers and dealers are already beginning to realize what an American team winning this event would mean to them; and as soon as they do so to the full extent, there will be no further question about raising the necessary money for the expenses of the team.

Many, possibly, who do not feel that they can afford to make a contribution to the fund from their own pockets are taking advantage of the offer of the Bicycling World Company. This offer makes it possible for anyone to contribute to the Olympic fund without taking a penny from their own pocketbook, and at the same time reseiving a dual benefit for a single investment. Some are taking this opportunity to make a Christmas gift to a fellow cyclist by subscribing to the Bicycling World and Motorcycle Review for them, sending the same to H. A. Gliesman, 782 Eighth avenue, New York City, and being credited with one-half of the regular subscription price of $2.00 as a contribution to the Olympic fund.

Important Meeting Next Monday Evening.

The next meeting of the United Cyclists will be held on Monday evening, December 18, at 9 P. M., at Stoetzer's Hotel, 1213 Fulton street, Brooklyn. Very important business will be taken up, including a report of the Thanksgiving Day Race. The regular meeting will be followed by a "Dutch"—something to eat—something to drink, and a smoke. The committee have arranged for a pleasant time. Prizes won on Thanksgiving Day will be given out probably at the meeting to be held on December 27. A dinner for the officials and winners of the race will be held on Tuesday evening, December 19.

Harry Gliesman's Store Burglarized.

The store of the Tiger Cycles and Aeroplane Company, 782 Eighth avenue, New York, of which H. A. Gliesman is the proprietor, was broken into on Sunday afternoon, December 3, and a new $50 Pierce bicycle and about 75 cents in cash was taken. The store is closed at noon on Sundays, but Gliesman has occasion to return about half-past three in the afternoon, and as near as can be figured the robbery occurred about four o'clock, and the perpetrator was a boy about twelve years old, who had broken a window pane in the back of the store, and in this way reached the bolt on the back door, which admitted him. Pedals had never been attached to the bicycle he took, but this fact he evidently did not discover until he reached the sidewalk. He then apparently did not know what to do with the elephant on his hands and a policeman saw him acting suspiciously with the wheel and called to him. With this he dropped the bicycle and skipped. Why the officer did not go after him has not been explained, but at any rate Gliesman secured the stolen property by proving ownership at the police station the following day, finding his wheel there on calling to report its theft.

SUPERINTENDENT BIGGAM DINES PIERCE FACTORY FOREMEN

Department heads of the Pierce Cycle Co., Buffalo, N. Y., recently were the guests at dinner of their chief, H. F. Biggam, superintendent of the plant. Reading from left to right the party is as follows: Standing—H. G. Pauer, T. M. Rogers, H. F. Biggam, J. I. Zeitler, J. I. Miller, N. J. Dobel, G. A. Stevens, A. L. Rose, W. G. Seymour, J. Baxter, E. W. Glose. Sitting—H J. Martin. W. J. Lutz, W. H. Boone, S. C. Wilson, C. G. Kaelin, R. H. Smith, J. J. Wilson, P. L. Boehmholdt.

JAPANESE PLACE LARGE ORDERS

One Thousand Pierce Bicycles for Manishi Shokai, Yokohama—American Bicycles and Motorcycles Popular.

The Pierce Cycle Company, manufacturers of the Pierce motorcycles, Buffalo, N. Y., have closed a contract for 1,000 bicycles to be shipped into Japan within the next three months, and this will be followed, it is stated, with a like shipment a few months thereafter. The Pierce Company state that their bicycles will be sold in Japan in great volume during the coming year than at any time in the past, as their representative features the American machine in advance of English and German bicycles, which they also represent. In addition to representing the Pierce bicycles, Manishi, Shokai, Yokohama, also sell Pierce motorcycles to a considerable extent. The Pierce business abroad is of very extensive proportions, and bicycles and motorcycles are continually sold in the various Latin-American countries, England and the Phillipines, Japan and Australia. To facilitate foreign shipments, many of these orders are handled through the Oakland branch of the company.

Atlas Bicycle Club Will Entertain.

Quite the most promising program of entertainment that has been offered in some time in metropolitan cycling circles is that for the first annual smoker under the auspices of the newly organized Atlas Bicycle Club which is to be held the evening of December 16 in the assembly room at Stoetzers Hotel, 1213 Fulton street, Brooklyn. A few of the numbers, all headliners, presented are: Selections by Thomas Gougie, baritone; some new demonstrations of the mystic art by the magician, H. Newton, both gentlemen being among the most popular of Brooklyn entertainers, and the club's own well-known quartette, consisting of Messrs. Jas. Mangles, J. Hedden, J. Malone and William Smith. When the date first was announced, it was feared that it would prove detrimental to the success of the smoker, as it falls on "six-day" Saturday, but as the race is finished at 10 P. M., many cyclists are planning to attend the smoker immediately after the finish of the race, as transportation facilities are very favorable.

Morgan Finished in Second Place.

Owing to typographical error in the summary of the Thanksgiving Day race of the United Cyclists on Pelham Parkway, New York City, as published in these columns, December 2, the name of A. Morgan, unattached, riding with a handicap of one minute 45 seconds was omitted; Morgan finished in second place instead of J. Townsend as published. Morgan's time for the 15 miles was 39:41⅗.

Latest F.A.M and Club News.

TRADE EXTENDS A HELPING HAND

Shop Registration Still Climbing—235 New Members for November—Publicity Leaven Working.

Glad tidings of generous support by the trade in the campaign for new members, a healthy increase in registered repair shops, publicity assistance from the bicycle jobbers, and promise of several new clubs from enthusiastic local F. A. M. workers, make the latest bulletin from E. M. Estabrook, chairman of the F. A. M. membership committee, unusually pleasant reading. Credit for lining up the trade in support of the organization belongs to such hard workers as Estabrook and Gibson, who pitched in and showed that the F. A. M. was willing to help itself before asking help of others. In consequence, when aid was solicited it was easily obtained on the strength of what already had been accomplished.

Local workers who are organizing clubs in their cities and towns are H. A. Williams, Amherst, O.; Maurice M. Welsh, Delaware, N. J.; David Klein, Jersey City, N. J.; L. Westfort, Meriden, Conn.; John A. Curran, Jr., Cohoes, N. Y.; B. C. Wildman, York, Neb.; Rudolph Baeuerle, Philadelphia, Pa. The latter writes encouragingly of local conditions and already has 35 riders pledged for his club, with prospects of 50 when the movement gets under way.

Secretary Gilbert, of the Colton (Cal.) Motorcycle Club, which traces its ancestry back to the early part of November, reports that by-laws and affiliation will be acted on soon. Charles I. Page, a dealer in Greenfield, Mass., has joined the procession, by hanging out a registered repair shop sign, and sending out "C. Q. D." calls to local riders to join his club now in the making.

With the advent of winter and the storing of thousands of machines until the robins chirp again, the chairman suggests that riders get together often and talk over plans for next year, discussing runs and tours to interesting points. Such gatherings will help to maintain interest during the period when motorcycling largely becomes a paper or theoretical sport. Where there are no clubs it is suggested further that such meetings take up the advisability of launching a club and renting or purchasing suitable quarters.

Working the membership campaign to the limit of its possibilities, membership recruiting stations are being placed with registered repair shops. The latest shops to register and secure appointments are the following: S. P. Birkenbach Co., 17 N. Fourth street, Columbus, O.; Finch & Hayes, 275 High street, Hartford, Conn.;

C. C. WILBER
Ex-Vice-Pres. F. A. M. Eastern Division

G. W. Campbell Co., 304 W. Fourth street, Waterloo, Ia.; G. H. Westing Co., 325 N. Delaware street, Indianapolis, Ind.; S. C. Hamilton, 131 Collin avenue, Pittsburgh, Pa.; W. P. Glasgow, 104 S. Tenth street, Tacoma, Wash.; E. H. Swartz, Elwood City, Pa.; Rainsford French, Billings, Mont.; W. J. Flesh, 1627 S. Jefferson avenue, St. Louis, Mo.; J. P. Wolf, 411 W. Market street, York, Pa.

Shops which have re-registered are A. G. Schmidt (Motorcycle Exchange), 106 Whitfield street, Pittsburgh, Pa.; F. W. Anderson, 147 Hudson avenue, Albany, N. Y.; H. D. Hanna (Cuyahoga Motorcycle Co.), 803 St. Clair avenue, N. E., Cleveland, O. The F. A. M. will publish a complete list of registered repair shops in the spring, which will be distributed to all members. Therefore the chairman points out that now is the accepted time for dealers to register and secure appointments and take advantage of the publicity and profit which will accrue to them through being included in the motorcycling "400." It also is recommended that dealers give the address of their place of business in preference to post office box numbers, in order that a motorcyclist who needs shop service can locate a station easily. The value of an F. A. M. repair shop sign also is emphasized as an eye catcher and business getter, and there is promise that these signs will become familiar objects in Canada, too. Dealers who are members of the F. A. M. can register their shops free, while other dealers also can do so on the same basis after joining the organization. Dealers desiring to join or to register their shops are invited to address the transportation and facilities committee, Secretary Gibson or Chairman Estabrook.

Twenty American motorcycle manufacturers, including all the leading makers, now are sending out F. A. M. literature in the tool boxes of their machines when shipped from the factory. The Hawthorne Mfg. Co., Bridgeport, Conn., manufacturer of Old Sol lamps, and one of the strongest publicity boosters for the F. A. M., also are enclosing the booklets in their lamps. The Sun Motor & Supply Co., New York City, American representative of the N. S. U. motorcycle, also is including F. A. M. propaganda in the equipment on its machines.

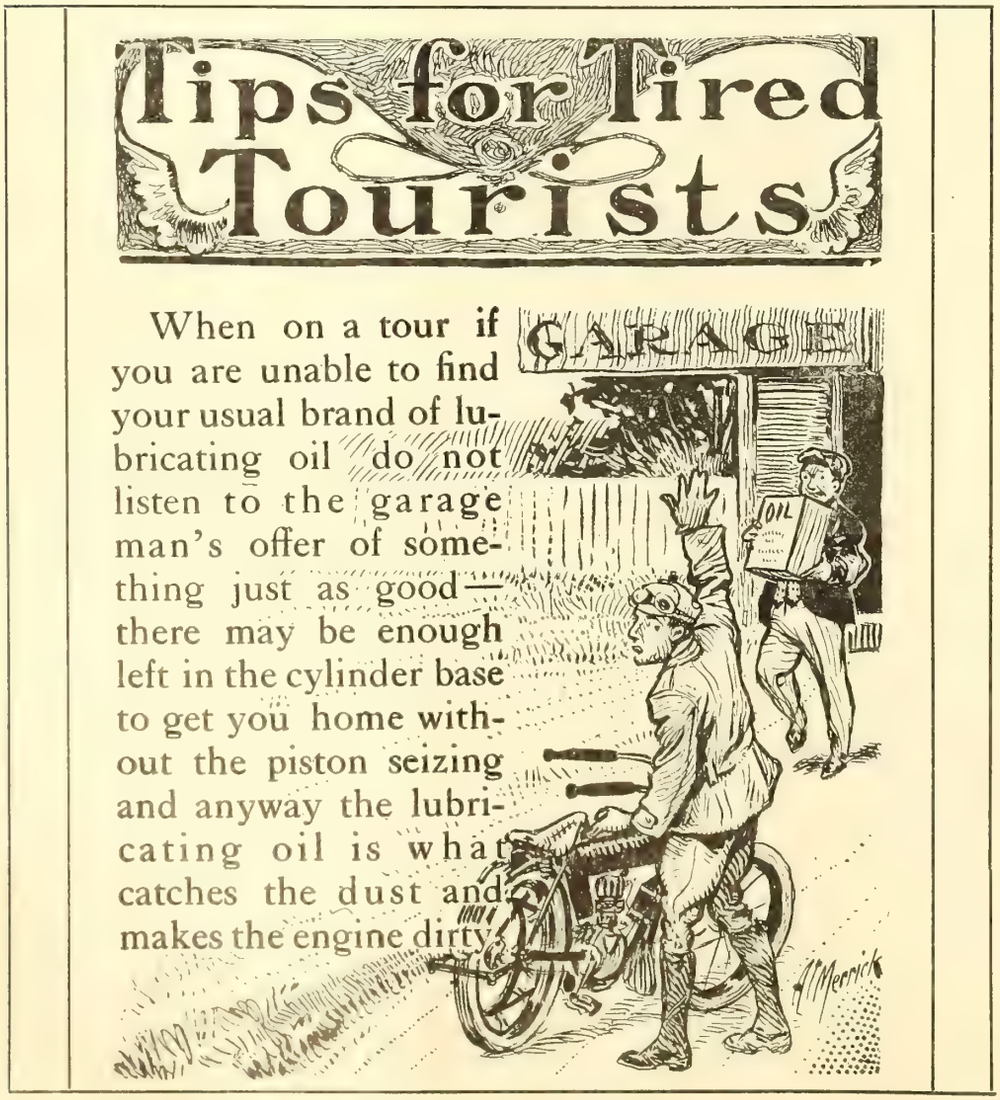
It will be pretty hard to pick up a 1912 bicycle jobber's catalog and not find something about the F. A. M. in it, for 27 of the leading members of the leading members of the National Bicycle Jobbers' Association have agreed to give half a page of their next year's catalog to F. A. M. publicity. The Hendee Mfg. Co. likewise have donated half a page of their house organ, and four other makers will give space in their catalogs to booming the F. A. M. The Hawthorne Mfg. Co., Bridgeport, Conn., naturally follow suit, and the three leading trade journals, in addition to a prominent automobile and motorcycle journal, are constantly devoting prominent space to the doings of the organization.

California carried off the State membership honors in the F. A. M. scramble for

recruits during the month of November, with 57 new members. The Southern States also came well to the front, ranking second and third. The total gain was 235, and the individual increase by States was as follows: California, 57; Georgia, 31; Louisiana, 29; Pennsylvania, 14; Ohio, 10; Indiana, 9; Illinois, 8; Florida, 8; Missouri, 8; New York, 7; New Jersey, 7; Kansas, 6; Washington, 6; Texas, 6; Wisconsin, 5; Iowa, 4; Colorado, 3; Minnesota, 3; Nebraska, 3; Michigan, 3; Massachusetts, 2; Oregon, 2; Maryland, 2; Alabama, 2; Connecticut, 1; Virginia, 1; Tennessee, 1. Total, 235.

There were 84 renewals of membership apportioned among the following districts: Atlantic, 28; Lake, 24; Central, 11; Southwestern, 10; New England, 5; Pacific, 4; Gulf, 2. New membership by districts, showing distribution among affiliated and non-affiliated clubs, is detailed below:

Affiliated	District	Non-Affiliated
0	New England	3
25	Atlantic	6
28	Lake	15
34	Gulf	1
40	Peninsular	2
55	Southwestern	2
6	Pacific	2
14	Central	2



CANADIAN SITUTATION CLEARS

Pleasing Result of Recent F. A. M. Decisions Concerning Racing and Other Matters.

Toronto, Dec. 5.—Canadian motorcyclists are highly pleased at the manner in which the F. A. M. affiliation situation is shaping up. The Federation is granting privileges that the Northern riders never dreamed would be their lot to enjoy, and it is realized more and more that a huge mistake was made when the decision was reached to ignore the invitation of the F. A. M. to enter the organization.

The concession granted allowing Canadians to arrange for their own meets and endurance runs without undergoing the necessity of asking and paying for an F. A. M. sanction, has made a decided hit among the Maple Leaf enthusiasts, and has engendered a feeling of kindliness that otherwise might not have been obtainable. It is felt that the Federation has placed the Canadian clubs upon their honor to do the right thing, and the assurance is given that the Canadian riders will be good boys.

The Northerners feel highly honored that the Federation should see fit to send a representative to Toronto to confer with the clubs for a more amicable arrangement. The man selected, J. Leo Sauer, of the Legal Action Committee, will not find the Canadians a horde of Chinese insurgents, and it is not anticipated that his task will be a peculiarly arduous one. There are problems that will need untangling, but when the Federation governors obtain a first hand view of the situation, these should prove fairly easy questions. The establishment of a set of Canadian records; the division of the country into several districts; the encouragement of the formation of new clubs; the appointment of officers for representation on the F. A. M. board; these are some of the matters that will have to be threshed out. Canadians are all agreed now that the protection offered by the F. A. M., is the one best arrangement for the good of the game in their country, riders in all parts of the Dominion having voiced their sentiments favoring a relationship with the U. S. A. governing body. Numerous letters from enthusiasts everywhere have been received, expressing confidence in the F. A. M., and the path to a close alliance looks rosy.

Trade Smoker to Wind-up Chicago Show.

What is planned to be a gigantic "round up" of motorcycle prospects in a "corral" where they can mix with riders and the trade, and see what sort of men ride and sell motorcycles, and what pleasure is to be derived from motorcycling, is being engineered by the North Shore Motorcycling Club, of Chicago, in the shape of a banquet smoker to be held Saturday, February 10, the closing night of the Chicago motorcycle show. Covers will be laid for 1,000 guests, and free tickets and programs will be distributed at the show. It is intended to put 7,500 tickets and programs in circulation. The affair will be held in the banquet room of one of the leading hotels, and following the full course dinner, will be seven standard vaudeville acts and other "doings." It hardly is necessary to state that about everything smokeable except cornsilk, rope and opium will be provided in abundance. It is the largest motorcycle function ever projected in the Middle West, and, having for its object the creation of new enthusiasts, deserves all the support the local trade and clubs can give it for they will be the chief beneficiaries.

Visalia Motorcyclists Form a Club.

E. H. Dorsey was elected president of the new Visalia (Cal.) Motorcycle Club at the organization meeting. Other officers chosen were Albert Kitto, vice-president; Victor Sharp, secretary; A. B. Shippy, treasurer. Fifteen riders were present at the founding proceedings, and great quantities of "rah-rah" noise was made.

WOLTERS BEATS PREVIOUS RECORDS

In Five and Ten Mile Events at Oakland—Unrecognized as Records, However.

Oakland, Ca., Nov. 27.—As usual, "Joe" Wolters was cast in the "leading roll" in the motorcycle races at the Elmhurst motordrome yesterday. He cashed first place every time he lined up, although Ray Seymour tried hard to break the regularity of the Denverite's winning streak, but to no avail. And, as usual, "world's records," on paper, were broken. Wolters was clocked for five miles in 3:25⅗, and 10 miles in 6:54, both performances being considerably under the recognized American professional records, but because of noncompliance with the record trial rules, these figures are of but local track value.

Owing to considerable oil on the pole, Wolters rode the center of the track, so that lower his time might have been faster. Despite his defeat by Wolters, Armstrong, his team mate extracted some satisfaction, and some money too, from a double victory over the Samuelson brothers. O. C. Walker, breezed home first in the five mile amateur fandango, and C. Weaver, was the bell sheep in the two mile ramble. Summary:

Five mile open, professional—Won by Wolters (Excelsior); second, Seymour (Indian); third, Armstrong (Excelsior). Time, 3:25⅗. Record, 3:29⅕. New figures not official.

Ten mile open, professional—Won by Wolters (Excelsior); second, Seymour (Indian); third, Armstrong (Excelsior). Time, 6:54. Record, 7:01⅘. New figures not official.

Three mile open, professional—Won by Wolters (Excelsior); second, Seymour (Indian).

Two mile open, professional—Won by Armstrong (Excelsior); second, T. M. Samuelson (Indian); third, W. M. Samuelson (Indian). Time, 1:27⅗.

Five mile open, amatuer—Won by O. C. Walker (Indian). Time, 4:11⅘.

Two mile novice—Won by C. Weaver (Indian). Time, 2:24.

Texans Hold Interesting Races.

On November 30, the San Antonio (Texas), Motorcycle Club held its best and probably its last race meet for the present season. The meet was run off without an accident of any kind, and as the track was in very good condition some good time was made. The star of the meet was O. Leoloff, mounted on a Thor IV who was entered in five events, and took first place in each with the exception of the seventh, which was a free-for-all for the Hendee cup, and was won by H. B. Wickwire on a 7 Indian. Wickwire and O. Leoloff traveled neck and neck for the entire distance of nine miles, but the former had the speed on the stretch which won the event for him. Summary:

Twelve miles (16 laps), 30½ class—Won by O. Leoloff (Thor); second, H. B. Wickwire (Indian); third, E. L. Miller (Indian). Time, 13:41.

Match race, 30½ class, 6 miles (8 laps)—Won by O. Leoloff (Thor); second, G. Owfer (Waverly).

Twelve miles (16 laps), 61 class—Won by H. B. Wickwire (Indian); second, M. Derr (Indian); third, E. L. Miller (Indian). Time, 12:54.

Match race, 61 class, 9 miles (12 laps)—Won by E. L. Miller (Indian); second, M. Derr (Indian). Time, 5:32.

Fourteen miles (18 laps), 30½ class—Won by O. Leoloff (Thor); second, E. L. Miller (Indian). Time, 14:27.

O. LEOLOFF, STAR AT SAN ANTONIO

Nine miles (12 laps), handicap, 61 class and under—Won by O. Leoloff (Thor); second, E. Eckenroth (Excelsior); third, M. Derr (Indian). Time, 9:32.

Nine miles (12 laps), free-for-all for Hendee cup—Won by H. B. Wickwire (Indian); second, O. Leoloff (Thor); third, M. Derr (Indian). Time, 9:35.

Big Indoor Track For Chicago.

The Association of Commerce, in Chicago, has perfected plans for a $2,500,000 structure to be called the White Sox Exposition Building, which will provide the largest and finest indoor motorcycle track in the United States, as well as a place for holding exhibitions and conventions, with a seating capacity of 35,000 people. The building, it is planned, will be several times larger than the Coliseum, and will be suitable for athletic fetes of every description. The new building receives its name from the famous ball park "The White Sox," which will be directly opposite. It is expected the building will be ready for use early next season.

FAST RIDING AT OAKLAND SAUCER

Wolters Makes a Clean-up in Open Pro. Events—President Hamilton a Spectator.

The Excelsior riders scored a clean victory in the professional events which were held at the Elmhurst Motordrome, Oakland, Cal., December 3, while the Indians took the victory in the amateur races. Wolters continued to hold his place as "speed king" and while he lowered none of his previous records, nevertheless, he did some fast work. He took the first heat of the professional handily from his team mate, Armstrong, averaging a mile in 0.41⅕. In the final he again defeated Armstrong, covering the six miles in 4:09⅕. The ten mile free-for-all was also an easy victory for Wolters. He got off first and held that position throughout the race, although in the seventh lap he was being pressed closely by Armstrong when the latter threw a tire and was forced out of the race, Balke taking second place and W. Samuelson, the Indian rider ,third.

In the two mile special race for professionals, W. Samuelson out-jockied Albright for the first place in the last eighth of a mile of the race. Albright looked to have the race well in hand when Samuelson shot out from behind and came under the tape the victor by several yards. Kohl, an added starter, riding an Indian, captured the five mile amateur race from Oberg and Lorenzen. President G. H. Hamilton of the F. A. M. was a spectator and was highly pleased with the races. He says that the Oakland saucer is one of the fastest in the country. Summaries:

Three mile professional in two heats; first heat—Won by Wolters (Excelsior); second, Armstrong (Excelsior); third, W. Samuelson (Indian). Time, 2:04. Second heat—Won by Balke (Excelsior); second, Ward (Indian); third, T. M. Samuelson (Indian). Time, 2:13.

Six mile professional, final—Won by Wolters (Excelsior); second, Armstrong (Excelsior); third, Balke (Excelsior). Time, 4:09½.

Two mile amateur, 30½ class, stock machines, fully equipped—Won by Martin (Indian); second, Weaver (Indian); third, McVey (Indian). Time, 2:19.

Two mile professional, special race—Won by W. Samuelson (Indian); second, Albright (Indian); third, T. Samuelson (Indian). Time, 1:31⅗.

Ten mile professional, free-for-all—Won by Wolters (Excelsior); second, Balke (Excelsior); third, W. Samuelson (Indian). Time, 6:57⅗.

There are 3,655 motorcycles registered in Massachusetts. This is an increase of 50 per cent. over 1910.

Thanksgiving Day Races in Florida.

Cold winds scared off several of the entrants in the motorcycle races of the Jacksonville (Fla.) Motorcycle Club, at Moncrief Park, Thanksgiving Day, November 30, but the handful of game speed merchants who refused to be intimidated by old Boreas, gave the large crowd present plenty of opportunity to stimulate their circulation and keep warm. "Pinkie" Edgar was the hero of the meet, winning the city championship and two other choice firsts. Felton Rawlings, outclassed the other professionals so far that he loafed and the officials did not bother to time him. Camplejohn salted away first place in the private owners scramble, and Mitchell Yeager batted out the winning sprint in the single cylinder everybody out for 10 miles. Summary:

Five mile private owners, single cylinder, belt drive—Won by P. Camplejohn (R. S.). Time, 7:52.

Ten mile free-for-all, stock singles—Won by Mitchell Yeager (Indian). Time, 15:30.

Ten mile city championship, singles—Won by Edgar (Indian). Time, 12:40.

Ten mile stock, twins—Won by Edgar (Indian). Time, 12:50⅘.

Twenty mile handicap—Won by Edgar (Indian). Time, 21:30⅘.

DeRosier Entertains Coast Correspondents.

Los Angeles, Cal., Dec. 8.—Jake DeRosier is back from "Lunnon town," New York, Chicago and other points East. As soon as it become known that he was in town the correspondents flocked to him for something new about his experiences abroad. "The real crowd follows the motorcycle sport in England," he said, "and business and professional men have their motorcycles as well as their limousines. And they ride their motorcycles, too. In one race on Brooklands, I rode against a field of contestants reputed to be worth a million pounds or $5,000,000 in the aggregate." DeRosier's leg which was hurt in a spill at Guttenburg, N. J., is still insurging, and he says that he will not ride for some time.

Planning Big Race For Indianapolis.

Following out the idea suggested by E. G. Baker, the Indianapolis motorcyclists want to pull off something big on July 4 next, in the way of an international motorcycle race on the Indianapolis Motor Speedway which is just outside of the city limits. It is reported that some good live men are interested in backing the proposition. Baker, not long ago, went out on the speedway and tore off a mile in 40 seconds against a stiff, cold wind. He made the circuit a great number of times and broke all Indiana "records," and after finishing his performance declared the brick track was great for motorcycle racing and would be an ideal place for a race meet.

The Indiana Motorcycle Club, of Indianapolis, at a recent meeting, decided to go ahead with the plans, having in mind the 500 mile automobile sweepstakes which were held on the Speedway last year, and feel certain that large enough inducements could be offered to get the best riders in the world entered in the race. Carl G. Fisher, president of the Speedway Association, has shown some interest in the proposed motorcycle event and the proposition is to be put before him officially by the Indiana Club next week. President G. H. Hamilton and F. I. Willis of the F. A. M., are reported as also being interested and in favor of such an event.

Late Doings in the Blue Grass State.

Louisville, Ky., Dec. 8.—The Louisville Motorcycle Club has the "come back" habit, and has retaken possession of its former quarters at 444 Fourth street. After deciding to return to its old rendezvous the club turned painters and decorators loose on the premises and they remodeled the rooms in classy fashion. Now the club has quarters to be proud of, and with this as a prime attraction, is waging a vigorous campaign for new members. It already is the largest and most active club in the Blue Grass State.

Motorcycles are "catching on" in business lines in this city in an encouraging way that indicates a big demand from this field later. The Diamond Rubber Company branch is using a Thor IV for errand and delivery work. To find out how well motorcycles are adapted for its requirements the Louisville Lighting Company just has commissioned a Thor IV, and if it "makes good," eight more will be purchased. Armour & Co. have an Indian and Harley-Davidson, both singles, in service.

An echo of a famous motorcycle swimming party one day last summer, was heard in court last week, when 15 riders of a well known make of machine were fined $9.01 each for hanging their clothes on a hickory limb and failing to stay in the water. The modern Garden of Eden was located on a creek about 15 miles from the city, and while the party was in the midst of their ablutions the police descended on them, took their names and summoned them to court. Chorus of the unfortunate 15: "We will now take our swims in a bathtub."

New York's Long Promised Motordrome.

If New York City doesn't have a board motorcycle motordrome next season it will not be for lack of prospective builders. To the three or four promoters who already are talking about putting up a track, has been added the Metropolitan Motor Racing Association, composed of well known newspaper men, who conducted a few motorcycle meets at Guttenberg, N. J., this fall. They have interested some wealthy automobilists in a motorcycle track, and are quietly formulating plans, although nothing definite has been done yet except considering several sites and securing estimates on land and lumber.

Heard In and Around the Trade.

The Fisk Rubber Co., Chicopee Falls, Mass., is building an addition to its plant.

There are 200 motorcycles in use in Reading, Pa. A 50 per cent. increase is looked for next year.

Voss Bros., Peoria, Ill., will sell Excelsior motorcycles for 1912. They had the same agency this past year.

David Stoetzel, 407 Francis avenue, Schenectady, N. Y., has secured the local representation for Flanders motorcycles.

William Greenspun, 839 Main street, Bridgeport, Conn., has secured the agency for the Flying Merkel. He reports having already sold 25 machines.

Boshen Bros., West Orange, N. J., have closed for the Excelsior for next year. Heretofore they have represented the Reliance.

Rullman Bros., of Louisville, Ky., who conducted a motorcycle store at Broadway and Barrett streets, have shut up shop and retired from the business. They held a sub-agency for the Indian.

Austin W. Burges, Houston, Texas, one of the leading motorcycle dealers of the Southwest, has been appointed South Texas distributor for the Excelsior. He already handles the Indian and Merkel.

Walter Bowers, 1194 N. High street, Columbus, Ohio, has embarked in the motorcycle business. He has secured a sub-agency for the Indian, and will operate a complete repair shop in connection.

Percy Drummond, Newark, N. J., the well known racing man, has become connected with the new Indian agency which Walter Goerke, also a former racing star, has opened in that city. Drummond will have charge of the repair department.

One of the largest motorcycle orders ever placed in the Middle West is that of C. H. Lang, Chicago, Ill., who has contracted with the Harley-Davidson Motor Co., Milwaukee, Wis., for 1,000 machines for 1912. He sold nearly 700 machines this year.

G. C. Sterling, who has covered New England for several years in the interests of the Penn Rubber Company and the Boston Tire and Rubber Co., of Boston, Mass., has resigned to become identified with the Hub Cycle Co., of Boston in the same capacity. He will travel his old district where he has a wide acquaintance in the trade.

Los Angeles, Cal., seems i na pretty fair way to hold its title of "The Motorcycle City" for 1912 without being hard pushed. The Harley-Davidson Motor Co., Milwaukee, Wis., has shipped its first coast carload to its local agents, the Appeal Mfg. & Jobbing Co. The past season eight carloads of Harley-Davidson's checked in at the Angel City, and for the coming sales year between 12 and 15 carloads will go through in addition to smaller shipments.

THE *Ful-Floteing* SEAT A TIRE SAVER

Read the following letter from the United States Tire Company:

MR. A. L. JOHNSON, Rockford, Illinois.

Dear Sir:--We are in receipt of a business card bearing your name and also a statement in lead pencil that indicates that you are complaining of rim cut tires.

We just wonder if you ever stop to consider the conditions under which motorcycle tires are used. There is not a tire concern in the United States making motorcycle tires but what is having more or less rim cut tires, at the present time, and they are going to continue having this trouble until certain things are corrected.

A great deal of time and thought has been put into designing and bringing out a front fork having a spring that will take up the concussion of the road. There is only one machine on the market today however, where the same thought has been expended on the rear wheel. The rear wheel carries all the load--it strikes the same obstructions that the front wheel strikes. It strikes them harder because it has more weight behind it. Therefore, there is more necessity for some provision to take up the shock of the road in the rear fork, but absolutely no provision is made except in the tires and in the saddle spring, and almost every rider will tell you when you ask him why he does not keep his tire inflated hard so as to prevent rim cutting, that it is impossible for him to ride the machine with any comfort if its tires are blown as hard as we tell them they should be.

Your worst trouble comes in the rear wheel. You seldom see rim cut tires on the front wheel. If the fault was entirely in the tires the front tire would rim cut the same as the rear. When you take the tire off the rear wheel and place it on the front wheel, the trouble stops, if it has not gone too far before the change has been made.

We have studied the situation carefully and have made one or two changes in the construction of our tires. There is no question but what these little changes will help, but the real answer lies in improving the conditions under which the tires are used.

Very truly yours,

UNITED STATES TIRE CO.

The Ful-Floteing Seat is manufactured under United States Patents, and we will vigorously prosecute all infringers.

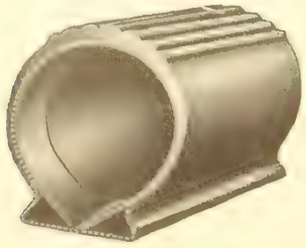
HARLEY-DAVIDSON MOTOR COMPANY

157 C Street **Milwaukee, Wis.**

PROGRESS SHOWN AT BRITISH MOTORCYCLE OLYMPIA

(Continued from Page 520)

Handlebar control very properly is the ruling form of motor control in the new models, but it would appear that there is much room for simplification. In fine, levers are too numerous; a series on the handlebar, two or three for the feet, a hand pump and an occasional lever for some other purpose. These multitudinous fittings should be dispensed with for after all the essential feature of the motorcycle is simplicity.



Ladies models show an increase, but it hardly can be said that this type either is handsome or really accessible, both highly desirable results to achieve popularity with the class for whom they are intended. Frame construction follows past standards, the double truss keystone type with triangulated steering head and the well-known Druid pattern spring fork comprising the ensemble. Examples of the open tubular or pressed steel frame are also in evidence.

In keeping with the demand for greater comfort there is offered the Wooler with both wheels mounted on spiral cylinders in cartridges, and the P. V. with its pivoted rear forks, one end being built to rock in a cradle formed by arched spiral springs embracing the curved seat column, while the opposite end carries the rear axle. This construction appeals as one of the most sensible efforts to attain comfort that the show has produced.

Nevertheless it would seem that bow springs for front and rear wheels offer the only true solution of the vibration trouble which the motorcyclist is heir to. No spiral spring can be made to iron out the oscillations created by road inequalities as can the laminated type.

New Combination Clinch Bicycle Tire.

The United States Tire Company just has placed on the market a new type of double tube clincher bicycle tire, known as a combination clinch. The illustration plainly shows the construction of this new tire.

CROSS-SECTION SHOWING NEW U. S. BICYCLE TIRE

This tire is unique in that it possesses all the strong rim-gripping qualities of the double clinch, and at the same time can be used with equal facility on the single clinch or double clinch rim; in fact, the term "universal" would fittingly indicate its adaptability.

"America Wins the World's Greatest Bicycle Race"

If this message is flashed across the cables from Sweden and then over the wires to all parts of this country on July 7th next, announcing that American riders have won the world's greatest bicycle race—the 200 mile road race in connection with the Olympic Games—there will not be an American man, woman or even a child, who is old enough to know what it means, but will be all enthusiasm, if there is a spark of patriotic sporting blood in them, and how much more gratified would they feel if they had done their share toward paying the expenses of sending the team over. James E. Sullivan, of the General Olympic Committee, says:

"America Can Sweep the Boards in All the Events of the Olympic Games"

Wouldn't your blood tingle when you heard that America had been victorious over all other nations in this peaceful conflict and that the athletes of this country had proven their supremacy of the world, and wouldn't you feel all the more gratified and proud if you could state that you are a member of the organization that sent the winning bicycle team over and had contributed to their expenses as representatives of this great nation of sports loving people?

There Is Not a Man With a Drop of Sporting Blood in Him

who does not want to do his share toward an American team winning this bicycle race, which would not only prove that American amateur bicycle riders are the best in the world, but that American mechanics who build the bicycles, with their attachments, and the machines that make the parts are far above those of any other nation.

SEND IN THREE DOLLARS TODAY WITH THE FOLLOWING BLANK and you will then become a member of the United Cyclists (with your dues paid for six months) a branch of which is now being formed, or will be, in your city, you will be credited with one dollar contribution to the American Olympic Bicycle Race Fund, and by special arrangements with The Bicycling World Company you will receive The Bicycling World and Motorcycle Review for one year (52 issnes), the regular price of which is $2. Perhaps you are already a subscriber to the paper, then send in the $3 just the same and the name and address of some friend who is interested in cycling, and notice will be sent him that you have subscribed to The Bicycling World and Motorcycle Review for him for one year, as a Christmas gift, and at the same time you will be credited with the one dollar contribution to the Olympic Fund and six months' dues in the United Cyclists, and you can say next July: I AM A MEMBER OF THE ORGANIZATION THAT SENT THE WINNING BICYCLE TEAM TO THE OLYMPIC GAMES AND I CONTRIBUTED TO THE FUND.

FILL OUT THIS BLANK AND SEND IT IN NOW

H. A. GLIESMAN, 782 Eighth Ave., New York.
Special Committee of the United Cyclists.

Enclosed please find three dollars for which I am to be credited with six months' dues in the United Cyclists; one dollar contribution to the American Olympic Bicycle Race Fund, and I am to receive The Bicycling World and Motorcycle Review for one year (52 issues).

COASTER BRAKE LICENSORS
Bristol, Conn.

THE HAVERFORD 1912 "BIG FOUR"

It's the motorcycle complete

embodying Bosch High Tension Magneto and Schebler Model "H" Carburetor and such features as these: long stroke 4 h. p. upright engine, aluminum crankcase, leaf spring truss fork, 28-inch studded tires, Persons "Champion" motor seat, "Rough Rider" grips, automatic stand and speed of 55 miles an hour. It is the comfortable motorcycle that necessitates a minimum of repairs. It's the motorcycle that is causing no little furore among riders from coast to coast and from boundary to boundary. It sells in your territory for **$175,** f. o. b. Philadelphia. Get our proposition to Agents and Riders—it's a liberal one and makes for a comfortable profit.

THE HAVERFORD CYCLE COMPANY, 826-827-829 Arch St., Philadelphia, Pa.

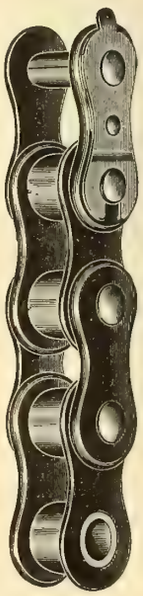
BRANCHES—411 Market Street, Philadelphia; Buffalo, N. Y.; Washington, D. C.; Newark, N. J.; Atlantic City, N. J.

THE HAVERFORD 1912 "BIG FOUR"

"Whitney" Chains Are Built for Strains

THE WHITNEY MFG. CO., Hartford, Conn.

Dear Sirs:—Yours of February 28th at hand. In regard to old chains, I have now covered over 12,000 miles on one set of your chains and have not even exchanged drive chain for pedal chain. Not one link or roller broken. Have carried tandem lately, which is a strain on chains. Just think of what these chains have gone through. From Los Angeles to New York, beside myself pulling 150 lbs. of extra baggage, and then from Canada to Mexico, and all over California, and still stick together. It sounds impossible, but this being the fact.



I will send old chains by express next week, as I intend to put on a new set. The old chains have done their duty, and then some. I think they are still good for a few thousand miles.

Put me down as a booster for "Whitney" Chains, as I will have no other.

Respectfully yours,

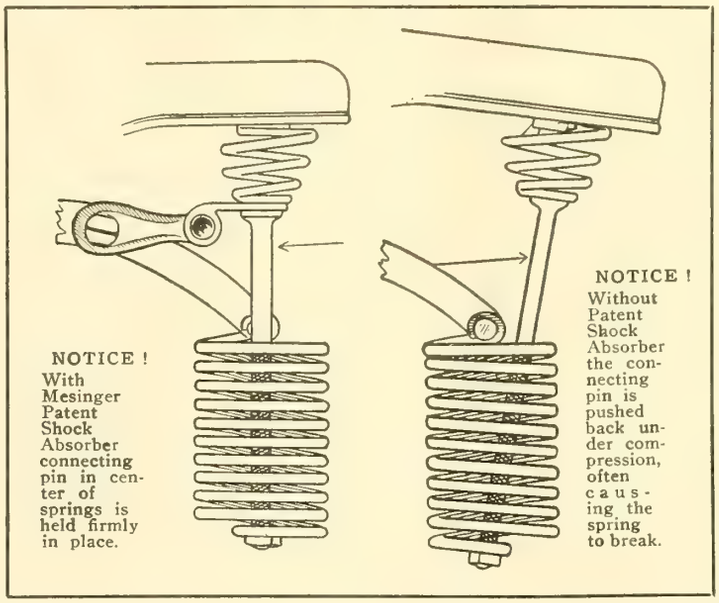
A. H. HELGESON.

733 Ottawa St., Los Angeles, Cal.

THE WHITNEY MFG. COMPANY, Hartford, Conn.

MESINGER

MOTORCYCLE SADDLES

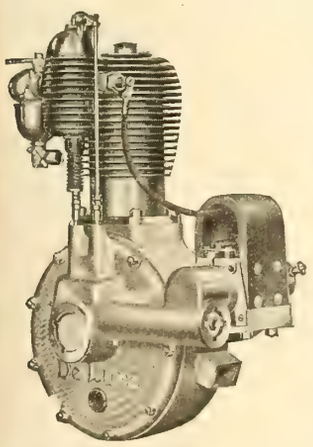


are scientifically designed and carefully constructed—NOT simply put together. That's why MESINGER workmanship and quality produce COMFORT.

"Ask the Rider and Watch Him Riding"

Where is there another saddle so cleverly designed to meet the rider's principal requirements of an easy position and of endurance under any and all conditions? Follow the example of the leading motorcycle manufacturers and insist upon having the MESINGER saddle. Our 1912 Catalog ready in a few days.

H. & F. MESINGER MFG. COMPANY



1801-1807 First Avenue NEW YORK

NOTICE! With Mesinger Patent Shock Absorber connecting pin in center of springs is held firmly in place.

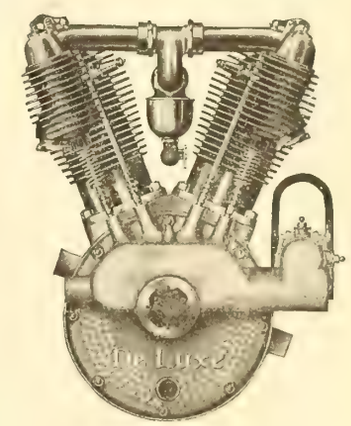
NOTICE! Without Patent Shock Absorber the connecting pin is pushed back under compression, often causing the spring to break.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

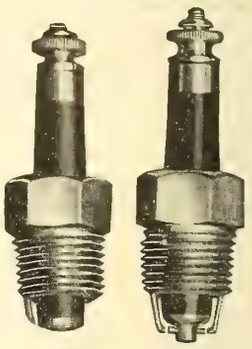
PITTSFIELD

Jewel Mica Spark Plugs



Will Not Short Circuit Under Severest Conditions

TEST them with others. The insulation of compressed mica cannot break and they never leak. Firing points are of a special alloy that withstands heat without oxidization. Designed especially for high speed motorcycle engines. Sparking is sure and perfect. These plugs have stood the test of time and experienced motorcyclists always demand them. Single and double points. All standard threads.

PITTSFIELD SPARK COIL CO., Dalton, Mass.

Battery Plug $1.00 Magneto Plug $1.25

Assume two bicycles—

one with rigid, non-adjustable bars and the other with the Kelly bar, giving 25 riding positions. Which bicycle will sell more readily?

The Kelly adjustable handle bar is a real contribution to cycling and a positive feature of added value to the machine.

Sales are stimulated when the Kelly is an equipment feature.

The Kelly Bar Has 25 Riding Positions

THE KELLY HANDLE BAR COMPANY, Cleveland, Ohio

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

The Prest-O-Lite Co.

245 East South Street **Indianapolis, Ind.**

Branches at Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Detroit, East Cambridge, Jacksonville, Kansas City, Long Island City, Los Angeles, Milwaukee, Minneapolis, New York, Oakland, Omaha, Philadelphia, Pittsburg, Providence, San Francisco, Seattle, St. Louis and St. Paul.

EXCHANGE AGENCIES EVERYWHERE

SCHAFER BALL BEARINGS

(MADE IN GERMANY)

are the most suitable bearings for motorcycles

Because

They withstand vibration due to the strong cage and large number of steel balls.

SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is being used on the *De Luxe* motor and transmission.

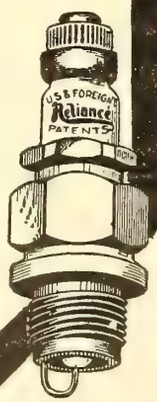
SPARK PLUGS

Sparks in Water

Take less battery power than any other plug.

Are absolutely proof against soot in any form. Dirty motors won't affect them. Patented electrical action destroys soot fast as deposited.

Carbon does not affect them. No cylinder knock means longer life to your motor.



Gives HOT concentrated spark. Means more power—greater fuel economy.

Reliance porcelain stands fifty to ONE HUNDRED per cent. greater voltage than any other.

Reliance plugs are positively and unconditionally guaranteed to satisfy.

Try Reliance plugs. Regular type, $1.00; Magneto type, $1.25. Sent prepaid on receipt of price if dealer can't supply. Write for our great book, "Ignition and Spark Plug Talk"—tells all ignition secrets; makes you master of your ignition system. Pocket size—convenient to carry. Sent free.

Kokomo "New Oxford"

The wear-resisting qualities of Kokomo Tires due to the extra quality of materials used in their making, illustrate the reason why so many manufacturers of high grade bicycles are using them; also, why dealers all over the land are busy supplying the demands of experienced riders who require only the highest grade tires manufactured.

KOKOMO TIRES

will be sold in greater lots during 1912 than in previous seasons. Kokomo "New Oxford," a popular guaranteed tire that is especially designed and constructed for road use. It is made from the best materials obtainable, being built up by hand with pure para inner tube, and, owing to the very high quality of the inner tube used, a puncture is very easily repaired. Kokomo Defender Special, a medium price tire of more than ordinary quality. It is popular among riders. Also furnished in smooth tread.

Pennsylvania VACUUM CUP Bicycle Tires

Stocked by the leading hardware and sporting goods jobbers throughout the country.

The raised rubber cups moulded on these tires absolutely prevent skidding on wet or slippery pavements or in mud. The cups "hold the road" better than any known form of non-skid, and by ensuring safety and better traction power they admit of increased speed. The rubber knobs render these tires exceptionally long wearing. They last.

The high quality of materials used in the manufacture of Pennsylvania Vacuum Cup Tires enables us to give with each an unqualified season's guarantee. Each tire carries our yellow guarantee tag.

Made by an Independent Company with a selling policy which ensures a fair margin of profit to jobber and dealer. Write for profitable particulars.

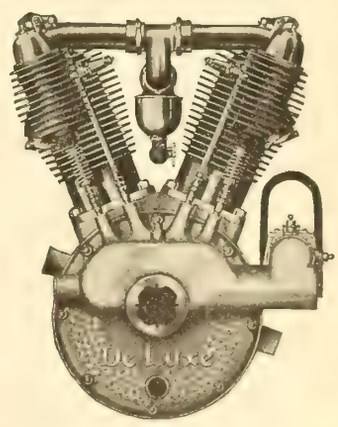
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

FREE—Our Handy Ruler

Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of motorcycle.

Price of Tank **$10**

Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

These Great Motorcycle Makers Specify Goodyear Tires for Their 1912 Output

The Folly of Taking Chances

Goodyears are today the world's most successful motorcycle tires. No tires equal them in **Endurance**, in Speed, or in **dependability.**

For this reason Goodyear Motorcycle Tires are most in demand.

For this reason experienced motorcyclists insist upon Goodyears.

For this reason the largest and most successful motorcycle manufacturers adopted Goodyears for their 1912 output of machines.

These makers realized the vital part played by the **tire** in the ultimate satisfaction rendered by **their own product.** They realized the **folly** of **taking chances.**

So they took Goodyears **instead**—just as you should do.

In Goodyears you get thicker treads than found in any other make of motorcycle tire. These **extra thick** treads together with other exclusive features explained in our Book on motorcycle tires, help to do away with punctures, blowouts and most other tire troubles known to motorcyclists.

There are 5 big successful tires in the Goodyear line—one for every road condition and built by famous auto tire experts—by the self-same experts who built such service into the Goodyear No-Rim-Cut Auto Tire.

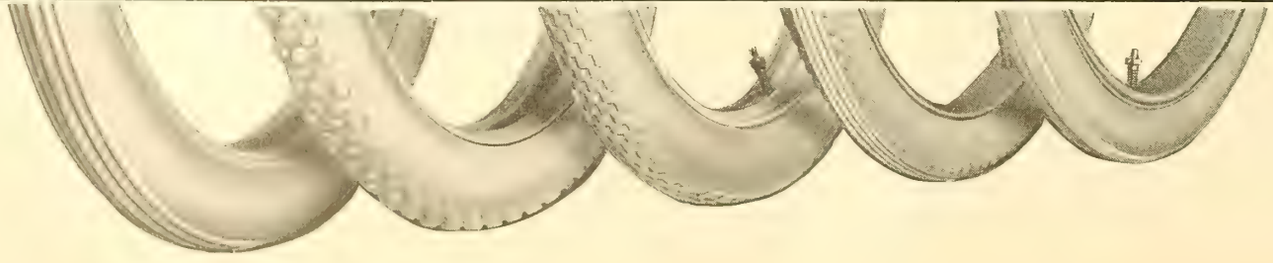
Here are the tires. Remember these tires charge you **nothing** extra for the extra service which they render. They cost the same as do any standard motorcycle tire. Specify one of them.

THE FIVE GREAT TIRES
A Tire for Every Road Condition

1—Goodyear Corrugated Tread Tires—for the average give and take road.

2—Goodyear Studded Tread Tires—for mud, sand, snow and ice travel.

Goodyear Non-Skid Tires—for use on slippery pavements.



4 & 5—Goodyear Blue Streak Racing Tires—Hold all world's records. One tire for dirt tracks, another for cement or board.

Let us send our book on "Motorcycle Tires." It Describes All.

THE
BICYCLING WORLD and MOTOR CYCLE REVIEW
(FOUNDED 1877)

Vol. LXIV. New York, U. S. A., Saturday, December 16, 1911. No. 13

PLAN BIG DINNER FOR SHOW WEEK

Motorcycle, Bicycle and Accessory Manufacturers to be Guests of Dealers' Association and United Cyclists.

Wednesday, January 10, is the date selected for the dinner which the Motorcycle Dealers' Association of Greater New York, in conjunction with the United Cyclists, will tender to the motorcycle, bicycle and accessory trade during the motorcycle show in Madison Square Garden. The function will be held at the Hotel Earlington, West Twenty-seventh street, at 8 P. M. Motorcycle manufacturers, parts and accessory makers and visiting bicycle manufacturers will be invited guests, as also will several prominent men of affairs.

Invitations have been extended to Governor Dix of New York, Governor Wilson of New Jersey, Mayor Gaynor of New York, Comptroller Prendergast, Police Commissioner Waldo, Borough President Steers, and George M. Cohan, the playwright. It is intended to make the dinner an annual function, having for its object the establishment of closer relations between the manufacturers and dealers, and to promote a more fraternal feeling among bicyclists and motorcyclists.

Tickets will be $2 and the banquet hall will accommodate 250 persons. Reservations may be made with H. A. Gliesman, 782 Eighth avenue, New York City, or A. H. Patterson, 1080 Bedford avenue, Brooklyn, N. Y. The dinner will be a "stag."

Marvel to Make One Model.

Concentration on one model, a 4-5 horsepower single cylinder, magneto equipped, and listing at $200, will be the policy of the Marvel Motorcycle Co., Hammondsport, N. Y., in the production of 1912 Marvels. Very few changes have been made over the preceding model, and chiefly consist of the employment of higher grade metals having greater strength and durability. Reinforcement has been provided at vital points. Among the features continued are the truss spring fork, the float oil regulator and the V belt. The Eclipse free engine clutch, and N. S. U. two-speed gear will be furnished as extras.

Curtiss Motorcycle to Sell for $200.

That the name of Glenn Curtiss will not be permitted to fade from the motorcycle firmament is assured by the announcement of the 1912 Curtiss motorcycle by the Curtiss Motor Co., Hammondsport, N. Y. For next year the Curtiss will be made in one model, a 4-5 horsepower single with the Curtiss overhead valve roller bearing motor. Unquestionably the most important innovation is the price, $200. Mechanical changes include the use of stronger steels and reinforcement at points subjected to heavy duty. The spring fork has been made heavier but otherwise is unchanged. Magneto ignition, of the Bosch type, will be exclusive. The novel float oil regulator in the crankcase also is continued. Special equipment will include the Eclipse free engine clutch and the well known N. S. U. two-speed gear.

Excelsiors Will Have Bosch Magnetos.

Bosch magnetos will be exclusive equipment in all 1912 Excelsior motorcycles, both singles and twins, hereafter manufactured by the Excelsior Supply Co., Chicago, Ill., according to the Bosch Magneto Co., New York City. While the Excelsior racers used by DeRosier and Balke, always have been Bosch equipped, the regular machines have been fitted with another make of magneto, so that the specfication of Bosch for the standard product holds unusual significance. Incidentally, it is one of the largest motorcycle contracts on the Bosch books for 1912.

SCHICKEL READY TO MANUFACTURE

Two-Cycle Motorcycles to be Produced at Large Stamford Factory—Extensive Advertising Campaign Planned.

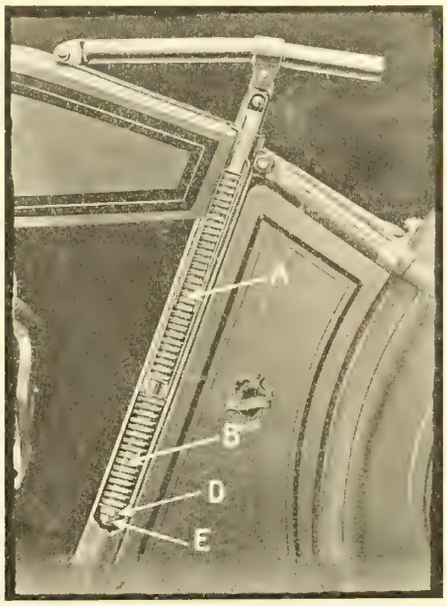
Production of two-cycle motorcycles on a large scale is planned by the Schickel Motor Co., Stamford, Conn., which was organized last fall to take up the manufacture of the Schickel motorcycle, developed by Norbert H. Schickel, of New York City, and exhibited at the Chicago show last February. Schickel's creation attracted considerable attention at the time, but the facilities for its production were severely limited, and the marketing of it was delayed until adequate facilities were obtainable. In the meantime several changes and refinements have been incorporated in the machine.

Following the formation of the company, a large factory building was secured in Stamford and now is being filled with an extensive tool equipment for the production of the 1912 model on a large scale. At present the old New York City shop will be used for the making of jigs and other tools, but the manufacturing will be done at the main plant. The initial shop run will be 500 machines, of which 100 are promised for immediate delivery when the New York show opens. When operated to full capacity the plant will have an output of 125 machines a month. Every facility for rapid production is provided.

An extensive advertising campaign is planned, and includes the use of several national magazines. Although several two-cycle motorcycles have been introduced and marketed in a very limited way, and eventually have dropped from sight, this will be the first effort to introduce and market that type of machine on an extensive scale.

BIG YANKEE INVASION FEARED

English Motorcycle Trade Worried Regarding Possibilities of American Machines Increasing in Popularity.



Now that American manufacturers of small and cheap motor cars are dumping hundreds of their product into Great Britain, and virtually have the British makers "on the run," the English motorcycle trade has a nightmare that the Yankee motorcycle manufacturers are going to do the same thing. Apropos of the phantom vision of shiploads of American motorcycles being set down in the land of mutton and ale at prices way below the home product, London "Motorcycling" says:

"Talking of the threatened American motorcycle invasion, I wonder what influence this will have, if and when it comes off, upon ruling English prices. It is true that the only American machine that has really got a hold in the English market up to the present is a highly-priced one even for this country. But if report speaks truly, active Yankee brains are now busy planning an attack upon the British market, armed with machines which, fitted with every modern refinement, are yet made in such quantities as to allow of their being retailed in the States at £35 ($175) complete. No doubt their price to us will be a little more than this figure, but, even so, it will be low enough to cause the English manufacturers to "sit up and take notice." In the motor car world, the American invasion has begun in earnest. Will the motorcycle trade wait for a similar invasion before attempting to reduce its prices, or to give better value for the same money? At present there is certainly some room for modification in this direction. It has been pretty thoroughly established this year that a variable gear is a necessary adjunct to a real touring machine, therefore no tourist should be listed without it. At the same time, no tourist should cost more than £50 ($250), which figure should therefore be the standard for a variably-geared, fully-equipped tourist model. As a matter of fact, the Humber people have already proved that it is quite possible to turn out such a machine satisfactorily at this figure, yet how many other manufacturers have followed their example? Anything between £55 ($275) and £60 ($300) is generally demanded for this type of machine at present."

American motorcycle manufacturers who already have agents in Great Britain are the Hendee Mfg. Co.; Aurora Automatic Machinery Co.; American Motor Co.; Pierce Cycle Co. It is rumored that certain makers who have low price models see a fine field in Great Britain, and are preparing to go after a slice of British trade. As far as prices are concerned American motorcycles list considerably below British machines in the same class, but there is a stone wall of English prejudice to Yankee goods that will require considerable battering to dislodge.

How the H-D Seat "Flotes."

Ever since the Harley-Davidson "Ful-Floteing" motorcycle seat was launched there has been considerable curiosity to know how it "flotes." Contrary to a rather well grounded impression there is no oil or air cushion employed, the road shocks being absorbed by spiral springs as the sectioned illustration reveals. Springs "A" and "B" are placed under the desired compression according to the weight of the rider by adjusting nuts "E" and "D." The

H-D. "FUL-FLOTEING" SEAT

springs work under compression on both down and up strokes of the seat pillar, so that when the rear wheel rises and falls in road inequalities, the seat, and consequently the rider, are disturbed only by a gentle undulation, as is the case in a motor car. Hence the coining of the descriptive "Ful-Floteing."

Goodyear Declares 12 Per Cent. Dividend.

The Goodyear Tire & Rubber Co., of Akron, O., has declared an annual dividend of 12 per cent. on its common stock, payable January 1 to holders of record December 22. This is an increase of 5 per cent. over previous disbursements, which have been at the rate of 7 per cent. per annum. It is stated that the gross sales of the company this year were approximately $13,000,000, and that it earned slightly in excess of 50 per cent. on its $2,284,000 common stock.

"Your honor," said the attorney, "I propose to show that this prisoner stole ten inner tubes from the stock in my client's motorcycle store."

Judge—"So! How do you propose to make a case out of ten inner tubes?"

PATENT INFRINGEMENT WARNING

Harley-Davidson Company State That "Ful-Floteing" Seat is Fully Covered by Letters Patent.

Finding that its "Ful-Floteing" seat has appealed strongly to other motorcycle manufacturers as a desirable feature worth copying, and that at least one manufacturer already has imitated it to an extent which it feels is an infringement of its patent rights, the Harley-Davidson Motor Mo., Milwaukee, Wis., issues, over the signature of President Walter Davidson, a warning to the trade as follows:

We wish to call the particular attention of the trade to the fact that the Ful-Floteing seat of the 1912 Harley-Davidson is thoroughly covered by U. S. letters patent. Other patents covering modified forms of this Ful-Floteing seat are pending.

We have spent and are spending considerable money in the exploitation of this device, and cannot afford to permit infringement of any character. To protect ourselves we already have been compelled to start proceedings against one manufacturer. We trust, however, that there will be no occasion for further action.

Under the law, the manufacturer, dealer and user of infringing devices are equally liable to prosecution. We therefore wish to warn all dealers and users, as well as manufacturers, that the purchase of any machine which embraces or incorporates any device which is an infringement of the Harley-Davidson Ful-Floteing seat renders them liable to prosecution.

This notice is not published as a threat, but rather as a warning. We shall, of course, protect our rights to the fullest extent.

Three Carloads of Indians.

Orders for motorcycles in carload lots no longer are unusual, and before long it will require nothing short of an order for a trainload to caause a ruffling of the eyebrows. Iowa is one of the states that takes its motorcycles in carload gulps, G. W. Campbell & Co., of Waterloo, just having contracted with the Hendee Mfg. Co., Springfield, Mass., for three cars of Indian machines for next year. This will approximate 180 machines and Campbell & Co. expect to put out 300 machines during the coming season. This past season they sold 100, of which 58 came in one shipment. Their territory includes the northeastern section of the state, and the Indian will be handled exclusively next year.

Toronto Motorcycle Trade Organizes.

Toronto, Ont., Nov. 28.—Borrowing an idea from their brethren in New York, the leading motorcycle dealers of this city, got together at the St. Charles November 22

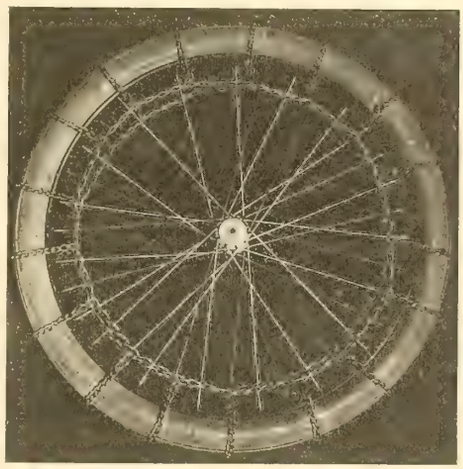
and laid the foundation for a dealers' association similar to that in the "Big American Village." Among the objects of the local organization will be the institution of co-operative advertising in the daily press, while the maker of instalment sales also will be investigated from all its angles. There also is talk of holding an exclusive motorcycle show, but this project is still in embryo, and it is probable that motorcycles again will be displayed at the Toronto automobile show in the Toronto Armory during the week of February 21-28. The next meeting will be held early in January. Those present were as follows: Herbert Kipp, Sr., (Indian); Sam Vogan (Minneapolis); Percy McBride (Excelsior and Bradbury); Walter Andrews (Pierce and Motosacoche); W. E. Amoss (Flanders); Herb Greenwood (Triumph); Alex McLean (Marvel and Haverford); Steve License (Harley-Davidson); W. E. Davis (Humber).

Dealers Plan "Feast of Friendship."

Believing that they better can discuss business matters on full stomachs and fragrant Havanas, the Motorcycle Dealers' Association of Greater New York are going to experiment along that line of deduction. Instead of a formal business meeting, they will have a "feast of friendship" on December 19. The gastronomical exercises are scheduled to begin at 10 P. M., when it is believed that all possible customers will have been corrolled or escaped. The chief topic of the evening will be the dinner which the association proposes to tender the motorcycle, bicycle and accessory trade during the week of the New York show, in conjunction with the United Cyclists. Other subjects which will be touched on include the local trade situation, and the motorcycle show in the Garden. The American Olympic Bicycle Race Committee of the United Cyclists, the winners of the Thanksgiving Day Handicap and the editors of the New York dailies have been invited to be present.

Reliance Affairs to be Closed Up.

Affairs of the bankrupt Reliance Motorcycle Co., Owego, N. Y., will be wound up on Monday, December 18, at 10 a. m., by public sale of the assets, at the company's plant, by order of trustee H. T. Patton. Arrangements have been made to fill orders for parts on all Reliance models ever marketed, this service being taken in charge by the trustee, who promises prompt delivery on all such requisitions. Orders for parts should be sent to H. T. Patton, Owego, Tioga Co., N. Y.



Lipski Now With National Supply.

Saul Lipski has sold his interest in the Standard Cycle Co., of Milwaukee, Wis., and is now connected with the National Supply Co., of Louisville, Ky. The latter company, located at 207 W. Main street, will hereafter wholesale exclusively.

TIRE CHAIN FOR MOTORCYCLES

Baker Places Non-Skid Attachment on the Market to be Attached Only to Rear Wheel.

"Stop your skiddin' and get a tire chain," to paraphrase a famous slogan of bicycle days, is mighty good advice for the winter motorcyclist to follow. Winter riding is rendered unusually hazardous because of the slippery roads, and while special tire treads have been devised to counteract this dangerous propensity, it has been the experience of the motor car fraternity that nothing is quite so good for the purpose as

BAKER MOTORCYCLE TIRE CHAIN

tire chains. Foreseeing a popular demand for a motorcycle tire chain, F. A. Baker & Co., New York City, are offering a non-skid attachment of the sort. Just how the device looks when fitted to a motorcycle wheel clearly is shown in the accompanying illustration, but in passing, it is pertinent to remark that the chain is applicable only to a rear wheel, as there is not enough clearance in front forks and springs to warrant its safe application to a front wheel. The chain is furnished for 26 and 28-inch wheels, and also in special types for either chain, belt or shaft drive machines. It may be fitted to any diameter tire up to and including 2¾ inches, and can be applied or removed in 2½ minutes. Before applying a chain, a tire should be inflated to its maximum pressure, so that when it is under normal depression by the weight of rider and machine, the cross chains have enough freedom to prevent cutting of the tread by continuous chafing on one spot. J. U. Constant, the racing man, has tested a chain on greasy asphalt and muddy macadam, and highly recommends it.

Brownson and Sherman Out of Flanders.

Walter E. Flanders has been elected to the presidency of the Flanders Mfg. Co., Pontiac, Mich., makers of Flanders motorcycles. He succeeds Robert M. Brownson, resigned. Brownson also occupied the position of general manager, and is succeeded in that capacity by Don C. McCord. George W. Sherman, who has been sales manager, also has resigned. He is understood to have other "irons in the fire." Brownson's resignation, and the death of John T. Shaw, leaves two vacancies on the directorate, which have not yet been filled.

Dealers Attractive Window Display.

In the accompanying illustration is depicted a very attractive, business-getting window display now being shown by the Jefferson Cycle Company, of St. Louis. The wheel is driven by a small motor and is cyclometered; a guessing contest on the distance recorded, December 1 to 24 inclusive, is the feature of the display.

Albert to Attend Garden Show.

M. R. Albert, of the big house of Brown Bros., Ltd., London, Eng., will sail for this country the latter part of December. The chief purpose of his visit is to attend the Madison Square Garden show, and meet members of the motorcycle, bicycle and accessory trade.

Corbin

Two - Speed

Coaster Brake

(For Bicycles)

and why it should be the first thought of when buying.

The direct gearing of the Corbin Coaster Brake makes it absolutely reliable and gives an increase of power.

Speed changes are made automatically and instantaneously without back pedaling.

It can be run either backward or forward and has no shifting levers. Is simple, scientifically designed and practically indestructible.

There is no shock to the gears in operating the Corbin Coaster Brake. Can be used as a plain coaster brake by removing the high-speed clutch.

NEW YORK, DECEMBER 16, 1911.

OUR NEW YORK SHOW NUMBERS.

The New York Motorcycle Show numbers of The Bicycling World and Motorcycle Review will bear dates January 6 and 13. The first number will contain a comprehensive forecast of the motorcycle exhibits in addition to various articles of special interest; the second number will contain complete and amply illustrated descriptions of all the machines displayed, including their respective innovations and features. They will be issues such as will prove of valuable assistance to the prospective purchaser, and a source of remunerative information to the present owner in his search for the latest knowledge of the industry and sport.

Trend of Foreign Motorcycle Design.

Generally conceded to be the fashion arbiters of the motorcycle world, the British makers at their recent Olympia show in London have decreed, among other things, that the change gearset is to be "it" this year abroad, although they as yet have been unable to agree as to what should be the standard number of speeds. There seems to have been a great awakening during the past year, to the advantages possessed by the change gearset, and from now on it is certain to widely increase its circle of friends, particularly among sidecar devotees. In fact, how the sidecar ever became as popular as it has in Great Britain, while laboring under the handicap of single-geared machines, only can be explained, either by the excellence of the roads, or the proverbial indomitable perseverance of the British in sticking to a thing which may appeal to them despite any great shortcomings which it may possess.

Further evidences of a catering to comfort are to be had in the more general adoption of spring frames, and hand and foot starters. In the former, several methods of suspension are used, incorporating spiral and elliptic springs in their various forms. Gear and segment foot starters are popular, while not a few designers show motor car leanings, by placing hand crank mechanisms on the frame. In the test of service it seems reasonable to suppose that the foot starter will prove more popular, as being easier to operate, more compact and less conspicuous, and less liable to derangement by accident, as well as possessing greater simplicity.

Single cylinder motors corresponding to our 30½ inch, or 4 h.p. size predominate. Then follows a class which is totally unknown in America, viz.: lightweight twins and singles of approximately 15¼ inches displacement. The big twins, which bid fair to become the leaders here, rank third in Britain. Another size which is growing in favor is a medium weight 18.30 inch motor with change gear. Big twins are used almost universally for sidecar work, and in some cases, of course, for solo speed dashes. While the Auto-Cycle Union new regulations for the Tourist Trophy tend to encourage the propagation of the 30½ inch twin, the reigning single of that capacity will die hard if its leadership is threatened seriously.

Frames show little that is new, but the rear dropped top tube is gaining ground because of the low position, with feet on the ground, which it affords. One or two makers are catering to both sexes, by offering open frames, and in these, of course, an even lower riding position is secured, than the "camel-back" type affords.

Naturally the belt drive still occupies the throne, but the chain is becoming a formidable pretender. The introduction of the clutch and change gearset have done much to remove the objection to the chain on the score of its racking distribution of power. It is more in favor for twins, although one or two makers have applied it to singles. Unusual combinations of belt, gear and chain drive, have been developed with the introduction of change gearsets. In some cases the arrangement is chain drive from the motor to a countershaft, and thence final drive by belt, while in other instances, gears form the connecting link between motor and countershaft. The first named form is more numerous. For the semi-auto-cars, as well as bona fide motorcycles intended for sidecar work, the chain drive is favored.

Gravity sight feed lubrication is on the increase and usually is supplemented by hand pump. A few forced-feed-to-the-bearings systems are making their debut, but are objects of considerable skepticism, and will have to prove their worth. There is a disposition to fit small gasoline tanks to some of the singles and big twins, in order to keep down weight, but this skimping also has the disadvantage of restricting the radius of the machine on a filling, particularly in sidecar work. Two gallon tanks are the exception rather than the rule, while in this country the tendency is toward three gallon tanks.

Ladies models are increasing, and efforts are being made to coax the fair sex to adopt the sport, but so far with limited success. Further improvements in clutches and gearsets, making machines easy to operate, should prove good drawing cards in stimulating the popularity of the machine among women. Although they do not yet embody such motor car limousine fitments as flower vases, speaking tubes and toilet cases, sidecars nevertheless, show wonderful advances in spring suspension, body design, comfortable arrangement and quick attaching facilities. However, they are so expensive that many seriously consider the small motor car as being more preferable.

Riders of chain drive machines, either motorcycles or bicycles, will find that the chains will tighten in cold weather, due to the oil in the chain rivets drying up and the old grease becoming hard. By putting a drop of 3-in-1 or light sperm oil on each link, a chain will limber up wonderfully and run softly and smoothly, reducing appreciably the frictional resistance.

December 25, Augusta, Ga.—Augusta Motorcycle Club race meet at fair grounds.

December 25, Tampa, Fla.—Tampa Motordrome Racing Association meet on half mile dirt track.

December 31, Brooklyn, N. Y.—Annual New Year's Eve midnight scorch from Bedford Rest to Coney Island and return.

December 31, Brooklyn, N. Y.—Annual mid-night bicycle run, Bedford Rest to Valley Stream, L. I., under the auspices of the Eastern Division, C. R. C. A.

December 31, Brooklyn, N. Y.—Annual New Year's Eve. mid-night scorch from Bedford Rest to Coney Island and return, under the auspices of the Empire City Wheelmen.

January 1, Buffalo, N. Y.—65th Infantry A. A., Arsenal, bicycle races and athletic games.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 10, New York City—Motorcycle Dealers' Association of Greater New York, first annual dinner to motorcycle trade, at Hotel Earlington, W. Twenty-seventh street., 8 P. M.

January 10, New York City — Hotel Astor, 2 P. M., meeting of Executive Committees of the Cycle Jobbers' Association and Joint Committee of Cycle Jobbers' and Cycle Parts and Accessories Association, followed by a luncheon tendered the Jobbers', Bicycle and Motorcycle Manufacturers, by the Cycle Parts and Accessories Association.

January 10, New York City—Hotel Earlington; dinner tendered to motorcycle, bicycle and accessory manufacturers by Motorcycle Dealers' Association of Greater New York and the United Cyclists. Tickets, $2 each, may be secured from H. A. Gliesman, 782 Eighth avenue, New York. position.

January 11, Hotel Astor, New York City —Meeting of the Motorcycle Manufacturers' Association.

January 11, New York City — Hotel Astor, 2 P. M., joint meeting of Motorcycle Manufacturers' Association, Cycle Parts and Accessories Association and Cycle Jobbers' Association.

January 13, New York City—Annual ball of the Century Road Club of America at Lyric Hall, Sixth avenue and 42d street.

January 13-27, Philadelphia—Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

February 3, New York City—Company "K," 22d Regiment and Morningside Athletic Club, bicycle races and athletic games.

February 3-10, Chicago, Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory.

February 10, Chicago—North Shore Motorcycling Club show wind-up smoker.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

Pierce Issues 1912 Motor Catalog.

First of the crop of 1912 motorcycle catalogs to make its appearance is that of the Pierce Cycle Co., Buffalo, N. Y., makers of Pierce motorcycles. Clothed in a handsome embossed cover and containing 32 pages of text, liberally illustrated with half-tones and line cuts, the book is a technical lecture on the construction of Pierce machines, but tells its story simply and well.

Special Holiday Offer by Baker.

F. A. Baker & Co., New York City, are offering a limited number of 1911 Indian motorcycles at attractive figures. The 2¾ horsepower single will be supplied with battery ignition at $150, and with Bosch magneto at $175. Either red or blue finish may be had, and the machines are standard models, including the clutch and other regular equipment.

Notice of an increase in capital from $50,000 to $62,500 has been filed by the Waverly Mfg. Co., Jefferson, Wis., makers of Waverly motorcycles.

To Long Island's already thriving list of recently formed bicycle clubs has been added another, the Cedarhurst Cycle Club, Cedarhurst, L. I.

CANADIANS PREPARE OLYMPIC TEAM

Determined to Have Riders Ready For Competition at Stockholm—Will Train in America.

Toronto, Dec. 12.—American cyclists are not the only one who are getting a move on in preparation for the big bicycle grind to be held around Lake Malar, Sweden, next July. Up in Canada, the riders are co-operating with the executive of the Canadian Wheelmen's Association, in making arrangements for the Olympic contest and already steps have been taken to find the greatest wheel team that has ever represented the Dominion. The Canucks are prone to realize that with the only bicycle event on the program, a terrible marathon of 200 miles, the riders of the Antipodes, namely the cracks of Australia, New Zealand and South Africa, will have a large edge on anything that can be turned out by any other nation, as long distance grinds have been featured this long time in the countries designated, but they feel that they can be depended upon to give a good account of their stewardship, no matter what the opposition is, because a great advance in the Canadian game has been taking place during the past two years.

The only regret heard is that during the winter months, the opportunity for training will be denied the wheelmen of the Dominion, whereas the riders of the United States will be able to take part in flat-floor races, which will, to a certain degree, keep them in shape until outdoor training time arrives in the spring. To off-set this disadvantage, the Canadian Wheelmen's Association is preparing a petition to present to the government, for permission to use the Armories at Toronto for training purposes, if nothing more. A magnificent flooring was recently laid on the rough-block drill area of this building, to be used for a grand ball to their Royal Highnesses, the Duke and Duchess of Connaught, Canada's new rulers, and it is hoped that the Parliament will see fit to allow the cyclists to make use of this floor.

Although the Government will make a grant to cover the expenses of the team, plans are being laid for the raising of a fund to enable the riders to carry on their preliminary operations. It is expected that eight men will be sent, besides a trainer, and the date of departure will likely be early encugh to allow the wheelmen a month's training in Sweden before the day of the contest.

The marathon fever having died out, it is anticipated that this bicycle event will form the one big feature of the coming games. Never before has such an unusual event been held in connection with the Olympic contests, and it should provide the headliner for all reports.

CHAIRMAN SAUER VISITS CANADA

Endeavors to Straighten Out Complications Caused by the Creation of a Canadian District.

Toronto, Ont., Dec. 9.—Canadian motorcycle history of a vital sort was made in this city on December 6, when a conference was held between J. Leo Sauer, chairman of the F. A. M. Legal Action Committee, and a delegation of Canadian riders, to thrash out the knotty problem of affiliation of Canadian clubs with the American organization. The American emissary did not expect to find his path strewn with roses, but the rocky snags which he encountered were enough to shatter any hopes he may have entertained for the early organization of the sport in the Dominion.

Coming here for the purpose of accelerating the formation of a Canadian district of the F. A. M., Chairman Sauer speedily uncovered so much internal strife among his northern brethren, that he declared the F. A. M. would take a hand in Canadian affairs until the riders of both countries were united. During his 24 hour stay in the American metropolis of King George, the New Yorker was the target for suggestions, propositions and ideas of all sorts, that must have kept even his unusually active mind spinning like a runaway motor. He found two widely separated factions, and in order to learn the whole story, gave both sides a hearing.

Lined on one side were the officials of the Canadian Wheelmen's Association, and opposed to them was the Toronto Motorcycle Club, supported by several other clubs throughout the Dominion. The issue at stake was the control of the sport in this country. Both factions are anxious to secure F. A. M. protection, their mutual aim being to govern motorcycling in Canada under F. A. M. supervision. The Toronto Motorcycle Club presented its side first.

Through Chairman Sauer, the F. A. M. offered to enter into negotiations with the strongest faction but to ascertain which is entitled to this recognition, is a knotty puzzle just at present. If there were but one faction with which to deal, the solution of the situation would be comparatively easy, as practically all of the Canadian racing men are anxious to get under the F. A. M. umbrella, but with two parties in the field, each claiming to hold the whip hand, a chrome nickel steel dead-lock has resulted, and the breaking of it seems to be a job for dynamite rather than oratory and diplomacy.

"We want to avoid local complications," explained Chairman Sauer, "and would like to deal with a Canadian organization if possible. We hardly can enter into negotiations with one club or body. The F. A. M. has a formal application from the Canadian Wheelmen's Association, seeking an alliance, and they have been told that if they can show the support of a majority of the Canadian clubs, we will entertain their proposition. The same offer applies to the Toronto Motorcycle Club. We are not seeking to extend the jurisdiction of the F. A. M. in foreign territory. Canada was partitioned off as an F. A. M. district in order to afford the opportunity for you to come in if you wished to do so, and you will be welcome. On the other hand, if you prefer to go it alone, the F. A. M. will wish you all success."

When Chairman Sauer called for a general discussion he got it hot and heavy. Interrogatory broadsides were hurled at him for a full hour, and he was kept busy explaining the F. A. M. and what it stands for, from all angles. During the discussion the local men frankly stated that no boundary lines were wanted in motorcycling on this continent, and that the F. A. M. was good enough for them.

As a result of the conference the Toronto Motorcycle Club passed resolutions calling for the extension of the Canadian district at once, this action being entirely devoid of any desire to secure control of motorcycling affairs throughout the Dominion. It is realized clearly that the idea that the district would be controlled and manipulated by any one city will have to be exploded if success is to crown the movement. Fifty-six motorcyclists were present at the Toronto M. C. conference and manifested the deepest interest in the proceedings, the significance of which was apparent to all.

It was with keen disappointment that the Toronto Motorcycle Club learned that its affiliation with the F. A. M. did not carry special privileges entitling it to control of the sport in that city. The club had labored under the impression that by allying itself with the F. A. M. it would be impossible for another motorcycle club to enter the local field ,and through this supposed monopolistic weapon it hoped to wage a successful fight against the bicycle association. However, when the actual situation was explained, many local riders showed real pleasure over the prospect of being gathered under the wing of the F. A. M. Communications from other clubs throughout the Dominion, presenting their views of the situation, also were submitted to the court, in order that he might be thoroughly familiar with the club sentiment all over the country.

At the conclusion of the presentation of the Toronto Motorcycle Club's case, the members, who were very favorably impressed with their American visitor, showered all sorts of honors on him, much to his embarrassment for he is exceedingly modest. First he was given a vote of thanks for his patient and fair minded conduct of the hearing, and following this, he was elected an honorary life member of the club, and invited to serve on a committee which will wait on the local member of parliament to seek favorable motorcycle legislation.

At a special executive meeting of the Canadian Wheelmen's Association, Chairman Sauer listened to the arguments of the bicycle men. He did not advise the association to inject itself into motorcycle affairs, expressing the opinion that the two sports could not be made to mingle harmoniously, which is a solemn fact. President Falconer, of the C. W. A., pointed out that as his organization was the only coast to coast body in the Dominion, it would be comparatively easy to formulate plans for a national motorcycle association and rebuild the C. W. A. to embrace riders of both classes.

As far as its object, that of promoting a Canadian F. A. M. district, is concerned, the conference accomplished little, and progress in that direction will remain halted until the warring factions either amalgamate, or one of them withdraws from the field. At present neither shows the slightest indication of giving up the fight, but on the other hand, are marshaling all their resources to gain the coveted control which will entitle the winner to treat with the F. A. M. as the arbiter of motorcycle affairs in the Dominion. Just now the Toronto Motorcycle Club, through its affiliation with the F. A. M. has a slight advantage over its rival, but the latter still is a very considerable factor to be reckoned with.

How To Be an Amateur and Take Cash.

Wonder how it is that some of these trade rider pot-hunters who ramble round the country, and promote snap meets on their own hook, are able to remain in the amateur class. They not only rake in the cash profits, but some of them also ride and win their own prizes, and often these prizes are not up when the meet is run, so instead of bothering to comply with the rules by purchasing prizes for themselves that they don't want, they pocket the money and forget it. Sometimes it is real convenient to be a promoter, if you want to follow racing, too. It is unfortunate that there is not enough sportsmanship in these fellows to make them play the game according to the rules.

New Number Plates in New Jersey.

Following the example of Connecticut, New Jersey is going to furnish motorcyclists with a uniform size of number plate next year, instead of permitting riders to make up their own numbers as in the past. However, the official plates will be supplied without extra charge, and the registration fee remains the same, viz., $2. All licenses expire on December 31 and the commissioner of motor vehicles is sending registered owners blank application cards for renewal of registration and license number.

The Passing of Madison Square Garden Marks Father Time's Flight During 21 Years of Cycle Racing

GARDEN'S LAST SIX DAY RACE THE BEST

First Four Days of the Contest Show Surprising Features—Well Balanced Field of Riders—Records Eclipsed Many Times During Race—Big Crowds Enjoy the Sport—The Contest Will End To-night.

Golden, lithe-limbed Diana, whose graceful figure, modeled by the late St. Gaudens, surmounts the artistic tower of Madison Square Garden, must have sighed when she looked down through the sky-light of the great auditorium and reflected that this would be the last time she would have the opportunity of being godmother to the Six-Day Bicycle Race. For, be it regretfully stated, the beautiful Garden must give way to the demands of commerce, and become a memory.

Diana, tradition has it, was fleet of foot as well as a mighty huntress, and it is small wonder she should consider the bicycle riders her especial proteges. She was evidently determined that the closing Garden race should be a fitting finale to her career as godmother, for the crowds have been bigger, the enthusiasm greater, and the race more interesting that for many seasons past. A more evenly balanced field never was signed by Manager Powers.

At the close of the second day's racing twelve teams were tied for first place, and the fact that the pace was fast is proven by the scorers' tally sheets which show that the riders were three miles and a half ahead of record when the unfortunate accident of Wednesday morning put two of the leading pairs out of commission. Up to this time it seemed to be impossible for the leading teams to gain upon each other.

Europe has certainly contributed three of her best teams to the race, for they have held their own with the American riders in a surprising manner. Never before in the history of the race has the entity of the foreign teams been prolonged for so extended a period. It is likely that numerous six-day races that have been promoted in Europe the past few years have improved the form of her riders for this type of contest.

There is the usual ever-shifting mass of humanity in the Garden at all hours of the day and night. Trim-looking business men, financiers from the stock exchanges, professional men, politicians, clerks, artisans in all branches of trade, not forgetting the ever-present office boy, all mingle together in the arena, straining to get a good look at the flying riders, and the great galleries are crowded to their utmost capacity. The afternoon and early evening bring many of the fair sex to adorn the boxes and reserved seats, and sometimes they linger till the wee morning hours, so interested do they become in the contest.

Bohemia is there in all its splendor after the Broadway restaurants and "lobster palaces" have put the all-nighters into good humor and ready for any sensational feature. In the morning hours between seven o'clock and midday the patronage is of the transient kind—men who drop in for a few minutes just to see "what's doin.'"

To the stranger in town the race is a rare treat, as its continuity enables him to see almost every type of cosmopolitan life which gravitates into the Garden some time during each 24 hours.

The track is of the usual ten-lap variety, highly banked at the turns, oblong in shape.

START OF THE RACE A MINUTE AFTER MIDNIGHT, MONDAY, DECEMBER 11

Adjacent to its inner edges on the northern side is placed the covered cots used by the riders for resting. In addition to these cots, the competitors have separate quarters in different parts of the building. A physician is in constant attendance to give aid to any who may meet with accidents.

Score at End of 24 Hours.

Root-Hill	515.4
Fogler-Clark	514.4
Kramer-Moran	515.4
Halstead-Drobach	515.4
Lorenz-Saldow	515.4
L. Georget-Brocco	515.4
Lapize-Von Houwaert	515.4
Bedell-Bedell	515.4
Pye-Collins	515.4
Cameron-Magin	525.4
DeMara-Lawrence	515.4
Palmer-Wells	515.4
Thomas-Stein	515.3
Galvin-Wiley	515.3
Ryan-Cavanagh	515.2

First Day—Monday, December 11.

On the starting line, facing the Madison avenue end of the Garden the teams were lined up for the start a few minutes before midnight. The riders who represented their teams were as follows: Moran, Hill, Drobach, Clark, Lorenz, Georget, John Bedell, Pye, Cameron, DeMara, Stein, Galvin, Ryan, Palmer, and Van Houwaert. As the clock in the great tower of the Metropolitan Life building two blocks away ceased pealing the hour of twelve, the Hon. Thomas F. Foley, ex-sheriff of New York county stepped forward and fired the shot that sped the riders on their 142-hour journey.

The first mile no laps could be gained or lost and the men then steadied themselves into a 24-miles an hour gait. For some undiscovered reason the Fourth avenue end of the track prover a regular "jinx" to the riders for the first few hours in the matter of punctures to tires. The field would round the turn, when "zip" a tire would go, until over 35 punctures were counted by the officials. Palmer, who wore No. 13, had 13 punctures to his credit before the track carpenters located the source of trouble—several points of nails that projected through the surface of the oval. Fortunately there were no falls of consequence to mar an otherwise perfect field.

When the score was posted for the sixth hour, there was a small flutter of excitement for the riders were two laps ahead of the record of 141 miles and 2 laps, made by Bedell brothers in the race of 1902. The spurt was but temporary, however, and the steady grind that followed was practically unbroken until the eleventh hour when Lorenz suddenly darting out set up a pace that was helped along by Clark and Root. It was then that the scalps of the Galvin-Wiley and Cavanagh-Ryan combinations were secured, and the seven minutes of lively riding sent the last-named teams one lap to the bad.

It looked as though the first day would end without any further excitement, but at the end of the 23d hour Clark started a jump that set the field rolling fast. It continued to roll lively for 15 minutes, when Pye fell. The Stein-Thomas team lost a lap, and Cavanagh and Ryan dropped behind one more. Cavanagh quit an hour later and his partner Ryan was thus forced out of the race.

Of all officials necessary in conducting an event of this sort, the scorers are by no means least important, as on their accuracy often depends final decisions of vexing situations which arise during the progress of the frequent furious sprints. In this work, the veteran Al Copeland, this year, has been admirably succeeded by W. B. Robinson, since 1899 his associate, with Howard Freeman on the opposite shift.

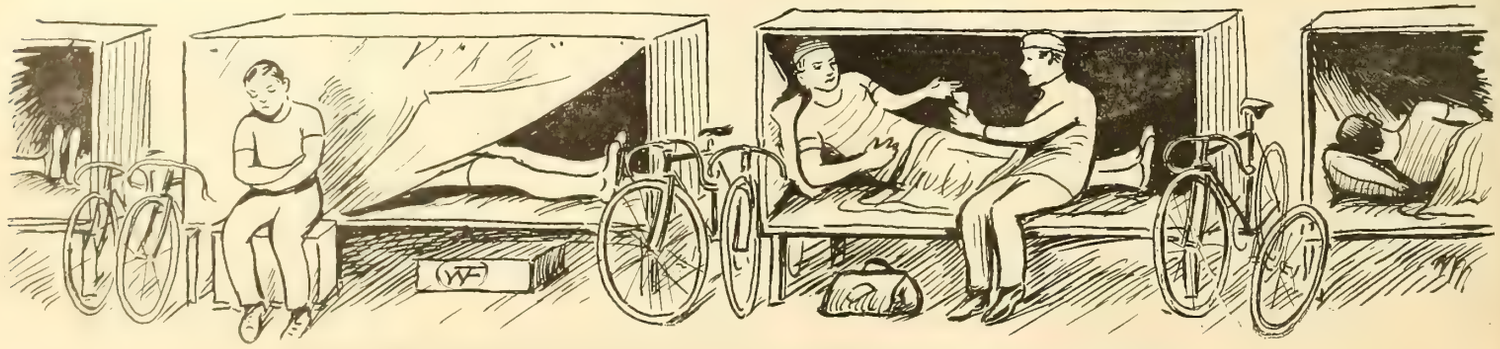
The summary of the first 24 hours, showing the leaders at each hour, and the mileage follows:

Hour.	Team.	Miles.
1	Van Houwaert-Lapize	24.6
2	Georget-Brocco	48.1
3	Clark-Fogler	71.7
4	Galvin-Wiley	95.9
5	Pye-Collins	118.8
6	Root-Hill	*141.4
7	Van Houwaert-Lapize	162.9
8	Lapize-Van Houwaert	183.9
9	Lorenz-Saldow	206.2
10	Georget-Brocco	225.2
11	Lorenz-Saldow	247.4
12	Drobach-Halstead	268.7
13	Kramer-Moran	289.7
14	Hill-Root	310.1
15	Hill-Root	331.1
16	Lorenz-Saldow	352.7
17	Kramer-Moran	373.6
18	Saldow-Lorenz	394.1
19	Stein-Thomas	414.6
20	Brocco-Georget	438.8
21	Hill-Root	455.4
22	Clarke-Fogler	476.2
23	Root-Hill	496.2
24	Root-Hill	515.4

*Record.

Score at End of 48 Hours.

Van Houwaert-Lapize	979.9
Kramer-Moran	979.9
Fogler-Clark	979.9
Root-Hill	979.9
Halstead-Drobach	979.9
Lorenz-Saldow	979.9
L. Georget-Brocco	979.9
Bedell-Bedell	979.9
Pye-Collins	979.9
Cameron-Magin	979.9
DeMara-Lawrence	979.9
Palmer-Wells	979.9
Thomas-Stein	979.8
Galvin-Wiley	979.8



Second Day—Tuesday, December 12.

Sultry, warm and unseasonable weather that prevailed from the time the race started had a depressing effect on the riders and the race resolved itself into one of the processional order, enlivened by occasional spurts. Stein made a faint attempt to get back the lap his team had lost, but the task was hopeless.

The steady average grind, however, began to tell on the record at six o'clock in the morning, the 36th hour. Root was leading the field when the hour was clocked and the score showed one mile and eight laps better than previous best time, made by Macfarland and Clark last year. Once ahead of the old mileage the riders seemed to take renewed interest in their work, and the record breaking fest continued right up to and including the 48th hour, the close of the second racing day's history, when they were three miles and one lap ahead of previous best figures

At half past five in the afternoon there was some lively going and Kramer received a puncture in front wheel. He wobbled and fell in front of John Bedell, who went over him and careened along the track for 50 feet, landing on the top of his head. It looked as though it was all up with John, but he only blinked a few times, rubbed his head, walked around to his camp and mounted a new wheel amid the plaudits of the crowd.

There was some lively sprinting during the 48th hour. At half past eleven Clark made a jump that set the big crowd on edge and the track was a mass of flying wheels. In making reliefs some of the riders were crowded too close to the black line before starting out, and Lorenz, who was leading, tried to avoid a collision. The swerve threw him and Lawrence, Clark and

ALONG THE TRACKSIDE ARE LINED UP THE COMPETITORS' COTS FOR RESTING

Van Houwert also went down in the mix-up.

Hours.	Teams.	Miles.
25	Clark-Fogler	536.3

Hill-Bedell	1417.1
Thomas-Stein	1417.1
Galvin-Wiley	1417.0

Third Day—Wednesday, December 13.

Records ceased to fall in the 51st hour and there was every legitimate reason for it. It was about half past one in the morning that Lapize, one of the French riders, let his gay Parisian nature bubble over and he started a series of short sprints, after each one checking up and laughing gaily at the rest of the field.

This hilarity on the part of the gay Parisian evidently grated on Eddie Root's nerves, and he started out from the bunch to put up a sprint of the hair-raising variety. He succeeded but the result was different than what he expected. While going at topmost speed at the head of the field Root's front tire exploded. He went down and over him piled Menus Bedell, Wells, DeMara, Cameron and Thomas. When the decks were cleared it was found that Root had severed an artery in his knee, and that Menus Bedell was badly bruised in the shoulders and the left side of his face terribly lacerated.

The accident so reduced the speed of the men that record breaking went glimmering for the time being. Both Root and Bedell gamely resumed the race, but at 8:19 Root's knee became so weak that he was compelled to retire. His partner, Fred Hill, had four hours under the rules in which to secure a new partner, and within the time limit relieved John Bedell, the injuries to Menus compelling his retirement. The re-

MANAGER POWERS LOOKS THINGS OVER

constructed team took the usual one lap penalty, which put it in the second division.

At ten minutes past four in the afternoon there were eight minutes of wild sprinting. Clark started the ball rolling with a well-timed jump and was closely followed by John Bedell. The first man to feel the effects of the pace was Lapize. He was soon lapped, as also was Brocco of the French team. The Galvin-Wiley team came in for the loss of another lap at this juncture. A fall by De Mara brought the sprint to a close, with five strokes of the scorers' bell—the signal given in case of accident.

About six o'clock Kramer and Georget collided on the easterly turn and the champion landed on his back. The shock knocked him unconscious for a matter of ten minutes. Georget was unhurt.

Soon after some enthusiastic individual in one of the arena boxes threw a water glass toward the track. His aim was perfect, and the glass broke into a thousand pieces. There was a number of punctures, and Hill fell, but fortunately the damage ended with that. The referee called the riders off the track, which was swept clean, and the race was then resumed. The man who threw the glass was promptly arrested and sent to the police station to think it over.

Eleven o'clock in the evening seemed to be a popular hour for starting something, and it came off on time. A sprint was started by Pye, and after a few laps Stein fell. The scorers' bell was struck but apparently the riders did not hear it for they tore around the track like mad for the next 20 minutes. The bell to resume was not rung, as the field was incomplete, and, of course, no laps could be lost of gained. A second fall, which brought down three more riders, caused a second five bells to be rung and the sprinting ceased. The crowd, however, got its money's worth of excitement even if the "jam" didn't officially count.

Hour.	Team.	Miles.

Galvin-Wiley	1870.1

Fourth Day, Thursday, December 14.

The peaceful plod of the six-day tourists was disturbed at half past five in the morning, when Van Houwaert, the tall Belgian, started to reel off laps at an alarming rate. The rush was soon checked, however, by the fall of John Bedell, the frame of his bicycle parting and letting him down in a heap. Fortunately there was no serious injury except to the wheel.

About half past eight there was another broken glass incident—this time an accident. A trainer was crossing the track with a bottle of hot milk. It toppled and crashed the bottom, the top part rolling down the track in front of Saldow. He dodged and veered straight down the bank, landing in one of the training camps. His left side was bruised by coming in contact with a small ice box.

The afternoon was passed in futile efforts to catch up with record figures and the scores showed the riders varying a mile or two below the highest distance marks. They became really busy about seven o'clock and at 7:51 tied the old score, the 92d hour showing a net gain of three miles and three laps.

Immediately after the record had been passed Clark and Hill lit out from the field. There was a wild scramble and several teams were in danger of being lapped, when Cameron's tire exploded and both Wells and he went down the bank. Their wheels were a twisted mass of steel, but no bones were broken.

There has been no diminution in the attendance, in fact, the crowds have increased in size as the race progressed. Every available seat has been utilized and the standees number thousands in the center arena and end platforms.

Near the close of the fourth day there was a sharp sprint which resulted in Van Houwaert being lapped.

C. H. NORTHRUP O. WALKER W. SAMUELSON T. M. SAMUELSON JOE WOLTERS

This Picture Tells Its Own Story—A

Last week, we told you how Joe Wolters smashed two more world's records in California, when, at Oakland, he reeled off 5 miles in 3.27 and 10 miles in 6.58. Here's his picture—in center—together with the chromos of other **track** notables.

The Kodak caught them all with the **goods on.**

THE GOODYEAR TIRE & RUBBER COMPANY, Moal Street, Akron, Ohio

The record was again passed in the 92d hour, and the following hour showed the field still six laps ahead of former figures.

The Galvin-Wiley team retired from the race at fifteen minutes past twelve Friday morning. Summary:

Hour.	Team.	Miles.

*Record.

Side Lights on the Big "Grind."

Figure to yourself the interior of a building having the area of a city block—on the floor of the building, a yellow pine track oblong in shape, with rounded ends banked to an angle of 45 degrees, 15 feet in width and one-tenth of a mile in circuit—in the infield, standing room for possibly two thousand persons in addition to the clutter of vendors' stands usual with large amusement projects and the press-stand, overflowing with alert reporters and shirt-sleeved telegraphers—on the inner edge of one of the straight stretches, a row of fifteen muslin-walled and roofed shelters affording just enough space for the cot on which one or the other of the two members of the respective teams will attempt to snatch the much-needed rest during his "spell" off the track, often useless owing to the recurring frequency, throughout the seemingly interminable 142 hours of the race—surrounding all, three tiers of seats reaching to the very roof of the vast coliseum crowded to the capacity limit with an expectant cosmopolitan audience and you have the setting for New York's unique annual six-day race in Madison Square Garden.

The present event, as noted elsewhere, is the 19th annual, and last, in the historic structure and, as in many former years, is under direct promotion of the astute Patrick T. Powers, who has been actively interested in bicycle race promoting since 1893 and is likewise a prominent figure in other lines of sport, especially baseball and pugilism.

Considering the fact that the curtain will ring down for the last time to-night, a few words concerning those who may be said to have become fixtures by reason of their regular reappearance together with others of more or less prominence for various reasons and some incidents, observed in the smoke-laden, odoriferous and indescribable "Garden" atmosphere, will no doubt be of interest to followers of the sport who may not have had the opportunity of being among the hundreds of thousands of yearly spectators.

No parade and introductions of the riders were held this year but the fifteen gladiators who lined up at the tape and faced the formidable array of flashlight artillery, for their respective teams, had little cause to mourn a loss of former glamour as the photographers' battalion was quite the largest and the encouraging yells of delight and good wishes from the more than 12,000 spectators were the longest, loudest and most voluminous that ever sped a six-day field on its journey as the riders bent to their task in response to the crack of the starters's pistol, in the battle for gold and glory.

Rambling round on a tour of discovery one finds the riders' headquarters fitted with kitchens and stocked with provisions, wheels, clothing, first-aid-to-the-injured outfits and other necessities of a big race almost sufficient to operate a Wanamacysiegull store.

Upstairs again, the incessant whir of wheels is heard, the sound suddenly intensifying in volume to a sullen roar, not unlike Niagara, as the riders, rolling over the raised board flooring of the track, jump into a sprint in response to the challenge of one who has made his getaway from the line for a few yards gain—the pack is after him in full cry, and the battle is on, seemingly, pandemonium reigns on the track, partners are being relieved in half-minute intervals, trainers are scurrying everywhere to steady each relieved rider on his wheel until his turn again comes to take up the running, and the "jam" is on; with the spectators expressing their approval by every vocal and muscular means within their power.

In catering to the news requirements of the crowd, the "Bicycling World" this year attained the dignity of a sales booth, an innovation for the Garden race in the news dealing line.

High up on the gallery fronts among the banners extolling the merits of this or that "extracts" and "bitters" is observed a new comer calling attention to the prime object of the United Cyclists—the project of creating a fund to finance a bicycle team to represent Uncle Sam at the Fifth Olympiad in Sweden, next July.

The Motorcycle Dealers' Association of Greater New York evidently believes in the doctrine that "in the bicycle rider of to-day is the motorcycle user of to-morrow," as its silent salesman, the first of its kind, is prominently displayed.

A suggestive scent through the hatchway in the center of the arena, tempts one to descend to the "grotto," and there is presented the opportunity to demonstrate to one's satisfaction the merits of the various liquid exhilarators as extolled on the aforementioned majority of the banners on high. Opposite is observed the pavilion whereat is prepared and dispensed links and miles and cords of the festive "hot dog" under the watchful eye and skilful hand of a seven-year concessionaire, F. A. T. Moore.

In the arena the same strong man who has operated for the past dozen years displays his dexterity and strength pulling the candy to snowy whiteness.

The same band master who has directed the efforts of the Sixty-ninth Regiment Band since the first race in 1891 is still wielding the baton.

CHARACTERISTIC ATTITUDES OF TWO RIDERS GUESS WHO?

Eight-Day Race at Mainz, Germany.

By a margin of six laps, which advantage they had held for four days, Ludwig and Rossellen, riding as a team, won the eight day's race of ten hours per day, November 19-26, at Mainz, Germany. The distance covered by the winning team was 2,224.4 kilometers, equal to 1,382 miles. The second team to finish was Echterhoff and Zeeh.

Warrnambool Winner Disqualified.

A. R. W. Collins, winner of the recent Warrnambool Road race, Australia's cycling classoc, has been disqualified on the protest of the third man to finish, F. Lessing, the latter claiming that Collins held him by his clothing in the sprint. Collins has appealed the decision.

KRAMER'S WORLD-BEATING SPRINT

Exercises It in Winning Match Race with Clark and Lorenz at Madison Square Garden.

Showing a world of speed and demonstrating conclusively his mastery of match racing on small tracks, Frank L. Kramer again won the head-liner event on the program of the usual curtain-raising meet for the annual six-day race in Madison Square Garden last Saturday night, December 10. Kramer's decisive victory came in two straight heats of the international three cornered match race when he met A. J. Clark, his runner-up in the championship series and Willy Lorenz, of Germany, who once this past season has met and defeated Walter Rutt, and who with Karl Saldow as partner, has been giving a very good account of himself in six-day races in Germany, and will attempt to do likewise in the "Nineteenth Annual."

Joseph A. Fogler won the ten-mile open, professional, in which started 20 of the entrants for the six-day race, and divers other pros. Punctures and spills rapidly depleted the ranks in this event until at seven miles there were but five riders on their wheels. Lloyd Thomas was a close second and George Wiley was third.

Ten heats were required to sift the amateurs down in the quarter-mile open and two semi-finals. Paul C. Heidrich led Chester Smith over the tape with a length to spare in the final and three lengths separated the latter from the third man, Earl L. Adams.

Long-markers had the call in the eight preliminary and final heats of the half-mile amateur handicap which was won by Herbert Clouse (60) with Joseph Brexel (70) five lengths in the rear for second.

Elmer Collins put up one of his usual displays of gameness when overtaken by a puncture in the second mile of his five-mile match with "Jimmy" Moran following the motors Moran showed signs of distress early in the race and was being overhauled rapidly by Collins when the latter punctured; jumping on a sprint wheel that happened to be standing alongside the track, Collins was in the battle again with a loss of two laps. With his feet whirling pin-wheel fashion on the low sprinting gear, Collins quickly drew up alongside but found the effort too great and was forced to drop back after riding a three-lap duel on the narrow track, a performance fully appreciated by the more than 10,000 spectators, who voiced their approval in no uncertain manner. The summary:

One-quarter mile open, amateur—Won by Paul C. Heidrich; second, Chester Smith; third, Earl L. Adams; time, 0.32⅗.

One-half mile, handicap, amateur—Won by Herbert Clouse (60); second, Joseph Brexel (70); third, George Pauli (30); time, 1.00⅘.

Three-cornered match sprint race, professional—First heat (one mile), won by Frank L. Kramer; second, A. J. Clark; third, Willy Lorenz; time, 3.18⅕. Second heat (half-mile), won by Kramer; second, Clark; third, Lorenz, time, 1.00⅗.

Two mile pursuit, professional, Joseph A. Fogler versus Edward Root—Won by Root by eight yards; time, 4,17.

Ten mile, open, professional—Won by Joseph A. Fogler; second, Lloyd Thomas; third, George Wiley; fourth, Karl Saldow; fifth, William Palmer, Jr.; leader of most laps, Palmer, 24 laps; mile prize winners, one to nine miles inclusive, Alfred Halstead, Norman Anderson, Peter Drobach, E. A. Pye, Thomas, Edward Root, Saldow, Palmer; time, 24.31⅗.

Five-mile motor-paced match, Elmer Collins (C. Turville) versus James F. Moran (J. Hunter)—Won by Moran; time, 8.03.

Crescents Hold Run and Closed Sprints.

The Crescent Bicycle Club, of Baltimore, held a run to Clifton Park, Sunday, December 10, and in connection therewith held a series of closed club races around the lake, on a roadway seven-eighths of a mile in length. The weather conditions were ideal and the track was fast, spirited contests were the rule in all the events, and the day's pleasure was voted perfect in every particular by all participants. Summary:

Class E riders—Won by Joseph F. Solan; second, William Vogel; third, Joseph Casey. Time, 2:38.

Class D riders—Won by J. Fred Huber; second, Fred M. Sanborn; third, Joseph F. Solan. Time, 2:31.

Class C riders—Won by Thomas W. Baker; second, Charles H. Thoms; third, J. Fred Huber. Time, 2:25.

Class B riders—Won by August T. L. Leimbach; second, William A. Leimbach; third, Thomas W. Baker. Time, 2:16.

Free-for-all—Won by August Leimbach; second, William A. Leimbach; third, Langdon M. Sanborn. Time, 2:20.

Busy Days in Australian Cycling.

The Australian cycling world is now in the throes of anticipation anent six-day races as the first of two under the management of the J. D. Williams Amusement Co., is scheduled to start at the Sydney Cricket Grounds, Sydney, N. S. W., January 1; the races will be run on plans very simliar to those of the Madison Square Garden events; the entries are limited to 40 teams. In addition to the bicycle races there will be pedestrian events occuring simultaneously in the infield. A month following the Sydney race there will be one held in Melbourne, and for the first time since its origination in 1886, the great Austral Wheel Race will pass out of the hands of the Melbourne Bicycle Club and will be run in connection with the six-day race under the J. D. Williams management.

WORLD'S CHAMPIONSHIPS FOR 1912

August 25-28 and September 2 Approved as Dates by the U. C. I.—Newark Velodrome the Place.

Official dates for the World's Cycle Championship races for 1912, under the patronage of the Union Cycliste Internationale, have been announced by the international secretary, M. Paul Rousseau, whose official headquarters are located in Paris. The dates approved are August 25, August 28 and September 2.

At the annual meeting of the U. C. I. in February, the championships for 1912 were awarded to the United States at the solicitation of the National Cycling Association, after the latter organization had completed arrangements to have them contested on the new Velodrome at Newark, N. J. Messrs. Mihlon and Chapman, proprietors of the Velodrome, prepared a schedule of dates that was submitted by the N. C. A. to the U. C. I., and the above announced dates were the ones chosen.

The list of championships include the 1,000 meters events for both amateurs and professional sprinters, and the 100 kilometers motor-paced championships for the gasoline machine followers in both classes. In addition Manager Chapman, of the Velodrome, has prepared a fine card of other events which includes in the professional class a one mile tandem championship, one, two and three mile handicaps, and two and five mile invitation races for first-class riders. Three amateur races will be added.

On the return of Mr. Chapman from Atlanta, Ga., where he has been visiting his mother for some time, active preparations will be begun to secure the entries of the champions of all countries affiliated with the U. C. I., and it is possible Mr. Mihlon and he will visit the European centers with that object in view before spring.

Friends of Mr. Chapman will be pleased to learn that he is rapidly recovering from his attack of typhoid fever contracted while on his travels in the Southland.

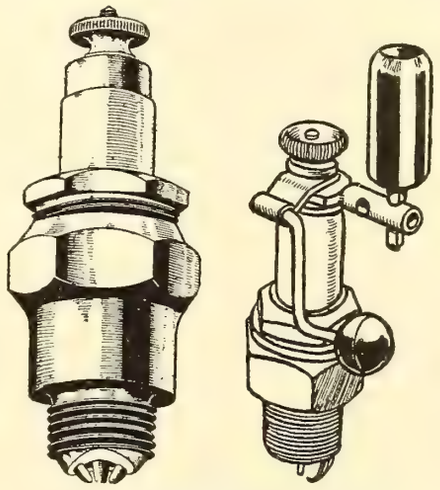
Hoffman Successfully Repels Invaders.

Hoffman, representing Germany, won the three cornered, three heat match at the Berlin Winter Velodrome, Berlin, Germany, November 30. The total scores for the three heats of one-half, one, and one and one-half miles are: Hoffman, Germany, two firsts, one second—4 points; Ellegaard, Denmark, two seconds, one third—7 points; Stol, Holland, two thirds, one first—7.

Walker Returns Home to Ride.

Gordon Walker, one of the Australian contingent that has become familiar to followers of bicycling in this country, is now in his native land and will take part in both six-day races to be held there.

Foreign Fashions in Motorcycles for Next Year



London, England, Dec. 3.—Now that the second Olympia motorcycle show has passed into history the trends in design which it disclosed, and the trumps and other mechanical cards drawn from the deck of experience during the past year offer much food for sober discussion. How many of the latter will pass into the discard remains to be seen. In common with the motor car in the early years of its development, the rapid advances in design have rendered the motorcycle of two seasons back practically obsolete. While the motorcycle designer has had the benefit of the research and experience of the car builder to aid him in sidestepping mechanical mistakes in design and construction, the conditions encountered in the motorcycle were far more onerous than in the car, so it is but natural that a long period of experimental work was necessary before an encouraging degree of success was attained.

By far the most striking development of the past year is the general adoption of the change speed gearset with two, three, and even four reduction ratios. Accompanying this luxury is the strong tendency to operate the low-speed by pedal, facilitating smooth and easy starting. Chain drive has gained a strong foothold, particularly among old and conservative makers, heretofore swearing unwavering allegiance to the belt. The result of the last Tourist Trophy race is the answer to this about-face. Occupying a front seat in the gallery of new things, the hand and foot starters show by their numbers that not a few manufacturers finally have discovered that the public long has been tired of taking a course in gymnastics in starting motorcycles, and wanted the task made easier. Engines also show a touching up in details, and in some cases have been completely rebuilt.

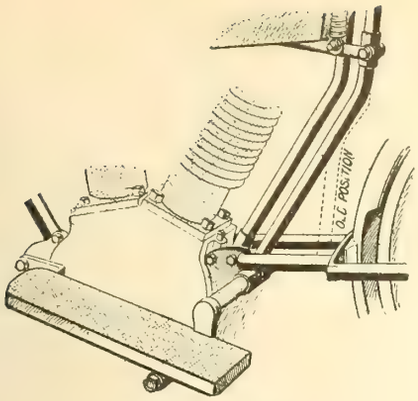
To many show visitors interested in the technical side, the new gearsets were by far the most interesting objects under the great roof of Olympia. The new Sturmey-Archer three-speed, which is a combined hub gear and clutch, and applicable to any standard motorcycle, always had a crowd around the stand where it was shown. In addition to a multiple disc clutch, the hub contains two trains of epicyclic gearing. The speed ratios are obtained by sliding a double sun pinion, which engages at different positions in its travel, with the axle for direct drive, and with intermediate and low pinion carriers for the second and first speeds. The clutch is mounted outside the hub shell, and the direct drive is on high.

Another popular type is the Armstrong three-speed. This is made in two types, for a single track motorcycle, and a side-car outfit. In the latter model, the heavier work required, is provided for by the use of more discs in the clutch. The discs are made of phospor bronze and steel, and placed alternately.

In the Bradbury two-speed gearset, which receives and delivers a double chain drive, the high gear also is in the top of the case, like the Armstrong, and the gears always are in mesh, being engaged by sliding dog clutches. Either two or four speeds may be had with the Clyno gearset. The two-speed set is standard, and has a direct drive on both speeds, each being connected to the rear wheel by chains, one on each side of the hub. The drive is obtained through expanding clutches. The four-speed system incorporates sliding dog clutches which combine with the double chains to produce the quadruple ratios. Two other simple and generally similar gearsets are the Lake and Elliott, and A. J. S. The latter is of the countershaft type and incorporates two speeds and a clutch.

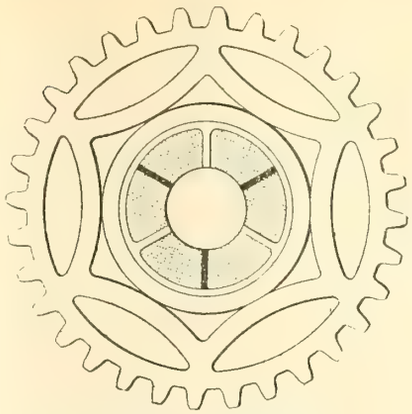
Three Point Electrode and Telephone Jack Terminal Plug Novelties

In the past the carbureter has been neglected, but now is receiving the attention it deserves, in minor departments. The well known Amac is used on many machines. The new Puch Senspray carbureter seems to particularly meet the demands of motorcycle work, being designed to give perfect vaporization under all conditions of air supply. Brown and Barlow, another leading maker, showed no less than eight types, embodying the results of their long and exhaustive experiments in this field. Their leader is a new variable jet, and variable piston throttle stroke, in which particular attention has been paid to securing easy adjustment from the saddle.



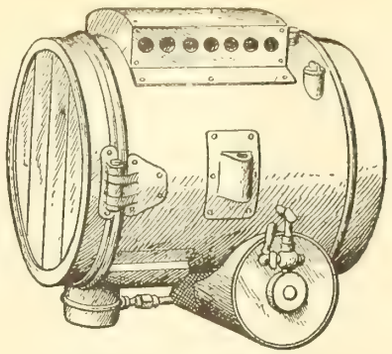
Because of the entirely different and exceedingly complex problems which they involve, two cycle carbureters are highly interesting. That fitted to the well known two-cycle Scott has been entirely redesigned. Ordinarily all air is sucked past the jet from the space between the crank chamber walls, where it is warmed previously, while the auxiliary supply is admitted through an attachment affixed to the main air inlet valve. The Phelon & Moore single jet carbureter also has a novel feature, in its piston control. One of its virtues is the ease with which it can be dismounted and inspected.

Many of the new motors, and changes in the old ones, are noteworthy, and deserving of comment. The Humber 3½ h. p. is one which has undergone almost complete transformation. In addition to offsetting the cylinders, their displacement has been increased. On the larger Humbers a handlebar-controlled half-compression release is fitted. Like its carbureter, the two-cycle Scott motor has been altered considerably. It has a larger bore, and the cylinders are remodeled, now being a very smooth casting. The aluminum crank chamber has been strengthened by the insertion of webs.



To meet the demand for a powerful single for hill climbing from that class whose wants are not to be satisfied by a twin, the 6 h.p. Precision was developed. It is the daddy of the line, the children being the widely popular 3¾ h.p., and the baby 2½ h.p. The later has been made more oil tight. A unique feature of the Hudson is the slidable magneto bracket to adjust the magneto drive chain. An enclosed roller chain is used.

There are several earmarks by which the new Clymo 5½ h.p. may be distinguished. The cylinders are set at 55 degrees, and are linked to large flywheels. Valves are set tandem and operated by two cams. In the Rex the fitting of ecentric cams to the flywheels is claimed to have made possible higher motor speeds. The crankshaft is mounted on roller bearings. The magneto now is chain driven, and provision has been made for easy retiming, should the instrument be dismounted.



Interesting construction is observable in the new Excelsiors which are made in sizes of 3½ and 4½ h.p., respectively. Both employ semi automatic sight feed lubrication through the cylinder walls, and thence to the wrist pin. The main bearings are served by ducts from a separate lead. In the Lloyd the bore and stroke have been increased. It mounts the new enclosed arch Bosch magneto in front of the motor, the armature rotation being accomplished by enclosed gears. Many other motors also carry the latest Bosch ignition.

TRACK FRANCHISE RESOLUTIONS

Hamilton and Thornley Each Submit a Set to F. A. M. Directors—To Take Action at New York Show.

Two sets of resolutions concerning the granting of franchises to motorcycle board track owners or operators during the coming season, are before the Board of Directors of the F. A. M. for consideration. President Hamilton fathers the first set, accompanying this article, and Chairman Thornley, of the Competition Committee, the second. A vote already has been taken by the board but no agreement was reached.

In order that the directors may acquaint themselves with the opinions of the trade and riders at large in the matter before taking further action, Chairman Sauer, of the Legal Action Committee, has sent copies to the trade journals, so that all interested may become familiar with the resolutions, and have an opportunity to express themselves. President Hamilton will call another meeting of the directors in New York, during the week of the motorcycle show in January, when the matter again will be tackled and an effort made to arrive at some decision. Following are the resolutions:

President Hamilton's Resolutions.

First—The track shall not be over four laps to the mile (preferably three); shall be properly constructed and measured as to correct distance, and an engineer's certificate of measurement filed with the chairman of the Competition Committee.

Second—In cities with a population of 1,000,000 or over, preferred sanctions shall not be issued to two or more tracks located within 15 miles of each other. In cities where the population is less than 1,000,000 preferred sanctions shall not be issued to two or more tracks located within 50 miles of each other, except in cases where two cities each having a population of 200,000 or over, are located within 50 miles of each other, and when so located one track in each city may receive the benefit of preferred sanctions.

Third—In order for the owner or lessee of an approved track to secure the advantage of preferred sanctions, such owner or owners or lessees must make application to the chairman of the Competition Committee for such dates during the season as he or they may desire sanctions for, with the understanding that not more than three preferred dates will be allowed in any one week, and the first approved track shall have no preference to a sanction for any dates not spoken for at least 30 days in advance. No track shall be considered as entitled to preferred sanctions that does not apply for at least 25 sanctions during the calendar year.

Fourth—The first approved track shall not be protected in the matter of preferred sanctions for a longer period than three years, and then only on condition that at least 25 sanctions shall be applied for not later than June 1st and taken in each calendar year. The three year period, as well as the mileage limitations may be extended by the Board of Directors of the F. A. M. when special conditions seem to call for an exception.

Fifth—Preferred sanctions when not more than 25 in a calendar year shall command double the usual sanction fee, and all preferred sanctions above the first 25 during the calendar year shall command treble the usual sanction fee.

Sixth—All applications for preferred sanctions must be accompanied by the proper fee in accordance with the foregoing.

Seventh—If the owner or lessee fails to comply at all times with the F. A. M. Competition Rules, he forfeits all rights to preferred sanctions and to all monies paid for sanctions.

NOTE.—F. A. M. sanctions which are intended for use at a period more than 30 days in advance of the date of filing applications for same shall be known as "preferred sanctions" and all applications for such shall be referred to the Board of Directors.

Chairman Thornley's Resolutions.

Whereas, it has been found by actual experience that properly built banked board tracks are the safest and most satisfactory tracks for motorcycle racing.

Be it resolved, that the Federation of American Motorcyclists is heartily in favor of the building of circular board tracks, and it will be our policy to protect, as far as possible the builders and promoters who first put up board tracks in any community.

Furthermore, be it resolved; that the F. A. M. will not grant sanction to any board track of less than a mile, that is not perfectly circular in shape; that is not properly and safely banked; that is not firmly and substantially constructed, and that is of a circumference of less than one-quarter of a mile.

Furthermore, be it resolved; that the charge for regular sanction for races and exhibitions on all board tracks for each calendar day shall be $25.00.

Furthermore, be it resolved, that the chairman of the Competition Committee is instructed and hereby authorized to grant restrictive sanctions to board track managers on or before the first day of March of each year for a period of from three to five years, upon the payment annually of certain fixed sums, and upon certain conditions as hereinafter set forth:

Upon the payment of $2,000 annually in advance, restrictive sanction will be issued which will insure the holder thereof against the F. A. M. issuing any sanction for board track races, exhibitions, or record trials to any board track promoter within a radius of 50 miles of said track and for a period of five years.

Upon the payment of $1,200 annually in advance, restrictive sanction will be issued which will insure the holder thereof against the F. A. M. issuing any sanction for board track races, exhibitions, or record trials, to any other board track promoter within a radius of 50 miles of said track for three years.

Upon the payment of $1,400 annually in advance, restrictive sanction will be issued which will insure the holder thereof against the F. A. M. issuing any sanction for board track races, exhibitions, or record trials, upon any other board track within a radius of 25 miles of said track for a period of five years.

Upon the payment of $700 annually in advance, restrictive sanction will be issued which will insure the holder thereof against the F. A. M. issuing any sanction for board track races, exhibitions or record trials, upon any other board track within a radius of 25 miles of said track for a period of three years.

Furthermore, be it resolved, that such restrictive sanction does not insure the promoter that regular sanction will be granted to him at any time; it simply assures to him that no sanction will be granted to any other board track within the radius agreed upon for the period of the contract.

Furthermore, promoters of board tracks holding restrictive sanction shall be required to apply to the chairman of the Competition Committee for regular sanction, and pay for it in each instance just as though they were not in possession of such restrictive sanction at all. Furthermore, holders of such restrictive sanction shall agree not to hold outlaw meets upon their track, or to permit others to hold such.

It shall be the duty of the chairman of the Competition Committee to withhold, cancel or suspend sanction for violations of the rules just as though no restrictive sanction had been issued, but in cases where the chairman of the Competition Committee shall deem it necessary to withhold, cancel or suspend sanction; that under no circumstances will sanction be granted to any other board track during the period covered by the above mentioned restriction.

Furthermore, be it resolved, that any and all rulings of the chairman of the Competition Committee involving the suspension, canceling or withholding of sanction shall be subject to appeal to the Board of Directors direct. That in the granting of such restrictive sanction, a promoter who has carried on motorcycle racing under F. A. M. sanction satisfactorily and fairly on a board track for the longest period shall be given the preference of renewal under the 25 mile radius, and that no sanction will be granted to a second board track within the radius above stated until the promoters of the first track have had ample opportunity to refuse such restrictive sanction, provided always that the promoter of such a track has satisfactorily lived up to the rules and regulations of the F. A. M.

Furthermore, be it resolved, that before granting such restrictive sanction to any board track promoter, said promoter shall agree to give a benefit on some good date during the year for the purpose of building a club house, to be for the use of all F. A. M. members within the radius protected.

Furthermore, said promoter shall agree to rent the track at a reasonable rental to an organization composed of all the F. A. M. members of the restricted area for one specific date during the year; the proceeds of such meet shall be devoted to the building and maintenance of the above designated club house.

All monies for restrictive sanction shall be collected by the chairman of the Competition Committee on or before the first day of March of each year, after which date if the payment has not been made in full, the chairman of the Competition Committee will be at liberty to issue sanctions to any board track either in existence or proposed, that may apply for restrictive sanction or otherwise.

Before a track is built no such restrictive sanction shall be issued until the first year's payment for such restriction has been actually made, and the

track completed on or before June first of said year.

Furthermore, be it resolved, that all monies collected for such restrictive sanction shall be turned over immediately to the national treasurer to be devoted primarily to the expenses of the Legal Committee up to $2,000 per annum, and thereafter, all sums in excess of $2,000 so collected shall go into the national treasury to be used at the direction of the Board of Directors.

Furthermore, be it resolved, that the chairman of the Competition Committee shall co-operate with the chairman of the Legal Committee in drawing up a proper contract embodying the above provisions, and that the chairman of the Legal Committee is hereby authorized to employ efficient legal counsel in order that such contract may be so drawn as to protect the interests of all concerned.

Motorcycles Please Turkish Queens.

Salonica, Turkey-in-Europe, Dec. 14.—American motorcyclists who are looking for titled and wealthy girls for wives, can find plenty of them here, if they bring their motorcycles with them. Motorcycles are objects of great curiosity in this country, and the owner of one is looked upon as a high mogul. James Gylamett, a young Turk, who just returned from the United States, after a residence there of several years, and brought a motorcycle back with him, has become an idol with the swell ladies of the city. Two women of rank, one of them wealthy, have proposed marriage to him. The latter also is a beauty, according to the Turkish standard of great avoirdupois, but Gylamett's stay in America has changed his ideas of beauty in favor of the slender Yankee type, so he has declined the hearts and hands of his obese native admirers.

Club Formed in Lindsborg.

Lindsborg, Kan., which is a typical live wire community of that dynamic state, has jumped its trolley and grounded on the motorcycle map circuit. The local riders were galvanized by the district F. A. M. exciter, Philip E. Zimmerman, advertising manager of the Hagstrom Bros. Mfg. Co., and a club was formed with practically every motorcyclist in the city mustered in. "Zim" as he likes to be saluted, has been appointed F. A. M. commissioner for the district, and has proved such a hustler that he already has drawn a berth on the committee delegated to secure motor trucks to carry the luggage and camping outfits, on the big tour which the Short Grass Motorcycle Club, of Rexford, and anywhere-else-in-Kansas, will conduct next August. Of course the Lindsborg boys will be there with both cylinders.

Motorcyclists Riding Southward.

Indianapolis, Ind., Dec. 13.—Like the sparrows, but not so hastily, quite a few motorcyclists in and around these "diggin's" are flocking to the sunny South for the winter. Charles Grimm, of Forest Park, and A. G. Ernst, of Oak Park, both Chicago suburbs, recently arrived here, Florida bound. They reported heavy roads, due to the softening influence of the sun, and consequently rather slow progress.

CLUBS CLUBS AND MORE CLUBS

Affiliation Seed Sent Out by Chairman Estabrook Shows Steady Growth—Many New Registered Shops.

Bangor, Me., Dec. 14.—With the closing of the riding season, practically, over a large section of the country, there is a noticeable acceleration in the club organization movement, indicating that interest in motorcycling no longer curls up and goes to sleep during the temporary reign of Jack Frost. Indeed, interest should not lapse, for with the enforced cessation of outdoor sport and relaxation from strenuous riding, comes a desire for variety which is gratified by seasonable social pleasures and an interchange of riding experiences with the more intimate of road companions of the past season. Verily the winter holds much in store for members of clubs wherein harmony reigns.

Lorain, Ohio, soon will number a motorcycle club among its institutions, thanks to the efforts of Dr. A. M. Webster. The wily M. D. knows well that the way to a man's heart is via his stomach, and accordingly planted a decoy for the preliminary meeting in the form of a "Dutch" lunch and entertainment. The scheme worked fine, as might be expected, and the club started off with a rush, the members voting for a 100 per cent. F. A. M. organization. Permanent organization will be completed shortly by the election of officers.

That the Lincoln Park Motorcycle Club, of Chicago, intends to keep in the running with other leading clubs in the breezy village, is vouched for by Secretary Pullviny. The first step will be affiliation in the near future.

Whittier, Cal., and its immediate environments, can muster 50 motorcyclists and half as many more prospects. Naturally the club germ will find fertile feeding ground here, and Percy Bennett says that the Whittier M. C. will be on the map soon and flying the F. A. M. colors, too.

L. C. Notbohm, Rime, Wis., one of the veteran bicycle dealers, is keeping up with the times, as his activity in organizing an F. A. M. club shows. He is responsible for most of the motorcyclists who are roaming in those parts, and occasionally make Rome howl, as its Italian sister did in the days of Nero. Notbohm's shop will be on the registered list soon.

"Across the Pacific" will have more than a theatrical meaning now, for Theodore Siddall, Box 550, Manila, Philippine Islands, soon will receive F. A. M. literature. We eventually expect to hear of a Manila club holding runs into the interior and dodging the bolos of the untamed tribesmen.

Greenough and Greenough, Charleston, S. C., who are live dealers, find that it is good business policy to stimulate the local riders to form a club. Accordingly a meeting with that purpose will soon be called, and if the club is hatched, it will "hang out" at Greenough's, which is a registered shop, until it is strong enough to take a home.

Alvin Knaak, St. Joseph, Mich., has received a consignment of F. A. M. seed and is planting it despite the fact that winter is nigh. He is confident that it will "take," and that he will be able to raise an F. A. M. club—how could it be otherwise on F. A. M. seed—soon. Here's luck, old top.

To the 400 registered repair shops, the following have been added: S. T. Barin, 72 Seventh St., Portland, Ore.; E. S. Smith, 426 Main St., Richmond, Ind.; Page Bicycle Co., Greenfield, Mass.; C. M. Anderson, 69 S. Batavia St., Batavia, Ill.; Williams Motorcycle Co., 250 Drayton St., Savannah, Ga.; Levin Supply Co., 601 Kansas Ave., Atchinson, Kan.; J. V. Daniels, 1032 W. Girard Ave., Philadelphia, Pa.; N. W. Whiting, 1407 Broadway, Denver, Colo.; S. H. Reed, 7 E. High St., London, O.; H. R. Olmsted & Son, 413 S. Clinton St., Syracuse, N. Y. Re-issues: B. E. Zerby, Aliensville, Pa.; F. M. Schellinger, 9 Lincoln St., Harvard, Ill.; Guarantee Cycle Co., 111 Avenue D, San Antonio, Tex.; Keinard Bros., 248 Bridge St., Phoenixville, Pa.

Splitdorf Donates Road Books.

C. F. Splitdorf, New York City, manufacturer of Splitdorf motorcycle magnetos, coils and plugs, has donated to the F. A. M. 3,000 road books containing maps and routes in various sections of the country. Trip and total mileage is given, also a digest of state motor laws, and the book is capably indexed. It is of convenient pocket size. Members in good standing may procure one of these books by sending 10 cents in stamps to Secretary Gibson, Lock Box 947, Westboro, Mass. Duplicates of these books were distributed at the Buffalo national tournament.

With the approach of Christmas, that recurring question of "what to give" pops up, and in the way of timely suggestions, Secretary Gibson mentions F. A. M. memberships as being acceptable gifts. He has arranged to date such cards December 25, and will either mail them to the recipients, or to the givers, for the latter to present in person, as desired. For suitable gifts for persons already members, he offers the F. A. M. novelties consisting of stick pins, cuff links, watch fob, motorcycle emblem, sweater emblem, gold membership pin and founder pin.

Marshall Enters the Trade.

Frank Marshall, formerly president of the Terre Haute (Ind.) Motorcycle Club, and a well known rider of Indian racing machines, has removed to Louisville, Ky., and entered the trade. He is manager of the motorcycle department of the Sutcliffe Co., local agents for the Indian.

PROVIDENCE CLUB PROGRESSING

Doubled in Membership During Past Year —To Secure Quarters in Swenson's New Building.

Providence, R. I., Dec. 12.—Even though the riding season practically is over, there is no waning of enthusiasm among the members of the Providence Motorcycle Club. A large number turned out for the December business meeting at the club quarters, 298 Blackstone street, last night, and several important matters were attended to.

Big plans for next year were discussed. The past season was the most successful in the history of the club, the membership being doubled, and several successful contests held, not to mention regular runs. There is a great increase in motorcycle interest in this section, and with the large number of new riders which will be created next year, the club confidently expects to set new records in membership, contest promotion and general boosting of the sport.

There was a great hurrah when the committee on club quarters reported that arrangements had been completed with B. A. Swenson, the well known dealer and rider, who is treasurer of the club, and has done so much to build it up and bring it into national prominence, whereby the club will secure larger and more agreeable quarters in the new building which he is erecting on Broad street, one of the main touring routes leading out of the city. The building now is in the course of erection and will be completed in the early spring. The club is much pleased over the consummation of this deal, as it long has outgrown its present quarters, and has had difficulty in securing a suitable new location. There will be ample storage room and repair facilities in the new quarters, and pool and billiard tables already are slated for installation.

This city always has been a red hot racing center, but has lacked a track that would permit of high speed since Narragansett Park was ploughed up. In fact, no other track but the half mile oval at Hills Grove is available, but this is not safe for big twins, and anyway, the horsemen object to having it rolled for motorcycle races.

Now the club has undertaken to build a board track of its own, and run some big meets which will attract the stars to the city. The plan proposed is that the members subscribe to shares of stock until a certain amount of money is raised, the balance to be furnished by private capital. This proposition met with an enthusiastic reception, and the details will be worked out shortly. The track will be located on the Narragansett Park tract, inside the mile course, a location which is well known and easily accessible both by motor and trolley.

A committee also was appointed to arrange for the annual club banquet in January. The exact date will be announced later.

Candidates for offices for the ensuing year were nominated as follows: E. L. Buffington, A. R. Magee, president; Frank E. Domina, Sidney Higgins, Lyman P. Whitcher, vice-president; John G. Edwards, secretary; B. A. Swenson, C. H. Westcott, treasurer; Charles A. Anderson, John Kay, captain; Edward G. Luther, Albert V. Howe, Joseph T. Leddy, first lieutenant; Charles W. Rayhill, Edward A. Lutz, Clifford H. Frazier, second lieutenant. The election will occur in January.

Chesapeake Motorcyclists Dance.

Baltimore, Md., Dec. 12.—Abandoning touring for the nonce to indulge in the art of terpischore, the Chesapeake Motorcycle Club gave a dance last evening, which was quite a success for the first affair of the young organization born last September. Members and their lady friends enjoyed themselves hugely, tripping the light fantastic to the strains of popular music, and it was midnight when the merrymakers broke up.

The club now has 22 names on the roster, and a campaign has been started to swell the membership to 50. Early in January the club will take possession of new quarters at 1801½ Baker St.

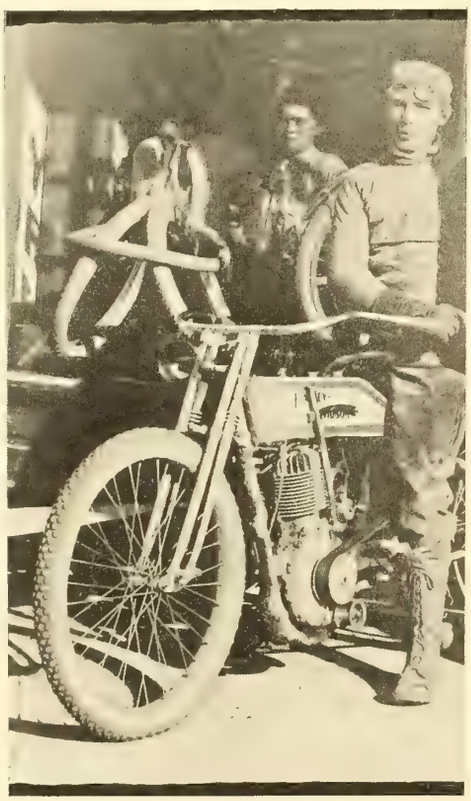
Louisville Club in New Quarters.

Louisville, Ky., Dec. 14.—It isn't often that such a crowd turns out for a motorcycle club meeting, as the regular Louisville M. C. function last week lured away from home, nearly the entire club membership being present. There was a great deal of enthusiasm over the new quarters, and if all the decorative plans proposed are carried out, the gasolene den will be a gorgeous place indeed. Not the least of its attractions is that it is just off Broadway, which is paved its entire length, and in consequence is one of the most popular motor drives in the city.

Among the recent recruits are Frank Marshall, the Indian racing man, who now is in our midst, and Arthur W. Ellis, manager of the local Goodyear tire branch. It is planned to install a pool table soon.

COLLIER MAY COME TO CALIFORNIA

DeRosier Dickering With British Champion—Meets Resumed at Ascot Park—Record Trials to Come.



Los Angeles, Cal., Dec. 12.—This city may have a world's motorcycle championship meet before long. One of Jake De Rosier's close friends whispers that Jake is dickering with C. R. Collier, the British champion, to come over and ride a series of races here. Jake is reported to have made Collier a very attractive proposition, and as Collier left all financial arrangements in DeRosier's hands before the latter left England, and practically agreed to come over if Jake was able to secure a satisfactory guarantee, it looks as if the money matters had been settled to suit DeRosier.

It is known that Collier is very anxious to come over to America and meet some of our riders, provided, of course, that he he can make expenses and a little gasoline money on the side, and while Jake also is anxious to have his very good English friend "see America," he steadfastly has refused to write for Collier unless he could guarantee the latter expenses and good purses. When Jack Prince and DeRosier were in Chicago last summer, Prince wanted Jake to bring Collier over for some big matches at Riverview, but Prince didn't "come across" with enough money, so Jake dropped negotiations. Jake thinks a lot of Collier and won't stand for having him buncoed with "salve" instead of cash.

Local followers of the sport scent something in the air, and are wondering what is going to be "pulled off" around December 31. While the Indian camp have lost none of the records on the official table this year, there are rumors which will not down, to the effect that they are going to make an attack late in the afternoon on the last day of the year. If advance "dope" is right old Daddy Time is booked to be slashed to ribbons before 1911 passes. Some new direct chain drive Indians are reported to be ready for the warpath, and Oscar Hedstrom, the big medicine man, is said to be coming here to see them pass their scalping novitiate, and superintend the massacre of the miles.

Back to nature is the new gospel of the racing men. After collecting enough splinters from the board tracks to start a woodyard, they are going to return to their old love, the dirt oval. Famous old Ascot Park, which has been outlawed for a year because some "auto bugs," who were "in bad" with the American Automobile Association, cut speed capers on it, has been reinstated among the "good" tracks, and beginning Sunday, December 17, speed parties will be held here all winter. Balke, Graves, Derkum and other stars will gallop for the dollars. Although DeRosier will be one of the promoters, he will not ride, as his knee still is bothering him as a result of the Guttenberg smash.

Charles Fuller Gates, has been crowned king of local F. A. M. racing again by Chairman Thornly, and although several of the riders don't like the choice a bit, they probably will have to grin and bear it. Wise ones are predicting a repetition of the big rumpus which killed racing here last winter. Jack Prince is promising his new track for the first of February, but local fans are taking Prince's soothsayings with a little Missouri brand, and won't worry much if Jack's newest set of woodenware isn't ready on time.

WALTER CUNNINGHAM,
Who Won Wichita, Kans., Road Race

Augustans to Race Christmas Day.

Augusta, Ga., Dec. 9.—Great interest is being manifested here in the race meet which the local club will hold at the fair grounds on Christmas Day. There will be a 50 mile free-for-all, and a match between a seven horsepower stock Merkel and a four horsepower "ported" racer of the same make. The latter "mill" is creating a lot of talk and both machines have ardent rooters.

Augusta has over 200 motorcycles, among them, those used by the enlisted men in Uncle Sam's aviation training school which is located here. As the government furnishes the machines and maintains them, the boys who ride them come pretty near enjoying the motorcyclist's dream of Paradise.

CUNNINGHAM WINS ROAD RACE

Takes Machine Fresh from Crate and Sets Course Record—Four Seconds Separate First Two Men.

First blood for a 1912 Harley-Davidson motorcycle in a speed event, was scored at Wichita, Kan., on Thanksgiving Day, November 30, when Walter Cunningham, mounted on a 4 horsepower machine just out of the crate, won the 67 mile road race to Wellington and return, in 1:45:14, a new record for this course, and an average of 38¼ miles an hour. The winner's performance is exceptionally good when the vile condition of the roads is considered. The riders ploughed through snow, slush and mud, which sometimes was ankle deep.

As if the victory was not enough glory for the Milwaukee machine, a 1911 brother of the winner, with Max Wilson in the saddle, came in second, and a mighty close second at that, being beaten by four seconds. Then there was a big gap until the third man, H. Stevens, on an Excelsior, came along. Stevens had the misfortune to pick up a big nail, which, of course, set him back. His time was 1:57:44. Stevens has been the winner of all previous road races in the vicinity this year, while Wilson, the second man, won the first race ever run over the Wellington course.

Three other contestants finished as follows: Frank Horner (4 Indian) 1:58:56; Harry Myers (4 Excelsior) 2:05:00; Paul Garst (4 Indian) 2:10:10. All of the six starters finished.

Tampans Taste Speed on Thanksgiving.

Tampa, Fla., Dec. 9.—Although it was Thanksgiving Day, quite a few of the contestants in the motorcycle meet which the Tampa Motorcycle Club staged at Tampa Bay Park on November 30 were of the opinion that they did not have anything to be thankful for. In fact the races more properly were reliability contests for it wasn't speed that determined the winner as much as it was freedom from mechanical trouble. There was a string of disabled motors, and one or two disabled riders, when the battles were over.

Under the circumstances no one made a "clean up," and several of the favorites were wiped out. John Marsicano (Excelsior) won the blue ribbon number on the program, a 15 mile open, after Frank Nelms (Indian) had held the lead until two laps from home, only to retire with a broken chain. Carl Torres (Thor) was runner-up. Torres won the 10 mile open, with Nelms second. Nelms finally cashed first place in the miss-and-out, and Louis Torres, brother of Carl, slashed out a victory in the five miel open. Mishaps shut him out of the money thereafter. Attendance, 1,500 paid; 2,000 "deadheads."

MANUFACTURERS AND CLUBS ENDORSE CAMPAIGN

Persons Donates Special Racing Saddles for Olympic Team—St. Louis Cycling Club by Contributing Fifty Dollars Makes New Record—Special Motorcycle Committee Appointed.

Subscriptions Pledged to the American Olympic Bicycle Race Fund.

B. A. Swenson, Providence, R. I.	$10.00
H. A. Gliesman, New York	10.00
C. T. Kilborne, East Orange, N. J.	5.00
United Cyclists (Collection)	10.00
New York Division, Century Road Club Association	10.00
New Jersey Division, Century Road Club Association	5.00
R. F. Kelsey, New York	10.00
J. A. Hall, Brooklyn, N. Y.	5.00
M. J. Zulzer, Brooklyn, N. Y.	5.00
New England Wheelmen	20.00
St. Louis Cycling Club	50.00

The regular business meeting of the United Cyclists was held on Monday evening, the 11th instant, at 1213 Fulton street, Brooklyn. In spite of the fact that the six-day race in progress at Madison Square Garden, was holding the attention of every one interested in cycling, enthusiasm and interest in the United Cyclists was proven by the fact that 22 members were present. The reading of the minutes of the previous meeting and the reports of the various committees were put over until the next meeting. It was reported by the president that 600 press notices to the leading newspapers of every city in the United States have been sent out since the last meeting, and that approximately 700 letters were to be mailed the coming week to every registered bicycle rider in the country. Several applications for membership were read by the secretary and referred to the membership committee. The chairman of the dinner committee, Mr. H. A. Gliesman, reported that the banquet hall at the Hotel Earlington, on West 27th street, had been secured for the dinner of the Motorcycle Dealers Association, in conjunction with the United Cyclists, to be tendered to the motorcycle, bicycle and accessory manufacturers on Wednesday evening, January 10th. It was also reported that the manufacturers, dealers and riders were responding with much interest to the call for the dinner, and that it was expected that at least 500 will be present. The caterer will be Mouquin, and because of his interest in cycling and the organization, he has agreed to furnish the dinner which usually costs $3.50—for $2 per plate. Mr. Gliesman asked the aid and co-operation of every one connected in any way in cycling, either bicycling or motorcycling.

The General Olympic Committee had appointed their selection committees for the various sections of the country, and a motion was made and carried that the president appoint a committee to confer with James E. Sullivan regarding the recognition of the United Cyclists. Will R. ("Happy Day's") Pitman, and H. J. Dibblee were appointed. It was then suggested that every cycling organization that holds a social affair of any kind in the future should raffle off a parlor clock, the proceeds to go to the Olympic fund. This suggestion met with the approval of those present and Mr. V. J. Lind reporting for the Atlas Bicycle Club, Brooklyn, stated that their club smoker and stag would be held at Stotetzer's, on December 16th and this suggestion will be carried out. It also was decided to request all cycling organizations that publish a program at their various affairs to allow the Olympic Committee a page for an appeal for contributions. A motion was then made and unanimously carried that a special committee be appointed to look after the interest of the motorcycle end of the organization and to provide ways and means for their special benefit. O. P. Warlick, president of the Invincible Motorcycle Club, of Brooklyn, was appointed chairman of this committee, and in accepting the appointment stated that he would do everything in his power to further the interest of the motorcyclists and to arrange for social, as well as beneficial events for them. Speaking on the motion, Mr. Gliesman stated that one of the tire companies had prepared an illustrated lecture showing how a motorcycle tire was made, and thought this lecture could be secured free of charge. The matter was referred to Mr. Warlick and, no doubt, it will be taken up later. Mr. Gliesman then reported that he was endeavoring to secure the privilege of presenting the prizes won at the Thanksgiving Day Handicap during an intermission of the performance at the Winter Garden.

Preparing Bill Against Cut-Out.

The committee appointed at the first meeting of the United Cyclists, for the purpose of preparing and presenting a proper bill against the use of the muffler cut-out to the New York legislature, made their report, and it was decided to confer with a like committee of the Motorcycle Dealers Association of Greater New York, and also with the chairman of the Legal Action Committee of the Federation of American Motorcyclists, J. Leo Sauer. A motion was then made and carried that a committee be appointed to confer with Mr. P. T. Powers regarding the raising of a banner in Madison Square Garden during the six-day race, advertising the United Cyclists and the Olympic campaign, also to endeavor to secure the privilege of giving out printed matter at the Garden in regard to this work. The special Subscription Committee appointed to work on the special offer of the Bicycling World Co. to donate one-half of the regular subscription price of $2.00 to the Olympic fund on all subscriptions to the Bicycling World and Motorcycle Review secured by the United Cyclists interested, reported that subscriptions were coming in and it is very evident that this will prove a great aid to the fund. Victor J. Lind was appointed a committee to arrange for a Christmas smoker and stag of the United Cyclists. H. A. Gliesman stated that the Motorcycle Dealers' Association of Greater New York would tender a dinner on Tuesday evening, December 19th, to the winners and officials of the Thanksgiving Day Handicap. The meeting was then adjourned to await the call of the chair.

Leading Manufacturers Endorse Campaign.

Enthusiasm is growing daily in the campaign of the United Cyclists for the raising, and the use of my name on your Hon- of 12 bicycle riders to represent America in the Olympic Road Race around Lake Malaar, Stockholm, Sweden, next July. Approximately 1,500 letters have been sent out from headquarters during the past two weeks in regard to the work, and responses all show hearty approval and enthusiasm. W. F. Remppis, of the Reading Standard Co., writes as follows:

"I will very gladly give you my endorsement of your very laudable undertaking, and the use of my name of your Honorary Comimttee, and I would not object to doing some work if I were able to spare any time, but I am not in a position to take any additional duties upon myself. However, since your letter clearly states that there are no duties devolving upon me and that it simply means an endorsement of the movement, I am very glad to accept. I am very glad that you have taken up this work, and I trust that you will meet with deserved success."

Charles A. Persons, president of the Per-

son's Mfg. Co., manufacturers of bicycle saddles, called at the headquarters of the organization this week and endorsed the campaign very strongly. He stated that the work of the committee ought to receive active and material support of every one interested in cycling, particularly the manufacturers, and also stated that he would donate personally, specially designed racing saddles for the use of the team. This saddle is not yet on the market, and will be made from special suggestions offered by Frank L. Kramer, national bicycle champion, and "Major" Taylor.

W. P. 'Farrell, of J. W. Grady & Co., Worcester, Mass., writes as follows:

"The writer would be very glad to do all he possibly can to advance the interest of cycling, and I wish you would give me all possible information regarding the methods used by other dealers who are promoting the interest of your organization in their cities, so that I can start the thing right here."

Through the kindness of Mr. P. T. Powers and Mr. Frank Stevens, a large banner was hung in Madison Square Garden during the six-day race, and about ten thousand circulars regarding the campaign were distributed.

As stated before, it is evident from correspondence being received at headquarters that unfortunately the manufacturers are waiting for someone to make a start in the way of contributions. This is absolutely against the interest of the campaign, because of the shortness of time, but it is expected that during the coming week one of the largest and oldest of the bicycle manufacturers will start the ball a-rolling with a very substantial contribution, and also that one of the large tire companies will do likewise.

Substantial Donation from St. Louis.

The St. Louis Cycling Club, one of the largest and most active clubs in the country, through its treasurer, Charles L. Barr, has notified the committee that they will donate $50 to the Olympic fund. This is the largest donation yet received, and is most encouraging to the committee. It shows the progressiveness of the St. Louis club, their real interest in the sport and their actual desire to do everything possible to boost cycling. Such a contribution should be following immediately by similar ones from every cycling organization in the country. Mr. Barr states further that the St. Louis club is forming a committee to raise more funds from outside sources, and that they will do everything possible to largely increase this amount, and report later.

Franklin Fisher, one of the well-known bicycle riders in New York, and who is working particularly hard to aid the Olympic fund, has sent in the following to headquarters:

"An Idea On How to Raise Funds. A good one, what say you?

Olympic Fund Quartette.

V. J. Lind.....First Tenor
W. R. Stroud.....Second Tenor
H. J. Dibblee.....First Bass
H. A. Gliesman .....Second Bass

Orchestra led by the boy wonder, "Happy Day's" Pitman. Lantern slide to illustrate song by Harry Gliesman. To sing the following song to all manufacturers, dealers, riders and ex-riders to the tune of "Auld Lang Syne."

Come on you howling patriots
Who love the flag so true,
Do something that will prove it,
And this is meant for you,
For next year in far-off Sweden,
Each countries' best athletes
Will meet in competition,
And strive each one to beat.
And to do this it takes money,
To send a team away,
And that is what we are after,
Why not help the fund to-day?
If you call yourself a patriot,
And look on the flag with pride,
You ought to help the cause along
Or go 'way back and hide.
(Chorus)
So come, take out your check book,
And make it out for ten (10),
And send it on to Kelsey,
And you'll be happy when
You see it in the "Bi World."
You can stick out your chest and tell,
That you helped along the Olympic fund
Or you ought to go to H——!
Copy written 1911, by the Cork Puller,
Respectfully yours,
Flat-Floor,
Flip-Flaps,
the
Flatbush-Flyer.

Say it as quick as you can."

Henry E. Johnson, of the Little Rhody Club, writes that the members will do everything in their power of aid the work.

Bicycle Race Becomes a "Walk."

Despite inclement weather and adverse road conditions, the Eastern Division, C. R. C. A., on Sunday, December 10, held its scheduled bicycle run, or bicycle "walk," as it developed, owing to the aforesaid conditions and the strict adherence to the principal requirement for qualification stipulated by Captain Segal that all entrants appear at the rendezvous either "wheel-equipped" or with at least part of a bicycle, regardless of existing weather conditions. Therefore, the bicycle "walk" of 10 miles distance with the finish at the residence of Centurion A. R. Cooley. The order of finish of the first five was: Harry Baum, Alfred Kaiser, George Bieregal, Henry Kest and Fred Lilienthal. The "walk" met with such approval that several are being planned for the near future, among which will be one of 100 miles over Long Island roads, the start to be made on a Saturday evening.

BALTIMORE TO HAVE BOARD TRACK

Howard French Promoting Proposition—Endeavoring to Get Prince to Build It.

Baltimore, Md., Dec. 13.—Once more dusting off the old saw which sings "it's an ill wind that blows nobody good," this city is lashed to the middle of the road with a board motordrome bearing down on it at record breaking speed, as a result of the erasing of the meet scheduled at Electric Park on Thanksgiving Day, by a muddy track after heavy rains. This meet was to have been the last of the season, and great preparations for a dashing wind-up had been made, when the weather man emulated the bull in the china shop, not once but twice in the same week, and consequently put the permanent kibosh on any more speed parties this year.

These didoes so riled the local boys, and Howard French, the dean of the local dealers, and promoter of the meet, in particular, that they got busy on a board saucer production that would freeze out the weather man hereafter, insofar as muddy tracks are concerned. French has taken hold of the proposition with both cylinders and intends to see it to a finish or bust.

He has written Jack Prince for estimates, and as to when the latter can hibernate to the Mound City, and stick around awhile and superintend the erection of the track. It is to be a one-third mile dish, the most popular size. As soon as Prince replies, French will start raising the spondulix. He has the financing plan all worked out, and it listens rosy. In substance he plans to incorporate a stock company with shares listed at $25 each, and offer them for subscription to local riders and enthusiasts. The riders already are saving their pennies to exchange them for the handsome steel engravings when they are ready.

Of course, French will be considerably interested in the track financially, but he prefers that the stock be distributed as widely as possible, instead of being cornered by a few holders, believing that it will be better for the sport and tend to maintain interest and enthusiasm in he enterprise. The more who are directly interested, the greater will be the number who will work to make the track a success. Washington and Norfolk riders also are anxious for a track in Baltimore, for it will be quite convenient for them, and there are not a few "future greats" in those cities. Baltimore has not had a board track since the old Coliseum was closed eight years ago, and has a keen appetite for a new bowl of speed of the sort Chicagoans thrived on during the past season. Hence the proposition will, without a doubt, prove a paying investment from the start and at the same time boost motorcycling materially.

The 1912 Harley-Davidson Wins Its First Race

Cunningham riding a new Harley-Davidson with Ful-Floteing seat defeats Wilson on his 1911 Harley-Davidson, the same machine with which he won the Kansas State Championship as well as many other important races this past season.

First—W. T. Cunningham,	**4 H. P. Harley-Davidson,**	**Time 1 hr. 45 min. 16 sec.**
Second—Max Wilson,	**4 H. P. Harley-Davidson,**	**Time 1 hr. 45 min. 20 sec.**
Third—H. Stevens,	**4 H. P.**	**Time 1 hr. 57 min. 30 sec.**
Fourth—Frank Honer,	**4 H. P.**	**Time 2 hr. 10 min.**
Fifth—Paul Garst,	**4 H. P.**	**No time taken**
Sixth—Harry Meyers,	**4 H. P.**	**No time taken**

Just think of it, only two Harley-Davidsons started and they finished first and second, only 4 seconds apart in 67 miles, and nearly 13 minutes ahead of the nearest competitive make and over 24 minutes ahead of the next.

This double victory proves several important things:

First—That the 1912 Harley-Davidson, although just out of its crate was faster than the 1911——.

Second—That the road tests given the Harley-Davidson at the factory is a **real** road test, which makes unnecessary any further adjustments or tinkering on the part of the dealer or rider.

Third—That the Harley-Davidson motorcycles are not in the same class with any other motorcycle on the market today.

In spite of all the tremendous handicaps the riders encountered, Cunningham broke all previous records for a course in some places. The rough roads were heavy with mud, at times ankle deep. In other places several inches of wet snow and slush materially hindered the riders progress; but here is where the Harley-Davidson was at home, and the close finish of these two machines is only a sample of the consistent performances that have become a habit with the sturdy "Silent Gray Fellow."

Harley-Davidson Motor Company

162 C Street **Milwaukee, Wisconsin**

CORRESPONDENCE

Wants Electric Light For Bicycle.

Editor Bicycling World and Motorcycle Review:

Can you furnish me the address of a firm manufacturing, or who may have for sale, a small storage battery that would be suitable to light a bicycle headlight. I fail to find any such equipment advertised in your valuable paper. H. T. M.

Wants Stock For Brazilian Trade.

Editor Bicycling World and Motorcycle Review:

As I am contemplating the establishment in a prominent city in Brazil of an agency for the sale of motorcycle and motorcycle accessories, I should like to have manufacturers of these goods write me giving me full information about their products and quoting me the best discounts. All quotations should be made on the basis of F. O. B. cars, New York City, (from which point shipments would be handled by my forwarding agents). The terms will be cash against sight draft with bill of lading, or express receipt attached. Manufacturers submitting quotations should mail full descriptive matter regarding their products. A. B. H.

If manufacturers of the goods desired by either of our correspondents will communicate with the editor of this paper, he will be pleased to furnish the names and addresses of the parties in question, so that direct business relations may be established.

Volney Davis Reached 'Frisco Oct. 14th.

Editor of the Bicycling World and Motorcycle Review:

Did Volney Davis ever reach San Francisco on his recent return trip, after breaking the transcontinental record, and if so, how long did it take him?

W. M. G., Toronto, Ont.

Volney Davis arrived in San Francisco October 14, making the return trip in 48 days. He left New York August 28.

Eastern Division's 14th Annual Ball.

The various bicycle and athletic clubs of Brooklyn are the recipients of invitations from the committee for the 14th annual ball of the Eastern Division, C. R. C. A., extending to each the courtesy of the use of the balcony boxes at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street, on that occasion. It is required that each box shall be decorated with the respective club's flags or emblems. Several acceptances have been received and all indications point to one of the largest and most successful affairs yet held under Association auspices, which has always been noteworthy for its many well deserved triumphs.

To the Members of Bicycle Clubs

YOU are greatly interested in the great sport of cycling or you would not be a member of a bicycle club.

YOU desire to do all in your power to promote the interests of cycling or you would not be a member of a bicycle club.

YOU, because of your interest in cycling as a sport, have sporting blood in you.

YOU, as an American, desire to see the interests of America and her supremacy established among the nations of the world, in every line.

To Sum Up the Situation in a Few Words

YOU are interested in cycling; you desire to boost the sport; you are a sportsman and you are patriotic. Taking it all in all, there is not one who would feel more proud or elated than yourself if an American bicycle team was to win the bicycle road race connected with the great Olympic games next year. In short, you would probably be one of those who would endeavor to "crow" the loudest over the great victory, but we do not believe that you are one who would desire to share the credit if you had not done your share of the work.

But the Time to Get Busy Is Now

We have no time to spare and we must have the active co-operation of every one NOW and right up to next July. WE HAVE GOT TO RAISE $4,500 and do it quick. WILL YOU NOT HELP US WHEN YOUR HELP IS MOST NEEDED? Every member of every bicycle club in the United States and every bicycle club should make a cash donation to the fund immediately. Perhaps you will say that there is not enough in your club treasury to allow your club to make a donation. That matter is very easily offset by the offer of The Bicycling World Co. They will donate to the Olympic Fund one-half of the regular subscription of $2 on every subscription to The Bicycling World and Motorcycle Review secured by the United Cyclists. Thus, if every member of every cycling club in the United States would either subscribe to The Bicycling World and Motorcycle Review for one year at the regular subscription price of $2, or get some one else to do so, sending the subscription blank below to H. A. Gliesman, Special Subscription Committee of the United Cyclists, 782 Eighth Ave., New York, stating what club you wish the subscription credited to, your club can make a most substantial contribution immediately without taking one cent from the club treasury or one cent additional from the pockets of its members. If you are already a subscriber yourself you can get one other subscription without very much trouble and in very little time, or perhaps you would like to give the subscription to some one for a Christmas present, one that would come 52 times during the year.

COULD ANYTHING BE FAIRER? WOULD YOU WANT ANYTHING EASIER? ARE YOU NOT INTERESTED ENOUGH TO DO YOUR SHARE? IS NOT YOUR SPORTSMANSHIP SUFFICIENT TO MAKE YOU GET BUSY AT ONCE? PROVE BY YOUR IMMEDIATE RESPONSE YOUR INTEREST IN CYCLING, YOUR PATRIOTISM, AND YOUR SPORTSMANSHIP.

FILL OUT THIS BLANK AND SEND IT IN NOW

H. A. GLIESMAN, Special Subscription Committee of the United Cyclists,
782 Eighth Ave., New York City.

Enclosed please find two dollars for which please credit me and the..... ..... Club of.....with a contribution of one dollar to the American Olympic Bicycle Race Fund, and for the balance I am to receive The Bicycling World and Motorcycle Review for one year (52 issues).

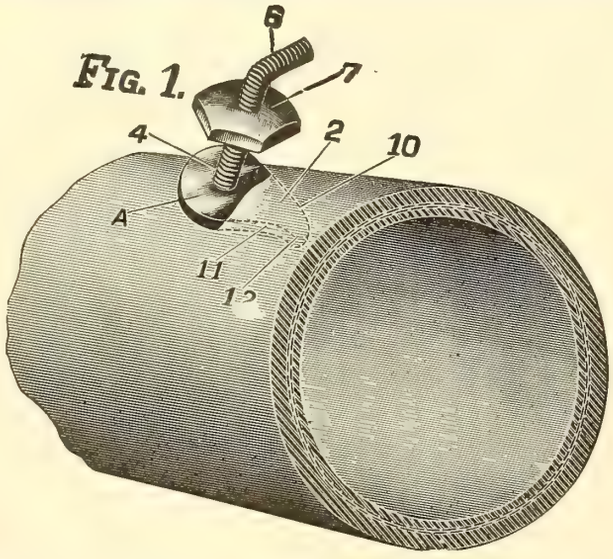
much unnecessary motorcycle trouble, provided that the 25 cents is invested in getting by mail, prepaid, a copy of

"Care and Repair of Motorcycles"



¶ In its new, revised, 1911 edition it has been amplified and enlarged to include matter and illustrations relating to the more recent improvements on American motorcycles, such as mechanical lubricators, free engine clutches, two-speed gears, magnetos, etc., together with special sections concerning motors, valves, carbureters, fuel and important general subjects, all plentifully illustrated.

¶ "Care and Repair of Motorcycles" is sent prepaid to any part of the world for 25 cents. It is a book that every motorcyclist and every motorcycle repairman should have.

Make Your Child Happy With a—Fairy

Here is a Christmas present that is *sure* to please the Boy or Girl—the famous "Fairy" Velocipede, Bicycle or Tricycle. Settle the question of "just the thing" now. Get a "Fairy"—or "Fairies"—for both or all of the children.

For twenty years the "Fairies" have been the aristocrats of vehicles for children.

They are made of the highest grade of steel, richly and tastefully finished—with full nickeled parts. Every "Fairy" is ball-bearing—the easiest running imaginable. Our strong guaranty covers each machine.

"Fairies" are the great successes in *safety* and *correct design*. Exercise on a "Fairy" can be only beneficial. It is so built as to cause the child to sit comfortably and to bring the muscles into play without fatigue. Physicians approve the "Fairies."

See the "Fairies" at Your Dealer's

"Fairies" are sold at most of the large stores of the United States. If you do not find the "Fairies" at a store near you, write us and we will see that you are supplied.

The prettiest, most durable, most serviceable Tricycle ever built.

"Fairy" Ball-Bearing Bicycles have the *style* that makes a hit with the boy.

Upholstered seat, adjustable to rider.

Be Sure You Get a Genuine "Fairy"

The success of the "Fairies" has brought out several imitations. Genuine bears the word FAIRY (our registered trademark) in the lettering shown at the top of this advertisement.

Send for Free Booklet, illustrating these high-grade children's machines.

Dear Sir:

Enclosed please find draft on your city for twenty thousand dollars ($20,000.00) deposit on two thousand machines for 1912, which I believe is in accordance with our agreement during my recent visit to Chicago and trust that you will be able to make early deliveries.

I have just returned from a trip through the State of California and, after sounding the various agents, I believe that the two thousand mark will be reached in my State. The fact that we will have all the 1912 motors equipped with a clutch, a seven horse-power chain drive machine in our list, as well as the distinction of having the fastest machine in the world, appeals to all the agents and riders. I, therefore, take great pleasure in forwarding this deposit.

Wishing you pleasant holidays and a very successful 1912.

Yours very truly,

W. H. Whitesell

A New Prest-O-Lite Motorcycle Gas Tank, Equipped with Gauge, $10

The addition of a gauge makes our motorcycle gas tank similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.

Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

FREE—Our Handy Ruler

Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of motorcycle.

Price of Tank **$10**

Length, 12 inches; diameter, 4 inches; weight, 7 lbs.

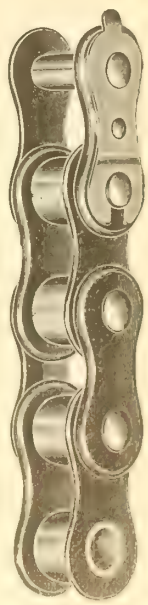
"Whitney" Chains Are Dependable

THE WHITNEY MFG. CO., Hartford, Conn.



Dear Sirs:—Yours of February 28th at hand. In regard to old chains, I have now covered over 12,000 miles on one set of your chains and have not even exchanged drive chain for pedal chain. Not one link or roller broken. Have carried tandem lately, which is a strain on chains. Just think of what these chains have gone through! From Los Angeles to New York, besides myself pulling 150 lbs. of extra luggage, and then from Canada to Mexico, and all over California, and still stick together. It sounds impossible, but this being the fact.

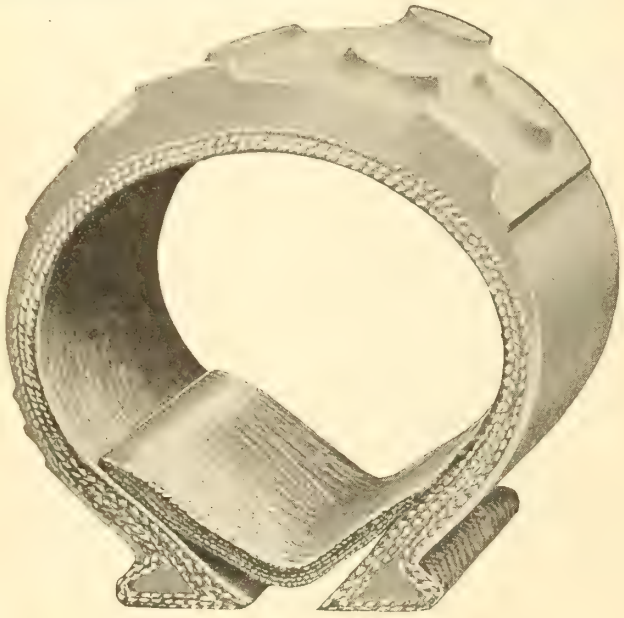
I will send old chains by express next week, as I intend to put on a new set. The old chains have done their duty, and then some. I think they are still good for a few thousand miles.

Put me down as a booster for "Whitney" Chains, as I will have no other.

Respectfully yours,
A. H. HELGESON.

733 Ottawa St., Los Angeles, Cal.

These chains have been driven from the Pacific to the Atlantic, from Canada to Mexico, and all over California, through rain, mud, dust, and sand and are still good.



Can any service be more strenuous and severe than this?

What test could show more clearly the true strength and wearing qualities of "Whitney" Chains?

The Enduring Motorcycle Tire

"Little Brother" to the Greatest Auto Tire Made

The famous Goodyear Motorcycle Tires solve the problem of tire economy. They cut tire costs in two. All leading motorcycle makers will specify them for their 1912 output.

Here are wonderful motorcycle tires.

They are built by the world's greatest tire experts—by the makers of the No-Rim-Cut Auto Tire. They offer you the same remarkable service based upon the same 13 years of study, research and experimenting that have made the No-Rim-Cut Tire today's most phenomenal auto tire.

We have proved this endurance by a simple, interesting factory test. Before a given type of tire is adopted it is mounted on a regular rim. Then it is placed on an endurance machine which subjects the tire and tread to a grilling endurance test.

All other makes get the same test side by side with the Goodyear. If our tire doesn't show less wear, last longer than all the others, then it never reaches the market.

Thus we know the exact relationship of our tires to all the others and the additional service to be rendered by them.

Thus have riders all over the country come to look upon Goodyears with unqualified favor.

And thus have the leading motorcycle makers contracted for Goodyears for their 1912 output. Knowing as they do the vital connection between motorcycle satisfaction and tire efficiency.

These tires render more mileage than any other motorcycle tire in existence. They give most service—give least trouble.

Goodyear Motorcycle Tires hold every world's record. They save their cost many times over by averting blowouts and other tire troubles.

Yet these premier motorcycle tires cost you no more than the tires they are **out-distancing** and **out-wearing** every day.

A Handsome Booklet tells all about the big line of Goodyear Motorcycle Tires. You ought to **have** it. Your name on a postal **brings** it. Write today.

RECEIVER SELLS RELIANCE PLANT

Ives, Who Started the Business, Purchases Manufacturing Outfit and Good Will —Other Parties Interested.

Put on the auction block by court order, the property and good will of the bankrupt Reliance Motorcycle Company, of Owego, N. Y., was sold at auction on Monday, December 18, to W. H. Ives, of Addison, N. Y., for $17,500. Ives, who was the founder and former president of the company before its reorganization, is understood to be acting for Elmira interests, and the names of Eclipse Machine Company, of Elmira, and John N. Willys, are mentioned as being behind the project to regalvanize the plant to activity. The Eclipse Machine Company make motorcycle brakes and clutches, and Ralph D. Webster, its vice-president, was prominent in the councils of the Reliance Company before it ran on financial shoals. Willys formerly was an automobile dealer of Elmira, and now is head of the big Willys-Overland motor car plant, of Indianapolis, Ind. He is understood to be flirting with the project of motorcycle manufacturing. Ives started the marketing of Reliance motorcycles in Addison, about 1904, and after enjoying a slow growth, the business was removed to Owego about three years ago, and a new plant erected. Last fall Ives retired from the company and new interests headed by Bandler Bros., New York City, assumed control. Facilities were enlarged and a new model was designed, but shortly after the Chicago show in February the company went into bankruptcy.

Peterlein Wins Out in Libel Suit.

Max M. Sladkin's suit for $25,000 damages against C. E. Peterlein, of Grand Rapids, Mich., a manufacturer of bicycle grips, came to a sudden termination recently, when the court before which the case was being heard directed a verdict of no cause for action. The suit grew out of the plaintiff's allegations that the defendant had slandered him. In stating the matter to the jury, the judge remarked that there was no evidence of expressed malice introduced by the plaintiff, and as the burden of the proof fell upon the plaintiff, he could not recover under the circumstances. The present is the second in the list of disputes between the parties engaged. The third, an assumpsit suit, probably will be tried at the next term of court.

Tacoma Dealers Report New Sales Records.

Tacoma, Wash., Dec. 14.—During the season now closing Tacoma motorcycle dealers have made new sales records and report substantial increases in business over the same period for last year. Although a large number of machines have been sold in the city proper, the bulk of the sales have been made in the surrounding cities and towns. One of the chief reasons for the increased number of machines in use is the improved streets, considerable highway improvement having been done this year. Dealers report a bountiful crop of prospects for 1912 sales and are looking forward to a bumper season's business.

Baker Will Show at the Garden.

Although not included in the official list of exhibitors in the motorcycle section of the Madison Square Garden automobile show, New York City, in January next, F. A. Baker & Co., New York City, well-known motorcycle and bicycle jobbers, will be represented as usual. They have secured space 401, comprising 1,100 sq. ft., on the mezzanine floor beneath the motorcycle section, and will be located at the Madison avenue-Twenty-seventh street corner. Baker will show several new foreign and domestic novelties for the first time.

GOVERMENT QUIZZES BRAKE MAKERS

U. S. Supreme Court Summons Manufacturers to Buffalo—Are They Violating the Anti-Trust Law.

Manufacturers of coaster brakes sold in the United States have been summoned to Buffalo by the Department of Justice to respond in the United States District Court to an investigation which is being conducted there by the Government to determinte whether they are violating the anti-trust law. The companies involved in the present action are: The New Departure Mfg. Co., Bristol, Conn., maker of the New Departure brake; Corbin Screw Corporation, New Britain, Conn., maker of the Corbin brake; Eclipse Machine Co., Elmira, N. Y., manufacturer of the Eclipse brake and Morrow brake, Miami Cycle & Mfg. Co., Middletown, Ohio, maker of the Musselman brake; Aurora Automatic Machinery Co., Aurora, Ill., maker of the Thor brake; and the Buffalo Metal Goods Co., Buffalo, N. Y., maker of the Atherton brake.

The New Departure Co. is the parent organization, and issues licenses to the other manufacturers. The parent company holds the patents in one basic coaster brake patent which gives it control of the situation in the coaster brake market. By this arrangement, the six companies have absolute control, and, it is alleged, have established a uniform retail price of $5 for coaster brakes, with such effect that a dealer who sells one at a lower price can buy no more.

It is the contention of the companies, and they are upheld by leading legal experts of the country, that they not only are permitted by the patent laws to do this, but are protected in it since the patent laws give a patentee unlimited power to regulate the prices at which his patent can

be sold, and who shall sell it. The present investigation is in effect a test case in which the government simply wishes to know that the companies are legitimate holders of the patents under which they claim protection, and whether the combination can be reached by the anti-trust law.

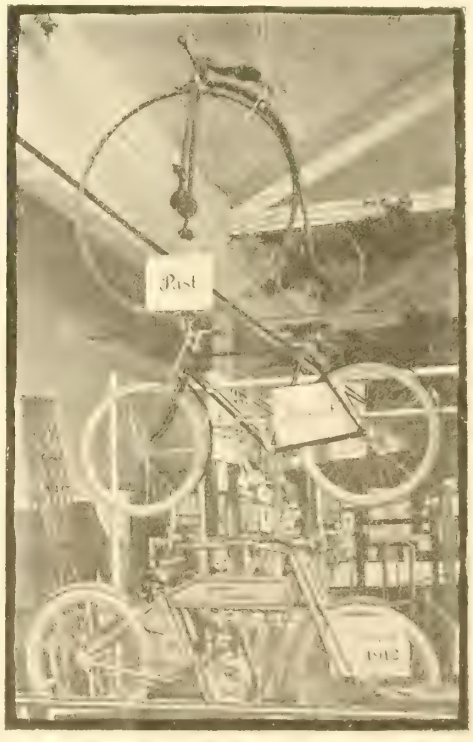
Colonel Charles M. Jarvis, of New Britain, Conn., president of the American Hardware Corporation, of which the Corbin Screw Corporation is a branch, gives the company's side of the case and explains its position. Colonel Jarvis raises a point which is of great importance. It is this: Can manufacturers engaged in the manufacture of a patented article, on which there is a specified sale price, be considered violators of the anti-trust act? The government, in granting patents, gives the inventor the right to earnings from the sale of the patented article. If the man is too poor to manufacture his own invention he has the right, under patent acts, to dispose of the patent, command a royalty from the manufacturers and specify a price at which his invention shall be sold.

The decision that will be rendered in this case will be one of great importance as it will affect the great majority of manufacturers in the country. Colonel Jarvis, in an interview, makes the following statement concerning the history of the coaster brake patent, and its present status:

"Some years ago there was a disagreement between P. & F. Corbin, of New Britain, and the New Departure Manufacturing Co., of Bristol, in reference to patents on coaster brakes—a brake used on bicycles.

"The suit was settled by a compromise, we acknowledging the validity of the New Departure patents and they allowing us to manufacture under those patents by a royalty agreement.

"Later, other manufacturers were sued by the New Departure Manufacturing Co. for infringement of their coaster brake patents. From time to time, as we understand it, the New Departure Manufacturing Co. has settled with these parties, who, they claim, infringed, on practically the same terms as they made with us, that is, under royalty agreement. This royalty agreement, like all other royalty agreements, covers the selling price for all coaster brakes manufactured under the patent owned by the New Departure Manufacturing Co. The agreement is the same that is usually made under similar circumstances by manufacturers, and we made it under the advice of eminent legal counsel.



"We certainly had no intention of transgressing any law, and eminent attorneys advise us that we have not transgressed any law in these agreements. We have shown to the government all the papers and documents connected with this agreement, in order to satisfy the government that we are acting within our rights under the patent laws of the country, and do not feel disturbed by the government action."

SEATTLE'S "FIRST AID" TIRE MAN

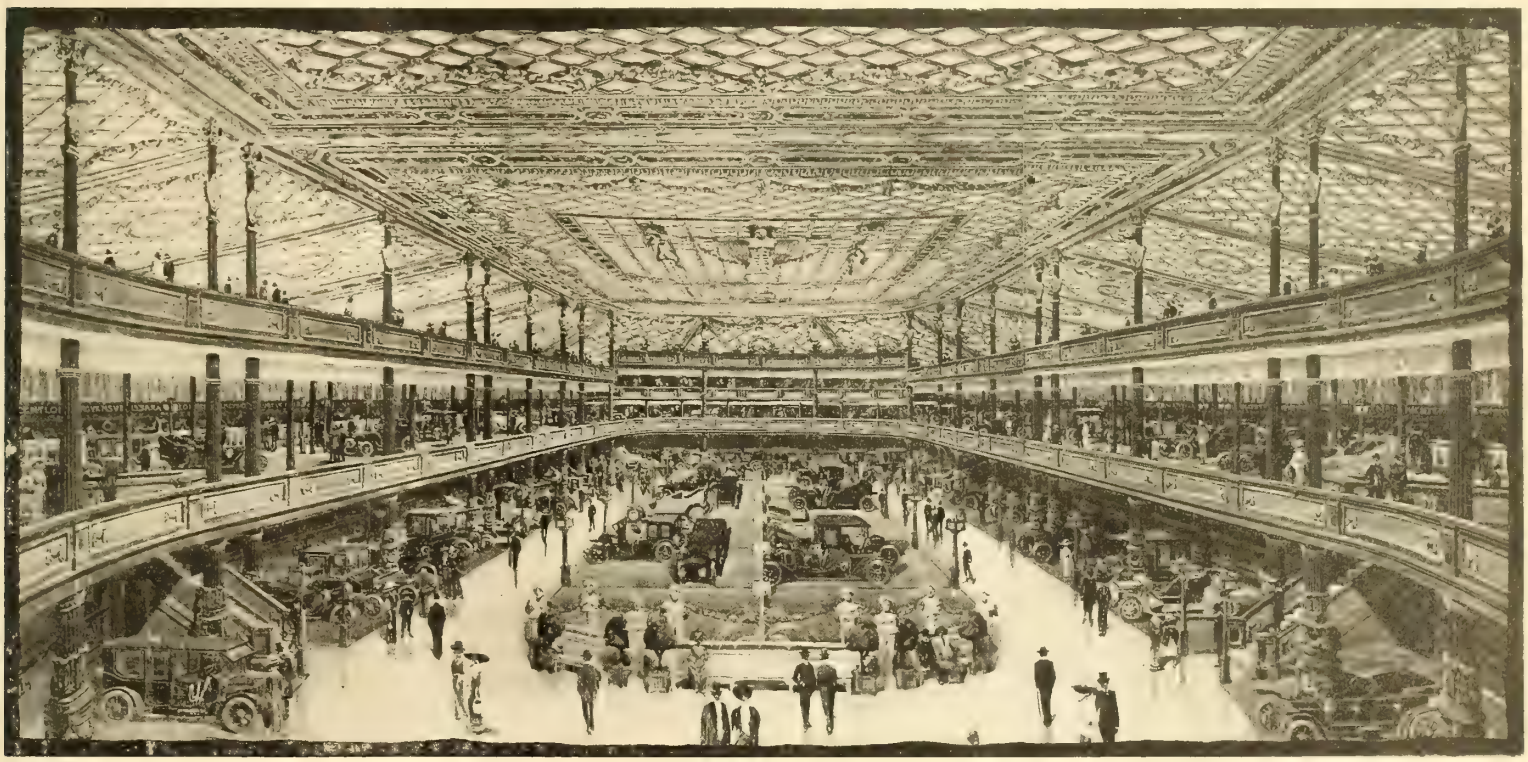
"Special Delivery" of Tires by Motorcycle.

Citizens of Seattle, Wash., no longer are impelled to "obey that impulse" and shout "Stop Thief" when they see a motorcyclist tearing along on a gray Excelsior machine, with a big automobile tire or two slung over his shoulder, for they know that he has not purloined them from a car or store, but is the "first aid" messenger of the United States Tire Company's local branch, on his mission of mercy to an automobilist in distress. Just how the Good Samaritan of motorists appears when delivering the "life preservers," as well as the ingenious method of carrying them, is shown in the accompanying illustration. The service, which just has been introduced, is very popular with motorists. It extends over a radius of 15 miles from the branch, and also is available to motorcyclists, of course.

THREE GENERATIONS OF CYCLES

Hartford Dealers Report a Good Year.

Willis L. Hayes, of the firm of Finch & Hayes, leading motorcycle dealers of Hartford, Conn., was in New York this week on business and pleasure bent. They handle the Thor, Merkel and Excelsior for Hartford county. "We did a fine business this year, but expect to double it in 1912," said Hayes. "This year," he went on, "we put out 30 new machines, 50 used ones, and did the largest accessory business in the city, as well as a very good repair trade. Our gross turnover, was $15,000, which is pretty good for Hartford. With the lower prices for next year I see no reason why we cannot double our sales of machines, and then, those already out will need overhauling and new equipment. Our suburban business already is very considerable, and we will appoint a number of sub-agents next year. We will increase our shop facilities extensively, and will be the only F.A.M. registered repair shop in the city. This, together with our central location on one of the main touring lines, and also the headquarters of the Hartford Motorcycle Club, fully equips us, we believe, to cater to the wants of the tourist, as well as the local rider, in all respects."



"Bone Shaker" to Motorcycle on Display.

According to George M. Cohan, the playwright, and actor, P. T. Barnum "had the right idea" and was the original publicity man. Among those who have absorbed some of the great showman's doctrine is J. P. McDaniel, agent for Harley-Davdson motorcycles in Janesville Wis. Janesville recently had an industrial exposition in its midst, and McDaniel did not overlook the bet to put down (or rather up) something in the two-wheeled line. The accompanying illustration shows the original way in which he traced the bicycle family tree from the high wheeler to the motorcycle, the youngest son. McDaniel was the only dealer who displayed his wares at the exposition, and he sold seven machines outright. He had a demonstrator working all week, and its silence elicited many favorable comments. Incidentally McDaniel's progressiveness in educating the public to the advantages of the motorcycle did more to stimulate motorcycle interest in Janesville than any other occurrence in the past three years. As might be expected, McDaniel is a large newspaper advertiser. During the past season he has run half page announcements regularly, preaching the gospel of motorcycles and bicycles, and has received wonderful returns. In the past three years his business has grown rapidly, a happy result which he attributes chiefly to newspaper publicity.

MAKING READY FOR GARDEN SHOW

Last Motorcycle Show in Historic Structure Will Be the Best—Fine Exhibit Promised.

Madison Square Garden, New York City, now is being fitted to its last and most gorgeous suit of automobile finery, for the twelfth national motor car and motorcycle exhibition in January. The color scheme for the last Garden show will be crimson and gold, and how becoming the famous old building will look in its farewell raiment the accompanying photograph gives suggestion. The motorcycle section this year is better provided for than ever before, being included in Part I, or the first week, which will be devoted to pleasure vehicles exclusively, when the attendance is greatest both in numbers and prominence. While located in the top balcony as usual, "motorcycle row" will be on the Twentyseventh street side in the left of the picture, this year, and across the arena from its former location. It will be the last of the big shows in the Garden which is scheduled for demolition in February.

AS THE GARDEN WILL APPEAR DURING THE BIG JANUARY AUTOMOBILE AND MOTORCYCLE SHOW

Novel Catalogue of De Luxe Motorcycles.

Adapting the oil window in the motor base feature to its printed matter, the F. W. Spacke Machine Co., Indianapolis, Ind., manufacturers of De Luxe motorcycle motors and two-speed gears, have issued a cleverly designed booklet of their product, with a "window" in the front cover giving a three-quarter view of its single cylinder motor illustrated on the first page, before opening the book. Notable features of the power plants are specified and detailed. Both single and twin motors and the two-speed gearset are illustrated. Motors are made in four sizes, viz.: four and five h.p. singles, and 7 and 9 h.p. twins, all Bosch equipped and furnished either for chain or belt drive. The gearset combines in unit form a plate clutch and is constructed for use with chain drive.

Pope Mfg. Co. Declares New Dividend.

Directors of the Pope Manufacturing Co. have declared a dividend of 1½ per cent. on the $2,298,200 preferred and a dividend of 1 per cent. on the $3,690,800 common. This is the first dividend paid on the common since August, 1910, when 2½ per cent. was distributed among the stockholders.

Goerke Formally Opens His Newark Store.

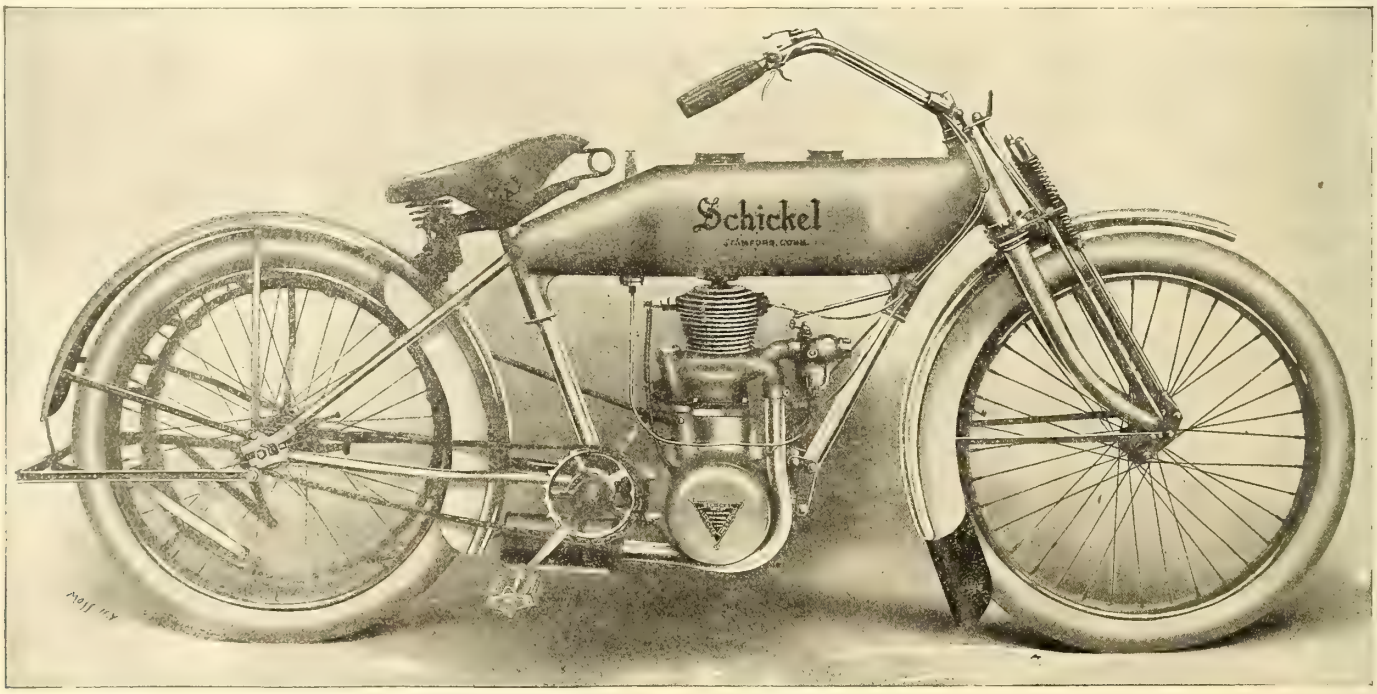
Walter Goerke, Newark, N. J., entertained a large number of visitors at the formal opening of his new store at 321 Washington street, Saturday, December 16. Models of the 1912 Indians were on view, and appropriate souvenirs were distributed. Many expressions of felicitation were extended to Goerke on his new venture, accompanied by wishes for success.

Swenson Will Become a Jobber.

B. A. Swenson, the big Providence (R. I.) motorcycle and bicycle dealer, is planning to do a large jobbing business in motorcycle accessories next year. He is desirous of receiving prices and electros from manufacturers, for his catalog now in course of preparation.

CASE GOES AGAINST DEALER

Right to Sell Machines Taken in Trade Without License Will Go to Higher Courts.



Magistrate Herbert, sitting in the Night Court in New York, December 20, fined H. A. Gliesman of the New York Motorcycle Company and president of the Motorcycle Dealers' Association of Greater New York, $2 for selling second-hand motorcycles without a second-hand dealer's license. This fine was imposed more for the purpose of getting the opinion of a higher court on the law, and having the question definitely settled, than because the magistrate felt that Mr. Gliesman was disobeying the letter of the law. Mark Eisner, cousel for the Motorcycle Dealer's Association, appeared for Mr. Gliesman, and will immediately appeal the case. Upon the Court of General Sessions upholding the decision of Magistrate Herbert, there will be a further appeal to the Appellate Division.

If this is declared by the higher courts to apply to motorcycle and bicycle dealers who sell second-hand machines, having taken them in trade, it will then be necessary for such dealers to pay a license of $25 for the first year and $12.50 for each succeeding year, and to also give a $100 bond to the city.

The law under which Mr. Gliesman was summoned says that anyone selling second-hand articles is deemed to be a dealer in such and must be licensed.

Schickel Exploiting Two-Cycle Motor Construction

Ranking as the foremost exponent in the United States, of two-cycle motor construction as applied to motorcycles, the Schickel Motor Co., Stamford, Conn., plans to produce the Schickel 5 h.p. single cylinder model in quantities soon, in what may be stated to be the first elaborate attempt to introduce and popularize this type of motor in the American motorcycle world. Although now making its real debut, the Schickel, to further similize "sassiety," has been "out" for nearly a year, being shown publicly for the first time at the Chicago automobile and motorcycle show in February last. Since its premiere, however, it has undergone extensive refinement, and the manufacturing facilities for its production have been increased many fold. It is the child of the brain of Norbert H. Schickel, of New York City, and will list at $225, fully equipped.

RIGHT SIDE OF SCHICKEL TWO-CYCLE MOTOR SHOWING GAS PASSAGES AND MAGNETO HOUSING

While little known or understood by the average motorcyclist or enthusiast, a two-cycle motor differs from the common four-cycle type in that it performs its complete series of functions in one revolution, as against two revolutions for the four-cycle. It also dispenses with poppet valves, springs, cams and gears, the mixture transportation functions of the valves being performed by the piston in its travel, uncovering ports at certain points in the stroke, through which the gas is admitted from the motor base and exhausted in the muffler. Advantages claimed for the two-cycle motor are simplicity, smoothness of running, extreme flexibility, reduction in number of moving parts, and consequently, in friction, wear and maintenance. Instead of being drawn directly into the cylinder, the mixture is aspirated into the motor base by up stroke piston suction, and is forced into the combustion chamber through a by-pass by down stroke base pressure. This is what may be called one form of fuel injection.

As a supporting company to the two-cycle motor, which, of course, is the star of the mechanical production, the Schickel incorporates many other novel features, including the unit-tank-and-frame construction, enclosed magneto with spring drive, rocking armature for obtaining maximum strength spark at variable crankshaft speeds, cable controlled free engine idler, integral tool compartment in the tank, castor spring fork, large tank capacity, large filler openings, large tires, wide motor speed range, and automatic oiling system.

Having a bore and stroke of 3⅛ inches, respectively, the motor is what is known technically as "square." It is rated at 5 h. p., and is claimed to develop well in excess of this figure. Unusual flexibility is stated to be obtainable, the speed limits being given as very low for minimum and 3,700 r. p. m. maximum. Incidentally the maximum speed of a two-cycle motor is higher, ordinarily, than that of a four-cycle, because of the much more rapid introduction and discharge of the mixture. No gears are used, and the moving parts in the motor are confined to the piston, connecting rod, flywheel, crankshaft and magneto groups. The crankshaft and big end of the connecting rod are mounted on generous sized F. & S. imported ball bearings.

Three rings are fitted to the piston, two at the top and one at the bottom, and all are pinned to prevent the slots becoming aligned. The deflector plate on top of the piston is cast integral with the latter. The piston pin is locked in the upper end of the connecting rod and rides in bronze bushings in the piston bosses. The connecting rod is a drop forging, double heat treated.

Distinct departure from standard practice is disclosed in the flywheel unit construction. The crankpin, main shafts and flywheels are machined from a solid forging, insuring permanent alignment of these important parts. A novelty is found in the use of a single flywheel, the connecting rod riding on a short projecting crankpin. The flywheel is drilled on both sides to give a running balance.

One-piece construction also is found in the cylinder, the inlet, transfer and exhaust passages being cast integral, eliminating packing and joints with the attendant possibility of leakage. By the casting of the transfer port on the cylinder wall, simple communication with the motor base is obtained when the cylinder is positioned,

while the upper passages of the transfer lead to the ports at the rear of the cylinder. Cooling flanges are tapered, increasing in depth as they approach the top of the cylinder to take care of the increased heat generated. The inlet passage leads through the exhaust elbow, being warmed before entering the motor base. This construction is defended as producing thorough vaporization of the incoming charge, and a clean burning mixture.

For relieving the compression a mushroom valve is placed in the top of the cylinder. It is spring seated, opening inward, and is controlled by Bowden cable from the right grip.

Aluminum alloy is used in casting the motor base, integral construction being used. On the right side is incorporated a housing for the magneto, while the left side is sealed by a plate which carries the motor drive shaft bearings.

How the Motor Operates.

Motor operation is as follows: On the explosion stroke the mixture, which previously has been drawn in under the piston through the inlet ports, partly is compressed in the motor base and under side of the piston. As the piston approaches the end of its stroke, it uncovers the exhaust ports, and transfer ports, successively, and the burnt charge escapes through the exhaust ports, being assisted by the rush of the new incoming mixture, which is deflected by the plate on top of the piston, so that it will fill the upper part of the cylinder. As the power stroke is completed, the cylinder is filled with mixture, and the rising of the piston again compresses the charge above it, simultaneously creating a vacuum in the motor base. When the piston nearly has reached the top of the stroke, the inlet ports are uncovered, and a fresh charge is drawn in below the piston. Ignition occurs near top center.

Ignition is produced by an imported high tension magneto, which is entirely encased in the motor base, and protected completely from dust, oil and water, as well as from impact injury. At its inner end the magneto has a bearing in the motor base, and at the outer end another in a quick detachable spider. Timing is regulated by rocking the magnets and pole shoes through a limited arc as illustrated in Figure 1. As this arrangement insures the continuous interruption of the current at the same point in the magnetic field, the maximum spark for all motor speeds, and consequently the most rapid propagation of the flame, is obtained.

An ingenious method of driving is used, whereby all gears are dispensed with. The armature shaft is connected to the crankpin by a twisted steel spring disc plate, the magneto, of course, running at crankshaft speed. The crankpin revolves around the armature shaft, the spring having sufficient flexibility to compensate for any cramping

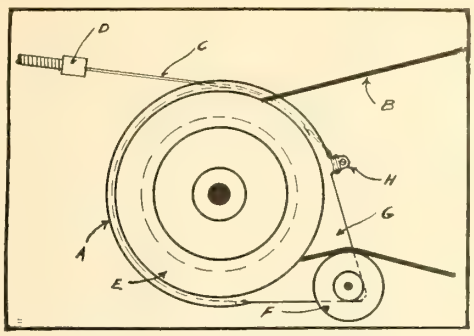


Figure 1—Free Engine Mechanism

in the drive, and yet assure positive motion to the armature. Rocking of the magnetic field is accomplished by Bowden cables controlled from the right handlebar. At full retard the current is grounded by the circuit breaker making contact with the magneto housing cover plate.

Oil and gasoline are mixed in the supply tank and fed to the motor as a homogenous mixture, the lubricant again separating after entering the motor, and performing its friction reducing function. The tank forms the upper bar of the frame, giving an integral truss construction. The gasoline capacity is three gallons, and in the large filler cap is embodied a cylindrical oil reservoir, for measuring the proper proportion of oil to be mixed with the fuel. The measure holds sufficient oil to unite with one gallon of gasoline in proper proportion, so that three measures are required for proper compounding on a full tank of gasoline. It is claimed that this system positively furnishes the required amount of lubrication at all speeds.

Plenty of innovation is found in the Schickel free engine device, illustrated in Figure 2. "A" is a grooved plate; "B" the belt; "C" the operating cable; "D" the cable anchor on the motor base; "E" the motor pulley; "F" the idler; "G" the idler supporting arm; "H" the cable lug on plate "A." The cable, which is operated by twist grip, travels in the grooved periphery of the plate "A," and when slackened, releases the pressure of the idler on the belt, giving the free engine effect. Transmission is by a 1¾-inch flat belt.

Unique construction is apparent in the frame. The tank header castings surround the steel tubes which form the steering head, front diagonal and seat post masts. The steering head and front diagonal tubes are brazed before being immersed in the casting, resulting in the obtainment of very strong construction.

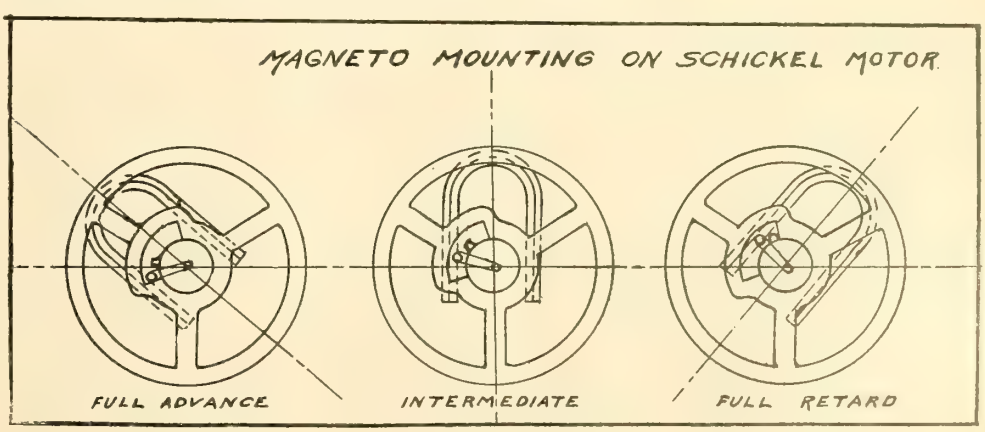
Owing to its size the tank affords an immense longitudinal girder member, capable of meeting any road driving strain, which it may be subjected to. A large tool compartment is provided in the tank tube, and is accessible through a spacious handhole. A sturdy needle valve built into the rear end of the tank controls the flow of gasoline to the carbureter. The latter is placed in front of the motor, with main air port facing head-on.

Castor Fork Gives Easy Steering.

Castor spring forks of the truss type, with exposed springs are used. The axle is carried just in front of the forkside center, giving a half castor effect, and making for very easy and comfortable steering. Load and rebound springs are provided, and grease cups are fitted to the rocker plates. The front axle is of the knockout type. Spring bottoming, rocker reversal, and dropping of the fork on the tire through spring breakage, all are claimed to have been guarded against. Straight line steering is guaranteed by a keyed handlebar stem, the key being nut retained. The castor axle mounting also tends to cause the wheel to follow a straight course automatically.

Double grip control is used, the left operating the free engine idler, and the right the throttle. A Bowden cable lever on a friction plate on the right bar, controls the magneto timing, and a latch lift under the right grip, controls the compression relief.

Independent chain adjustment is provided by an eccentric hanger. Wheels are 28 inches, and are shod with 2¾-inch tires. Mudgards are flanged front and rear, the latter being hinged to permit removal of the wheel without jacking the machine. The hinged guard has a snap lock. The wheelbase is 57 inches, and a low and comfortable riding position is secured by dropping the top tube at the rear, and also the handlebars. The weight is given as 180 pounds.



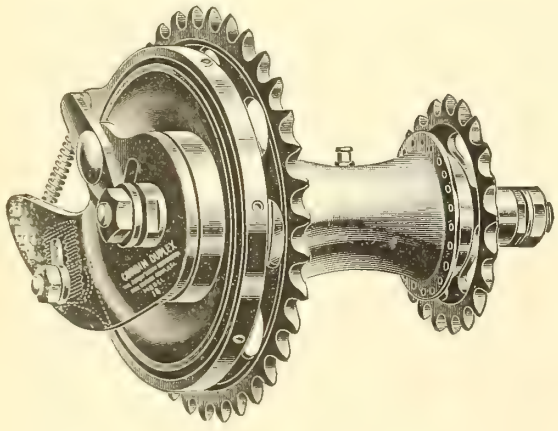


Figure 2—How Magnets Are Rocked to Secure Maximum Spark at All Speeds

CORBIN

Motorcycle Brake

—and why motorcyclists should specify CORBIN by name and insist on it.

A reliable braking device should be one of the first requisites in the equipment of the motorcyclist. Accidents should be made impossible.

The new model Corbin Brake for motorcycles has a V-shaped drum and a triangular friction band, superseding the flat band.

This yields 50 per cent. more braking surface—a most important feature for riders of high-powered machines.

The releasing mechanism is entirely outside, making the action easier and more reliable.

With the Corbin, chain interference is impossible. Corbin Brakes can be fitted to belt or chain driven motorcycles.

13 YEARS of manufacturing experience is your guarantee of efficiency and reliability in Corbin Brakes and the people behind them.

Sold by leading Jobbers and Dealers everywhere. Specify CORBIN.

Merry Christmas

Opportunities in the Motorcycle Industry.

To the ambitious youth of to-day, casting about for a field that offers opportunities for bright, enterprising and energetic men, the motorcycle industry stands out as one of the few which are not overcrowded, but rather lacking in enough men of proper size and calibre. There are fine openings for live and resourceful men who capably can fill the positions of sales managers, branch managers, traveling representatives, and also sell motorcycles themselves.

No longer is the motorcycle industry to be despised in the business world. Motorcycles are not the playthings of youth entirely by any means, for they already have proved their worth in many lines of business, so strongly as to have made themselves practically indispensable. There are million dollar corporations manufacturing motorcycles to-day, and the total output for next year, is estimated conservatively, as approximating close to $12,000,000 in value.

There are many men in the motorcycle industry to-day, particularly agents, who are not big enough properly to handle the business that awaits them. They are afraid to risk a few dollars until they first see it coming back. They are afraid to carry good stocks and take advantage of discounts for fear that they will be "stuck" with the goods. They have no confidence in their ability to sell their goods. They spend most of their time worrying about what their chief competitor is doing, or is going to do, instead of exercising their brains and planning their own campaigns, regardless of the other fellow.

Many agents do not "know" the machines they handle, as they should They do not study their best points, and how to present them to a customer in the best and most convincing manner. Not long ago a traveler visited a dealer handling a well-known machine slightly higher in price than the average, and found him literally "throwing up the sponge" because he did not know how he would meet the competition of a rival machine slightly lower in price. The visitor proved himself a good Samaritan and lost no time in pointing out to the downcast dealer several features on his machine that compared well with those on a model of the rival he feared. Needless to say the dealer's face lighted with joy and he speedily transformed himself into a happy frame of mind, the while admitting that he "never had thought of those things."

There are dealers with ample capital, who already are operating, or would like to operate branch stores in other cities. They find difficulty in securing the proper men to handle these stores, men who have ambition and enthusiasm, and recognize the excellent opportunities to advance themselves by taking hold and putting as much energy and earnest effort into the business as if it were their own. In other words men who can forget that they are mere employes, and concentrate themselves on making records for themselves in their positions.

Not a few motorcycle manufacturers would like to get hold of a sales manager who can measure up to their standard. It is a high one to be sure, but the emoluments are equally so. As a training school for this berth, the traveler probably enjoys the best advantages. Here again the men who can "carry the message to Garcia" are all too few. Manufacturers regard the traveler who goes out and signs up a sheaf of agents of mediocre calibre or in "bush" communities as having done nothing particularly brilliant.

It is the man who can win over a stubborn agent, who will be a valuable acquisition once landed, who will stay on the job for days if necessary, who will use every bit of salesmanship in his system and then invent some more if necessary, but who "delivers the goods" that is highly prized by the maker. It isn't the apples gathered promiscuously and sent to market unsorted that bring the highest prices, but those that are picked, sized and graded, and it is the same in the gathering of motorcycle agents. The man who picks the best is the one who collects the highest salary, and also puts himself in line for higher honors.

With the motorcycle industry in its infancy, it literally is a mine with but the surface scratched, and its wealth lying awaiting those who know how to "prospect" and work the "claims" properly. The man already "big" or who has the makings of one, will find plenty of opportunity and scope for the exercise of his talents in the selling of motorcycles.

Anent the Recent Six-Day Race.

To the credit of every one connected with the six-day race which ended at Madison Square Garden last Saturday night, be it said that the contest was the cleanest and most sportsmanlike of any that has taken place in recent years. The riders were under bonds to ride without forming combinations, and patrons of the sport showed their appreciation by turning out in larger numbers than ever before. Lovers of clean sport are satisfied that they saw a real contest during the whole week in which every team was out for itself. This condition of affairs kept the officials on the jump all the time, but in the extra attention required they are more than compensated by the knowledge that there has been no "come back" in the way of scandal. May the races that follow be as clean and wholesome.

When a motorcycle saddle is set horizontal, or nearly so, the rider has a strong tendency to slide forward to an uncomfortable position. The saddle should be set with a pronounced upward tilt to keep the occupant on the widest part.

DOES NOT FAVOR FEDERAL AID

Nation's Chief Executive Fears Government Assistance in Roads Building Will Deplete Treasury.

President Taft was the chief guest of honor at the annual banquet of the Automobile Club of America, held at its spacious clubhouse, New York City, December 20. In the course of his remarks the nation's chief executive touched upon the vital question of national aid for good roads. The President addmitted that the sentiment was strong for aid by the Government in road construction, but he took the position that it would start an endless drain upon the treasury, forgetful of the fact that the benefits that accrue from the building of good roads is a permanent one, and repays the people a hundred fold more than any other form of investment.

When one thinks of the countless dollars that have been appropriated for dredging rivers and creeks that have proved useless for navigation, and the tremendous amount of money and energy that it being yearly expended on harbors and rivers for the benefit of a comparatively small portion of the country, the good that could be achieved by using a similar amount of money for the construction of permanent highways that would benefit every one, becomes so apparent that even the veriest tyro in economics must be convinced that the advocates of Federal aid are right, and being right, that time will vindicate their efforts.

That portion of the President's speech that refers to the roads question is reproduced below. There are paragraphs in it which give the impression that he is more than half convinced of the justice of the demand for Federal aid, but the ever-looming spectre of expenditure seems to cloud his vision of the future. Mr. Taft said:

"The question of good roads, I say, is a difficult one, not only for the perfection of a road for the purpose of resisting this much heavier traffic, but also because of the questions, Who is to pay for the roads? Are they to be built by the State? Are they to be built by the county? And who is to take care of them? This is a much more important question; but I hear the earnest patriot—and it does not make any difference how he construes the Constitution, if there is any plan of running a National road near his farm—I hear the earnest patriot say: 'It is the business of the general Government to build these roads. Let's have a National road running from New York to San Francisco, to teach the world what a model road is.' 'But what would it cost?' 'Oh, what difference does it make what it costs? You can strive and hunt ways of saving a hundred thousand dollars in the matter of employes at Washington, but when it comes to building roads, what is a hundred million between friends?'

"And there is the difficulty, gentlemen. I admit that the general Government has the power for the purposes of promoting inter-State commerce to build National roads. It has done it already, but I venture to question the wisdom of opening that method of spending Federal Government money. I think it is much better to have the neighborhood and the State as a large unit expend its money in the construction of roads across the State, and aiding the counties to keep the roads in repair, because if you once set out upon a plan of National roads in addition to the plan of National waterways, I do not know how great the expenditure will amount to.

"If we could confine it to two or three roads I would not object, but we have 48 different States, and every State is as anxious to share in the common funds at Washington as every other State. And it is a dangerous experiment. I would suggest great delay and deliberation before you undertake so great an expenditure, the stopping of which will have no end. We have had some experiments in that in Washington, and we are looking forward now to large expenditures, and if we are going to add roads and if you are going to run automobiles through them and promote the cost of them, as you will, increasing, of course, the intercourse between all the people, creating a benefit which I do not minimize, nevertheless I say to you that if you can reach that benefit without opening the National Treasury I think it will be the wiser and more statesmanlike course."

THE TIME, THE PLACE AND THE EVENT

December 30—71st Infantry Armory, 33d street and Fourth avenue, New York City, 71st Infantry A. A. bicycle race and athletic games.

December 31, Brooklyn, N. Y.—Annual New Year's Eve midnight scorch from Bedford Rest to Coney Island and return.

December 31, Brooklyn, N. Y.—Annual mid-night bicycle run, Bedford Rest to Valley Stream, L. I., under the auspices of the Eastern Division, C. R. C. A.

December 31, Brooklyn, N. Y.—Annual New Year's Eve. mid-night scorch from Bedford Rest to Coney Island and return, under the auspices of the Empire City Wheelmen.

January 1, Buffalo, N. Y.—65th Infantry A. A., Arsenal, bicycle races and athletic games.

January 1, Tampa, Fla.—Tampa Motordrome Racing Association Motorcycle meet at Tampa Bay half mile dirt track.

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 10, New York City—Motorcycle Dealers' Association of Greater New York, first annual dinner to motorcycle trade, at Hotel Earlington, W. Twenty-seventh street., 8 P. M.

January 10, New York City — Hotel Astor, 2 P. M., meeting of Executive Committees of the Cycle Jobbers' Association and Joint Committee of Cycle Jobbers' and Cycle Parts and Accessories Association.

January 10, New York City—Hotel Earlington; dinner tendered to motorcycle, bicycle and accessory manufacturers by Motorcycle Dealers' Association of Greater New York and the United Cyclists. Tickets, $2 each, may be secured from H. A. Gliesman, 782 Eighth avenue, New York.

January 11, Hotel Astor, New York City —Meeting of the Motorcycle Manufacturers' Association.

January 11, New York City — Hotel Astor, 2 P. M., joint meeting of Motorcycle Manufacturers' Association, Cycle Parts and Accessories Association and Cycle Jobbers' Association.

January 13, New York City—Annual ball of the Century Road Club of America at Lyric Hall, Sixth avenue and 42d street.

January 13-27, Philadelphia—Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

February 3-10, Chicago, Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory.

Four Month's Motorcycling in Europe

By WILLIAM STREIFF

Part III

After overstaying the 30 days allowed in Germany by our passports, we finally headed for Switzerland. Presenting a letter from the N. S. U. factory, accounting for our delay, we had no difficulty in passing the customs, and soon were on Swiss soil. Our first night in the Alps country was spent at Basil, where the N. S. U. agent took us automobile riding and brought us to the Basil Motorcycle Club, where a meeting was in progress, and introduced us to the members. Gasoline was being discussed, and we learned that in Switzerland the fluid is designated by its full gravity test, for example, 680 or 700, instead of 68 or 70, as Americans call it. It costs twice as much there as in this country, and the quality is no better.

Next day, on the road to Zurich, we had rain, and ran into some gumbo mud that had the Iowa and Missouri brands beaten to a frazzle for its clinging propensities. It took an hour to cover a 10-mile stretch. Approaching the city we struck loose patches of gravel, thrown on worn spots, and left to be trampled down by traffic. It may save work for the road gang, but it's fierce on the nerves and tires of motorcyclists and their machines.

Although we had been told that the Swiss speed laws were very strict, and the limits low, we rode as fast as we pleased in the open country without molestation, although we did travel slow in the cities. On the road to Zurich we passed many carts laden with new wine, one of the chief industries of the district being wine making.

Finding California Friends in Switzerland.

Upon arriving in Zurich we looked up friends whom I had known in California, and had returned to their native land. Boarding a trolley, the system being operated, successfully, by the city, we climbed to the surrounding heights, from whence a magnificent view was obtained, with the snow capped mountains in the distance. Hearing rifle volleys, and inquiring the cause, we learned that the militia were indulging in regular Sunday practice. Returning to the city we visited the old section and saw much of interest in the quaint buildings and narrow streets.

Coming to the union railroad station we looked it over, and learned that 500 trains arrived and departed from it daily. We decided to take a short sidetrip to Schwanden, 62 miles, and as the roads were muddy after recent rains, we went by train. We noted that steel ties were used, indicating that Swiss railroad builders are keeping abreast of the times. The train equipment was somewhat superior to that of Germany, but not to be compared with America, which has the finest trains in the world. However, our fares were only 50 cents each, which certainly is cheap railroad traveling.

Taking Swiss "20th Century Limited."

For miles the railroad bordered Lake Zurich, and the panorama unfolded to view with the mountains on one side and the hills dotted with houses on the other, was most beautiful. At its widest part the lake is but a few miles across. After looking over Schwanden to our heart's content, we boarded what we were told was a "fast" train bound for Zurich. It stopped at every excuse for a civilized community, and only required three hours and twenty minutes for 62 miles.

On the following day we decided to strike out for Lucerne, 34 miles away. We made it in an hour and a half over good roads. Lucerne is one of the famous resort cities of Europe, where the elite and near-elite who can afford it go, and every other building is a hotel, or so designated at any rate, even though it may not live up to the name. While here we visited the glacier park, and the lion monument, a massive lion carved from solid rock. It is a memorial to the Swiss troops who were lost in the French Revolution.

IN THE LOWER SWISS ALPS

Leaving Lucerne behind we continued to Brunnen, where we took aboard gasoline at 40 cents a gallon. From Brunnen we rode along the shore of Lake Lucerne over a road cut from solid rock, and passed through several tunnels in the rock. One of them, called the Auxen Strasse, had two large open windows, from which a superb view of the lake was obtained, with its deep blue reflected in the mountains until all above and below seemed to be of that hue.

In the cities and towns in this district many children hurrying home with large loaves of bread were noticed. Upon inquiry we learned that a loaf weighed five pounds and cost 1 franc, or 20 cents. A loaf was big enough to feed an average family for a week. The coinage system of Switzerland is similar to that of France, so we had to try and forget our German marks and pfennig for francs and centimes.

We were surprised how often we were taken for Americans in Switzerland, as in Germany and other countries we usually were assumed to be every nationality from Danish to Italian. The Swiss seem to be better posted on the nationalities of their visitors. After leaving Amsteg, 46 miles from Zurich, we began to climb, and in a mile and a quarter went up 1,697 feet. This was altituding some, but more was to come, and when we reached Goeschenen, where we stopped for the night, we were 3,605 feet above sea level. The scenery was grand, with snow-capped mountains looming high above the fog on all sides and glistening in the sunlight. It was a sight long to be remembered.

Through the St. Gothard Tunnel.

Crossing and recrossing the road on the mountain-side, the train, with its two locomotives, reminded me of the "doubles" in the Rocky Mountains of America. Goeschenen is the Swiss terminal of the famous St. Gothard tunnel, which pierces the mountains, but both ends are in Swiss territory. It is seven miles long and is double tracked, and required eight years to build. We were told that there were two feet of snow in the St. Gothard pass and that we could not ride through it, so we decided to take the train.

It cost us 30 cents to ship the machine through the tunnel, and our fare was 40 cents each. Before going aboard we

GREAT AXENSTRASSE ON VIERWALDSTATERSEE, SWITZERLAND

drained our tanks and also took the usual precaution to stow a pint bottle of gasoline in our clothes. When we reached the other end of the tunnel we immediately thought that we were in Italy, for we came into the midst of Italians, who people that section very thickly, although it is Swiss soil. At Airolo we began to descend from our lofty heights somewhat, and at Biasco, where we spent the night, we had dropped 1,500 feet, but not all at once, mind you. It was a glorious descent, but we had to watch the road closely, as the turns were sharp and dangerous, with the river hundreds of feet below, roaring and tumbling over its rocky bed. Sure death down there.

Carrying Gasoline "On the Hip."

On the way to Milan next day we passed another famous resort, Lugano, on the shores of the lake of the same name. We had another hard climb before us at Monticeneri, where we crossed the foothills of the Italian Alps at an altitude of 1,200 feet. Here we did some climbing, all right. I made it by dismounting a few times and using the low gear promiscuously, but Esler had no two-speed and finally stalled. While resting by the roadside a chauffeur came along alone in a car and asked Esler if he wanted a tow. He didn't have to be asked twice, for he was pretty warm from his strenuous efforts to keep his machine going, so the chauffeur produced a pair of straps, coupled them, hitched them to Esler's machine and started to haul away. Up he went, bounding over rocks and ruts, through sand and around curves, and several times he came near taking a header over the bars.

When the Tow Line Broke.

Once the straps parted and the car got quite a ways ahead before Esler's Good Samaritan discovered that he had lost his load. Then he returned for it and finally reached the top without losing it again. I was waiting for them, and after Esler had rested we began our descent. Much to our surprise it was very easy and gradual, there being no sharp drop, as we naturally had expected after the steep climb on the other side. Passing through many small villages, whose narrow streets were crowded with people and carts, we reached the Italian frontier early in the afternoon.

We experienced no trouble in passing the Swiss customs, and after having our tryptiques stamped, we walked over and presented them to the Italian officials with some trepidation, for before leaving London the Royal Automobile Club authorities had told us that we might have difficulty in getting into Italy. At the border we met an Italian just back from America who spoke English, and that helped us considerably in getting through. All it cost to have our papers filled out was a dime, and the soldiers did not even ask to look through our luggage. The only thing they did ask for was cigars, and we had none, being abstainers from the weed. We now were in Sunny Italy.

True Tale of the Motorcycle and Colt.

Because he returned a motorcycle which he traded for a colt, to its former owner express collect, on the ground that it was not as represented, and because the other party to the bargain quite naturally refused to receive the machine bearing storage and carrying charges, Len Lacy, an Indiana farmer, not only will have to abide by his "swap" but also has something like $400 in court costs to liquidate. Lacy "swapped" a colt for a motorcycle with Frank Snotgrass, but soon became dissatisfied with his gasoline "nag" and tagging it with Snotgrass's name and address forwarded it to him. Snotgrass found that the machine was sent C. O. D. and refused to take it, so Lacy sued him for the return of the colt. When the circuit court heard the case it desided that the manner in which Lacy returned the motorcycle did not constitute a proper return of the property, and instructed the jury to find for the defendant. This they did after half a day's quibbling, and in addition to taxing Lacy with the costs, he also has a much damaged motorcycle on his hands.

Racing the fire aparatus to fires is the delight of Galveston, (Tex.), motorcyclists. However, the fire marshal says the practice must stop, as it is very annoying to the firemen—pestiferous, don't you know.

A VILLAGE BEAUTY OF SOUTHERN GERMANY

ROMANTIC LAKE LUGANO, IN SWITZERLAND

EN ROUTE TO THE SOUTHLAND

Historic Richmond, Virginia's Capital, Presents Attraction the Touring Motorcyclist Will Appreciate.

No other American city of equal size has so many monuments and historical features of interest to the tourist as has Richmond, Virginia. Entering Richmond from the peninsula as many do after taking the boat from New York, Baltimore or Washington, the motorcycling or cycling tourist will come up from Newport News (ferry from Norfolk) through Williamsburg, New Kent and Seven Pines to the National Cemetery, close to the eastern city limits, and the route may be noted in the lower right hand corner of the map that is printed on this page.

Using the map as a general guide (though the points of interest are too numerous to be shown in a single drawing of that size) the tourist should at all events see Monument avenue, which is an extension of West Franklin street beyond Lombardy street. Here are located the many statutes of heroes of the Revolutionary and Civil War. In Hollywood Cemetery are the graves of two presidents of the United States, James Monroe and John Tyler, and also the graves of Jefferson Davis and Fitzhugh Lee.

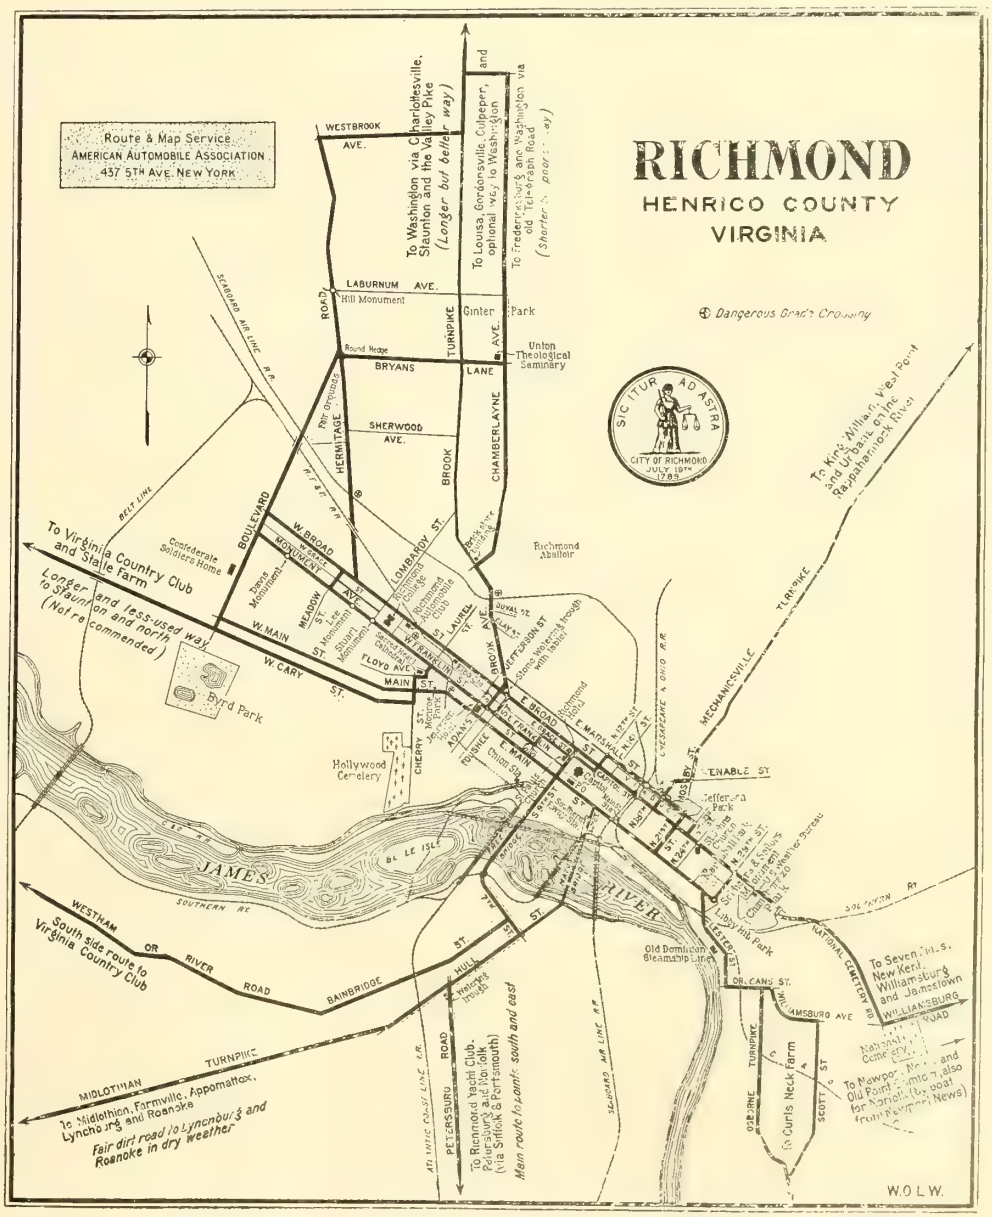
There are two points of particular interest just north of Broad street near Capitol Park—the home of Chief Justice Marshall and the Confederate "White House." The latter is now a museum and well worth a visit.

The map shown is one of those compiled by the Touring Bureau of the American Automobile Association, of which Robert Bruce, the well-known road book compiler, is the manager. The bureau is issuing a large map of Virginia, and in connection with same will include maps similar to this of prominent Virginia cities. The large map may be obtained by addressing the A. A. A. Touring Bureau, 437 Fifth avenue, New York City, and enclosing 25 cents to help cover cost of production.

Eliminate Politics from Roads Building.

In discussing the subject of road construction, the Motorcycle News for October, which is a bright little monthly paper published by the Hendee Manufacturing Co., of Springfield, Mass., in the interest of its products, takes the position of an insurgent in everything relating to good roads. Editor Hapgood says that too much "politics" enters in to the matter of road buildilng, and that the ideal road will never become an actuality until political favoritism is eliminated from construction work. He further says:

"When good roads become in any way a matter of politics they very soon become bad roads. The contracts are let to political favorites, and any sort of a useless politician that has a 'pull' is appointed as inspector. The results are easily imagined, and are more frequently seen than they should be.



"We never will have good roads until they are built as they should be, and then maintained. The best port of a good road is not on the surface, but in the deep and solid foundation that will hold up the traffic and resist the weather; and these can only be built by honest work and the aid of a proper outfit.

"On considerable of the road work done recently it is noticed that the steam rollers used are of diminutive size, weighing not over a couple of tons, and an opportunity offering, inquiry was made of a foreman of a large contracting firm that formerly engaged extensively in road work. His explanation was that there was 'not enough in it' for the big concerns, and the work had fallen into the hands of smaller people who could not afford the proper apparatus, and were making a bluff with the little rollers just to satisfy the public idea of road making. His own concern, when in the business, used fifteen-ton rollers, which were heavy enough to lay down a foundation that would last for years, whereas the toys so frequently seen were hardly able to put on a surface that would last more than a month.

"Do not take it for granted that because road work is going on that it is good work, but use every effort to secure publicity on the job, and compel proper construction and proper methods."

Uses Motorcycle on Business Trips.

Edwin Smith, secretary of the Crowley County Abstract Co., Ordway, Colo., took a business trip to La Junta, 25 miles away, on a motorcycle last week. Shortly after starting back Smith saw a storm overtaking him, and giving the machine "its head" beat the storm to his home, making the run in an hour and 25 minutes over ordinary country roads. It is apparent that the busy secretary fully appreciates and benefits by the motorcycle's business utility.

CONNECTICUT'S LAW ANALYZED

After January 1 Nutmeg State Motorists Will Have Good and Plenty to Think Of

What Connecticut motorcyclists and dealers, and tourists from other States as well, who want to use the roads of the "land of steady habits" next year will be up against under the motorcycle provisions of the new automobile law which becomes effective January 1, next, is made plain by a dealer who has been looking into the matter. His investigations disclose that not only will it cost more to motorcycle in Connecticut next year, but the restrictions governing this privilege are more onerous.

Analyzing the important sections of the motorcycle statutes, the investigator says:

"The cost of registration has been raised from $1 to $2 while the cost of an operator's license remains at $2. A motorcycle dealer can take out a "dealer's" license, which permits him to register all machines belonging to him for $10. The Secretary of State will furnish six sets of number plates with dealers' registration. Is not this fee rather steep when it is considered that a garage owner can register all the automobiles which he owns for the sum of $20 and is furnished five sets of markers, despite the fact that the value of the cars is from ten to twenty times that of the motorcycles, the room required to store them is ten times as great, and the damage they do to the roads is 100 per cent. above that inflicted by motorcycles. The average cost of registering an automobile is $20, and the garage owner can register all his cars for the same amount, but the motorcycle dealer must pay five times the cost of an individual motorcycle registration on all machines belonging to him.

"All motorcycles shall carry horizontally on front and rear, and so fastened as not to swing, a number plate which shall be furnished by the Secretary of State. The expressage on these plates will cost the consignee from 25 to 40 cents. These plates will be quite large because each digit thereof shall be 2½ inches high and not less than 2 inches wide. A motorcycle license number will be preceded by the letters "CO" as, for example, CO34 and CO2345. Therefore, where numbers run above 1,000 the license plate will be about 3¼ inches by 14 inches in dimension.

"In the matter of lights the usual white light in front is required and also a rear light showing red to following traffic and also embodying a white light illuminating the rear number plate. No motorcycle shall be operated at any time with its muffler open."

From the foregoing it is apparent that motorcyclists will be "tagged" good and plenty in Connecticut next year, and in addition to paying more for registration will have to defray the express charges on number plates, and add tail lamps to their equipment. As the Secretary of State has no power to change the law, the only redress is an appeal to the General Assembly at its next convocation.

Motorcyclists Hope Jersey Will Do It.

Special efforts will be put forth by New Jersey automobilists this winter to secure an amendment to the State motor vehicle law granting reciprocity to tourists from other States who have complied with the motor regulations of their home commonwealths. Last winter a reciprocity bill was defeated by one vote in the Legislature. If the much desired relief is secured motorcyclists will benefit largely.

How Modern Dick Turpin Plys Trade.

Highwaymen, who keep posted on new inventions better than the average person thinks for, have adopted the motorcycle as a valuable aid to the successful pursuit of their profession. John J. Gebhard, of Detroit, Mich., reported to the police the other day that a highwayman on a motorcycle had held him up and decreased his capitalization $15 worth and made a clean getaway after the financial operation. The holdup occurred but a short block from a police station, and after picking his quarry the motor road agent pulled up to the curb, left his machine standing there, poked a gun at his victim, plucked him, jumped on his motor and was off, after warning Gebhard not to shout on pain of being punctured. The disciple of Dick Turpin has not been registered at police headquarters yet.

Midwinter Motorcycling Popular in Canada.

Toronto, Ont., Dec. 18.—Since this city acquired its new street lighting system recently, "night riding" of the safe and sane variety has been very popular with local motorcyclists. In fact, the town is almost as light as New York's Broadway at night, and the only reason for carrying lamps is the ordinance requiring them. Unprecedented warm weather has inveigled scores of riders out for evening spins this month, the mildness of the season being in sharp contrast to the raw Decembers of previous years. It's like borrowing time on next season's account, but it is quite probable that the weather man soon will refuse loans.

COVER

Schickel Valveless Two-Stroke Motorcycle

EXCLUSIVE FEATURES

Clean burning, valveless, two-stroke motor, having only three moving parts, and making absolutely no mechanical noise. The largest imported annular ball-bearing used in motorcycle construction. Flywheel, crank shaft and crank pin made from a single piece drop forging and given a running balance. Single piece crank case with covers at both ends. Magneto fully enclosed in waterproof, dustproof and oilproof case, and mounted so that the field can be rocked to change timing, giving maximum spark at all times, easily accessible and removable.

Schickel oiling system effected by mixing the oil with the gasoline. This is the only absolutely perfect oiling system in use. It cannot fail if the oil is put into the tank, and has no parts except an oil measure which is incorporated in the filling cap.

Schickel unit frame tank construction giving strongest and neatest frame.

Schickel tension spring fork — the safest fork ever put on a motorcycle.

SPECIFICATIONS

5 H. P. all ball-bearing, Valveless, Two-Stroke Motor, 3⅜ in. bore, 3⅜ in. stroke; 57 in. wheel base; 28 in. x 2¾ in. tires; low saddle position; Flanged mud guards; Imported high tension magneto; twist grip controlled free engine and throttle; spark advance lever and compression release lever on handlebar; 3 gallon tank capacity; large filler cap; built in metal tool box.

PRICE, $225.00 WRITE TODAY

CLARK AND FOGLER ARE THE WINNERS

Spectacular Ride on Last Day of Six-Day Race at Madison Square Garden—Lap Gained Places Them in Lead Before Contest Ends—Kramer and Moran Head Second Division.

THE FINAL SCORE.

Fogler-Clark	2718.9
Kramer-Moran	2718.8
DeMara-Lawrence	2718.8
Halstead-Drobach	2718.8
Cameron-Magin	2718.8
Pye-Collins	2718.8
Lorenz-Saldow	2718.8
Hill-Bedell	2718.7
Brocco-Georget	2718.2
Lapize-Von Houwaert	2718.1

When "Jackie" Clark unwound a sprint at two o'clock on the morning of Saturday, December 16, the big crowd of all-nighters gasped for breath. He shot out like a rocket, tore around the track like a streak of lightning, was ably relieved by his partner, "Joe" Fogler, and in turn took the pace again, caught Kramer and the rest of the field, and the Nineteenth Annual Six-Day International Bicycle Race was won.

Madison Square Garden at that hour was packed with over 10,000 cycle sport loving fans who lingered late in hope that something would happen—and it did. It was the prettiest piece of bicycle riding seen in many a day, and stamped Clark as the greatest six-day rider in the world.

The gain of the lap by Clark and Fogler made it practically certain that they would win, and left six teams tied for second place, a condition that prevailed until the close of the race at five minutes to ten o'clock, Saturday night. At that time all the remaining teams were called off the track, and Kramer, Lorenz, Lawrence, Pye, Drobach and Magin, who represented their teams, lined up for the final sprint of one mile, to settle the tie, as provided by the rules.

By a special agreement between the riders and the officials the concluding mile of ten laps was to be run over again in case of accident to machine or fall inside of eight laps from the starting gun. On the sixth lap Magin's tire punctured and as soon as the scorers located him riding off the track they gave the bell for a restart. Through some misunderstanding the rest of the field mistook the bell for the finishing lap and rode another lap for a finish, Kramer just nosing Lorenz out for first place.

A re-run of the mile was ordered and Lorenz and Kramer refused to do so, pleading that the bell was for the finishing lap. The referee insisted that the mile be run over, Kramer finally agreeing to ride under protest. Lorenz, who is a German, did not seem to comprehend the value of compliance and refused to ride. For this he was set down to seventh position—at the tail end of the tied field for second place, the race having been officially ended when the balance of the teams were called from the track.

In the runover Pye jumped to the front and carried the field at a rapid clip until the eighth lap, when Kramer, as he entered the homestretch, plunged straight to the lead. A mighty shout shook the Garden, and Pye, in making the turn, nearly went over the bank, putting him out of the running. Kramer clung tenaciously to the lead and finished ahead of Lawrence, who just nosed Drobach out of the following position. Magin finished strong in the next place, Pye followed down the line, and the Six-Day Race of 1911 was over.

Score at End of 120 Hours.

Fogler-Clark	2326.7
Lorenz-Saldow	2326.7
Halstead-Drobach	2326.7
Kramer-Moran	2326.7
Pye-Collins	2326.7
DeMara-Lawrence	2326.7
Cameron-Magin	2326.7
L. Georget-Brocco	2326.3
Lapize-Van Houwaert	2326.1

Fifth Day, Friday, December 15.

There was not much doing in the way of excitement at the Garden in the early morning hours. About daylight there was a series of punctures that almost brought the race to a standstill, and there was some lively work by the officials to keep the contestants going. A couple of bad spots in the track made the trouble and several wire nails worked their points to the surface. When these were fixed all went smoothly again.

Misfortune overtook the Galvin-Wiley combination shortly after midnight. Wiley was baked, and Galvin, while willing to continue, seemed to be pretty tired. They retired at half past twelve.

Early in the morning—5:41—Stein announced that he was "all in" and he withdrew. His partner, Thomas, was in good shape, but he could not persuade Stein to continue.

At noon a rule devised by the board of referees went into effect allowing 15 laps as a maximum time for a rider meeting with puncture, or accident to wheel, to be off the track. He was required to secure a new mount or be relieved by his partner within the 15 laps, or all lost laps would be scored against the team. The rule worked well, and though a critical record was kept until the five lap rule went into effect on Saturday afternoon, not a single violation was noted

The riders were again flirting with the record from the 97th to the 99th hour, and again in the 102d and 104th hour topped the previous best figures. Again they beat the record in the 119th, 120th, 121st and 122d hour, but that told the story. There was no more record breaking. Summary of the day by hours:

Hours.	Team.	Miles.
97	Moran-Kramer	*1891.0
98	Saldow-Lorenz	*1907.4
99	Pye-Collins	*1924.1
100	Kramer-Moran	1937.7
101	Clark-Fogler	1959.9
102	Fogler-Clark	*1979.0
103	Saldow-Lorenz	1995.7
104	Collins-Pye	*2015.2
105	Pye-Collins	2029.2
106	Pye-Collins	2045.5
107	Palmer-Wells	2062.2
108	Collins-Pye	2082.2
109	Drobach-Halstead	2102.3
110	Wells-Palmer	2121.2
111	Lorenz-Saldow	2139.7
112	Fogler-Clark	2162.2
113	Pye-Collins	2182.4
114	Fogler-Clark	2203.6
115	Kramer-Moran	2221.8
116	Drobach-Halstead	2240.9
117	Fogler-Clark	2262.6
118	Magin-Cameron	2284.8
119	Collins-Pye	*2304.8
120	Fogler-Clark	*2326.7

* Record.

Sixth Day—Saturday, December 16.

Interest in the closing day of the race centered in the gaining of the lap by Fogler and Clark at two o'clock in the morning. After that it was a fight for retaining the tie of six teams for second place, for there was certainly no chance for any team to get on even terms with the leading pair. The hard riding at two o'clock put the Palmer-Wells team out of the running, Palmer's legs giving way under him.

At one time it looked as though the Collins-Pye camp wanted to stir up things, but a fall put an end to that, and the Hill-Bedell team was the only one which seemed to be in earnest after that. A gain of a lap would have placed the team in the second division. Hill seemed to have steam enough, but Bedell couldn't hold the pace on his reliefs and the plan was abandoned. The spurts resulted in a further loss of laps by Georget and Brocco and Lapize and Van Houwaert.

All the European teams lasted right up to the finish—a good record. The score by hours for the concluding 24 follows:

Hours.	Team.	Miles.
121	Fogler-Clark	*2345.5
122	Fogler-Clark	*2365.8
123	Fogler-Clark	2378.3
124	Fogler-Clark	2390.7
125	Fogler-Clark	2405.1
126	Fogler-Clark	2423.1
127	Fogler-Clark	2442.5
128	Fogler-Clark	2460.7
129	Fogler-Clark	2477.8
130	Fogler-Clark	2492.8
131	Fogler-Clark	2506.5
132	Fogler-Clark	2519.9
133	Fogler-Clark	2538.4
134	Fogler-Clark	2560.3
135	Fogler-Clark	2582.3
136	Fogler-Clark	2605.4
137	Fogler-Clark	2626.0
138	Fogler-Clark	2645.0

139	Fogler-Clark	2662.8
140	Fogler-Clark	2682.7
141	Fogler-Clark	2701.3
142	Fogler-Clark	2718.9

Record.

The record for 142 hours is 2737.1, made by Macfarland-Moran in the race of 1908.

The Score Classified by Miles.

Special interest attaches to performances of the riders when measured by distances instead of hours. A few of the first miles were timed and thereafter every 50 miles announcements were made as to the riders' standing. In the following list the 50 mile figures are not included after 1,000 miles is reached:

Distance, Miles.	Team.	Time.
1	Pye-Collins	2:34
2	Pye-Collins	5:01⅗
3	Pye-Collins	7:27⅘
4	Pye-Collins	9:42⅗
5	Pye-Collins	12:02
50	Root-Hill	2:05:00
100	Brocco-Georget	4:11:00
150	Van Houwaert-Lapize	6:24:00
200	Clark-Fogler	8:44:00
250	Lorenz-Saldow	11:09:00
300	Lorenz-Saldow	13:30:00
350	Stein-Thomas	15:52:00
400	Moran-Kramer	18:17:00
100	Moran-Kramer	18:17:00
450	Saldow-Lorenz	20:44:00
500	Root-Hill	23:11:00
550	Thomas-Stein	25:45:00
600	Brocco-Georget	28:25:00
650	Kramer-Moran	*31:04:00
700	Brocco-Georget	*33:48:00
750	Saldow-Lorenz	*36:20:00
800	Pye-Collins	*38:51:00
850	Brocco-Georget	*41:27:00
900	Root-Hill	*44:02:00
950	Brocco-Georget	*46:30:00
1000	Brocco-Georget	*48:59:00
1100	Hill-Root	54:50:00
1200	Pye-Collins	60:24:00
1300	Pye-Collins	65:45:00
1400	Clark-Fogler	70:15:00
1500	Clark-Fogler	75:24:00
1600	Lawrence-DeMara	81:55:00
1700	Clark-Fogler	87:15:00
1800	Collins-Pye	92:17:00
1900	Moran-Kramer	*97:34:00
2000	Saldow-Lorenz	*103:15:00
2100	Pye-Collins	108:52:00
2200	Fogler-Clark	113:57:00
2300	Fogler-Clark	*118:47:00
2400	Fogler-Clark	124:45:00
2500	Fogler-Clark	130:37:00
2600	Fogler-Clark	135:46:00
2700	Fogler-Clark	140:56:00

* Record.

More Side Lights on the "Grind."

That the race, in itself quite the best and most evenly matched contest of the sort ever held, proved the magnet that drew not only the largest and most remunerative attendance of any in the historic old Garden, but it also was more than ordinarily replete with interesting incidents, and in a manner served as a "gathering of the clans," there being noted "among those present," many of the old guard, those who have been in and of the sport since its earliest days and who, by their continued presence, in many instances serving long, arduous hours as officials, gave ample evidence of their loyalty to the game.

Prominent among those at the trackside was Alfred Reeves, now general sales-manager of the United States Motors Company, and for years identified with cycling and kindred sports; his interest in the "six-day" is attested by the fact that he has attended every race. He also was a referee in 1904, when the famous "strike" occurred.

Daniel M. Adee, president of the National Cycling Association, and now after years of service, retiring president of the Century Road Association, could be seen at almost any time during the week in the officials' stand, to all appearances as young and enthusiastic in spirit as ever.

Veterans dominated in the numerous responsible official capacities with a sprinkling of younger faces here and there in the line. On the board of referees was noted "Jack" Donovan, referee of the Revere Beach track and a sporting writer on the Boston Globe. Paul Thomas was there, he that is president-elect of the Century Road Club Association, and has been in the harness since the days of Shock and Ashinger of high wheel fame. The youngest on the bench of arbitrators is Walter A. Bardgett, who graduated from the ranks after a successful career of over twelve years and established such an enviable reputation during the past season, his first as referee, at the Newark Velodrome.

Along the line, as judges or timers, were noted C. B. "Lal" Ruch, president of the New England Wheelmen; Emil Greenbaum and Dr. A. C. Griffin, C. R. C. A.; R. A. Van Dyke, secretary, N. C. A.; and A. H. Seeley, Century Road Club of America. As clerks of the course, Fred Hoeckley, Harry Gliesman and F. O. Emmons many times had their sterling abilities taxed to the limit.

Not less interesting were the personalities and incidents observed at the trackside and in the riders camps. Heroes of other races were to be seen at any time chatting with the riders on relief, exchanging reminiscences, offering advice, congratulations and indulging in friendly joshing of former fellow competitors in speed merchandising.

One of these who caused no small stir of interest among the riders and spectators alike, especially the older ones, was Major Taylor, the colored sprinter who first came into prominence in a Garden six-day race and afterwards achieved world fame for his wonderful "jump."

Kramer, owing to his lack of willingness to respond to the demands of the audience to "go out for a lap, Frank," early and often received his share of "panning," as did likewise his partner, Moran, who was not the Moran of old, full of gingery sprints and jumps. On the other hand, Brocco, of the French-Italian team, Georget-Brocco, was the idol of the crowd, furnishing it endless amusement in his response to the calls of his name, the pronouncing of which is easy and affords many resounding variations in the Garden.

NEW HOME FOR THE "SIX-DAY"

Manager Powers Signs Contract For Specified Dates in New Arena For Ten Years to Come.

Although Madison Square Garden will disappear from the map early in 1912, provisions have been made for running the annual Six-Day Bicycle Race in another and larger building which will be constructed during the coming year in Lexington avenue, New York City, between 47th and 48th streets. The new structure, which will be probably called the Arena, will be far more imposing and roomier than the Garden, according to the plans submitted, and will have a seating capacity of 12,272.

The principal arena will be 252 feet long and 112 feet wide, inside measurement, and 405 by 200 feet outside measurement. There will be 101 boxes with a seating capacity of 3,342, while the arena itself (when used as an infield for the track) will accommodate over 4,400. The seating capacity of the first balcony will be 2,567, while that of the second balcony will be 1,954. In height the ceiling will be 91 feet from the floor.

Inside the outer wall there will be a second wall of fireproof construction, between which 26 fire escapes will be placed, each so arranged that spectators on each floor will have their own exits.

The Merchants' and Manufacturers' Exchange, a corporation of wealthy men, is financing the enterprise, and it is stated that the new structure will be in readiness for the annual Horse Show in November next. As this function always precedes the six-day race, the latter will be the second great feature held in the new structure.

Manager P. T. Powers, of the six-day race, has signed a contract with the owners for a period of five years, and has an option for the five years following, and has already specified the dates he desires. Thus New York is assured that the great annual cycling event will be continued for some time to come.

Rutt and Stol Win German Six-Day.

Frankfort, Germany, Dec. 20.—Walter Rutt and Johann Stol, German and Holland riders, respectively, won the six-day race which ended to-night in this city, with a mileage of 2,119 to their credit. The French team, Miquel and Combes finished second, while the German-American team, Stabe and Walthour, was third. Rutt and Stol captured the six-day race that was run in Berlin last March, covering 2,118 miles. Both riders are well-known in this country, having won the Madison Square Garden six-day race of 1907. They have also ridden as a team at all the Garden races since that time with the exception of the one just held.

RIDERS GET THEIR MONEY

Percentage Proportion of Receipts Paid For Bonuses Reduces Amount For Actual Prize Winners.

To all but those teams that were forced out by accident or otherwise in last week's six-day race at Madison Square Garden, the result was not as satisfactory financially as in other years, when the riders competed for a stipulated list of cash prizes. This year the division was on the percentage plan, the riders taking a chance with the management. Although the total receipts were larger than those of last year, the leaders received less prize money.

This was not because there was less money to divide, but because the method of division was such that it deprived the leaders of what they expected the percentage scheme would bring them. According to their own arrangement the riders agreed to divide their money between all of the teams. That meant that the thirty men who started shared in the receipts. More money was divided this year than in 1910.

The total amount taken in for the seven days amounted to $65,900. Of this the riders received 30 per cent. of $60,000 and 35 per cent. of the other $5,000, which amounted to $19,900.

This amount was divided on a percentage basis between the teams, the winners receiving 28 per cent. of it. From this amount the bonus allowed each man was deducted with the result that their actual prize money was much less than in former years.

Jackie Clark and Joe Fogler, who won the race, received only $900 besides their bonuses, whereas last year the winning prize was $1,600.

When the riders were paid off on Monday at Manager Powers' office in the Flatiron building, it was difficult at first to make them understand the situation in regard to the prizes, when the lump sum appeared so large. All agreed, however, that the books of the management were correct and that the tickets and cash tallied to the cent.

The highest bonus paid to any rider was $300 a day, or $1,800 for the week, to Kramer. Jackie Clark came next in line, wtih a bonus of $200 a day, or $1,200 for the week. Fogler and Root were not far from the $1,000 figure, and the Germans, Lorenz and Saldow, received $750 each, or $125 a day. Every rider entering the race received a bonus, varying according to the abilities of the men, and the entire sum exceeded $16,000.

Many Cyclists Off For Foreign Shores.

Floyd A. Macfarland, who is acting as booking manager for Fogler, Hill, Root, and Elmer Collins the American champion pace-follower, sails to-day, with the men mentioned on the "Philadelphia," for a European three months' trip. The men will ride in the coming Berlin midwinter six-day race, and it is possible Macfarland himself will be an entrant. If satisfactory proposals are made to Collins by foreign promoters, it is possible he may remain abroad next summer following pace. Mrs. Collins will accompany her husband abroad.

Jackie Clarke, who at first contemplated accompanying the Macfarland party to Europe, has decided to visit the native heath, Australia, and see his mother. He will sail with Mrs. Clarke and Trainer Morris Gordon from Vancouver, December 27, by steamer "Nakura" for Sydney, where he will participate in a six-day race to be run there, and later will follow the big sprint race meetings of the Australian circuit. He will return to this country before the opening of the summer season at Salt Lake City.

George Wiley, who was Collins' chief competitor at paced racing the past two seasons, also sails on the "Philadelphia," in company with Frank Galvin. They will ride as a team in the Berlin six-day race, and return home in the spring.

Alfred Halstead and Peter Drobach will sail for England in a few days and will engage in races in that country and France before going to Berlin for the six-day event there. Halstead, who is of English parentage, although born in Sacramento, Cal., expects to be married during the stay in England. Drobach will act as his best man.

Lorenz and Saldow also sailed for home this week and will ride in Berlin's six-day grind. The French riders Leon Georget, Brocco, Lapize and the Belgian, Van Houwaert sailed for "that dear Paris" on Thursday.

BERLIN'S 25-HOUR RACE

Exciting Sport on Wheels at Winter Velodrome—Stellbrink and Miquel Winners Over Crack Field.

Some interesting and able long-distance material in Europe must have escaped the wachful eye which it is said is ever on the lookout for possible candidates for the big New York Six-Day Race, as witness the winning of the 25-hour race at the Berlin, Germany, Winter Velodrome, December 2-3, by the team of Stellbrink-Miquel, both being well known to followers of the sport, when they showed the way to the entire field with two laps margin just as a clincher.

The winning team, and that of Hoffman and Sonntag, proved to be the "bear cats" of the race, and in all probability a much closer finish would have obtained but for an unfortunate accident in the 22d hour as the result of which Hoffman sustained a broken collar-bone and withdrew.

At the time of the accident, the Stellbrink-Miquel and Hoffman-Sonntag teams were tied with a lap lead on the field; this advantage being the result of a big "jam" started in the 18th lap of the 20th hour in which Shilling, Stol's partner, was one of the first to be lapped. Stol made a gallant effort to recover the lost ground.

In the 24th hour the leaders succeeded in placing themselves another lap to the good and further demoralized the field of 16 teams so that at the finish there was but one tie to be run off, that for second position. Stol and Shilling do not figure in the final score, which is as follows: Stellbrink-Miquel, 438 miles 5 laps; Stabe-Pawke, 438 miles 3 laps; Finn-Ehlert, 438 miles 3 laps; Techmer-Tadewald 438 miles 2 laps; Schallwig-Von Natzmer, 437 miles 8 laps.

START OF 25-HOUR RACE AT BERLIN WINTER VELODROME

Latest F.A.M and Club News.

ESTABROOK'S WEEKLY REPORT

Winter Season Shows No Diminution in Progress of F. A. M. Organization Work—New Clubs Numerous.

Bangor, Me., Dec. 18—There now are 210 affiliated F. A. M. clubs, three more having been booked since the filing of the last report. They are No. 208, Lorain (O.) Motorcycle Club, 30 members, 100 per cent.; No. 209, Cloud County Motorcycle Club, Concordia, Kan., 16 men; No. 210, Sidney (O.) Motorcycle Club, 17 men, 100 per cent.

Twenty new members were taken into the Lorain (O.) Motorcycle Club at its second meeting on December 12, bringing the total membership to 30. It was decided to hold a 100 or 150 mile reliability run Christmas Day, and plans for the future were discussed. During the winter membership recruiting will be carried on vigorously and when the riding season opens the contest slate will be filled with bookings in short order. Officers chosen are as follows: President, George Williams; vice-president, Edward Clotz; secretary, Clifford B. Tunte; treasurer, Harry Johns; directors, John Kienzle, Edward Clotz; captain, Dr. A. M. Webster; first lieutenant, Robert Parker.

After being without a motorcycle club for some time, good old Philadelphia has attained that distinction again. In selecting its name the founders showed due reverence for tradition and christened it the Quaker City Motorcycle Club. It will hold out at 1032 Girard avenue, and the glad hand will be extended to F. A. M. members and tourists generally. To be a live wire in local motorcycle affairs is the avowed purpose of the club, and the resurrection of racing at Point Breeze is among the possibilities. The officers are: President, R. Bauerle; vice-president, Harry Gerlack; recording secretary, Wm. A. Stark; financial secretary, A. Peters; treasurer, John O. Kelker; captain, John Daniels; first lieutenant, Julius Elker; second lieutenant, Charles Deacon. Stark is a veteran rider, ex-F. A. M. State commissioner, and has a reputation for "doing things."

Although Sioux City, Ia., is reputed to have several club organizers on the job, nothing has materialized as yet. New hope has sprung up, however, with the appearance on the field of action of W. H. Knight, a local dealer. He has applied for F. A. M. shop registration, which is regarded as a forerunner of better things to come.

John B. Quinn, Fall River, Mass., a dealer, also has applied for F. A. M. registered shop honors, and is stirring up sentiment favorable to an F. A. M. club. When it is hatched he will offer it quarters in his spacious garage.

Sleepy Eye, Minn., is going to live down its Morphian title in so far as motorcycles are concerned. McMaster Bros., who sell motorcycles to the wideawakes of that burg, have registered their shop and are planting F. A. M. club seed which will sprout soon. Two other dealers are located in Sleepy Eye, and as the town absorbs about 40 machines annually, by all reckoning it should be able to support a live club. A meeting is to be called by the "live ones" and steps will be taken to complete a club's organization.

There is a well advanced movement on foot in the District of Columbia to form a motorcycle club to succeed to the name, but not the reputation, of the defunct National Capital Motorcycle Club. It will be an entirely new organization and not a rehash of its predecessor. Immediate F. A. M. affiliation is one of the planks in the platform.

Burke C. Cook, Warsaw, Ind., a dealer, is plugging for a local F. A. M. club. His shop now is registered. Cook has an imitator in the person of Walter Holmberg, Duluth, Minn. Holmberg is a dealer and has made application for shop registration. This will be followed by a 100 per cent. F. A. M. club now "in the works."

Burlingame, Kan., riders are disposed to organize a club, but there are not enough to secure F. A. M. affiliation as yet, according to C. A. Basset.

F.A.M. Press Agent as a "Moneyloguist."

Although best known as the editor of the F.A.M. weekly publicity sheet which is sent to the daily press, Guernsey Van Riper, of Indianapolis, Ind., also finds time to break into print on his own hook occasionally. He has some very humorous and entertaining verse entitled "A Moneylogue" in the Saturday Evening Post of December 16. It deals wih the cost of high living on a higher and higher income.

MOTORDROMES A-PLENTY COMING

Kreamer, et al., Plan Tracks for Coney Island—Newark Meadows Track a Certainty—Cleveland in Line.

Although things look pretty quiet on the surface, there is a lot of work going on silently in the New York City motordrome situation. George I. Kreamer, who is one of those interested in erecting a board track, has secured an option on a plot large enough for a five lap circular track, in the heart of Coney Island, and also has interested capital in the project. However, inasmuch as both the track resolutions proposed by President Hamilton and Chairman Thornley of the F. A. M., provide for nothing smaller than four lap tracks, Kreamer is awaiting events, and plans to lay his case before the board of directors at their January meeting in New York City. He states that he is willing to erect the track on the provision that he will guarantee to demonstrate to the F. A. M. officials that it is safe for big motors, before asking for sanction, and if he fails to convince them that he will be willing to accept sanction for smaller motors. Kreamer plans to run meets every night. He states that five lap tracks are perfectly safe for the experienced stars, and while the second raters might find them harder to ride, it would serve to eliminate the little fry and afford high class racing by the big fellows.

Now it it a race between Coney Island and Sheepshead Bay to see which will have its motordrome first. Jersey of course, also is in the running, but has been lagging somewhat, and now is making strenuous efforts to close the gap. Possibilities of the Sheepshead Bay race track being converted into a motordrome loomed up with the announcement that a New York syndicate has taken a $3,000,000 option on the property. If the deal goes through it is said to be one of the plans under consideration to construct a two-mile automobile race track. The tract comprises 430 acres, and is ample for a big motordrome.

Motordrome on Newark Meadows Certain.

Work on the big brick motordrome which is scheduled to be erected on the

meadows near Newark, N. J., is set to commence February 1, according to the announcement of the promoters of the project. The track will be egg-shaped, with the speed path 60 feet wide, and paved with vitrified brick. Seating accommodations for 100,000 persons are planned. Although intended primarily as an automobile speedway, similar to that at Indianapolis, it is quite possible that motorcycle races will be staged occasionally. Situated near the Manhattan transfer station of the Pennsylvania and Hudson and Manhattan tubes, the track will be quite convenient of access from New York City by train, and also by road, and also is within easy riding distance of Philadelphia and Jersey points.

Quarter Mile Track Planned for Cleveland.

Rumor has it that Luna Park, Cleveland, Ohio, will be the site of a new motorcycle track next season. It is proposed to make this track four laps to the mile, and have it oblong in form, so that it can be used for bicycle racing in case the promoters desire to include this class of sport, the straight stretches making it possible to start bicycle or motor paced races from a standing start. Manager Bramley, of Luna Park, is interested in the plan, and with him will be associated "Dare-Devil" Schreyer, so well known as the man who cycles down an inclined plane and dives into a tank of water—a thrilling spectacle. Walter DeMara, the well-known racing cyclist, at the present time has an option on the Cleveland franchise for cycle racing, and it is possible that a combination of interests may be effected. If not, the Luna Park people are next in line for the National Cycling Association franchise should DeMara decide not to build, as an option on a franchise cannot be sold or transferred.

Dealers Play Politics in Club Caucus.

Toronto, Ont., Dec. 8.—Officers for 1912 were nominated by the Toronto Motorcycle Club at its regular meeting on December 6 as follows: Fred Johnson, president; W. G. Self, vice-president; Tom Anderson, secretary; executive board, Messrs. Simmer and McMulkin; entertainment committee, R. N. Case, chairman, Charles Neilson, H. J. Stillaway; racing committee, Dan Davis, Don Sutherlan, Herbert Marshall, Alex McClean, Jack Scott, Percy McBride, C. F. Burke, W. Stoner, W. Andrews, Phil Young, Frankland and Hodgson. Several of the candidates were re-nominated for the chairs which they already occupy, and the ticket largely was made up by acclamation. The presidential nominee, who was chosen unanimously, is one of the newest recruits in the club.

While an effort was made to keep racing men and dealers off the ticket, in order to suppress possible trade friction in the administration of affairs, it developed that prominent members had held a secret caucus the night previous, and framed up the slate which went through. There was some criticism of these high-handed proceedings, the legality being questioned, but as the nominees are popular, no serious opposition to them was raised. The election will occur January 3, 1912.

Several of the club members are planning to see the old year out and the new one in, with a midnight ride on December 31, if the weather is favorable. Until a few days ago, the riders have had ideal motorcycling weather in this vicinity, and have been working their 1911 licenses overtime for they soon will be passe. The sport in this city is growing steadily in popularity.

Uticans to Have Club Headquarters.

Utica, N. Y., Dec. 19.—At a special meeting of the Utica Motorcycle Club, held last week it was unanimously decided to secure permanent rooms as club headquarters. The organization has an option now on several good places in the heart of the business district upon one of which the club's executive committee will decide in in a short time. The rooms will be attractively decorated and comfortably furnished, and the first regular meeting in January will be held there. At that time there will be special attractions befitting the opening of the new quarters.

A number of entertainments have been decided upon to take place during the winter months. Already there are four bowling teams and plans have been made for a snowshoe trip to Oneida Lake later in the season.

The Utica Motorcycle Club extends a cordial invitation to all tourists to stop off at Utica and make themselves acquainted with its motorcycle riders, and looks forward in pleasant anticipation to greeting those passing through their city this coming season, assuring them of the hospitality of the city and club. The club also has a very handsome pennant which it would like to exchange for the pennants of other clubs throughout the country.

SCHACK HEADS MOTORCYCLE CLUB

First Manufacturer to be Honored With Such Office—Annual Banquet Well Attended and Bright Oratory Flows.

B. M. C., among other things, stands for Buffalo (N. Y.) Motorcycle Club, but when the time for electing a new president rolled around on December 15, the enterprising campaign managers of William G. Schack had a happy thought and accordingly issued some literature worded as follows: "B. M. C. Bill's My Choice for President." The slogan was a winning one, as also was the choice, and so it happened that the regular ticket, with President William G. Schack at the head, swept into office on high gear. The other officers chosen were as follows: Vice-president, Philip Goetzman; recording secretary George Goetzman; financial secretary, M. D. MacDonald; treasurer, Howard H. Ganson; directors, O. H. Peters, R. H. Paddach, C. H. Andrews, J. L. Kellner, O. L. Neal, E. P. Seeber; captain, W. W. Cloudsley; lieutenant, George Tiefts. The election followed the club's second annual banquet at the Hotel Edelucia, covers being laid for 60. President-elect Schack acted as master of ceremonies, and responses were made by J. M. Sayles, mayor's secretary, who will be remembered for his breezy and scintillating speech of welcome to the F. A. M. delegates last July, at the annual meet held in that city; J. M. Henry, and A. H. Sullivan, of Chicago. William G. Schack is president of the Emblem Mfg. Co., Angola, N. Y., maker of Emblem motorcycles and bicycles, and is a veteran of bicycle days and a self-made man, who has attained his present position by hard work. During the period between 1889-1894 he was a leading bicycle dealer in Buffalo, and also prominent as a racing man.

XMAS GREETINGS FROM THE CAMBRIDGE (WIS.) MOTORCYCLE CLUB

WOLTERS CONTINUES TO WIN

Exciting Contests Please Spectators on California Circle—Seymour and Walker Also Score.

Oakland, Cal., Dec. 19.—Playing goat against an aeroplane a week ago did not take the speed edge off "Joe" Wolters at the motorcycle races at the Elmhurst motordrome yesterday, for he took first money in two of the three pro. events. Ray Seymour bagged the other, but Wolters was not "among those present." Despite the antics of aviators dropping "bombs" amid militia, an dthe latter shooting "blanks" at the airmen, the motorcycle portion of the program furnished the real thrills and galvanized the spectators to frantic demonstrations.

Wolters inaugurated his winning streak by defeating Armstrong and Albright easily in the first heat of the three mile event. Seymour duplicated the trick in the second heat at the same distance, Ward and T. M. Samuelson bringing up the rear. In the final, six miles to go, Wolters again lowered the colors of the field, consisting of Ward and Armstrong, who registered in that order. Seymour was in the running for five laps, when he lost a valve, and Ward then slid into second place by an unusual burst of speed. He trailed Wolters close and easily maintained the gap on Armstrong.

In the 10 mile free-for-all Ward again came to the front and for four laps pressed Wolters hard. On the next round he passed the Denver flier and held the lead for a lap, when Wolters wrested it from him, and Armstrong came up and passed him along to third place. Ward went into eclipse in the 16th lap with motor trouble. Although Albright had covered but 18 laps when the race finished, he was awarded third money. Armstrong put up a sizzling attack on Wolters toward the end, but the defense was just a bit better and Armstrong lost by less than a length.

After laying back until the last lap, Seymour unwound and won the two mile event in a sensational spurt that left him a wide margin over T. Samuelson and Albright. He used the same tactics in taking the second heat of the six mile race, giving a line on his style of riding for the moment, at least. Walker and Estudillo divided the pair of amateur events easily, taking safe leads in the openings and holding the mthroughout. Summary:

Six mile professional—First heat, three miles—Won by J. Wolters (Excelsior); second, E. Armstrong (Excelsior); third, J. Albright (Indian). Time, 2.07. Second heat, three miles—Won by Ray Seymour (Indian); second. A. Ward (Indian); third, T. M. Samuelson (Indian). Time, 2:18⅗. Final, six miles—Won by Wolters (Excelsior); second, Ward (Indian); third, Armstrong (Excelsior). Time, 4:12⅘.

Two mile professional—Won by Ray Seymour (Indian); second, T. M. Samuelson (Indian); third, J. Albright (Indian). Time, 1:40⅕.

Five mile amateur, stripped stock—Won by Walker (Indian); second, Lorenson (Indian); third, Kohl (Indian). Time, 4:02⅘.

Two mile amateur, fully equipped stock—Won by Estudillo (Indian); second, Norton (Indian); third, McVey (Indian). Time, 2:20.

Ten mile professional, free-for-all—Won by J. Wolters (Excelsior); second, E. Armstrong (Excelsior); third, J. Albright (Indian). Time, 7.05⅘.

Jerseyites Elevate Post to Presidency.

Newark, N. J., Dec. 18.—In recognition of his services to the club since its organization, George Post was elevated to the presidency of the New Jersey Motorcycle Club at the election of officers for the ensuing year, at the club rooms last night. Post, who is a charter member, has been largely responsible for the prominence it has attained, and relinquishes the treasurership for the executive chair. The rest of the ticket which went through was composed of the following: Vice-president, Carl Bush; recording secretary, H. Norman Havis; financial secretary, Peter Cunningham; treasurer, Elmer Crosby; captain, P. W. Stevens; first lieutenant, Holmes Wright; second lieutenant, Howard Hill. The officers will be installed January 2.

Captain Stevens has called a New Year's run to Dover and return, a 60 mile scamper. The boys will leave the club at 9 A. M. and take dinner at Dover. Tickets are out for the club's second annual ball on February 9. The place will be Oraton Hall, and the date falls on Friday.

College Men Form Motorcycle Club.

Columbus, O., Dec. 18.—College men at the Ohio State University in this city, who are ambitious to join some of the "frat" societies, hereafter may expect the interjection of the motorcycle in the stunts they will be called on to perform to secure admittance to sacred circles. Recently a meeting was called to get a line on the prospects for a motorcycle club, and 30 students responded. They entertained the proposition enthusiastically, and straightway perfected organization and elected officers as follows: A. A. Case, president; Harvey R. Kidney, vice-president; Robert C. Sherwood, secretary-treasurer. A committee was appointed to draft constitution and by-laws. Incidentally the club enjoys the distinction of being the first college motorcycle club in the State. It also proposes to fine members who are caught speeding, or running with open mufflers on the campus. When the riding season opens, tours to picturesque sections of the State will be in order.

MOTORCYCLE AND AEROPLANE MIX

Wolters Bumps Into Aviator at Oakland Track Without Spoiling His Winning Streak.

Oakland, Cal., Dec. 11—New dangers of motorcycle and aviation racing were emphasized at the Elmhurst Motordrome yesterday, when an aviator lost control of his machine and descended on the track dierctly in front of "Joe" Wolters while the latter was slowing after a race. Wolters did not see the machine until too late and then turned into the infield in an effort to escape a collision, but struck the rudder of the areoplane and was thrown violently. He was unconscious for some time.

Despite his mishap Wolters was the king bee of the meet, taking two firsts, including the feature 10 mile free-for-all. In this race Seymour, of the Indian camp, gave Wolters a hot chase for the money. Wolters assumed the lead at the getaway with Seymour hard on. Seymour forced himself in front at the beginning of the third mile, but his glory was short lived, for Wolters crowded on more speed and regained the lead within the lap, holding it to the finish, Seymour crossing the line a second later. W. Samuelson (Indian) was third. It was all Excelsior in the six mile event, the order of finish being Wolters, Armstrong, Balke.

Al. Ward scored on Balke and T. M. Samuelson in the three mile dash, the others checking, in the order named. Seymour collected first money in the two mile special, with Albright and W. Samuelson, on Indians, breezing along some seconds later.

New stars broke forth in the amateur events. Kohl won the five mile handicap, beating Lorenson and Walker. Walker tumbled after the finish but was unhurt. Summary:

Three mile professional—Won by Ward (Indian); second, Balke (Excelsior); third, T. M. Samuelson (Indian). Time, 2:14⅕.

Six mile professional—Won by J. Wolters (Excelsior); second, Earl Armstrong (Excelsior); third, C. Balke (Excelsior). Time, 4:11⅕.

Two mile professional, special—Won by Ray Seymour (Indian); second, J. Albright (Indian); third, W. Samuelson (Indian). Time, 1:30⅖.

Ten mile professional, free-for-all—Won by J. Wolters (Excelsior); second, Ray Seymour (Indian); third, W. Samuelson (Indian). Time, 7:02⅗.

Five mile amateur handicap, stripped stock class—Won by Kohl (Indian); second, Lorenson (Indian); third, Walker (Indian). Time, 4:09.

Two mile amateur, 30½ stock class, fully equipped—Won by Estudillo (Indian); second, McVey (Indian); third, Campi (Indian). Time, 2:17⅘.

DEALERS TO PROMOTE RACING

Toronto Tradesmen Believe They Should Conduct Race Meets as a Business Getter—Will Try It Out.

Toronto, Ont., Dec. 18.—Extending the co-operative plan, which already has been tried successfully in local newspaper advertising and marketing goods, the Toronto, (Ont.) Motorcycle Dealers Association proposes to promote racing on a trade scale and gamble on the advertising and business it may bring them. It has made a proposition to the Toronto Motorcycle Club that dealers be given full control of the club's racing affairs, and while this may appear as the limit of effrontery, the dealers support it with arguments to the effect that it would assure high-class racing, through uncovering the best machines and riders of all classes and makes. Nor is this all, for it is planned to promote meets throughout the province, in the nature of missionary work to create interest in the sport, and to import riders and machines where local talent of the required standard are lacking in sufficient numbers. Meets would be held at points where suitable dirt tracks were located. This proposition is directly opposed to the general opinion that dealers should have no part in conducting the competition affairs of a club, because of the opportunities for advancing the interests of a particular make. Further action on the plan will be taken by the dealer's association next month, and if the club declines to entertain the plan, the dealers indicate their intention of experimenting with the scheme on their own hook.

Toronto Crook Caught Without "License."

Toronto, Ont., Dec. 19.—True to the teachings of his trade, which is the acquiring of "something for nothing," when William Longmuir, a confirmed crook of this city, became desirous of tasting the joys of motorcycling, he entered the store of License Bros., agents for the Harley-Davidson, without a "license" and prepared to select to his liking. However, a watchful "bobby" who had been "shadowing" him, pounced on him, and although Longmuir attempted to escape, the "exhaust" from the officer's gun checked his flight. He was remanded when arraigned.

Tampa Motorcyclists Will Race New Years

Saucy racing motor exhausts will split the air at Tampa, Fla., on January 1, 1912, as a welcome to the New Year, and also in ushering in the first speed contest of the year under F. A. M. sanction. The Tampa Motordrome Racing Association will conduct the meet at Tampa Bay track, under half-mile course restrictions. The constant influx of Northern visitors is assurance of the great success of the meet.

MAKING SPEED ON ATLANTIC CITY'S BOARD WALK

New Use for Atlantic City Board Walk.

Thoughts of Atlantic City invariably cause a vision of its famous board walk to flicker across the brain film simultaneously. When the American Riviera attained the prestige and dignity of motorcycle cops, it didn't take long for them to find out that the big wooden road was an ideal motordrome, although of an unusual sort, and consequently the bluecoats have split the ocean breezes to smithereens as they ripped up and down the planks. Incidentally, it is a favorite testing ground with local speed merchants, and in the accompanying illustration, Frank Gravatt, local Flanders agent, is depicted testing out a new machine just uncrated and leaving a healthy imitation of Pittsburgh in his wake.

J. S. Tormey, of the Thor team, who filed the protest in the Lake district endurance run last September, is requested to make known his whereabouts to Chairman Thornley.

Celestial Merchant Becomes Motorcyclist.

Toronto, Ont., Dec. 18.—That motorcycling knows no race—no pun intended—is evidenced by the recent acquisition of an Excelsior twin by Harry Ling, a prominent and progressive Celestial merchant of Toronto, Ont., who enjoys the honor of being the first Mongolian of that city to take up the sport. Ling uses his machine for pleasure exclusively and has become quite proficient in handling it. He declares that as a source of enjoyable recreation motorcycling has fan tan, "hitting the pipe" and other well known Celestial amusements taking the dust. It is very amusing to hear Ling attempt to pronounce the name of his machine without "missing" a syllable, and his feelings are considerably wounded if laughter greets his earnest endeavor to master this seemingly difficult word. He is fast making friends among his brother riders ,and intends applying for admission to the Toronto Motorcycle Club in the near future.

When it was announced in the columns of the Bicycling World and Motorcycling Review, October 14, that a bicycle road race was listed in the program of events for the Fifth Olympiad, to be held at Stockholm, Sweden, next July, and it was suggested that a fund be created for the purpose of providing the expenses of a team to represent the United States in that event, it was thought there would be quick and generous response. It seemed that the mere mention of so magnificent an opportunity for the display of the much-talked-of spirit of patriotism and love of sport would bring forth an outpouring of inquiries and a very considerable list of immediate subscriptions. That practically no results of the sort were returned is amazing—it is incomprehensible.

That the thousands who are within reach of the Bicycling World's voice, who are vitally interested in bicycles as manufacturers, dealers, club officials or riders, should accord so worthy an object so little substantial support is inexplicable; unless it be along the lines that they consider that there is yet ample time to carry out their good intentions later. Nothing could more greatly jeopardize the ultimate success of the project, when the fact is borne in mind that it is not the date of the games that marks the closing of the subscription list, but that it is absolutely necessary to know not later than January whether a bicycle team will be sent. The General Olympic Committee must have the definite information so as to complete transportation and hotel arrangements. The assurance of the fund is also necessary to those who have so promptly, and since proved efficiently, taken up the preparatory work of the team, which includes the running of trial races and elimination finals for the hundreds of riders throughout the country who are willing and anxious to take up at once the long, arduous system of training necessary to prepare for a road race of 200 miles. The expense of carrying on a long-drawn-out subscription campaign also would tend to re-action which is apparent with a moment's consideration.

Considered as a Publicity Medium.

To the manufacturer of bicycles and practically all fitments, the proposition offers one of the most productive, and, compared to other publicity mediums, extraordinarily inexpensive channels for increasing the scope of the business that has arisen in years, if not in the entire history of the industry. Already through the efforts of the officers and press committee of the United Cyclists, there has been submitted and published in the leading dailies of cities and towns of all sizes throughout the entire country more matter relative to the Olympic bicycle race, and this purely of the announcement character, than has been the case with cycling since the so-called "palmy" days when every item submitted concerning the sport was most carefully scrutinized and accordingly "blue-penciled" on any appearance of the press agent's art.

Is Bound to Stimulate Business.

Aside from the publicity that will accrue from the news on the preliminary and elimination races to be held in various sections and the resultant accounts of the sending of the team, together with whatever is done in the international race—all legitimate sporting news, is the immense impetus that is bound to be given the business in every line, and wherever bicycles are ridden from the time that it can be definitely stated that a team will be provided for and sent, when the active training will immediately start, until long after the team will have returned, let us hope, and there is every reason, so far as ability is concerned, to expect with victory in the bicycle race, and the title of World's athletic champions for the American team.

Dealers everywhere also should support the movement substantially for just the same reasons as those which apply to the manufacturer. Almost instant results can be realized by dealers if the race and the prospects of any local riders of ability to make the team, at which all will have an equal chance, is explained to customers, and an effort made to have the local papers publish matter concerning the greatest bicycle race in the world. Information and press notices will be furnished willingly on application to the bicycle editor of the Bicycling World.

Clubs and riders will find, as is already the case in several localities where the cause has been taken up, a most prolific and interesting medium, in arousing enthusiasm in one of the most enjoyable of sports. Club press committees also should apply for and endeavor to have published the press notices mentioned.

For the glory of the country—for the proving to the world that American cyclists are among the world's best, with the most loyal supporters—and for a more extended and yet extending bicycle business let each give according to his means, be he manufacturer, dealer, or rider, large or small, let each contribute his share towards the success of what, if consummated, will mark an epoch in cycling annals. Subscriptions or checks may be mailed to R. F. Kelsey, Treasurer, American Olympic Bicycle Race Committee, Room 914 Tribune Building, New York City.

Cash Box Flling Up in Jersey City.

Charles Hansen, 81 Montgomery street, Jersey City, N. J., has started a cash box in circulation, asking all his good friends to help the cause along. He writes: "At the present time my box is half full, and as soon as it is filled up I will bring it over to one of the meetings and present it to the committee."

Olympic Cycle Race Regulations.

Rules governing the 200-mile road race around Lake Malar, the great cycling event of the Fifth Olympiad, at Stockholm, Sweden, next July, have been received by the American Olympic Committee. The race is under control of the Olympic sub-committee on cycling appointed by the Svenska Velocipedforbundet (Swedish Cyclists' Union), and will conform to the rules for the Championships of the World, adopted in June, 1907, by the Union Cycliste Internationale, of which body the National Cycling Association is a charter member.

Start will be made from Liljeholmsbron in Stockholm on Sunday, July 7th, at 2 A. M. (the night between Saturday and Sunday), and all competitors must be present at the roll call not later than 1 A. M. No competitor may leave the starting place without special permission.

Before starting, each competitor will have to undergo a medical examination by the doctors officially appointed by the Swedish Olympic Committee.

The order of starting will be decided by lot.

The competitors will start singly at intervals of three minutes.

The competitors, both at start and finish, may be assisted only by persons (so-called attendants) authorized by the Committee.

Each competitor shall wear, both on back and front, the number assigned to him by lot.

Pacing is strictly forbidden during the competition, and no person will be allowed to accompany any competitor. Refreshments must be given only by persons on foot.

Any competitor who has manifestly been paced or has intentionally interfered with the progress of another competitor, or has not passed the control stations, will be disqualified. Moreover, any offence against these rules involves disqualification.

While riding, the competitors shall keep to the left and, by duly sounding their bell in good time, warn anybody approaching.

At the control stations, all of which must be passed, there will be official controllers wearing blue and yellow arm-badges. The stations are: Sodertelje, Laggesta, Strengnas; Eskilstuna, Kungsor, Koping, Kolback, Vesteras, Enkoping, Balsta, and Jerfva.

At these control stations, refreshments will be provided gratis to competitors, as well as necessary help for cleaning and repairing of machines; also any information required will be given.

At some of these control stations, the competitors will have to prove their identity by their signatures.

In case a competitor retires from the competition, he must immediately give notice to that effect to the nearest control station, and take away his number. If a competitor makes a stop, he must re-start from the same place where the stop was made.

On arrival at the finish, which is in the Stadium, one lap of the track shall be ridden around to the right. The time will be taken immediately before beginning of the said lap.

Only competitors, officials concerned, and attendants will be allowed in the arena of the Stadium.

Reserve machines, if so desired, can be left at the control stations; in such a case, the machines must be delivered to the Committee at least four days before the competition.

Something About Inlet Valves.

Because they are directly in the path of the cool incoming gas, inlet valves do not become as hot as exhaust valves, and therefore expand less. On this account the clearance between inlet valve stems and tappets or rocker arms should be less than in the case of exhaust valves. Equal clearance for both valves is equivalent to decreasing the power, for a smaller charge will be taken in.

"FEAST OF FRIENDSHIP" SUCCESSFUL

Motorcycle Dealers and Cyclists of Metropolis Eat Fraternal Dinner—Much Enthusiasm Manifested.

On the evening of Tuesday, December 19, the Motorcycle Dealers' Association of Greater New York tendered a most successful dinner, at the "Parisian," Eighth avenue and Fifty-fourth street, New York, to the officers of the United Cyclists, the winners and officials of the Thanksgiving Day bicycle handicap, and the American Olympic Bicycle Race Committee. After a short meeting of the committee and the dealers, about 40 sat down to the "Feast of Friendship," as the invitations called it, and so it truly proved to be, for there never was shown a more truly friendly spirit and a greater desire by all to co-operate on all that was for the best interest of the sport than those who gathered around this festive board. After the "inner man" had been plentifully supplied and the cigars passed, President H. A. Gliesman, of the Motorcycle Dealers' Association, in a few able remarks, welcomed those present and stated the objects of the dinner, which were manifold.

It was truly a great occasion. When the motorcycle and bicycle dealers, representatives of the manufacturers, and the motorcycle and bicycle riders get together in an affair of this kind in the "Big Village," it means that work is beginning to start in New York, and that big things are going to be accomplished with the united efforts of those present or represented. The truth that is proven that everything that is started in New York will surely repeat itself, with the result that large results will follow in all parts of the country, and before long cycling will see a great revival.

Great enthusiasm was aroused pending discussion by the various speakers, of the campaign of the American Olympic Bicycle Race Committee of the United Cyclists, which expects to send a team of 12 men to represent America in the bicycle road race of the Olympic Games at Stockholm, Sweden, next July. Every speaker endorsed the movement, and J. B. Webb, representative of the United States Tire Co., stated that he believed it was a great project and he knew that the company he represented would make a substantial contribution to the fund.

President J. A. Hall, of the United Cyclists, explained the objects of that organization and the work of the American Olympic Bicycle Race Committee, and stated that the main and great idea of both was to "boost" cycling, both motorcycling and bicycling, in all parts of the country, beginning the work at first in New York. Will R. (Happy Days) Pitman followed with a few most interesting remarks, interspersed with a touch of cycling history. Counselor Mark Eisner, of the Motorcycle Dealers' Association, eloquently described the great work that the association and its president, H. A. Gliesman, had already accomplished. Other speakers included A. E. Bolles, J. T. Shaw, H. J. Dibblee, Franklin Fisher, W. R. Stroud, A. Scaisson and E. C. Kicherer. Although the hour was late—or rather "early"—before half of the speakers had been heard from, the same enthusiastic interest was shown to the last, and it seems evident that a new era in cycling history has been started.

In talking with the hospital surgeons this week, Frank Hart, of New York, the national amateur champion, who is laid up with a broken leg, learned that it had been fractured in five places. The breaks are knitting, and Hart is progressing toward recovery very nicely. His leg will not be short, nor will he be lame permanently.

BREAKING A PATH FOR TESTERS AT HARLEY-DAVIDSON FACTORY

Opportunity for Side Cars in America Outlined

By THOMAS CRABTREE

Evidence is found on all sides of the approach of the motorcycle industry to a condition approximating standardization in broad outline. The power of both singles and twins of a large majority of makes is found to vary less than five per cent. from the average of the total. Wheelbases vary less than two inches from the average; frame-heights have settled around 20 inches. Tank location, wheel size, ignition, control and many such details of a wide diversity of design five years ago have steadily verged toward what well may be called a universal specification. Of course when one ventures into detail the trend and individuality of each designer again asserts itself and there is found sufficient variation to guarantee a constant search for perfection along the line of improvement and refinement.

Some fear has been expressed that a condition of staleness eventually will be reached, but this possibility is proven more than improbable if the evidence of far older industries is taken into account. Sewing machines, approaching as an industry the 75-year mark, all sew and look alike 40 feet away, yet bristle with distinctiveness upon inspection. It is the same with typewriters, with pistols, and with agricultural implements, where constant improvement is the order of the day. In fact, in all these fields, staffs of inventors constantly are employed in search of that never-to-be found finality, perfection. Considering many large industries individually, nevertheless, it is found that they have gone forward in steps; the bicycle, as an instance, had its "bone shaker" days, followed by the high wheel, then the safety, and finally the application of the pneumatic tire and coaster brake. Prior to the beginning of each of these epochs there was a general recognition of the need of new life or inspiration through the trade, and there is no doubt but that the great improvements enumerated were essential to its life, and thus also to the birth, later, of the motorcycle.

This brings up the question as to whether we soon are not to see a decided step taken in motorcycling. In my opinion, we are, and I believe we are now at the threshhold of the sidecar era Of all European countries blessed with good roads, France alone is backward in the development of this most workable of fields, which condition is due to the fact that there they still stick to little motors of 250 c. c. to 350 c. c. In England the demand for sidecars was light, while motor powers were light, but with the approach of the standard of power to 500 c. c., or the "four horse" prevailing here now, and with the twins doubling that, the sidecar industry went ahead by leaps and bounds, and to-day nearly every English motorcycle maker catalogues a sidecar. Inquiry abroad develops the point that in selecting such cars, as in tires, saddles and other fitments, riders prefer exercising their own judgment, and not being held to a stock design of car produced by a motorcycle maker. Hence the motorcycle maker is able to supply his machine with practically any sidecar when so desired.

In studying this subject from the American side, I am impressed with the belief that, on the commercial side, its benefits will fall where they most are needed—in the hands of the retail dealers. It is an open secret that many agents of pedal machines have gone over to motorcycles and learned to their great sorrow that there was not sufficient trade in motors in their respective communities to support one or more exclusive motorcycle establishments. Others, in larger cities, while doing a nice business, claim the need of a greater volume of sales in proportion to their expense, and in both these classes the sidecar can put

A GOOD ROADWAY INCREASES THE DELIGHTS OF SIDECAR MOTORCYCLING

The Big Orders We Turned Down

We have been approached several times recently by large Mail Order Houses, with propositions to furnish them with motorcycles. The quality they demanded made even the low price attractive.

We could have built machines such as they wished—along the lines of the Harley-Davidson only of cheaper materials—and made money. No particular road tests, double inspection, etc., needed, but we turned their overtures down flat.

Now, Mr. Dealer, this brings up the question of the business policy of the house you will represent, a question which is of most vital interest to you.

Do these manufacturers consider that the sale of machines to you ends their responsibility, or do they, like the Harley-Davidson Motor Co., assist their dealers to sales by extensive advertising?

Will these manufacturers merely take the business you may get for them or will they boost motorcycling, and the advantages of their make, thus making more and easier sales for you?

Have they taken a flat-footed stand against the mail order proposition, or have they shown in their business relations in the past a decided leaning that way?

Are they leaving you all alone to fight the World of competition with only one selling argument—Price—or does their machine combine with an unusual quality every advantage which an enlightened public would ask for?

These, Mr. Dealer, are questions you should ask and have answered. They will have a decided bearing on your motorcycle future.

The Harley-Davidson Motor Company is ready and willing to answer these or any other question you may wish to ask.

Harley-Davidson Motor Company

164 C Street **Milwaukee, Wisconsin**

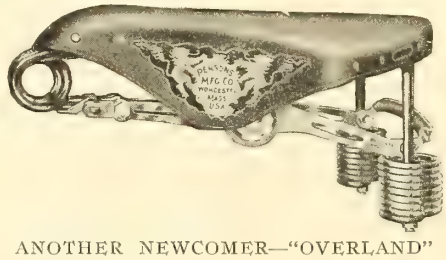
the situation on a satisfactory basis. The introduction of the sidecar will require no such uphill work as that preceding the popularizing of the motorcycle. The riders of to-day know their machines, and are, as a rule, notoriously independent of the agent.

My sidecar, which is of Majestic make, can be attached in two or three minutes, and detached in half the time. On a four-horse single it will show with 125-pound passenger, 30 to 35 miles per hour, and uses but little more "gas" once well under way. Reasonable grades can be taken at good speed, and traffic negotiated almost as with a single. A double century is not a big or tiresome undertaking on the proper sort of roads.

If, then, at a cost of, say $60, a motorcyclist can convert his machine into a two-passenger vehicle, have it at will either a single or a double machine, and still not perceptibly increase his operating expense, is there not here a splendid opportunity for the manufacturers and dealers to open up a new source of income?

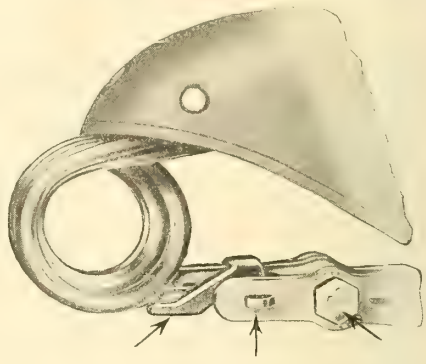
Installment Sales Plan at the Hub.

Boston, Mass., Dec. 19.—It looks as though most of the motorcycle dealers of this city were favorable to instalment sales and would do considerable business on this plan next year. The most popular selling plan is one-third of the list price on delivery of machine, and the balance in weekly payments of $5 or $10.



Two New Persons Saddles for 1912.

Taking cognizance of the popular demand for bicycle saddles of the suspension type with spring mounting, the Persons Mfg. Co., Worcester, Mass., are including



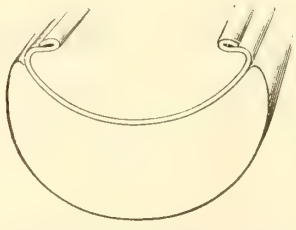
1912 PERSONS "STERLING" MODEL

in their 1912 line two new models of this pattern, illustrated herewith, and bearing the distinguishing designations of Overland and Sterling. Comfortable seating

ANOTHER NEWCOMER—"OVERLAND"

area for the average rider is provided by the generous size tops, which are the same in both patterns, viz: 10¾ inches by 8¾ inches. An important feature of the new models, which also has been incorporated in the well-known Maxinus and Peerless brands, is the three point front spring support, also illustrated. In addition to being bolted firmly between the steel trusses the springs also are held securely by a double platform, one level being above and the other below the springs: a construction

PERSONS NEW THREE-POINT SUSPENSION



claimed to prevent their disalignment. Attention is directed also to the solid copper rivets used in fastening the leather top to the pommel, a feature of all Persons saddles.

The complete Persons offering of bicycle saddles for 1912 will embrace 15 models, including popular types for track and road racing, every day use and ladies. There also will be three motorcycle models.

SOME FAST FLAT FLOOR WORK

Excellent Time on 74th Regiment Armory Floor in Buffalo—Schieder Still the Star Performer.

Buffalo's cyclists contributed in no small measure to the success of the December carnival of the 74th Infantry A. A., held at the handsome big armory Saturday evening, December 16. The fascinating sport of flat-floor riding has a large hold on the fans of the city, and scarcely anywhere can be found such sterling indoor competition as is witnessed there regularly. On this occasion, the exceptionally fast and clever work of the cycling experts made more than the usual hit with the thousands present.

Joe Schieder, Buffalo's star flat-floor rider, encountered considerable opposition in the two-mile lap race from Ed. Arenz, of the Ariels, and Freddie Schudt, of the Almas, but finally captured the honors, winning by 58 points to Arenz's 50. The field was so large that for heats were necessary. The time for the fastern whirl was 4:31⅗.

Schieder and Arenz were drawn to start in the first heat of the one-mile handicap with Arenz 15 yards out from Schieder on scratch. Arenz fell, and Ed. Dethloff, of the Alma Club, with a 60-yard handicap, had one kick more than Schieder, hitting the finish line a fraction of a wheel-length in front of the backmarker. Had Schieder won, he would have eclipsed the one-mile indoor record of 2:12⅖ established by Schudt in 1906. Herb Kriegbaum, of the Royal Fliers, took first place in the final, due partly to a start of 60 yards; second, H. J. Young (110); third, Ed. Dethloff (65). Time, 2:10⅗.

An evidence of the skill of the riders on the polished floor, was given during the progress of one of the heats of the handicap event. A trainer unthinkingly stepped out on the course directly in front of the contestants. The latter gave a shout and in an instant they were upon him. Frotunately the man stood still, and the riders "side-stepped" him with an apparent ease that received appreciative applause from the startled spectators.

Closed Bicycle Races in Baltimore.

Baltimore, Dec. 18.—Members of the Crescent B. C. held another series of races at Clifton Park yesterday morning. It was a closed meet and despite the heavy track and a rather stiff wind the events were pulled off in fast time. The distance for all the races was seven-eighths of a mile, which was a complete lap of the lake. The most exciting race was the last one, which was open to all classes, the first four men being compelled to obtain their respective positions by some hard sprinting. The summaries follow:

Class E—Won by William Vogel; second, Joseph Casey. Time, 3:05.

Class D—Won by C. E. Berigtold; second, Fred M. Sanborn; third, William Vogel. Time, 2:36.

Class C—Won by Charles H. Thoms; second, J. Fred Huber; third, C. E. Berigtold. Time, 2:32.

Class B—Won by William Leimbach; second, Thomas W. Baker; third, Charles H. Thoms. Time, none taken.

Class A—Won by August T. L. Leimbach; second, William Leimbach. Time, 2:35.

Open to all—Won by August T. L. Leimbach; second, Charles H. Thoms; third, William Leimbach. Time, 2:30.

Crescent B. C. Mileage Contest Near End.

Baltimore, Dec. 18.—The report of Captain Huber on the mileage contest of the Crescent B. C. for the month of November has just been made. Charles H. Thoms still holds first place, but William A. Leimbach dropped from second to third, his brother, August T. L. Leimbach, jumping into the vacated place. Mommer, the New York plugger, is gradually dropping down the list, he having been forced out of fifth position during November by Langdon M. Sanborn.

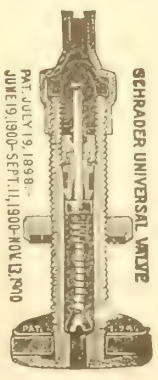
November proved a poor month as far as the total number of miles reeled off was concerned. The grand total of mileage for the club for eleven months of the year, 49,355 miles, surpasses by far any full year's mileage made by the club. The former record was 28,175 miles, made in 1910, when Doc. Sanborn won the contest.

Hausenbauer Lands Two Handicap Races.

Performing to a capacity crowd, the general athletic meet, in which there were two closed bicycle races, furnished excellent sport on the occasion of the annual games of the Thirteenth Regiment A. A., Brooklyn, Saturday evening, December 16.

By a margin of half -a-wheel's length, E. Goodwin (scratch) missed establishing a new armory record, he being beaten just that much by C. Hausenbauer (90) in the two-mile handicap race; his estimated time, erroneously announced as a record, was 4:49⅘. The standing record for the floor is 4:52⅖, held by Oscar Goerke. Summary:

One mile handicap—Won by Hausenbauer (45); second, A. E. Rhodes (75); third, E. Goodwin (scratch). Time, 2:43.



Two mile handicap—Won by C. Hausenbauer (90); second, E. Goodwin (scratch); third, C. A. Mohrmann (scratch). Time, 4:50.

VanDenDries Takes 14th Infantry Race.

William VanDenDries, N. Y. A. C., the veteran flat-floor rider of New York, added further to his long string of laurels in winning the two-mile bicycle race carded on the program of the Fourteenth Regiment A. A. games, Brooklyn, Saturday evening, December 16. The score: Winner—W. VanDenDries (scratch); second, J. Townsend I. A. A. C. (30); third, Walter Raleigh E. C. W. (60).

No Oslerism for These Riders.

The ages of three paced riders who competed at the opening of the winter track at Paris recently are as follows: Nat Butler (45), Emile Bouhours (43), Paul Guignard (36).

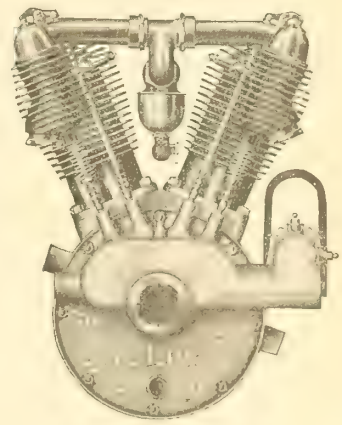
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

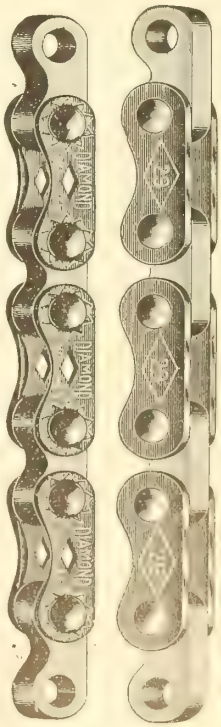
DIAMOND CHAINS

For Bicycles and Motorcycles



Our types and sizes meet every service condition. With a good record extending over twenty-one years and with the most practical connecting link ever offered, Diamond Chain is the logical equipment.

Diamond Motorcycle Chains do their work right in bad weather as well as good and are in every way a mighty good investment in a place where it pays to be careful.

We recommend the following for motorcycle work:

For main drive, Diamond No. 150 Roller Chain
For starting, Diamond No. 29 Block Chain

Of course, we make other sizes. Better start with Diamond Chains than come to them later.

TRADE ◇ MARK

Diamond Chain and Mfg. Co.

CAPACITY 8,000,000 FEET PER YEAR
(103)

Fine Trade, Fine Profit, Fine Premiums for Dealers

EVERY dealer of bicycle supplies should handle NEVERLEAK, the well known tire fluid which automatically heals tire punctures "on the jump" without the rider having to dismount. It is the only legalized tire fluid on the market and for years has had a big sale everywhere.

NEVERLEAK TIRE FLUID

offers you fine trade, fine profit and fine premiums. These are REAL premiums —not a cheap or common one among them. It costs you nothing to find out about NEVERLEAK. Write us to-day and send us your jobber's name.

BUFFALO SPECIALTY COMPANY, Buffalo, N. Y.

SCHAFER BALL BEARINGS

(MADE IN GERMANY)

are the most suitable bearings for motorcycles

Because

They withstand vibration due to the strong cage and large number of steel balls.

SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is being used on the *De Luxe* motor and transmission.

Extra Thick Treads Mean More Mileage

Consider, Mr. Motorcycle Rider—and Mr. Dealer—how riders are coming to Goodyear Motorcycle Tires.

One year ago we began building motorcycle tires. Our facilities were enormous. We had the prestige—the factory equipment of the famous No-Rim-Cut Auto Tire back of us. Today our Motorcycle tires stand without equal. All the leading manufacturers of motorcycles have contracted for them for their 1912 output. Every third motorcyclist you see in 1912 will be riding on a machine equipped with Goodyear Motorcycle Tires.

Goodyears are the strongest, most enduring Motorcycle tires made. Above is the evidence. It remains only to be shown why they are most enduring. Your own sound judgment will suggest the next step.

We have been building auto tires for 13 years. Today the Goodyear No-Rim-Cut Tire outsells all others. Our motorcycle tire is a direct result of all those years of experience.

Year after year—on tire testing machines we have proved out every fabric and formula, every method and theory for adding to tire worth.

We have compared one with another—under all sorts of usage—until we have achieved pretty close to perfection.

Every theory that we have proved correct we have utilized in connection with our motorcycle tires. Hence a more comprehensive service—a greater mileage per tire than afforded by any other make—is offered you by these tires—and at no additional cost.

Goodyear Motorcycle Tires Hold All World's Speed Records Except 7 Mile.

BULLETIN.

On December 10th, Oakland Motordrome, Goodyears won all races—5 miles amateur, Kohl;—6 miles professional, Seymour;—10 miles professional, Wolters.

Goodyear Treads are thicker than all others. Hence, a reason for greater endurance. And the tires are so built up as to guarantee uniform endurance throughout.

The plies of fabric are stretched on by special machinery operated by master tire builders. No uncertain tugging and stretching by hand. And no tightness here and looseness there as a result. This is why Goodyear riders are not afflicted with blowouts and other harrassing and expensive tire troubles.

So all along the line Goodyears spell "reduced tire expense" and "multiplied satisfaction." Compared with other makes, the amount these tires save you in repair bills quickly covers their first cost. Yet Goodyears cost no more than the other kind.

Goodyear Motorcycle Tires fit all standard rims in a grip that never lets go. There's a tire for your rim—a tire specially adapted to your own road condition—a tire that will be sure to render Goodyear service.

Our book on Motorcycle Tires describes the most complete line of motorcycle tires in the world. Send for it.

THE
BICYCLING WORLD and MOTORCYCLE REVIEW
(FOUNDED 1877)

Vol. LXIV. New York, U. S. A., Saturday, December 30, 1911. No. 15

LARGER RIMS ARE NEEDED

Prominent Tire Authority States That Motorcycle and Tire Makers Should Confer on Rim Sizes.

According to S. A. Falor, manager of the motorcycle tire department of the Goodyear Tire and Rubber Company, there is a new problem confronting both the makers of motorcycles and the manufacturers of tires for these machines, and though like the riddles of the past it will be solved eventually, there is much to be said by various experts in the meantime. The problem has to do with rim sizes for 28 x 2¾-inch and 28 x 3-inch motorcycle tires.

With the advent of the motorcycle the most generally used tire was the 1¾-inch size. This soon was followed by the 2-inch type. Another year's experience brought the 2¼-inch size to the front, and as it was learned that the larger the tire the longer it wore, the 2½-inch size made its appearance. More recently the 2¾-inch tire has been put on the market, and now some of the tire companies are preparing to add still another quarter of an inch to this diameter. In discussing the matter, Mr. Falor, who has given much study to the matter of tires for motorcycles, said:

"All three of the sizes now being used have been run on rims measuring but an inch and a half across, and while this is large enough for the two smaller tires, it is barely wide enough for the 2¾-inch size, and a 3-inch tire on such a rim is fairly certain to give some trouble.

"A large tire on a small rim has a tendency to roll sideways, sometimes pulling the head from the rim and often causing rim-cutting. An elongated bead will lessen this difficulty, but cannot overcome it entirely. On the other hand, the wider the rim is, the heavier it must be to hold its shape, and the added weight is an important feature. The present size rims hold our 28 x 2¾-inch Blue Streak tires very satisfactorily, but it is certain that with the larger tires we must have larger rims, and it is a problem that the tire makers and the motorcycle manufacturers should get together on."

Merkel Agents Third Annual Dinner.

Among the social events of the New York show week will be the annual dinner to the Merkel motorcycle agents, who this year will be the guests of the Miami Cycle & Mfg. Co., Middletown, O., at the Hotel Breslin, Broadway and Twenty-ninth street, on Thursday, January 11, at 2:30 P. M. This will be the third annual Merkel show dinner, but the Miami company will be the host for the first time, inasmuch as it will be the first show since the consummation of the Miami-Merkel merger. Trade topics naturally will predominate, and will include a review of the past year and an outlining of next season's sales and racing campaigns.

Indian Representatives at New York Show.

The Hendee Mfg. Co., of Springfield, Mass., makers of Indian motorcycles, will be largely represented at the motorcycle show, to be held at Madison Square Garden, January 6-13. The headquarters of the staff in New York will be the Hotel Breslin, and the following representatives of the Hendee staff will be present: George M. Hendee, Oscar Hedstrom, F. J. Weschler, R. W. Ellingham, J. H. O'Brien, E. E. Cross, J. B. McNaughton, W. F. Hapgood, F. L. Hunt, John McDowell and H. W. Kipp.

Westing Co. Joins National Cycle Jobbers.

The G. H. Westing Company, Indianapolis, Ind., has been elected to membership in the National Association of Cycle Jobbers. The company is one of the largest motor and bicycle concerns in the State.

NOT INTERESTED IN RELIANCE

Vice-President Webster of Eclipse Machine Co., Denies Report of Complicity in Recent Purchase.

In connection with the sale of the effects of the Reliance Motorcycle Company, of Owego, N. Y., by the receiver, December 18, rumor connected the names of Vice-president Ralph D. Webster, of the Eclipse Machine Company, of Elmira, N. Y., and John N. Willys, president of the Willys-Overland Company, Toledo, Ohio, as interested in the purchase with W. H. Ives, of Addison, N. Y., who bid in the property at the auction.

Mr. Webster writes to the Bicycling World and Motorcycle Review that neither Mr. Willys or himself are interested in any way financially in the purchase. The fact that Elmira people are interested with Mr. Ives in the matter undoubtedly led to the report that Mr. Webster was one of those in question. In making his position clear to the trade, Mr. Webster states:

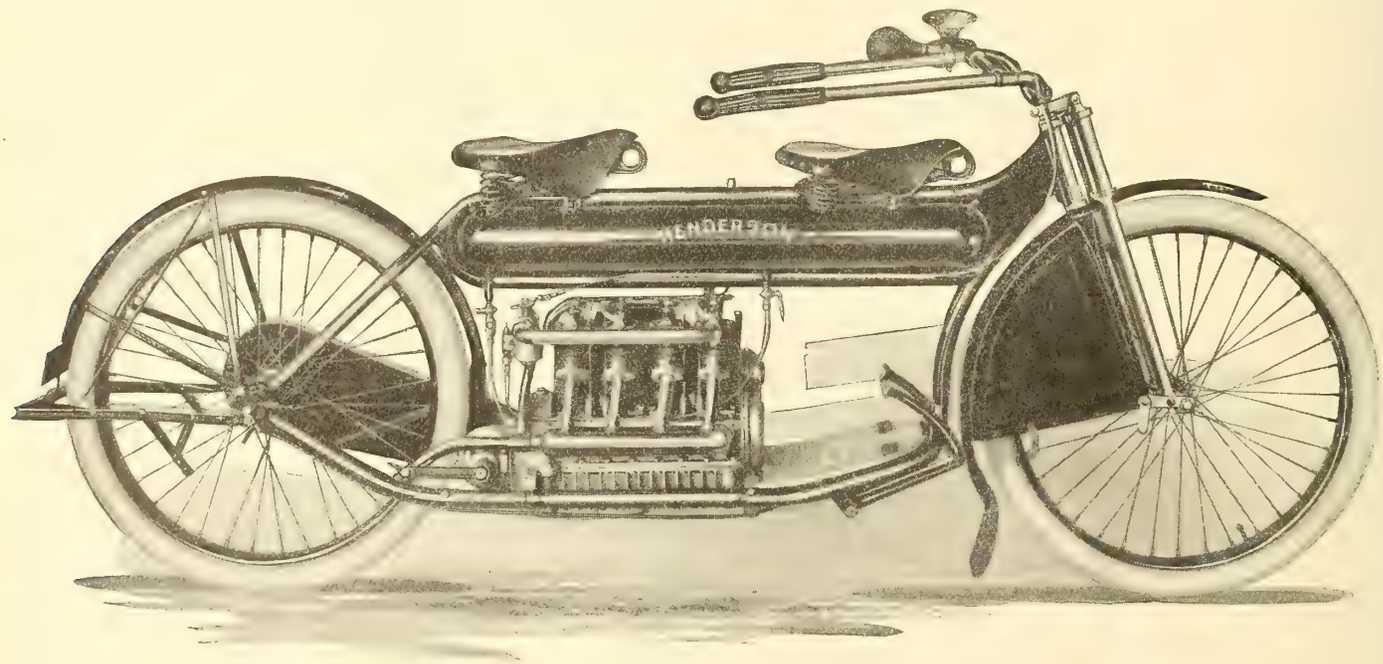
"It is quite true that I was active in trying to help the Reliance Company at the time it was in trouble, but I had nothing whatever to do with the recent sale of the plant to Mr. Ives. I learned a few days before the sale that Mr. Ives had interested Elmira capitalists, who were going to furnish him some money, and was told who these people were. In fact, one of the gentlemen told me himself that he was helping Mr. Ives, but none of the parties connected with the purchase are at all interested in the Eclipse Machine Company. We are very glad that Mr. Ives has secured the plant and hope, and believe, that he will be able to successfully run it, but we do not want the idea to go out to the trade that we are interested in the manufacture of any motorcycle."

NOVEL LINES IN THE HENDERSON

Detroit Offers Another "Four"—First Regular Two-Passenger Motorcycle —Chain Case an Innovation.

Born in Detroit, the "automobile city," it is not surprising that the Henderson motorcycle, offered by the Henderson Motorcycle Company, should savor of motor car construction. In fact, T. W. Henderson, until recently, was local branch manager for a prominent automobile maker, so it is quite natural that he should inject in his two-wheel love, motor car features which appealed to him as also highly desirable in his ideal of the motorcycle.

Because of its unusually long, low and rakish appearance, the Henderson may be likened to the dachschund. Its four-cylinder motor, air cooled, is rated at 7-horsepower, and all valves are mechanical, the inlets being of the overhead rocker type. The motor is slung well to the rear in a dropped cradle, giving a low center of gravity, and what is known as an "underslung effect," or the ability to "hug the road." It will list at $325.



Great flexibility is claimed for the motor. Rushing of hills is unnecessary, it is stated, the accelerating powers of the Henderson being equal to a gradual and sustained pull. Silence, smoothness and sweetness of running have been obtained in large measure, according to the builders. It is apparent that four cylinders have twice the flexibility of a twin, because of the doubling of impulses, while the crank arrangement likewise makes for easier balancing.

The motor is coupled to a jack shaft by bevel gears, and the final drive is by an enclosed roller chain. It is the first attempt fully to enclose a chain drive in this country, and a very acceptable innovation. Protecting the chain from dirt and grease, and running it in an oil bath, will do much to make that form of drive more popular in this country. An Eclipse clutch is mounted on the jackshaft, and on the right side of the clutch housing, a starting crank is attached.

Bullet nosed at both ends, the long cylindrical tank is cradled between the top frame tubes. It is the largest tank fitted to a motorcycle and is of the separate compartment type, the oil reservoir being at the rear. Magneto ignition, a la Bosch, is used. A large band brake is mounted on the rear hub and enclosed by the chain case, the operation being vested in a foot pedal. The chain case is easily removable.

Perhaps the most novel feature of the Henderson, aside from its mechanical side, is the fact that it is a two-passenger machine in the full sense of the word, and the first motorcycle to be offered in standard form with seating capacity for two persons. The passenger seat is mounted forward on the top tube, and is a regulation saddle, both occupants having plenty of leg room on the foot boards. Whether this regular double seat equipment will circumvent the ordinances which some municipalities have passed, forbidding "tank riding," is food for interesting discussion. Ordinarily, "tank riding" is construed as carrying a passenger in front of the operator, on a motorcycle built to accommodate but one person.

The Henderson belongs to the pedalless class. Roomy foot boards are provided, and carry a pair of pedals for controlling the clutch and brake. Motor control is by grip cables. Positive automatic lubrication is employed. The long wheelbase, and low center of gravity, are offered as an assurance of very easy and comfortable riding. Instead of dropping the top bar at the rear to secure a low position, it is sloped away at the steering head and then continued horizontal throughout its length. The foot boards also are tilted upward to afford a restful foot position. The fork is of the compound type with enclosed plunger springs, and has side mud fenders to afford better protection to the seat occupants. Both seats are mounted directly on top of the upper frame bar.

HENDERSON 4-CYLINDER 7-HORSEPOWER, WITH ENCLOSED CHAIN DRIVE, $325.00

Corbin Motorcycle Brake Not Two-Speed.

In advertising the Corbin two-speed coaster brake a few weeks ago, the makers, the Corbin Screw Corporation, of New Britain, Conn., made the statement that it was available for use in motorcycles as well as for bicycles. Since then the Corbin people have been flooded with applications for more information on the subject by readers of the Bicycling World and Motorcycle Review. The Corbin Screw Corporation wishes to announce that an error was made in advertising the brake for motorcycles as a two-speed device, whereas, in reality, it is the Corbin coaster brake for bicycles only, that has the two-speed mechanism. The Corbin people never have produced a two-speed hub for motorcycles, confining their products in this field strictly to brakes.

Bosch Magnetos at London's Recent Show.

Nearly 81 per cent.—to be exact, 80.9—of the motorcycles and separate engines exhibited at the big Olympia show, in London, in November, were equipped with Bosch magnetos, according to the Bosch Magneto Co., New York City This widespread adoption in the land where "British built" is a fetish, is highly complimentary to Bosch design and quality

Business Booming in West Virginia.

Clarksburg, W. Va., Dec. 26.—W. W. Ours has closed with the Hendee Mfg. Co., for the Indian agency in this city

The F. C. Welch Company will continue with the R. S. representation for 1912.

Prospects are bright for the establishment of another motorcycle agency or two here next year. There are about 15 machines in the city, and F. C. Welch, local F.A.M. representative, is mapping out plans for a club shortly after the New Year.

During the past season W. W. Ours, the local racing star, has peeled off some fast miles at race meets held here. This prominence not only has stimulated the sales of machines for pleasure, but also has set business men investigating their suitability for use in commercial fields.

Bad roads have retarded the growth of motorcycling in this section the past year, but with highway improvements planned for 1912 the sales prospects are encouraging. If favored with an early spring and good weather, the dealers are confident of larger sales than in any previous year.

A Live Dealer's Novel Idea.

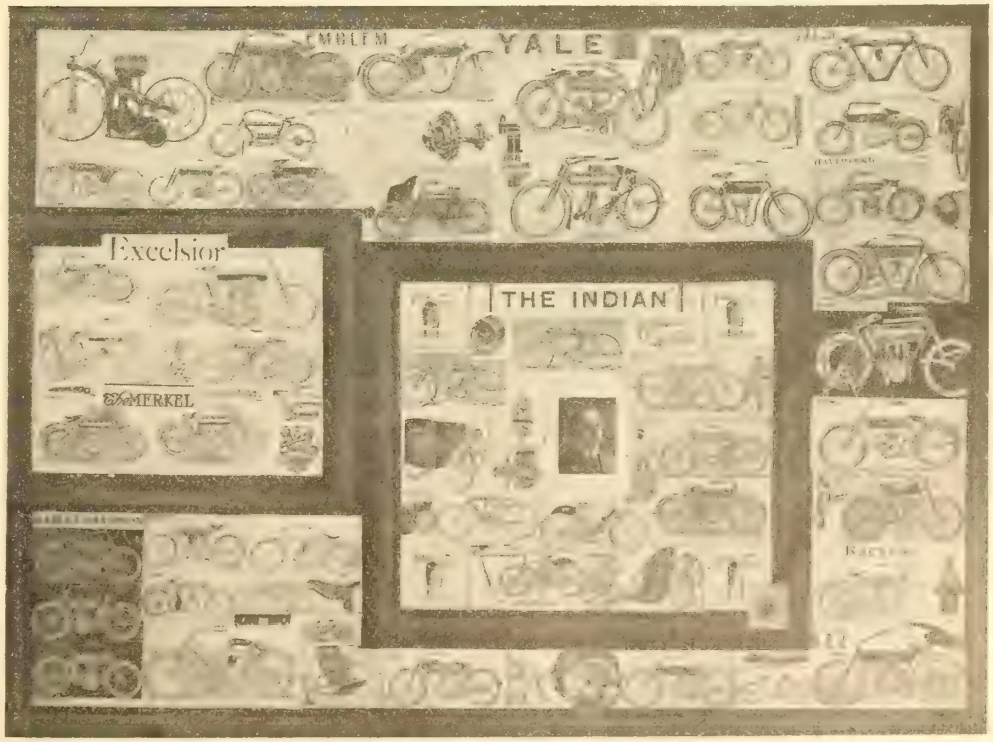
Combining "pulling" power with opportunity for instructive comparisons insofar as concerns the general appearance of the machines illustrated, S. E. Purbum, bicycle and motorcycle dealer of Macomb, Ill., struck upon a live and inexpensive advertising medium when he arranged and neatly pasted on a suitable card, the illustrations clipped from the various trade periodicals depicting a wide range of motorcycles. This card, reproduced in the accompanying illustration, Purbum posted in a prominent position in his store, and found it of such interest that he has had post-card copies printed and reports many inquiries regarding machines as the result of the promiscuous mailing of the cards throughout his vicinity.

New Harley-Davidson Chicago Store.

E. W. Fearing has taken a lease on the property at 147 Lake street, Oak Park, a suburb of Chicago, and will open a new store there for the sale of Harley-Davidsons. Mr. Harley is an old motorcyclist and was formerly physical director of the Y. M. C. A. at Oak Park. He was recently injured in a collision with the rear end of a motor truck, but has fully recovered. He will open the new store the first of the year and carry a full line of machines and supplies.

Motorcycles at Baltimore Auto Show.

Baltimore, Dec. 25.—The date for the annual automobile show in Baltimore has been set for February 20-28 in the Fifth Regiment Armory. Motorcycles will have a prominent part. No plans have been perfected as yet outside of the appointing of a committee to attend the New York show and get some ideas.

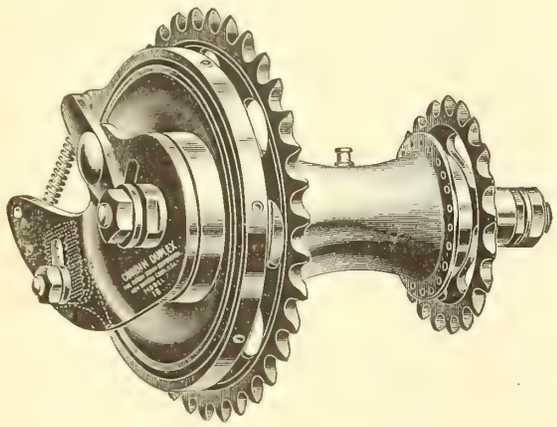


MAIN STORE OF THE CHICAGO MOTORCYCLE WORKS, ON SHERIDAN ROAD

A Hustling Chicago Motorcycle House

"We believe in signs!" So says the Chicago Motorcycle Works, 738 Sheridan road, Chicago, and a glance at the illustration showing the headquarters of this enterprising house will confirm the reader's belief that the statement is a fact. The store is located at the corner of Sheridan road and Michigan avenue, Chicago, and the proprietors, C. Blankenheim and L. J. Leonard, are pioneers in the motorcycle business, and have been prominently identified with most of the track and road contests in Chicago and vicinity. They have secured the exclusive agency for the Excelsior for the north and south sides of Chicago, and expect to sell at least 500 machines during 1912. On January 1 they will open up another store on Fifty-fifth street boulevard, near Michigan avenue.

Grady Eastern Distributor for Excelsior.



J. W. Grady & Co., 68 High street, Worcester, Mass., have been appointed distributors for Excelsior motorcycles for the States of Massachusetts, Vermont, New Hampshire, Maine, and a small section of Connecticut and Rhode Island. Their territory also includes the northeastern quarter of New York State.

ILLUSTRATED REFERENCE CARD, COMPILED BY S. E. PURHAM, MACOMB, ILL.

CORBIN

Motorcycle Brake

—and why motorcyclists should specify CORBIN by name and insist on it.

A reliable braking device should be one of the first requisites in the equipment of the motorcyclist. Accidents should be made impossible.

The new model Corbin Brake for motorcycles has a V-shaped drum and a triangular friction band, superseding the flat band.

This yields 50 per cent. more braking surface—a most important feature for riders of high-powered machines.

The releasing mechanism is entirely outside, making the action easier and more reliable.

With the Corbin, chain interference is impossible. Corbin Brakes can be fitted to belt or chain driven motorcycles.

13 YEARS of manufacturing experience is your guarantee of efficiency and reliability in Corbin Brakes and the people behind them.

Sold by leading Jobbers and Dealers everywhere. Specify CORBIN.

NEW YORK, DECEMBER 30, 1911.

Staying on the Business Map in Winter.

Nowadays the dealer who crosses his legs, twiddles his thumbs, expectorates on the rusty stove, nails the white flag of despair to the door when winter comes, and opines that it's a case of starve until spring rolls around, is conditioning himself for eventual elimination from the business map. He may not do as large a business as he does in summer but he can do something, and if he will but put forth some real effort and go after the business he will be surprised to find how much there is of it to be had.

Incidentally, one live New England dealer who does not find enough business to occupy all his time in winter, turns his former trade to good account. He is instructor in the pattern-making class of the local evening school, three nights a week, and now has entered on his fifth year in this capacity. The remuneration is increasing yearly, and his partner tends store on the nights that he is teaching his classes Another dealer in the Middle West, who formerly worked in a motor car factory, is instructor in an automobile school during winter evenings. Incidentally his pupils often bring him trade after they get out on cars.

With popular interest in motorcycles growing daily, there soon will be a big demand for knowledge in operating them. There are opportunities for dealers to establish motorcycle schools along the same lines as successful automobile schools, either in their own establishments or in connection with an automobile school. It is a good field which can be worked to best advantage during winter evenings, and undoubtedly would be the means of making many sales, particularly to ladies, once they were initiated into the mysteries of motorcycles.

May Change Date of F. A. M. Assembly.

It is understood that an amendment to Section 1, Article III, of the constitution of the Federation of American Motorcyclists is soon to be offered, changing the time of the annual business meeting of the National Assembly to a date placed somewhere between November 1 and March 31, instead of holding the meeting as at present between June 15 and September 15.

A suggestion advocating the change was first made in these editorial columns directly after the Buffalo meeting of last summer, at which meeting it was found to be practically impossible to secure a quorum of the delegates after the first business session, until after the smoker on the last day of the assembly. It was then one o'clock in the morning and every one was tired out and in a hurry to get home.

To reiterate what was said at the time, the business of the F. A. M. is growing year by year in importance, keeping pace with the increase in strength of the organization, and it is absolutely necessary for these business matters to receive the careful and thorough consideration of the delegates in convention assembled. The great majority of those who attend a meeting in the summer time, go to the place of meeting mainly for the purpose of seeing the sights of the city, attending the championship races, and otherwise enjoying themselves, business matters being a secondary consideration.

At Buffalo, last July, practically all the important business accomplished at the meeting on the first day was the election of officers for the ensuing year. There were many other matters of great importance to come before the delegates, and the executive officers were at their wits' ends to secure a quorum, and though they strove heroically, were unable to accomplish their purpose until after the concluding smoker.

With a meeting held in New York or Chicago during motorcycle show week, or some time during the winter months in any conveniently located city, the delegates would attend for one purpose—that of the transaction of business. Such important matters as the track franchise proposition, the Canadian situation, and other vital topics, could be considered calmly without the delegates recalling to mind that they were missing a lot of fun outside under the summer skies. At this winter meeting the delegates also could consider and act upon the invitations extended from various communities for the regular summer assembly and championship events.

It is a striking fact that such successful organizations as the Amateur Athletic Union, the Union Cycliste Internationale, the National Cycling Association—all sport controlling bodies—hold their principal business sessions in the winter time. When that sterling old organization of the palmy days of bicycling—the League of American Wheelmen—was in its prime, it went up against the same difficulty that the F. A. M. is now encountering, and it became necessary to change the main business meetings to winter dates.

The project is one worthy of the consideration of the wise heads of the organization, and although there may be more expense entailed in securing the attendance of delegates, the benefits to be derived will more than outweigh a multitude of such objections.

Vanadium Steel for Motorcycles.

Scientists continually are searching for methods and materials by which steel and iron can be strengthened. The metal known as vanadium, which was discovered in the early part of the last century, now is in general use in the manufacture of steel where great strength is needed. In motorcycle construction, where a combination of strength and lightness are prime requisites, it is being used more and more for motor shafts, connecting rods, gears, frames and forks. It is employed in the proportion of from one to three-fourths of one per cent., and the steel is not hardened materially or rendered brittle, but the resistance is increased wonderfully.

THE BICYCLING WORLD AND MOTORCYCLE REVIEW

BIG YANKEE INVASION FEARED

English Motorcycle Trade Worried Regarding Possibilities of American Machines Increasing in Popularity.

Now that American manufacturers of small and cheap motor cars are dumping hundreds of their product[illegible] Great Britain, and virtually [illegible] British [illegible] "on the run," [illegible] has a nightmare [illegible] cycle manufacturers [illegible] same thing. Appro[illegible] ion of ship[illegible] being set do[illegible] ale at prices [illegible] London "Motor[illegible]

"Talking of the [illegible] motorcycle invasion [illegible] fluence this will have [illegible] off, upon ru[illegible] that the only [illegible] really got a ho[illegible] up to the prese[illegible] even for this c[illegible] truly, active Ya[illegible] planning an attack [illegible] armed with [illegible] every modern [illegible] such quantities [illegible] retailed in [illegible] plete. Anything between £55 ($275) and £60 ($300) is generally demanded for this type of machine at present."

American motorcycle manufacturers who already have agents in Great Britain are the Hendee Mfg. Co. Aurora Automatic Machinery Co.; American Motor Co.; Pierce Cycle Co. It is rumored that certain makers who have low price models see a fine field in Great Britain, and are preparing to go after a slice of British trade. As far as prices are concerned American motorcycles list considerably below British machines in the same class, but there is a stone wall of English prejudice to Yankee goods that will require [illegible] to dislodge.

This will approximate [illegible] 80 [illegible] es and Campbell & Co. expect to put o[illegible] 00 machines during the coming season. [illegible] past season they sold 100, of which 58 came in one shipment. Their territory includes the northeastern section of the state, and the Indian will be handled exclusively next year.

Toronto Motorcycle Trade Organizes.

Toronto, Ont., Nov. 28.—Borrowing an idea from their brethren in New York, the leading motorcycle dealers of this city, got together at the St. Charles November 22

A HAPPY NEW YEAR

PREPARING FOR THE COMING GARDEN SHOW

Motorcycles Will be Elaborately Housed With Their Big Brothers, the Automobiles, in a Bower of Oriental Beauty—Features of the Decorative Scheme That Will Transform the Big Building Into a Wonderland.

Beautifully housed beneath a huge, rich crimson and gold canopy weighing no less than three tons, probably the largest single piece of decorative fabric ever woven together, the Madison Square Garden Automobile and Motorcycle Show will open its doors Saturday evening, January 6, and continue for a period of two weeks. Motorcycles will be shown the first week for the first time.

The motorcycle exhibition, however, will close on January 13, the date on which the automobile pleasure vehicle section of the show terminates, and the second week will be given over to commercial vehicles.

But as to decorations. The great canopy spoken of above, takes the form of an inverted oriental rug, and will immediately attract the visitor's eyes. It has a lattice-like center panel, measuring 200 by 100 feet, and fringing it are 24 other smaller panels, required to cover the Garden's iron girders stretching across the ceiling of the structure. Artisans weaving, drying and painting this gigantic rug have been working on it for ten months, and are rushing to complete it.

In the center panel is a large allegorical painting representing the triumph of the industry. Several thousand feet of floral garlands are to be draped in graceful borders about the panels, and the management is sanguine that it will be pronounced one of the most remarkable art pieces ever seen in years.

Progress of the Work of Preparation.

Monday of the present week workmen began activities in preparing the Garden itself for the reception of the exhibits, although hundreds of artisans have been at work on the decorative properties for months. More than 200 tons of steel and 1,000,000 feet of lumber are to be used in reconstructing the building. The two monster elevators which were successfully used at the last show, again will be put into service to hoist the exhibits to the balconies.

An attempt has been made by the committee in charge of the Garden show to remove or conceal the familiar lines of the amphitheatre's interior by converting it into a definite picture, which itself becomes the frame for the exhibits. While the work of doing this becomes more difficult each year, the genius of those to whom it falls seems to rise to the occasion. For the show of 1912 the pictorial idea is that of a mammoth Oriental garden. The color scheme is crimson and gold with smatterings here and there of other tints.

The exhibition spaces on the main floor, elevated platform and balcony will be carpeted with a specially woven fabric of green hue. Entering from the foyer the visitor will be confronted by a large fountain casting up sparkling streams of water. Back of this, in the center, is a statue representing the "era of motors." The splashing water from the fountain will be electrically radiant, made so by iridescent, hidden electric bulbs. All about the fountain are eight ganes or bust figures standing on pedestals ten feet high, arched by garlands of natural flowers. Half a dozen bay trees are arranged in the front of the fountain. Beyond this fountain will extend the main car display space.

Elevated Platform Plan is Repeated.

The plan of having the elevated platform and balcony above the arena boxes project over the main floor and the scheme of covering the high rear seats so as to make a sort of mezzanine floor, will be repeated this season. For the edges of the elevated platform and balcony special railings have been designed, which, like the stairways, standards, and decorative borders will be finished in gold. In the general view these railings of the platform will rise in three rows in front and rear, and two rows on each side of the interior.

Along both sides of the arena will be boxes or lodges similar to those of the horse show, seating 1,200 people. Extending about the arena, towering to the dome, will be a number of ornate, impressive steel columns, which add much to the stateliness of the whole effect. These columns support the balconies.

The Entrance and the Smaller Halls.

Upon entering the Garden, the foyer, wide and deep, will be decked out on each side with thick boxwood hedges, in the recesses of which marble figures on tall pedestals, sculptured by the eminent Martini will present a pleasing, artistic effect. The ceiling will be clustered with vines and natural flowers. On the right is the exhibition hall, while following straight ahead the main garden greets one.

This exhibition hall is being transformed into a California patio, the entire grape arbor setting being thoroughly characteristic. A huge pergola will extend about the room while stretching around the four walls is a mammoth landscape painting by Pal representing a golden sunset in Southern California. The pergola has stucco columns supporting it, and is topped with a tiled roof. The center part of the pergola is open overhead. In the midst of this is a much smaller one with foliage-entwined cross-beams. Peering upward a blue sky is seen through the lattice of vines.

The "Concert Hall" reached after passing up through the Garden proper will be found transformed into a veritable Japanese canopy of white cherry blossoms—the branches being so covered that the ceiling can not be seen through them. These branches of real cherry wood were cut last spring and stored away especially for this purpose. The artificial blossoms will be scented with the natural, dainty perfume. Circling the room will be a panoramic landscape scene depicting the "Land of Flowers" in all the glory of its full bloom, with Fuji-Yama, the sacred mountain of Japan, towering in the distance.

What the Basement Has to Offer.

A Spanish Bodega in a Californian setting will be found in the basement—one of the quaint features of the show. There is a huge iron gateway surmounted by a "tympumen" upon which is painted two toreadors drinking to their hearts' content. Inside stucco columns rise to the ceiling and on the back wall a gigantic mirror adds the illusion of great size to the room. Mission furniture and the California scenery seen through the arches in the side walls will give the place a pleasing, romantic atmosphere.

Will Show Famous "Tourist Trophy."

Motorcyclists will be interested to know that the celebrated "Tourist Trophy," which was captured by Oliver Godfrey, on an Indian machine in the Isle of Man race, last July, will be on exhibition at the stand of the Hendee Mfg. Co., at both the New York and Chicago motorcycle shows. The Trophy is a solid silver figure of Mercury mounted on a winged wheel, is 38 inches high, and valued in American money at $500. It represented what is commonly acknowledged as the most important road race in the world, which this year was not only won by an American machine, but was also triply cinched by the capture of second and third places as well, the greatest triumph ever scored abroad by a Yankee motorcycle.

December 31, New York City—Annual New Year's Eve midnight bicycle race from Monument Square and Concourse to City Island bridge and return, under the auspices of the New England Wheelmen.

December 31, Brooklyn, N. Y.—Annual mid-night bicycle run, Bedford Rest to Valley Stream, L. I., under the auspices of the Eastern Division, C. R. C. A.

February 3, New York City—Company "K," 22d Regiment and Morningside Athletic Club, bicycle races and athletic games.

February 3-10, Chicago, Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory, under auspices of National Association of Automobile Manufacturers.

February 10, Chicago—North Shore Motorcycling Club show wind-up smoker.

February 26-March 3, Quincy, Ill.—Second Annual Mississippi Valley Automobile Show, under the patronage of Quincy Auto Club, at Highland Park Pavilion.

February 21-28, Toronto, Ont.—Motorcycle show in Toronto Armory.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

Motorcycles for Assistant Fire Chiefs.

Mayor Stratton, of Reading, Pa., is strong in his advocacy of the city procuring motorcycles for the assistant chiefs of the fire department of that municipality. The mayor thinks there is nothing so practical for immediate availability for the purpose of quick service as the motorcycle, and as the assistant chiefs have other vocations during the day time in a city of the size of Reading, they must have a speedy conveyance in case of an alarm of fire in their districts. The idea is worthy the consideration of wide awake chief executives in other cities throughout the country.

Canadian Salesmen Convene at Montreal.

Montreal, Que., Dec. 28.—Branch managers and salesmen of John Millen & Son, Ltd., of this city, distributers for motorcycle accessories, with branches throughout the Dominion, attended the second annual sales convention last week. The commercial conclave lasted four days, and was interspersed with theatre parties, suppers and bowling parties. Representatives of several accessory manufacturers in the United States were present. One of the results of the gathering was the adoption by the house of a new trade mark "Millenium," which is now commissioned.

PLANNING WHEEL ABOUT LONDON

English Cyclists Taking Kindly to a Summer Tour Around the World Metropolis —A Picturesque Run.

Americans, familiar with the annual "Wheel About the Hub," a fixture since its organization with the Boston Bicycle Club, this country's oldest cycling club, will be interested to learn that their English cousins are now seriously contemplating promoting a run of like nature round London.

England's cycle governing body, the National Cyclists' Union, is fathering the proposition which at present is being planned to occur some time in June next. The plan of the run, submitted by a cycling enthusiast, James Blair, while essentially the same as that of "The Wheel About," differs from the latter in that it will be open to promiscuous entry, and there also will be four starting points on the proposed circle at the cardinal points of the compass from which starts will be made simultaneously.

It will be open to all bona fide cycling clubs and companines of cycling corps attached to the local militia. Any number can enter, but the minimum number to score for the prizes and medals would probably be five, and the maximum 15.

The riders will be started from four different points round London, at a distance of about 15 miles from Charing Cross. They will ride in a clock-wise direction right round London, crossing the Thames by the Tilbury-Gravesend ferry, until they reach the starting-point again.

The distance would be approximately 100-120 miles. Another route under consideration is one of a 20-mile radius, the complete distance being about 160 miles. The ride would open up stretches of country and many charming lanes at present unknown to thousands of London cyclists, for the territory surrounding the world's metropolis abounds with rustic beauty.

A limit of speed of 10 to 12 miles an hour would be fixed, and the riders would have to keep to a time table, with "controls" at various points. They would be penalized for arriving early or late at controls, and in each would have to wait 15 minutes before proceeding. A trophy and medals are proposed for the winning team, as well as other prizes.

The best date is a very moot point, and one on which the N. C. U. is earnestly considering. The proposal now before the Union is to start the ride at 3 o'clock in the afternoon on a Saturday in June, the ride to finish in the small hours of Sunday morning. The long summer days in June and the choice of date to coincide with a full moon would remove all the ordinary difficulties of night riding.

Four Month's Motorcycling in Europe

By WILLIAM STREIFF

Part IV

After crossing into Italy we passed through several small towns, but not until we reached Milan, did we have any exciting or humorous adventures. At the N. S. U. agency there we picked up a newspaper, not with the idea of reading it, because we could not, but to look at the pictures. To our surprise we found the Singer sewing machine, National cash register, and several other well-known American articles advertised therein. Many American products are very extensively advertised throughout Europe.

Milan is infested with dogs, many apparently homeless, but all muzzled, in accordance with a police regulation. Taking a stroll Sunday morning, we noticed women washing soiled clothes on the banks of a canal. In Strassburg, Germany, they do it from houseboats. Street car fares vary considerably in Milan. Once we boarded a car, and after paying 10 centimes, or 2 cents, rode to the end of the line. On the return trip the conductor demanded 20 centimes, or 4 cents, and after much argument we settled.

Milan's "Broadway" Strollers.

On Sunday evening, practically the entire populace turns out to stroll along the boulevards, recalling dear old Broadway, in New York town. We visited the Victor Emanuel arcade, which is laid out in the form of a cross and is three stories, the roof being entirely of glass. Across the street is the Milan cathedral, almost 400 years old, and containing over 2,000 statues. It is not finished yet, and workmen still are laboring on it. The N. S. U. agent in Milan, having taken quite a fancy to Esler's Indian, he sold it at a good price, and therefore was relieved of the burden of taking it back to America.

One night while writing a letter in the hotel dining room, a waiter came and took the ink bottle away and placed it before another person. I tried to tell him that I had not finished, but he shrugged his shoulders, and apparently did not understand. Next day I told Esler that I was going to leave the place for that insult. When we asked for our bill, we found an overcharge of 2 francs, which was explained as covering ink and electric light. We made a fuss about it, and finally it was reduced to one franc, and we were so angry that we left without tipping anyone.

When we boarded a trolley early that morning, the fare was only 5 centimes or 1 cent. We found later that special low laborers rates were in force when the populace goes to and from its daily toil, and everybody rides. Another thing that impressed us was the tameness of the doves, who flock about the city in great numbers. They feed in the streets and easily are approached. To molest them would invite disaster on one's head, for the people are very kind to them.

Allow Five Minutes to Call "Central."

People in America who fume about the delay in getting "Hello Central" would go mad in Italy. You have to shout "Pronto" for about five minutes, sometimes, before she answers. Investigating a sign reading "Bigliar do," we found it was the location of a billiard parlor. The co-operative store system has been developed strong throughout Italy, and particularly in Milan. Six stories is the maximum height of Milan buildings. In the residential section on washday the windows are filled with clothes hung out to dry, as there seem to be no yards attached. Motorcycles are very popular in Milan, the lightweight being preferred.

Esler being without a machine, of course our road traveling together was over, so he stayed in Milan while I took a run to Venice, an eight hour trip. Although it was very cold I enjoyed the trip immensely. I sailed around in a gendola for 40 cents an hour, gliding through nearly all the famous waterways. The canals are dredged by hand labor when they fill up.

Venetian Furniture "Vans."

An interesting sight was witnessed in St. Marks place, where the tame pigeons come to feed by thousands. There is a famous church here also, the largest spot of land in Venice. Of course gondolas are the only means of transportation, for the streets are waterways, and the canals run right past the doors of the houses, which, of course, have landings. It was amusing to see the household goods of a perambulating family, being transported in a gondola.

I made the return to Milan in six hours, and reached the hotel at 1 A. M., having to pound on the door half an hour before I was admitted. We left Milan at 4 P. M., or 16 o'clock, as they call it. They do not divide the 24 hours into two periods, A. M. and P. M., but after 12 o'clock, continue right on to 13 o'clock, to 24 and begin over. A cab driver tok us and our outfit three miles to the station for 30 cents, which was dirt cheap. The ticket taker told us that we would have to ship all our luggage as baggage, and could not take it in the car with us. We certainly were loaded with grips, packages and spare tires.

Talk about the famous slow train of Arkansas in the United States; it was not to be compared with the outfit which we took a chance on making Paris in. When we reached the Italian border we learned that the train would tie up at Zurich, Switzerland, for the night, instead of going through as booked. Therefore we had to spend the night in Zurich.

Next day we had to change cars about eight times on the way to Paris. In Italy and Switzerland they punch your ticket almost every time the train stops, while in Germany and France, they punch it when you get aboard and debark. You are not disturbed about tickets while riding in the latter countries. Passing one small

BIDDING FAREWELL TO THE ALPS ON ENTERING ITALY

CHARACTERISTIC SCENES ALONG VENICE'S "MAIN STREET"—THE GRAND CANAL

station, Esler noticed a pile of bricks with holes through them, and asked what the holes were for. I explained that they not only made the bricks lighter without weakening them, but also made them less expensive to manufacture.

Powder Puff Slot Machines of Paris.

At Petit Croix, the French frontier, we were asked for our passports for the first time on our trip. We also had to set our watches back an hour on re-entering French soil, the time of that country being an hour earlier than the others. Arriving in Paris late at night, we immediately hunted up a hotel. Next day we secured steamer tickets, and headed for Boulogne where we were to take ship. While waiting for the train, I invested a 10 centime piece in a slot machine, expecting to receive a chocolate bar in exchange, but instead I drew a small box of powder and a puff. Esler went into paroxysms of laughter, and attracted a crowd, who wondered what it all was about. These powder and puff machines are very numerous and popular in Paris.

It was raining hard when we reached Boulogne, and we tried to engage a cab to take us to the dock, but none was to be had. So we had to foot it in the storm, and were thoroughly drenched when we reached the pier. After waiting two hours, we were advised to return to a hotel and wait until sent for, as the sea was so rough that the tender could not go out to the ship, which was lying in the open roadstead outside the breakwater. However, it was noon next day before we were taken aboard ship, in the meantime being the guests of the steamship company. We learned that most of those aboard had been seasick during the rough weather, the day before.

On the Atlantic Highway.

On Monday afternoon we sailed, and had a stormy passage down the English Channel, to Southampton, where we called for more passengers. When we weighed anchor for New York, we had 2,000 passengers aboard. Very rough weather for the first two days, prevented the passengers getting acquainted or planning any amusements. Much to our surprise neither of us were victims of mal de mer.

Hallow'een night, October 31, found us on the Atlantic highway, and the young folks aboard had a jolly good time with parties, games, and general cutting up. One night a dance was held in the second cabin, the ship's orchestra furnishing music, and this was one of the pleasantest events of the homeward voyage. We reached New York on a Thursday night, and although we had been given to understand that we would be allowed to stay aboard until Friday morning, the customs officers boarded us that night, and then all were chased ashore. Of course we did not mind much, being familiar with our surroundings, but it was hard on the foreigners who never had been here, and were unused to American ways, and particularly to hurry-up methods. We landed in New York November 3, just 129 days after we had left it, and completing what we believe was the longest European motorcycle trip ever accomplished by American motorcycle tourists in such a period of time.

ST. MARK'S PLACE, VENICE

We were glad to be home, under the Stars and Stripes once again. We had ridden 5,128 miles, visited the British Isles, Holland, Belgium, Germany, Italy, Switzerland and France, and the principal cities thereof, and acquired an immense store of knowledge of the countries, their inhabitants and customs. Our trip was not as expensive as otherwise would have been the case, for very frequently we were guests of N. S. U. agents. As a au revoir, we both fervently unite in advising American motorcyclists who contemplate a European trip to "See America First; then Europe if you will."

Restrictive Laws Arouse Canadian Protest.

Toronto, Ont., Dec. 28.—Onerous local traffic regulations designed for automobilists and motorcyclists have so exasperated the latter that last week a delegation from the Toronto Motorcycle Club waited on the police commissioners to ask for a separate ordinance. The trouble lies in the fact that when the ordinance was drawn the authors saw only automobiles and tacked on motorcycles without realizing that the latter differed considerably, and that many of the provisions of the statute worked a hardship when applied to the two-wheelers One of the recent amendments which has brought forth a storm of protest from the riders is the edict that all self-propelled vehicles shall come to a dead stop in approaching motionless trolleys. Another objection raised was against the order requiring machines to display numbers painted on the headlights. It was pointed out by the delegation that not a single motorcycle accident yet had occurred in city streets, and that therefore the machines were entitled to more consideration than the present statute gave them. The club has engaged counsel to conserve its interest at a traffic conference to be held, and will submit copies of the traffic rules in force in New York and other large American cities.

ENGLAND'S EXPORTS AND IMPORTS

Interesting Figures Showing Healthy Conditions of Industry—Exports Increase —Import Values Show Advance.

Speaking of Great Britain's export bicycle and motorcycle trade, the current issue of the Cycle and Motorcycle Trader and Review, says:

"The figures for the month of November which have just been published denoting a continuance of the increase in the export trade which has been such a feature of the overseas' trade during the year. During the month we exported £47,004 of cycles, which compares with £39,880 in 1910. This increase puts the totals for the eleven months of the year well ahead of the previous year, the figures being £559,604, as against $504,994. There was a decrease in the value of parts exported during the month, £109,695 as against £111,498, but the total for the eleven months £1,317,555, is still ahead of last year when the trade was valued at £1,298,646.

"The Board of Trade returns for November show an increase in both imports and exports. The value of the month's imports was £65,432,935, which is £1,343,083, or 2.09 per cent. more than the total for the same period last year. Exports of British produce totaled £40,986,391, an increase of £4,088,966, or 11.08 per cent. For the eleven months of the year the value of the imports was £615,674,630, an increase of £6,353,717, or 1.04 per cent., compared with the same period in 1910. Exports of British produce for the eleven months reached £415,710,581, an increase of £22,544,880, or 5.73 per cent."

Anent the import and export business in bicycles, motorcycles and parts, the following comparative table gives a comprehensive review of cycle trade conditions in the "tight little isle":

Bicycles.

	1909.	1910.	1911.

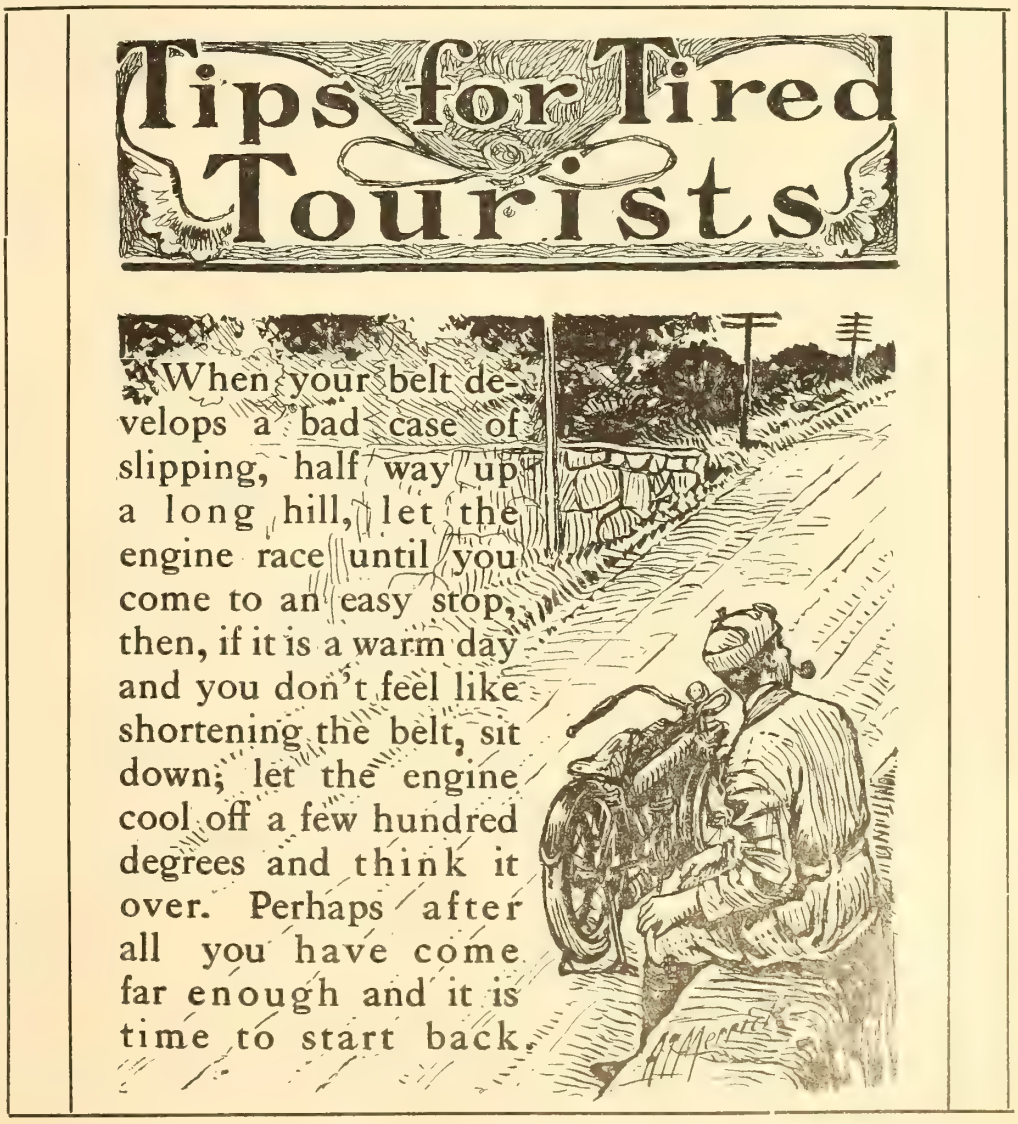
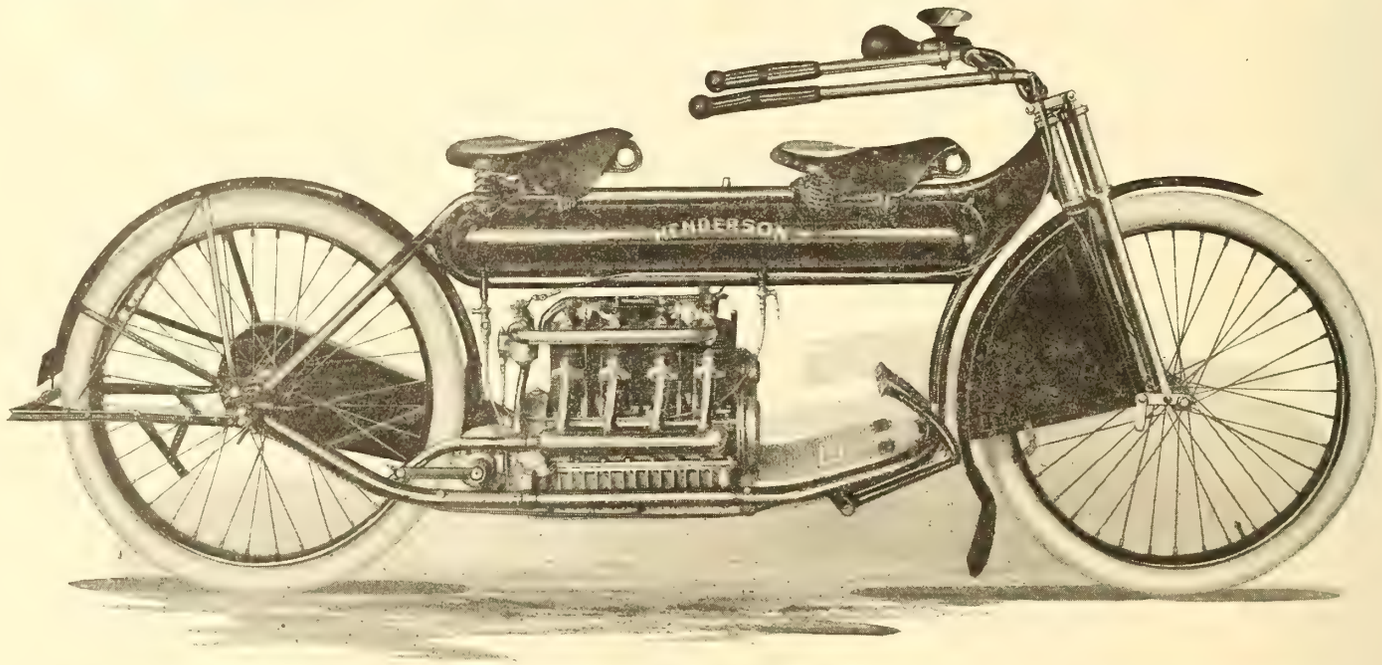
Total	65,286	94,559	101,979

Tandems Increasing in England.



Word comes from the land of the sturdy Briton that tandem riding is gaining vogue to an extent which indicates there are probabilities of the two-seater again becoming favored as a pleasure vehicle. One leading maker has re-introduced it as standard.

Switzerland As a Bicycle Market.



Official returns show a considerable increase in the import of bicycles into Switzerland in the first six months of 1911 as compared with the corresponding period of 1910. There were altogether in the first half-year of 1911 imported 17,832 bicycles valued at $433,617; in the same period of the previous year, 16,217, valued at $396,153.75. Swiss exports are very insignificant, amounting to but 85 machines in 1910 and 82 in 1911. Imports from various countries, shown by numbers of machines, are as follows:

Germany	14,352
Austria-Hungary	111
France	1,825
Italy	325
Holland	164
Great Britain	1,015
Other Countries	40

It will be observed in the foregoing table that the United States is conspicuous by its absence and in view of the fact that the use of bicycles evidently is increasing in Switzerland, it is timely that some of our manufacturers who are making a bid for export trade should look into this field so apparently monopolized by Germany.

1912 HENDERSON

A Few Henderson Points

No Noise.
No Vibration.
Roomy Foot Board.
Positive Lubrication.
Starts With a Crank.
Every Cylinder Cools.
Low Center of Gravity.
Bosch Auto Type Magneto.
Eclipse Free Engine Clutch.

4 CYL. **Price $325** **7 H. P.**

If you would like to have a few more points write for booklet.

HENDERSON MOTORCYCLE CO.

Detroit.

No Noise!

The Henderson four cylinder motor is the smoothest, quietest, sweetest running little motor, that was ever designed.

A well known rider recently referred to it as the sassiest, snappiest machine he had ever ridden on.

You can throttle down to a walk in thick traffic because the motor is flexible.

Flexibility means ability to apply what power you have to best advantage under all conditions.

With a flexible four cylinder motor you can throttle down and then get away quickly. It means you don't have to rush the hills. The Henderson approaches a stiff grade slowly and still makes a conquering hill climb.

It is easy riding, too. The combination of long wheel base and low center or gravity makes it so. You get the minimum of road shocks with this construction and IT HOLDS THE ROAD.

Mr. Dealer:—Is your line complete? No! You need the Henderson! A strictly high grade 4 Cyl. 7 H. P. Machine at $325. The live ones are getting in line fast. Better write quick, or see us at the New York Show

HENDERSON MOTORCYCLE CO.

Detroit.

CANAL ZONE INSPIRES SONG

Chairman Estabrook, of Membership Committee, Poetic Over Prospects—Eight More Repair Shops Registered.

In considering the matter of affiliation with the F. A. M., the Hamilton Motorcycle Club, of Hamilton, Ontario, wants to know more about the conditions that will govern the status of clubs of another nation joining the American organization, and such information has been supplied its officers by Chairman Estabrook, of the Membership Committee.

Another organization contemplating affiliation is the Lawndale Motorcycle Association of Chicago, the president of which is J. C. Vesely, 1657 South Fortieth avenue, that city. The association was organized June 30, of the present year, and has a membership of 28. The club has promoted several runs under F. A. M. rules, and has a fine financial standing.

P. S .Spencer, Oakley, Kans., will do local F. A. M. work in his territory. He reports that he will organize a club, even if he has to enlist the services of the "boy scouts."

Word has been received from Empire, in the Canal Zone, Panama, that even in that warm country there are riders interested in the F. A. M., and the sport of motorcycling. Chairman Estabrook has been asked to furnish details for organization work down there, and is so impressed with the prospects that he bursts into verse, thusly:

Way down on the Zone,
Way down on the Zone,
Where the pickaninnies croon, and your 'bus gets out of tune;
Way down on the Zone,
Way down on the Zone,
Won't we have a jolly club, way down on the Zone.

The Iver Johnson Sporting Goods Company, Boston, has reserved a half-page in its catalogue for the promotion of F. A. M. interests.

Eight more repair shops have been registered since the last report given to the public by the Membership Committee. They are as follows: No. 412, Ernest A. Craddock, 24 North 52d street, Philadelphia; No. 413, A. L. Zimmerman, 247 West Main street, Valparaiso, Ind.; No. 414, William Voss (Voss Brothers), 419 South Adams street, Peoria, Ill.; No. 415, A. T. Taylor, Salina, Kans.; No. 416, Sutcliffe Company, 220 South Fourth street, Louisville, Ky.; No. 417, Ferd. Belle, 1107 Kansas avenue, Great Bend, Kans.; No. 418, P. L. Abbott, 209 Fourth street, Portland, Ore.; No. 419, A. C. Banta & Co., 174 South Second street, San Jose, Cal. (re-issue).

RACING AT LOS ANGELES

Ascot Park the Theatre of the Revival of the Sport in the Pacific Coast's Motorcycling Capital.

Los Angeles, Cal., Dec. 18—Pugilistically speaking, M. J. Graves, and Charles Balke, professional speed artists, fought four terrific gasoline rounds to a draw at the revival of motorcycle racing in this city at old Ascot Park, Sunday, December 17. This pair of native sons hooked up for the first time in a long while, and although it was Graves' first appearance on the Excelsior—he has joined that camp too—he seemed perfectly at home on it. The match was at five miles, best three in five heats, and Graves and Balke each trimmed the other twice in slashing duels. With the crowd primed for the final Balke's motor developed piston trouble and the windup was called off.

Despite his bad leg Jake DeRosier cavorted around on his Excelsior for a mile exhibition. It was nearly a year since the Angelenos had seen Jake in action, and he had taken on several honors in the interval. Jake aimed at Graves' mile record of 0:49⅖, and after three warming up circuits signalled for the getaway. Like at Guttenberg he went into the lower turn too fast,

ANNUAL GATHERING OF THE LOS ANGELES (CAL.) MOTORCYCLE C

and almost came to grief, but fortunately there was no one in his path this time, and he straightened out after a sensational skid and streaked along the back stretch. The upper turn was taken with better skill and the final drive was made all out, but the watches said 54 seconds.

Action blew the cork from the enthusiasm flask immediately Graves and Balke were released. Balke had the best of the start and whittled the first lap in 51 seconds. The pair were less than 10 feet apart at the end of the second lap with Balke still in front. Graves crept up a bit in the third round and the pace slackened, but in the fourth Balke crowded on more speed and was clocked in 51 seconds. Going into the last lap the men were even and seasawed. As they broke through the last turn Balke was in front and held the gap open to the tape with Graves pursuing like a fiend, and beaten by less than a wheel. It was a corking race. The time for the round was 4:19.

Graves was the star in the second heat. He took the lead and unwound a lightning pace that electrified the crowd. One lap was caught in 50⅗ seconds, better time than Barney Oldfield made with his "200' Blitzen Benz. Graves slid around the turns with that finesse and skill that has gained him the reputation of the cleverest corner artist on the track. Balke was driving his machine to the limit to close the gap, but Graves had equal speed and better driving ability and shot across the cash line a length ahead. The time was ⅗'s of a second lower than the first heat.

With honors even the daredevils answered the flag for the third round. It was a seesaw from start to finish. Balke crowded to the front in the stretch and crossed the line half a length to the good. The time was falling, this round being clocked in 4:20⅘.

Graves had a candy canter in the fourth round, Balke failing to finish. It was the symptoms of motor trouble which later became serious. Graves romped around in 4:32⅘, a time gait compared to his former flashes.

G. F. Jankobe, blossomed forth as a "comer" by scoring twice in his first track session. He graduated from the novice class with highest honors, and again exemplified the victory glide in the six-mile scramble among the private owners. Ray Peck, one of the popular native sons, hammered out an easy win in the trade rider scrap at the five-mile distance.

With DeRosier, Graves and Balke, three of the top notchers, on the Excelsior, there should be a repetition of the racing which in the old days made Los Angeles famous around the world. Hasha has his new direct drive eight-valve Indian, and will pit it against his old-time team mates soon. Cal Rodgers, transcontinental aviator, and ex-motorcyclist, dropped the flag at the Ascot meet. Summary:

Five mile professional match—First heat won by Charles Balke (Excelsior); second, M. J. Graves (Excelsior). Time, 4:19. Second heat won by Graves; second, Balke. Time, 4:19⅗. Third heat won by Balke; second, Graves. Time, 4:20⅘. Fourth heat won by Graves; second, Balke. Time, 4:32⅘. Final not run.

Mile exhibition—Jake DeRosier (Excelsior). Time, 0:54.

Ten mile handicap, trade rider—Won by Dave Kinney (Indian) (0:15); second, Ray Peck (Excelsior) scratch; third, N. Bueneman (0:45). Time, 9:32⅗.

Five mile novice—Won by G. F. Jankobe; second, Lester Carson; third, Robert Green. Time, 5:02⅘.

Six mile, private owner—Won by G. F. Jankobe; second, N. Bueneman; third, George Sawaya. Time, 6:07⅕.

Five mile, trade rider—Won by Ray Peck (Excelsior); second, Dave Kinney (Indian); third, George Sawaya. Time, 4:44⅕.

The Invincible Motorcycle Club, of Brooklyn, N. Y., is contemplating promoting a 50-mile economy test in the near future on the Coney Island Cycle Path.

NEW TRACK FOR BALTIMORE

Jack Prince Makes Plans For a Record-Breaking Saucer—Howard French to Finance Scheme.

Baltimore, Dec. 25.—One of the liveliest of live wires is on the job. Jack Prince has been welcomed into the fold by the local motorcyclists, for has he not indicated that he will follow in the footsteps of his other good work and build in this old town the best motordrome in the world? Prince has spoken, and so be it.

Howard A French is the happiest man in the Monumental City and he carved his turkey today in a lighter mind and with a surer hand than he ever did before. And he was also prodigal in the bestowal of Yuletide cheer. And did he not have good reason for being so? He did. For this is what Prince shot into Baltimore a few days ago over the nocturnal lettergram route, and it was enough to make French feel real youthful once again:

"Dear Howard: Just got letter. See if you can lease Electric Park for motordrome. If so, how much? I will build a triple radius board track half a mile over dirt track. Hold hundred miles an hour. Best track in the world. Will take stock myself. Hold night racing. Would be great. Will come soon. Wire answer. Jack Prince."

French says Prince can say more in three words than T. R. can in a Fourth of July message. Prince wants to have a hand in the dough pan and he probably will have one swell opportunity. But the co-operative financial plan has been kidnapped by Santa Claus. A real, pulsating Kris Kringle, in the form of a prominent Baltimorean whose name has been locked up in a fireproof safe from discovery, has whispered to Howard that he is inclined to dish up the merry jingle with which to start the wheels

Ascot Park the Theatre of the Revival of the Sport in the Pacific Coast's Motorcycling Capital.

Los Angeles, Cal., Dec. 18—Pugilistically speaking, M. J. Graves, and Charles Balke, professional speed artists, fought four terrific gasoline rounds to a draw at the revival of motorcycle racing in this city at old Ascot Park, Sunday, December 17. This pair of native sons hooked up for the first time in a long while, and although it was Graves' first appearance on the Excelsior—he has joined that camp too—he seemed perfectly at home on it. The match was at five miles, best three in five heats, and Graves and Balke each trimmed the other twice in slashing duels. With the crowd primed for the final Balke's motor developed piston trouble and the windup was called off.

Despite his bad leg Jake DeRosier cavorted around on his Excelsior for a mile exhibition. It was nearly a year since the Angelenos had seen Jake in action, and he had taken on several honors in the interval. Jake aimed at Graves' mile record of 0.49⅗, and after three warming up circuits signalled for the getaway. Like at Guttenberg he went into the lower turn too fast, and almost came to grief, but fortunately there was no one in his path this time, and he straightened out after a sensational skid and streaked along the back stretch. The upper turn was taken with better skill and the final drive was made all out, but the watches said 54 seconds.

Action blew the cork from the enthusiasm flask immediately Graves and Balke were released. Balke had the best of the start and whittled the first lap in 51 seconds. The pair were less than 10 feet apart at the end of the second lap with Balke still in front. Graves crept up a bit in the third round and the pace slackened, but in the fourth Balke crowded on more speed and was clocked in 51 seconds. Going into the last lap the men were even and seasawed. As they broke through the last turn Balke was in front and held the gap open to the tape with Graves pursuing like a fiend, and beaten by less than a wheel. It was a corking race. The time for the round was 4:19.

Graves was the star in the second heat. He took the lead and unwound a lightning pace that electrified the crowd. One lap was caught in 50⅗ seconds, better time than Barney Oldfield made with his "200' Blitzen Benz. Graves slid around the turns with that finesse and skill that has gained him the reputation of the cleverest corner artist on the track. Balke was driving his machine to the limit to close the gap, but Graves had equal speed and better driving ability and shot across the cash line a length ahead. The time was ⅗'s of a second lower than the first heat.

With honors even the daredevils answered the flag for the third round. It was a seesaw from start to finish. Balke crowded to the front in the stretch and crossed the line half a length to the good. The time was falling, this round being clocked in 4:20⅘.

Graves had a candy canter in the fourth round, Balke failing to finish. It was the symptoms of motor trouble which later became serious. Graves romped around in 4:32⅕, a time gait compared to his former flashes.

G. F. Jankobe, blossomed forth as a "comer" by scoring twice in his first track session. He graduated from the novice class with highest honors, and again exemplified the victory glide in the six-mile scramble among the private owners. Ray Peck, one of the popular native sons, hammered out an easy win in the trade rider scrap at the five-mile distance.

With DeRosier, Graves and Balke, three of the top notchers, on the Excelsior, there should be a repetition of the racing which in the old days made Los Angeles famous around the world. Hasha has his new direct drive eight-valve Indian, and will pit it against his old-time team mates soon. Cal Rodgers, transcontinental aviator, and ex-motorcyclist, dropped the flag at the Ascot meet. Summary:

Five mile professional match—First heat won by Charles Balke (Excelsior); second, M. J. Graves (Excelsior). Time, 4:19. Second heat won by Graves; second, Balke. Time, 4:19⅗. Third heat won by Balke; second, Graves. Time, 4:20⅕. Fourth heat won by Graves; second, Balke. Time, 4:32⅘. Final not run.

Mile exhibition—Jake DeRosier (Excelsior). Time, 0:54.

Ten mile handicap, trade rider—Won by Dave Kinney (Indian) (0:15); second, Ray Peck (Excelsior) scratch; third, N. Buenеman (0:45). Time, 9:32⅗.

Five mile novice—Won by G. F. Jankobe; second, Lester Carson; third, Robert Green. Time, 5:02⅘.

Six mile, private owner—Won by G. F. Jankobe; second, N. Bueneman; third, George Sawaya. Time, 6:07⅕.

Five mile trade rider—Won by Ray Peck (Excelsior); second, Dave Kinney (Indian); third, George Sawaya. Time, 4:44⅕.

The Invincible Motorcycle Club, of Brooklyn, N. Y., is contemplating promoting a 50-mile economy test in the near future on the Coney Island Cycle Path.

ANNUAL GATHERING OF THE LOS ANGELES (CAL.) MOTORCYCLE CLUB

LUNA PARK, THE CITY'S BIG PLEASURE GROUND, NOVEMBER 26, 1911

NEW TRACK FOR BALTIMORE

Jack Prince Makes Plans For a Record-Breaking Saucer—Howard French to Finance Scheme.

Baltimore, Dec. 25.—One of the liveliest of live wires is on the job. Jack Prince has been welcomed into the fold by the local motorcyclists, for has he not indicated that he will follow in the footsteps of his other good work and build in this old town the best motordrome in the world? Prince has spoken, and so be it

Howard A French is the happiest man in the Monumental City and he carved his turkey today in a lighter mind and with a surer hand than he ever did before. And he was also prodigal in the bestowal of Yuletide cheer. And did he not have good reason for being so? He did. For this is what Prince shot into Baltimore a few days ago over the nocturnal lettergram route, and it was enough to make French feel real youthful once again:

"Dear Howard: Just got letter. See if you can lease Electric Park for motordrome. If so, how much? I will build a triple radius board track half a mile over dirt track. Hold hundred miles an hour. Best track in the world. Will take stock myself. Hold night racing. Would be great. Will come soon. Wire answer. Jack Prince."

French says Prince can say more in three words than T R. can in a Fourth of July message. Prince wants to have a hand in the dough pan and he probably will have one swell opportunity. But the co-operative financial plan has been kidnapped by Santa Claus. A real, pulsating Kris Kringle, in the form of a prominent Baltimorean whose name has been locked up in a fireproof safe from discovery, has whispered to Howard that he is inclined to dish up the merry jingle with which to start the wheels

LIEUT. J. D. HANNA, TAMPA, FLA.
F. A. M. Commissioner and well-known motorcyclist. He is lieutenant of the city's motorcycle police squad.

going. And with the assistance of French's cash register there will be something doing ere many days wander by.

Also, George Kreamer, of Brooklyn, pens a few words to French, advising in a paternal manner that the time is now ripe for some speed sport in this town. He is soft on Riverside Park, but French refuses to listen. Kreamer is also pining to put up this track, and comes across with some good ideas on how it can be done. Now all this leads up to one thing, and that is that the palaver about a motordrome has been hidden away in the cellar, and certainty has popped up as a Christmas gift, and from now on everything will whirl along merrily until gentle spring ushers in her purring zephyrs, and then the band will play, the lights will shine bright, the atmosphere will ring with lusty rah-rahs, the pistol will crack and the speed boys will gallop off to new records and plenty of your Uncle Sam's purchasing power.

Derkum to Manage Los Angeles Track.

Los Angeles, Cal., Dec. 28.—Paul J. Q. Derkum, better known as "Daredevil," is slated to manage Jack Prince's new track here. Jack has promised, on a deck of dollars, that his new bowl will have its speed baptism January 21. Maybe so, maybe so. It will be a quarter-mile dish, and Jack plans to run Sunday meets until May, when he will hie back to Chicago to reopen Riverview. It is expected that Derkum will prove the best manager who ever staged meets in this city, because of his racing experience and his intimate knowledge of the riders. Prince gives his usual guarantee of 95 mile speed for the track.

ARMSTRONG IS MOTORSTRONG TOO

Beats Balke in Rousing Race at Oakland—Ward Shines Bright Also—Wolters Gathers "Toothpicks."

Oakland, Cal., Dec. 25.—Earl Armstrong, and Al. Ward, of the Excelsior and Indian teams, divided honors at the Elmhurst motordrome meet, Sunday, December 24. Armstrong took the biggest share, the 10-mile free-for-all, while Ward cashed the six mile heat scramble. Walker was the king of the shamateurs, annexing the five-mile handicap.

The 10-mile everybody out, proved the big scream in the bill, and was anyone's race until Armstrong nosed Balke out by a wheel. Balke had second berth cinched. Balke led for 11 laps with Armstrong, Seymour and Ward close coupled behind. On the 12th lap Ward went to the front as though shot from a cannon, and held the lead for a lap when he punctured. Ward's passing left Balke in front, and Seymour dropped out in the same lap, leaving Armstrong and W. Samuelson to take care of Balke. Armstrong crept up slowly on Balke, whose desperate efforts to stave him off, energized the crowd to a frenzy, and the last lap was a bedlam party. Samuelson took the leavings.

Just after winning the first heat of the six-mile, Wolters was transformed into a human lumber yard, temporarily, and was whittled off the card for the day. He just had beaten Armstrong and both skidded; Wolters being in front Armstrong struck his rear wheel and Wolters was richocheted along the track for 100 yards, being severely bruised and punctured by splinters in many places. Seymour with his new direct drive, eight-valve Indian, easily took the second heat from Ward. In the final Ward again sprung his cannon ball jump on the field, and they could not close the gap.

As usual, the motorcycle races overshadowed the automobile events, and the antics of a pair of tame airmen were laughable in comparison, from a spectacular standpoint. The second instalment of the double bill was held to-day, Christmas, but the motorcycle events were farcical, and had no semblance of competition. Summary:

Six mile professional—First heat, three miles. Won by J. Wolters (Excelsior); second, Earl Armstrong (Excelsior); third, J. Albright (Indian). Time, 2:06⅕. Second heat, three miles. Won by Ray Seymour (Indian); second, Al. Ward (Indian); third, T. M. Samuelson (Indian). Time, 2:13⅖. Final, six miles. Won by Al. Ward (Indian); second, Earl Armstrong (Excelsior); third, J. Albright (Indian). Time, 4:11⅘.

Ten mile professional—Won by Earl Armstrong (Excelsior); second, C. Balke (Excelsior); third, W. M. Samuelson.

Five mile amateur handicap, stripped stock class—Won by Walker (Indian); second, Lorenzen (Indian); third, Kohl (Indian).

Canadian Cyclists Expect New Track.

Toronto, Ont., Dec. 26.—Bicycling interests in Toronto are on the hop, even in the midst of the off-season, on account of the prospects of a new board saucer at Scarboro Beach, the home of the sport in the summer months, and the approach of the Olympic carnival at Stockholm. The announcement was made this week that two absolutely new bicycle clubs were in the process of formation there, and both are liable to cut some figure in the coming season, judging by the material in hand. One of the organizations, yet nameless, is being created by Fred McCarthy of Stratford, Ontario, well-known at Newark, and Joe Golden of the Toronto Club. McCarthy has been reinstated to the amateur ranks by the Canadian Wheelmen's Association, and having removed to the Canadian metropolis, is taking a deep interest in the wheeling affairs of his new home.

The other club, to be known as the Riverside Athletic Association, 58 Strange street, has already signed up several stars and a few youngsters, and indications are that a strong team will be placed on the track next summer.

Auburn Motorcyclists' First Annual Dinner.

Auburn, N. Y., Dec. 26.—Echoes of the first annual banquet of the Auburn Motorcycle Club, which was held on the evening of December 7, in the palm room of the Osborne House, are still ringing in the ears of those fortunate enough to attend. Forty-five guests, all told, sat down to the tables, with President Edwin Spooner at the head. After an elaborate menu had been served, cigars and speechmaking were in order, and the officers presented in their addresses many incidents that helped to contribute to the success of the organization during the initial year of its existence. Secretary Harrington gave a short review in his address of the work done, and said that the time was not far distant when the club would have to rent a home of its own, so marked was the interest manifested by the motorcyclists of Auburn in club fellowship.

Sec'y Gibson Issues New Year's Circular.

This being the season of the year for "turning over new leaves," morally, as well as otherwise, Secretary Gibson, of the F. A. M., is sending out "straight talk" circulars to delinquent members, suggesting that their list of New Year's resolutions include a resolve to send in their renewal, and stay in the fold. He calls attention to what the F. A. M. already has done, what it hopes to do, provided enough of the "sinews of war" are forthcoming and the value of membership in the national organization.

Reliability Run in Northern Ohio.

Lorain, O., Dec. 24.—The fourteen starters in the holiday reliability run of the Lorain Motorcycle Club, which took place to-day over a 110-mile course, held an informal debate at its conclusion, over the old problem as to which furnishes the most happiness—anticipation or realization. It was finally decided that the best time of all was after the run, telling each other of their hard or comical experiences. Checking stations were in Elyria, and at the rooms of the Cleveland Motorcycle Club, where the tourists were well entertained. A ride was made from Cleveland to Dunham Hill, about 12 miles out, for a hill climbing contest. On account of the snow and slush, only two riders, George Williams and Thomas Lynch, both riding Indian "fours," were able to make perfect scores. The event will be made an annual fixture.

Capital City Motorcyclists Are Busy.

Washington, D. C., Dec. 26.—At a meeting of the reorganized National Capital City Motorcycle Club, held at the handsomely equipped club rooms, 908 Pennsylvania avenue, last week, the following board of officers was elected for the ensuing year: President, F. Yowell; vice-president, F. Dodson; secording secretary, S. Eaton; corresponding secretary, T. Wansleben; treasurer, C. Cross; captain, G. Beall; first lieutenant, S. McPherson; guard, W. H. Throop. The first named six officers, with J. S. Berryman and H. B. Cohen, make up the board of directors. Addresses were made by the newly elected officers, the keynote of which was the expression of a desire for concerted action on the part of the members for the business and social interests of the club.

When the Magneto Gears "Talk."

With the advent of cold weather, motorcyclists who have magneto equipped machines may be puzzled by a squeak or chatter emanating from the driving gear case. It generally is caused by the shaft ends of the magneto driving gears becoming dry, as the heavy grease in which the gears are packed solidifies in a low temperature and often fails to reach the shaft bearings. The remedy is simple, all that is necessary being to remove the cover plate of the gear case and lubricate the ends of the gear shafts and bushings with light oil, then replacing the cover. If one is unfamiliar with timing a magneto, extreme care should be taken not to unmesh the gears after the cover plate is removed. One treatment of this sort generally will suffice for a winter's riding.

Bowser Now a Nebraska Indian.

Roy Bowser, the expert rider, who is so well known in the Chicago district, has joined the Indian sales forces and has gone on the road, covering Nebraska and Kansas.

QUARTERLY TRIALS FOR YANKEELAND

Large New England Centers to Be Asked to Participate—Classes Provided For All Types of Machines.

Springfield, Mass., Dec. 27.—New England may be the theatre of some big motorcycle contests next year, if plans now in the incubator are hatched, and there is every likelihood that they will be. Recognizing that New England offers some of the most ideal roads and scenery to be had in the country, and therefore is a tourist's paradise, but nevertheless little realized or appreciated as such, R. W. Ellingham, of the Hendee Mfg. Co., is sounding riders in various sections of that district, relative to the advisability of staging a series of quarterly trials, along the lines of the famous trials of the Auto-Cycle Union, of Great Britain.

Ellingham believes that such contests not only will do much to accelerate motorcycle sentiment in New England, where it has been rather sluggish, but will also advertise that territory to motorcyclists in other parts. While still in a tentative state, the skeletonized plan, as outlined, calls for four trials, each to be promoted from a different city, as for instance, Springfield, Boston, Worcester and Providence, all live motorcycle centers. Each trial will be different, in that one will embrace a hill climb, another a 24-hour reliability, another an economy test, and so on.

Also, classes will be provided for all types of machines, in order to secure as many entrants as possible. Sidecars, forecars, tricars, tandems and even three-passenger machines will be eligible, as well as the regular solo type. Of course there will be no restrictions on cylinders, other than the F. A. M. 61-inch displacement limit. It is planned to solicit the F. A. M. to assume control of, and conduct the trials, in order that national prominence and prestige may accrue to them.

Great enthusiasm over the project has been manifested by riders in Springfield, Worcester and Boston, to whom the plan has been broached. Ellingham plans to hold a meeting of those interested during New York show week, on Friday night, January 12, around a festive board, when it is hoped to develop and launch the project in full form. The meeting will be an open one, and as a large number of New England riders will be at the show, a large attendance is forecasted. In the meantime Ellingham solicits suggestions from all interested. It is even possible that the contest may be expanded to take in New York City.

Christmas Party of Toronto Motorcyclists.

Toronto, Ont., Dec. 28.—Thirty-six members of the Toronto Motorcycle Club shuffled cards at the big Christmas euchre party. Race track stars did not shine as manipulators of the paste boards, the honors going to Jack Scott and Howard Schuch. Scott drew a box of neckwear, while Schuch drew down a pair of Mutt and Jeff statuettes.

HOW THE YEAR LOOKED TO THE MAN WITH TIRE TROUBLES

Trenton's Indian Agent Tenders a Banquet.

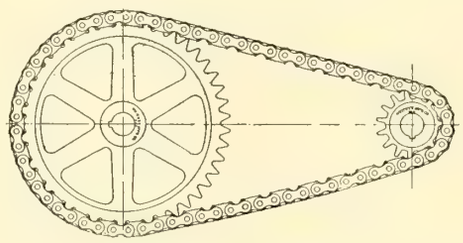
Trenton, N. J., Dec. 26.—John Sykes, Jr., who took the agency for Indian motorcycles in this city, gave a "coming out banquet" recently. Places were laid for 60 guests, who included all the prominent riders in and about the city of Trenton, and the new Indian was given a prominent position in the dining hall. Addresses were made by R. S. Crist, president of the Central Jersey Motorcycle Club; Geo. B. Yard, secretary and treasurer of the same club; Alvin Sykes, John Hopper, John Sykes, Jr., and others.

Interest in motorcycles is fast increasing around Trenton, and with such a wide-awake and able representative as Mr. Sykes, the Indian will greatly strengthen its position.

Big Year Predicted in Washington.

Seattle, Wash., Dec. 23.—Local motorcycle dealers have had the best sales season in the history of the business and are looking forward to prosperity with a big P for 1912, despite the fact that it is presidential year, which generally is considered as an era of business depression. Several dealers are planning to take larger quarters, after the first of the new year, and at present are carrying more prospects on their books than ever before. The extensive improvement of the boulevard system this year, has stimulated the sale of machines very materially.

Johnson Distributes Christmas Souvenirs.



Friends of Fred I. Johnson, of the well-known Fitchburg, Mass., family of cycle makers, and one of the most pouplar men in the cycle trade and sport, were the recipients last week of pleasing reminders of the givers kindly remembrance in the shape of a blotter with a beautifully embossed celluloid art cover on which is conveyed the season's greetings.

Whitney Unrolls a New Chain.

After exhaustive experimental work extending over a period of years, coupled with rigid tests in the service of a limited number of patrons, the Whitney Mfg. Co., Hartford, Conn., is offering to the trade its new silent type chain. One of its most important features is, that the sprocket wheels used in connection, require no flanging, or grooving, thus making the entire width available for wear. This advanced construction is secured through the agency of guide plates, which are a part of the chain, as will be noted in the accompanying illustrations. The guide plates are connected by outside plates, which give added tensile strength. Long life is secured by the manner in which the links are assembled, each having four wearing surfaces.

NEW WHITNEY SILENT CHAIN

SPROCKET WHEELS FOR SILENT CHAIN

Hardened steel bushings are forced into the guide plates, by machinery, insuring secure and permanent fastening. The steel links revolve around the bushings, while the hardened steel rivets, which also are forced into the outside plates, turn within the bushings. The chains are made in various sizes and can be furnished for camshaft and magneto drive.

ANNUAL RUN OF PHILADELPHIA H-D RIDERS TO EGG HARBOR

Every year the Harley-Davidson riders of Philadelphia and Camden, N. J., make to run to Egg Harbor, N. J., as guests of Alexander Klein and William Heckenhorn, the Philadelphia and Camden agents, respectively. This year the run was made October 28, and 71 riders participated. The American Hotel, shown in the photograph, was a famous rendezvous for bicyclists in the '90's.

What Ontario Tradesmen Are Doing.

Toronto, Ont., Dec. 28.—George Bain, formerly connected with the Motorcycle and Equipment Co., representatives for the Flanders, has removed to Calgary, Alberta. He will open a motorcycle depot under his own management and take on several British machines.

Percy A. McBride, local representative for the American Excelsior, is in Chicago attending a sales convention at the factory.

Business expansion has forced the Dunlop Tire and Rubber Goods Co., the largest motorcycle and bicycle tire maker in the Dominion, to increase its facilities. Plans have been approved for additions affording 30,000 square feet of additional "elbow room." The new construction will comprise a one-story addition 167 x 60, and a three-story building 100 x 60.

How "Mr. Sullivan" Works His Scheme.

E. E. Fenn, a well-known dealer in motorcycles and bicycles, at Bloomington, Ill., writes that a smooth, well-dressed young man, who passes under the name of Sullivan, is posing as an expert on carpet sweeper repairing, and is victimizing the cycle repair shops in that vicinity. He works himself into the confidence of the dealer, gets him to stand good for such ready material as he may need, and after doing business for a week, leaves town all of a sudden, leaving unpaid his board and other bills. When "Sullivan" canvasses the town he passes out cards to each house with the cycle dealers' advertisement thereon, in connection with his own announcement. Mr. Fenn warns all dealers to look out for him.

Pointers for Cleaning Leather.

Cleaning leather trimming or upholstery of a side car, or fore car passenger seat with gasoline, naptha or anything of this nature soon will take away the natural luster of the leather and cause it to become hard and crack. A good cleansing solution for leather is a ten per cent. solution of ammonia; that is, nine parts of water to one of ammonia. The leather should be sponged off with this solution to remove dirt and grease, and afterward rinsed with clear water. It then should be rubbed thoroughly dry with chamois or a soft cloth, which treatment will restore the lustre. A leather dressing also may be applied if desired.

While long motorcycle trips with one rider "up" are of ordinary occurence nowadays, four-figure tandem tours still are rare enough to be unusual. Perhaps the longest motorcycle tandem ride of the season was taken last month by Ray G. Pratt, of Waterloo, Ia., who with a companion, motored 1,000 miles on a Harley-Davidson four horsepower single. They report a very enjoyable time, unmarred by trouble of any sort. The trip boosted Pratt's total mileage for the season to 7,000.

From present indications the dinner to be tendered the motorcycle, bicycle and accessory manufacturers on the evening of January 10 ,at the Hotel Earlington, New York City, by the Motorcycle Dealers Association in conjunction with the United Cyclists, will be far greater than even anticipated by the most sanguine of those interested in its promotion. Reservations are coming in every mail to H. A. Gliesman and A. H. Patterson of the dinner committee, and during the past week one of the largest manufacturers sent in a reservation for ten tickets. A new phase has been added to the dinner, not originally planned for by the fact that so many of the prominent cyclists of other days are sending in reservations that the affair will truly become a reunion, or better still ,a means of forming a connecting link between the enthusiasts of former years with those of today, and their united effort to boost, as one has put it, "the best sport for everybody,—cycling."

Most of the prominent manufacturers have already signified their intention of being present personally, as well as the sales and advertising managers of the various companies. With this in view, and the fact that practically every dealer of importance in and around New York, or who will be in this city at the time, and the motorcycle and bicycle riders themselves will attend, it can well be presumed that the affair will see the greatest gathering of most representative men interested in the sport ever held in the metropolis, at least. A gun, in any movement, fired in the greatest city of the country, resounds throughout the land and grows in force and effectiveness as it travels, and so it may be said of this dinner; for with the great strength manifested by the unity of the manufacturer, the jobber, the dealer, the sales manager, the advertising manager and the rider, all in evidence at this function,—all united with one purpose, that of boosting cycling as a sport—the greatest gun in recent years will be fired and resound in other cities with growing force and resultant benefit to all interested in the trade and sport.

Forecast of Good Things Provided.

The committee has made arrangements for very extensive decorations, and Mouquin, one of the best and well-known restauranteurs of New York, who will act in the capacity of "Mine Host" for the occasion, will prepare the following menu and will serve an extra fine vintage from his famous wine cellars:

Oysters, Blue Points
Hors D'euvres
Olives Sardines Celery
Potage
Mock Turtle a l'Anglaise
Entree
Filet of Sole a la Mouquin
Potatoes a la Hollendaise
Roti
Spring Chicken Stuffed
Cauliflower au gratin
Salade
Dessert
Ice Cream Cakes Fruits
Coffee
Cigars

Those who desire to attend should send in their reservations at once to either H. A. Gliesman, 782 Eighth avenue, New York, or A. H. Patterson, 1080 Bedford avenue, Brooklyn. It is expected that representatives of all the cycling clubs in the city will attend in a body and special tables decorated with their club colors will be provided for them.

Eloquence by Captains of Industry.

Prominent men in the civic affairs of the day, as well as those in the trade will speak, among whom may be mentioned: Mayor W. J. Gaynor, of New York City; Borough President George McAneny, of Manhattan; Borough President Alfred E. Steers, of Brooklyn; Hon. St. Clair McKelway; Hon. Simeon Ford, George M. Hendee, W. F. Remppis, A. B. Coffman, George H. Hamilton, president of the F. A. M.; F. I Willis, secretary of the National Association of Cycle Jobbers; J. Leo Sauer, chairman of the Legal Action Committee of the F. A. M.; James E. Sullivan, chairman of the American Olympic Committee; A. G. Batchelder, chairman of the executive committee of the American Automobile Association, and A. Eugene Bolles.

H. A. Gliesman, Chairman of the Thanksgiving Day Race Committee of the United Cyclists desires to state that the prize list for that event has all been practically assured, and that the same will probably be given out early in January, at a large public gathering that he is trying to arrange for.

In response to invitations to serve as honorary members on the American Olympic Bicycle Race Committee by Chairman J. A. Hall of that committee, acceptances have been received as follows: Hon. St. Clair McKelway, A. G. Batchelder, George M. Hendee, W. F. Remppis, W. J. Morgan, Joseph P. Norton, A. Yager, A. R. Cooley, Charles A. Persons, F. I. Willis, G. H. Hamilton, A. B. Swetland, J. Leo Sauer, J. Lovell Johnson, Ludwig Nissen, J. C. Wetmore, W. P. Farrell, P. J. Conway, and John Foster.

Team's Cause Rapidly Gathers Impetus.

Interest in the American Olympic bicycle team continues to increase throughout every section of the country. Clubs everywhere are taking up the movement, they are particularly interested in the prospects of their riders making the team. From Atlantic City comes word of the reorganization of the Atlantic City Wheelmen, again under the leadership of "Charley" VanDoren, and having for its principal object the formation of a team to represent that city in the try-outs. Several of the riders down at the "shore" already have be-

gun training as the climate there practically permits of all-the-year-round riding.

The United Cyclers of Baltimore, also have begun active training and preparations. In the metropolitan district many of the riders now actively competing in flat-floor races are planning to discontinue that style of competition during January, and take up a series of gymnasium exercises tending to improve their endurance rather than extreme speed, such as is required in flat-floor races and devote their spare time to development of strength with that object in view, and to take work-outs on the road whenever the weather and road conditions permit.

Within two weeks of its organization, the Cedarhurst, L. I., Cycle Club, reports a membership of 50, all working for the one prime object—the production of a qualifying team. Buffalo, N. Y., one of the most enthusiastic bicycle racing centers in the country, has at least six riders who are confident they have the stamina to go successfully through the elimination trials.

The St. Louis Cycling Club, in addition to being the largest contributor to date, gives further evidence this week of its whole-souled interest in the project by sending in another subscription made up of individual donations on personal solicitation, as suggested in these columns by E. Lee Ferguson of the C. R. C. Association.

Clubs are not alone in demonstrating the immense amount of interest aroused. Requests for information from unattached riders regarding the locations of elimination races nearest their respective towns are being received almost daily by the committee. Some of the most promising of these, according to the times furnished of previous performances being from Wilmington, S. C., Louisville, Ky., and Wellston, Ohio.

Atlantic City Wheelmen Reorganize.

With a constitution adopted, officers elected and a committee appointed to select a club house, the recently reorganized Atlantic City Wheelmen gives promise of renewing its former strenuous activity in the cycling game in and around the "City-by-the-Sea." The rejuvenation also attests the enthusing abilities of Charles A. VanDoren, now, as formerly, president and chief instigator; vice-president, Frank Lacey; secretary-treasurer, Stephen Gelona; sergeant-at-arms, Peter LaRosa. An imposing list of honorary members consisting of prominent citizens and cycling devotees is in course of formation. One of the principal objects of the club is the making up and preparation of a racing team to represent Atlantic City in the spring try-outs for the American Olympic Bicycle Team.

ALVIN AND CLARENCE LOFTUS, OF PROVIDENCE, R. I.

Well-known brothers from Roger Williams's town who have made good in their lines. Alvin has developed championship form as a cyclist, and Clarence is sales agent for Harley-Davidson motorcycles in that city.

Century Road Club Association Election.

At the meeting of the board of governors of the national organization of the Century Road Club Association, held in New York City, December 21, the mail vote for officers for the ensuing year was canvassed with the following result:

National officers — President, Paul Thomas, Tarrytown, N. Y.; first vice-president, E. Lee Ferguson, New York; second vice-president, D. W. Moore, Bayonne, N. J.; recording secretary, Sylvain Segal; financial secretary, R. W. Zarr; treasurer, R. A. VanDyke, New York City.

New York Division—Centurion, A. R. Cooley; secretary, H. W. Zarr; treasurer, George Bieregel; captain, Sylvain Segal; directors, J. W. Clement, J. A. Olson, Henry Kest, Peter Wollenschlager, F. W. Lilienthal, New York City.

New Jersey Division—Centurion, I. Taub, Hoboken; secretary, W. H. Mey; treasurer, Kenneth Mackenzie; captain, H. A. Jaeger, Bayonne. Directors will be selected at a later date.

The annual dinner of the association will be held about the middle of February, the place and date to be selected by the following committee which has charge of the arrangements: R. A. VanDyke, chairman; Paul Thomas, Sylvain Segal.

Moran Off For a European Campaign.

Jas. F. Moran has joined the ranks of invading cyclists now en route to foreign lands in search of six-day races and sundry other conquests for the knights of the wheel which are now in immediate prospect in Europe. Moran sailed on the French liner "Rochambeau," Saturday, December 23. While at the pier early in the day to bid bon voyage to the big squad which sailed on the "Philadelphia," Jimmy made final arrangements to team with Joe Fogler in the coming Berlin six-day race. Jack Neville, famous as Kramer's trainer, was also at the pier, and was immediately engaged to take them in hand during the grind. Neville sailed with Moran.

Baltimore Cyclists Take up Winter Bowling

Baltimore, Dec. 25.—Four members of the Crescent B. C. entered the elimination contest for the best duckpin bowler in this city. Capt. J. Fred Huber, Alfred J. Baker and William Vogel did not survive the first round of the tourney. Thomas W. Baker rolled a high enough score to permit him to stay in the contest. He totalled 470 in five games. Capt. Huber knocked down 350 pins in five games, while Vogel had 376, and A. J. Baker 424.

St. Louis Cyclists Eat Early Xmas Dinner.

Fifty members of the St. Louis Cycling Club, some of them with a membership of 25 years, and practically all of them active cyclists, attended the annual Christmas dinner of the club, Saturday night, December 16. The club's annual banquet will be held Saturday, January 13.

A Word To The Other Dealer

When a customer came to you in the past and told you he wanted to buy a motorcycle and wanted to see your make and if after you had shown and demonstrated all the good points he said he rather liked the Harley-Davidson better what would you do?

You started a technical whirlwind comparison telling all about the "Inner workings" and etc., things he didn't understand, couldn't see and couldn't deny, didn't you?

But what are you going to do this year? Mechanical "Razzle-Dazzle, etc.," won't overcome his Harley-Davidson desires. For after he has once ridden a Ful-Floteing seat and handled a Free-Wheel control and therefore knows what they are, you can't deny their advantages. To do so would be to either show your ignorance or your prejudice. So if you are a good salesman you will begin to use your only remaining argument—Price. You will try to tell him that to have all the roads ride like boulevards isn't worth ten, fifteen or twenty-five dollars more. You will try to make him think the dexterity, practice and skill required to handle your clutch is an advantage because everybody can't do it. But will he believe you?

Let's suppose he does and you make the sale. It won't be long before that rider will find out his mistake. His confidence in your judgment will be gone. Never again will he believe you. It's a case of "If you win you lose."

You say this is strong talk Mr. Dealer. We grant it. But Mr. Dealer if we can't back up every claim we make for our machine and its exclusive features, if we can't prove all we say we lose not gain by our big claims.

Claiming won't gain us anything. You or any other sensible dealer would make us prove our claims before contracting with us.

At the New York show January 6th to 13th and at the Chicago Show February 5th to 10th we are going to submit proofs by submitting the product itself.

CYCLISTS FOR NATIONAL DEFENSE

British War Office Formulates Scheme to Organize Wheelmen Into a National Reserve—Details of Plan.

Bicycles now are receiving the serious considerations of the British War Office, that important department of England's government having in contemplation the formation of a National association of cyclist defenders.

The idea is that there are innumerable young men who, for various reasons, are unable to join the Territorial Army of Great Britain which corresponds to our National Guard, but who, under a practical scheme would be very willing to take up arms and defend their country in case of invasion. Under existing conditions, the mere civilian, not a member of some recognized combatant force, who took up arms at the last moment on his own initiative, would not be treated as a combatant, and when caught by the enemy he would be shot and the village or house in which he lived would be sacked and burned, as a reminder to other inhabitants. It is to obviate these conditions and to provide, for the country's defense, an arm capable of quick mobilization that the organizers have evolved the present movement.

According to our English contemporary, Cycling, the outline of the scheme in brief, is as follows:

"Every cyclist in England and Wales will be invited to join the proposed National Association of Cyclist Defenders. He will undertake that in the event of a foreign invasion he will take up arms and place himself at the disposal of the organizations which will have been elaborated in time of peace. From that moment we will become an authorized combatant, and he will wear a badge and a distinctive mark on his cap. That is all he is asked to undertake, namely, to turn out and fight in the event of an invasion. For this service it is suggested he should enjoy certain privileges. First of all, on becoming a member of the association, he will select the local detachment to which he desires to be attached, and in this connection it is suggested that every cycling club in the kingdom should form a detachment. Through the association, these detachments will be put into touch with the nearest Territorial Cyclist Battalion, and they will have the privilege of being looked upon as honorary members. They will be allowed to take part in field days and so forth, and in all the social functions organized by the regiment, such as dances, smoking concerts, etc. They will also be allowed not only to attend military lectures at headquarters, but military officers will attend occasionally to lecture to members of the detachment.

"In the event of invasion, each member of a detachment would have the option of joining the Territorial cyclist battalion, to take the field with them at once (instead of being retained to go through a course of recruit's training), or else of taking his place in the local detachment. He will also receive arms and ammunition and his food, and compensation in case of injury to himself or his cycle.

"Detachments would be organized under a leader, and would consist of not more than 25 cyclists, all drawn from the same locality. They would then be grouped into corps, each consisting of several detachments. The commander of the corps would be in close touch with the officer commanding the nearest cyclist battalion, and in most cases would receive his commands from him. Their duty would be to assist in watching the coast, railways, bridges, roads and telegraph lines, and of watching and delaying small bodies of the enemy's cavalry. They would hang on the flanks of any body of the enemy, and harass it and prevent it from obtaining either information or supplies. In the event of an invasion, corps commanders and detachment leaders would probably receive commissions as officers."

JOE A. CAMMIATI
Amateur Cycling Champion of Southern California

Empire City Wheelmen Celebrate Mmas.

As ever, alive to the opportunity, the Empire City Wheelmen of Brooklyn, N. Y., on Christmas morning on counting noses found some 20 dyed-in-the-wool "raceologists" in the immediate vicinity of headquarters, and on a suggestion coming apparently from nowhere, or perhaps it was just from force of habit, they forthwith promulgated, promoted and perfected with neatness and despatch, a Christmas Day race for ten miles over the Twenty-second Avenue course. First place, turkey —Won by Carl Ericson; second, duck—Franklin Fisher; third, chicken—John Becht. Time, not announced before dinner and unobtainable since.

Claims World's Record For Century Runs.

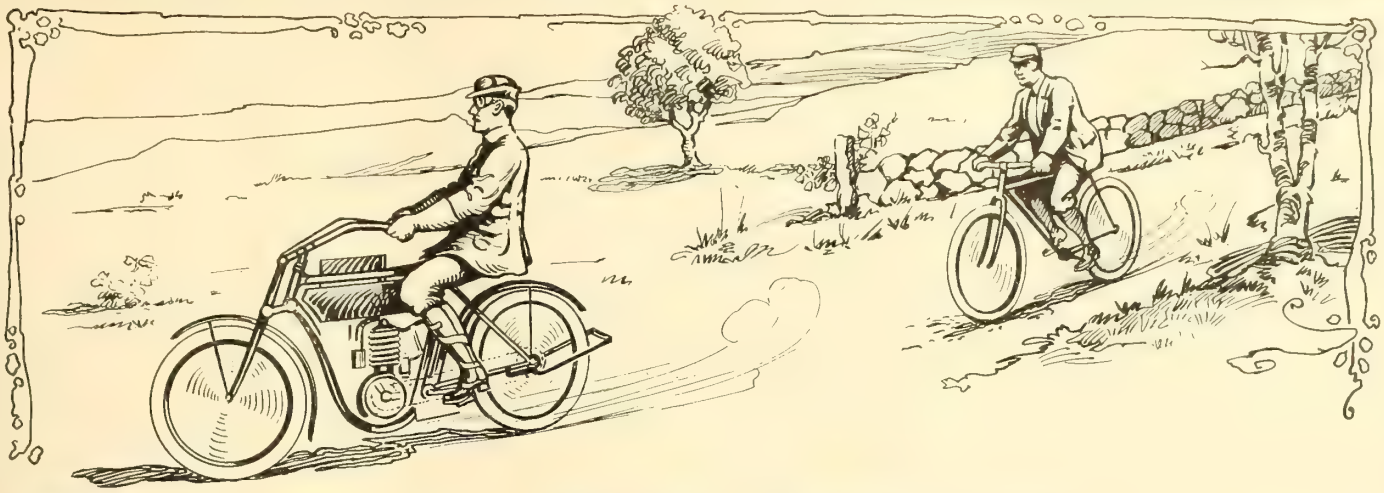
On December 10, Marcel Planes, an English century "plugger," completed his 313th century, equalling what has been conceded to be a world's record for that style of cycling performance previously credited to Teddy Hale with 313 one-day centuries in 365 days. The following day, with 20 days to spare, Planes added one more to his score, and Hale's record was eclipsed. In the accomplishment of his gigantic task, Planes rode 230 centuries in 225 consecutive days, having ridden at least one century every day from April 28 to December 8.

An Echo of the Recent "Six-Day."

Gallery gods there were in plenty and if possible more ready than ever with more or less witty remarks and advice to the riders and management. A case in point was heard early Wednesday morning when upon being awakened by one of the various squads who furnished diversion for themselves between sprints by arousing the "sleepers," one of the latter called out on finding the riders pedaling round the bowl at a ten-mile-an-hour gait, "For heaven's sake open the gate and show them the way out, I've been here since Monday and all they've done is ride round there looking for a way to escape."

Once Famous Racing Cyclist Blind.

Otto Ziegler, some years ago one of the most popular and consistent performers in the bicycle racing game, is totally blind at his home in Alameda, Cal. Ziegler was the first to ride a mile in less than two minutes, making the distance in 1:50 flat on the Alameda straightaway course.



Long Island Has a New Bicycle Club.

At the first election of the Cedarhurst Cycle Club, Cedarhurst, L. I., officers were elected as follows: President, James Lynch; secretary, H. Pettit ;treasurer, E. Goodwin; house committee, L. Walton, F. De Mott and J. Dorn; trainer, W. Miller.

71st Has a Bicycle Race To-night.

At the general athletic meet under the auspices of the Seventy-first Regiment Athletic Association in New York City, there will be a two-mile handicap bicycle race this evening, open to registered amateurs.

Both Germany and Ireland are considering sending bicycle teams to the Olympic Race at Stockholm next July.

CORRESPONDENCE

Timely Suggestions on Care of Tires.

Editor Bicycling World and Motorcycle Review:

Please let me know if steam heat will affect tires, and if so how would you advise me to care for them, and the machine that I wish to store away in a steam-heated house for the winter. I am a reader of your paper and ride an Excelsior twin.

B. H. DAVIS.

Omaha, Neb.

The following suggestions formulated by the United States Tire Company to motorcyclists who lay up their machines for the winter seems to fit our correspondent's case to the letter. They are: First—Remove the tires from the rims. Wash with soap and water, and if the casing is cut it should be repaired immediately. Rims should be painted with graphite to prevent rusting. Second—Put a little soapstone or talc in the casing and enough air in the tube to shape it; then insert tube in casing. Third—Wrap tire either with burlap or heavy dark paper. Fourth—Store in a dark place, which should be kept at a temperature of 50 degrees, or as near that figure as possible. Under no circumstances should the tires be kept in or near a warm place, as the heat will cause them to deteriorate.

Wants Information About Seat Patent.

Editor Bicycling World and Motorcyvle Review:

In the Bicycling World—issue of December 16, page 562, appears an illustration of the Harley-Davidson "ful-floteing" seat, and on the same page a statement by President Walter Davidson of the Harley-Davidson Motor Company, calling attention to the fact that this device is thoroughly covered by U. S. letters patent. Will you kindly inform me through your columns what manufacturer has been sued, and what the numbers of the patents claimed by the Harley-Davidson Company are?

I am interested in devices of this kind, and have no desire to infringe on the rights of others. I never have considered the device patentable, owing to the fact, that in "The Motor Cycle," London, England, of November 6, 1905, the Rex Motor Co., advertised a similar device. Also, if I recollect correctly, the Berkey Spring Seat Post Company, Grand Rapids, Mich., brought out a similar device for bicycles about 13 years ago.

HENRY FITZ GERALD.

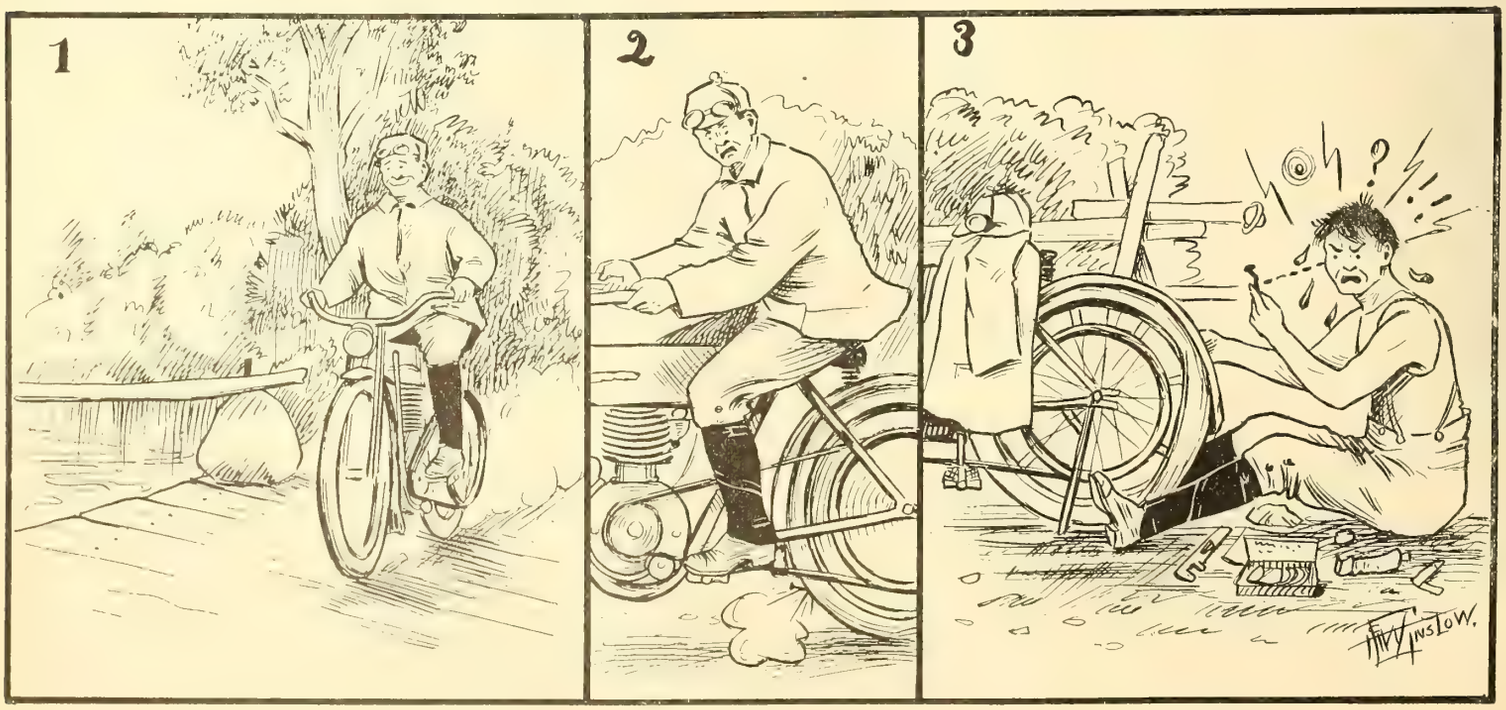
New York City.

(Particulars as to what manufacturer against whom suit has been brought, and the numbers of the patents covering the "ful-floteing" seat, have not been divulged by the Harley-Davidson Motor Company. This information undoubtedly will be forthcoming upon request direct to them at Milwaukee).

Wants Goods For the Australian Market.

Editor Bicycling World and Motorcycle Review:

Being a representative traveling over Australia and New Zealand in the interests of English manufacturers of motorcycles and cycles, I am ready to entertain any good American proposition of a like nature. My proposition is to take accounts on a commission basis, and to be guaranteed the sole rights of handling such accounts for five years. The writer has had an experience of 16 years, and although he has taken some good risks has never lost a penny since first starting on the job.



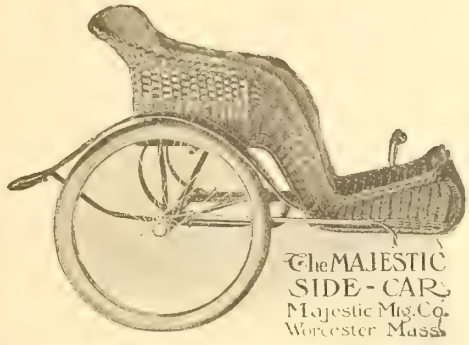
To interest some progressive firms in the United States, I expect to send a representative to your country early in the coming year, who will carry the proper credentials for introduction.

W. G. H.

Melbourne, Australia.

Manufacturers desiring to make Australian connections can communicate with this office, and their lettters will be turned over to the traveling representative upon his arrival in America. The name and address of the writer of the above letter will be furnished if desired.

An easy way of making an eye for connecting battery or magneto cables where no regular snap terminal is provided is to untwist the wire at a short distance from the end, and then to separate the straightened strands equally by pushing a sharp instrument in between, forming a hole sufficiently large to receive the screw terminal. A stronger eye may be made by stripping a good inch of the wire and bending it into a simple loop and then binding together with fine wire the two parts lying in parallel contact, leaving an eye of suitable size, as before. In securing the one terminal to another, be careful that no part of the insulation is pinched, as this would tend to prevent perfect contact between the metallic surfaces; at the same time, the insulation should be continued as nearly up to the connection as possible, and for further security, the whole connection may be wrapped with insulating tape.



JOY APPREHENSION DISGUST

The Majestic Side Car

For Joy Riders and the Live Agents of 1912.

Don't Forget the Girl!

SPECIFICATIONS:

WHEEL—26″ or 28″, as desired.
TIRE—First quality Kokomo.

Dealers' Pocketbooks Are Helped by Us

Bicycles that you can buy right and sell right, and that sell easily because of their superiorities, are what we supply.

CYRUS JUVENILE

Our capacity, with our new four story addition and a total floor space of 240,000 square feet, is a carload of bicycles a day, including Adlake, Cyrus, Crown and other models, in addition to which we can produce 5,000 pieces or parts per day, including Fauber hangers. Not only are we using Fauber patent one piece crank hangers in our bicycles but also roller chains, which we adopted two years ago, being in advance of the rest of the cycle manufacturers in this respect. Write for 1912 prices.

GREAT WESTERN MANUFACTURING CO., La Porte, Ind.

Prest-O-Lite

Motorcycle Tank Equipped With Gauge $10

Similar to our famous automobile tank in everything but size. This gauge shows, at all times, the amount of gas in the tank.

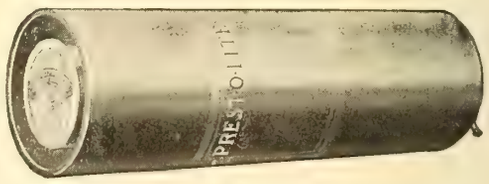
Our tank without gauge, which formerly sold at $10, will hereafter sell for $8. We have arranged with our dealers to take in this tank and exchange it for the new model with gauge, if the user, desires, upon payment of the difference in price, $2.

Prest-O-Lite Tanks are now handled by nearly all motorcycle and automobile dealers in the United States.

Investigate Prest-O-Lite

Some of your friends are probably using this famous lighting system.

Ask them if it costs any more to maintain than the troublesome, treacherous generator.



Ask them about its convenience, safety and insurance against accidents. Ask them how much pleasure they find in having 40 hours of brilliant, unflickering, dependable light, turned on and off like a gas jet.

Just one accident due to poor light would probably cost you more than a year's supply of Prest-O-Lite.

But get the genuine. Imitations can be exchanged in very few places. Prest-O-Lite Tanks, when empty, can be promptly exchanged, anywhere and always.

FREE—Our Handy Ruler

Light, flexible, folding foot rule. Half of it is specially made for finding depth of gasoline in tank. Inches and centimeters. Measures tires, etc. Handy in a hundred ways. Sent free on request. Give name and address, and make of automobile.

Price of Tank **$10**

4 inches; weight, 8¾ lbs. Length, 13¼ inches; diameter,

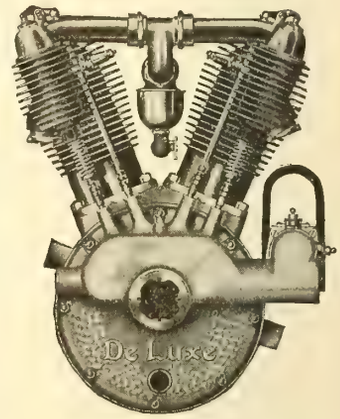
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

THE POPE MANUFACTURING COMPANY, Hartford, Connecticut

Each tire carries our yellow "guarantee" tag and each pair of tires is wrapped in the same substantial paper as our automobile casings.

Pennsylvania Vacuum Cup Bicycle Tires

The increasing popularity of these tires is a striking feature of the tire trade and is due entirely to their sterling worth.

Their non-skid and service qualities are so sound that we are enabled to give an unqualified season's guarantee with each tire. This is a strong inducement to the consumer.

For the convenience of the Jobber and Retail Merchant, Pennsylvania Vacuum Cup Bicycle Tires will be packed ten pair in a strong wooden box. This enables the Jobber to ship in the original package and the Retail Merchant to order in convenient quantities.

Made by an Independent Company with an Independent Selling Policy which insures a fair margin of profit to Jobber and Dealer.

If you want to sell tires for profit, write now for our attractive proposition.

FEDERAL TIRES

FEDERAL MOTORCYCLE TIRES are produced in the finest, most modernly equipped plant in the world. The newest types of tire making machinery and the latest appliances known to the tire making industry are installed in this plant.

This modern equipment, together with a ripe experience in tire making, enables us to build into Federal Motorcycle Tires the **quality** that makes them tires of "Extra Service." With an equipment less modern, it would be impossible to produce Federal Quality. Federal "Quality" can be had **only** in Federal Tires.

Made in two styles:
CORRUGATED TREAD and STUDDED TREAD

CONTINENTAL RUBBER WORKS, Erie, Pa.

New York Branch—35 Murray Street **Chicago Branch—131 N. Canal Street**

YALE PROGRESS PROVED BY YALE QUALITY

YALE quality isn't a mysterious, undefinable thing; it's something you can see for yourself.

It shows in the splendid lines and correct design of every YALE model, each one of which is worthy of special study.

It shows in the exceptionally high grade of every class of material which enters into the building of this motorcycle.

It shows in the skilled workmanship displayed in every detail of YALE construction, which is without equal here or abroad.

The YALE has more drop forgings than are used in any other motorcycle that has ever been built.

The YALE for 1912 shows still higher quality, and a degree of progressiveness not to be found in any other motorcycle.

Keep these important features in mind when you compare the YALE with any other motorcycle, because no other machine has them all.

All 1912 YALE models—4-H. P. to 7-H. P. Twin—have 2 3-4 inch Studded Tires and 4 inch auto fender type mud guards.

All YALE models have the long stroke motor, the Eclipse Free Engine Clutch, Eccentric Yoke, Improved Vibrationless Spring Fork, Extra strong, comfortable Handle Bars, anchored in three places, connecting at their tops the fork sides and stem.

These YALE features, in connection with the YALE QUALITY of materials, furnish ample reasons for the YALE'S UNEXCELLED SERVICE.

If you want a distinctively 1912 motorcycle, you will buy the YALE.

The line for 1912 comprises the following models: Model 24, 4-H. P.; Model 24M, 4-H. P., with Bosch Magneto; Model 25, 5-H. P. Twin; and Model 27, 7-H. P. Twin.

Write today for complete information concerning these up-to-date motorcycles.

SPLITDORF

PLUGS

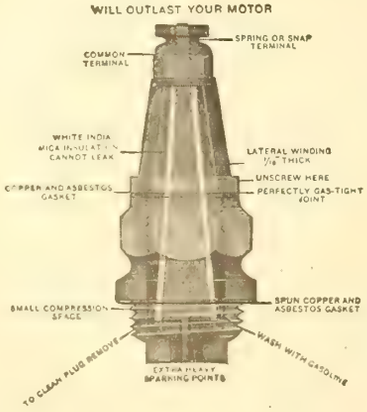
"Always There"

SPLITDORF PLUGS are a standard in the motorcycle world and their quality has been demonstrated in thousands of track and road struggles.

A "record of performance" of SPLITDORF PLUGS would be to all intents and purposes a complete motorcycling record—such is the sweeping hold of SPLITDORF efficiency on racer and "road-plugger" alike.

The fastest single cylinder racing work of the 1911 season was done on a machine using SPLITDORF PLUGS—the White Thor IV. Mathews made 1 mile in 0:46, 5 miles in 4:11 on this machine at Riverview.

At Cleveland, Sept. 10, he rode 5 miles on a dirt track in 4:48, at Syracuse, Sept. 16, he rode 5 miles on a dirt track in 4:46 and one mile in 0:53⅕ on a machine using SPLITDORF PLUGS.



Wenk, the most consistent amateur winner at Riverview, rode a Thor with SPLITDORF PLUGS, giving others a handicap ranging from 200 yards to 1½ lap.

At Winnipeg, Canada, Oct. 14, Joe Baribean rode an Indian with SPLITDORF PLUGS, 100 miles on a dirt track in 100:14⅘.

At San Jose, Cal., Oct. 15, Ben Broderick, on an Indian—with SPLITDORF PLUGS, rode 100 miles in 98:11.

At Terre Haute, Ind., Oct. 15, E. E. Baker, Indian, rode 100 miles on a ½ mile dirt track in 2:23:35⅖, with V. O. Scanling, Indian, second—both using SPLITDORF PLUGS.

But why continue? SPLITDORF PLUGS are STANDARD—for track or road work they are INVINCIBLE.

Write for our Magneto catalog.

Advice to the Prospective Purchaser of a Motorcycle

¶ If you want the acme of motorcycle luxury get a four cylinder "HENDERSON". It has the smoothness of a high grade motor car and the VIM and GO of a racing motorcycle combined.

¶ Should you want to have the company of your sister, wife or sweetheart you can take her with you and have the satisfaction of knowing that she looks like a LADY, not like excess baggage stuck on behind. When riding a "HENDERSON" she sits on a comfortable front seat. Side saddle if she is wearing an ordinary skirt or astride is she is dressed for it.

¶ The "HENDERSON" is clean. Clean in lines as well as otherwise. The flywheel is enclosed and no oil escapes anywhere.

¶ It is also cool. The motor cools perfectly because the incoming charge of gas sweeps the exhaust valves; there are large air chambers around the exhaust ports and the oil is cooled because of the fins on the crankcase. The machine is cool for the RIDER because the motor is BEHIND HIS LEGS.

¶ There are LOTS of other reasons why you ought to ride a "HENDERSON". We will tell you about them at the New York show or we will send you a booklet.

Motorcyclists Find Tire Problem SOLVED!

Extra Thick Treads Increase Mileage—Reduce Tire-Cost

No longer do you go against the *tire problem* when you purchase a *motorcycle.* We have *solved* it. We offer you tires built by the world's greatest auto-tire experts—tires ridden by America's Star riders—tires that hold more world's records than all other makes combined. We offer them at the price of the common kind.

Thicker Treads

We build our motorcycle tires with treads thicker than those found on any other motorcycle tires. These extra thick treads mean more service, more wear. They also mean greater tire economy because *puncture* dangers are reduced and *repair bills* are cut down to a minimum.

Double-Proof Tires

These tires are as nearly trouble-proof as any pneumatic tire can be made.

The rubber we use is new, live, the highest grade we can buy. And our fabric is the toughest known. The plies of this fabric are laid on by a mechanical process of our own that practically does away with **weak spots** and resulting **blow-outs.**

Our Durability Test

In these tests we place our tire on an endurance machine. We wear it down by hundreds of thousands of revolutions on a surface more **trying** than the average road.

Then we subject every other make of tire to the same test.

If our tire doesn't **outlast** and **outwear** every other make, then this type of tire never reaches the market. Thus do we **prove** our tires to be the most **"Durable Tires in Existence."**

13 Years Experience

We have been building auto tires for over 13 years. We have studied the tire problem from every angle—have focused on it the brains and skill of the world's master tire-builders. Out of these years of delving for **best** methods, we evolved the Goodyear No-Rim-Cut Auto Tire. This tire has leaped into amazing popularity.

And from this same rich tire-building experience was born our **Motorcycle** Tire to meet the new demand.

With such tires as these offered at the common-tire price, it seems folly to take chances. You are sure to come to this tire **some day.** Why not save time and money by coming **now**—TODAY!

Send for Our Tire Book

Describes the most complete and perfect line of motorcycle tires in the world. Money-saving tips to tire buyers. Send for it at once.

THE
BICYCLING WORLD and MOTOR CYCLE REVIEW
(FOUNDED 1877)

Vol. LXIV. New York, U. S. A., Saturday, January 6, 1912. No. 16

TRADE MEETINGS DURING SHOW

Important Gatherings of Motorcycle Makers, Cycle Parts and Accessories Makers and Cycle Jobbers.

Show time in New York City means much to the various branches of the cycle industry. The annual gathering of tradesmen in the metropolis during the continuance of the great exhibition, brings the leading representatives of the industry together from all parts of the country, and the time is opportune for conference.

First of the meetings on the calendar are those of Wednesday, January 10, when at 2 o'clock in the afternoon, separate meetings of the executive committees of the National Association of Cycle Jobbers and Cycle Parts and Accessories Association, will be held at the Hotel Astor.

The next day, Tuesday, January 11, is the day set for the annual meetings of the National Association of Cycle Jobbers and the Cycle Parts and Accessories Association, and the place and time is the Hotel Astor, at 10 o'clock in the morning. On the same day and at the same time and place, there will be a business meeting of the Motorcycle Manufacturers' Association.

Immediately following these meetings of Thursday, there will be tendered at 1 o'clock in the afternoon, at the Hotel Astor, a luncheon by the Cycle Parts and Accessories Association, to the Motorcycle Manufacturers' Association and the National Association of Cycle Jobbers.

At these meetings there is every indication that the attendance will exceed every previous gathering of the three associations mentioned. Never were all three branches of the industry in such a thriving condition, or the outlook so optimistic. The displays at the shows will exceed all previous efforts and everything seems to point to the coming season as the banner one in the trade's history.

Pierce Cycle Co. Bankruptcy Proceedings.

Buffalo, N. Y., Jan. 3.—There will be a meeting of the creditors of the Pierce Cycle Company for the election of trustee in bankruptcy on January 10, in this city. It will be remembered that the company was adjudicated a bankrupt November 13, on the petition of Donald S. McKay, Conrad J. Lang and Gustave Benjamin, at which time the company withdrew defense to the proceeding so that trial was unnecessary. Receivers were appointed in the litigation started several months ago, and they claim to have operated the business at a profit. The bankruptcy proceedings are said to be of a friendly nature to effect a re-organization. New capital is said to be interested in the reorganization proceedings.

Motorcycles at Buffalo Auto Show.

Buffalo, Jan. 3.—Neal, Clark & Neal Company, the well-known motorcycle dealers, are the only exhibitors of motorcycles at the automobile show now in progress at the 74th Infantry Armory. The exhibit is attractive, and being the only one of its kind, naturally attracts much attention. Five models of the Indian are shown, ranging from the big "Four" single cylinder, with magneto ignition, to the giant "Seven," complete with magneto ignition, free engine clutch, and foot-starting device. A model of the Flanders is also shown. The show closes on Saturday evening.

Shipp Brackets on Solar Lamps.

Watt Shipp, Salem, Oregon, the well-known maker of Shipp brackets for carrying lamps on motorcycles and bicycles, announces that he has made arrangements with the Badger Brass Mfg. Co., of Kenosha, Wis., by which that company will equip its Solar gas lamps with Shipp brackets at the regular prices.

AFTER THE EASTERN TRADE

Arthur Davidson Says New England Is Fine Field.—Why Service Depot Was Established There.

During his recent trip through New England in the interests of the Harley-Davidson Motor Company, Arthur Davidson spent 10 days examining the business situation, with both ears to the ground. In speaking of the situation as it pertains to Yankeeland, Mr. Davidson says:

"New England is a fine business ground. The trouble has been that there has not been enough competition to liven it up, and there are lots of dealers that are going to handle motorcycles and handle them soon. In all the States, with the possible exception of Maine, the conditions for the sale of motorcycles are ideal. There are magnificent roads, beyond comparison with any other section of the country, and as I have been in every State in the Union but four, I feel qualified to speak on that particular subject.

"Our putting in a service depot at Danvers, Mass., to take care of the dealers at short notice, will do much to remove the popular notion that Milwaukee, where our factory is located, is a suburb of China, and it will give the Eastern dealers confidence to sell a machine made in the West. The average motorcyclist figures that in purchasing a western made machine it is up to him to look after it ever after, as the factory is way out west, in the direction of the Philippine Islands. By giving the riders service at short range we establish confidence in our products. This is the only thing a rider cares about when he buys a machine—will the factory take care of him and how much? The ability to give satisfactory service is the prime selling argument in the motorcycle business today."

READING-STANDARD'S DIRECTORS

Last Year's Business Satisfactory and Heavy Increase Expected For 1912. Two-Thirds of Output Sold.

At the annual meeting of the stockholders of the Reading Standard Company, Inc., of Reading, Pa., held December 28, the following directors were elected for the ensuing year: J. B. Fricker, Abner S. Deysher, William F. Remppis, Reading, Pa.; G. Jahn, F. A. Lemal, New York City; C. A. Earl, New Britain, Conn.; Charles T. Treadway, Bristol, Conn.; Ralph Webster, Elmira, N. Y.; F. R. Wilhelmy, Cleveland, O. The directors will choose the executive officers of the company at their next meeting.

All financial arrangements having been satisfactorily concluded and all plans for 1912 approved of, the policy of the company will be vigorous and aggressive in the extension of the R-S business during the coming season, and the sale of their well-known product.

The company reports a surprising interest in the new R-S models, and the booking of orders both for motorcycles and bicycles is far in excess of business of the previous season at this time. Immediate delivery is made on belt models, and delivery of twins will start very shortly.

The interest that is being manifested in the 1912 product is evidenced by the daily receipt of inquiries at the factory, and the statement of the company says that two-thirds of the output has already been sold. Reading Standards will be exhibited at both the New York and Chicago shows.

Harley-Davidson Puts on Chains.

New York City, Jan. 5.—When the Harley-Davidson show exhibit arrived at Joseph Buckingham's Broadway store today, it revealed that the Milwaukee builders had followed suit of the other big makers and flopped to the chain drive. One of the models, the coming of which had been guarded jealously, is a brand new 7-horsepower twin, with double chain drive, and the free wheel clutch on the rear hub. The new motor, while resembling the regular 6½-horsepower twin, is of special design all through, and is not the standard twin engine with enlarged cylinders. The chain drive is neatly worked out, the short chain being enclosed entirely. Large sprockets are used both on the countershaft and rear wheel, giving low chain speed, quietness of running and moderate piston speed. The gasoline tanks are double and have a total capacity of about four gallons. Each tank is a separate unit, having its own filler cap, needle shut-off valve, and outlet. The outlets are siamesed before reaching the carbureter. The big tool box back of the seat mast has been divided, and the upper compartment set aside for oil, affording a one gallon reservoir. The chains are 5/16 roller. In addition to the regular gravity sight oil feed, a hand pump is fitted. A double eccentric in the hanger gives independent chain adjustment on both sides of the machine. The inlet manifold has a sleeve regulated auxiliary air shutter.

Corbin Screw Corporation's New Manager.

Clarence A. Earl has been appointed general manager of the Corbin Screw Corporation Division of the American Hardware Company, at New Britain, Conn., following the re-organization of the properties that has been recently effected.

Charles Glover, the former president of the Corbin Screw Corporation, has been elected vice-president of the American

CLARENCE A. EARL
General Manager Corbin Screw Corporation

Hardware Company, in charge of the mechanical operations of all of the plants.

The promotion of Mr. Earl to that of general manager will be certainly very gratifying to his many friends connected with the bicycle and motorcycle industries. He started with the Corbin interests nineteen years ago as office boy in the New York office, has traveled on the road for a number of years, and has been connected with the New Britain factory for the past ten years.

Thursday of last week, Mr. Earl entertained 85 of the department heads of the Corbin company at a dinner in Bond's cafe, Hartford, Conn., at which Mr. Earl stated that plans had been formulated to greatly enlarge the scope of the business of the Corbin division of the American Hardware Company, and the occasion was a sort of get-together affair.

The coaster brake business of the corporation is one that is showing gratifying gain each year, and during 1911 this department showed an increase of 33 per cent. over 1910.

BREED COMPANY SELECTS OFFICERS

Bay City Men Actively Interested.—Temporary Factory to Be Used During Construction of Plant.

Bay City, Mich., Jan. 2.—It is officially announced that the Breed Motorcycle Company will begin the construction of motorcycles February 12. However, temporary quarters will have to be used for the production of this year's models, as the permanent factory of the company will be undergoing construction in the south end of the city.

At a meeting of the stockholders and directors of the company held in Detroit the following executive officers were elected: President, George W. Breed; vice-president, O. W. Ballard; treasurer, O. J. Morton; secretary, John J. DeYoung. The three last mentioned officers are all Bay City men, prominently identified with the South End Improvement Association, which was largely responsible for the Breed company locating here.

Court Decides "Nobby" Tread Infringes.

Ruling that it was the intent of the inventor that the tire tread specified in the Mell patent No. 898,907, "was for use on automobiles as distinguished from bicycles and motorcycles, though the patent contained no such limitations," Judge Hazel, sitting in the United States District Court for the Southern District of New York, on December 29, decided that the Morgan & Wright "Nobby" tread was an infringement upon the "Staggard" tread production of the Republic Rubber Co., of Youngstown, Ohio.

The Republic people, who, by the way, do not manufacture either motorcycle or bicycle tires, are the owners of the Mell patent, dated September 15, 1908, which, strangely enough, is specifically entitled "improvements on pneumatic rubber tires for bicycle wheels," and the suit was brought by them against Morgan & Wright for infringement. The latter interposed a strong defence but it served no purpose. They quoted the patent on the well known Bailey tread as an anticipation and made the most of it, and also brought to bear an English patent issued to one Healey, and which long since expired. But discussing them at considerable length, Judge Hazel ruled "that the gripping capacity of the studs, which was the desideratum of Mell's invention, was absent in both the Bailey and Healey treads.

Excelsior Motorcycles in Georgia.

Alexander-Seewald Company, 54-56 North Pryor street, Atlanta, Ga., well known as a leading bicycle and automobile supply house in the South, has contracted to handle the Excelsior in Atlanta and northern

Georgia The company will conduct a complete motorcycle store and repair shop, and will also do a jobbing business in supplies and motorcycle appurtenances. The company expects to accommodate its customers when desired by selling motorcycles on the instalment plan. T. C. Butler, Jr., who is well known in trade circles, will have full charge.

"Some" Paper Used in H-D Catalog.

Arthur Davidson, of the Harley-Davidson Motor Company, Milwaukee, started in to do some statistics on catalog stock the other day, and this is how he interestingly tells the story:

"The motorcycle business has indeed reached some proportions. We are just in receipt of our paper for our 1912 catalogue, and also advance folder, and it takes just 20¼ tons of paper to print these. The amount of publicity that this will give the motorcycle can be estimated better by making comparisons. In other words, it would make a strip one foot wide that would reach from Boston, Mass., to Philadelphia, Pa., from Chicago, Ill., to St. Louis, Mo., or from Santa Fe, New Mexico, to Denver.

Rival Shows Divide Exhibits in Toronto.

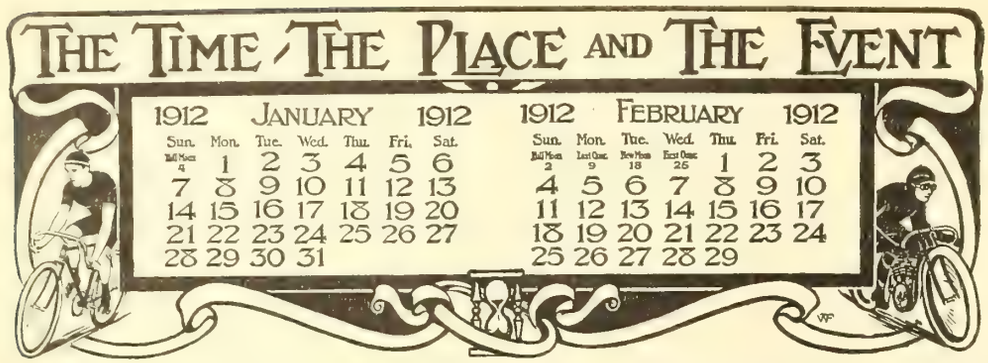
Toronto, Ont., Jan. 2.—The staging of two automobile shows of rival nature here, has led to a split among the city's motorcycle dealers so that the two-wheel flyers will be seen at each exhibition. Both shows are to be held during the last week in February, the one in the St. Lawrence arena and the other in the Toronto Armory. W. Dunn ,the Thor representative, will show at the Arena, along with others, while Herb. Kipp, Indian; Percy A. McBride, Excelsior; S. License, Harley-Davidson, and the Motosacoche agencies have already booked for space in the "drill-shed."

How One Dealer Has Progressed.

In presenting the illustrations of the old and new establishments of B F. Conner, of Wilkes-Barre, Pa., a striking example of the possibilities in store for energetic dealers is given. Mr. Conner, who is the representative for the Indian motorcycle in his city, started in the little one-story structure to do business eight years ago. Through persistent effort and "stick-to-itiveness" his business grew larger each year until the small quarters no longer sufficed for the demands of his trade.

Having in mind the expansion that had been made and looking to the requirements of the future Mr. Conner constructed the three-story building he now occupies, having taken possession in September last. It is located at 21-23 Hazel avenue, Wilkes-Barre. Mr. Conner is the possessor of good, healthy optimism, a fine business asset in itself, and when his new store gets too small for his requirements he expects to have a new building, twice the size, in which to conduct business.

Motorcycles the Greatest Time Savers.



The new sales manager of the Flanders Manufacturing Company, John Yoke, has some excellent ideas of the values of motorcycles as a means for transportation, and their economic features. Here they are, and they are worth remembering:

"It is the greatest time-saver known. It quadruples the efficiency—the earning capacity of the owner. The collector can collect four times as many bills, the order taker can take four times as many orders. The boy can deliver four times as many messages, the contractor or architect can oversee four times as many jobs. Most important of all, the motorcycle is the cheapest form of human transportation ever invented excepting perhaps the bicycle."

OLD AND NEW STORES OF B. F. CONNER, A SUCCESSFUL WILKES-BARRE DEALER

THE TIME, THE PLACE AND THE EVENT

January 6-20, New York City—Twelfth annual automobile show in Madison Square Garden; motorcycle section included in first week.

January 10, New York City—Hotel Earlington; dinner tendered to motorcycle, bicycle and accessory manufacturers by Motorcycle Dealers' Association of Greater New York and the United Cyclists. Tickets, $2 each, may be secured from H. A. Gliesman, 782 Eighth avenue, New York.

January 10, New York City—Hotel Astor 2 P. M., meeting of Executive Committees of the Cycle Jobbers' Association and Committee of Cycle Parts and Accessories Association.

January 11, New York City—Hotel Astor, 10 A. M., meeting of Motorcycle Manufacturers' Association, Cycle Parts and Accessories Association, and Cycle Jobbers' Association. To be followed by luncheon tendered cycle jobbers and motorcycle manufacturers by Cycle Parts and Accessories Association, Hotel Astor, 1 P. M.

January 11, New York City—Miami Cycle & Mfg. Co, annual dinner to agents at Hotel Breslin; 2:30 P. M.

January 13, New York City—Annual ball of the Century Road Club of America at Lyric Hall, Sixth avenue and 42d street.

January 13-27, Philadelphia — Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

January 20, Buffalo, N. Y.,—Seventy-fourth Infantry A. A., Armory, bicycle races and athletic games.

February 1, Buffalo, N. Y.—Sixty-fifth Infantry A. A., Arsenal, bicycle races and athletic games.

February 3, New York City—Company "K," 22d Regiment and Morningside Athletic Club, bicycle races and athletic games.

February 3-10, Chicago, Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory, under auspices of National Association of Automobile Manufacturers.

February 10, Chicago—North Shore Motorcycling Club show wind-up smoker.

February 26-March 3, Quincy, Ill.—Second Annual Mississippi Valley Automobile Show, under the patronage of Quincy Auto Club, at Highland Park Pavilion.

February 21-28, Toronto, Ont.—Motorcycle show in Toronto Armory.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

Motorcyclists Obtain Licenses Early.

Toronto, Ont., Jan. 2.—With the advent of the new year, Toronto's 500 riders found occasion to clamor about a majestic pile known as the Parliament buildings, for the purpose of securing new number licenses and plates to tide them over for another twelvemonth. A number took time by the forelock by sending in applications, accompanied by the $3 fee, for renewals, long before the change in date, so that they would suffer no interruption in their riding. The distinction of being labelled No. 1 fell to the lot of Herbert Greenwood, the Triumph agent for Toronto. Fred Johnston, the Toronto club's new president, has been ticketed No. 9.

New Southern Touring Record Claimed.

En route to Savannah, Ga., Henry Crowell, of Asheville, N. C., riding an Excelsior twin, claims to have made Atlanta, 295 miles, in 11¼ hours. The best previous time, made by motor car, is said to have been 15 hours.

WHEN THE CRACK SALESMAN ARRIVED IN TOWN FOR THE SHOW
He signed the hotel register "J. de Smith, VII H. P., F. A. M.," and the "hops" mistook him for a nobleman.

NEW YORK, JANUARY 6, 1912.

An Excellent Prospect For Trade.

From every part of the country comes glowing reports of what the coming season has in store for the development of the industry. Never before from the standpoint of the motorcycle and parts, and accessories makers, has the situation been so optimistic as it exists at the present time.

Dealers are increasing their orders for early delivery so as to keep pace with the demand which is already making itself felt in those portions of the country where there is practically no winter season, and the selling period is practically an all-the-year-round affair. In the North every dealer is making preparations for a spring rush, and in consequence the order books of the factories are filled to overflowing. Traveling men who have their ears "close to the ground" say they never have heard so much motorcycle and bicycle talk as on their present winter trips.

All this augurs well for the year which has just made its advent, and which promises to produce a record business. Thousands of tradesmen are now gathering in New York City to attend the automobile and motorcycle shows, during the period of which important business meetings will be held by the various industries of the trade. These meetings are of great importance to the various industries that they represent, as they permit interchanges of ideas that result in a more definite understanding of business conditions, and in the establishment of mutual business confidences.

We congratulate the trade upon its prospects for 1912.

The Return to the Chain Drive.

Those partisans of the chain drive for motorcycles will find cause for much elation, in the sudden flop of the big makers to this type of transmission. For the past few years the belt has been gaining in favor, steadily, and only three or four manufacturers stuck by the chain. In fact, there were those who asserted confidently, that the chain would be superseded entirely before long, but others refused to accept the prophecy, and as strongly refuted the contention.

Three prominent makers, two of them always have been stanch advocates of the belt, and did not build chain drive stock machines, although they pinned their faith to the chain for racing, have, for 1912, brought out regular chain driven models. And only this week, another of the large manufacturers, who likewise always has been a belt champion, save for racing, has joined the camp of chain stock machines.

Now, every one of those manufacturers entitled to be included in that coterie known as the "big five" are building chain models. Three of them are very recent recruits to the chain ranks. Another old line maker, who formerly swore by the chain, and later abandoned it entirely, has come back to it this year. In fact, the first prominent maker to champion the chain drive, was its only strong and consistent supporter, in the days when the belt was in the ascendancy, and now has the satisfaction of seeing his chief rivals coming around to his style of transmission.

It is not to be inferred that the belt is going out suddenly, for but three manufacturers are building chain drive machines exclusively, while many are using the belt drive altogether, and several offer both types. As to the reasons for the sudden flop to the chain drive, there are several. One is that some manufacturers who used it on their racing machines with success, found themselves facing an insistent demand for it from their agents and riders. Another reason is, that those makers building high-powered belt driven twins, found that the belt would not hold, and that too much power was wasted. These may be said to be the primary reasons for the sudden popularity of the chain drive in quarters where it heretofore was unwelcome, at least on the surface. Manufacturing economy had nothing to do with it, for the chain drive is more expensive to build than the belt However, the fact remains that the chain has returned to favor suddenly, which is cause for keen jubilation in some quarters.

Progress of the Olympic Fund.

Following the old adage of "making haste slowly," the fund which is being raised to send a representative team of amateur bicycle riders to compete in the 200-mile road race at the Olympic games of Stockholm next July, steadily but surely increases weekly. So far the contributions have been largely by individual enthusiasts, who for the pure love of the sport, or through their inherent patriotism, want American riders to win what will be the greatest cycling road race in history.

The movement deserves something more than individual support, however. It needs and should have the united support of the trade. It is the red blood of competition that is the business producer, and all industries that produce goods that sportsmen use are healthiest when the manufacturer takes a keen interest in the sports competitive side.

Makers of bicycles and their fittings are the first to feel the impetus given to the trade when their representatives win in a contest, and a race is "everybody's candy" until it is won. Preliminary discussion of the various competitors' chances is stimulating to business.

Nothing in years has aroused so much general interest in cycling sport as the possibilities of an American team winning this race, and a manufacturer who is alive to his own interest should lend a helping hand in sending the team over. The dealer also, for the same reasons as concern the manufacturer, should apply his most earnest efforts, spreading the gospel locally and contributing substantially.

ALL READY FOR THE GARDEN SHOW

Preparations Complete for the Last Exhibition in Historic Structure—Motorcycle Exhibition Will Be Located in Balcony—Concert Hall and Basement for Accessories—Society to Be Out in Force.

When the doors of Madison Square Garden open on this (Saturday) evening there will be staged in its capacious arena the most splendid exhibition of automobiles and motorcycles ever presented to the view of the great American public. It is right that this should be so, as it also marks the finish of the historic Garden as a meeting place for the trade. The vast structure has been sold and must be torn down to meet the ever increasing demands of commerce for space in the up-town district.

The opening week, which includes in its system of dates January 6 to January 13, is devoted to pleasure cars and motorcycles, and it is pleasing to note that motorcycles this year are included in the dates that draw the most people, for although the motorcycle has its value in the commercial sense, the bulk of public interest at present is in the productions of the factory that cater to the pleasure and pastime of the user.

Following the precedent set other seasons ,there will be two "Society Nights"—Tuesday, January 9, and Thursday, January 11. These are always dressy occasions and the "smart set" turns out in full force. The display of gowns on these occasions rivals the horse show and the famous Metropolitan opera premieres. Last season the custom of removing one's furs became almost general and the attention of women is called to the fact that this year the coat rooms have been greatly enlarged, permitting wraps and furs to be accommodated, so the exhibits in the heated Garden can be viewed without being burdened with heavy outer apparel. Monday afternoon, January 8, there will be a "theatrical matinee," to which many prominent legitimate players have been invited.

Visitors who become fatigued after several hours of strolling about the booths will have plenty of opportunity to rest, for there are two long rows of loges with comfortable seats skirting each side of the main floor or the amphitheatre. They may be occupied without extra charge. From these one may gaze upon the passing show, and while the exposition is essentially one of cars, the visitors walking around the huge arena form a show in themselves—hundreds of beautiful women in beautiful gowns—a composite vision of loveliness.

The show, as in previous years, has been departmentized. On the main floor and elevated platform during the first week of the show will be found only gasoline pleasure cars. Electric pleasure vehicles and motorcycles will be located in the balcony. Cars will be exhibited in the exhibition hall, also, and in the concert hall and basement will be found a comprehensive line of accessories.

In bidding farewell to the Garden as a mart where annually have been displayed the productions of the trade since its earliest inception it is fitting to state that New York City will have prior to the time of holding the next annual show, a building suitable for the purpose. Construction has already begun on a giant arena facing on Lexington avenue, between 47th and 48th streets, which will have ample space for housing, and fully displaying the trade's products. It is expected that this building will be completed by October 1, in time for the November horse show.

IMPROVEMENTS THE DESIGNERS HAVE WROUGHT

It is fitting indeed, that the last motorcycle exhibition the famous old Garden ever will shelter, while not the largest in its history, easily will be the best. While it would be a cause for loud remark if the makers did not show good results in advanced designs and construction, after a whole year of experience, the great strides forward, which they have taken, are indeed far beyond expectations, that is, the expectations of those who do not look for the millenium in motorcycle building.

In the present show, 16 manufacturers are represented, two less than last year. There also are fewer models shown than in the past, as a result of the stronger trend towards standardization of lines. The line along which the greatest development has been made is that of comfort. Spring seat posts, or the "floteing" seat, has gained several advocates, including Harley-Davidson, Thor, Wagner and Excelsior. R-S and Emblem, who worked out the same principle along different lines, last year, still stand pat.

In frames, the rigid and the spring type, each have gained. Merkel, always the foremost advocate of the spring frame, lists a rigid model, also, while Minneapolis, has jumped to the other side of the fence and offers a spring frame. Both of these makers adhere to their previous frame standards. The tank-in-the-tube frame construction also has made recruits in Schickel, and Pierce, the latter bringing out new models.

There are two makers in the field who never have exhibited at a previous show, Henderson and Flanders. The former belongs in the four cylinder ranks, keeping company with Pierce. Flanders has placed all his eggs in the single cylinder basket. Pope is another, who is making his debut at a New York exhibition, although he "came out" at Chicago, last February.

Half the Makers Use Magnetos Only.

Of course every maker is using the magneto on some models, and half of them use it exclusively, as for instance Indian, Merkel, Flanders, New Era, Pope, Schickel, Pierce and Henderson. Indian and New Era went solid for magneto this year.

In transmission there has been a great deal of switching and straddling, and the chain has had the best of the deal. Harley-Davidson, Excelsior, Merkel and R-S have put on chains. The first three have used it for racing, but this is their first venture in the stock class. R-S once used it, and then abandoned it for a year, and now returns to it. The new Henderson also uses the chain, and with New Era, and Thor, are exclusively chain advocates. Thor has abandoned the belt.

On the other hand, Schickel, Flanders, and Pope, all newcomers, so far as New York is concerned, belong in the belt class. Also Excelsior, Pierce, R-S and Minneapolis, have added additional belt models. Pierce remains the only exponent of the shaft drive, at the show. The internal gear system also has gained a recruit in R-S, and Thor still clings to it. There is a tendency to completely enclose the short drive chain, Harley-Davidson and Excelsior, so doing, while Merkel and Indian partly case it. Henderson which uses a single chain, encloses it entirely.

There is a big rush to the clutch, and a lesser one to the two-speed. Some makers give the clutch as regular equipment like Emblem, Excelsior, Henderson, Indian, Merkel, New Era, Pierce, Thor and Yale. Clutches are extra with Harley-Davidson, M. M., Minneapolis and R-S. Schickel and Flanders, secure a free engine by slacken-

SOME OF THE "GRANDDADDIES" OF THE MODERN MOTORCYCLE

ing the belt, and the others offer no clutch or substitute.

Indian, Pierce, New Era, and Minneapolis, reinforced by Thor, compose the two-speed brigade. Minneapolis applies the two-speed to a flat belt model, blazing the way in this class. Pump lubrication has gained Henderson and Yale, and lost none during the year. Indian, Pierce four, and Thor stick to it. Thor has revised its system in the matter of pump drive. Pope and Flanders use gravity sight feed, and Schickel mixes the oil and gasoline in the tank, and feeds it homogenously.

Many Changes in Fork Construction.

There has been a deal of refinement in forks. Thor has abandoned his familiar pneumatic type, for the truss with enclosed double plunger springs. Schickel has a medium caster, with exposed springs, while Pope, and Excelsior, use laminated leaves. Yale also has a new double plunger fork, of the Sager type. The Henderson is a single cushion plunger, and Flanders is the same, with exposed springs. New Era retains the cushion plunger pattern, but it has been enlarged considerably, and several of the others have found room for fork improvement.

Harley-Davidson, Emblem and Excelsior have adopted the "camel back" frame, which is indicated by the sloping top tube. Flanders and Pope, also use this style, as does Schickel, the new Thor, R-S and Minneapolis. Yale, Merkel and Pierce continue with straight top tubes, and this style also is used by Henderson, but the tube slopes away from the head.

As a result of the attention given to the magneto, the coming season should witness less ignition trouble than before, on the new models. Indian, and Thor, have an enclosed arch magneto, the terminals, condenser and all working parts being housed. Schickel houses it entirely in the motor base, and has a spring drive, using no gears. The new R-S carries its magneto back of the motor, likewise the Excelsior single, while the new Thors have abandoned the rear seat and moved up front. Pope and Flanders, also mount their magnetos in front. Henderson has its magneto alongside the motor on the left, and driven from the front end.

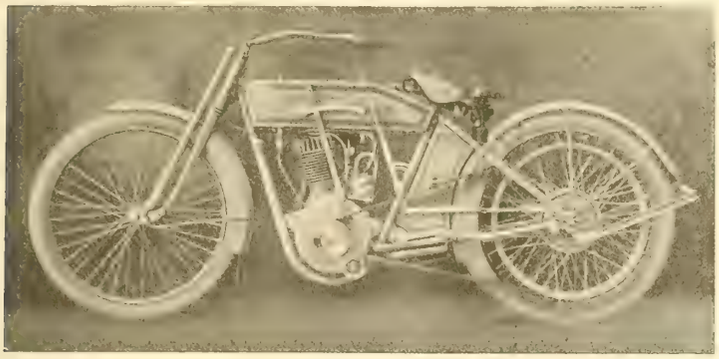
Henderson, and New Era rather class by themselves, being hand cranked, and pedalless. Indian also shows the new Tourist Trophy pedalless models, with the foot starter. Starters, either hand or foot, are bound to increase, as the demand for easier starting becomes stronger and more persistent among those who are disinclined to exert themselves unduly.

This is the first show for multiple jet carbureters, although the Indian's was brought out late in the spring. Thor also has a double nozzle mixing plant, and Merkel has a new single jet device. Pope, Schickel, Flanders and Henderson, use single jet.

Overhead Rocker Inlet Valves Increase.

Twenty-eight inches remains the standard wheel size, Pope being the single exception. It comes in the 26-inch class. Two and one-half inches is the standard tire diameter, although Yale, Schickel and Thor have jumped to 2¾ inches. Pope is 2¼ inches, and also M. M., on some models. In valves, Thor, New Era and Henderson, have adopted the overhead rocker, and it also is found on the new Excelsior single. Others using this type retain it. Flanders, Pope, and Schickel are in the automatic inlet class, and Yale, Merkel, M-M and Emblem adhere to this type.

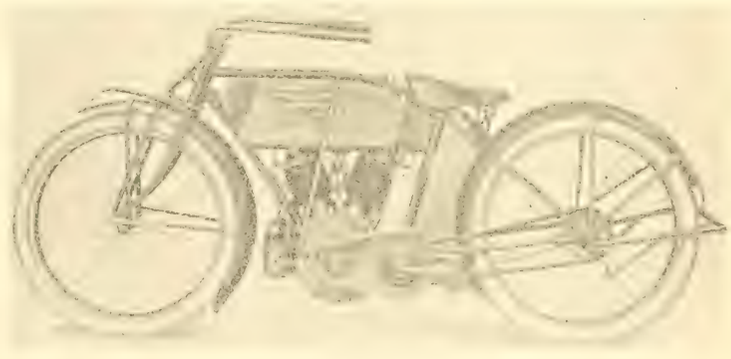
Tanks have been enlarged generally, wheelbases remain about the same, averaging from 53 to 55 inches, and motors have been refined, especially in the valve mechanism. Motors are quieter, cleaner and smoother running, as well as stronger, and attached more neatly. Indian joins R-S and Pierce four, with double brakes, and Indian also introduces the knockout rear axle. New Era now has company in the use of roller bearing hubs, Indian adding this type of bearing in the T. T. models. Henderson offers an innovation in two-passenger accommodation, being the first regular "double seater" to be listed. Spokes and rims are heavier, controls are strengthened, and handlebars are lower, longer, wider and more comfortable, as well as more secure. The standard powers are four for singles, and seven for multi-cylinders. The low-powered machine has disappeared entirely.



Of course the big reduction in prices is very prominent, almost on every make. The new figures are from $15 to $60 lower than last year, the average price of the single being $225, and of the twin $275. Improved design and neater lines and finish are noticeable all along the course. Makers at the show are building 35 models of singles, 16 twins and two types of fours, a most extensive array from which to select.

On the following pages will be found illustrations and condensed specifications of all makes on exhibition at the show, together with a list of the new features.

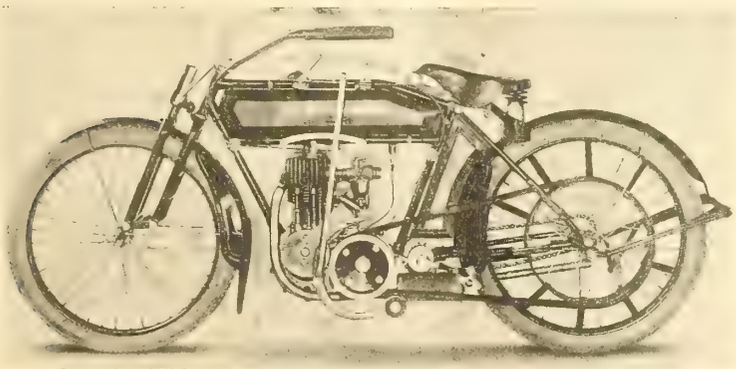
CONCERT HALL, WHERE MANY LEADING ACCESSORIES ARE SHOWN



Motorcycles Shown at the Final Garden Gathering

1912 HARLEY-DAVIDSON SINGLE, $235

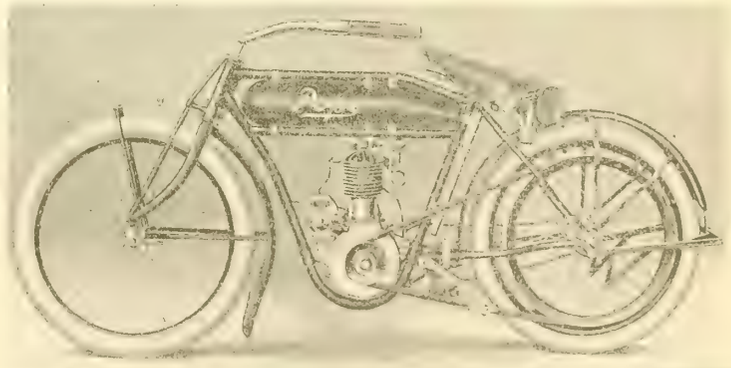
Motor—4-horsepower.
Valves—Inlet automatic.
Lubrication—Sight feed.
Speeds—One.
Fork—Sager type double plunger.
Drive—Flat belt.
Cylinders—One.
Ignition—Magneto.
Clutch—Disc on rear hub.
Frame—Rigid; trussed loop.
Brakes—One; coaster.
Tires—28 x 2½.



Control—Motor: double grip; belt tensioner: hand lever; free wheel clutch: hand lever; brake: pedal.
Tanks—Gasoline: 2 gallons; oil: 1 gallon.
Other models—6½-horsepower twin, magneto, $275; 7-horsepower twin, chain, magneto, $285; 4-horsepower single, battery, $200. Free wheel clutch, $10 extra. Only one chain model.
New features of the line—Floating seat; free wheel clutch; reinforced frame head; improved stand; drop forged rear stay jaws; improved brake arm fastening; front wheel side fenders; tank filler nozzles further forward; new piston; improved balancing of connecting rod; dropped top frame tube; lower riding position; eccentric pedal hanger; improved finish; more equipment; improved control mechanism; on the twin, improved inlet valve mechanism; greater silence; new pistons; new lower connecting rod bearing; better balancing of rods; greater motor flexibility.

1912 EXCELSIOR TWIN, $250

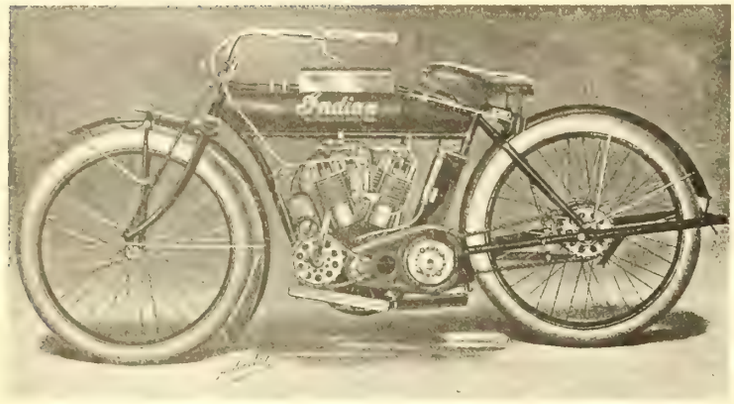
Motor—7-horsepower.
Valves—Mechanical.
Lubrication—Sight feed.
Speeds—One.
Fork—Scroll leaf.
Drive—Roller chain.
Cylinders—Two.
Ignition—Magneto.
Clutch—Disc on countershaft.
Frame—Rigid; trussed keystone.
Brakes—One; coaster.
Tires—28 x 2½.



Control—Motor: double grip; clutch: hand lever; brake: pedal.
Tank capacity—Gasoline: 3 gallons; oil: 2½ quarts.
Other models—4-horsepower single, chain or belt, $200; 6-horsepower twin, belt only, $225; all with magneto and clutch; 4-horsepower single, belt only, battery, $175; same, magneto, $185.
New features of the line—Chain drive; disc clutch; magneto in rear of cylinder on single; cradle spring fork; spring seatpost; dropped frame; combination belt tensioner and clutch control on belt models; mechanical inlet valves on singles; enclosed short chain.

1912 MINNEAPOLIS SINGLE, $285

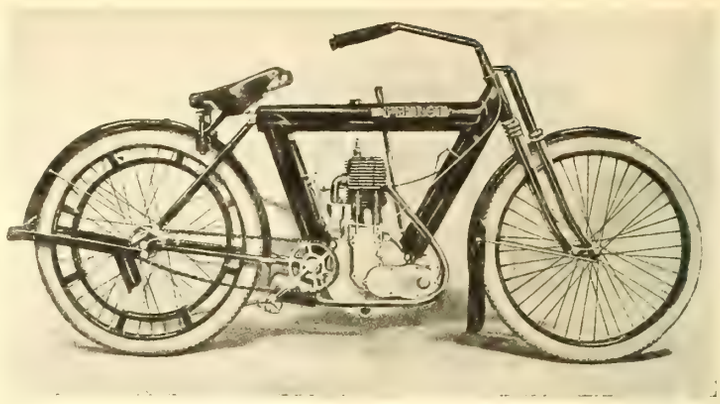
Motor—5-horsepower.
Valves—Mechanical.
Lubrication—Hand pump.
Speeds—Two.
Fork—Cushion plunger.
Drive—Flat belt.
Cylinders—One.
Ignition—Magneto.
Clutch—None.
Frame—Rigid; trussed loop.
Brakes—One; coaster.
Tires—28 x 2½.



Control—Motor: double grip; belt idler: hand lever; gearset: hand lever; brake: pedal.
Tanks—Gasoline: 2 gallons; oil: 3½ quarts.
Other models—5-horsepower single, two-speed, chain drive, magneto, $285; 5-horsepower single, flat belt drive, one speed, magneto, $240; 5-horsepower single, two-speed, chain drive, magneto, with delivery van, $375. Spring frame, $15 extra on all models.
New features of the line—Spring frame; side splashers; belt drive models new throughout; delivery van new; application of two-speed gear to flat belt drive; new toolbox on spring frame models; lower gear ratios on two-speed; 26-inch wheels optional; oil window on right side of motor only.

1912 POPE SINGLE, $175

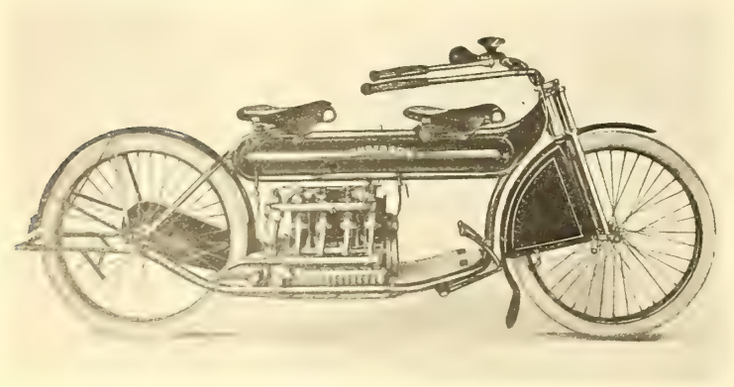
Motor—3-horsepower.
Valves—Inlet automatic.
Lubrication—Hand pump.
Speeds—One.
Fork—Cradle spring.
Drive—V belt.
Cylinders—One.
Ignition—Magneto.
Clutch—None.
Frame—Rigid; trussed loop.
Brakes—One; coaster.
Tires—26 x 2¼.



Control—Motor: double grip; brake: pedal.
Tanks—Gasoline: 1¾ gallons; oil: 1 quart.
Other models—None.
New features of the line—No changes over 1911 model; prominent characteristics are light weight, low price, neat appearance, simplicity.

INDIAN T. T. TWIN, $300

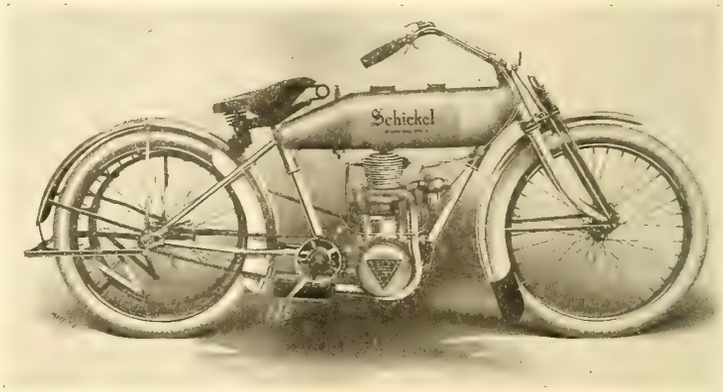
Motor—7-horsepower.
Valves—Mechanical.
Lubrication—Gear pump.
Speeds—One.
Fork—Cradle scroll spring.
Drive—Roller chain.
Cylinders—Two.
Ignition—Magneto.
Clutch—Disc on countershaft.
Frame—Rigid; trussed loop.
Brakes—Two; band.
Tires—28 x 2½.



Control—Motor: double grip; clutch: hand lever; brakes: hand latch and pedal.
Tanks—Gasoline: 3 gallons; oil: ½ gallon.
Other models—4-horsepower single, chain or belt, $200; 7-horsepower twin, chain, $250; 4-horsepower Tourist Trophy single, chain, $250; all magneto and clutch. Two-speed, $25 extra on T. T. models.
New features of the line—T. T. models new throughout; improvements on regular models include front fender extension; heavier spokes; heavier rims; hard rubber ball grip on clutch lever; armored magneto; larger clutch on "7"; larger gasoline tank; motor base oil level indicator; cylinder priming cups; tank priming gun; multiple jet carbureter; redesigned front cylinder head and exhaust tube; heavier grip control universal blocks; new cam levers and hand lift valve levers on "4"; keyed handlebar stem; larger crankpin; larger valves; heavier springs; longer clutch bearings. Prominent features of the T. T. models are the foot starter; right hand clutch control; right hand gearshift; roller bearing hub; knockout rear axle; double band brakes and folding foot boards.

1912 PIERCE SINGLE, $265

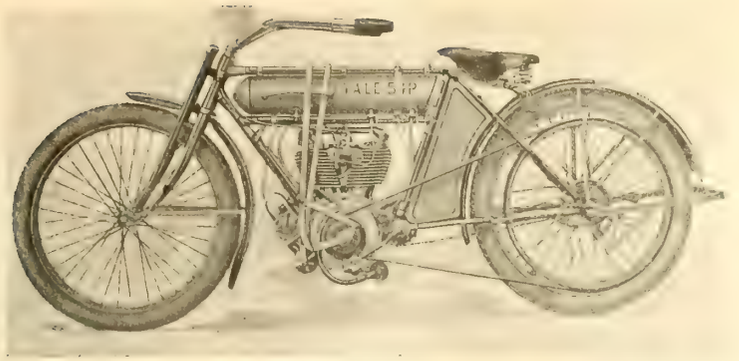
Motor—5-horsepower.
Valves—Mechanical.
Lubrication—Hand pump.
Speeds—One.
Fork—Cushion plunger.
Drive—V belt.
Cylinders—One.
Ignition—Magneto.
Clutch—Disc on motorshaft.
Frame—Rigid; tubular keystone.
Brakes—One; band.
Tires—28 x 2½.



Control—Motor: double grip: clutch: hand lever; brake: pedal.
Tanks—Gasoline: 1¾ gallons; oil, 5 pints.
Other models—5-horsepower single, magneto, $225; 5-horsepower single, magneto, $250; no clutch on either; 7-horsepower four-cylinder, two-speed, shaft drive, clutch, double brakes, $400.
New features of the line—$250 and $265 singles, new models throughout; engine redesigned; longer stroke; larger valves; larger exhaust tube and muffler; quieter valve gear; oil insulated magneto; wider piston rings; flat rear pulley; new fork cushion; spring tank caps; improved carbureter; larger handlebar tubing and lower bars; lower frame head; roller contact grips; throttle grip starting index. Refinements on the four-cylinder include splash lubrication in addition to pump; redesigned crankcase; wider piston rings, pinned; oil tight motor base; oil gauge in base; new valve lifters; taper and key flywheel mounting; keyed gears; larger clutch pins; right hand gearset and clutch control.

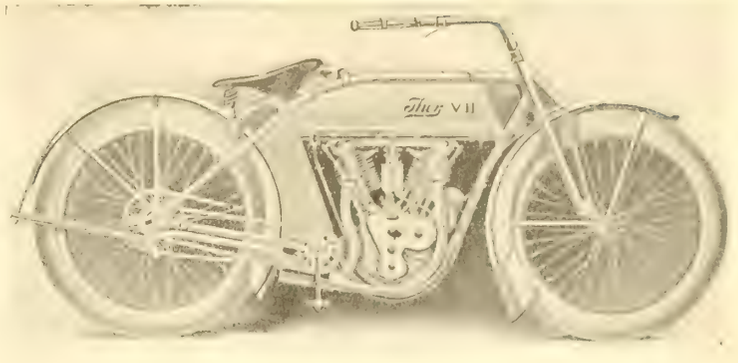
1912 HENDERSON FOUR, $325

Motor—7-horsepower.
Valves—Mechanical.
Lubrication—Gear pump.
Speeds—One.
Fork—Cushion plunger.
Drive—Enclosed chain.
Cylinders—Four.
Ignition—Magneto.
Clutch—Disc on countershaft.
Frame—Rigid; underslung truss.
Brakes—One; band.
Tires—28 x 2½.



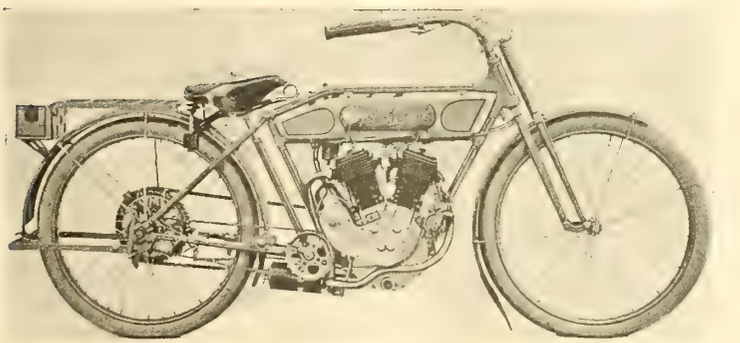
Control—Motor: double grip; clutch: pedal; brake: pedal.
Tanks—Combination.
Other models—None.
Features of the line—New model throughout; underslung frame; four-cylinder motor; enclosed chain drive; long wheelbase; pedalless; two seats; large tanks.

1912 SCHICKEL SINGLE, $225



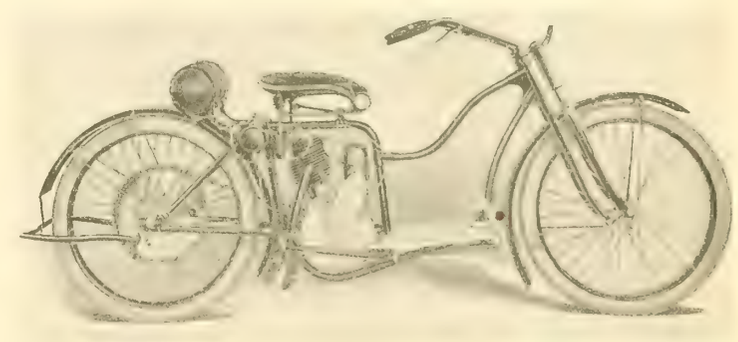
Motor—5-horsepower.
Valves—None.
Lubrication—Automatic splash.
Speeds—One.
Fork—Caster; Sager type double plunger.
Drive—Flat belt.
Cylinders—One.
Ignition—Magneto.
Clutch—None.
Frame—Keystone girder.
Brakes—One; coaster.
Tires—28 x 2¾.

Control—Motor: double grip, hand latch and thumb levers; brake: pedal.
Tank capacity—Gasoline: 3 gallons; oil: 1 quart.
Other models—None.
New features of the line—First time shown in New York; only two-cycle machine exhibited; oil and gasoline mixed in tank and fed homogeneously through carbureter; no valves, cams, gears, tappets; magneto enclosed and armature rotated by spring drive; spark advanced by rocking magnets and pole shoes, giving maximum strength spark at all speeds; tank forms large upper frame girder; tool compartment in tank tube.



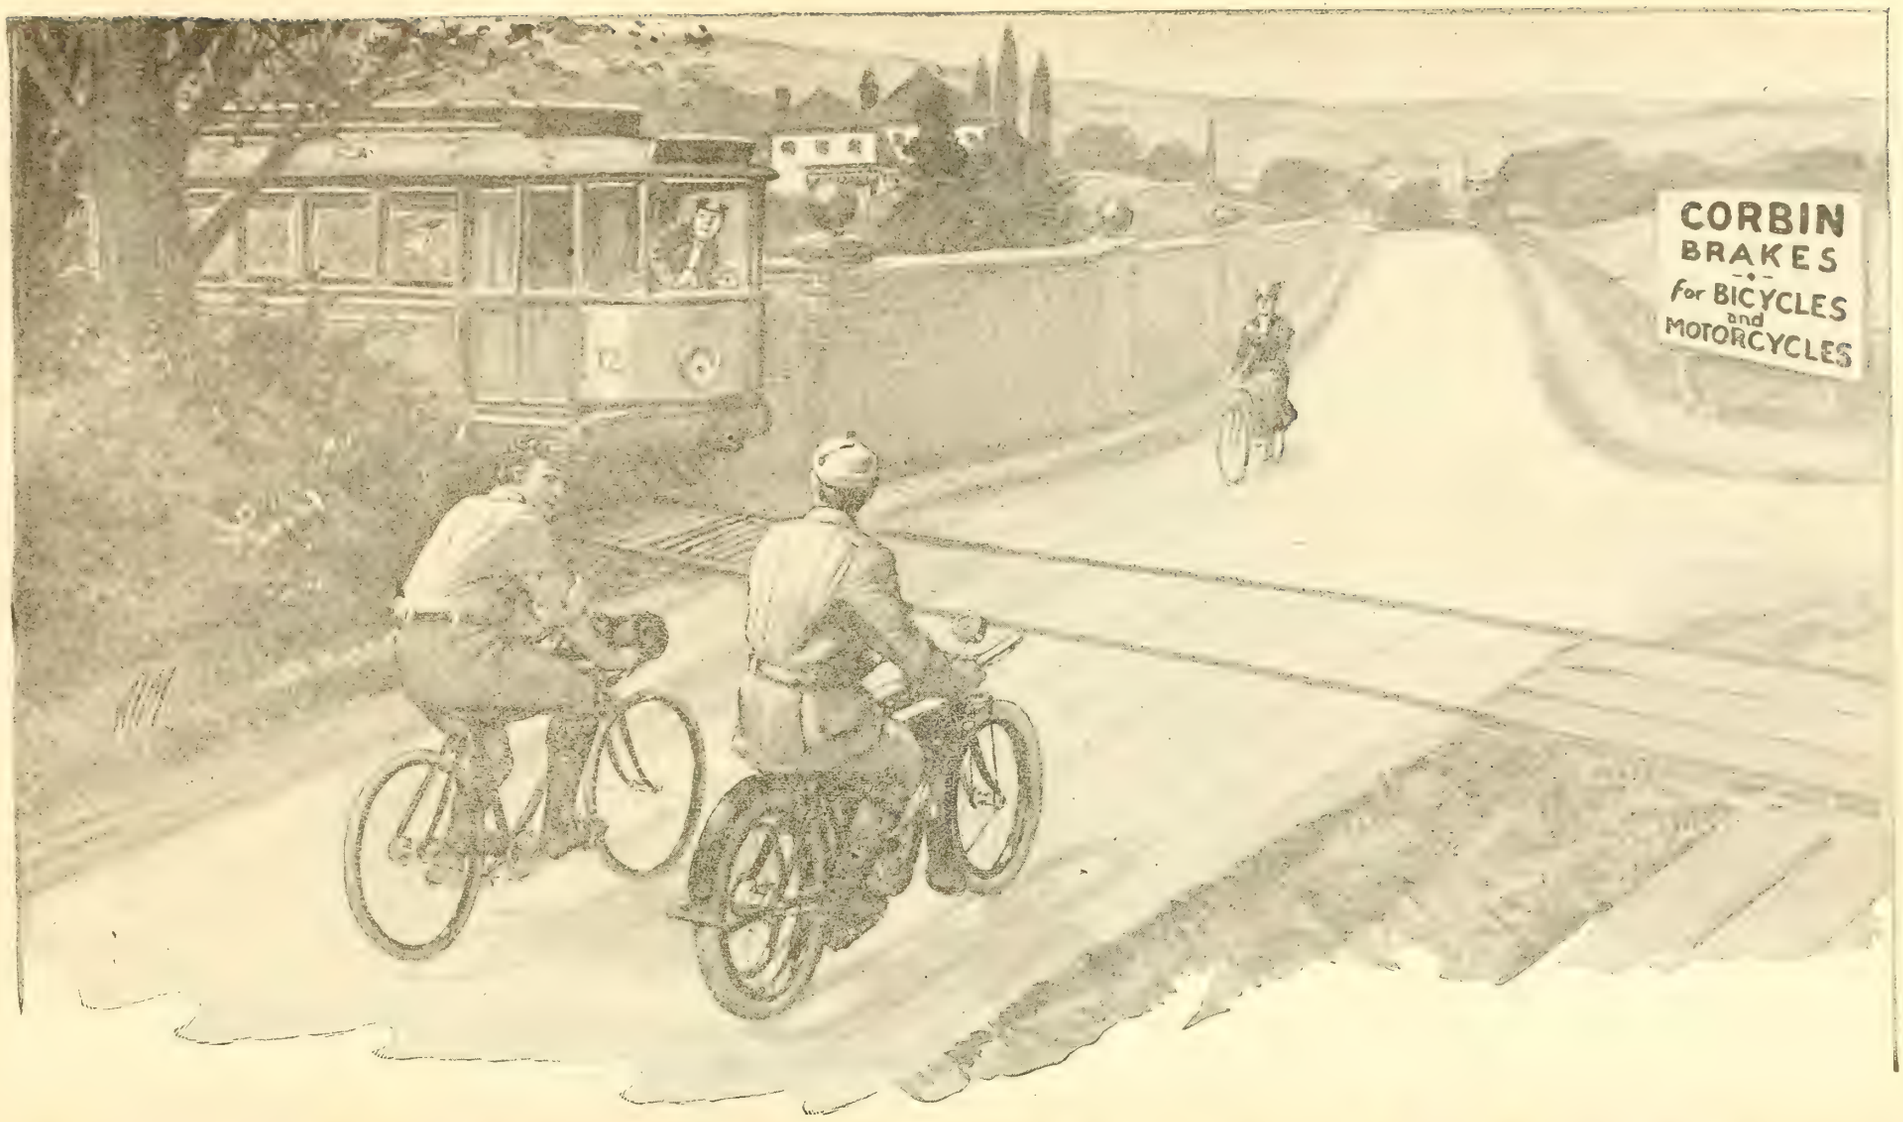
1912 YALE TWIN, $260

Motor—5-horsepower.
Valves—Inlets automatic.
Lubrication—Gear and hand pumps.
Speeds—One.
Fork—Sager type, double plunger.
Drive—Flat belt.
Cylinders—Two.
Ignition—Magneto.
Clutch—Disc on motorshaft.
Frame—Rigid; keystone truss.
Brakes—One; band.
Tires—28 x 2¾.
Control—Motor: double grip, clutch: hand lever; brake: pedal; belt tensioner: hand lever.
Tank capacity—Gasoline: 2 gallons; oil: 2 quarts.
Other models—4-horsepower single, flat belt, clutch, battery, $210; same, with magneto, $235; 7-horsepower twin, clutch, flat belt, $285.
New features of the line—5-horsepower twin, new model throughout; clutch on all models; mechanical oilers on the twins; larger tires on all models; new spring fork and handlebars; wider guards; improved finish; heavier spokes; priming cups on twins; improved grip control; eccentric yoke pedal chain adjustment; three stem handlebar fastening; larger head fittings, option of flat or V belt on all models; option of band or coaster brake on all models; twin cylinder flanges horizontal with road, giving freer air circulation around cylinders.



1912 THOR TWIN, $300

Motor—7-horsepower.
Valves—Mechanical.
Lubrication—Gear pump.
Speeds—One.
Fork—Sager type, double plunger.
Drive—Internal gear and chain.
Cylinders—Two.
Ignition—Magneto.
Clutch—Disc on motorshaft.
Frame Rigid; trussed loop.
Brake—One; coaster.
Tires—28 x 2¾.
Control—Motor: double grip; clutch: hand latch; brake: pedal.
Tank capacity—Gasoline: 3 gallons; oil: 1 gallon.
Other models—4-horsepower, single, clutch, battery, undergeared chain drive, $175; 5-horsepower single, magneto, clutch, undergeared chain drive, $250. Two-speed on twin, $25 extra; twin and 5-horsepower single have spring seat posts; 5-horsepower single, and twin, have armored magneto, and are duplicates save as to number of cylinders.
New features of the line—Twin and 5-horsepower single, entire new models, incorporating many refinements, and desirable units of preceding models; prominent improvements include camelback frame; truss spring fork, upright V motor; overhead rocker inlet valve actuation; magneto in front of motor; simplified oil pump drive; larger and neater tanks; neater and longer handlebars; armored magneto; front wheel side fenders; multiple jet carbureter; 50 degree twin cylinder inclination; spring seat post; two-speed gear; double stem handlebar fastening; larger tanks; cylinder priming cups; redesigned exhaust tubes; new stand; larger tires; distinctive white finish.

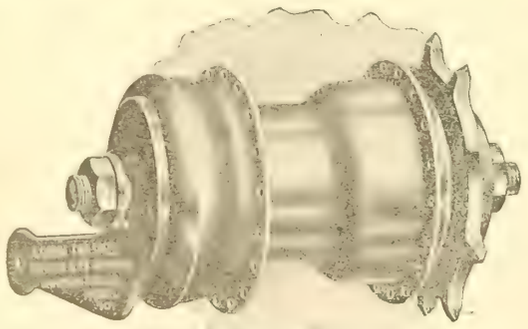


1912 R-S TWIN, $290

Motor—7-horsepower.
Valves—Mechanical.
Lubrication—Gravity feed and hand pump.
Speeds—One.
Fork—Cushion plunger.
Drive—Internal gear and chain.
Cylinders—Two.
Ignition—Magneto.
Clutch—None.
Frame—Rigid; keystone truss.
Brakes—Two; coaster and band.
Tires—28 x 2½.
Control—Motor: double grip; brakes: hand lever and pedal.
Tank capacity—Gasoline: 2½ gallons; oil: ½ gallon.
Other models—4-horsepower single, magneto, flat belt, $225; same with double brakes, foot rests, double lubricating systems, belt tensioners and double control, $250; clutch, $10 extra on twin.
New features of the line—Twin, and $225 single, new models; latter is $250 model stripped of double equipment; leading points on the twin are undergeared drive; double brakes; double lubricating system; foot rests; low chain speed; protected magneto.

1912 NEW ERA SINGLE, $285

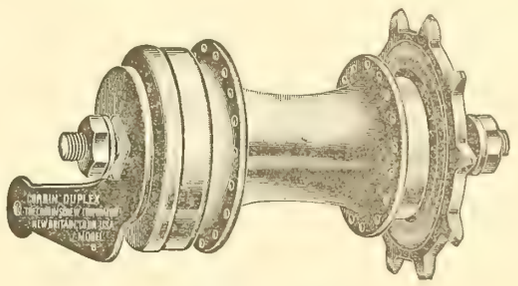
Motor—4-horsepower.
Valves—Mechanical.
Lubrication—Sight feed.
Speeds—Two.
Fork—Cushion plunger.
Drive—Roller chain.
Cylinders—One.
Ignition—Magneto.
Clutch—Disc on countershaft.
Frame—Rigid; trussed cradle.
Brakes—One; band.
Tires—28 x 2½.
Control—Motor: double grip and hand latch; clutch: pedal; gearset: pedal; brake: pedal.
Tanks—Gasoline: 1¾ gallons; oil: 3 pints.
Other models—Same, with tandem seat, $300.
New features of the line—Inclined motor; Bosch magneto in front of cylinder; mechanical inlet valve; redesigned cylinder and exhaust pipe; new cam case; heavier fork and springs; easier starting motor; double lubricating system; new form seat spring suspension; heavier rims.



CORBIN BRAKES

make bicycling and motorcycling SAFE at all times on any road.

A slight back pedaling pressure operates the CORBIN, which is located in the rear wheel hub.



Your machine can be stopped instantly or slowed down gradually, according to desire or the need of the moment.

BRAKES FOR BICYCLES

CORBIN TWO-SPEED

The Corbin Two-Speed Coaster Brake is invaluable for hill climbing and wind resistance. Added to this is the element of safety in having your machine under complete control.

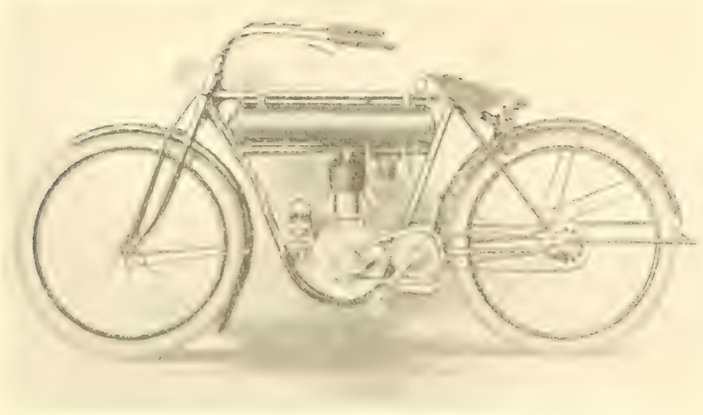
CORBIN DUPLEX

The Corbin Duplex has been the standard in Coaster Brake construction for thirteen years. Either of these Brakes can be fitted to any make of bicycle.

The CORBIN MOTORCYCLE BRAKE has a V-shaped drum and a triangular friction band. This yields 50 per cent. more braking surface than the old flat band type. Riders of high powered machines should be Corbin equipped for this reason alone.

Chain interference is impossible with the Corbin Brake. The releasing mechanism is entirely outside, making the action easier and more reliable. The Corbin can be fitted to either belt or chain driven Motorcycles.

Your Guarantee of Corbin efficiency and reliability is the manufacturers' thirteen years experience.



No matter where you may ride you're always in Corbin territory. Sold by leading Jobbers and Dealers everywhere. Ensure SAFETY by specifying CORBIN and insisting on it.

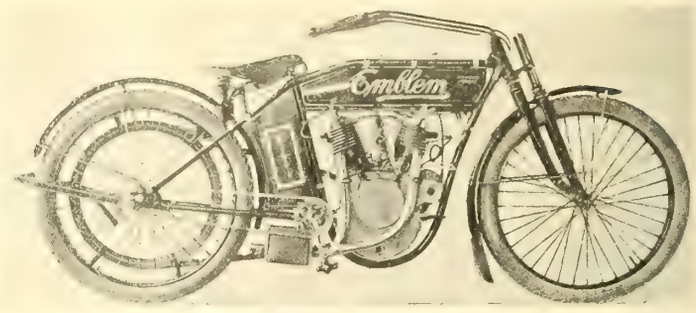
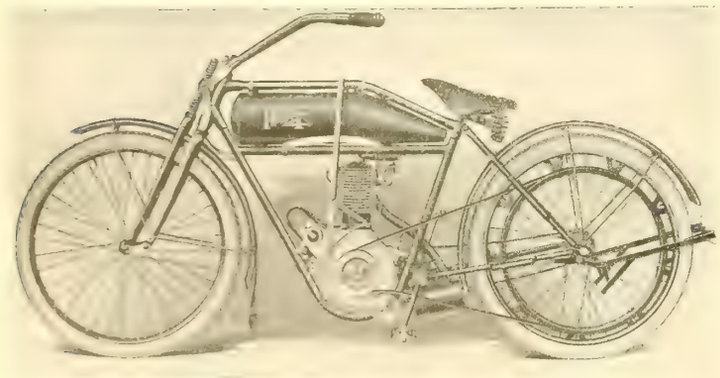
THE CORBIN SCREW CORPORATION, New Britain, Conn.



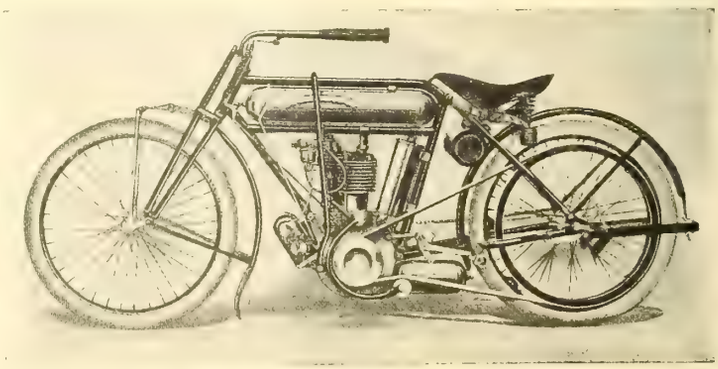
(Licensed Coaster Brake Manufacturers)

Western Office, 65 West Lake Street, Chicago, Ill.



1912 MERKEL SINGLE, $200

Motor—4-horsepower.
Valves—Inlet automatic.
Lubrication—Sight feed.
Speeds—One.
Fork—Sager type, double plunger.
Drive—Chain.
Cylinders—One.
Ignition—Magneto.
Clutch—Disc on countershaft.
Frame—Rigid; trussed loop.
Brakes—One; band.
Tires—28 x 2½.
Control—Motor: double grip; clutch: hand latch; brake: pedal.
Tanks—Gasoline: 1¾ gallons; oil: ½ gallon.
Other models—4-horsepower single, $225; 6-horsepower twin, $250; 7-horsepower twin, $275; all magneto, chain or belt drive and spring frame.
New features of the line—Chain drive on stock models; new carbureter; rigid frame model; clutch as regular equipment on all models; shock absorber in hanger on spring frame models; larger belt.



1912 EMBLEM TWIN, $250

Motor—7-horsepower.
Valves—Inlets automatic.
Lubrication—Hand pump.
Speeds—One.
Fork—Cushion plunger.
Drive—V belt.
Cylinders—Two.
Ignition—Magneto or dual system.
Clutch—Disc on main shaft.
Frame—Rigid; trussed loop.
Brakes—One; coaster.
Tires—28 x 2½.
Control—Motor: double grip; clutch: hand latch; brake: pedal.
Tank capacity—Gasoline: 2 gallons; oil: 2 quarts.
Other models—4-horsepower single, battery, $175; same, magneto, $200; 5-horsepower, single, battery, $200; same, magneto, $225. V or flat belt or either, and including clutch.
New features of the line—Shorter frame head; three stem handlebar lock; lower top frame tube; lower gooseneck saddle spring; longer front forks; greater front and rear mudguard clearance; improved rear fork ends, and stand mounting; improved stand; integral rear fork ends, and stand mounting; improved stand; oil compartment in front; oil pump in front part of tank; celluloid oil pump barrel; smaller battery case with improved fastening; thinner cylinder flanges; ground cylinders; improved crankshaft oil retention packing; improved base compression release; larger mainshaft and connecting rod bearings; improved valve mechanism; new contact breaker cam; larger clutch discs running in oil.

1912 FLANDERS SINGLE, $175.

Motor—4-horsepower.
Valves—Inlet automatic.
Lubrication—Gravity sight feed.
Speeds—One.
Fork—Cushion plunger
Drive—Flat belt.
Cylinders—One.
Ignition—Magneto.
Clutch—None.
Frame—Rigid; trussed loop.
Brakes—One; coaster.
Tires—28 x 2½.
Control—Motor: double grip; belt tensioner: hand lever; brake: pedal.
Tanks—Gasoline: 1½ gallons; oil: 1½ quarts.
Other models—None.
New features of the line—New model throughout; simplicity; low price.

1912 M. M. SINGLE, $200

Motor—4½-horsepower.
Valves—Inlet automatic.
Lubrication—Hand pump.
Speeds—One.
Fork—Leaf spring.
Drive—Flat belt.
Cylinders—One.
Ignition—Magneto.
Clutch—None.
Frame—Rigid; trussed keystone.
Brakes—One; coaster.
Tires—28 x 2¼.
Control—Motor: double grip; clutch: hand lever; brake: pedal.
Tanks—Gasoline: 1½ gallons; oil: 3 pints.
Other models—8-horsepower twin, belt and magneto, $275; 4-horsepower single special, magneto and belt, $160; same with battery, $140. V belt optional on all models. Expanding drum clutch for V belt equipped twin and big single, $15 extra.
New features of the line—Longer stroke on 4½ motor; new carbureter, cylinder priming cups, and regular equipment of flat belt and hand idler on twin; magneto gear driven on "4" special; general refinements include lower saddle position; new form of saddle; dropped seat cluster gooseneck; lower and longer handlebars; longer cylinders and pistons; four rings; greater front tire clearance; longer fork uprights and heavier spring leaves; drop forged fork rockers; wider rocker bearings; drop forged one-piece flywheels and mainshafts; vanadium steel fork spring leaves.

New Fixin's for the Man and Motor

WHAT THEY ARE AND WHERE TO FIND THEM

As usual a surpassingly complete line of motorcycle accessories will be displayed at the Garden exhibition. Practically every product entering into the manufacture of the motorcycle, either in raw or finished form, will be displayed, and visitors will have an opportunity to become familiar with the construction of the various components by close range study at the booths where they will be exhibited. That star educational school, the sectioned instrument, of course will be staged at many booths, and in some cases will be shown in actual operation.

The exhibitors of motorcycle accessories and the products they will display, together with their space numbers, are as follows:

At space 218, in the west balcony, the Bosch Magneto Co., New York City, will show a complete line of its motorcycle magnetos. This will be the only show of the year at which the full Bosch line will be exhibited. The motorcycle magnetos are designated by new numbers, ZEI and ZEV, succeeding the DAV and DA2 types. They retain the principal features of the preceding types, and in addition, all the operating parts are enclosed, rendering the instruments practically oil, dust and water proof, and immune from derangement by any weather condition.

Enclosed magnetos also will be a prominent feature of the display of Marburg Bros., Inc., New York City, at space 537. This firm is exploiting the Mea instrument, a German make, whose most striking characteristic is its rocking magnets and pole pieces, for advancing the spark. It is claimed that these instruments are so completely weatherproof, that they will operate regularly in a downpour of rain. They are made for dual systems of ignition. Another line to be shown at this stand, is the S. R. O. ball bearing, which hails from Switzerland. It is claimed that the makers are the oldest factory producing annular bearings, and special stress is laid on the means devised to insure positive lubrication.

Something entirely new in motorcycle clothing will be shown at the stand of the Nathan Novelty Co., New York City, space 621. A novel and stylish two-piece riding suit has been designed, in dark double mackintosh material, which is claimed not to show dust or grime. The coat may be worn either tight fitting, or box style, by means of an invisible belt. The trousers are roomy above the knees, like riding breeches, and at the calves have a legging fit, with a snap catch. Also, a full line of Nathan standard goods for the rider and machine will be shown.

Motors in single and twin form, together with disc clutches, and two-speeds of the sliding gear type, will constitute the exhibit of the F. W. Spacke Machine Co., Indianapolis, Ind. They will be located at space 312. The complete line of motors consists of 4 and 5 horsepower singles, and 7 and 9 horsepower twins, the latter being the highest powered motorcycle engine manufactured in this country. The motors are equipped, either for chain or belt drive, and come complete with magneto and carbureter. One of the unique features is the enclosed shaft magneto drive. An engine in section also will be exhibited.

A display board showing the delineation of a motorcycle in its entirety, as regards tubular parts, will be the top line feature of the exhibit of the Standard Welding Co., Cleveland, O., at space 177. The parts will be shown just as supplied to manufacturers of complete machines, and will give a very clear idea of how many Standard products are used in the making of a motorcycle. Another display board will show samples of stock tubing, and still another a line of rims and belt pulleys. The rim display will include a new type, just brought out, and accepting any 2½, 2¾ or 3 inch tire. It is made in two diameters, 26 and 28 inches, and of course is of heavy stock to withstand the increased strains which it is intended to bear.

At space 125, the Badger Brass Mfg. Co., New York City, will show a complete line of Solar motorcycle lamps, both acetylene and oil. The acetylene types are made with separate and self contained generators.

F. A. Baker & Co., New York City, while missing from the motorcycle section this year, will be on hand as usual with a very complete line of domestic and foreign accessories and novelties. They will be located at space 401 on the mezzanine floor.

The Baldwin Chain & Mfg. Co., Worcester, Mass., will show a line of motorcycle chains embracing the well known Baldwin quick detachable link feature. This exhibit will be found at space 136.

Byrne, Kingston & Co., space 174, carbureters and spark coils; Coes Wrench Co., Worcester, Mass., space 155, wrenches; Columbia Lubricants Co., New York City, space 217, oils and greases; Connecticut Telephone & Electric Co., Meriden, Conn., space 154, spark coils; Continental Rubber Works, Erie, Pa., space 217, Continental motorcycle and bicycle tires; Diamond Chain & Mfg. Co., Indianapolis, Ind., space 138, chains; Diamond Rubber Co., Akron, O., space 127, motorcycle and bicycle tires; Joseph Dixon Crucible Co., Jersey City, N. J., space 182, lubricants; Eisemann Magneto Co., New York City, space 216, magnetos; Federal Rubber Mfg. Co., Milwaukee, Wis., space 222, Federal motorcycle and bicycle tires; Fisk Rubber Co., Chicopee Falls, Mass., space 122, Fisk tires.

J. L. Gibney & Bro., Philadelphia, Pa., space 501, tires and accessories; B. F. Goodrich Co., Akron, O., space 126, Goodrich tires; Goodyear Tire & Rubber Co., Akron, O., space 130, Goodyear Blue Streak tires; R. E. Hardy Co., Detroit, Mich., space 134, spark plugs; Hawthorne Mfg. Co., Bridgeport, Conn., space 579, Old Sol lamps; Herz & Co., New York City, space 259, Herz magnetos; S. Hoffnung & Co., Ltd., New York City, space 588, Coventry chains; International Acheson Graphite Co., Niagara Falls, N. Y., space 257, graphite; Janney, Steinmetz & Co., Philadelphia, Pa., space 173, spark plugs; Jeffery-DeWitt Co., Detroit, Mich., space 567, spark plugs.

Jones Speedometer, New York City, space 143, speedometers; Light Mfg. & Foundry Co., Pittstown, Pa., space 133, aluminum castings; Manufacturers Foundry Co., Waterbury, Conn., space 276, cylinder castings; C. A. Metzger, Inc., New York City., space 135, spark plugs; Charles E. Miller, New York City, space 161, accessories; Wm. P. Miller's Sons, Brooklyn, N. Y., space 618, belt dressing; A. R. Mosler Co., New York City, space 180, spark plugs; Frank Mossberg Co., Attleboro, Mass,. space 581, wrenches.

National Carbon Co., Cleveland, O., space 132, batteries; New Departure Mfg. Co., Bristol, Conn., space 223, motorcycle and bicycle brakes, cyclometers; New York Sporting Goods Co., New York City, space 251, accessories; A. S. Noonan Tool & Machine Works, Rome, N. Y., space 514, chain tools; Pennsylvania Rubber Co., Jeannette, Pa., space 147, Pennsylvania tires; Pittsfield Spark Coil Co., Pittsfield, Mass., space 167, spark coils; Rose Mfg. Co., Philadelphia, Pa., space 279, Neverout lamps; C. F. Splitdorf, Inc., New York City, space 128, magnetos, coils, plugs; Standard Thermometer Co., Boston, Mass., space 247, Standard speedometers; Star Speedometer Co., Milton, Pa., space 405, speedometers; Stevens & Co., New York City, space 619, accessories; Stewart & Clark Mfg. Co., Chicago, Ill., space 227, Stewart speedometers; Timken Roller Bearing Co., Canton, O., space 165, roller bearings.

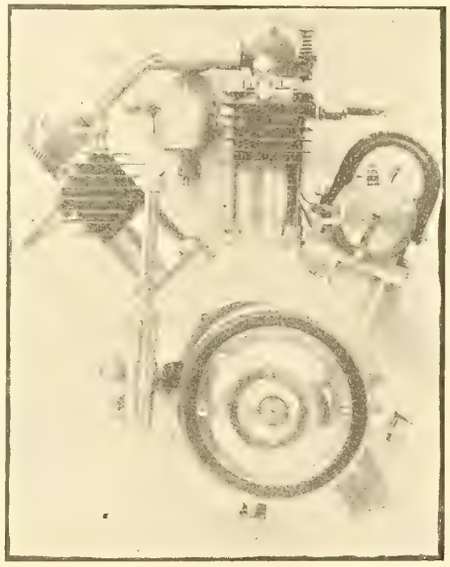
C. O. Tingley & Co., Rahway, N. J., space 407, tire sundries; United States Tire Co., New York City, space 124, United States tires; Vacuum Oil Co., New York City, space 188, oils; Veeder Mfg. Co., Hartford, Conn., space 123, cyclometers; Warner Instrument Co., Beloit, Wis., space 150, Warner autometers; Weed Chain Tire Grip Co., New York City, space 142, tire chains; Wheeler & Schebler, Indianapolis, Ind., space 145, carbureters; Whitney Mfg. Co., Hartford, Conn., space 179, Whitney chains; W. R. Winn, New York City, space 425, lubricants.

Where to Put the Magneto, and Why

By A. H. BARTSCH.

It is surprising to note that during the rapid development of the modern motorcycle, one vital point had been practically overlooked by many manufacturers until but a year or two ago; that is, the proper attachment and location of the magneto, "the motor's heart."

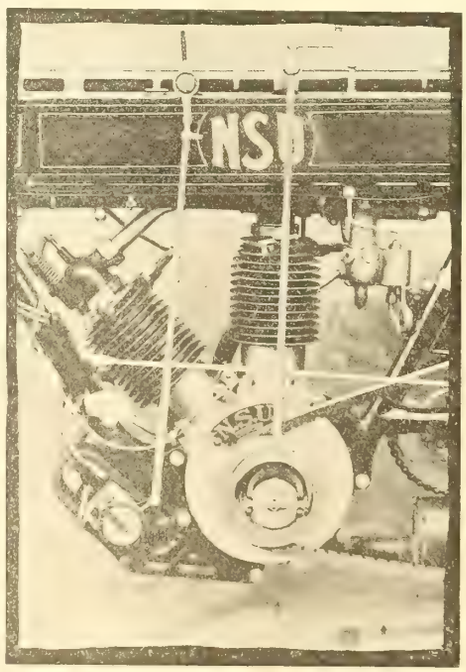
Two or three manufacturers have awakened to the necessity, and it is hoped that the rest soon will follow, in placing the magneto in a position where it will be protected from the splashes of road water, nor required to receive the brunt of a downpour of rain. Magneto makers have watched the ordeal, if I may so term it, that their instruments were required to undergo, and one of them at least is showing at the Garden an instrument that is entirely water and dust proof; but this should not hinder placing so important a member of a motorcycle's make-up in a more protected position.



Strange as it may seem, it is nevertheless true, that the high tension magneto was used on motorcycles quite some time before it made its appearance as part of the automobile's equipment, so that it is rather difficult to understand why the motorcycle makers, who led the way for manufacturers of the more expensive pleasure vehicle, should remain behind the times and allow themselves to be criticised for inaction.

The magneto assisted materially in establishing the motorcycle as a reliable vehicle, and this form of ignition has become so widely known for its dependability, that the battery, which held the position of chief importance as a current source, but a few years ago, now is rated as a "has been." The change has helped greatly the present day mount in establishing itself among a bétter class of people, who, heretofore, have refused to tinker on the roadside with the difficulties connected with timer and coil.

As I have said, the motorcycle designer was in the advance when he adopted the high tension magneto for his ignition system, but be that as it may, most of them now can learn considerable from the automobile designer concerning the actual attachment of the instrument.



Of course, it is to be admitted, that the designers of engines for motorcycles have a very much harder set of conditions to face, than those confronting the designer of motor car power plants. Motorcycles must be compact, the motors must be small yet powerful, and whatever appliances are necessary to make up the power unit, must fit in unfilled spaces below the tank, which, by the way, are rather limited. In addition, these components must appear as a direct part of the motor itself as nearly as possible.

This has resulted in placing the magneto forward of the motor in most in-

PROPER PLACE FOR THE MAGNETO

stances, which location has proven to be exactly the one a magneto should not occupy, for when it is desired to remove the instrument, it is exasperating, to say the least, to find the holding down bolts which secure the magneto to its platform, so

MAGNETO UNSUITABLY PLACED

covered with mud, and encrusted with rust, that the task of removal is made nigh impossible without causing considerable damage.

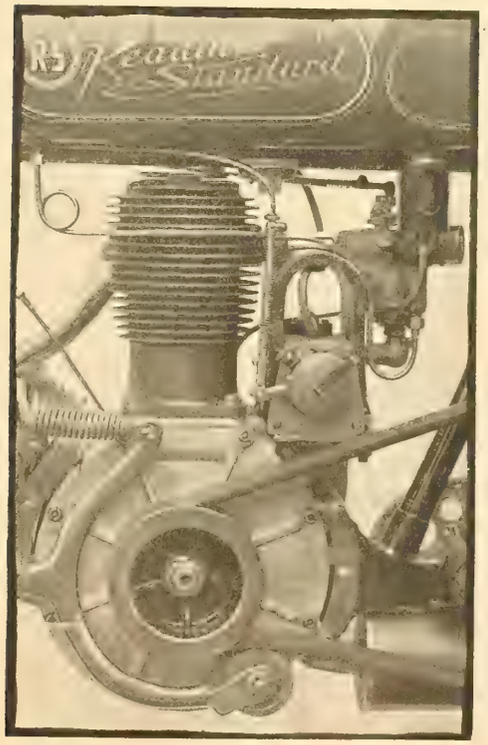
Moreover, this position forward of the crank case, brings the magneto so low, as to make it necessary for the rider to assume anything but a comfortable position, when the contact breaker or carbon brushes require attention after a drop into a mud hole or water pool.

As mentioned, some of our designers have awakened to the evident necessity of protecting the magneto from the ravages of mud, water and road dust, and are relocating the instrument to the rear of the motor. In another year, I hope, for the good of all who motor on two wheels, that we will see all magnetos so placed, as to contribute further to the reliability of the motorcycle in general.

Several years ago, a motorcycle handled by a large dry goods concern in New York —the machine was an imported one—had the magneto placed in the tank. The armature was driven by a shaft with bevel gears, obtaining power from the countershaft gear. This location surely protected the magneto admirably, but a possible leakage of gasoline into the magneto compartment might have resulted in a serious conflagration, although I yet have to hear of one so started. In addition to this rather adverse possibility, a fall would be liable to break or bend the driving shaft, and thus the motor would be placed entirely out of commission.

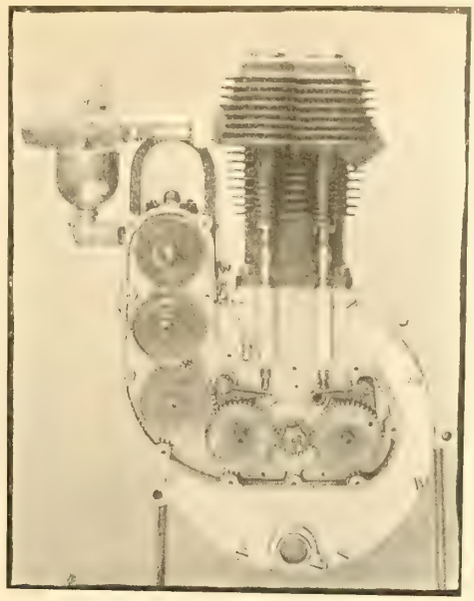
Still another point to be considered before adopting this position for the magneto, is the fact that a very undesirable reduction in tank capacity would result, so that, all in all, this location hardly would appeal to the majority of riders.

I believe it was about three years ago, that the N. S. U. Motor Company, of New York, placed a small twin cylinder motorcycle on the market, with the magneto mounted on an aluminum platform abaft of the engine. When I saw this, and the neat method of casting the platform integral with the crank case, I expressed myself as being satisfied that motorcycle designers at last were going to give the riding public a proper location for the magneto on their mounts.



Here was a magneto, easily accessible, not at all in the way, and protected from the splashes and dashes of mud and rain. The position was not so high as to cause the machine to be top heavy, yet, when the contact breaker required inspection, it was possible to attend to it without standing on your head.

Very shortly after this, I was glad to note the Harley-Davidson people placing the magneto on their single cylyinder model also to the rear of the motor, high and dry from the road. In view of these examples, we may hope, in the near future, to purchase our favored mounts with the magneto properly located.



Now that manufacturers are giving a more protected position to the magneto, more is to be learned from the automobile designer, who once learned from us; —that is, in regard to the actual attachment of the instrument. In the cases cited, the magneto is secured by holding down bolts, which, as I have mentioned, make detachment very trying when they become rusted, as they naturally will do, being unplated.

The majority of magnetos fitted to automobile motors, are held in position by dowel pins or studs fitting into nicely registered recesses. Two brass straps then are passed over the magnets, one from each side of the base plate, and are held together at the top by a neat form of clip, removable by releasing a thumbscrew. These straps hold the magneto firmly on its bed, while the studs prevent shifting; really an ideal method of securing the instrument.

At the 1911 motorcycle show at Madison Square Garden, I was very agreeably surprised to find the newly modeled R. S. single cylyinder motorcycle designed with its magneto secured by a method very similar to that just explained. The straps, instead of being secured by a thumbscrew, were held to the base by a plain bolt, which in turn was secured to the platform casting by another bolt, as illustrated in the accompanying photog.aph. Thus a secure fastening and an excellent location was given the magneto.

PROTECTED FROM MUD AND WATER

SHOWING AN IDEAL GEAR DRIVE

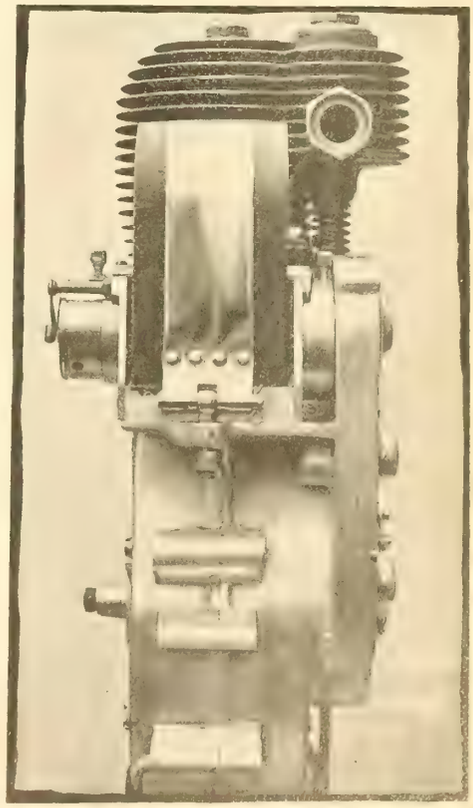
This really is the ideal, from my point of view, and I feel quite justified in saying that many others would be pleased to see all motorcycles so designed that the magneto is given not only a more protected position, but that its detachment would be a mere matter of loosening one nut or thumbscrew.

While I am dealing with the subject, a small point, which could be improved upon, is the method of retiming the magneto. At present, too many parts have to be removed before the magneto timing can be altered. Of course, it is seldom that the timing requires any alteration, and it is best to leave it as set by the motorcycle manufacturer, but then, some riders will race and tour on the one machine, and it might be able to make the necessary timing alterations, or arrangements, more simplified for them. This would be appreciated by those who have trouble with timing gears slipping on the taper shaft, thus throwing the timing entirely out. We shall live in hope.

A Dissertation on Tire Valves.

An old tire man who has followed the development of the motorcycle from its inception, has the following to say regarding valves:

"It is a remarkable fact that the valve insides to-day are the same that were used twenty years ago on bicycle tires. In fact, the valve is about the only individual part of motor vehicle construction that has not been greatly improved.



"My observation is that a great deal of tire trouble is due to leaky valves, and this is particularly annoying because frequently the real cause is not discovered until after the shoe has been taken off. In any event, the only remedy is replacing the valve-plunger, and this necessitates pumping an empty tube. Furthermore, if the plunger sticks, it is more than likely that the little prongs at the top will be twisted off so that the inside cannot be removed at all.

"Often, assuming that no difficulty has been experienced in taking out the inside, a new inside will not remedy the trouble, because the small external rubber washers rot and stretch so fast that they are quite likely to be defective, although apparently in good condition. Furthermore, the inner metal shoulder in the outer tube, against which this washer seats, may be burred or worn, and the least defect will cause the washer to tear.

"Great care is needed in inserting the inside, because it must be screwed tight to seat the washer, but if screwed too tight it may tear the washer. I have put into the same tube two or three new insides in succession without stopping the leak.

"I have also seen persistent leaks through the check valves themselves. These valves are so infinitesimally small that it is impossible to tell by inspection whether they are defective or not, so that it is a matter of luck whether or no a new inside will remedy the difficulty. The small size of the inflating passage and the proportionally large back pressure are a result in the use of a great deal more muscle in pumping than ought to be necessary.

"On several occasions during the past four years, I have had a whole new valve put into an otherwise serviceable tube. This is more expensive than any other tube repair; and, furthermore, if the repair is carelessly done, the tube is likely to be spoiled."

How Our Advertising Paid Our Dealers

ONLY a limited number of people will of their own accord buy motorcycles this year. That limited number, we believe, will not purchase much more than one-half of the output of the various motorcycle factories.

Realizing this the Harley-Davidson Motor Company does not intend that its dealers shall have to be satisfied with their share of this natural demand. We are therefore inaugurating the biggest sales creating campaign ever even attempted by any motorcycle manufacturer. Half pages and full pages will appear in the Saturday Evening Post, Collier's Weekly, Everybody's, Cosmopolitan, McClure's, Munsey's, Ainslee's, Popular, American, Argosy, Sunset, Pacific and the rest of the prominent national magazines.

We will tell in these ads of the advantages to be had from the use of the Harley-Davidson Motorcycle as well as the particular advantages of this machine itself.

Millions of people will be influenced more or less by these advertisements—thousands will be brought in touch with our dealers, and our experience last year has demonstrated absolutely that a good percentage of these prospects will buy Harley-Davidsons. For instance, here's a few examples:

Recently our dealer in Danville, Kansas, reported the sale of Harley-Davidson to seven (7) prospects we had referred to him within one month.

Our Chicago dealer traced the sale of more than twenty Harley-Davidsons to two advertisements we carried in one magazine last summer.

Our dealer in Oklahoma City made seven sales from one advertisement in one other magazine.

In Cleveland, our dealer, whose sales ran well into the hundreds last year, made the statement not long ago that nearly one-fourth of the sales he made were made to fellows who came into his store and said, "I want to look at a Harley-Davidson Motorcycle."

Just as we write this advertisement the following letter comes to hand from our dealer in Ashtabula, Ohio:

"I am in receipt of your recent letter enclosing copy of letter written to Mr. Carleton. I called to see him and got his order for a model 8A."

Now, in comparison with a proposition of this kind, where does an ordinary dealer **"get off at"** who only has the prospects to work on he has drummed-up himself, by his own personal efforts? Think it over.

1912 is going to be the biggest year the motorcycle industry has ever known. The biggest year for motorcycle dealers in general, and for the Harley-Davidson in particular.

The Harley-Davidson is a Dealer's Proposition Worth Considering.

Latest F.A.M and Club News.

437 OFFICIAL REPAIR SHOPS

Year Just Closed Shows Excellent Results in Membership Department—New Year Promises Much Progress.

Says Chairman Estabrook, of the F. A. M. Membership Committee in his weekly bulletin:

Hutchinson, Kansas, is a thrifty western city of about 25,000 inhabitants, in which the percentage of motorcyclists is fully up to the average. Harry A. Ambler, 20 West Sherman street, who is contemplating building a motorcycle garage, has made a canvass of the riders and finds a sentiment in favor of organizing a club, the details of which will soon be perfected.

H. F. Lans, who is connected with the Phoenix Cycle Company, 135 North Center street, Phoenix, Ariz., has been interviewing the motorcycle riders of that hustling town, and has secured pledges sufficient to form an F. A. M. club. The Phoenix Cycle Company has a finely equipped general repair shop, and will be registerd as an F. A. M. institution.

A movement is on foot in Augusta, Ga., to organize an F. A. M. club to come in early in the new year. Chester Story is planning to run some local races, the proceeds of which will be donated to the embryo club

The chairman has been permitted to view the plans and itinerary of the Central District Tour, which will be conducted under the ausnices of the Short Grass Club of Kansas, during the summer of 1912, and feels frank to say this will be the greatest event of the kind ever attempted by motorcyclists. Of course it would be unfair to give even a line on this in advance of the information itself, which will presently be given to the cycling papers. However, riders who could reach this tour with one or two day's traveling, should begin now to lay their plans and get into communication with Vice-President B. J. Patterson, of Pratt, Kansas, who will furnish details and otherwise advise with prospective tourists. This tour is going to be a hummer and the rider who misses it will lose the opportunity of a lifetime. It is not going to be a high cost affair, either, but it will be a high-class and novel one, and riders should watch the papers for the announcements. Verily, Patterson and the officers of the Short Grass Club can show all of us a little bit, and then some.

During the closing week of the year, 19 repair shops were registered, making a grand total of 437. The new registrations are as follows: F. D. Johnson, 619 Walnut street, McKeesport, Pa.; P. I. Haynes & Co., 45 North Third street, Columbus, O.; Appleton Motorcycle Company, 760 College avenue, Appleton, Wis.; F. W. Huels, 115 State street, Madison, Wis.; W. H. Wolfe, 1011 Chestnut avenue, Altoona, Pa.; G. W. Webb, 2210 Fourth avenue, south, Minneapolis, Minn.; J. Carriker, Orange, Calif.; B. B. Millison, 114 South Fifth street, Steubenville, O.; W. E. Metzger Company, 351 Woodward avenue, Detroit, Mich.; A. McCarthy & Son, 915 Frederick avenue, St. Joseph, Mo.; Richardson Bros., 439 Court street, San Bernardino, Calif.; J. E. Swank, 338 South Sandusky avenue, Bucyrus, O.; E. O. Wheeler, 174 Central avenue, Albany, N. Y.; T. E. Lindsay, 59 North Sixth street, Zanesville, O.; T. M. Caldwell, Telephone Block, Amarillo, Tex.; S. J. Van Pelt, Washington C. H., Ohio; Warsaw Motorcycle Company, 120 West Market street, Warsaw, Ind.; Brockton Sporting Goods Company, 11 North Main street, Brockton, Mass.; Frank H. Drew Company, 226 South Second street, Cedar Rapids, Ia.

All registered F. A. M. repair shops are local recruiting station for the F. A. M., where literature pertaining to the organization is always on tap, and where copies of the motorcycle journals may be consulted. Touring or visiting members, or other riders, can always obtain reliable information at the F. A. M. shops.

Will County Club's Annual Ball.

Joliet, Ill., Jan. 2.—Great preparations are in progress for the annual ball of the Will County Motorcycle Club, January 11. One of the unique features of the decorations of the hall is that everything used bears a relation to motorcycling, and clubs and organizations from all over the country send samples of their pennants and club colors to add to the effect. Manufacturers and dealers send along their illustrated advertising matter, and as it is all arranged artistically on the walls the effect as a whole is pleasing.

DECEMBER MEMBERSHIP REPORT

Secretary Gibson's Monthly Bulletin Announces 233 New Members for the F. A. M., and 114 Renewals.

December was productive of securing 233 new members for the Federation of American Motorcyclists, coming from the following States: Massachusetts, 7; Connecticut, 1; Rhode Island, 1; New York, 21; Pennsylvania, 12; Maryland, 3; Tennessee, 5; Georgia, 3; Florida, 14; Mississippi, 1; Texas, 4; Oklahoma, 1; Indiana, 11; Illinois, 11; Ohio, 64; Wisconsin, 2; Michigan, 6; Missouri, 2; Kansas, 19; Nebraska, 4; Iowa, 3; Minnesota, 1; California, 14; Arizona, 1; New Mexico, 1; Oregon, 2; Montana, 1; Colorado, 6; Idaho, 2; Washington, 2; Canada, 3; Philippine Islands, 2.

By F. A. M. districts the division of the new members for December is as follows: New England, 9; Atlantic, 39; Peninsular, 23; Gulf, 5; Lake, 96; Central, 27; Southwestern, 22; Pacific, 7; Canadian, 3; Insular, 2. Of the new members 159 are affiliated with clubs and 74 have no club affiliations.

There was a total of 114 renewals of membership for November, divided as follows in the various districts: New England, 17; Atlantic, 24; Peninsular, 3; Gulf, 3; Lake, 39; Central, 6; Southwestern, 16; Pacific, 6.

Encouraging Development of Chesapeakes.

Baltimore, Jan. 2.—The Chesapeake Motorcycle Club, the youngest motorcycle organization of Baltimore, is now snugly installed in its new club house on Baker street, corner of Fulton avenue. The club is not yet a year old, but has met with a success most gratifying to the original promotors, and a substantial increase in the membership is anticipated in the spring. The new club house consists of a one-story and basement detached building just off a smooth street, and is nicely fitted up, the basement being the meeting room, while the upper floor will be devoted to social affairs, a ladies' night is being planned to occur at frequent intervals.

The new home of the club, however, does not allow much room for the storage of

machines, but the members consider it as but a stepping stone to a larger home in the near future. Recently a movement was started looking towards a consolidation of the club with the Maryland Motorcycle Club, but the Chesapeakes turned down the proposition, feeling fully able to paddle their own canoe. During the coming season the Chesapeakes expect to promote a number of contests, and expect to take a prominent part in the motorcycle affairs of the Monumental City.

Cold New Year's Run of Ohioans.

Columbus, O., Jan. 2.—Mercury in the local thermometers was down among the wee figures on New Year's Day, when 15 members of the Columbus Motorcycle Club gathered at Broad and High streets for the first "social run" of the year to Springfield, a distance of 65 miles. The start from the "Arch City" was made at 10 o'clock. From the frozen and rough condition of the roads, spills and accidents were sprinkled plentifully in the path of the Columbus cyclists. Seven of the 15 starters "died" en route, and after thawing out at various farm houses along the road turned their machines about and "beat it" home. Those fortunate to reach Springfield immediately put themselves on the outside of a good dinner. The start back was made at half-past one, but some of the riders did not reach home until long after old Sol had dropped below the western horizon. At Springfield, two braver spirits, Leo P. Birkenbach and Otto Tressmer decided to visit Dayton, 27 miles farther on. The two riders made excellent time despite the poor condition of the roads and reached the "Gem City" later in the afternoon. Birkenbach has the agency of the Yale machine and he rode a new "Five" on the trip.

Oakland Wants Club 100 Per Cent. F. A. M.

Oakland, Calif., Jan. 1.—At the meeting of the Oakland Motorcycle Club, held December 29, it was decided that all applicants for membership must be F. A. M. members, or willing to become such upon entrance. At the present time 75 per cent. of the members belong to the F. A. M. and the near future will see the club an 100 per cent. one.

On New Year's Eve the club participated 400 strong in the parade given by the Oakland Improvement Club in honor of changing the steam railroad lines to electric power. The parade was a decorated one, and included singles, tandems, sweethearts and wives and possibly the other fellow's girl, all decorated in club colors of red and green.

As will be seen by referring to the two views of the interior of the club's headquarters published on this page, fine accommodations are provided for the members and their friends. In the meeting room all the comforts of home are provided, and the line of amusement is looked after in the equipment of the pool room, where is located the cigar, candy and soda water stands. The club has completed all arrangements for an immense theater party, to take place during the early part of January, and which is anticipated to exceed any previous event of the sort.

HUNGRY CEDAR RAPIDS MOTORCYCLISTS READY FOR ANNUAL FEAST

Iowa Motorcyclists Celebrate with Banquet.

Cedar Rapids, Ia., Jan. 1.—Organized last March, with a charter membership of 28, the Cedar Rapids Motorcycle Club has now almost 100 on its rolls. This is progressing, some, and the club recently celebrated with a banquet to inaugurate the social winter season, a flashlight photograph of which is shown on this page. The club stands high in the estimation of the citizens, and one of the most prominent organizations of its character in Iowa.

Lockport Celebrates With Banquet.

Lockport, N. Y., Jan. 2.—The dining room of the Niagara House, this city, was the scene of the annual banquet of the Lockport Motorcycle Club, on New Year's Eve and 50 members and guests attended. The event was arranged in honor of the completion of the club's new headquarters, which were formally opened on New Year's morning. The excellent repast provided was thoroughly enjoyed, as were the appropriate remarks by the officers and leading members, presaging a prosperous year.

SPLENDIDLY FITTED ROOMS OF THE OAKLAND (CAL.) MOTORCYCLE CLUB

New Rooms for Providence Motorcyclists.

Providence, R. I., Jan. 4.—Holding one of the best attended and most productive meetings in its history, the Providence Motorcycle Club convened on Wednesday, January 3, for its annual business meeting. After general exchange of the season's greetings, the elections were taken up, the choice being as follows: President, E. L. Buffington; vice-president, F. E. Domina; secretary, J. G. Edwards, 298 Blackstone street; treasurer, B. A. Swenson; captain, C. A. Anderson; lieutenants, A. V. Howe and E. A. Lutz.

Negotiations with B. A. Swenson were completed for the club's future home in his new buildling now in course of construction at the intersection of Broad, Friendship and Blackstone streets, a prominent central location, and providing most commodious quarters for all purposes and additional room for expansion. Through Swenson's generosity,who is one of the founders of the club, and to whose energy and sportsmanship largely is due the high standard of prosperity of Rhode Island's motorcycling, a nominal rental was obtained.

Memberships were shown to have almost doubled during the past year, and an even greater increase is anticipated this year.

A motorcycle track promotion was put in work and J. K. Crafford, B. A. Swenson, C. A. Anderson assigned as committee to interest private capital in 50 per cent. of the shares, the club to subscribe for a like portion.

The date for the annual club dinner was settled on for January 28, immediately following the close of the Providence automobile and motorcycle show.

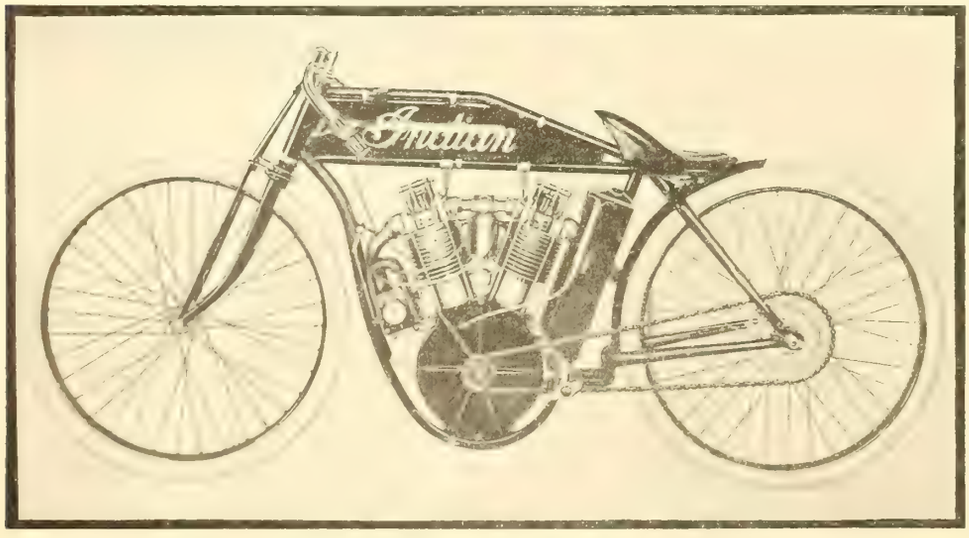
The club runs of last year, notably the Herring run, Picture run and Trianble run, brought together more motorcyclists than any other events in New England. They will be repeated this year.

AMATEUR RACES THE FEATURE

Aviator Rodgers Cannot Soar Because of Wind—His Match with DeRosier Postponed One Week.

Los Angeles, Cal., Dec. 24.—Cal. P. Rodgers, famous coast-to-coast aeroplane driver, failed to get into the air at Ascot Park to-day. A treacherous wind which blew across the track, whirled clouds of dust into the atmosphere and made flying hazardous. Rodgers took his biplane into the infield in the hope that the wind would die down, but the gale continued.

Jake DeRosier, who was matched to race against Rodgers, tuned his motorcycle to a 50-second clip, and went out in an exhibition mile in an effort to break the track record established last Sunday by Morton Graves. The wind on the back stretch proved too much for DeRosier. He turned the mile, however, in :52⅕.



The motorcyclists were sent out in a series of races which were not speedy, but otherwise were quite exciting. In the first event, a five mile race, G. F Jakobe, an amateur, fought a fierce duel with George Sawaya, the two riding into the turns wheel to wheel. Jakobe took the pace early, but could not shake Sawaya off. The plucky lad hung to the leader and the two boys whirled the last turn of the fifth lap with less than a wheel length between them. They hummed down the stretch together with Jakobe just nosing out Sawaya, who was a good second. The time of 4:57 was good for an amateur event.

In the eight mile event for trade riders Jakobe took the lead early in the race and looked like a winner. On the first turn of the third lap Jakobe's machine skidded. He had a hard fight to keep the motorcycle on the track and lost his nerve. Dave Kinney took the lead. Kinney waited for Jakobe on the last lap, and the two came down the stretch together. Kinney almost made a mistake, however, as Jakobe made him ride like a fiend to win. Kinney crossed the tape less than a wheel length ahead of Jakobe.

In the handicap event the referee made a mistake which almost cost George Sawaya the race. Sawaya won, but the announcer was told by the referee that Kinney was the winner. Sawaya was at least 50 yards ahead of Kinney as he swept across the tape. This caused a near-riot in the judge's stand and Eddie Lingenfelder, manager of the Goodyear Rubber Company's branch, and formerly one of the champion motorcycle riders, called the referee into a hasty conference with the result that Sawaya was given the race.

Kinney made a great race. Starting from scratch he caught every rider in the two-mile handicap except Sawaya. On the last lap he was less than 100 yards behind the leader as the two went into the first turn. He closed the gap on the back stretch and came into the second turn close to Sawaya. The latter increased his lead on the finish, however, and swept across the tape a winner by 50 yards, with Kinney second and Jakobe third. The time was slow.

One of the features of the meet was the victory for Lingenfelder. He had picked probable winners before the races and had equipped certain machines with Goodyear tires. He pulled out at the finish with three places in each race. This, coupled with a one, two, three victory last Sunday, is, perhaps, a unique record.

NEWEST EXAMPLE OF THE INDIAN RACING TYPE OF MOTORCYCLE

This machine, with eight valves and direct chain drive, built for Edward Hasha. Ray Seymour has a duplicate. Note the fadeaway lines of the tank and frame, the short wheelbase, cylinder head braces and footrests on the hanger bracket. Also the long oil tank, with a section indented, through which the rear exhaust pipe leads, keeping the oil fluid.

Buffalonians Received New Year's Day.

Buffalo, N. Y., Jan. 2—Open house was kept yesterday by the Buffalo Motorcycle Club, and the rooms were visited not only by the members, but a host of invited guests accepted the invitations that had been extended. That the year ushered in promises to be a lively one in motorcycle circles was evinced by the large number attending this affair, and the enthusiasm displayed.

Motorcyclists Organize at Petaluma.

Petaluma, Calif., Dec. 30.—Charter membership lists for the new motorcycle club which has been organized here will be held open until January 19. Officers have been elected, as follows: President, Bert Goodwin; secretary, H. Lauritzen; treasurer, R. Schluneggard. It is planned to open permanent club rooms.

A horn and a lamp are considered to be vital necessities, and are required by law, and while a speedometer is not compulsory, its use indicates good business acumen, for it shows that the owner wants to know what it costs to run his machine. Truly, the speedometer may be called "the bookkeeper of the motorcycle."

MOTORCYCLING AS INSOMNIA CURE

Vibration on the Nerve System Affects the Human Frame When Riding a Machine.

Vibration and its effect on the human frame is a story of the automobile and motor cycle as well. It means much or little to a man according to the amount of insulation he has on his nerves. There are people who find as much comfort in hard tires as in pneumatic, and these people are not discussing vibration. They are apparently impervious to it and their opinions on the subject has no value. There are other people who are highly susceptible to vibration, so much so in fact that they cannot endure the gasoline automobile and must needs use the steamer. For this very reason the steam automobile will be in demand for use of such.

The effort of the sensitive rider to conserve his nervous system is a big one. Everything known in springs, cushions, pose in seat, softness of torque is done, and with all these modern perfections not every one enjoys a drive of 200 miles a day.

The selection of the machine is largely up to chance and circumstances, particularly if he be a novice, but its enjoyment afterwards depends almost entirely upon the susceptibility to vibration. Hence the wide and varied notion with regard to weight of machine, size of tire, and length of wheel base. The man with a four-inch nerve insulation is pleased with the rapid skim of the light cars, and the more he shakes and bumps the more he likes the exercise. Before examining the different makes of machines, therefore, the prospective purchaser should visit a physician or health builder and learn the measure of his own nerve capacity, the cushion or resistance of his own frame. He will then be less liable to a misfit on some worthy machine whose sterling merits he would afterward descry, thus raising mechanical issues not at all germane.

In the motorcycle field the situation is keener, just as every function of carbureter, spring, tire, tank, torque, and wheelbase is keener. While usually traveling faster than an automobile, the rider is perched over one little 26-inch or 28-inch wheel with a two-inch tire. In early days of motorcycles he was perched between these two wheels and caught somewhat of the ease between. But the proper pose now is almost over the rear wheel, and his only spring is two small spiral affairs under the saddle, as the spring fork in front does not help much.

There has arisen in the motorcycle ranks much discussion over the respective merits of light and heavy machines. A light motorcycle is represented by 90 pounds, while a substantial machine weighs 150 pounds at least. There are extra heavy high-powered machines, one with four cylinders weighing close to 200 pounds. In the light machines the vibration tingles through the body of the sensitive, while the impervious man does not notice it. To secure lightness the fly wheel must be very light, hence the engine must be high speed, and this makes the fine vibration. But the light machine handles easily, and for running around town on short distances it is the right machine to have. The heavy machine absorbs the vibration, and one can ride long distances on some of them and feel perfectly comfortable.

But the heavy machine has the drawback of being hard to handle on a rutty road. When the road gets muddy and sandy it may have to be pushed. It is great labor to push a heavy motor cycle over a rough country road. A skilled rider, with a slow-moving engine or two-speed gear to give great power, might sit on its back and steer it through very bad ways, but this skill is not yet common.

After all, the art of motoring was settled long ago by railway locomotives particularly adapted to the different divisions of the line. Both light and heavy engines are employed, but the light ones are not asked to do the work of the heavy grades. In motordom, they are, consequently the commercal necessity of building machines that will average up to the conditions, which means that in many cases they would not be perfectly adapted to either. The wealthy automobilist bridges over this by buying two cars, and the motor cyclist who would be satisfied under any and all circumstances will have to do the same. Neither will find in one machine the perfect thing for all sorts and conditions of roads, nor suit all temperaments, from the man who rides over corduroy and doesn't mind it to the man who gets the creeps riding over the shadows of trees.

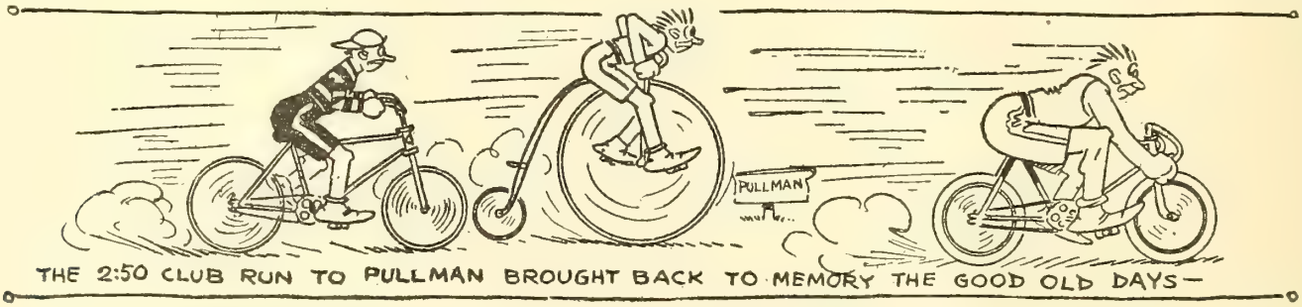
"Karl Kron" Faithful to High Wheel.

His recent death at his home in West Springfield, Mass., October 23, recalls to many that Lyman Hotchkiss Bagg, or as he preferred to be known, "Karl Kron," was renowned the world over for his full nickeled high wheel and white flannels, which he used to the time of his death.

FOLLOWS BROTHER'S EXAMPLE

Ernest Succeeds Nicholas to "Scorching" Honors in Chicago's Classic "2.50" Bicycle Race—Kuehl Second.

Over a course covered with a smooth glaze of ice, and in the face of a stiff wind, Ernest Kockler, in a desperate sprint, in which he led the second man over the tape with only inches to spare, won the twenty-second annual "2.50" club race from Chicago to Pullman, on New Year's Day. Kockler's time for the eleven miles of exceedingly slippery going was 36 minutes.



In winning the race, Kockler duplicated the performance of his brother Nick, known among the Windy City's cycling fraternity as the "strong man" who pedaled to victory through snow, slush and wind on January 1, 1911.

The first fifteen to finish were checked in the following order: Ernest Kockler, Lewis Kuehl, Ed Manning, Fred Nelson, Ralph Steffins, J. F. Slattery, Nick Kockler, Earl Harlow, Herman Hultgren, John Schruedter, M. Chester, Fred Grueper, Frank Payne, Irving Anderson, and James White.

The start back to Chicago was made at 1.30 P. M., and the riders, thoroughly warmed to the going, made a flying trip favored with the wind.

Crescents Elect and Plan for 1912.

Showing continued confidence in the ability and faithfulness of its previous officers, the Crescent Bicycle Club, Baltimore, at its election, December 24, again chose President F. M. Sanborn; vice-president, August Leimbach; treasurer, Charles H. Thoms; secretary and captain, Thomas W. Baker, who has served in these positions continuously since the organization of the club in 1906, with the exception of the term just closed, when J. Fred Huber was the incumbent; the latter, on his declination to succeed himself in these positions, being elected color-bearer, succeeding Alfred J. Baker. For the coming season's road events, Huber is planning several innovations.

WHAT ARTIST FRENCH OF CHICAGO "RECORD HERALD" SAW AT THE "PULLMAN"

Instituted in 1891 by Herbert Githens, N H. Van Sicklen, Charles P. Root, George K. Barrett, and other prominent riders of that time, the 2.50 race still survives as the blue ribbon event in Chicago cycledom. At the time of its inauguration the old high wheelers were in vogue, and there were few in those days who could do a mile in 2.50 or better. This was the name given to the event by its founders, and it still sticks.

Twenty-one survivors of the old guard that pedaled over the roads of Cook county two decades ago and an amplified following of new talent lined up at the starting point. Grand boulevard and Thirty-fifth street, at 10 o'clock, New Year's morning, each member toting a lot of excess baggage in the way of wearing apparel. The race down the boulevard was fraught with upsets owing to the glassy "freeze" which coated the course.

The route pursued by the riders took them south on Grand boulevard to Cottage Grove avenue, thence to Ninety-fifth street and east to Pullman. Nearing the last leg of the grind Kockler, Kuehl and Ed Manning opened a sprint, the former beating his nearest rival to the line by a margin of two seconds. Freddie Nelson, brother of Johnny Nelson, holder of the course record of 28 minutes, trailed fourth in 37 minutes.

Of the starting field all but six stuck for the finish and the big eats provided to reward them at Pullman.

DeMara Seeks Winter Laurels Abroad.

Sailing from New York, January 4, on the "Crown Princess Cecilie," Walter DeMara, the well-known racing cyclist, will land at Cherbourg, and go straight to Paris, to compete in the six-hour race which is soon to be run on the winter track there—the Velodrome d'Hiver. After that event he will compete in sprint races until the Berlin six-day race, in which he expects to be an entrant with Percy Lawrence as a partner. Lawrence will sail later. DeMara expects to return to this country about May 30th. His wife will accompany him on his trip.

Manager Chapman Returns to Newark.

John M. Chapman, manager of the Newark (N. J.) Velodrome, returned Wednesday from a two months' visit to his mother's home at Atlanta, Ga. He has fully recovered from his recent illness, looks well, and is busy on plans for 1912.

CANADA HAS SIDE-CAR FEVER

Demand For the "Double Rigged" Machine Promises to Exceed Previous Records Across the Border.

Toronto, Ont., Jan. 2.—Judging by present inquiries for side-cars, feminine hearts in Toronto will ache no more with loneliness. The probability is that not a few machines in the province of King George's North American domain will be converted into "twins" this coming season, the natural result of which is that there will be no more "left at homes" for the riders to think about when out enjoying themselves. From president down to the latest recruit, practically every member of the Toronto Motorcycle Club who rides for the fun there is in it, has the "side-car bug" which is the latest form of malady in motorcycledom, and local tradesmen are finding orders piling up for the "invalid chairs."

A dozen or more single-trackers of the city made use of the equipment during the season of 1911, but prospects are that there will be at least five times that number of cars in use on the streets during 1912. One local accessory agency, the John Millen & Son Company, not long ago placed a trial order for five cars with an English manufacturer, and almost before the baskets were unpacked, the lot had been disposed of. This was an eye-opener and the "Millenium" people are now preparing to give an order for 50 cars of the same pattern.

Dealers of every make of machine, report that side-car talk is being heard on all sides and there is hardly an agent in town but is planning a side-car campaign. A number have already adopted their use for demonstrating purposes, Walter Andrews, the Pierce agent, having fixed a car to one of his big four-cylinder mounts for the transportation of prospective buyers. The presence of many English machines in the Canadian city is hurrying along sales, too, but the owners of American wheels are not far behind.

Many riders, whether sure of securing a car or not in the near future, are taking particular care in renewing their licenses for 1912 to specify that their motor-driven vehicle has a passenger capacity for two.

What the Speed Kings Did to the Record Table in 1911

When Providence flicked the dial of 1911 off the time clock of eternity, at midnight on December 31 last, the American motorcycle record table of the year, took its well deserved place in the hall of big things accomplished in the milestone of life just completed. For although the 1911 record puddings were mixed and cooked in the speed bowls way back last Spring, they are in some respects the richest and most palatable ever served, by the motorcycle speed chefs of this country.

Like the biggest electric sign on Broadway, New York—if you don't know what it is you ought to—the peerless performance of 1911 in the realm of motorcycle racing, was the shattering of all professional records from 1 to 92 miles inclusive, by Jake DeRosier, on the Los Angeles mile motordrome, February 7. DeRosier went for the 100 mile honors, already held by himself, but unfortunately, his gasoline gave out when he was within sight of the goal, and well inside his old figures.

All of the conditions imposed by the Federation of American Motorcyclists, on record trials, having been complied with, DeRosier received credit for, and his records up to 90 miles, were accepted, and designated as official professional records. Intermediate records between multiples of 5, above 25 miles, are not accepted, save where they constitute hour records. In his wonderful ride, DeRosier covered over 83 miles in the hour, the most marvelous feature of his flight, and the greatest distance ever traveled by man in that period. This also stands as a record.

DeRosier's Protege Makes Good.

Almost two months to a day after DeRosier's famous flash through space, Don Johns, of Los Angeles, hitherto unknown, and a protege of the wizard of the board track, made motorcycle history, and incidentally himself famous, by knocking down the amateur records from 2 to 20 miles inclusive. This bout with Time was pulled off on the mile motordrome also, on April 4. Both of these performances were made on Indian machines, and were time trials.

As the weeks and months rolled by, the records stood solid, like Gibraltar, although no attacks were made on them. Even on the last day of the year, a favorite date with record seekers, when it was whispered widely that there would be "something doing" in Los Angeles, nothing happened, and 1912 arrived with the old slate still the speed authority.

So it happens that these two occasions were the only ones during the past year in which records broken have been recognized and accepted by the F. A. M. However, in July, a new aspirant for speed honors, Excelsior, of Chicago, entered the arena, with direct chain drive racers, instead of the belt used on the stock models. Now, however, it is made in stock form, with double chain drive. This machine, unsuspected of having record speed in its cylinders, immediately began to "do things" on the new Chicago bowl, and broke several of the official records up to five miles. DeRosier, who now is riding this make, also established a new American kilometer record with it, last summer.

Wolters Appears in Racing Firmament.

Joseph Wolters, and the Excelsior, leaped to fame by their frequent shattering of official records for short distances. Their latest feat was the breaking of the professional records up to 10 miles, inclusive, at Oakland, Cal., on November 26 last. The time was 6:54.

DeRosier's time for a kilometer was 23⅕ seconds. This was made at Chicago, on the one-third mile Riverview motordrome on September 17th. The Oakland track is a half-mile.

However, although the Excelsior records all were made in competition, save the kilometer, and at F. A. M. sanctioned meets, they have not been recognized by the F. A. M., nor has any claim for recognition been made. Wolter's machine was measured once in the presence of President Hamilton, of the F. A. M. and others, the tracks are oversize, and no fault is found with the timing, but the F. A. M. prescribed requirements for record claims, including the filing of sworn affidavits of all officials concerned, where records are claimed to have been made, the certifying of watches and the measuring of the motor immediately after the trial, were not complied with. Therefore, they are given no credence by the chairman of the F. A. M. competition committee.

Nevertheless, the Excelsior performances, as far as they go, are highly interesting, for comparison with the record table. Always the leading holder of record honors, the Indian machine closed the year with the greatest contest triumphs of its career, holding not only all American official speed records, both professional and amateur, but also all the 1911 F. A. M. championships, the transcontinental record, and also all economy class records save one.

While not accepted or recognized by the present chairman of the F. A. M. competition committee, the economy records, nevertheless, are "real records," for the pint and quart performances were made in connection with F. A. M. national meets, and the long distance record under F. A. M. sanction. Edward Buffum, riding a two horsepower Yale motorcycle, established the one quart record in the early days of the sport. Without doubt one of the most startling and high efficiency performances ever made by a motorcycle, was the covering of nearly 32 miles on a pint of gasoline, by Fred A. Baker, on a 1¾ horsepower Indian machine, in 1904. This is at the rate of over 250 miles to a gallon.

Although not made under F. A. M. sanction, and a private performance, the transcontinental record, is entitled to recognition as such, until refuted, and not the slightest breath of suspicion has been heard against its genuineness. In the table of American speed records, all except the amateur records from 75 to 95 miles, inclusive, were made on board tracks. Those cited specifically, were made on a mile dirt track. While M. J. Graves, who holds the 100 mile amateur record, undoubtedly broke many intermediate records also, as the figures indicate strongly, he receives no credit for them, because no times were taken for individual miles, or if so, never filed with the F. A. M.

What John Bull's Boys Did.

Not all of the speed is on this side of the Atlantic, as the British records show. John Bull holds the fastest kilometer and mile ever covered, but here his supremacy ends. His riders other performances, while very good, are not quite up to those of Uncle Sam's boys. It will be noted that British records are divided into several classes, while in America there is but one class. However, the 1,000 c.c. limit of Great Britain, and the 61 cubic inch limit of America, are identical.

In this country nothing smaller than 7 horsepower, and very close to 61 cubic inches piston displacement, is used for record work, so it is unfair to pit American performances against those of the smaller British class machines. Nevertheless some of the latter are excellent, considering the size of the motor used. In Britain there is no professional or amateur distinction, all riders competing as one class, and taking cash or merchandise, as they choose, without affecting their sport status. The British records bear date of December 22, and were furnished by Fred Straight, secretary of the Auto-Cycle Union, London, the motorcycle governing body of Great Britain.

On the following pages will be found the most accurate and complete table of American and foreign motorcycle competition records ever published.

1911 CHAMPIONSHIP HOLDERS

Professional—Jacob DeRosier, Los Angeles, Cal. Also holds international professional championship.

Amateur—Frank K. Hart, New York City.

Federation American Motorcyclists One Mile—Frank K. Hart, New York City.

F. A. M. Two Miles—Ben Broderick, San Francisco, Cal.

F. A. M. Five Miles—Frank K. Hart, New York City.

F. A. M. Ten Miles—John U. Constant, Brooklyn, N. Y.

F. A. M. One Hour—Frank K. Hart, New York City.

No motorcycle records are recognized outside of the country in which they are made, owing to the absence of an international agreement between the motorcycle governing bodies of the different nations. Therefore, there is no such thing as a "world's motorcycle record," and all claims to that effect either are erroneously made, or else with the intention to deceive. However, American records, with very few exceptions, are faster than those made elsewhere, and most deserving of being recognized as "world's records."

From many converging lines comes evidence of increasing zeal in the cause of the American Olympic Bicycle Team. As reported in detail in these columns last week, clubs and individuals throughout the length and breadth of the land now are earnestly at work on the proposition, training riders, soliciting funds and working with a will to forward in every possible manner what has become recognized as a most beneficial means of advancing the sport of cycling, and the list of helpers is growing daily.

Those connected with the industry, the manufacturer and dealer, although as yet wofully in the minority on the subscription list, are awakening to the fact that through the voluminous news features growing out of the creation of the fund, the selection of the team by widely distributed elimination trials, and the sending of it with its probabilities of eventually winning in a contest having world-wide interest, is presented one of the most advantageous opportunities ever offered to broaden every department of the business.

The activities of the United Cyclists on behalf of the project in New York City will be most prominent during the coming week when on Wednesday evening will be consummated under the joint auspices of that organization and the Motorcycle Dealers' Association, the dinner at the Hotel Earlington to visiting manufacturers who will be attending the Madison Square Garden Show and which event now gives ample promise of being the leading social feature of that exceedingly busy week.

Pioneers' Support Indicates Achievement.

The development of one phase of the dinner that is a source of much gratification to those responsible for its inception and auspicious promotion, particularly to Presidents Hall and Gliesman, respectively of the patron organizations, is the extraordinary demand for reservations sent in by veterans of the trade and sport, all of whom were developed and many of whom remain in the ranks, while others have entered the automobile field; yet all, by their enthusiastic support show unswerving loyalty to their first love—the bicycle.

In addition to State and city officials, many of whom will deliver addresses, will be present of the "old guard" the following: Hon. St. Clair McKelvay, Hon. Simeon Ford, George M. Hendee, W. F. Remppis, A. B. Coffman, president of the Motorcycle Manufacturers' Association; George H. Hamilton, president of the F. A. M.; F. I. Willis, secretary of the National Association of Cycle Jobbers; J. Leo Sauer, chairman of the Legal Action Committee of the F. A. M.; A. G. Batchelder, chairman of the executive committee of the American Automobile Association; John C. Wetmore, Gridley Adams, Will R. Pitman, William E. Metzger and W. J. Morgan.

Another feature that undoubtedly will prove of unusual interest to the many guests will be the reminiscent character of the display on either side of the toastmaster, of the first prize offered and won in the first recognized bicycle race in America, at Brockton, Mass., July 4, 1878, and the prize for the first 100 miles road championship of America, under the auspices of the Boston Bicycle Club in 1885. Both prizes are the highly valued possessions of the winner, "Happy Days" Pitman, of honorable racing fame.

St. Louis Augments the Olympic Fund.

There is a strong manifestation of enthusiasm in and about St. Louis for the project of sending a team to Stockholm to represent America in the Lake Malar race. The St. Louis Cycling Club, which is the real live institution in cycling in the Mississippi Valley, has formed a sub-committee to act in concert with the Olympic Road Race Committee of the United Cyclists, and C. L. Barr, the club's energetic treasurer, has been made chairman.

A vigorous campaign for contributions for the fund has been instituted, and the trade, which will in the long run receive the greatest benefit through the publicity given such a measure, has been appealed to for aid. The circular issued by the St. Louisans is worthy of perusual, and is as follows.

To our friends in the Trade:

There is a very well organized movement under way to send a team of amateur cyclists, to Sweden next July to win the 200-mile road race in the Olympic games. This movement has the backing, in a very large measure, of the Bicycling World and Motorcycle Review. The Bicycling World, by the way, has been the only friend that the cycling interests have had in recent years.

Of course you will agree that a victory by the representatives of this country, will, to a very great extent, have an influence to make cycling much more popular as a means of sport and pleasure. We often hear from our friends in the trade that bicycles now are used only for business, and that these riders pay no attention to the sporting side and possess no enthusiasm. True enough, but—did not the use of the bicycle as a business vehicle follow in the immediate wake of its popularity as a sporting institution? Will not greater interest in bicycling as a sport cause an even greater use of the bicycle as a means to an end? Was not the big profit in bicycles and supplies made in the days when there was a demand for the best grades by riders of the better class? Now that the city streets and country roads are so much more improved, is there any reason why cycling should not become more popular than ever?

Automobiles, motorcycles, and aeroplanes do not, by any means, displace the good old plain bicycle. Of the well nigh 100 enthusiastic members of the St. Louis Cycling Club, they number a high school principal, professional men, bank clerks, and business men who maintain a high priced touring car for their family, yet prefer to go out on a long cycle tour with the "boys."

If you know the history of bicycling in St. Louis, you are aware that this city always had the reputation of doing things. We are proud that we can say that we are at the present time maintaining this reputation, and that the appropriation made by the St. Louis Cycling Club for the Olympic Fund exceeds anything that the committee has so far received.

Now, if you are inclined to help this good move, and we feel that you are, will you not let this committee have the credit of receiving your donation rather than some committee of an Eastern trade association? If you will send us your remittance, we will promptly forward it and see that the proper credit is given to your firm in the columns of the Bicycling World.

The Pacific Coast Heard From.

From Reedley, California, comes word of the banding together of riders there on short notice, by some of the leading citizens, who also are thorough cycling enthusiasts, in accordance with the suggestions as offered in these columns, with the consequence that, within a few days time, a road race was planned, an excellent prize list, composed of donations by local merchants, was provided, posters printed, setting forth the fact that the proceeds would be applied to the Olympic fund, the race was run successfully, despite the lack of necessary time to complete the details, and the net balance forwarded to the treasurer as credited in the column of subscriptions. A bicycle club of which much is promised, in active course of formation, is not the least of the net results.

Send in Your Choice For Team Members.

According to previous announcements, the personnel of the representing bicycle team which ultimately will be sent to the Olympic games will be determined by tryouts and elimination trials to be held at various centers throughout the country, now, in order to ascertain where would be the most convenient points for the prospective participants, at which to hold these trials and obtain the popular opinion of those interested in cycling as to whom are considered the most eligible to compete, the bicycle editor of the Bicycling World and Motorcycle Review will offer a list of handsome prizes as follows:

First prize, $10—To the person first voting the complete team of twelve amateur riders in the United States which receives the highest number of votes.

Second prize, $5—To the next complete vote received. Two years' subscription each to the next five. One year's subscription each to the next ten. All votes as received will be stamped with time and date.

The reader of this paper may send in his vote on the following coupon.

Use this blank for sending in your vote.

You, and all who are interested in the sport are invited to submit the names and addresses of those to whom it is desired to have voting blanks sent—make your list as large as you like—self-explanatory blanks will be sent promptly and with absolutely no obligation incurred by the recipients. Send your list at once to the bicycle editor, The Bicycling World Co., Box 649, New York City.

New England Wheelmen Inaugurate Year.

Starting over the usual course, at 161st street, New York City, the annual New Years' Day race of the New England Wheelmen was held last Monday. The route was from the Grand Concourse to Pelham Bay bridge and return, a distance of 17 miles. The winner proved to be Joe Kopsky, the club's crack road rider, who finished the race in :53 flat. Donald J. McIntyre, the veteran rider who hails from the Bronx, was second in :54. Bert Baker, Emil Koster and B. Boyes finished in third, fourth and fifth positions respectively.

Midnight Scorch of Empire City Wheelmen.

Ploughing and splashing through snow, slush and water, Franklin Fisher, a member of the promoting club and the Irish American A. C., won the honor of being the first cyclist to complete in 1912 the round trip between Bedford Rest and the sea wall on Surf avenue, at the Coney Island end of the Cycle Path, Brooklyn, when he crossed the finish line at 12:52 A. M., January 1. It was the New Year's Eve midnight "scorch," under the auspices of the Empire City Wheelmen, and which race proved to be the Cycle Path "midnight" having the largest list, the smaller number of starters, the greatest percentage of finishers, and the toughest contest of years, requiring the most strenuous efforts to go the journey.

Some forty odd nominees declined the opportunity to combat a-la bicycle with climatic and surface conditions when time was called, on the turn of the hour by Starter T. Murphy, consequently but six of the faithful got the word, they being: Franklin. Fisher, E. C. W., Joseph G. Kopsky, N E. W., Frank Mehrmann, E. C. W.

Fisher came primed for the occasion with his wheel equipped with a low gear and early, and often had his fellow contestants in a temperament the exact opposite of their temperature, as he dug merrily into the pedals in short, snappy jumps, through a continuous series of slushy puddles. Fisher was the first to make the Island turn and led the return to within a half-mile of the finish when Kopsky moved up only to be "jumped" in the last fifty yards by Fisher. who led him over by five yards; Frank Mehrmann coming in for the remaining cup of the three that were posted as prizes.

Baltimore United Cyclers Now "At Home."

Opening a club house at 1807 Friendsbury place, Baltimore, the United Cyclers, the most recently formed cycling organization of that city, on Tuesday evening, December 26, set a precedent for the numerous clubs that have arisen in the Monumental City in late years, and by this hitherto unprovided consideration of the members' comfort it is hoped by the promoters to give added zest to local cycling interests.

The plans of the pioneers of the movement originally was to include all Baltimore clubs, but as yet the Lafayette Wheelmen and the Carroll Cyclers are the only two accepting the opportunity of consolidation. Pending election of a regular staff of officers, the direction of the organization's affairs is in the hands of Edgar R. Boehm and Wilbur W. Shaw, respectively of the aforementioned clubs.

For the coming year, an extensive program is being mapped out, including a big road race in the spring and a 12-hour track race. With the practical assurance of a board track, local riders are industriously practicing sprinting, which accomplishment then will be most necessary.

FLAT FLOOR RECORD AT BUFFALO

Schneider Reduces Mile Mark to 2:18⅘ on Arsenal Floor—114 Entries, 29 of Them Novices.

Buffalo, N. Y., Jan. 2.—Enthusaism, centering around the bicycle races, ran rampant at the combined athletic and flat-floor bicycle meet on New Year's night, when more than 7,600 wildly jubilant spectators, who were jammed into the 65th Infantry Arsenal saw their favorite speed merchant, Joe Scheider, take his heats and finals in both open and handicap races.

Schieder first chased Father Time off the floor in the fifth heat of the mile when to win from Jack Tanner and J. Ricotto, he was forced to slip around the ten laps in 2.20, as against the mark of 2.25⅗ set up by Schudt two years ago; again in the final whirl, he whittled 1⅕ seconds from the new mark, setting the figure at 2:18⅘.

Five preliminary heats were required to sift down the 29 novices in their mile event, who by their performances showed they were imbued with the "go-get-'em" spirit and rode like veterans. In this event, the newly organized Post Office Delivery Bicycle Club, composed of U. S. P. O. special delivery riders, launched three aspirants in Bundt, Ferry and Smith, who not only shone well in their maiden race, but rode well in the handicap events, and their riding stamps them as comers' for local cycling honors. The final heat was won by Elmer Bundt, P. O. D. B. C.; second, H. C. Howe, Ariel A. C.; third, Bert Ferry, P. O. D. B. C. Time, 2.32.

The first heat of the mile open was won by Eddie Dethloff in 2:26⅘. The second heat was garnered by E. C. Arenz in 2.26. The three remaining heats were the fastest of the five required, and accordingly second men qualified; Schudt and Kreighbaum finishing in that order in the third to the tune of 2.25. Scott led Penseyres over in the next in two seconds less, and Schneider was clocked in the fifth for 2.20 with Jack Tanner hustling him from the crack of the gun. The final was won by Joe Schieder, C. Y. M. C. A.; second, J. M. Tanner, Ariel A. C.; third, Lloyd Safford, Reading-Standard Wheelmen. Time, 2:18⅘, a new indoor flat-floor record, so far as is known.

The two-mile handicap also was divided into five preliminaries, and a final with two in each heat to qualify. The back markers, Scheidel, Krushed, Joe Tanner and Arenz exhibiting plenty of ginger in their respective heats and continued the seasoning process in the concluding serving when Scheider (scratch) uncorked an extra sting in the last lap and won handily with Arenz (20), and Krushel (25) separated by inches in that order. Time, 4.45.

Cyclists End Up Year with Clash.

There was considerable excitement and much bad blood exhibited during the two-mile amateur bicycle handicap run in connection with the annual games of the 71st Infantry Athletic Association, at the Armory, New York City, Saturday evening, December 30.

About two laps from the finish VanDenDries fell, and clutching at Goodwin, brought him down with him. On arising VanDenDries struck Goodwin in the face, and was placed under 30 day's suspension for his pugnacious precocity. The race itself resulted as follows:

Two mile handicap—First heat, won by William VanDenDries, N. Y. A. C., scratch; second, T. J. Murphy (70 yards) Empire City Wheelmen; third, Nat Gutoff, (100 yds.) Atlas B. C. Time, 5:22. Second heat, won by Jack Townsend, (20 yds.) Irish American A. C.; second, Walter Raleigh, (70 yds.) N. Y. A. C.; third, E. H. Goodwin, (scratch) Irish American A. C. Time, 5:05⅗. Final heat, won by Townsend; second, Murphy; third, Gutoff.

BEVIN BROS. MFG. CO.
Easthampton, Conn.

Motorcycle manufacturing and marketing are now among the leaders in present day commerce—amply demonstrated by the highest standard of efficiency, maximum of serviceability, and acme of design and finish which afford satisfaction, profit and pleasure to the user—the logical outcome of progressive production, ever increasing facilities, and presistently applied effort by corps of veteran designers and constructors.

That all may derive the consequent benefits and enjoy protection against unscrupulous imposition the Motorcycle Dealers' Association of Greater New York has successfully evolved and submit for your consideration a plan wherein is embodied the above all-important features and the hitherto unobtainable privelege of deferred payment purchase.

To those interested who contemplate satisfactory, remunerative ownership of a motorcycle, is offered the result of careful, conscientious research by special committee of this organization in its comprehensive recommendation of the following dealers:

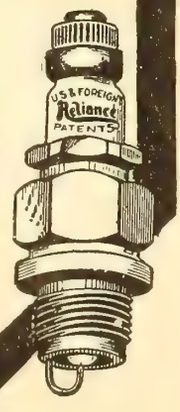
Reliance

(REG. U. S. PAT. OFF.)

Sparks in Water

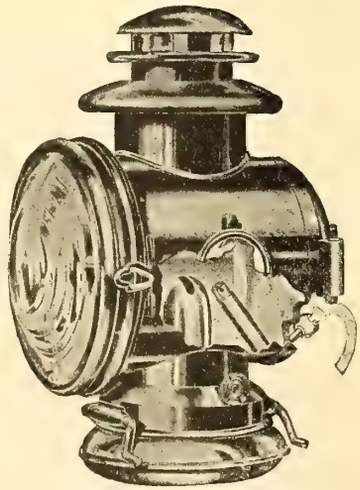


Special Motorcycle Types

The fact that the "Reliance" plug "Sparks in Water" proves that it can't be short circuited.

As an automobile, motorcycle or motor boat owner, you will instantly appreciate the overwhelming importance of this one great point. Beside it other claims sink into insignificance.

Soot, carbon, and other fouling influences, have no effect on Reliance Plugs. They do affect all other plugs—put them out of business.



Regular Type $1.00

Other Reliance advantages are, lower current consumption, concentrated spark, heat-proof porcelains.

Reliance Magneto Plugs are especially recommended for oily engines. Satisfaction guaranteed or your money back. Sold by dealers everywhere, or sent prepaid on receipt of price. Get "Ignition and Spark Plug Talk"—a valuable pocket reference book—will make you master of your ignition system.

Lamp with Acetylene Burner

LET

HAM

Light Your Way

Here is a Motorcycle Lamp positively trouble proof. Doesn't that sound good? No amount of jarring will affect the steady stream of light which is generated from the HAM-LIGHT. Actual speed tests of 50 miles per hour have failed to blow or jar out the flame. Simply attached to motorcycle. Can be furnished either as an oil lamp, burning kerosene, or with acetylene burner in addition, using acetylene gas, making it a combination oil and gas lamp, a combination of great value on country roads or poorly lighted streets. Send for new circular containing full line. Do you want our Agency Proposition?

MANUFACTURED BY

C. T. Ham Manufacturing Co.

ROCHESTER, N. Y.

Protect Your Clothes and Health by Wearing

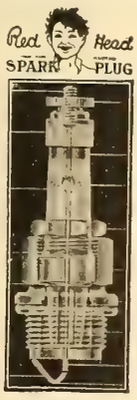
Nathan's New Motorcycle Garment

CUT A

Nathan's New Motorcycle Garment is made of a dark, double texture mackintosh which does not show dust or grime. It keeps the entire body comfortable in all weather. It is the only garment that enables the cyclist to make a trip over muddy or dirty roads without leaving a speck on his clothing. When he stops at a hotel or restaurant he can remove the garment in a jiffy and his clothes are just as neat as when he put them on.

The COAT may be worn either tight fitting (Cut B) or box shape (Cut A), by means of the invisible belt. The high standing military collar fits snugly about the neck. The sleeves have adjustable tabs at the wrists for wind protection. Ball and socket snap fasteners are used throughout in place of buttons and button holes. The TROUSERS are roomy and ample like riding breeches, and fit like leggings below the knee, with a fork spring fastening. The wearer has easy access to the side pockets of trousers underneath. Both garments have bellows pockets with snap fastened flaps. These garments are tailor made, neat in appearance, and guaranteed to give service and satisfaction. They open on side only, always affording a closed front. Made in three sizes—a fit for all. If not on sale in your town, send to us and give exact length of leg on inside and measurements around waist for trousers—and chest measurement for coat. (Sold separately or together.)

CUT B



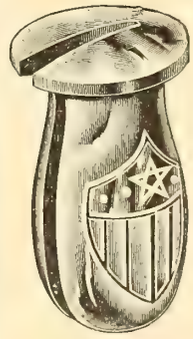
NATHAN

Send for new 1912 catalogue—it's free. Dealers, we ask that you send to us for prices, but you will learn something about quality if you send for samples.

NATHAN NOVELTY MFG. CO., 88B Reade St., New York City.

If spark plugs would cost as much as tires, you'd buy more carefully.

We recommend the use of



Red Head

plugs not only to reduce the expense per plug, but to increase the enjoyment of your machine per mile.

All Sizes, $1.00, Porcelain or Mica.

Fisk Bicycle Tires

Dealers Can Depend On The Quality

Wherever bicycles are used Fisk Bicycle Tires are recognized as the standard of quality.

The representative wheel manufacturers almost without an exception use Fisk Tires, including such well known makers of wheels as the Pope, Iver Johnson, Pierce, Emblem, Snell, Yale, Racycle, Etc.

Fisk tires are made in many different grades, but each grade is admitted unusually good value for the money.

DEALERS in Fisk Tires never find business dull. Write for particulars.

"THE LIGHT UNIVERSAL"

Wherever You Find Motorcycles There You Will Find

PREST-O-LITE

Practically All Experienced Owners Use It!
Over 10,000 Wise Dealers Handle It!

Insist Upon It

Don't try to get along with the unsatisfactory, unreliable service of the generator, or imitation gas tank. One accident caused by poor, undependable light will cost many times the price of Prest-O-Lite. Thousands of owners have discarded the generator for Prest-O-Lite after a short experience. Be guided by those who know. Get Prest-O-Lite.

On Your Motorcycle

When you buy you should be particular about details that mean added expense later. Don't accept a generator. Get a lighting system that you can depend upon. If you take a substitute for Prest-O-Lite you will regret it before you've used your machine a month. Without good light the machine is not of full value.

The Prest-O-Lite Company manufactures Prest-O-Lite, "The Light Universal"; Prest-O-Starter, that eliminates the crank; Prest-O-Tire Tubes, that displace the pump; Prest-O-Tire Tanks; Prest-O-Carbon Remover and the Prest-O-Welder. Ask for information and literature for any or all of them.

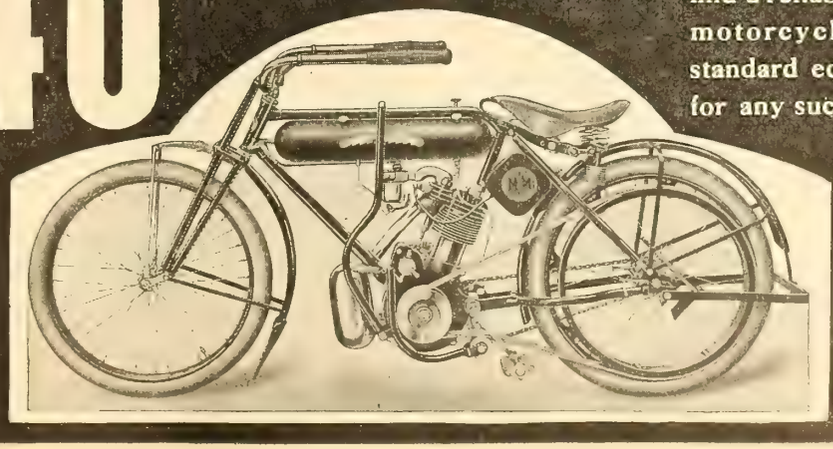
Agents—Listen!

Here's a winner—A sales winner. The low price will catch the eye, and the high quality will clinch the sale.

The M·M "Special" line appeals to more possible buyers than any other to be had. This is the theory:—If you could sell motorcycles at the cost of bicycles, you would sell one to every fellow in town. If they cost $500 each, you wouldn't sell one, but the nearer to the bicycle price you get (with a good motorcycle) the more machines you will sell—Just think that over.

The M·M agency is a big opportunity for you. Don't lose it. The M·M line is complete—Our commission to the agent allows him to sell on time which is the way 90% of all motorcycles are sold to-day.



Write now for literature and agents proposition.

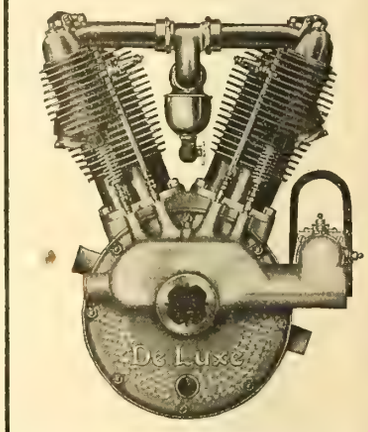
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

"Whitney" Chains Are Dependable

THE WHITNEY MFG. CO., Hartford, Conn.

Dear Sirs:—Yours of February 28th at hand. In regard to old chains, I have now covered over 12,000 miles on one set of your chains and have not even exchanged drive chain for pedal chain. Not one link or roller broken. Have carried tandem lately, which is a strain on chains. Just think of what these chains have gone through! From Los Angeles to New York, besides myself pulling 150 lbs. of extra luggage, and then from Canada to Mexico, and all over California, and still stick together. It sounds impossible, but this being the fact.

I will send old chains by express next week, as I intend to put on a new set. The old chains have done their duty, and then some. I think they are still good for a few thousand miles.

Put me down as a booster for "Whitney" Chains, as I will have no other.

Respectfully yours,

A. H. HELGESON.

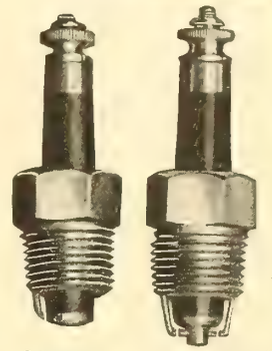
733 Ottawa St., Los Angeles, Cal.

These chains have been driven from the Pacific to the Atlantic, from Canada to Mexico, and all over California, through rain, mud, dust, and sand and are still good.

Can any service be more strenuous and severe than this?

What test could show more clearly the true strength and wearing qualities of "Whitney" Chains?

"Whitney" Chains Are Built for Strains



THE WHITNEY MFG. COMPANY, Hartford, Conn.

PITTSFIELD

Motorcycle Spark Plugs

Remarkably Serviceable and Always Dependable

IMPROVED firing is at once noticed with these plugs and more speed and power is obtained. Perfectly insulated they cannot short circuit. Firing points are of a special alloy that withstands heat without oxidization. The plugs are guaranteed for a year but last much longer. Every motorcycle should be equipped if maximum efficiency in sparking is desired. Made with all standard threads. Catalog on request.

Battery Plug $1.00 — Magneto Plug $1.25

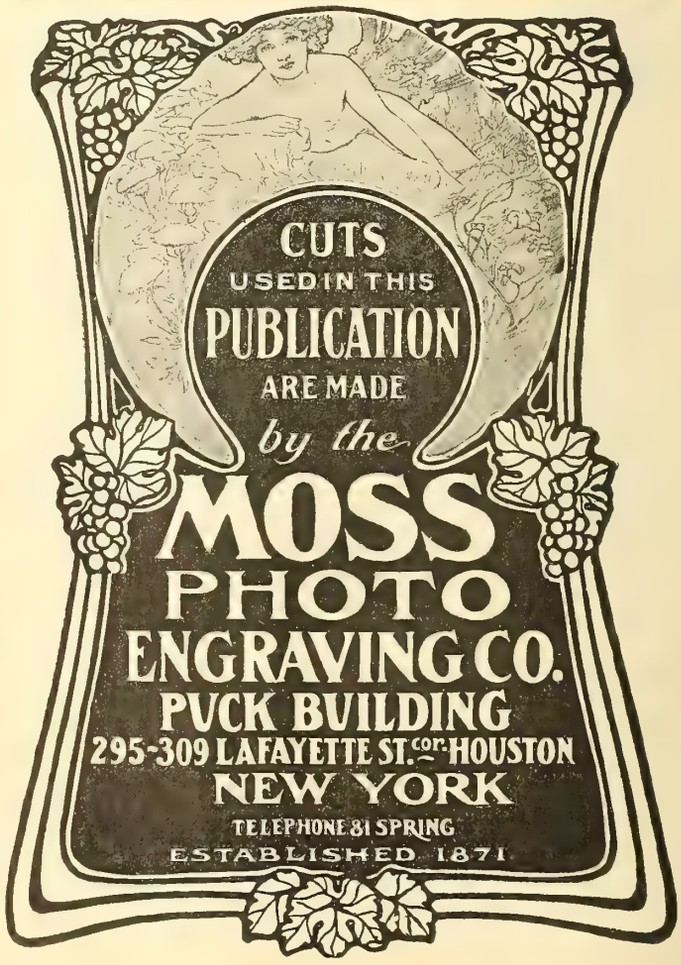
SCHAFER BALL BEARINGS
(MADE IN GERMANY)



are the most suitable bearings for motorcycles

Because

They withstand vibration due to the strong cage and large number of steel balls.

SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is being used on the *De Luxe* motor and transmission.

KOKOMO MOTORCYCLE TIRES

and a Few Facts Relative to Their Construction

The most important factor entering into the construction of a motorcycle tire is the material. Something more than the best materials, go into the making of KOKOMO Motorcycle Tires —our knowledge from over 16 years of manufacturing bicycle tires, together with workmanship which is absolutely the best obtainable. Our knowledge of rubber and its handling, from the crude material to the finished product, has resulted in the best motorcycle tire the market has ever known—the KOKOMO. We leave out the guess work, and embody only scientific principles of construction which insure long lasting qualities to the tire.

"If It's Kokomo That's All You Need to Know"

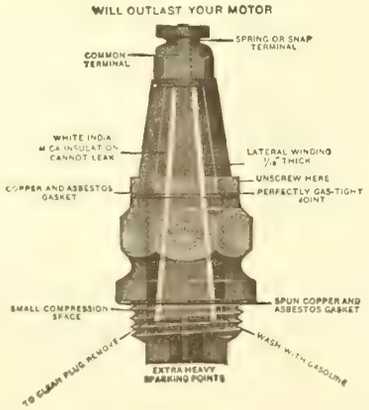
KOKOMO RUBBER COMPANY, Kokomo, Ind., U. S. A.

SPLITDORF

PLUGS

"Always There"

EPOCH-MARKING ACHIEVEMENTS



SPLITDORF PLUGS have been responsible for innumerable performances of wonderful merit but, if any one achievement stands out conspicuously, the remarkable epoch-marking flight of the Lebaudy dirigible across the English Channel, is entitled to a high place on the honor roll.

From Moisson Seine-de-Oise in France to Farnborough, near Aldershot, in England, the semi-rigid dirigible, 337 3-7 ft. long and with an envelope containing 353,165 cubic feet of gas was driven, approximately 197 miles. at an average speed, roughly speaking. of 36 m. p. h.

Major Sir Alexander Bannerman, Royal Engineers, of the British Military Aeronautic Department was the pilot and the performance, considering the head winds prevailing, was a phenomenal one.

Never for a moment did the SPLITDORF PLUGS, of the regular motorcycle type, with which the dirigible's motor was equipped, fail to respond to the terrible demand made upon them—high pressure engine and terrific motor speed the herculean task demanded, notwithstanding.

SPLITDORF PLUGS are a standard in the motorcycle world and for track or road work they are INVINCIBLE.

Write for our Magneto catalog.

Each tire carries our yellow "guarantee tag and each pair of tires is wrapped in the same substantial paper as our automobile casings.

Pennsylvania Vacuum Cup Bicycle Tires

The increasing popularity of these tires is a striking feature of the tire trade and is due entirely to their sterling worth.

Their non-skid and service qualities are so sound that we are enabled to give an unqualified season's guarantee with each tire. This is a strong inducement to the consumer.

For the convenience of the Jobber and Retail Merchant, Pennsylvania Vacuum Cup Bicycle Tires will be packed ten pair in a strong wooden box. This enables the Jobber to ship in the original package and the Retail Merchant to order in convenient quantities.

Made by an Independent Company with an Independent Selling Policy which insures a fair margin of profit to Jobber and Dealer.

If you want to sell tires for profit, write now for our attractive proposition.

"THE LIGHT UNIVERSAL"

Wherever You Find Motorcycles There You Will Find

PREST-O-LITE

Practically All Experienced Owners Use It!
Over 10,000 Wise Dealers Handle It!

Insist Upon It

Don't try to get along with the unsatisfactory, unreliable service of the generator, or imitation gas tank. One accident caused by poor, undependable light will cost many times the price of Prest-O-Lite. Thousands of owners have discarded the generator for Prest-O-Lite after a short experience. Be guided by those who know. Get Prest-O-Lite.

On Your Motorcycle

When you buy you should be particular about details that mean added expense later. Don't accept a generator. Get a lighting system that you can depend upon. If you take a substitute for Prest-O-Lite you will regret it before you've used your machine a month. Without good light the machine is not of full value.

The Prest-O-Lite Company manufactures Prest-O-Lite, "The Light Universal"; Prest-O-Starter, that eliminates the crank; Prest-O-Tire Tubes, that displace the pump; Prest-O-Tire Tanks; Prest-O-Carbon Remover and the Prest-O-Welder. Ask for information and literature for any or all of them.

READING STANDARD COMPANY, 310 Water St., Reading, Pa.

The Waverley Model A-4

Some motorcycles will be sold by price but we believe there is a sufficient number of experienced motorcyclists who are through with petty troubles and want only the highest degree of mechanical excellence to justify us in building

The Waverley Model A-4

The WAVERLEY motor has proven its quality in the hardest service and we are building it in a motorcycle that is fully up to the same high standard of excellence throughout.

The WAVERLEY Cushioned Frame is what its name implies—a rigid frame supported on a set of leaf springs that absorb ALL the road shocks without in any way weakening the frame by hinge joints and other complications.

The WAVERLEY has all the other up-to-date features, such as free motor clutch, extension fork, taper fenders, etc., with a lot of good things all its own.

Our illustrated advance sheet tells all the story and will be of immense interest to the live dealer who wants a machine to uphold his promises or the rider who is tired of trouble and discomfort and wants a machine to ride day after day without tinkering or repairs.

To such we have much to offer and only await your inquiry.

RIDE A YALE—THEY NEVER FAIL

Yale Quality and

QUALITY of materials and method of manufacture gauge the selling price of any article.

A CHEAPLY made article sells at a low price.

A HIGH CLASS article made of first quality materials by improved manufacturing methods sells at a correspondingly high price.

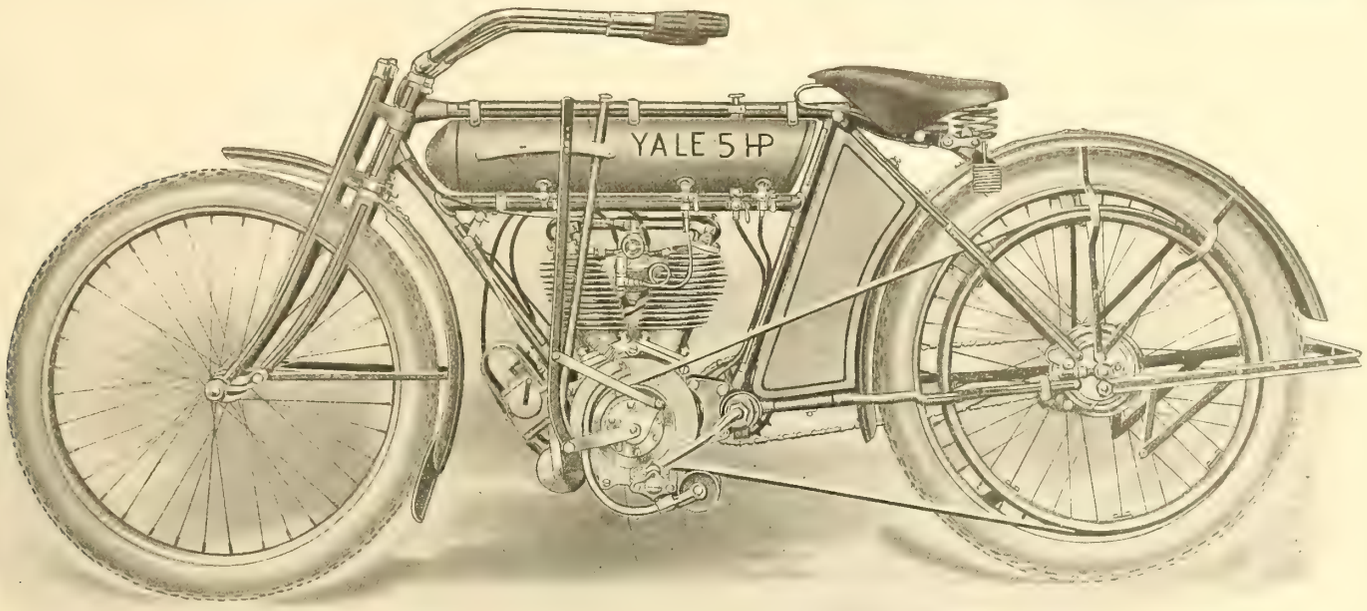
THERE ARE several grades of almost any article manufactured. Each sells at the price set by quality or value to the consumer.

TODAY THIS is true of the motorcycle. The YALE is, by the materials and methods employed in its production, a high class motorcycle and sells at a price based on cost to produce and ability to give satisfactory service.

EVERY PIECE and part is treated in the most scientific way. Every detail looked after in the most careful manner, from selecting the steel best suited for drop forging motorcycle parts to copper plating the spokes before they are nickeled.

THERE ARE more forgings used in YALE construction than in any other motorcycle built.

EVERY ROD, rod end, bolt and nut is copper plated before being nickeled.



THE FINISH is another proof of the care taken in building these famous machines. First, a coat of anti-rust is baked on, then hand rubbed with pumice. A coat of gray enamel is then sprayed on, of absolute uniform thickness. A thorough baking follows, after which a hand pumice rubbing.

THREE COATS of enamel are applied in this manner, after which the blue stripe is put on. Then a dip in high luster varnish and another baking completes the job.

THIS IS only a sample of the care exercised in the YALE factory and is a GUARANTEE to the rider that he is getting the BEST.

WE ARE strong advocates of direct side by side comparison. Compare the YALE handle bars, fork, frame, grip control, tires, spokes, finish, etc., with those of any other machine and the vast superiority of the YALE is immediately apparent.

RIDE A YALE—THEY NEVER FAIL

Construction

RUN THE YALE alongside of any motorcycle listed at or about the same price. Look the two over. See how much bigger, better, and stronger the YALE is. See how much heavier the construction is. See if it does not seem more practical to invest in a YALE than in some cheap machine. The additional price guarantees you additional strength and security.

ASK ANY YALE agent what Consolidated protection in allotted territory means.

HE WILL tell you ABSOLUTE PROTECTION and prompt receipt of all inquiries from that territory.

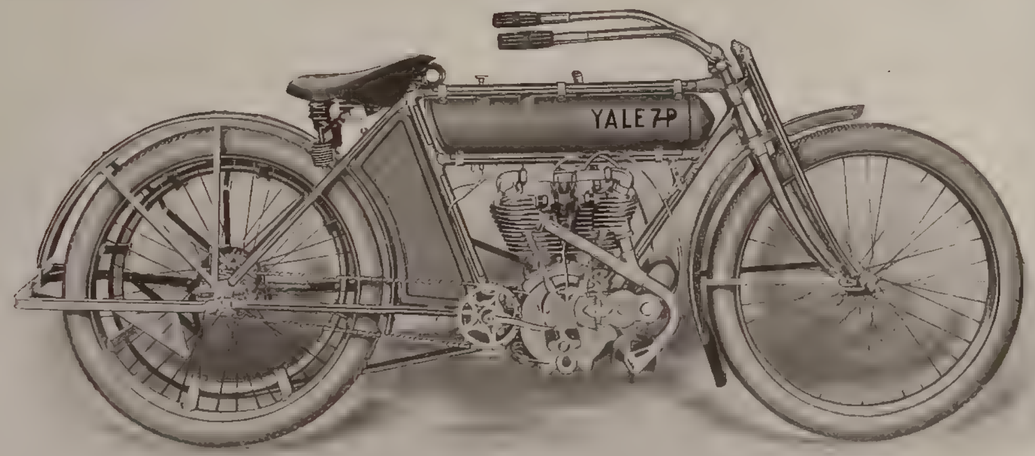
ASK ANY YALE agent what Consolidated service means. He will tell you "Shipment of machines on the day his order reaches the factory."

LOW PRICE is not everything and you, Mr. Dealer, will find this true before the season is over.

THERE ARE many Packard and Pierce cars sold each year in spite of the fact that you can buy a fair car for $500.00.

YOU WILL find in every town a certain number of people who demand the best, who buy only the best, and are perfectly willing to pay for quality of material and workmanship.

YOU CAN sell these PARTICULAR people in your town a YALE. Better write today for full information. Agents wanted in unoccupied territory.



Exhibiting at Madison Square Garden Automobile Show, January 6th to 13th, Space No. 704.

CONTINENTAL-ERIE Motorcycle Tires

They Guard Against

Tire Troubles

They go one better than simply guarding against, but are a permanent preventive of such tire difficulties as are familiarly known to every rider. Competitors wonder how we make them so everlasting -- the answer is — we make one style only but in that one style goes expert knowledge of rubber from its crude state to finishing the product. That isn't all, either. Send for our 1912 circular matter and learn the rest.

The Leading Motorcycle Tires

Thicker Treads—Tougher Fabrics
Construction Unusual—Unequalled

Motorcyclists everywhere are enthusiastic over Goodyear Motorcycle Tires.

These tires save time—save trouble—save scads of money hitherto spent either for repairs or for new tires. They outlast all other makes. They render **Goodyear Service.**

Thicker Treads

The puncture is one of the chiefest causes of motorcycle tire trouble. So to lessen the **danger** of puncture, we build our motorcycle tires with extra thick treads. These treads are thicker than found on most any other motorcycle tire. So Goodyears not only come nearer to being puncture-proof but they give most mileage.

Materials—Fabrics

The rubber used in Goodyear Tires is New, Live and Properly compounded. Like all the materials used, this rubber is the very best and highest grade that money can buy.

We also use a **fabric** different from that commonly used. Our fabric possesses unusual tensile strength. Instead of weaving it **closely,** we weave it loosely, in such a manner, that every thread may be thoroughly embedded in rubber. Thus, the threads separated, can not rub together, cause internal friction and develop weak spots in the tire.

BULLETIN

San Francisco, Dec. 22.—Goodyears win all events at Oakland Motordrome. 5-mile Amateur, Walker. 6-mile Pro., Wolters. 10-mile Pro., Wolters.

Los Angeles, Dec. 24.—Goodyear Stock and Blue Streak Tires win first, second and third in every race on program.

Goodyear Motorcycle Tires hold all world's Amateur and Professional Speed Records.

Our Great Endurance Test

Every Motorcycle tire made—including our own—undergoes this test—the severest that we can devise to try out a tire's endurance—the same test given our No-Rim-Cut Tires.

In this test we place our tire on a heavy weighted endurance machine. We wear it down by countless revolutions on on a surface rougher, harder on the tire than the average road.

Then every other tire gets the same test.

Our tire must outlast—outwear all other makes. Failing in this, it is abandoned and we perfect one that **does.**

13 Years Experience

During these years we have studied the tire problem from every angle. We have spent vast sums of money in sifting down principles, materials, methods, theories. Our aim was the ideal—the tire of perfect service. We focused on the problem the brains and skill of the world's greatest tire experts.

One outcome was Goodyear No-Rim-Cut Auto Tire—a tire which leaped into astonishing popularity with a record of sales that in one year's time—1911—exceeded all others.

Another outcome was for the Goodyear Motorcycle Tire—offered you today at the price you'd expect to pay for any standard tire.

Let us tell you more about these tires. They hold more world's records than all other tires combined.

Write for our Tire book.

BICYCLING WORLD and MOTORCYCLE REVIEW
(FOUNDED 1877)

Vol. LXIV. New York, U. S. A., Saturday, January 13, 1912. No. 17

MANUFACTURERS HOLD MEETING

Four Firms Admitted Raises Membership to 21—Representative Gathering Discusses Trade's Bright Prospects.

Twenty-one manufacturers, all makers of motorcycles, now constitute the membership of the Motorcycle Manufacturers' Association. Four new members, the Minneapolis Motorcycle Company, of Minneapolis, Minn.; the Black Hawk Motor Company, of Rock Island, Ill., the Henderson Motorcycle Company, of Detroit, Mich., and the Schickel Motor Company, of Stamford, Conn., were admitted at the winter meeting of the association, held at the Hotel Astor, New York City, Thursday, January 11.

There was a representative attendance at the meeting, President A. B. Coffman (Consolidated Mfg. Co.) of Toledo, O., in the chair. Others present included George M. Hendee and F. J. Weschler (Hendee Mfg. Co.) Springfield, Mass.; J. A. Handin (Aurora Automatic Machinery Company) Chicago; W. G. Schack (Emblem Mfg. Co.) Angola, N. Y.; Arthur Davidson (Harley-Davidson Motor Company) Milwaukee, Wis.; J. F. Cox (Pope Mfg. Co.) Hartford, Conn.; W. F. Remppis (Reading Standard Company, Inc.) Reading, Pa.; W. A. Johnson (Pierce Cycle Company) Buffalo, N. Y.; H. N. Kirk (Excelsior Motor Mfg. and Supply Company) Chicago; Jesse Campbell (New Era Auto-Cycle Company) Dayton, O.; C. B. Knudsen (Minneapolis Motorcycle Mfg. Co.) Minneapolis, Minn.; W. T. Marsh (American Motor Company) Brockton, Mass.

In addition to the election of new members mentioned above, routine business matters were disposed of, and the prospects of the coming season's trade as indicated by popular interest in the present display of motorcycles at the Garden was discussed. The general sentiment was that 1912 was to be the banner season so far in the industry. President Coffman, acting as spokesman for the association in discussing the trade situation, said:

"Motorcycles, like automobiles, are steadily and gradually approaching the goal of mechanical perfection. Every year brings changes, it is true, but fundamentals have become pretty well established and, based on these is a careful and elaborate process of refinement and improvement in detail which has made the 1912 models worthy of the serious consideration they are now being given by the public.

"The Motorcycle Manufacturers' Association is pleased with the business done last year, and its members see even brighter prospects for 1912. The coming year will be satisfactory not only to manufacturers, but to riders as well.

"The rider is, of course, the backbone of the motorcycle industry. He must be pleased and satisfied. His desires are first in the manufacturers' mind, and in the models now being exhibited in conjunction with the automobile show, in Madison Square Garden, there is evidence that the rider will be satisfied in 1912. Mechanical skill and ingenuity have done their utmost to incorporate in these new models a maximum of reliability, efficiency and comfort as well as a minimum cost of up-keep.

"Our association is active in furthering the interests of retail dealers in motorcycles; it furthers the interests of motorcycling by co-operating in motorcycle tours and other events, and through its show committee it arranged for space and cares for other business details that are part of such an exhibition as that now in Madison Square Garden. Its members, through their regular meetings have the advantage of the exchange of ideas and suggestions; and moreover these meetings bring about friendly associations and personal contact that is helpful in the industry.

DETROIT FOR SUMMER CONVENTION

Cycle Parts and Accessories Association Sets Dates for August 6-9—Officers Elected—Fine Luncheon Given.

There was a very large gathering of the trade at the annual meeting of the Cycle Parts and Accessories Association at the Hotel Astor, New York City, which convened at 10 o'clock in the morning, January 11. In the absence of President Ralph D. Webster, of the Eclipse Machine Company, William H. Crosby, of the Crosby Company, occupied the chair, until the election of the new president.

Officers for the ensuing year were chosen in the choice of L. M. Wainwright, of the Diamond Chain Company, of Indianapolis, for president, and David S. Smith, of the Standard Company, Torrington, Conn., for vice-president, to succeed R. D. Webster and D. S. Troxel, respectively. The other officers chosen are re-elections, Louis Schwab, of Stevens & Co., New York, as secretary, and W. J. Surre, of the Continental Rubber Works, Erie, Pa., as treasurer.

Detroit was chosen as the place for the annual summer convention of the association, and August 6-9, was chosen for dates. The meeting made an appropriation for the entertainment of guests, and a committee of arrangements, consisting of W. J. Surre, chairman, David S. Smith and L. M. Wainwright, were chosen to perfect the plans for the gathering. It was decided to invite all members of the trade individually to the convention, instead of extending the invitations collectively to organizations as formerly.

The feature of the day, succeeding the meeting, was the luncheon tendered by the association to the Motorcycle Manufacturers Association and the National Assoc-

iation of Cycle Jobbers. The guests and their hosts filled the spacious dining room on the eighth floor of the hotel, and the occasion was one of much enjoyment to all who participated. W. H. Crosby, who was the association's first president, occupied the chair of toastmaster, and after the menu had been exhausted introduced the new president, L. M. Wainwright, who fittingly welcomed the association's guests.

John N. Willys, of the Willys-Overland Company, who was an original member of the jobbers' association followed with a short speech full of interesting reminiscences. He was in turn followed by George M. Hendee, P. R. Robinson, and Fred I. Willis, each of whom set the tables in a roar with their witty sallies.

Bradley After Merkel Pottstown Plant.

The Bradley Motor Company, 268 Diamond street, Philadelphia, which has been making motorcycles for a number of years, is contemplating an extension of its factory facilities. Representatives of the company have been looking over the former Merkel plant, at Pottstown, Pa.

Tire Makers Will Standardize Rims.

At a meeting of the Clincher Tire Manufacturers' Association, January 5, 1912, standard rim sizes were adopted for motorcycles. The Goodyear Tire and Rubber Co. immediately staged at the New York Show, the first 2¾ and 3 inch tires to suit.

CYCLE JOBBERS FORMALLY DISSOLVE

Inability to Agree on Matter of Incorporation Given as Reason For Dissolution —May Reorganize on Social Lines.

The National Association of Cycle Jobbers has officially gone out of existence. At the annual meeting of the association, held at the Hotel Astor, New York City, January 11, a plan for the incorporation was discussed by the meeting, and referred to the board of directors, which went into executive session. The directors reported that inasmuch as the association could not agree upon a plan for incorporation, a resolution to formally dissolve would be considered. The resolution to dissolve the association was then formally introduced and carried.

There is a possibility that the cycle jobbers will reorganize along social lines at some future date.

Bison City Dealers Plan to Organize.

Buffalo, Jan. 9.—Motorcycle and bicycle dealers are going to bury the hatchet of jealousy, and form an organization to encourage the sale of motorcycles for business and pleasure in that territory. The first spadeful of earth was thrown in the grave of the "knocker's hammer," on Monday, by John W. Henry, president of the Vim Cycle & Supply Company, who presided at a preliminary meeting of the dealers held at his establishment, to discuss the advisability of forming a trade organization. The proposition was received enthusiastically, and the association will take definite form on January 15, when officers will be elected. The meeting brought out the fact that several of the local dealers were total strangers to each other, the most striking instance being in the case of two dealers, who had been in business for 15 years within a mile of each other and never had become acquainted. All local motorcycle and bicycle dealers, and manufacturers, will be eligible to membership in the organization. Henry, who relinquished the shrievality of Erie County on January 1, was the host at the big free-for-all trade dinner of the 1911 F. A. M. national meet.

Additions to the Big Goodyear Tire Plant.

Two more buildings are being added to the already immense Goodyear Tire & Rubber Company plant at Akron, Ohio. One of the buildings will be 300 x 60 feet, five stories high, and the other 120 x 50 feet, six stories high. When the new structures are completed they will permit the company to increase its tire capacity from 2,200 to 3,500 casings per day.

Walter Goerke, Indian agent at Newark, N. J., has been placed on the list of F. A. M. repair shops of the first class. His store is located at 321 Washington street.

LUNCHEON TENDERED MOTORCYCLE MANUFACTURERS AND CYCLE JOBBERS, BY CYCLE PARTS AND ACCESSORIES ASSOCIATION, HOTEL ASTOR, NEW YORK, JANUARY 11, 1912

COASTER BRAKE MEN INDICTED

Eighteen Individuals and Six Corporations Accused of Conspiracy—Defense Claims Exercise of Patent Law Rights.

Indictments were handed down by the Federal Grand Jury at Buffalo, N. Y., on Monday, January 8, charging that a trust bearing no name has secured control of 90 per cent. of the business of manufacturing and selling coaster brakes for bicycles and motorcycles and a large percentage of other bicycle accessories and has violated the Sherman anti-trust law.

There are eight counts in the indictments, in which 18 individuals and six corporations are accused of conspiracy to restrain their own trade and that of competitors and jobbers, and trying to monopolize the business. The individuals indicted are:

Edwin E. Jackson, Jr., Frederick R. Huntington and James P. Drouillard, New York; Albert F. Rockwell, Gales P. Moore, DeWitt Page, and Charles T. Treadway, Bristol, Conn.; William A. Graham, Brooklyn; Charles Glover, Clarence A. Earl, New Britain, Conn.; David L. Whittier, Ralph D. Webster, Leonard S. Whittier, and Edward J. Dunn, Elmira, N. Y.; Simon Florsheim, John D. Hurley, Chicago; K. R. Jacoby, E. M. Jackson, Middletown, O.

The houses represented by the above, and which are also indicted, are the New Departure Mfg. Co., Bristol, Conn.; Corbin Screw Corporation, New Britain, Conn.; Aurora Automatic Machinery Company, Aurora, Ill.; Eclipse Machine Company, Elmira, N. Y.; Miami Cycle & Mfg. Co., Middletown, O.; Buffalo Metal Goods Company, Buffalo, N. Y.

It is charged that on July 1, 1907, at the Hotel Lafayette, Buffalo, representatives of the six firms entered into an agreement arbitrarily fixing prices and providing for a system of penalties and blacklists. No corporated name was adopted then or since, although the alleged combination has been known to the trade as "The Association of Coaster Brake Licensees."

Jackson and Huntington, two of the New York men indicted, are charged with acting as "arbitrators" and were custodians of a fund of several thousand dollars deposited by the six firms as guarantees that the alleged agreement would be kept. They settled all questions at issue between jobbers and kept records of the output by each concern. Cutting prices for the goods of any one of the six companies, it is alleged, was penalized by blacklisting on the books of all of them, and since the companies controlled the manufacture of 90 per cent. of the coaster brakes made, a dealer who failed to observe the regulations and prices of the association, it is charged, was practically shut out from that line of the trade.

Bail was fixed at $1,000 each, and all of the indicted parties were notified to appear before the United States District Court at Buffalo, on Friday of this week to plead to the indictments. The defence, it is understood, will be that there was no combination in restraint of trade and that the companies were merely exercising rights guaranteed to them under the patent laws.

"This will be a test case to determine just how far a patentee can go in fixing the price of his product," said a lawyer for the defense. "That is a question which has not yet been passed upon by the Supreme Court and the decisions of the lower courts have been adverse to the stand taken by the Government in this prosecution."

The New Departure Mfg. Co., which is the parent company owning the coaster brake patent, on Thursday, January 11, issued the following statement to the trade:

"You have doubtless been advised through the public press, that the United States Grand Jury at Buffalo, has presented an indictment against this company and its licensees for an alleged combination in restraint of trade. We think it proper to assure you at this time that we have taken no action, or done anything at any time, except such things as we have been advised by able counsel we were authorized to do under the patents granted us by the United States, for the protection of our rights and the rights of our licensees."

DeWitt Page, secretary of the New Departure company, who has been in New York the past week attending the Madison Square Garden show, was asked: "What about this 'restraint of trade' investigation of your coaster brake patents?"

"Restraintomania," remarked Mr. Page. "We welcome this investigation on the part of the Government, and believe our position will be very much strengthened because of same."

Will Construct Motorcycle Frames.

Occupying a three-story building, with a floor space of 40,000 square feet, at 166-168 North Sangamon street, Chicago, the Excelsior Cycle Company, of that city, will soon be established in a new and advantageous location. The company will make a specialty of turning out frames for motorcycles, selling to jobbers, dealers and individuals who desire to build or assemble motorcycles. It is expected to open the factory on January 20. The officials of the company are: Chairman of board of directors, Peter O'Horo; president and general manager, James C. Blaine; vice-president and factory manager, Ernest Unger; secretary-treasurer, A. C. Walker.

The Excelsior Motor Manufacturing and Supply Co., manufacturing and dealing in automobiles, bicycles, motors, engines, etc., was incorporated at Springfield, Ill. Incorporators—Ambrose A. Worsley, Marx Loehwing and Samurel W. Jackson.

HENDEE ON TRADE CONDITIONS

Prospect for Fine Business Unparalleled Says "Indian" Manufacturer—Future of the Side Car a Certainty.

"Never in the history of the motorcycle trade has the outlook for business been as good as at the present moment," said President George M. Hendee, of the Hendee Mfg. Co., on Wednesday of the present week, while in New York attending the motorcycle show at Madison Square Garden. "Here is evidence of the fact," continued Mr. Hendee, as he drew forth a letter received that morning from the factory at Springfield, Mass. The letter showed that orders for 87 Indian motorcycles had been received the day previous at the factory, practically all of them for immediate delivery.

"We are now turning out 80 machines per day at the Indian plant, and are increasing our facilities so that we will soon be enabled to turn out 100 per day," said Mr. Hendee. "The building which we recently acquired in the rear of our present factory will give us the greatly needed room we require for the present, and if we need more factories we can build them, as we have about six acres of ground, all told.

"The future for the side car in this country is one of the most pleasing aspects of the industry. We have great faith in the side car, and believe that it will be readily available for country riding upon the average road. Good construction and plenty of horsepower in the motorcycle will enable the side car to perform its functions, and the jar can be eliminated with properly constructed seats.

"Moreover, the increased use of side cars will open the eyes of the public to their possibilities as commercial carriers. We look for a largely increased call for side cars during the coming season."

New Prest-O-Lite Factory to be Steel.

Owing to urgent need of additional room, the Prest-O-Lite Company decided to abandon the construction of the reinforced concrete building recently started at its Indianapolis plant, part of which, during erection, collapsed, and instead have awarded a contract for a three-story steel factory building on the same site on East South street. It is announced by the architect of both buildings that the change in construction was made solely because the steel building could be finished more quickly and not from any lack of faith in the concrete structure. Considerable delay on deliveries was occasioned by the accident, which it is hoped soon to improve greatly.

The second suit for damages growing out of the collapse of the first building, was filed against the Prest-O-Lite Company and the contractors, for $10,000.

January 13, New York City—Annual ball of the Century Road Club of America at Lyric Hall, Sixth avenue andn 42d street.

January 13-27, Philadelphia — Eleventh annual motorcycle and automobile show in First and Third Regiment armories.

January 20, New York City—Fourteenth annual ball of the Century Road Club Association, Eastern Division, at Alhambra Hall, Seventh avenue and One Hundred and Twenty-sixth street.

January 20, Buffalo, N. Y.—Seventy-fourth Infantry A. A., Armory, bicycle races and athletic games.

January 20, Brooklyn, N. Y.—Forty-seventh Regiment Armory, five mile flat-floor bicycle race and athletic games, under the auspices of the Melrose Athletic Association.

January 20-27, Providence, R. I.—Automobile and motorcycle show in Providence Armory.

January 25, New York City—Madison Square Garden—Three-mile flat-floor bicycle race and athletic games under the auspices of the Irish American Athletic Club.

January 28, Providence, R. I.—Providence Motorcycle Club's annual banquet and high jinks.

February 1, Dayton, Ohio—Annual dinner of the Dayton Motorcycle Club.

February 1, Buffalo, N. Y.—Sixty-fifth Infantry A. A., Arsenal, bicycle races and athletic games.

February 3, New York City—Company "K," 22d Regiment and Morningside Athletic Club, bicycle races and athletic games.

February 3-10, Chicago(Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory, under auspices of National Association of Automobile Manufacturers.

February 10, Chicago—North Shore Motorcycling Club show wind-up smoker.

February 26-March 3, Quincy, Ill.—Second Annual Mississippi Valley Automobile Show, under the patronage of Quincy Auto Club, at Highland Park Pavilion.

February 21-28, Toronto, Ont.—Motorcycle show in Toronto Armory.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

Keen Racing at Georgia's Capital.

Augusta, Ga., Jan. 6.—Rivalry between local favorites furnished close finishes and good sport at the New Year's Day motorcycle races at the fair ground's half-mile track, under the auspices of the Augusta Motorcycle Club, and although the track was inches deep in mud in places around the pole, due to the heavy rain of the day previous, good time, considering the conditions, was made in all of the events.

In the headliner event of the card, the fifty miles open, R. H. Lombard was leading the field by one lap in the forty-third mile when he threw both tires, escaping almost miraculously without a scratch, he riding at the time at a 1:30 clip. The fastest time of the day was made in the match race by Buford on a ported Merkel "four," doing an intermediate lap in 38 seconds. Summary:

Three mile open, stock singles—Won by W. J. Bignon (Excelsior); second, M. B. Buford (Merkel); third, J. L. Brandon (Excelsior). Time, 5:22.

Fifty mile open, stock machines of all classes—Won by Hugh Saxon (7-h.p. Merkel); second, W. J. Bignon (4-h.p. Excelsior); third, W. D. Phillips (6-h.p. Merkel); fourth, J. L. Brandon (4-h.p. Excelsior). Time, 1:16:00.

Two mile match race, M. B. Buford (4-h.p. Merkel) versus Hugh Saxon (7-h.p. stock Merkel)—Won by Buford. Time, 2:50.

Road Race at Phoenix, Arizona.

Under the auspices of the local Y. M. C. A. at Phoenix, Arizona, there was run the first motorcycle road race in that vicinity, to Mesa and return, a total distance of 38 miles, Thursday, Dacember 28. It is anticipated by the promoters that the event will be the forerunner of a number of like nature. It also is being planned to hold endurance contests, hill-climbs and economy tests in the near future. A motorcycle club is in process of formation, and when organized, affiliation with the F. A. M. is contemplated.

A handsome silver loving cup was posted by the Y. M. C. A. as first prize, with the condition that the winner defend it against all challengers. The order of finish and the respective times were as follows: Staton Dorris (Harley-Davidson), 1:00:37; Joe O'Connell (Thor), 1:05:08; Jim Davis (Harley-Davidson), 1:06:20; Walter George (Harley-Davidson), 1:06:49; J. Barber (Harley-Davidson), 1:07:05; M. Valentine (Thor), 1:09:59; H. Steele (Yale), 1:10:45.

Willis and Hamilton Out of Kokomo.

Fred I. Willis and G. H. Hamilton, who some three months ago purchased an interest in the Kokomo Rubber Company, of Kokomo, Ind., the former becoming the vice-president and the latter the sales manager of the Kokomo plant, have sold their holdings to the Spraker interests, which organized and control the Kokomo works. The Kokomo Rubber Company will continue to manufacture high grade tires for the jobbing trade in keeping with its long established policy.

Mr. Willis has returned to Indianapolis and will continue his relations with the Hersey-Willis Company of that city, and Mr. Hamilton has joined the forces of the Federal Rubber Mfg. Co., at Milwaukee, Wis., as assistant sales manager. Both Willis and Hamilton are well-known to motorcyclists, the former being a past president of the Federation of American Motorcyclists, and the latter is the present incumbent of that important position.

Bush Goes With Kelly-Racine Rubber.

James I. Bush, formerly manager of the B. F. Goodrich Company's motorcycle tire department, at Akron, O., has severed his connection with that house and is now located at Racine, Wis. He will have entire charge of the motorcycle tire department of the Kelly-Racine Rubber Company. Mr. Bush has been closely identified with the motorcycle trade for a number of years, and is a very active rider personally. He will also be remembered as the one-time captain of the Wisconsin University football team, where he made an enviable record as an athlete.

Gibneys Form New Company for Supplies.

Under the name of the Gibney Motor Supply Company, the long established house of James L. Gibney & Bro., of Philadelphia, have decided to handle their rapidly growing general supply business in the future. The supply company will take over the selling end of the motorcycle, bicycle and automobile supplies, but the manufacturing business, which consists of the solid tire and electric vulcanizer interests, will be continued by James L. Gibney & Bro.

Dayton Motorcycle Club Plans Dinner.

February 1 was decided upon as the date for the annual dinner of the Dayton, Ohio, Motorcycle Club at its last meeting, held January 3, at the Algonquin Hotel in that city. Plans were put in operation to make it quite the largest affair of the sort, as it is expected that at least 200 will attend.

To Facilitate Matters Our Patrons Should Address us at P. O. Box 649.

NEW YORK, JANUARY 13, 1912.

A Technical Glimpse at the Show.

To the man with a mechanical eye, who likes to look at the bone and fiber of the motorcycle rather than the skin, however handsome the latter may be, the 1912 models of the leading manufacturers, shown in Madison Square Garden this week, offer a rare treat. Never in the history of the industry have the designers offered so much that is new, novel and attractive to the rider, as in the models for the coming season.

Touching first on the motor, which is the heart of the motorcycle, it plainly is apparent that despite the increasing popularity of the twin, a trend which is being assiduously nurtured by some manufacturers, the single, or rather the "big single," is king. Of the 65 machines on exhibition, 45 are singles, 18 twins, and 2 have four cylinders. But one make of single is under 4-horsepower, the others ranging from 4 to 5. The twins are rated from 5 to 7-horsepower, but several of them will develop considerably more. Both of the "fours" also are given 7-horsepower rating, which undoubtedly is conservative.

Although the mechanical inlet valve is gaining slowly, the automatic advocates are dying hard. Of the 16 makes exhibited, 7 each use mechanical and automatic exclusively, while 2 straddle the question by using both types on different models. The overhead rocker type of inlet valve is most popular. Despite the many advantages which it offers, the two-speed is having a hard fight for recognition. Only five makers offer it.

Oil windows in the motor base are numerous, but at least six makers yet have to be convinced of their worth. One of the finer details is the growing tendency to use decalcomania name transfers on the head instead of the conventional metal plate. A few leave the nameplate space blank. In strong contrast to the early days of the industry, not a single maker now buys an assembled motor, but builds his own, although many of the parts are made outside.

Since the last show two multiple jet carbureters have been born, and it is quite likely that their numbers will increase, especially on twins, which are hard to make flexible. As naturally might be expected, the magneto steadily is crowding the battery out. Half of the makers use the magneto exclusively, and the others fit it to their leading models, offering the battery on the cheaper machines. Enclosed spur gear drive is practically universal, not a single maker showing a chain driven magneto. One maker, who, by the way, is blazing the way with the two-cycle motor, uses no gears whatever, the drive being through a banjo disc from the armature to the crankpin, the magnets being rotated for spark timing. Mounting the magneto in front of the motor is most general, while a few makers place it in the rear, and still a few others use both positions.

In cylinder design there is a very pronounced leaning toward the one-piece construction, only three makers casting the head separate. Ball and roller bearings are making slow headway, the plain bronze type being intrenched strongly owing to its satisfactory service. Although the number of models show averages from four to eight, standardization tendencies are apparent in the confining of motor sizes to not more than three, and in most cases two. Weights run from 160 to 250 pounds approximately.

There has been a big flop to the clutch, all but two makers offering it, although some list it extra and others include it as standard equipment. The multiple disc type is far in the lead, but this year the cone pattern has appeared on the horizon. While wheelbases run from 51 to 65 inches, the average hovers around 54 and 56. All but two makers use 28 inch wheels exclusively, and the standard tire diameter is 2½ inches, but the 2¾ and even 3 inch size is gaining ground.

Quick detachable front axles, otherwise known as the knock-out type, are fitted to every machine, but just why this desirable feature is not incorporated in the rear hub also, where it is even more requisite, is difficult to fathom. But one maker offers a quick detachable rear axle. Ball bearing hubs are the style, but two makers also use roller bearings. Coaster and band brakes are about equally divided, and a few examples of double brake equipment are to be found. All but four makers fit muffler cut-outs, because the demand is such as to require recognition.

This show is notable for the sudden return of the chain drive to favor, all of the big makers now using it, after some had steadfastly held aloof for years. The standard size used is a 5/16 roller, and the most popular application is a double drive through a countershaft, but where the motor is undergeared the direct chain is used, and also in two cases without undergears.

In the realm of the belt, the flat type predominates, and to take care of high powered motors, the belt widths have been increased, in some cases spreading more than two inches across. Spring seat posts, of the hinged link type, with springs in the seat mast, have bobbed up strong, three makers showing this style for the first time. Another uses an auxiliary spring tube, and two firms exploit the spring frame. Although only one foot-starter was shown, it attracted a generous share of attention, and by the very reason of its inherent advantages it will compel greater recognition from makers within the next twelvemonth.

With better machines all around, and prices lower than ever before, the buyer of 1912 will receive greater value for his money and better service from his machine than the manufacturer ever before has offered. Also there will be more machines built this year than in any previous one, and from present indications it promises to be the rosiest season the industry ever has enjoyed.

ESTABROOK'S NEW YEAR'S BULLETIN

Predicts Great Doings For the Next Twelvemonth—Galveston M. C. First New Year Comer—Repair Shops.

Under date of January 6, from his headquarters at Bangor, Me., Chairman Estabrook, of the F. A. M. Membership Committee, states that the new year starts in auspiciously, with promise of great results during the next twelve months. A very large number of clubs are in the embryo stage, and presently will appear on the horizon, bearing tidings of great cheer and unusual activity in the sport, while most of the banners will bear the legend "100 per cent. F. A. M."

The Galveston Motorcycle Club was up a little before daylight on January 1, and succeeded in capturing the first batch of 25 members and sending them over the home plate before the Rushville boys reached the diamond. The list of latest affiliations include three 100 per cent. club as follows: No. 211, Galveston Motorcycle Club, E. H. Frank, secretary, 3616 J avenue, Galveston, Tex.; No. 212, Rushville Motorcycle Club, W. C. Feudner, secretary, 105 East Third street, Rushville, Ind.; No. 213, Bowling Green Motorcycle Club, R. J. Walker, secretary, 105 Court street, Bowling Green, O.

The latest Chicago Club to consider affiliation is the Humboldt Motorcycle Club, recently organized with 41 members. John Peska, 4535 West North avenue, is the secretary.

Signs of progressiveness at Enid, Oklahoma, are already noticed, and Ivan King, 106 East Randolph street, is organizing an 100 per cent. club for F. A. M. affiliation.

Harold Meline, of Hollowville, N. Y., writes of his intent to spend the spring and summer moths en tour. When road conditions permit he will make a trip to Georgia, thence with a companion, will follow the southern route across the continent to California. On the return trip he will strike north from Fort Worth, Tex.

Registered repair shops now number 452, 15 new registrations having been received since last report. The new ones are: John Steele, 185 Paterson street, Paterson, N. J.; J. B. Quinn, 201 Ridge street, Fall River, Mass.; Whipple & Forman, 51 Genessee street, Auburn, N. Y.; C. J. Mitchell, Temple, Texas; W. A. Myers, Lycoming Opera House, Williamsport, Pa.; P. N. Thompson, 625 Dodge street, Lake Genevt, Wis.; Sonnebern's Sons, 813 Main stret, LaPorte, Ind.; Apex Bicycle Company, 12 Twelfth street, Portland, Ore.; F. Strowbridge, 324 West Dominick street, Rome, N. Y.; G. A. Allen, 14 Church street, Livermore Falls, Me.; Baltimore Gun & Bicycle Works, 336 West Second street, Albany, Ore.; Turlock Cyclery, Hotel Carolyn building, Turleck, Calif.; Wolverine Auto-Cycle Company, 59 South Jefferson avenue, Battle Creek, Mich.; C. A. Sherman, Middleboro, Mass.; Garrison Motor Company, 454 Monroe street, Memphis, Tenn.; Andrew Kraus, 6 Genessee street, Auburn, N. Y.; James Mayo, 222 Penn street, Reading, Pa.; Harley-Davidson Sales Company, Union City, Ind. (The last three names are re-issues).

For the benefit of repairers who are withholding their registrations on account of a supposed 10 per cent. discount, formerly given to regitered shops, Chairman Estabrook says that the F. A. M. contract does not call for this or any other discount. He will forward full information on this subject to inquirers by mail, on request.

Doings of New Jersey's Big Club.

Newark, N. J., Jan. 9.—George Post was duly installed president of the New Jersey Motorcycle Club last week. The official board which he heads consists of the following: Vice-president, Carl Bush; treasurer, Elmer Crosbie; recording secretary, H. Norman Davis; financial secretary, Peter Cunningham.

The annual banquet of the club is scheduled for Friday night of this week, the club members visiting the New York motorcycle show in a body and afterwards partaking of a feast at one of the metropolitan restaurants.

Several propositions have been made to construct a motorcycle track in Newark to the club members, George Kreamer and George Hamilton submitting separate propositions, both for the same site, that of the old Vailsburg cycle track at Electric Park. Nothing definite has been decided, however.

Preparations are in active progress for the annual reception and dance which will be held at Oraton Hall, February 9. Former President H. C. Page will act as floor manager.

Elmira Motorcycle Club Elects Officers.

Elmira, N. Y., Jan. 8.—The annual business meeting and election of the Elmira, N. Y., Motorcycle Club, held January 4, in the club rooms on West Water street resulted in the choice of the following officers: President, B. A. Forsythe; vice-president, Robert Weaver; corresponding secretary, T. C. Sayles; financial secretary, Henry Rohver; treasurer, Arthur Helly; captain, Waldo Allen; first lieutenant, Robert Butts; second lieutenant, Victory Campbell; members of the board of directors, Phay B. Ruton and Dr. Walter C. Byrne.

It was also announced that the club intends to hold three race meets during the coming season. Options have been secured on the Maple Avenue Park track for the afternoons of Decoration Day, Fourth of July and Labor Day, the success which attended last year's events in this line being highly gratifying and encouraging.

Torontonians Convene in Annual Meeting.

Toronto, Ont., Jan. 8.—There was a large meeting of the Toronto Motorcycle Club January 3, the occasion of which was the annual gathering for the election of officers and for hearing the reports of officers for the year which has just closed. Officers for the ensuing year were elected as follows: Hon. president, Rev. J. D. Morrow; president, Fred Johnston; vice-president, William Self; secretary-treasurer, Tom Anderson; executive board, Messrs. McMulkin and Summers; racing committee, Messrs. Stoner, Scott, Marshall, Frankland, Young, Davis, Sutherland; social committee, Messrs. Case, Stillaway, Neilson; auditors, Messrs. Thompson and Stillaway.

The secretary-treasurer reported a balance of $1,035.35 in the treasury, and was voted an honorarium of $100 for his services for 1911. The incoming president, Fred Johnston, in his inauguration address, gave an outline of the work to be expected during the coming season. A notice of motion was entered favoring the establishment of permanent quarters, while a resolution was passed directing that the club submit a proposition to the Federation of American Motorcyclists for better protection of affiliated clubs, especially where it concerns Canada. Messrs. Anderson, Kipp and McLean were delegated to represent the local organization at a special conference to be held in New York City during show week, to deal with the matter.

The Dunlop trophy, awarded to the club for the three-day endurance run held last fall, was officially received. The announcement was made that the club will occupy an exhibit at the coming automobile and motorcycle show to be held in the Armories, February 21-28.

Joe Baripeau, the celebrated rider, of Winnipeg, who holds a record of 100 miles in 100 minutes, was present and was called upon for a few words. He promised that Manitoba's cracks would come East next summer for the club's championships. It was one of the finest meetings the club ever had, both in the number present and in the work accomplished.

Reading Motorcycle Club Elections.

Reading, Pa., Jan. 9.—With a thriving membership of 60 and located in fully equipped clubrooms, the Reading Motorcycle Club held its regular election on January 4, and the following officers were chosen: President, John S. Hartman; vice-president, Robert B. Haensen; recording secretary, C. B. Eisenhower; financial secretary, Arthur Bruderick; treasurer, C. A. Hart; trustees, P. B. Fritz, Charles F. Kinsey, Milton Reed; house committee, Robert Haensen, Max Meis, Christ Starck, Milton Reed, Jacob Deysher; competition committee, John G. Neubling, James Mayo, William Schaeffer, W. E. Buel, William Stout; captain, J. M. Dunkel; first lieutenant, Christ. Starck; second lieutenant, Samuel Killian.

Last and Best of the Garden's Motor Shows

ON ENTERING THE GARDEN

Deluged with a flood of electric lights that radiated their brilliance upon a multitude of exhibits, consisting of the latest and best products of the automobile and motorcycle industry and the makers of their component parts and supplies, the Twelfth National Show was opened auspiciously on Saturday evening January 6, with a vast crowd of visitors that packed the aisles of the arena and the galleries to suffocation.

It is pronounced by all the thousands of visitors who have thronged the Garden every day and evening of the present week to be the most brilliant exposition ever held in that historic structure, now doomed to make way for a business block.

During the two weeks of the Garden show there will be nearly 600 exhibits. Ninety-four display complete vehicles. Of these 60 are exhibiting this first week, lines of pleasure cars only. Next week 34 makers will show commercial vehicles. There are 16 exhibits of motorcycles and several hundred showing accessories. The estimated cost of the exhibits is $2,500,000.

In addition to the outpouring of the public there has been an outpouring of trade representatives of all the allied branches of the industries, such as never before has been in evidence in New York City. Hotels have been jammed to their utmost capacity, and conferences of tradesmen, interpersed with dinners, luncheons, and other social functions have added greatly to the zest and spirit of the occasion.

As to bookings of orders and business done exhibitors have but one report to make—that of unexampled activity in all lines. Agencies for the sales of motorcycles that have been pending for some time have been closed by the hundred during the present week, and large numbers of new agencies have been placed. This shows a healthy confidence by the dealer, and promises to give the factories all that it is possible for them to handle in the future.

LOOKING TOWARD THE GALLERY WHERE MOTORCYCLES WERE EXHIBITED

A pleasing feature of trade conditions is large demand by dealers for immediate deliveries. This shows that large numbers of motorcycle riders no longer wait for the advent of the summer season for the delivery of their mounts, but consider that motorcycling is a practical possibility all the year round.

One of the exhibiting manufacturers, who has lately entered the field, and who has had considerable experience with motor car construction stated that when he considered the fact that the present year's output of motorcycles could not exceed 50,000, he determined to enter the field, as he believed the market presented the finest opportunity for development in the transportation field that was in evidence to-day.

Referring to what may be considered a trend toward standardization it is noticeable that in the motorcycles exhibited the motive power is confined largely to two

sizes of motor, and both high-powered. In some instances a third size of motor was noticed, but it is exceptional. There appears to be a big gain in chain drives for machines, and a larger traveling range is assured by the increased sizes of tanks.

In the matter of ignition systems reliability now seems to be the keynote desired, and machines are capable of being run more silently than heretofore. Much attention has been paid to making the motorcycle more comfortable for the rider, and cleaner to operate. Attractive finishes predominate, and what will appeal to the purchaser strongly is the fact that prices are lower.

It can be readily seen that with the rapid development made in the industry, as is exemplified by the show, it is impossible to do full justice to all the varied branches of the industry in compiling a report for a weekly publication, owing to limited time and space. It will therefore be the function of the Bicycling World and Motorcycle Review to treat in the present issue of the finished product of motorcycles, and devote space in next week's paper to the accessories shown.

EMBLEM MFG. CO.—EMBLEM.

Show Staff—W. G. Shack, F. L. Valiant, L. S. Taylor, W. H. Snyder.

Models Displayed—One 7-horsepower twin; two 4-horsepower singles; two 5-horsepower singles, one tandem.

What is New—Since making its 1912 announcement the Emblem factory has brought out nothing new. A great many changes and refinements have been made in the motors, but they are of a secondary nature. Perhaps the most noticeable change in the line is the adoption of the camelback type of frame, in place of the straight bar pattern. An ingenious tandem attachment with adjustable foot rests for various length-leg passengers also is shown. One of the little innovations is a number plate on the tank, which carries two serials, one being the motor number, and the other the color indicator. The latter of course, is intended chiefly for factory guidance when the parts are going through the enameling room. The Emblem people, who also make bicycles, had an exhibit of them at their hotel headquarters.

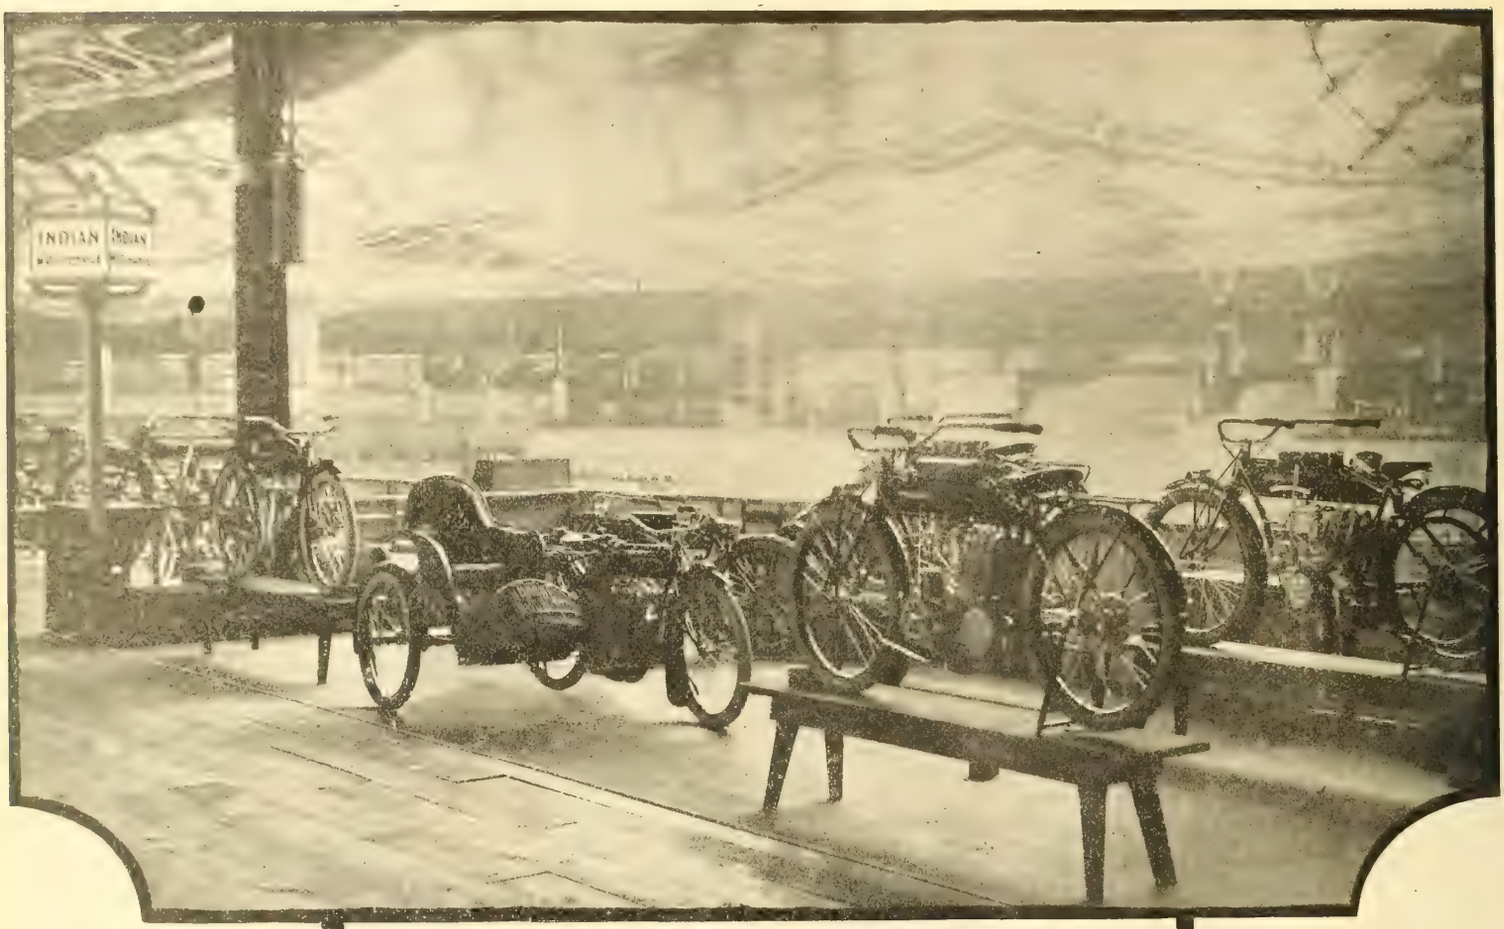
Frank Valiant, of the staff, exhibited a neat handlebar mirror, of his own design. It was the only accessory of this style shown on any of the machines.

EXCELSIOR MOTOR MFG. & SUPPLY CO.—EXCELSIOR.

Show Staff—H. N. Kirk, S. T. Kellogg, F. Mercier.

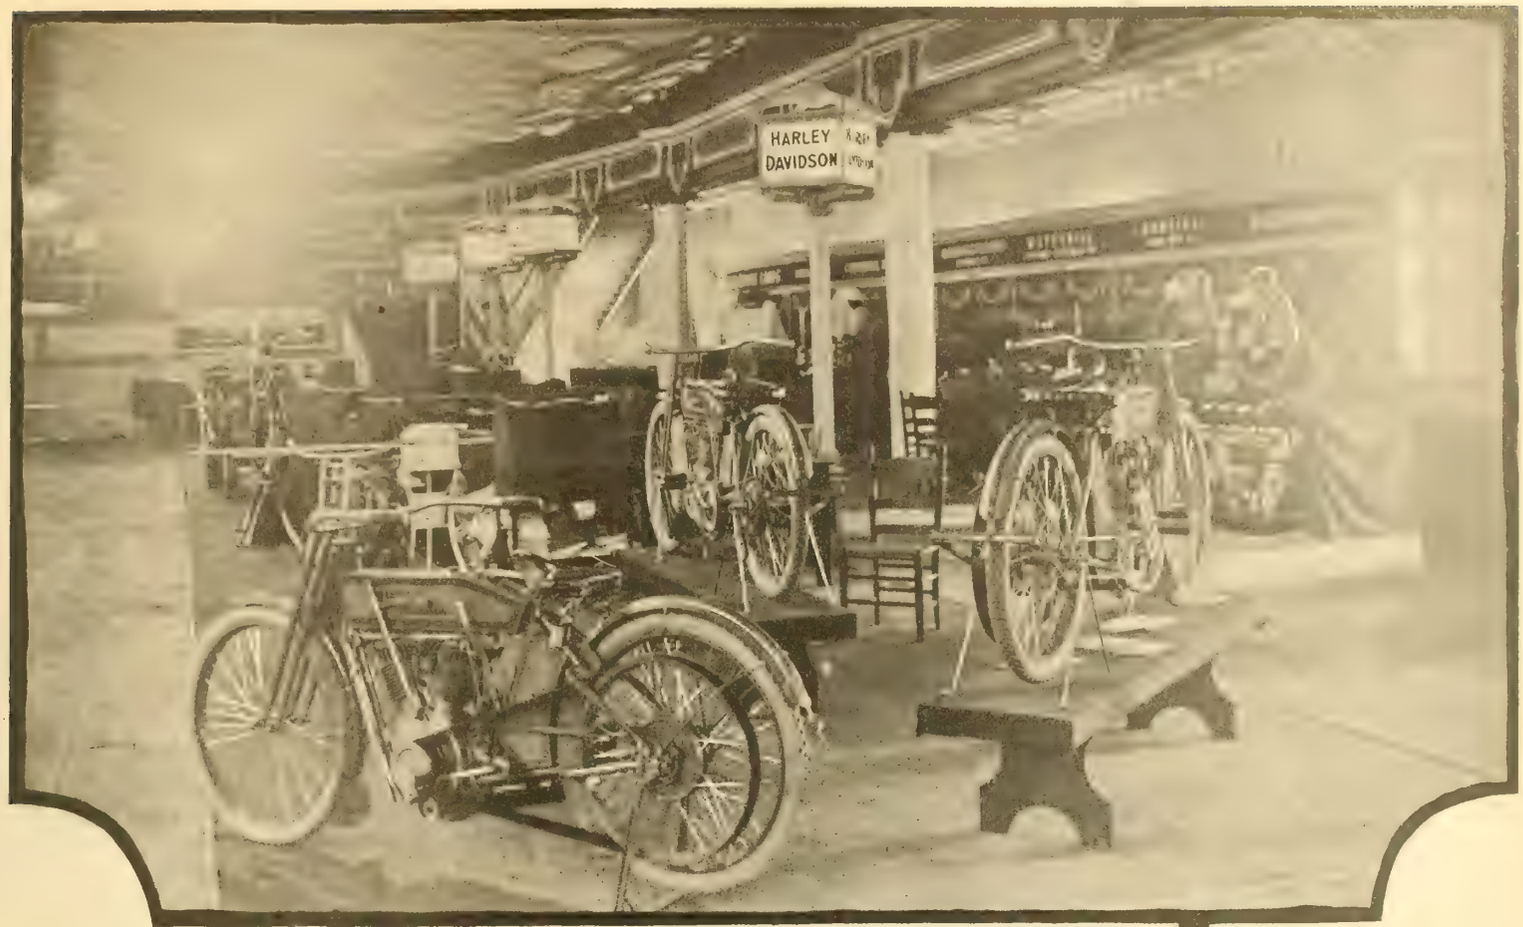
Models Displayed—One 7-horsepower chain twin; one 7-horsepower chain twin racer; one 6-horsepower belt twin; one 4-horsepower chain single; two 4-horsepower belt singles; all gray finish.

HOW THE PRODUCTS OF THE INDUSTRY LOOKED, COLLECTIVELY STAGED AT THE GARDEN

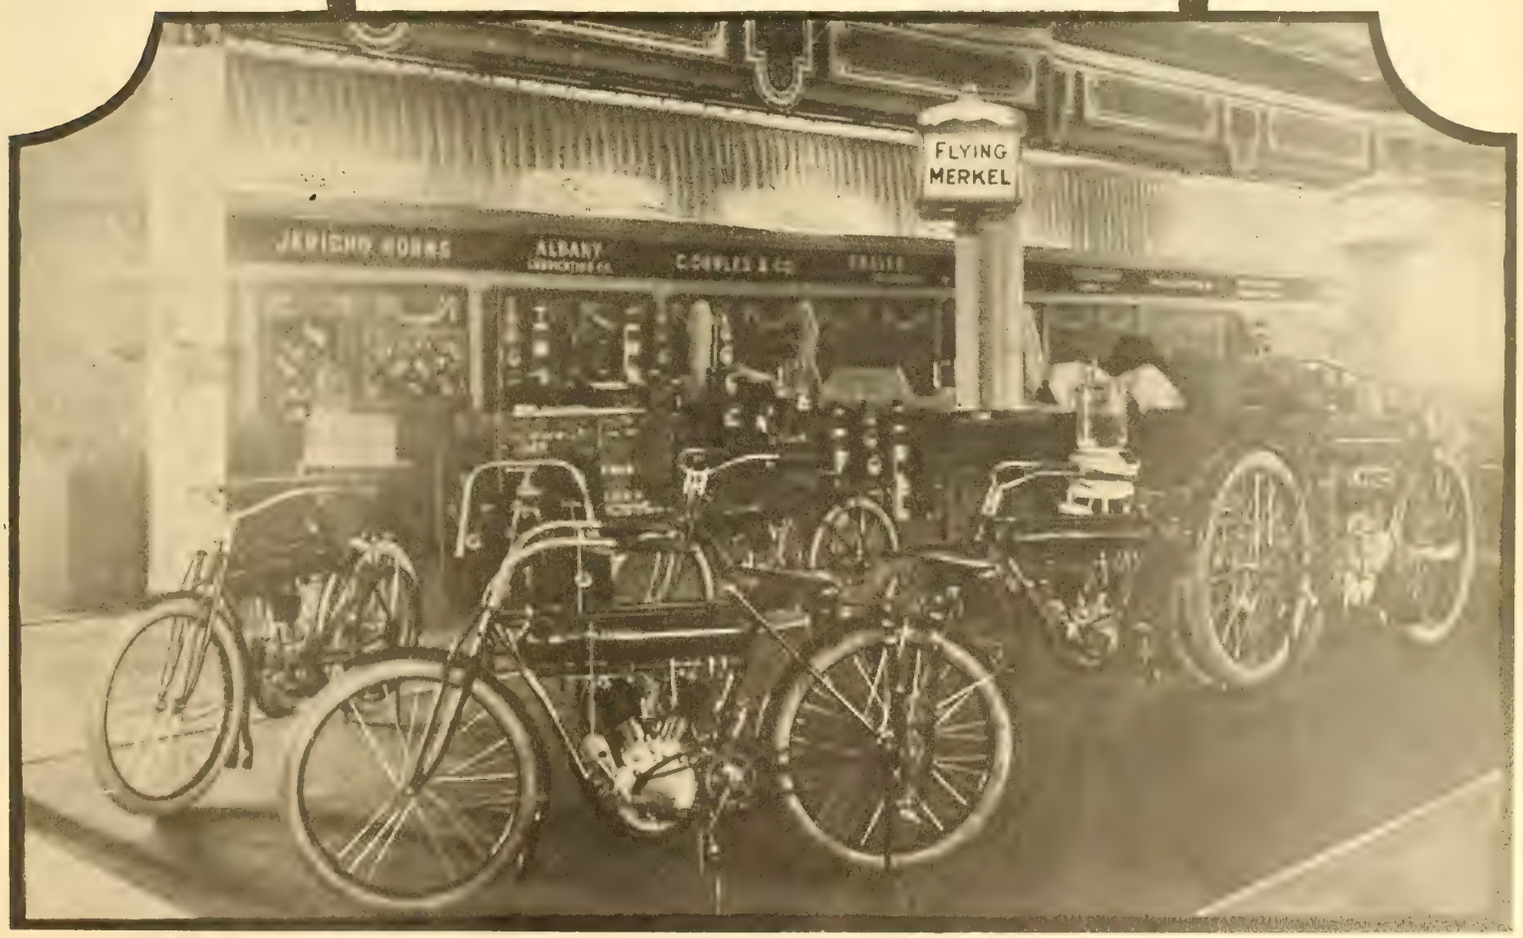


What is New—By far the chief centers of attraction at the Excelsior stand were the new chain drive regular models with cradle spring fork, cushion spring seat, double chain drive and multiple disc clutch. The cushion seat construction is very similar to others of this class, the main differences being in details. The horizontal member is coupled to a frame lug and passes through a slot in the upright spring post, the rear of the horizontal post being extended to form a perch for the saddle. Two springs are used, one working under compression and the other under rebound action. The springs are separated by a metal spool, and are adjustable for load.

SCHICKEL ALONE IN ALL ITS GLORY



WHERE THE NEW ERA HELD FORTH



INDIANS WERE THERE IN THEIR AMPLE WIGWAM

NO BACKACHES WHEN LOOKING AT EXCELSIORS

THE ENTIRE HARLEY-DAVIDSON FAMILY FROM MILWAUKEE.

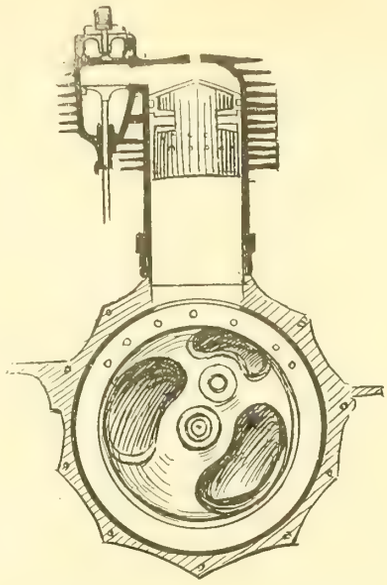
MERKELS THAT NOW HAIL FROM OHIO

They work in hard oil to prevent cutting of the tube walls or spring chafing.

While not the first to use the cradle spring fork, the Excelsior adds originality to its adoption of this construction by building it with extension fork sides and a double bridge. The front guard is in two pieces, the forward member being hinged to the spring shackle, and supported out in front by the end of the second spring leaf which is brought out on a slope instead of being turned under with the others.

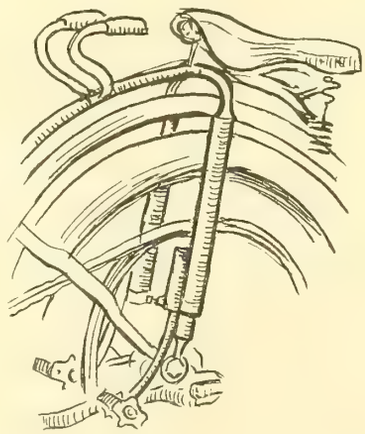
The chain drive clutch is of Eclipse pattern, but has a reverse action to some other types, the clutch lever being pulled to the rear to release. The short chain is enclosed entirely. The camelback type sloping bar frame is another fresh feature of the chain models, and the truss tubes now are further apart, permitting the use of larger tanks. The gasoline capacity is 2¾ gallons, and the oil reservoir holds 1½ quarts.

Novelty and newness are found on the belt models in the combined clutch and idler control, the clutch engaging first, and the idler following, this arrangement giving a free motor with the belt running loose and no load on the bearings. The clutch is engaged by advancing the lever on the tank ratchet. The belt may be adjusted with the clutch engaged and the idler free, this condition obtaining at one point in the control lever range. On the chain model the clutch also acts as a compensating sprocket to absorb motor jerks. The 6-horsepower twin will be built with belt only, and is one of the lowest priced twins offered this year. Other refinements include the use of wider fenders, the fitting of the double handlebar on all models, and the placing of the cut-out control latch on the left side of the tool case.



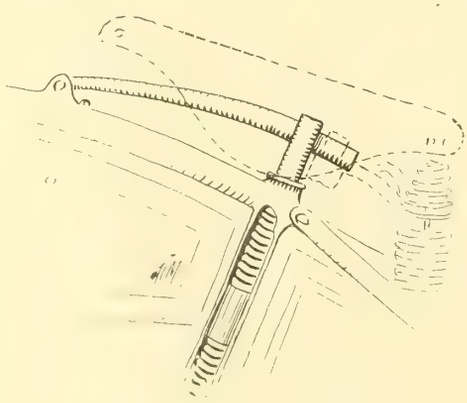
FLANDERS MFG. CO.—FLANDERS.

Show Staff — E. C. Kicherer, B. F. Howard, I. B. Swegles.

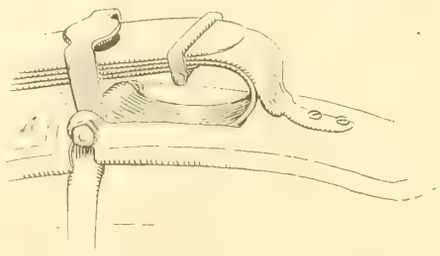


Models Displayed—Four-horsepower single, black, Eclipse clutch; 4-horsepower single, black, with Majestic sidecar; three 4-horsepower singles, black, no clutches, and duplicates throughout.

What is New—This is the first time the Flanders has been seen at a Garden show. It is made in a single model, and the Eclipse clutch will be listed extra. Since it first was announced, there have been some changes, but mighty few of any consequence. The chief improvements are a one-piece fork stem, brazed to the fork crown, and superseding the two-piece stem previously used; one-piece forging lower fork links, with bronze eye bushings, in place of the two-piece stamped links, and internal reinforcement in the tank.



One of the features of the machine is the Kingston carbureter with suction lift ball auxiliary air valves. This carbureter, it is stated, is not of the stock type, but altered to meet the particular needs of the Flanders engine. The Splitdorf magneto



Cross Section of Emblem Motor

Emblem Tandem With Adjustable Foot Rests

Details of Excelsior Cushion Seat

Forward Shackling of Excelsior Fork Spring

is used exclusively. The cylinder dimensions are 3¼ x 3.6. All bearings are plain bronze. An automatic inlet valve is used, and the exhaust valve has a screw adjustment for wear on the tappet.

The fork is of original Flanders design, and is of the cushion type. The springs are exposed. The handlebar stem is keyed, and also tied to the upper fork links, giving double insurance against turning. Oil is fed in proportion to the speed, the throttle and needle valve oil feed being interconnected. The gravity and splash system is employed. For the drive, a 1¾-inch flat belt is used, running over flanged pulleys, and an adjustable idler affords a free engine by slipping the belt. The wheelbase is 53½ inches, and the weight 160 pounds. Black enamel with nickel trimmings is the standard finish.

One of the distinctive and original features of the motor is the eccentric flywheel. The advantages claimed for it are slower motor speed, greater pulling power in hill climbing and wider engine flexibility. The inlet valve spring tension is adjustable, the valve stem being threaded. The tension is regulated by turning a split adjusting sleeve which is tapered and locked in position by the spring cap which rides up the sleeve until it jams and wedges the collar against the threads.

HARLEY-DAVIDSON MOTOR CO.—HARLEY-DAVIDSON.

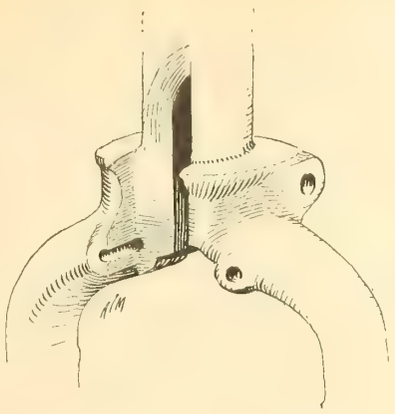
Show Staff—Arthur Davidson, Joseph Buckingham, W. J. Ruhle, W. J. Walker.

Models Displayed—One 6½-horsepower belt drive twin, gray; one 7-horsepower chain twin, gray; one 4-horsepower belt single, gray; one 4-horsepower belt single, gray, sectioned.

What is New—At the Harley-Davidson stand, the new 7-horsepower chain twin was the center of attraction. It will list at $275, without the free wheel, which will be $10 extra. The motor is special throughout, which is to say that it is not built up from parts of the 6½-horsepower belt twin and the cylinders bored out to secure the higher rating. Save in motor and transmission the chain and belt twins are duplicates.

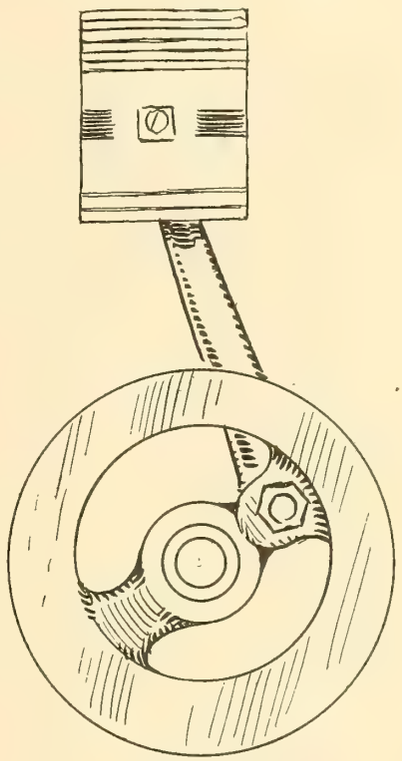
One of the neat engine refinements on the twins is the relocating of the inlet valve push rod tension springs at the lower ends of the rods in cups, just above the crankcase. The previous location was on top of the valve domes just under the rockers. The new system permits of much larger and heavier tension springs being used, and not being exposed to as great heat as formerly, they do not squeak, nor require dust catching lubrication to insure silent action. The function of these springs is to take up the play necessary between the push rods and valve rockers to insure full closing of the valves, when the parts become heated and expand.

There is a new double sleeve auxiliary air inlet in the center of the twin inlet mani-



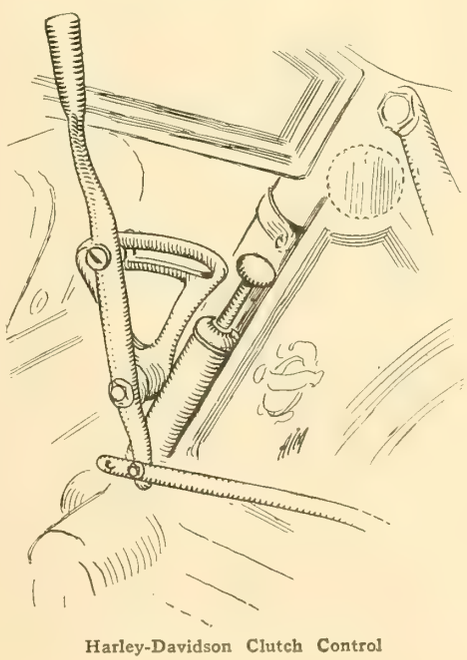
fold. On the chain twin only, roller bearings are used on the drive side of the mainshaft. Plain bronze bearings are used on the belt twin and singles. All pistons now carry three rings, one more than formerly. Piston walls also are drilled to assist in carrying oil to the cylinder walls, on the twins. In addition to the time tried gravity feed oiling system, which is retained without change, a hand pump is fitted to the twins for emergency requirements. Neat little dust proof oil cups are fitted to the inlet rocker arms on the twins.

The cylinder dimensions of the chain twin are 3 5-16 x 3½ inches, and of the belt twin, 3 x 3½. This year the controls have been reversed, the throttle being operated from the right grip, and the spark and valve lift from the left. This arrangement allows the right hand to accelerate the motor, while the left is feeding in the clutch, a combination which is most convenient. Large sprockets on the motor shaft and rear hub of the chain twin, insure low chain speed, silent running and long life to the chains. Diamond roller chains of 5-16-inch width are used, the drive being double through a reduction countershaft.



Harley-Davidson is one of those makers who place the magneto back of the cylinders where it is kept dry from the heat of the motor, and well protected from mud splashes. The Bosch instrument is used. A double eccentric in the countershaft hanger of the chain twin provides for adjustment of the short motor chain and pedal chain, the long motor chain adjustment being from the rear wheel. On the twins, the large tank under the seat heretofore devoted to tools and storage space has been requisitioned in part for oil. The upper half is isolated and holds oil, while the lower half is used for tool storage. By the use of a separate oil tank, two gasoline tanks with a total capacity of 3½ gallons are obtained, and are slung parallel on the upper frame bars. Each tank has individual filler caps, needle valves and outlets, the latter being siamesed before reaching the carbureter.

On the front fork, the screw adjusting rods have ben eliminated and larger springs fitted, affording a neater spring tube crown construction. The short drive chain is enclosed entirely, and the rear side belt shield also is fitted to the chain model. The upper fork suspension also is changed, the main fork being carried on lugs which ride in slots on the auxiliary spring members. A V cross support was used previously.



The ful-floteing seat and free wheel, the star features of the 1912 Harley-Davidsons, show no change since first announced. The clutch has 76 square inches of contact surface. It consists of two steel discs double-faced with Raybestos, one plain steel disc between the Raybestos discs, and together with the end plates gives eight contact faces. The clutch carrying plate is attached to the rear hub by toothed dogs, and the clutch has a worm operating feed.

Flanders Heavy Fork Construction

Flanders Eccentric Fly Wheel

Harley-Davidson Clutch Control

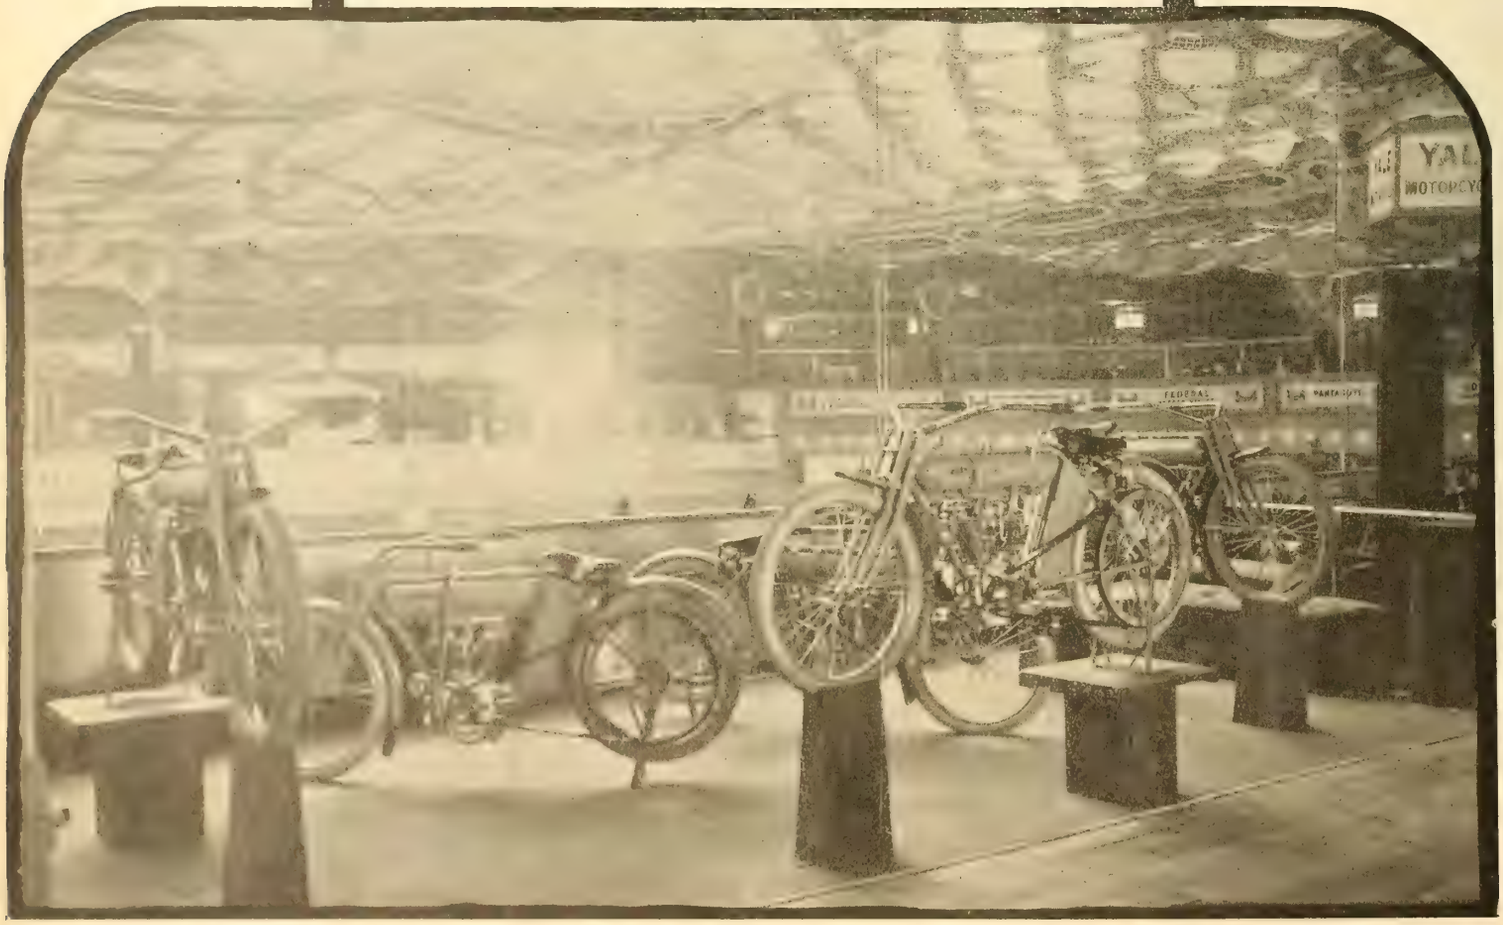
HENDERSON MOTORCYCLE CO.—DETROIT.

Show Staff—T. W. Henderson, W. G. Henderson.

Models Displayed—One 7-horsepower four cylinder.

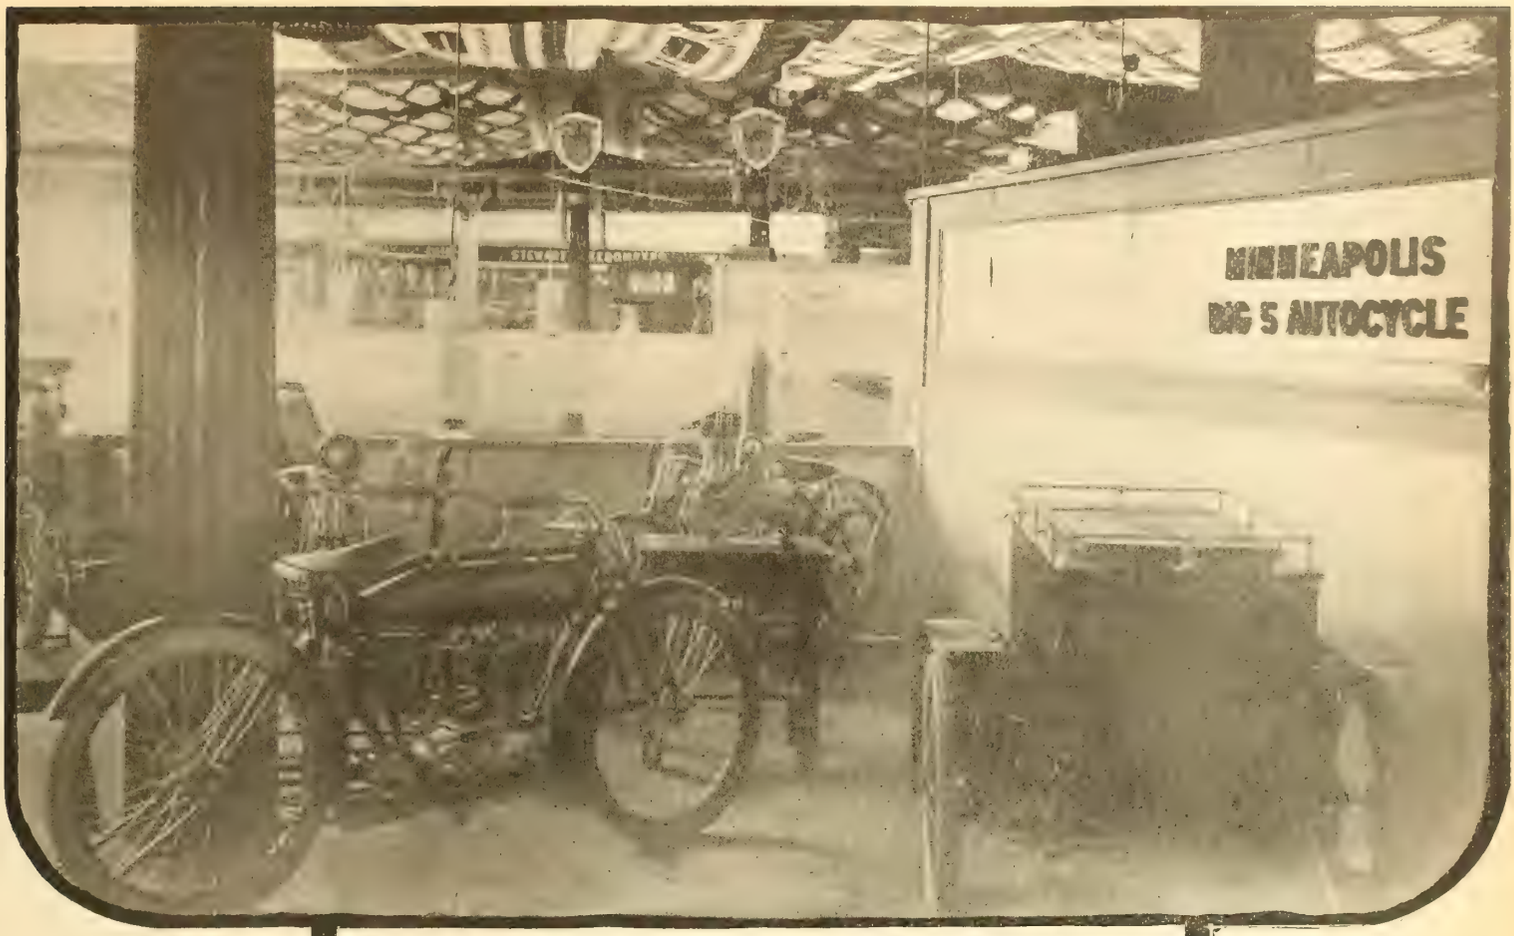
What is New—Partly because of the fact that it was making its debut in the motorcycle world, and partly because of the many unique innovations embraced by it, the Henderson is one of the leading attractions of the show. Its underslung frame, four-cylinder motor and long wheelbase, and general "automobilly" appearance make it popular with four-wheel motorists, while not a few motorcyclists declared strongly for it.

The motor fairly bristles with original features. The valves are all mechanical, the inlets being over the exhausts and tripped by rockers. This construction permits the use of the L type of cylinder, with the heated exhaust ports being constantly cooled by the incoming gas, and is one of the prime factors which the designer points to in describing how overheating has been circumvented. It is asserted very positively that the rear cylinder is as cool as the front at all times.



Just as the innocent hat on the sidewalk usually has a brick inside for the unwary to bruise their toes on, the Henderson inlet manifold, has internal passages through which the gas is led to secure even distribution to all cylinders. The carbureter is placed back of the fourth cylinder, and is connected direct with the exhaust chamber by a hot air pipe which is claimed to have a wonderful effect on securing an even and permanent mixture in any temperature.

On the under side of the motor base, fins are cast to aid in radiating the heat. A very ingenious oiling system has been devised. The feed is by sight gravity to the front of the motor base in which a sump is located. The inner section of the base is divided by partitions into wells, one for each cylinder, so that when the machine is ascending or descending steep grades no cylinders are starved for oil and others flooded. Also the end of each connecting rod lower bearing carries a small tit which dips into the oil pool, and as the cranks kick around this oil is carried up and flung on the cylinder walls and piston pin bearings. The tits have been so designed that no matter how deep the oil may be, up to a point where the ends of the rods will dip, the same quautity of oil will be carried up to the cylinders, so that over lubrication is avoided. In fact, the only way in which this can occur, it is stated, is to neglect to shut off the oil when shutting down the motor, thus flooding the base.



Through the use of a Bosch automobile magneto, with distributer and "accelerating driving shaft," an extremely wide spark range of 60 degrees, is secured. The drive shaft is "broken," and both ends are coupled by a sliding worm sleeve, which is

One Thousand 1912 Harley-Davidsons Delivered

SINCE the announcement of our 1912 models we have built and shipped 1,000 1912 machines, every one of them a real 1912 with Ful-Floteing Seat. One thousand machines in three months is not a wonderful feat in mid-season but after bringing out an entirely new model we call it a triumph of production engineering.

You know how these thousand machines have set the motorcycle world afire—you have probably tried one of them yourself or heard your friends tell about it who have. You know that the Ful-Floteing Seat does more than we ever claimed it would. You have learned that the Free Wheel Control is in a class by itself and that it won't kill the engine every chance it gets, and that you do not have to make the motor "tear its head off" before the clutch takes hold.

Above all, you know now that everything we said in our announcement about the new Harley-Davidson was true and that the whole 1912 motorcycle situation simmers down to just what J. W. Harper of Miami, Fla., says it does:

"With the Ful-Floteing Seat and Free Wheel Control the 1912 Harley-Davidson has the world beat."

We have the machine, the plant and the organization, a combination that spells "satisfaction" to dealer and rider alike.

HARLEY-DAVIDSON MOTOR COMPANY, 500 C Street, Milwaukee, Wis.

PIERCES PROMINENT ON THE "SUNNY SIDE" OF THE ROW

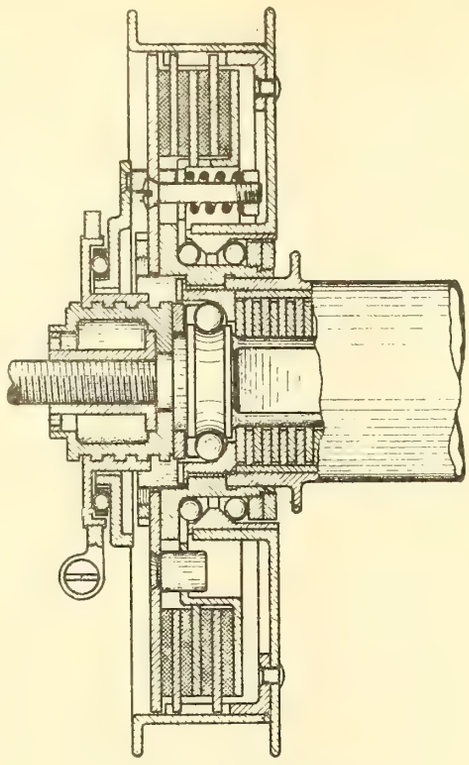
R-S AND HENDERSON IN 1, 2 AND 4 CYLINDERS

POPE HEADED THE CENTER ROW

FLANDERS AND M-M TYPIFIED THE EAST AND WEST

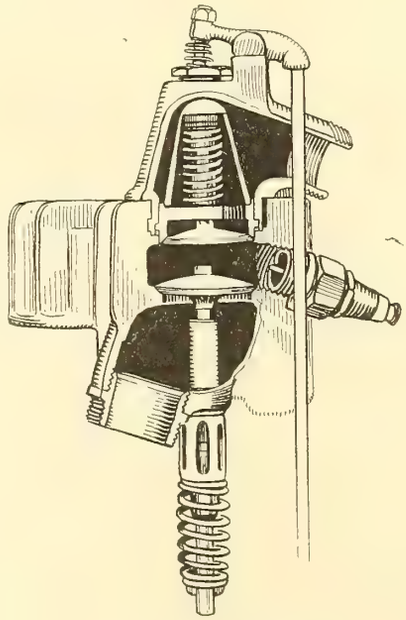
actuated from a lever on the clutch control sector. For starting, and slow running, the magneto armature can be "jumped" ahead of the motor drive shaft, so that the maximum spark is obtained at low speeds. This "accelerating" of the armature, is most efficient up to 30 miles an hour, above which the driving and driven shafts again are synchronized for higher motor speed firing under the best conditions. A cut-out switch is mounted on the lever control sector.

In the gasoline tank, a two-line outlet, feeding from either end, gives a siphoning action, and insures positive flow of fuel when the machine is inclined, and the gasoline runs to one end of the tank. The gasoline capacity is 2¼ gallons, and the oil reservoir holds half a gallon. The spark plugs are located in the center of the cylinder heads.



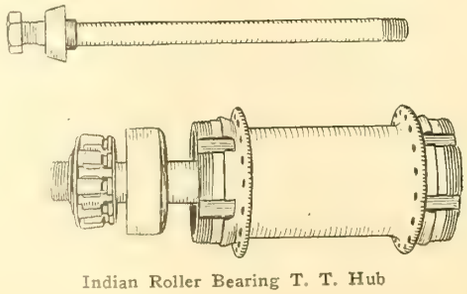
A regulation Eclipse belt drive type of clutch is used, and is mounted on a countershaft, which takes its motion from the motor, through enclosed bevel gears. These are lubricated from the motor base. The flywheel also is entirely housed. Unusually heavy springs are used in the clutch, and it is said that by the use of these, the clutch will "hold" the motor without racing, when the power is thrown on suddenly. The motor is claimed to develop 10 brake horsepower under A. L. A. M. formula.

Although an ordinary coaster brake of Eclipse make is used exclusively, it is claimed to be powerful enough to stop the machine under any conditions, owing to the enormous leverage obtained through the long pedals. There are two pedals on the foot boards, both operating the brake, this double system being employed so that either foot may be used for braking in case of emergency.



The frame head is a heavy steel casting and the fork fittings are claimed to be the heaviest made. On the footboards, rubber blocks are provided to brace the feet, and prevent them slipping off on rough roads. The motor control is through Bowden cables, the handlebar grips being retained in any position by internal friction ratchets, a patent having been granted on this construction. The cartridge plunger type of spring fork is used. Ample side fenders enclose the front wheel, and protect the occupants from mud and water, which ordinarily escapes past the regular grades.

Foot rests for both passengers are provided on the lower lips of the front side fenders, and the lower fork links. The front seat is detachable, so that the machine may be converted into a single passenger vehicle. A crossbar, with grips, is placed in the handlebars, back of the central stem, to afford hand purchase when two passengers are riding.



That the machine has undergone strenuous tests during its development period, is apparent from two instances given. The model frame was made of lighter stock than the regular one now used, and in addition, was drilled in all vital spots, and then punished over all sorts of roads for weeks, in an endeavor to unearth some weak spots. However, it is asserted that no breaks occurred, but nevertheless, the frame was made heavier, in order to give an extreme factor of safety. It also is claimed that the engine was run indoors for two hours in summer, without a fan stream or any cooling medium, without overheating. The builders are experienced motor men.

Cross Section Harley-Davidson Clutch

Indian Valve Construction

Indian Roller Bearing T. T. Hub

HENDEE MFG. CO.—INDIAN.

Show Staff—George M. Hendee, Oscar Hedstrom, F. J. Weschler, R. W. Ellingham, J. H. O'Brien, E. E. Cross, J. B. McNaughton, W. F. Hapgood, F. L. Hunt, John McDowell and H. W. Kipp.

Models Displayed—Four-horsepower regular single, red, chain; 4-horsepower T. T. single, blue, chain, one-speed; 4-horsepower regular single, blue, belt; 7-horsepower T. T. twin, red, one-speed; 7-horsepower T. T. twin, red, two-speed and Millford imported sidecar; 7-horsepower regular twin, red, chain; sectioned 7-horsepower twin engine, two-speed set, and frame parts.

What is New—As usual the Hendee Company, had the largest space and the largest display of models, six, but absolutely nothing new save the sidecar was shown. The Millford sidecar, imported from England, where it is one of the leading makes, was coupled to a 7-horsepower T. T. two-speed twin, and attracted considerable attention. The upholstery was in red leather. A duplicate of this sidecar will be offered in about two months, and will list at $75. All of the new features and models of the 1912 Indian have been exhaustively illustrated and described in these columns, in the company's first announcement of its line for this year.

MIAMI CYCLE & MFG. CO.—MERKEL

Show Staff—K. R. Jacoby, J. F. Merkel, Edward Buffum, W. K. Aurandt, J. W. Ash, A. G. Chapple.

Models Displayed — Four-horsepower single, belt; 4-horsepower single, chain; 6-horsepower twin, chain; 7-horsepower twin, belt; 7-horsepower twin, chain; all magneto, and orange finish.

What is New—Since making its 1912 announcement the company had not developed any surprises to be sprung at the show. All models were exhibited, in chain and belt drive, and rigid and spring frame. The enclosed Bosch magneto which has been exploited so widely, was fitted to the show models and will be regular equipment as soon as it can be procured from the makers.

Of the new features for this year, the shock absorber in the hanger, is offered as the leader. Merkel always has paid close attention to building a comfortable riding machine, and his latest contribution along that line, is quite original. The shock absorber is of the friction type, and is placed

in the crank hanger bracket on the spring frame models. It acts as a check on a sudden downward plunge of the frame springs or an equally sudden recoil, softening the violent action set up in "free" suspension springs on rough roads. The device is constructed very similar to automobile shock absorbers, a pair of brass friction discs floating between steel plates. Adjustments are provided for taking up whatever slight wear may occur, and the device may be set either rigid, or to offer any degree of resistance to the springs. It has very little movement, and consequently the wear should be very negligible.

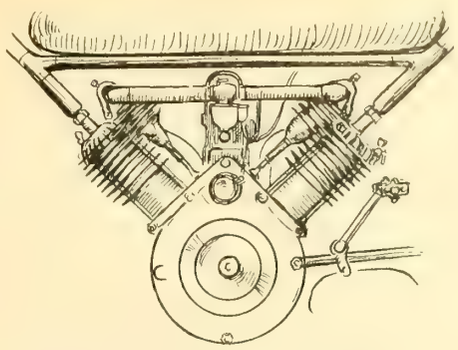
Double adjustment of the gasoline needle is provided on the new Merkel-Acme carbureter, so that when the throttle is opened the needle is raised automatically admitting more gasoline. A suction type valve takes auxiliary care of the air requirements. The double lubricating system is retained, the main gravity feed being coupled to the throttle control so that when the speed is increased, more oil is fed automatically. A hand pump takes care of emergency oil requirements.

In the new Merkel chain drive system, the jerks from the motor are absorbed by the disc clutch mounted on the motor shaft. One of the most interesting features of the exhibit was the parts board showing the ball bearing mounted flywheels, the seamless brass tubular tank, a sectioned front fork, a frame section containing the shock absorber, and motor parts. The 1912 Merkel line was described and illustrated in detail in these columns in November last.

MINNEAPOLIS MOTORCYCLE CO.—MINNEAPOLIS.

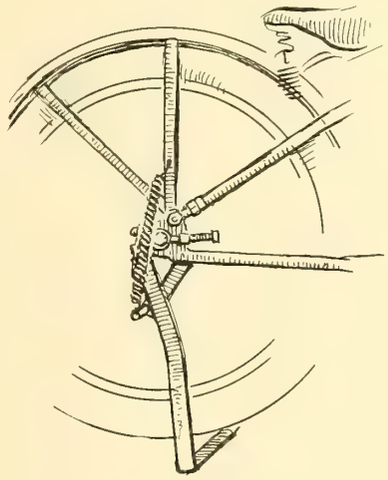
Show Staff—C. B. Knudsen, J. Gellers.

Models Displayed—One belt drive two-speed; one chain drive two-speed with delivery van; one two-speed chain drive regular; one single-speed chain drive. All 5-horsepower singles.



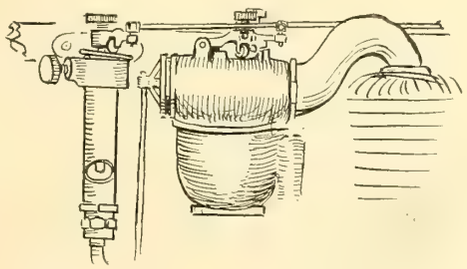
What is New—The leading feature of the Minneapolis line this year is the new two-speed belt drive model. It is the first time that a two-speed model with flat belt has been offered. The only difference from the other models is in the final drive, the regular Minneapolis unit power plant being employed. The belt pulley is mounted on the two-speed countershaft, thus giving an undergeared drive and permitting the use of pulleys of more proportionately equal diameter than is usual. This gives greater belt grip area, reducing slipping to a minimum and also lowers the belt speed, making it longer lived. A very wide belt, 2⅛ inches, is used. The belt two-speed model has no clutch, the free engine being obtained in the neutral notch of the gear shift quadrant, while the belt can be slipped by relieving the idler tension.

Spring frames have found favor with the Minneapolis people this year, and they are offering one of their own design. It is stoutly built of extra heavy fittings with a big spongy spring that gives a featherbed comfort sensation to the rider. The spring barrel is separated from the seatmast tube, and in fact the entire spring suspension apparatus is a complete unit in itself and coupled to the main frame by big hinges. Through the style of suspension used, the power plant, main frame and rider, all are carried between the front fork and rear frame springs, the entire load being spring cushioned from road shocks. Such earmarks of refined design as the placing of oil cups at all hinge joints of the spring frame are noted.



Another change over previous models is that the clutch plates are of saw blade steel instead of fiber, and run metal to metal in oil. On the spring frame models the tool compartment is placed in front of the seat mast tube, as its usual position back of the seatmast is occupied by the spring frame mechanism.

The anchoring of the plunger spring, and the use of but a single spring in the cushion frame model, presents novel design. The spring, which is larger than ordinarily used in spring frames, is anchored at both ends to its cylinder casing. A plunger rod coupled to the upper hinge works in the spring cylinder and is coupled to the spring midway of the latter. Thus in action, the spring works under both tension and compression, which is claimed to eliminate pounding.



Four models comprise the line, and all will employ the Minneapolis unit power plant, the engines all being single cylinder of 5-horsepower. Two chain and two belt models, both with single or two-speed will be offered, and the spring frame will be extra. It will be furnished on all models save the delivery van.

M-M Automatic Stand

Merkel Throttle and Oil Inter-Connection

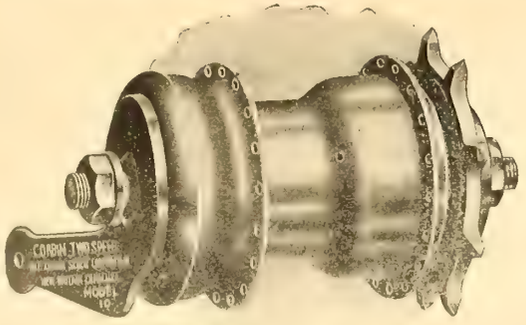
Merkel Spring Tandem

MAJESTIC MFG. CO.—MAJESTIC SIDECAR.

Show Staff—C. A. Persons, W. E. Eccles, Thomas Crabtree, Cyrus Darling.

Models Displayed—One sidecar with wicker body.

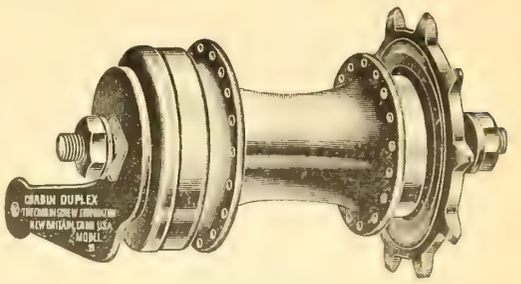
One of the catchiest motorcycle slogans that has been coined in some time, and which quite likely will be influential in winning friends for sidecars in this country, is that of "Don't forget the girl," which is exploited by the Majestic Mfg. Co., Worcester, Mass., in directing attention to the Majestic sidecar which it exhibits at the Flanders booth. It is one of the two sidecars on exhibtion, and is well limbered by the hundreds who have tested its comfort holding qualities. As might be expected, a majority of those who settled themselves in its cosy recesses, were ladies, and from the undisguised pleased expressions they immediately assumed, it is safe to assert that those of them who have friends of the male persuasion, devotees of motorcycling, will see to it that the latter do not "forget them" when the coming touring season rolls around.



CORBIN BRAKES

make bicycling and motorcycling SAFE at all times on any road.

A slight back pedaling pressure operates the CORBIN, which is located in the rear wheel hub.



Your machine can be stopped instantly or slowed down gradually, according to desire or the need of the moment.

BRAKES FOR BICYCLES

CORBIN TWO-SPEED

The Corbin Two-Speed Coaster Brake is invaluable for hill climbing and wind resistance. Added to this is the element of safety in having your machine under complete control.

CORBIN DUPLEX

The Corbin Duplex has been the standard in Coaster Brake construction for thirteen years. Either of these Brakes can be fitted to any make of bicycle.

The CORBIN MOTORCYCLE BRAKE has a V-shaped drum and a triangular friction band. This yields 50 per cent. more braking surface than the old flat band type. Riders of high powered machines should be Corbin equipped for this reason alone.

Chain interference is impossible with the Corbin Brake. The releasing mechanism is entirely outside, making the action easier and more reliable. The Corbin can be fitted to either belt or chain driven Motorcycles.

Your Guarantee of Corbin efficiency and reliability is the manufacturers' thirteen years experience.

No matter where you may ride you're always in Corbin territory. Sold by leading Jobbers and Dealers everywhere. Ensure SAFETY by specifying CORBIN and insisting on it.

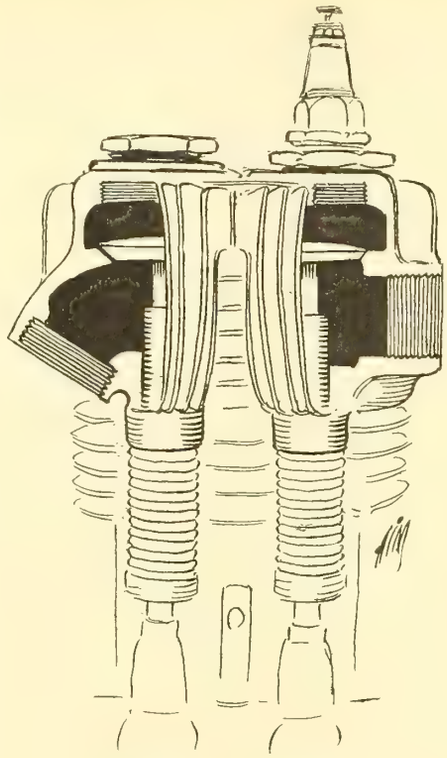
(Licensed Coaster Brake Manufacturers)

Western Office, 65 West Lake Street, Chicago, Ill.

AMERICAN MOTOR CO.—M. M.

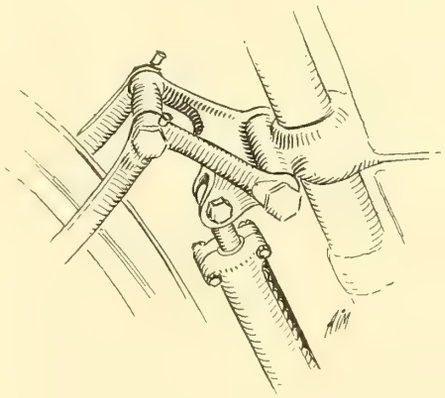
Show Staff—W. T. Marsh, George P. Jenkins, Henry Heyer, G. C. Kirchhof, Nicholas Ennello.

Models Displayed—Eight-horsepower red twin; 4½-horsepower red single; 4-horsepower special red single; 4-horsepower special red single. Three first Bosch equipped; last one, battery.



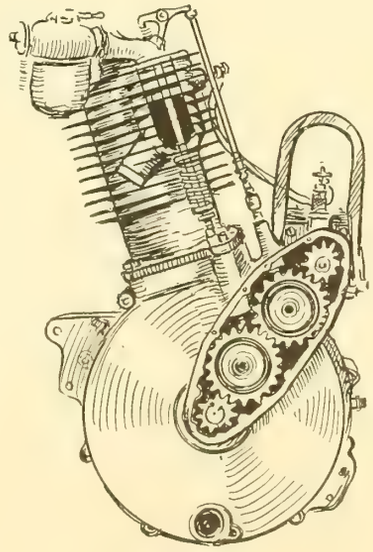
What is New—Prabably the M. M. shows fewer new features or changes than any other line at the show. The chief alterations are the lengthening of the stroke a quarter of an inch on the "4-50" single, it now having a four-inch sweep, the casting of the cylinder flanges, instead of machining them from the solid tube as heretofore, the lengthening of the piston and the addition of an extra ring, making three in total. The saddle post also has been given a rear drop, bringing the seat lower.

On the "4-50," the leader of the line, the magneto control has been removed from the handlebar grip and vested in a hand lever on the left side of the tank. The grip control of the compression relief is retained. In support of the independent magneto control, the claim is made that it permits the motor to be cut out momentarily without changing the spark timing, so that the breaker box can be left at maximum advance, and the motor speed governed by throttle, which is the correct operating method.



Although much against its wish, the company has restored the cut-out in response to an insistent demand for it, after it had been subtracted from the machine for two seasons, in an effort to discourage the abuse of it. The statement was made that 80 per cent. of purchasers demanded a cut-out, and quite strongly too.

One of the distinctive features found on this machine is the date "1912" on the head nameplate, the only "dated" brand at the show. It was explained that this innovation, which is a good one, was found desirable, owing to the confusion and annoyance resulting from riders, of previous models, not being positive of the vintage of their machines, in ordering parts, and receiving replacements which did not fit, owing to a mistake in the model being made at the time of filing the order. Furthermore, it was stated, that used machines advertised for sale, as late models, frequently were older than stated, owing to ignorance on the part of the advertiser.



As the first exponent of the 90-degree angle for its twin, the M. M. still remains the only one. The eccentric gear drive of the magneto is another bit of originality on this model. The 4-horsepower specials have inclined motors and single crossbar frames, while the big single and twin have trussed frames, and the motor on the former is uright. Another exclusive M. M. feature is the swinging yoke and set screw inlet dome lock, and the twin has the longest inlet manifold of any "double" at the show.

Minneapolis Valve Layout

Minneapolis Spring Frame Mechanism

How New Era Operates Valves Off Magneto Gears

NEW ERA AUTO-CYCLE CO.—NEW ERA.

Show Staff—J. D. Platt, Jr., Jesse Campbell, D. L. Marshall.

Models Displayed—One 4-horsepower red single, two-speed; 1 4-horsepower gray single, two-speed, with tandem attachment; 1 6-horsepower gray delivery van, with two-speed; 1 sectioned motor, and disassembled motor and transmission parts.

What is New—Although the New Era retains its distinctive line and constructive features for 1912, there are numerous changes in the new models. Archie McCollum, who has designed several motorcycles is responsible for the latest New Era creations. The 4-horsepower model, which is the bell wether of the line, shows the greatest alterations and pruning. The motor has been redesigned, and the bore decreased, with an accompanying increase in the stroke, the dimension now being 3.215 x 3.75, which is said to give a full 30½ cubic inch rating.

This year the New Era joins the advocates of the overhead type of mechinical inlet valves, and incidentally have incorporated some novelty in the application of it. The motor has been inclined to the rear, having been vertical heretofore, but the new position is said to give better cooling. The Bosch magneto, replacing the Eisemann, has been mounted in front of the cylinder, and is driven by enclosed gears.

It is here that originality in the inlet valve mechanism crops up. The first magneto idler gear, counting from the motor shaft, carries an integral forged cam which actuates the inlet push rod, and the second idler gear, mounting another one-piece cam, trips the exhaust valve. Therefore, there are but four gears in the motor, the idler magneto gears being used as timing gears also. This is the first and only instance, so far as known, where the magneto driving gears have been utilized for operating the valves.

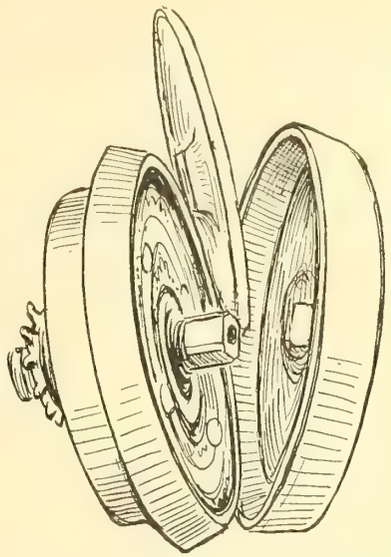
Easy starting is secured in two ways. First by the use of the Bosch DUI-5 instrument, which gives the maximum spark at full retard, thus contributing to the easy firing of poor starting mixtures. The magneto is held down by a steel strap, instead of bolts formerly used, making a quick detachable instrument. The second accessory to easy starting is the priming outfit, consisting of a continuation of the gasoline line from the carbureter to the inlet dome just over the valve. A shut-off is inserted in the line, as well as another just outside the tank, and by opening both the motor can be primed before cranking. The shut-off nearest the motor is closed except when priming.

Larger ball bearings are fitted to the mainshaft, while the lower end of the connecting rod now rides in roller bearings, instead of bronze. A new carbureter, the Acme, which has double gasoline adjustment, is used. There are two adjusting

screws attached to the gasoline needle valve, governing the pitch of a track, under which, rides a roller, mounted on the throttle arm. When the throttle is opened, this roller swings around, raising the track, and simultaneously, the gasoline needle, admitting more fuel for the increased speed. An automatic air valve of the spring controlled type, takes care of air supply.

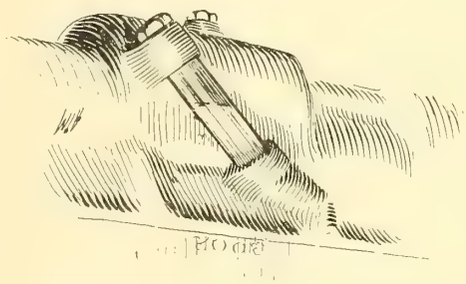
In addition to the gravity sight feed lubricating system, a hand pump has been added. The clutch has been redesigned entirely, and instead of the contracting band, a metal cone is used. The cone is about eight inches in diameter, with a three-quarter-inch face, and engages with a leather lined female member, the male member having no friction material on its periphery. The planetary two-speed gears are mounted on a spider inside the cone clutch, making a very compact mounting. The clutch control is by pedal actuation of a bell crank, which energizes a trio of toggle fingers, engaging with a grooved ball on the motor shaft. As the toggles are forced in, they climb the ball, giving a gradual engagement until they slip into the groove, where they are retained by friction. The clutch can be slipped by regulating the degree of engagement of the toggles.

Easier riding qualities have been obtained by a new three-point mounting of the form seat, the arrangement of the compound springs being such as to produce a shock absorbing action. Easier lubrication of the two-speed has been provided. A charge of hard oil, sufficient for several months' running, can be inserted with a grease gun by removing a screw on the end of the motor shaft. Buttonhole spoke flanges on the rear hub, afford facilities for spoke replacement, without removing the sprocket, or wheel.



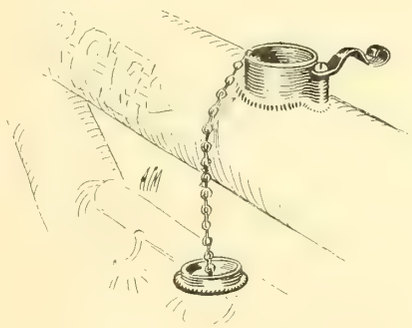
Accompanying the refinements in the motor, is a new exhaust tube, which leads from the rear side of the cylinder straight down to the muffler. The foot button muffler cut-out is retained. The changes on the regular four apply also to the tandem model, which is a duplicate save for the two-passenger accommodations.

On the 6-horsepower van, the only changes are the attachment of a belt-driven cooling fan, and a new ignition system. The latter is known as the Delco, and has a vibrating coil with a transforming switch to single spark. The motor is started on the vibrator, which gives a continuous spark while the circuit is closed, and on throwing the switch, the ignition is changed to single jump spark. The system is said to be very economical of current, 3,000 miles being guaranteed on a set of six dry cells.

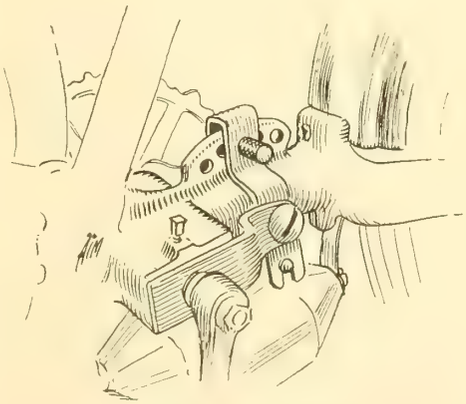


PIERCE CYCLE CO.—PIERCE

Show Staff—W. A. Johnson, E. R. Durkee.



Models Displayed — One 5-horsepower single, red; two 5-horsepower singles, black; one 7-horsepower four-cylinder; black; sectioned motor and transmission; board of parts.



New Era Cone Clutch and Gearset

Pierce "Four" Oil Gauge in Motor Base

Pierce Non-Losing Tank Cap

Pope Adjustable Hanger

What is New—Like several other makers the Pierce people have stood pat since making their 1912 announcement, and uncovered no new features. The four-cylinder model was the center of attraction, and the sectioned gearset and clutch on a tripod with an operating lever, initiated many into the mysteries of sliding gear transmission and multiple disc clutches as applied to motorcycles. A board of parts, showing forgings and finished parts also proved an interesting study. One of the clever little refinements, which is exclusively Pierce, was the quick detachable tank filler cap, a snap spring holding the cap on the mouth of the filler nozzle, the usual threads being dispensed with. By twirling the spring aside the cap can be removed instantly, and is linked to a tank chain with cross arm stop, so that it will not fall to the ground when removed, and also need not be held in the hand.

POPE MFG. CO.—POPE.

Show Staff—J. F. Cox, B. A. Edgar, L. D. Hardin, R. H. Smith, G. G. Ryan, F. W. Starr.

Models Displayed—Three 3-horsepower singles; sectional motor; display board of parts.

What is New—This is the first New York show at which the Pope has been present. It is distinctly in a class by itself, being the smallest machine at the show, but nevertheless its saucy lines, and petite appearance, have won for it many friends. While first publicly exhibited at Chicago, last February, it has undergone practically no change, save in very minor details. It also is in the lightweight class, tipping the scales at 140 pounds.

Although rated rather low in the horsepower column, it is claimed by the makers, that, owing to its light weight, that when it is sliding along at 30 miles or more, over 4-horsepower is developed. A distinctive feature is the double tube frame, the outer tube being reinforced with a pair of "D" tubes, for half its length. Another original detail is the bell crank control of the magneto breaker, through the Bowden cable, which also operates the hand compression release mechanism.

Aside from the features mentioned, and perhaps the square hanger box with sliding hanger adjustment, and deep heads cups displacing the regular fork stem, the machine follows standard practice closely. Simplicity, accessibility, lightweight and low price, are its strongest pulling points.

READING STANDARD CO.—R-S.

Show Staff—W. F. Remppis, W. B. Glasser, W. G. Rhodes, W. G. Schaefer, E. J. Wilson, F. Dolt, A. Atkins.

Models Displayed—Two 4-horsepower belt singles; one 4-horsepower chain single; one 7-horsepower chain twin.

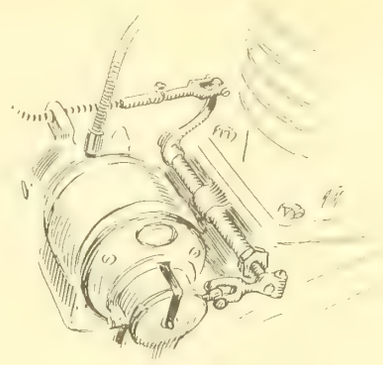
What is New—This concern was one of

the few to spring a new model for the show, a chain drive single. It is a duplicate of the new chain twin which it has brought out this season, modified of course, by particular constructional limitations. Although using the disc clutch on their belt models, the R-S people have developed a cone clutch for the chain type. It is of extremely large size and is mounted on the undergeared countershaft of the motor. The male member of the clutch is faced with leather and seats in a metal cup. The undergear mechanism instead of being housed in the motor base, as is customary, is caged in the rear of the clutch, making a complete driving unit.

Through the use of the undergeared drive system, the use of large sprockets is permissible, giving low chain speed, chain silence, and longer lived chain and sprockets. An extended guard is placed around the forward sprocket and upper chain line. By dropping the auxiliary shock absorbing seat post two inches, a lower and easier riding position is secured.

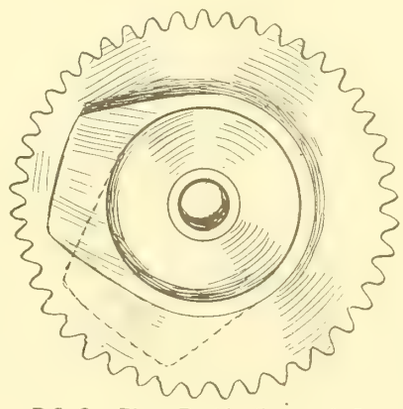
In the new chain drive motors, an important innovation has been introduced by making the valve cams and half-time gear integral, eliminating one gear from the valve operating mechanism. The double gear system is retained on the belt models. A powerful band brake, of R-S design, is incorporated in the rear hub of the chain models, and a larger rim brake has been fitted to the belt models, supporting the standard hub brake.

Double control of the clutch and idler on the belt models is provided, by hand lever and foot pedal, acting on a ratchet. The clutch engages before the idler, so that a free engine is obtained with no idler load on the bearings. The company also showed four bicycles, being the only exhibitor to show these humble vehicles, which were the foundation stones of the huge motor industries.



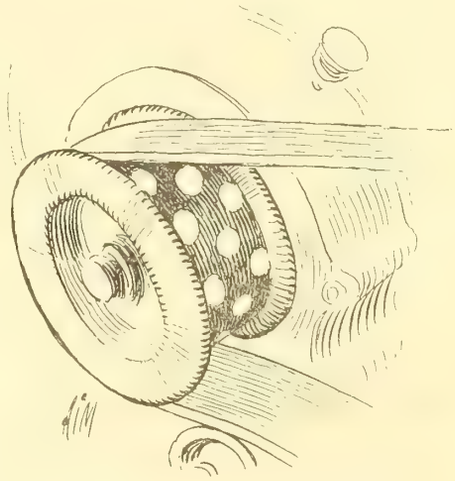
SCHICKEL MOTOR CO.—SCHICKEL.

Show Staff—Norbert H. Schickel, L. J. Carling, R. M. Hillis, Bruno Benziger, W. C. Schickel.

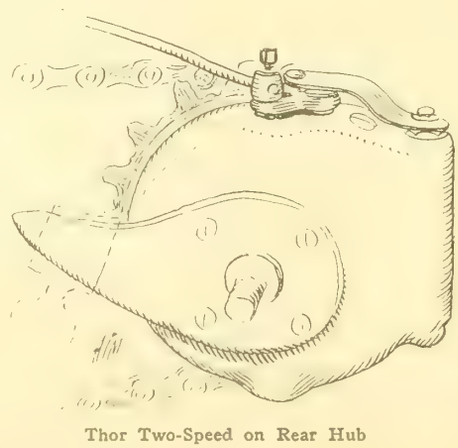


Models Displayed—One 5-horsepower single cylinder; sectioned motor driven by belt off dynamo; parts.

What is New—As the only two-cycle motorcycle in the show, as well as the only one which was shown in actual operation, a sectioned model being run by belt off a dynamo, the Schickel came in for its full share of attention. Close inspection discloses many ingenious and novel features, indicating the difficult problems which had to be met and solved in departing from four-cycle construction and adapting the two-cycle engine to a motorcycle.



There is but one flywheel, instead of the customary pair, and it is a drop forging, the mainshaft and crank pin being integral with the disc. The inner face of the flywheel, is recessed deeply, to take the large ball bearing, carrying 9/16-inch balls,



Pope Magneto Bellcrank Control

R-S One-Piece Double Cam and Gear

Cork Inserts in Schickel Driving Pulley

Thor Two-Speed on Rear Hub

claimed to be the largest bearings used in any motorcycle. The driving pulley is mounted on ½-inch balls, which are set in the center of the wheel, taking the full load pull. The left side of the motor base is a detachable plate, which carries a bronze bearing, over which is slipped a steel sleeve, and on this outer sleeve the ball races are mounted at either end. In the recessed pocket of the flywheel, a groove is ripped, into which a felt washer fits, to exclude dirt from the bearing, and in addition, metal dust plates are slapped against the exposed faces of the bearings.

All the load comes on the ball bearings, the central bronze sleeve being only a guide for the motor shaft. A compression grease cup and feed pipe, leads from the outer rim of the base, to the center of the sleeve, in which a hole is drilled, and the clearance between the main shaft and sleeve is made airtight, by forcing grease in, so that the base compression is not materially lowered. This compression in the base, of course, is necessary, to force the mixture into the upper part of the cylinder, when the transfer port is uncovered.

There are no gears in the motor, the Eisemann magneto being driven off the crankpin by a "banjo" disc, the arm being twisted, and having sufficient spring to compensate for any temporary cramping of the drive. The magneto is enclosed entirely, in a housing cast on the right side of the motor base, and the magnets are rocked to secure spark advance and retard. The inner end of the armature shaft, is supported by the crankpin through the "banjo" disc connection, and the outer end of the breaker box rests on a ribbed spider, just inside the rim of the housing. When the full retard is made, the terminal on the breaker box grounds on the spider arm, short circuiting the magneto.

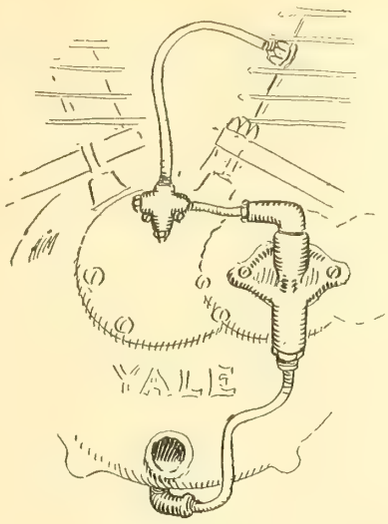
The upper part of the frame, is used also for fuel, the gasoline and oil being mixed, and fed homogeneously through the carbureter. Lubrication is entirely automatic, the oil and gas vapor separating after entering the motor, and performing their respective functions. The oil measure is contained in the filler cap of the gasoline tank, and holds about one-fifth of a pint, which is the proportion for each gallon of gasoline put into the tank. The latter holds three gallons. The tank and upper frame unit is an aluminum casting, which is poured around the front and rear head tubes after they are brazed. It is said that in testing the frame for strength, it was sawed in half at the aluminum section, and pounded over rough roads in an effort to fracture it, but that nothing gave way.

Cork inserts are placed in the face of the front pulley to prevent belt slipping, or at least, to reduce it considerably, when mud and water splashes on the metal face of the pulley. It is claimed that not only do the corks give better traction than metal in wet weather, but also, that when worn down, they have a suction effect in making

the belt hug the pulley. In connection with the flat belt drive, the idler is controlled by a Bowden grip, giving any desired degree of belt tension, and an instantaneous free engine, without removing the hands from the bars.

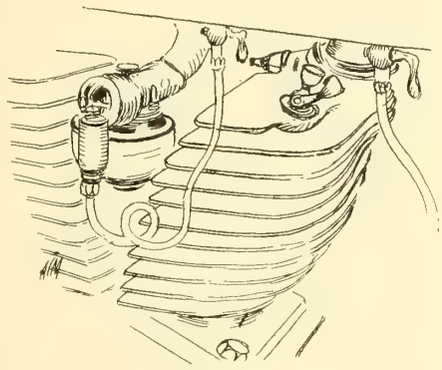
Among other things of interest, the tool barrel in the tank looms conspicuously It consists of a brass tube about three inches in diameter, which is set vertical in the tank, and the joints sealed against gasoline leaks by nut rings at top and bottom. The head of the motor is secured to the bottom of the tool barrel by a bolt. Other refinements are drilled fork rocker pins with dust proof grease caps, dropped ends of the handlebars giving a natural and restful position to the hand, and the hinged rear guard.

AURORA AUTOMATIC MACHINERY CO.—THOR.



Show Staff—J. A. Handin, F. D. Freeman, William Ottaway, E. W. Matthews, A. Freed, T. K. Lee.

Models Displayed—One 7-horsepower chain twin; one 5-horsepower chain single; one 4-horsepower chain single racer; one 4-horsepower chain single regular; one 4-horsepower belt single.



What is New—Not since Thor motorcycles have been built have so many new features, some quite radical, been offered under this brand as this year. The twin has been entirely redesigned, and a big single, the same strain throughout, bred also, both bristling with fresh conceptions of the designers brain. Thor, in common with several other makers, offers the floating type of spring seat mounted on a horizontal link riding on a vertical spring suspended pillar. The horizontal member is linked to a frame lug in front and is flatted aft to pass through a slot in the upright post. A bolt passes through both members at their slot junction, giving a hinge bearing.

The usual compression and recoil springs, with central separator are enclosed in the seat tube. One of the real novelties of the show is the Thor two-speed which is mounted on the rear hub. It is a planetary system with the gear ratios obtained by sliding dog toothed discs having a lateral motion. The disc clutch running metal to metal, is mounted on the underground countershaft of the motor base group, and the clutch and two-speed control are centralized in one lever working in a sector.

On the control lever is a notched plunger, which when depressed to the required degree, switches the operating lever, so as to bring the desired speed into engagement when the lever is advanced. Of course the interlocking clutch and gear control provides for the engagement of the speed disc dogs before the clutch takes hold, and vice versa so that the gearset cannot be damaged by shifting with the clutch in. When the lever is far forward the gears and clutch are in and on the aft

Yale Mechanical Oil Pump

Yale Twin Horizontal Cylinder Flanges

position are out, with the neutral notch in the center.

Tension plungers in the fork form the suspension foundation for cushioning front wheel shocks. The fork sides are carried up past the crown to give a double stem handlebar mounting. Included in the other "double" units, is a multiple jet carbureter with two spray nozzles, and two hand regulated air adjustments in addition to the main air port. The Bosch armored type magneto is mounted forward of the motor and secured by a quick "breaking" strap fastening.

Except for the cylinder dimensions and co-related parts, the big single and twin are replicas throughout. One of the clever features of the magneto installation is the provision for quick dismounting without deranging the timing, providing the motor is not turned over after the magneto comes off. By removing a screw in the magneto gear housing the instrument, together with its pinion may be dismounted and slipped back without retiming.

While the gear driven disc pump takes care of the lubrication, an emergency sight feed system is fitted, which will automatically oil the motor should the pump become clogged. The motor is supported at the top by a steel girder brazed to the lower truss tube of the frame. Automatic chain lubrication is provided by leading the motor base breather tube around to exhaust on the chain where a constant film of oil is sprayed when the motor is running.

The 4-horsepower model will be continued in its standard form. either with undergeared chain drive, or flat belt with the elongating frame for taking up belt slack. Not the least interest compelling point of the new Thor is the distinctive finish in pure white, which will distinguish it instantly in any gathering.

CONSOLIDATED MFG. CO.—YALE.

Show Staff—A. B. Coffman, D. J. Welch, F. J. Cornish, L. Goldsmith.

Models Displayed—Two 4-horsepower singles; two 5-horsepower twins; one 7-horsepower twin; sectioned parts.

What is New—A 5-horsepower twin, incorporating many original Yale earmarks, as well as standard construction in general, is the youngest member of the 1912 family, having yet to celebrate its first birthday. It is a smaller replica of its big brother, the "7." Perhaps the most noticeable change is the casting of the cylinder flanges on the twins horizontal with the road, giving a free circulation of air among the inclined cylinders. This is a Yale feature.

Yale is the only manufacturer who has adopted the mechanical pump oiler this year, making three who now use it. It is driven off one of the magneto idler gears, and has two leads, one to the front cylinder, and the other to the motor base. An auxiliary hand pump provides a dual system of lubrication. A clutch now is standard equipment, the Eclipse make being used, and clutch and idler control are independent, the levers traveling in a double sector on the tankside.

Stress is laid on the use of long stroke motors, which are claimed to deliver more power per cubic inch displacement, use less fuel per horsepower and have greater flexibility and pulling power at low piston speeds. Additional safety has been incorporated in the steering gear, by carrying the fork sides up flush with the frame head, affording a three-point anchorage for the handlebars.

Among the prominent detail refinements that impress favorably are the use of 2¾-inch tires, priming cups on the cylinders, heavier spokes, larger head fittings, wide fenders, a horizontal sliding seat post, eccentric yoke pedal chain adjustment, and a locking grip control, permitting the holding of the valves open without continuous hand pressure on the grip.

As to be expected there was considerable racing talk, particularly at the exhibits of the makers who sic their machines against the stop watch, and the Bicycling World's exhaustive and exclusive racing resume and record tables, in the show forecast number, were very popular wherever the speed fans gathered.

It is an all-American show, no foreign motorcycles being exhibited.

Mechanical Data on Motorcycles at Garden Mart

MODELS BUILT

Minneapolis — Two chain; two belt; all singles.
Indian—Six chain; one belt; four singles, three twins.
Yale—Four belt; two singles, two twins.
Pierce — Three belt; one shaft; three singles, one four-cylinder.
Excelsior—Two chain; four belt; four singles, two twins.
Thor — Four chain; three belt; six singles, one twin.
Henderson—One shaft, four cylinder.
R-S—Two chain; two belt; three singles, one twin.
Schickel—One belt; single cylinder.
Emblem—Three belt; two singles, one twin.
New Era—Three chain; all singles.
Merkel—Chain or belt, optional on all models; two singles; two twins.
Harley-Davidson — Three belt; one chain; two singles, two twins.
Flanders—One belt; single cylinder.
M-M—Four belt; three singles, one twin.
Pope—One belt; single cylinder.

Flanders—Black.
M-M—Red.
Pope—Light gray with blue stripe.

Grist Ground at Garden Mill During Show Week

From what George Kreamer, of Brooklyn and other points West, told a Bicycling World man at the show, it looks as if he would have a big finger in the building of a quarter-mile board motorcycle track in Providence, R. I. Kreamer was in Providence on January 6, at a conference, at which were present Fred C. Perkins, owner of Narrangansett Park, where the proposed track will be built; B. A. Swenson, and Jefferson K. Crafford, the latter composing the committee representing the Providence Motorcycle Club, which is interested in the deal. An effort also is being made to induce the other local organization, the Rhode Island Motorcycle Club to participate. At a tete-a-tete, it was decided to get down to brass tacks, and incorporation papers will be filed for the Narragansett Motordrome Company, with $15,000 capital, of which $10,000 will be paid in. Perkins agreed to put up $5,000, and the club to furnish the remainder through stock subscription among the members at $10 a share. The track will be built inside the mile oval at Narragansett, and while Kreamer declined to make known the degree of banking that will be used, he stated that the dish will be steep enough to hold any speed that a present-day or near future racing machine can develop.

Kreamer likely will figure as the builder only, as he disclaims having any further connection with the project. He is bidding for the contract and has been asked to submit figures, which he now is preparing. He states that he has become identified with a prominent engineering concern in New York City, and is prepared to undertake the erection of board tracks on a basis of a guaranteed speed. He states further, that Jack Prince, has not been considered at all in the Providence enterprise.

Perkins is wealthy, Swenson is the largest motorcycle dealer in the State, and Crafford is the head of a large automobile agency, and a motorcycle enthuiast. Narragansett Park is accessibly located, and is reached by several trolley and steam lines, being but half an hour from the Union station in Providence.

There was not a little talk over the presence of the Bosch enclosed magneto on several makes, when it had been tacitly intimated that it would be an exclusive Indian feature, for some time, at least. The housing idea is said to have been conceived and developed in the Indian plant. Merkel, Thor and Yale also were fitted with this type. It was with considerable glee that A. B. Coffman, of the Yale, stated that he had taken an ordinary open-type Bosch, and fitted a housing from castings made at the Yale factory, and that the job was good enough to deceive George M. Hendee, when the latter looked over his show neighbor's display. It would seem the most natural thing in the world, for a manufacturer, who wanted the enclosed type very urgently, and was unable to obtain it, to have patterns made and fit a housing of his own to the open type instrument. One prominent maker, who did not have the enclosed magneto on his machine, when asked if he was keen for it, stated that he was not, as his magneto was mounted in back of the cylinders where it was protected from mud and water, and that the chief demand for it would be from makers who placed the instrument in front of the cylinders where it was more exposed to moisture.

B. A. Swenson, of Providence, R. I., breezed in Tuesday. He created a big laugh at the Indian booth, with a story of a recent customer from the suburbs, who carried his money in his stocking. After the customer had selected his machine, Swenson took him in his office to make out the sale slip, and while so doing, the visitor began removing one of his shoes. Swenson noticed it, but said nothing, thinking that his customer had some sand, or perhaps a nail, in his shoe, that was painful. Following the shoe, came the sock, and then the visitor reached down in the toe and brought forth a roll of bills. "I a'int takin' no chances on gettin' my pocket picked on the way here," he remarked with a wide grin, as he proceeded to replace his footwear.

There was considerable rivalry among the motorcycle exhibitors to see who would register the first bona fide sale, and Joseph Buckingham, of the Harley-Davidson, scored on a close play. He claims to have landed Henry Fisher, of Southold, L. I., at 1 P. M., Saturday, January 6, and produced Fischer's check as "Exhibit A," to support his statement. According to Buckingham, Fisher was browsing around, while the exhibits were being made ready for the opening, and engaging him in conversation, pointed out Harley-Davidson features so convincingly, that a deal soon was closed. George Jenkins, of the M. M., was a close second, and he thought for a time that he was first, for he reported a sale before the show opened too, but at 4 P. M.

The Tourist Trophy at the Indian stand, was the only prize on exhibition on motorcycle avenue, and proved a top line drawing card. It was brought over especially for the New York and Chicago shows, and will go back to England immediately after the latter exhibition closes. One enthusiastic Indian rider, was heard offering to wager that it would be in this country at the next show, but no one took him up. The trophy is a sterling figure of Apollo, balanced on a winged wheel, and holding a wreath of victory, and is valued at $1,000. It is the most valuable trophy ever presented for motorcycle competition.

J. B. Webb, of the United States Tire Company, who has been special representative of the motorcycle tire department for New York City, has had his territory expanded to include the company's eastern district, embracing the Atlantic seaboard from Maine to Florida. Webb, will be a traveling free lance, his duties consisting of visiting the branches, and cooperating with the managers in the developing of motorcycle tire sales in their respective territories.

W. H. Snyder, who is agent for the Emblem at Columbus, O., and who is also one of the officials of the Columbus Motorcycle Club, was "on the job" early and late booming Ohio's capital city for next summer's National assembly of the Federation of American Motorcyclists. He certainly has some nice things to say in favor of Columbus, and they were listened to attentively. If Columbus get the assembly much of the credit will be due to Snyder's effective work.

B. A. Swenson (Indian), J. C. Loftes (Harley-Davidson) and Hirah Baxter (Excelsior), Providence, R. I., dealers, who are at the show, will exhibit at the big automobile show in the Providence Armory, during the week of January 20-27. It will be the largest show in New England, surpassing even the Boston show, while the main floor space will exceed that of the Garden arena.

Swenson, of Providence, said that the annual banquet of the Providence Motorcycle Club, would occur Sunday night, January 28. There will be gasoline, oil, spark plugs and vaudeville, and the committee of arrangements has promised that last year's affair will be outdone. Those who were there haven't forgotten it yet.

Hirah Baxter, Providence, R. I., agent for the Excelsior, came to the show with Mrs. Baxter, on a honeymoon. It happened in Attleboro, Mass., about a month ago.

INITIAL TRADE DINNER EXCEEDS ALL ANTICIPATIONS

Great Gathering Presages Bright Future for Cause of Both Branches of the Cycling Sport and Industry—Olympic Fund Increased Materially—Project Gaining Steadily—Popularity Vote in Full Swing.

Supscriptions Pledged to the American Olympic Bicycle Team Fund.

Frank Blatz, Jersey City, N. J.	1.00

Successful to a degree beyond all expectations, and establishing a precedent that without doubt marks an epoch in New York's voluminous history of the trade and sport, both of the bicycle and motorcycle, the first annual dinner, January 10, at the Hotel Earlington, under the joint auspices of the Motorcycle Dealers' Association of Greater New York and the United Cyclists, to the visiting manufacturers of those and allied lines, was easily one of the leading social events provided for their entertainment during "show week." In magnitude and achievement of its announced objects, it may well be ranked with the most effective of the many kindred affairs which occurred in crowded sequence throughout the first week of the Twelfth Annual Automobile Show in that city.

The much desired and heretofore apparently unattainable "get-together" spirit amongst manufacturer, dealer and rider was most gratifyingly exemplified. That

ARTIST MERRICK'S MENU CARD

far-reaching beneficial results will accrue to all concerned, is the consensus of opinion of recognized leaders of years' standing; to whom, and all present, the assemblage of 174 representatives of the various interests with a unity of purpose—the common good—was indeed a revelation and a fitting tribute to the untiring energy and ceaseless effort since the inception and launching of the idea by President H. A. Gliesman of the Motorcycle Dealers' Association, and who was so ably assisted from the beginning by J. A. Hall, the United Cyclists' president.

Immediately after those present were seated, Toastmaster A. G. Batchelder introduced the newly elected president of the Amateur Athletic Union, Gustavus T. Kirby, who explained that a previous engagement necessitated his early absence from the festivities, and then proceeded clearly and concisely to state the object of the American Olympic Committee, and demonstrated that to insure the winning of the games by the United States at the Fifth Olympiad, all branches of sport should be represented; congratulating those who had carried the work thus far in creating a fund to send a bicycle team, assuring them of the appreciation by the general committee, and recommending it as a most worthy object for support by all connected with every branch of the industry and sport for business and patriotic reasons.

In closing, Mr. Kirby announced a $100 subscription to the fund by Frank B. Mihlon, one of the proprietors of the Newark Velodrome. The donation was tendered by John M. Chapman, manager of that track, through R. F. Kelsey, chairman Board of Control of the National Cycling Association. The reception of this, the largest contribution so far made, was most appropriate, and then was taken up the discussion of the repast—a delectable one—with an orchestra in attendance as part of the proceedings.

The remarks following the dinner were under the able guidance of the veteran A. G. Batchelder, for years connected with cycling in various official capacities of National importance, and now chairman of the executive committee of the American Automobile Association, and who, if possible, in the present instance exceeded himself in the happy function of toastmaster.

Instructive, entertaining addresses were made by the dozen or more gifted speakers on their respective subjects. H. A. Gliesman, "The Motorcycle and Organization;" A. B. Coffman, "The Motorcycle Manufacturer;" J. A. Hall, "The Olympic Bicycle Team;" Will R. (Happy Days) Pitman, "Cycling, Its Beginning in America and History;" George H. Hamilton, "The Federation of American Motorcyclists;" Fred I. Willis, "The Duty of Supporting the American Olympic Bicycle Team;" A. Eugene Bolles, "The Trade Paper, Its Relation and Fealty to the Industry and Sport;" Mark Eisner, counselor for the Motorcycle Dealers' Association: "An Appeal for the Cause of the American Olympic Bicycle Team;" J. P. Thornley, "The Motorcycle Racing Situation;" O. P. Warlick, "Motorcycling, United Cyclists, and F. A. M.;" W. F. Remppis, "Reply of the Bicycle Manufacturer and the Present Day Relations to the Sport;" J. W. Brandt, "Cy-

cling and the Olympic Team." Thus ended a most enjoyable and profitable event.

Send in Your Choice of Riders.

The first mail vote in the rider's popularity contest as propagated in these columns last week, was submitted by Charles Hansen, an enthusiastic worker for the cause in Jersey City, N. J. Hansen's vote received the time stamp of 4 P. M., January 9, it having been received at this office at that time. This first ballot reads: "My choice for twelve amateur bicycle riders for the American Olympic Bicycle Team is as follows: Frank Blatz, Jr., Gus Wohlrab, Joe Kopsky, John Becht, Charles Hansen, Alvin Loftes, Jesse Pike, Paul Heidrich, Stanley Carman, Carl Ericson, Isadore Taub, Joe Schieder. Signed: Charles Hansen, 81 Montgomery street, Jersey City, N. J."

The interest in this contest already gives promise of reaching immense proportions, for in addition to securing the honor of being the first to register his vote, Hansen submitted a list of 25 names requesting that voting blanks be sent them in accordance with the suggestion in the announcement. There also is much interest manifested in other directions. Every Borough in Greater New York has been heard from. Providence has some very enthusiactic rooters. Baltimore, as usual, is busy sending in votes. That hotbed of bicycle racing, Newark, N. J., put up a close race to register the first ballot.

Other names noted on the ballots at hand are: Bert Baker, Franklin Fisher, H. Kaiser, Frank Mehrmann, August Leimbach, Charles Thoms, William Leimbach, Jack Townsend, D. J. McIntyre, Fred Perreault and Walter Raleigh.

Now that the ball is started, keep it rolling, send in your votes and do not fail to send the list of names with addresses, to whom you wish voting blanks sent; they will be amply and promptly supplied. Here again is the prize list and conditions of the contest, with a blank attached for your immediate use. "Vote early and often."

First prize, $10—To the person first voting the complete team of twelve amateur riders in the United States which receives the highest number of votes.

Second prize, $5—To the next complete vote received. Two years' subscription each to the next five. One year's subscription each to the next ten. All votes as received will be stamped with time and date.

The reader of this paper may send in his vote on the following coupon.

Use this blank for sending in your vote.

My choice for twelve amateur bicycle riders for the American Olympic Bicycle Team is as follows:

Send your list for voting blanks to the bicycle editor, The Bicycling World Co., Box 649, New York City.

Campaign Producing Diversified Benefits.

The fund took a big upward jump this week, going from last week's total of $199 to $335, a gain of 68⅓ per cent.

The manufacturer first to subscribe to the fund is the Standard Company, from whose plant in Torrington, Conn., come practically all this country's bicycle spokes.

FIRST ANNUAL DINNER OF THE MOTORCYCLE DEALERS' ASSOCIATION AND UNITED CYCLISTS AT THE HOTEL EARLINGTON, NEW YORK CITY, JANUARY 10, 1912

GOULLET AND HEHIR WIN

Capture First Six-Day Australian Race at Sidney, with $3,750 as Their Share of the Collateral.

Brief cablegrams from Sydney, Australia, bring the news, most welcome to the many American friends and admirers of Alfred Goullet and Paddy O'Sullivan Hehir, of their winning the first six-day race held in the Antipodes. The race was held on the three-lap asphalt track at the Sydney Cricket Grounds in the open air and started on New Year's Day, and ran continuously until Saturday night, January 6.

The race was a mammoth affair, forty teams starting, the prize money was $5,000 of which the winners received $3,750. Second and third were respectively, $1,000 and $250. There also was extra prize money for the team which made the best mileage, the team which had the best record for one day and the team which made the best hour record.

Besides Goullet and Hehir, native Australians, who have become very popular with the followers of the game in this country during their two years' riding at various tracks, there also rode in the Sydney race, two likewise well-known Americans: Iver Lawson and Worthington Longfellow Mitten. It will be recalled by readers of Bicycling World that at the time when announcement of the proposed Australian races was made during the closing weeks of the past season, the latter two secured contracts as also did Jackie Clarke which included transportation. Goullet and Hehir were not so favored, and took the trip on their own hook, declaring "they would warm somebody's heels," and that they did so is evident. Clarke did not sail in time to take part in the Sydney race, remaining here to ride with Fogler in the Madison Square Garden race, which they eventually won, although to not quite so loud a tune of the "merry jingle."

Clark is now on his way to Australia and will ride in the Melbourne race next month with Gordon Walker as partner; there they will have opportunity to match endurance and speed with Goullet and Hehir and Lawson and Mitten on a five-lap outdoor track, under the broiling midsummer sun of the southern hemisphere.

New England Wheelmen's "Cork" Races.

During the year 1911 the New England Wheelmen of New York held their series of "cork" races, which were run off every Sunday morning on the Pelham Parkway in the Bronx. The first four men to finish in each race were credited with points; the three men with the greatest number of points at the end of the year to be awarded gold, silver and bronze medals. The distance of the race each Sunday was 6¼ miles. The competition in this series was very keen, blanket finishes being the rule, and provided interesting entertainment for the many spectators. The score in this competition is as follows: First, Joe Kopsky, 31 points; second, George Polacsy, 25; third, B. Baker, 23.

Stanley Carmen, the well-known amateur, posted a valuable gold medal for the member winning the greatest number of points in these "cork" races from November 5 to December 31. This medal was awarded to Donald J. McIntyre, who rolled up a total of 12 points. B. Glemba, the treasurer of the club, offered a silver cup to the member making the best time for 10 miles, unpaced, on the road during the year. This cup was won by Bert Baker, who established a record for the year at 10 miles of 28:50. The first "cork" race for the season of 1912 will be run off on Pelham Parkway on March 3, and every Sunday morning thereafter, starting at 10 o'clock.

Close Scores in Crescent B. C. Runs.

Baltimore, Jan. 8.—Charles H. Thoms and August Leimbach tied with 215 points each in the run attendance contest of the past season of the Crescent Bicycle Club, Baltimore, they having attended all of the 43 runs held by the club.

With a penalty of but five points, William Leimbach finished in the next position with 210 to his credit; in addition he was the only member to win a meritorious medal in 1911. This medal is offered each year to those members who ride at least 5,000 miles, attend at least 75 per cent. of the club runs and secure three new members for the club. Leimbach's record is 10,335 miles, 25 centuries and over 97 per cent. of the runs.

There were 12 races for class "E" riders; eight for class "D," five for class "B," and two for class "A." The final standing in the class series follows:

Class A—Langdon M. Sanborn, August Leimbach and William Leimbach.

Class B—Thomas W. Baker and Charles H. Thoms.

Class C—Alfred J. Baker, J. Fred Huber and C. Edward Berigtold.

Class D—Fred M. Sanborn, George Peilstocker, Joseph F. Solan and William Vogel.

Class E—Charles Baquol, Fred E. Mommer, Joseph Casey, John Shaney and Carroll Keller.

The run attendance score in points is as follows: Charles H. Thoms and August Leimbach, 215 points each; William Leimbach, 210; Fred M. Sanborn, 205; Langdon M. Sanborn, 195; Alfred J. Baker, 135; J Fred Huber, 125; Thomas W. Baker, 95; C. Edward Berigtold, 75; John W. Trost, 55; George Peilstocker, 45; William Vogel, 25; Joseph Solan and Joseph Casey, 20 each; G. A. Miller and Fred S. Plitt, 15 each; John Shaney, John Andreas and William Foos, 10 each; Charles Baquoi and Frank Fertitta, 5 each.

BARDGETT SECURES PROVIDENCE

Will Conduct Bicycle Racing on Melrose ark Track in That City—Promises a Big Season.

Walter A. Bardgett, who for the past ten or twelve years has been well-known as a prize-winning professional rider, and who, last summer officiated as referee at the Newark (N. J.) Velodrome, has taken over the management of the Melrose Park cycle track, at Providence, R. I. The track is one of the most popular bicycle racing courses in New England.

Manager Bardgett left for Providence on Tuesday of the present week, taking with him the good wishes of his many friends for his success. He proposes to give to cycle sport lovers in the city founded by Roger Williams, the very best competition in motor-paced and other forms of bicycle competion. All the big contending star riders that illuminate racing at the Newark track will ride at Providence during the coming summer. The track will be a night stop on the New England and National Circuits on Friday evenings, and of course the National holidays will be utilized for big racing features.

Century Road Club of America Election.

The election for National and State officers of the Century Road Club of America was held by mail ballot. The entire body of National officers was re-elected, while those chosen in the New York State Division are all active, experienced men, who have been at the helm in various capacities, assuring safe guidance for the club during 1912. Those to serve for the ensuing year are as follows:

National officers—President, John Bailie, New York City; first vice-president, F. H. Watrous, Chicago; second vice-president, Emil Leuly, West Hoboken, N. J.; treasurer, Fred I. Perreault, Malden, Mass.; secretary, Fred E. Mommer, New York City.

New York State Division—Centurion, Emile E. Fraysse; secretary-treasurer, Julius G. Schmidt; captain, Clinton B. Walker; first lieutenant, Emil Trunk; second lieutenant, Hugo Hintze. Chairmen of Committees—Century, Henry C. Sommer; entertainment, Adrian P. Bastide; press, Herman Geiler. Board of Governors—E. E. Fraysse, Julius G. Schmidt, Henry C. Sommer, Fred E. Mommer, Emil Trunk.

Cyclists to Whirl at I. A. A. C. Games.

A three-mile flat floor bicycle race open to all amateurs, is scheduled on the long athletic program of the Madison Square Garden games of the Irish American Athletic Club, New York City, to be held on Thursday evening, January 25. The Irish American A. C. races are always popular, and a big entry list is assured.

BABY BLISS PASSES AWAY

Well Known as the Largest Bicycle Rider —He Died of Gas Asphyxiation at Bloomington, Illinois.

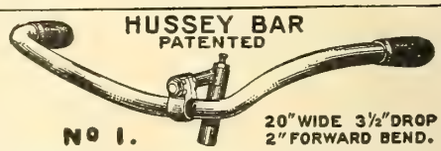
"Baby" Bliss is no more. By this name he was known in the hey-day of cycling during the early and middle "nineties." To his friends and business associates he was Leonard Bliss. In addition to the fame which accrued to him as the biggest man who ever rode a bicycle he also was known as the world's champion heavyweight athlete, and was reputed to be the largest man in the world. He tipped the scales at the modest weight of 575 pounds, and was in his forty-sixth year.

"Baby" was found dead, January 4, at his home at Bloomington, Ills., where he had been living alone. Having been missed by his neighbors, the door was forced in by the police and the body was found seated in a mammoth arm chair of his own manufacture, in front of a gas stove. The cocks had been accidentally turned on and death resulted from asphyxiation. There is a theory that he committed suicide, but this is scouted by his friends, as he was the soul of geniality and never known to be despondent.

A world of memories is recalled to old-time followers of the bicycling game by the death of the world-famed heavyweight athlete. When road races were the big holiday sporting events in Chicago "Baby" Bliss was a regular starter, but seldom a finisher.

James Levy, of Chicago, who years ago was captain of the Chicago Cycling Club, was the man who remembered the race in which Bliss finished.

"It was back in 1898 or 1899 that 'Baby' sprung the sensation of the year by covering the entire route of the annual July 4th race to Pullman," said Levy. "He had been a regular starter for years, generally being given a handicap of 25 minutes or so, but he usually stopped at the first refreshment parlor instead of going through the race.



Bliss was known the world over. He started his career in the cycling world about 1893 and was employed by the Fowler Cycle Mfg. Co., to advertise its products. He visited county fairs all over the United States, gave exhibitions at race meetings and afterward journeyed to Australia and Europe to advertise bicycles.

When his services were no longer required in the bicycle business, Bliss went into the show business, traveling with circuses to many countries, and was shown as the world's heaviest man. His dimensions were as follows: Height, 6 feet 4 inches; waist, 72 inches; hips, 86 inches; chest, 66 inches; thigh, 42 inches; calf, 27 inches; collar, 21 inches; hat, 7⅝; socks, 12½; shoes, 13; weight, 575 pounds.

Bicycles that you can buy right and sell right, and that sell easily because of their superiorities, are what we supply.

CYRUS JUVENILE

Our capacity, with our new four story addition and a total floor space of 240,000 square feet, is a carload of bicycles a day, including Adlake, Cyrus, Crown and other models, in addition to which we can produce 5,000 pieces or parts per day, including Fauber hangers. Not only are we using Fauber patent one piece crank hangers in our bicycles but also roller chains, which we adopted two years ago, being in advance of the rest of the cycle manufacturers in this respect. Write for 1912 prices.

Siren Alarms
Improved 1912 Models

There are cheap and flimsy imitations of the Majestic Siren on the market. They have plain or **Single Row** bearing. They are **MADE OF TIN**, hardware store screws and nuts and more tin. Some will last a week, but not many.

AN HONEST DEALER

will kill his Siren trade if he puts out these imitations. Handle

The Genuine Majestic!

The sounding perforations in the 1912 Majestic have been improved in design and doubled in number. The cover is of a specially rolled hard brass, 50% heavier than formerly. The frame is 50% heavier than formerly, as are most of the other parts. The **Double Ball Bearings** (18 3/16" balls) are adjustable, run in case-hardened, ground and polished cups. Take one apart and examine. The spindles are now vulcanized fiber. **Every part** is wrought and assembled with exceeding care. This company's name is plainly stamped on each Siren.

AVOID COUNTERFEITS, and we will help you, Mr. Dealer.

Order a half dozen or a dozen "GENUINE MAJESTIC SIRENS" from your jobber. If he substitutes on you, notify us and give us the date of his invoice and we will send you, FREE, by registered mail, a 1912 Majestic Siren. Try it.

Write for latest catalogue.

MAJESTIC MFG. CO.
Worcester, Mass, U. S. A.

Strongly Guaranteed

Practically Perfect

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

FEDERAL TIRES

FEDERAL

Federal Motorcycle Tires are produced in the best equipped and most modern tire making plant in the world with the same care that enters into the making of Federal Automobile Tires.

In the use of Federal Tires motorcyclists are assured the utmost in resiliency, endurance, economy, strength, comfort and service.

Federal Tires absorb road irregularities, decrease tire expense, increase tire mileage, diminish tire troubles and make possible greater speed.

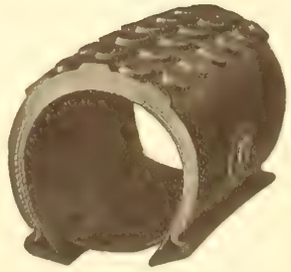
FISK

MOTORCYCLE

TIRES



FISK Motorcycle Tires, under intelligent usage, will not blow out, rim-cut nor will the tread become loose from the fabric. It is not unusual for them to run 5,000 miles and still be in perfect condition.

They are of the regular automobile type construction and furnished with the Fisk Superior Pure Para Inner Tube.

The GRIPFAST MOTORCYCLE TREAD positively prevents skidding. It grips the muddy road and holds fast. Spills are of rare occurrence. This tire will carry you through heavy going where machines equipped with other types would stall.

The BAILEY TREAD has all of the advantages demonstrated by this reliable construction in automobile use and our CORRUGATED TREAD is unexcelled for all-round conditions.

Motorcyclists who have used and experimented with many makes pronounce Fisk THE BEST.

BAILEY TREAD

DEALERS who are seeking a Motorcycle Tire that will stand up to heavy work can rely upon the Fisk to meet the severest tests, and will find it to their advantage to have a complete stock always on hand.

of the advertising we are carrying in journals of national circulation, and it makes people ask for the

Fairy

TRADE MARK

The most active selling high grade line of children's machines on the market. Sold through exclusive agencies in small centers and restricted agencies in the cities. Are you the live dealer to control the "Fairy" line in your locality? Think it over, but think quickly, and write for catalogue.

THE WORTHINGTON CO.
ELYRIA, OHIO.

SELLS ALL THE YEAR 'ROUND

Make Your Child Happy With a— Fairy

Here is a Christmas present that is *sure* to please the Boy or Girl—the famous "Fairy" Velocipede, Bicycle or Tricycle. Settle the question of "just the thing" now. Get a "Fairy"—or "Fairies"—for both or all of the children.

For twenty years the "Fairies" have been the aristocrats of vehicles for children.

They are made of the highest grade of steel, richly and tastefully finished—with full nickeled parts. Every "Fairy" is ball-bearing—the easiest running imaginable. Our strong guaranty covers each machine.

"Fairies" are the great successes in *safety* and *correct design*. Exercise on a "Fairy" can be only beneficial. It is so built as to cause the child to sit comfortably and to bring the muscles into play without fatigue. Physicians approve the "Fairies."

See the "Fairies" at Your Dealer's

"Fairies" are sold at most of the large stores of the United States. If you do not find the "Fairies" at a store near you, write us and we will see that you are supplied.

The prettiest, most durable, most serviceable Tricycle ever built.

"Fairy" Ball-Bearing Bicycles have the *style* that makes a hit with the boy.

Upholstered seat, adjustable to rider.

Be Sure You Get a Genuine "Fairy"

The success of the "Fairies" has brought out several imitations. Genuine bears the word FAIRY (our registered trademark) in the lettering shown at the top of this advertisement.

Send for Free Booklet, illustrating these high-grade children's machines.

THE MOTT WHEEL WORKS, Utica, N. Y.

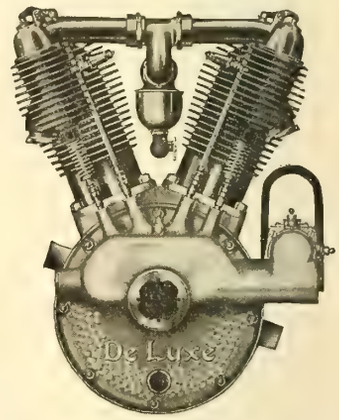
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

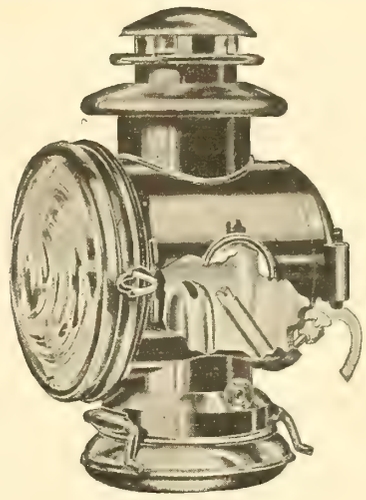
Reliance

(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.



When you realize that **ninety per cent.** of all plug troubles are caused by **carbon** and **soot** you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.

Regular Type $1.00
Magneto Type $1.25

For sale by most dealers; if yours does not carry, write and we will ship prepaid at prices quoted.

Lamp with Acetylene Burner

LET

HAM

Light Your Way

Here is a Motorcycle Lamp positively trouble proof. Doesn't that sound good? No amount of jarring will affect the steady stream of light which is generated from the HAM-LIGHT. Actual speed tests of 50 miles per hour have failed to blow or jar out the flame. Simply attached to motorcycle. Can be furnished either as an oil lamp, burning kerosene, or with acetylene burner in addition, using acetylene gas, making it a combination oil and gas lamp, a combination of great value on country roads or poorly lighted streets. Send for new circular containing full line. Do you want our Agency Proposition?

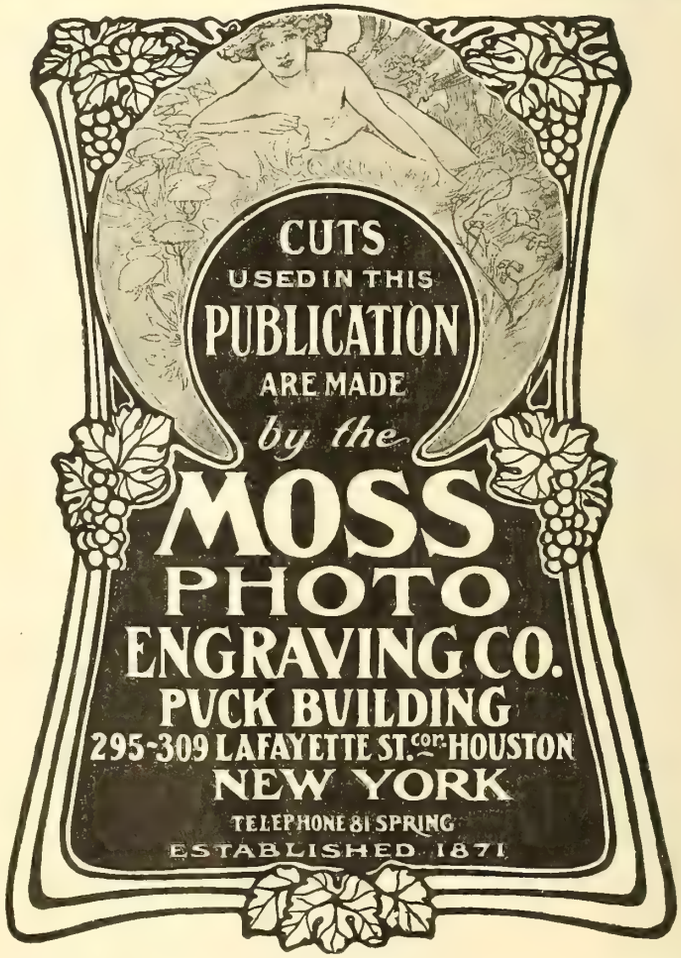
SCHAFER BALL BEARINGS
(MADE IN GERMANY)



are the most suitable bearings for motorcycles

Because

They withstand vibration due to the strong cage and large number of steel balls.

SCHAFER BALL BEARINGS are used throughout the *De Luxe* motor and two speed transmission for motorcycles manufactured by F. W. Spacke Machine Company, which fact proves that SCHAFER BALL BEARINGS stood up under the most severe tests before being adopted and that the best bearing regardless of cost is being used on the *De Luxe* motor and transmission.

Each tire carries our yellow "guarantee tag and each pair of tires is wrapped in the same substantial paper as our automobile casings.

Pennsylvania Vacuum Cup Bicycle Tires

The increasing popularity of these tires is a striking feature of the tire trade and is due entirely to their sterling worth.

Their non-skid and service qualities are so sound that we are enabled to give an unqualified season's guarantee with each tire. This is a strong inducement to the consumer.

For the convenience of the Jobber and Retail Merchant, Pennsylvania Vacuum Cup Bicycle Tires will be packed ten pair in a strong wooden box. This enables the Jobber to ship in the original package and the Retail Merchant to order in convenient quantities.

Made by an Independent Company with an Independent Selling Policy which insures a fair margin of profit to Jobber and Dealer.

If you want to sell tires for profit, write now for our attractive proposition.

POPE MOTORCYCLES

Showered With Compliments at the Show

$175
With
Magneto

$175
With
Magneto

At the New York Show, we exhibited our standard Pope Motorcycles finished in "London Smoke" with wide blue striping.

To say that they were greatly admired is to put it mildly. They were showered with compliments.

Had we been able to make a phonographic record of a few of the nice things said by visitors who viewed our exhibit, it would sound something like this:—

"What handsome, clean-cut machines they are!"

"I like its simplicity of construction and its general air of trimness."

"There's great value in that motorcycle."

"It's the simplest machine to operate and by far the easiest one to handle that I've ever seen."

"The quality and workmanship in that motorcycle couldn't be better if it sold for twice the price."

"It looks like a little thoroughbred."

"It strikes me as the ideal motorcycle—light, compact, and sturdily built."

And so it would continue indefinitely.

Thickest Treads

Most Mileage

Goodyear Motorcycle Tires offer you the extra mileage of tires with extra thick treads. Our treads are thicker than those found on most any other motorcycle tire. So our tires are more durable and less liable to puncture. Yet these motorcycle tires—"little brothers" of the famous Goodyear No-Rim-Cut Auto Tire—cost you no more than ordinary tires. You get the extra service FREE.

Superiority of Construction

In building a tire several plies of fabric are stretched, one at a time, over an iron core. Naturally, these layers of fabric in hand-made tires are unevenly stretched. The tightest layer bears the major part of the strain, and soon gives way.

Result—blowout.

The Goodyear Tire Machine stretches each ply at exactly the same tension. Each layer bears an equal share of strain.

Every layer is an integral part of the whole fabric. Not one layer—but the entire fabric bears the strain. Consequently this reinforced fabric is strong to the highest degree. The tire lasts.

We place them on an endurance machine. We wear them down by hundreds of thousands of revolutions on a surface more severe than the average roadbed.

If our tire does not outlast and outwear every other, then we keep at it until we make one that does.

Thus do we certify Endurance, the true test of quality.

Thus have thousands of riders everywhere come to realize the wonderful advantages and the economy offered by these tires.

And thus have the 13 leading motorcycle manufacturers contracted for our tires for their 1912 output.

As the sum total of satisfaction offered by your motorcycle is necessarily limited by the service rendered by the tires, it seems folly to take chances. Take Goodyears instead. You will be splendidly repaid.

CURTISS FORMS HOLDING COMPANY

Capitalizes at $600,000 and Takes Over Various Properties That Bear His Name —Main Offices at Hammondsport.

Hammondsport, N. Y., Jan. 15.—A $600,000 holding corporation to take over the Glenn H. Curtiss properties in this city has been organized with the following officers: President, Glenn H. Curtiss, of Hammondsport; vice-president, Monroe Wheeler, of Bath; secretary-treasurer, C. Ray Hall, of Hammondsport; directors, the foregoing officers and J. Fanculli, of New York, and Philip Sawyer, of Elmira. To the new company Mr. Curtiss turns over all his rights and holdings in the Curtiss Motorcycle Company, the Curtiss Aviation School, the Curtiss Motor Company, the plant and equipment at Hammondsport, all patents secured and pending, contracts, good will, etc.

Of the stock of the new company, $300,000 will be 7 per cent. preferred and $300,000 common. The offices will be located at Hammondsport.

Chicago Cycle Supply Moves Down Town.

The Chicago Cycle Supply Company, jobbers of bicycle and motorcycle supplies, has moved into its new home at 22 West Lake street, Chicago, between State and Dearborn streets, where it occupies three floors 26 by 140 feet, giving a floor space of over 10,000 square feet, and this entire space will be devoted exclusively to bicycle and motorcycle supplies. The company states that its business in the future will be wholesale to the trade only, and that it is open to entertain propositions from eastern manufacturers looking for Chicago representation.

The company will soon issue a very complete catalogue which will be mailed to all dealers in the middle west, south and west. The old location of the house at 3255 North Clark street, will be disposed of to local parties for retail purposes.

Will Continue to Market "Nobby Tread."

The United States Tire Company is announcing to the trade and to consumers throughout the country that the manufacture and sale of Nobby Tread tires is continuing as heretofore. This statement is supplemented with an announcement to the effect that the company is under no prohibition from the courts.

Application had been made for an injunction to restrain the United States Tire Company from marketing Nobby Tread tires pending the result of an appeal, but the court ruled that the injunction be suspended pending the appeal. This means, of course, that the handling of the tire will be carried on by the company in the same manner as previously.

Henderson Appoints Eastern Distributor.

Contracts have been closed for the sole eastern agency for the Henderson motorcycle by the New York and Brooklyn Automobile Supply Company, 1717 Broadway, New York City. The agency will be run as a branch of the company's automobile supply department, and will be in charge of Felix Lewin, formerly of the Moto-Accessories Company, and secretary of the Harlem Motorcycle Club. A demonstrating Henderson will be on the salesroom floors by February 20. The company also handles the Standard tire protector.

Vim Co. Closes Large Excelsior Contract.

The Vim Cycle & Hardware Company 137-139 Broadway, Buffalo, N. Y., has secured the agency for the Excelsior autocycle for western New York and northern Pennsylvania, in which territory President John W. Henry of the Vim people says his company will act as general distributors, in addition to retailing in Buffalo.

WAVERLEY MAKES COMPLETE MODEL

Distinctive Type Motor Now Incorporated in Full Grown Machine—Has Ingenious Leaf Spring Frame and Fork.

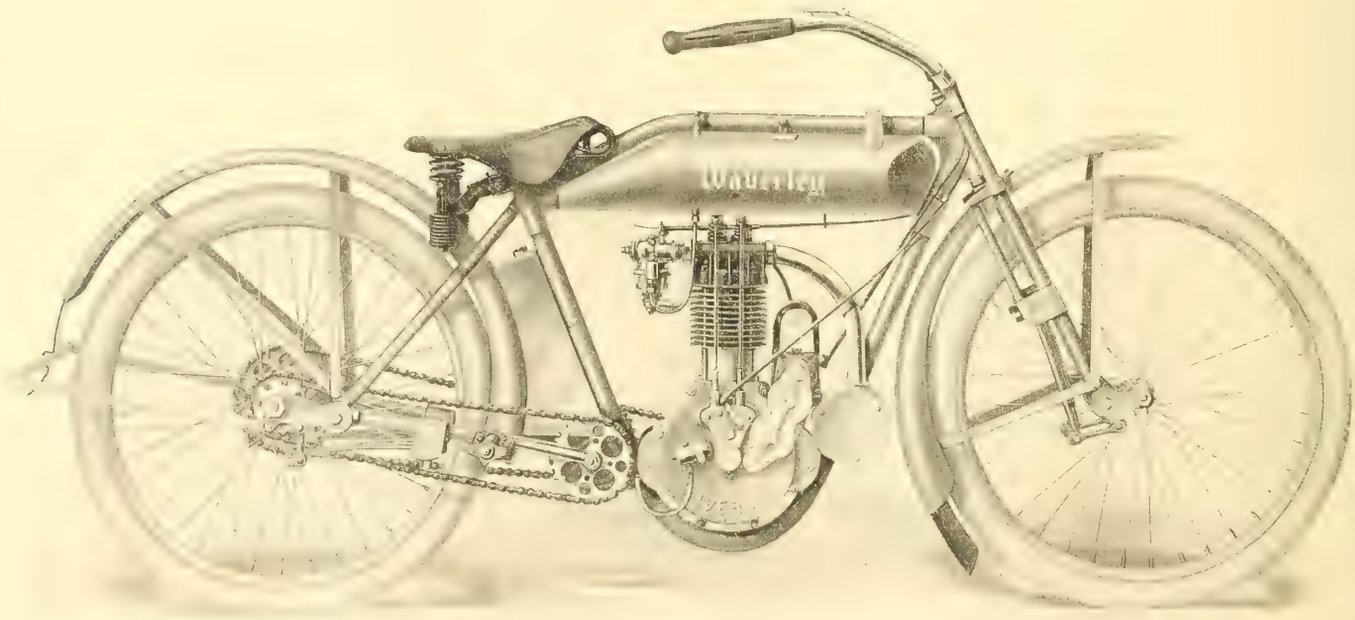
Having achieved an enviable reputation for the Waverley overhead valve motor in speed contests, the Waverley Mfg. Co., Jefferson, Wis., now is offering a complete motorcycle of its own, embracing this distinctive power plant, as well as several constructional features distinctly new to motorcycle practice. Bearing a four-horsepower rating, the Waverley, as it is styled, will be made in one model only, and in single cylinder form.

Campaigned for two years on road and track in this country and abroad, the Waverley motor, mounted in other makes of chasses, soon gained prominence by its sensational successes, perhaps the most notable of which was the winning of a 100-mile championship at Dublin, Ireland, against the cream of the foreign machines. Its cylinder dimensions are 3⅜ x 3 13/32, and the flanges are lathe turned to obtain uniform expansion. Generous size F. & S. ball bearings carry the crankshaft.

One-piece nickel steel valves are used, and are located directly over the piston, being tripped by individual rockers. The valves are interchangeable. Vanadium steel drop forgings are used throughout the motor. A wide range of flexibility is obtained through the use of a Heitger multiple jet carbureter, and the glass float chamber permits the gasoline level to be observed at all times. Firing is accomplished with a Bosch ball bearing magneto, mounted in front of the cylinder and driven by an enclosed gear train.

Lubrication is taken care of by a mechanical pump, which is said to have but two moving parts. It can be adjusted with

the motor running. No check valves are used in its makeup, obviating the liability of clogging, and the most important claim made for it is that it is the only motorcycle mechanical pump that will handle successfully, oil charged with foreign matter. An unusually large muffler, built of cast aluminum, is located in front of the motor, where the maximum benefit of cooling is obtained. Owing to its ample size, no cut-out is fitted, and the use of aluminum is claimed to permit the use of a large expansion chamber without undue increase in weight.



Automobile constructional tendencies are apparent in the springing of the frame and fork, the system being distinctly unique. Quarter-elliptic leaf springs of vanadium steel are used, and are adjustable to the weight of the rider. The frame is of the construction where strains are greatest. The riding sensation of this type of suspension is said to be totally unlike any other. Fork sides are carried up to the frame head to form a double handlebar mounting. Motor control is through the grips via Bowdon cables. The spark control is through a separate finger lever on the right bar, the grip controlling the compression release only.

Separate tanks are employed, the gasoline reservoir being carried between the frame truss tubes. It holds two gallons. The oil tank, located back of the seat mast, accommodates two quarts. Transmission is through double roller chain of Diamond make. Large sprockets are used to reduce chain speed and noise. Twenty-eight inch single clinch wheels shod with 2½ inch tires are fitted. Fenders are flared to arcle and Motor Co., Ltd., Toronto, has been negotiating with certain motorcycle manufacturers of the United States for an arrangement whereby machines might be assembled in Canada.

Sam Vogan, Toronto's crack endurance run contestant, has given up the Minneapolis agency.

Eisemann Transfers Sales Office and Staff.

The sales department of the Eisemann Magneto Company, heretofore maintained at Detroit, has been transferred to and consolidated with the main office of the company at 225-227 West 57th street, New York, closer conenction with the factory in Brooklyn, N. Y., being thus provided. A. T. LeBlanc, long an Eisemann attache, has been appointed sales manager. H. D. Wilson will remain in charge of the Detroit

FIRST MODEL OF THE WAVERLEY WITH OVERHEAD VALVES AND SPRING FRAME

standard double truss loop type, the springs being slung from the rear stays. Instead of being carried in the usual frame slots, the rear wheel floats on a pair of rocker links hinged to the frame. The springs are shackled in front to housed axle extensions on the lower stays, and at the rear to auxiliary shackles on the rocker links.

In the fork the main rigid member is in front, and the axle is carried on the extreme forward end of the lower links. The auxiliary fork member projects from the crown half way down the length of the main fork in its rear, where it picks up the spring leaves. At their lower end the springs are shackled to the fork links. A clip circling the main and auxiliary fork members at the spring upper connection acts as a check on "whipping." The wheelbase is 56½ inches. Fork and frame springs are interchangeable, operate noiselessly, and embody no sliding joints.

All frame and operator's weight is carried between the springs, affording rigid rest side splashing, and have ample clearance for tire chains. The front hub is Corbin with knockout axle, and the rear carries a Corbin band brake. The standard finish is Waverley blue with nickel trimming, and standard equipment will include a clutch. The price tag is marked $225.

Late Doings of the Toronto Trade.

Toronto, Jan. 14.—Walter F. Andrews, the Canadian bicycle champion, has secured a sub-agency for the Indian product. This is significant in view of the fact that Andrews' emporium at 369 Yonge street, is only a few doors away from the Excelsior branch here. The main Canadian distributing depot for the Indian will be situated at 384 Spadina avenue, H. M. Kipp, the Canadian representative of the Hendee company, having secured commodious quarters there recently. Andrews is already the sole Pierce agent for Toronto.

A denial has been given to the report that T. A. Russell, president of the Canada Cybranch. A branch opened at 427 Meriden street, Indianapolis, will be in charge of Lon R. Smith.

An Addition to Harley-Davidson Plant.

Milwaukee, Wis., Jan. 17.—An extension of large proportions will be made to the Harley-Davidson Motorcycle Co.'s plant, Thirty-seventh and Chestnut streets. Plans are in preparation for a five-story concrete structure, 87 x 135 feet, to cost $60,000.

Indian Houses Its Foot Starter.

To afford protection from dust, mud and flying stones, the Indian foot starter ratchet mechanism is now housed in a neat metal cap. The housing is applied in such a manner as to be quite inconspicuous.

Handin Severs His Thor Connections.

J. A. Handin, sales manager of the Aurora Automatic Machinery Co., makers of Thor motorcycles, has resigned. His plans for the future have not been announced.

SOME OF THE PIERCE TESTING FORCE

Eight Pierce Testers Are on the Job.

Every Pierce motorcycle leaving the factory of the Pierce Cycle Company, of Buffalo, N. Y., is tested from 50 to 100 miles on the road. The company employs a staff of eight testers, who are kept constantly at this work. The photograph shows some of the men thus employed enjoying a slight relaxation at the roadside.

Gives Clutch as Standard Equipment.

E. C. Kicherer, New York representative of the Flanders Mfg. Co., Pontiac, Mich., announces that the Flanders will have an Eclipse clutch as standard equipment at the list price of $175. The finish also will be touched up, and the motor base will be polished instead of the sand blast scrubbing it now receives. Vigorous denial is made of the rumors of a contemplated price reduction, which are asserted positively to be unqualifiedly false.

Will Handle Excelsiors in Westchester.

A contract has been closed by the Ford Motorcycle and Auto Supply Company, of White Plains, N. Y., with the Excelsior Motor Mfg. and Supply Co. of Chicago, to handle the Excelsior line for Westchester county, N. Y. The Ford company is a member of the Motorcycle Dealers' Association of Greater New York, and is also county distributor for the Flanders, Curtiss and Marvel. The company has an up-to-date machine shop and is prepared to do all sorts of repairs and special work.

Federal Rubber Mfg. Co. Men Dine.

Once each month the Federal Rubber Mfg. Co., of Milwaukee, tenders a banquet to the managers of its various departments. These gatherings are of a semi-social and business nature, and after the good cheer has been disposed of a general discussion of the operations in each of the company's many departments is in order.

The illustration on this page shows the Federal "family" gathered in the red room of the Pfister Hotel, on one of these festive occasions, those present being Byron C. Dowse, president; Herbert A. Githens, vice-president; Richard Ward, secretary-treasurer; F. Haskell Smith, superintendent of works; J. E. Kepperley, general counsel; Arthur A. Frank, assistant superintendent; Edward Hutchins, superintendent of construction; Arthur J. Zealley, publicity manager; P. H. Ober, superintendent tire department; W. H. Piggott, first assistant sales manager, D. H. Roberts, second assistant sales manager; R. T. Huntington, manager of traffic; Earl White, manager of cost department; G. H. Money, purchasing agent; A. H. Willson, assistant to the secretary.

"I believe these monthly gatherings to be most beneficial to the company's interests and progress, as well as to our department managers individually," said President Dowse, "for it brings us together under conditions of mutual good-fellowship, free from the ordinary restraints of business hours, and has a tendency to promote a freedom of discussion, suggestion of new plans, improvements, etc., and a general co-operation that we might not otherwise obtain."

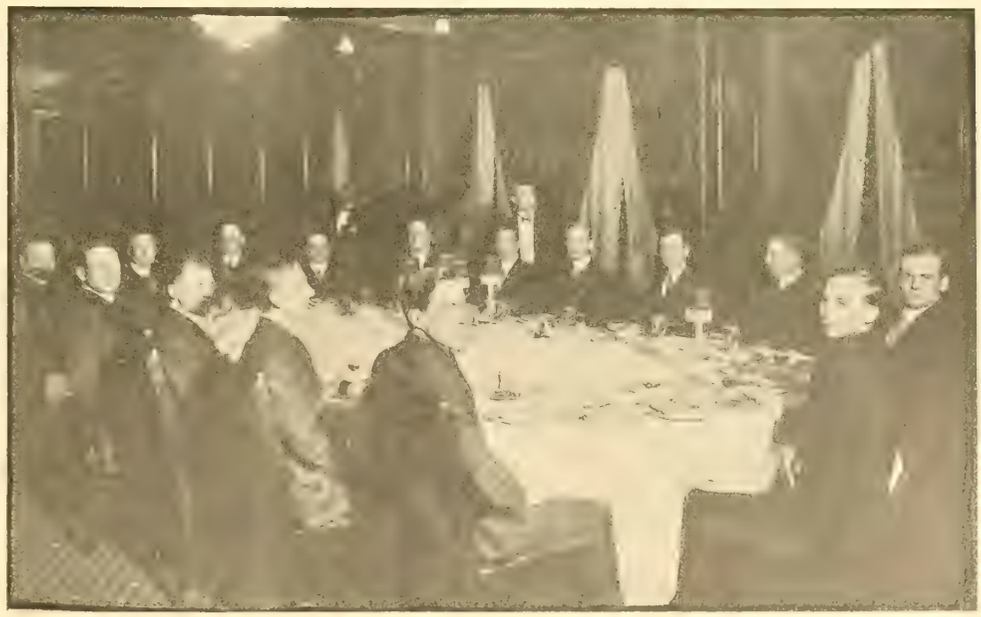
Allen Now New York Federal Manager.

Announcement is made by the Federal Rubber Mfg. Co., of Milwaukee, of the appointment of Marcus Allen, as manager of its New York branch, with headquarters in the metropolis. Mr. Allen, who was formerly connected with the Empire Tire Co., left that house to take the management of the New York branch of the G. & J. Tire Co., of Indianapolis. Inasmuch as the former officials of the G. & J. Tire Co. are now at the head of the Federal Company, Mr. Allen's connection with the latter company is in the nature of a "welcome home" by his former business associates.

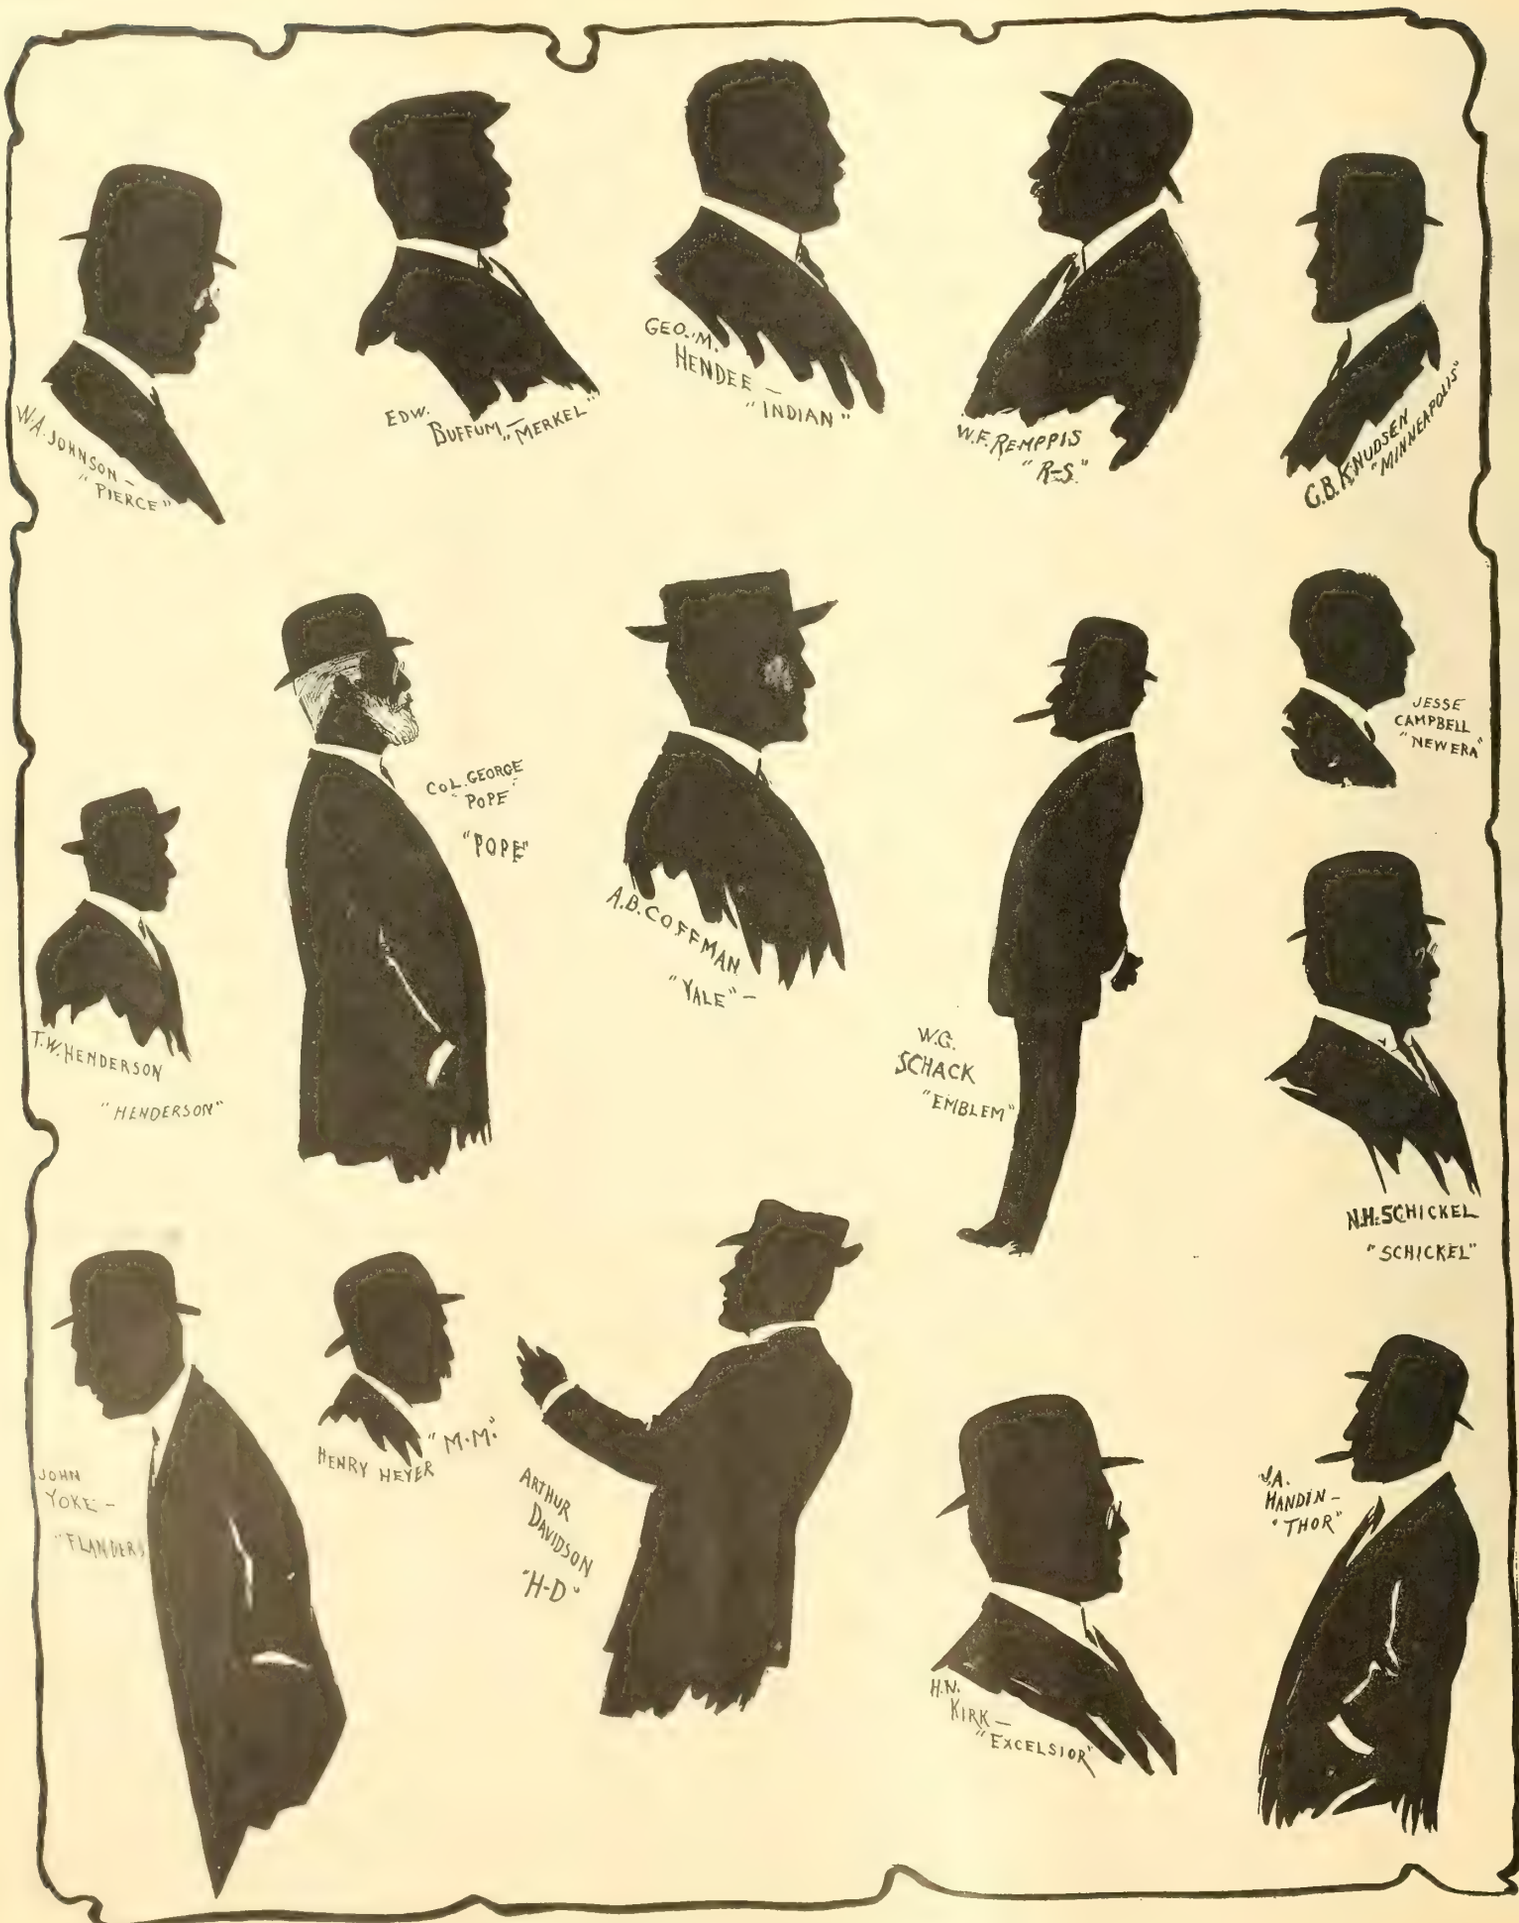
Having a wide acquaintance among the pneumatic tire trade, and an enviable record for results achieved in sales promotion work, Mr. Allen should prove a strong link in the chain of representative selling connections which the Federal Company has established in all parts of the country.

Gunning For H-D Orders in Maryland.

While on a "gunning trip" last summer among "up-State prospects," Manager John N. Carroll, Jr., of the Chase Motor Company, Charles and Read streets, Baltimore, agent for the Harley-Davidson, had has picture taken on the "big gun" that he used to bring down the game he was after. That it did the business to perfection is proven by the rapid increase in orders



JOHN N. CARROLL, JR., OF BALTIMORE



from that section of Maryland, for both 1911 and 1912 machines. The Chase Motor Company has been one of the most successful of the Harley-Davidson agents. It states that it has captured the first new Baltimore business, having been taking orders and making prompt deliveries on 1912 models of the H-D since the first week in November.

Shirley Off For a European Trip.

Amos Shirley, one of the pioneer bicycle and motorcycle dealers of New York sailed for England Saturday, January 13. He will be absent about six weeks.

MONTHLY DINNER OF THE FEDERAL RUBBER MFG. CO.'S EXECUTIVE FORCE

"SIDE ELEVATIONS" OF PROMINENT TRADESMEN AT THE RECENT GARDEN SHOW

Uniform Plan For Goodyear Branches.

Under the energetic direction of C. W. Martin, Jr., district manager in the Southern States for the Goodyear Tire & Rubber Company, the past year has shown a fine growth in the number of branches he has established. Starting a year ago with one store in Atlanta, the opening of 1912 finds Mr. Martin supervising five branches.

An innovation of Mr. Martin, is that of making all of the branches in his territory uniform in construction, interior decorations and furnishings, and in methods of storing and handling stock. To this end elaborate changes are to be made in some of the branches during the spring. The Atlanta branch, which is located at 223 Peachtree street, is to be remodeled to conform with the uniform plan, and 1,000 square feet of additional floor space will be added to the office. The stock room, which contains nearly 6,000 tires, and the shipping department, will require but slight changes. H. E. Hyde is the local manager.

The Charlotte, (N. C.) branch, which was opened November 1, already conforms to the uniform plans in construction and furnishing, as does the Jacksonville (Fla.) branch which moved into its new quarters October 1. L. R. Gemmill is manager.

At present, the Birmingham, (Ala), branch is occupying temporary quarters, but will soon move into its new quarters, a two-story, 48 x 90 building, now under construction. J. G. Caldwell is the local manager at this branch. The New Orleans branch is at 536 Baronne street, and will be remodeled along the uniform plan lines in the near future. T. H. McGehan occupies the position of local manager.

Reliance Factory Resumes Operations.

Owego, N. Y., Jan. 15.—On Tuesday of last week the one-time plant of the Reliance Motorcycle Company resumed operations after a period of inactivity dating from July 31 of last year. The company that purchased the plant is known as the Ives Motorcycle Corporation, and was organized during the first week of the present month, incorporation papers being filed at Albany, the capital stock is given at $60,000, and bonds to the amount of $15,000 are being issued, one-half of which will be placed in Owego, and the other half in Elmira. The directors are: W. H. Ives, Hon. Frank M. Baker, H. Taten Patten, of Waverly, N. Y., and Frank T. Carroll and Charles B. Smartwood, of Elmira.

Jackson Will Issue Bicycle Sundry Catalog.

W. E. Jackson, 628 Third street, San Francisco, is about to issue a bicycle sundry catalog and would be pleased to receive subject matter and electros for same from the different manufacturers. W. E. Jackson is the firm name established by W. E. Jackson, Sr., 20 odd years ago. About three years ago, W. H. and W. E. Jackson, Jr., took over the business and added the Dayton line of bicycles, being distributors for that wheel in northern California.

INTERIOR OF A HUSTLING TEXAS FIRM'S STORE

The Ben. L. Miller Company, 715 East Houston street, San Antonio, Texas, is the agent for Pierce motorcycles and Dayton bicycles.

During 1911 they added a line of bicycle sundries and the business grew to such an extent that they were forced to procure larger quarters at the above address. They enjoy spur track facilities into their warehouse and do a strictly jobbing business.

Indian Agents Inspect the Hendee Plant.

The recent New York show brought together a large number of Indian agents from all parts of the country, and at its close an adjournment was taken to the factory at Springfield, Mass., to witness the process of manufacture. On the arrival of the party at Springfield on Sunday evening they were met by F. J. Weschler, treasurer and sales manager of the Hendee Mfg. Co., and entertained at supper, and on the following day the big Indian plant was thoroughly inspected.

Monday evening the entire party was taken to the theater, after partaking of a dinner at the hotel. A meeting of the visitors was held and a vote of thanks tendered the Hendee Mfg. Co., for the pleasure and entertainment afforded.

Among those present were: H. B. Clark, Buffalo, N. Y.; George H. P. Stone, Ilion, N. Y.; Joseph Voll, William Rothmiller and H. R. Williams, Lancaster, Pa.; A E. Gettys and George F. Hewitt, Harrisburg, Pa.; A. G. Schmidt, Pittsburgh, Pa.; John Rawlings, Scranton, Pa.; S. F. Weary, Mt. Carmel, Pa.; John Sykes, Jr., Trenton, N. J.; Ed. Stauder, Rochester, N. Y.; and Charles Daycock, Rome, N. Y.

To Facilitate Matters Our Patrons Should Address us at P. O. Box 649.

NEW YORK, JANUARY 20, 1912.

Track Franchises Should Be Permanent.

In formulating a plan whereby the men who invest their capital in the construction of tracks for motorcycle racing will be protected by an exclusive franchise, the Federation of American Motorcyclists has a problem on its hands which, though not impossible of favorable solution, presents some difficulties.

As is proposed in the resolutions drafted by the F. A. M. board of directors, the franchise rights cover a stated period of one year only, which is too short a time for the investor to realize upon the original cost of outlay. It is true that under the proposed statute preference will be given the original investor for a renewal of his franchise, but no guarantee to that effect is forthcoming.

It would offer greater encouragement to capital if franchises were made permanent, subject, of course, to cancellation, if rules are not lived up to. People who invest their money in tracks do not do so for purely eleemosynary purposes—the primal reason for the investment is to make money.

In any sport in which professionalism enters, the situation must be considered from the practical business standpoint, else capital will be chary of the proposition. There is little danger of promoters obtaining absolute control of the sport simply because their rights as investors are guaranteed. Proper restrictions can be placed on all tracks that will make them models of decorum, and yet not interfere with their profit making proclivities. For the good of the sport and its future success the honest investor should be encouraged and not repelled.

Why the Sidecar Ought to Prove Popular.

If sentiments voiced at the New York show count for anything, and there is good reason for believing that they do, the sidecar will have not a little to do in increasing the popularity of the motorcycle as a pleasure vehicle for women this year. Many who heretofore have abstained from purchasing a motorcycle because they were unwilling to ride alone, and also did not care to ask their lady friends to occupy the rather undignified and somewhat precarious perch on a tandem seat, are highly enthusiastic over the motorcycle sidecar. Ladies who cuddled themselves in the sidecars at the show went into ecstacies over them, and because of the fact that they permit the enjoyment of motorcycling in a new and enjoyable form they will be no strange sights on the roads this season. With high-powered engines, clutches and change speed gears, the present day motorcycle is better equipped to handle a sidecar burden more easily than it ever before has been.

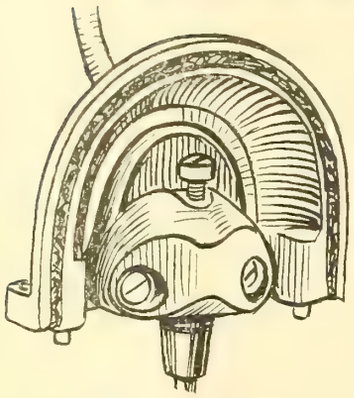
Secretary Bassett's Silver Anniversary.

Chosen as the secretary of the League of American Wheelmen, January 17, 1887, Abbot Bassett on Tuesday last completed his twenty-fifth year of faithful, conscientious service to the cause of cycling in that capacity.

The choice of Mr. Bassett to what was then denominated the office of secretary-editor, was the outcome of one of the hardest fought battles known to League history. Since that memorable occasion he has seen the League membership grow from 10,000 in 1887 to 103,000. He has seen the good roads movement started and grow to the magnificent proportions it now can boast. He has seen racing fostered and developed and the flag of amateurship never lowered. He has seen a fraternal spirit growing out of the association of splendid fellows interested in the cause. He has seen over and over again the love and confidence that the wheelmen have for and in the organization that has been so much to them and has done so much for them.

It is the earnest wish of his hosts of friends and the legions of followers of the sport of cycling, for which he has worked so long, that he be spared his health and strength for many years to continue in the office he had filled so efficiently and loyally.

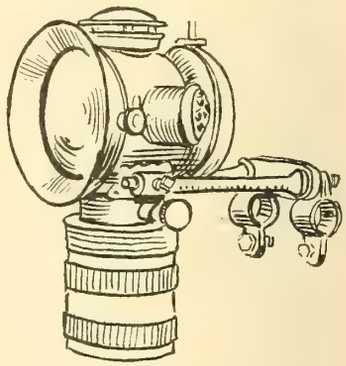
The Bicycle's Place in World's Work.



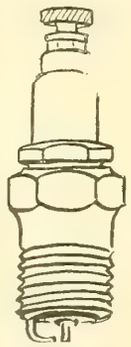
Because of the bicycle the world is bigger, better and brighter. By the demands created in its manufacture, advancement in methods of production of history making importance were absolutely necessary and in like degree were successfully consummated. Due to its use millions have been benefited. From its development and being have been made possible and have arisen industries previously undreamed of and which now are of utmost pre-eminence in the world's work.

That the manifold benefits from its use at the present and in the future are more than ever accessible to those most in need of such is a matter of figures and price that cannot be gainsaid. The conditions under which its pleasures may be enjoyed, brought about by the ever advancing improvement in construction together with superb highways extending into every corner of this broad land, are surpassingly propitious.

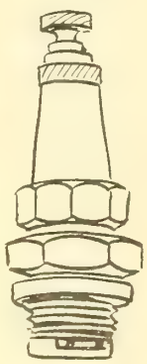
To further a purpose that will bring about such far-reaching results, should be the desire and aim of every loyal, red-blooded citizen of this great commonwealth. That purpose through which this aim can be most speedily and efficiently accomplished is the project of producing, developing, financing and sending a representative American bicycle team to the Fifth Olympiad. Your patriotism, love of sport, and fidelity to your business interests should demand your support. This campaign was undertaken in a broad spirit and is worthy unequivocally of your aid in the same spirit. It is a movement in which all can afford to join. If they cannot give much, they should give little. Will you, Mr. Manufacturer, Dealer, Jobber, Club, or Rider, meet the issue?



Fresh Features from the Factories



Bosch Secondary Terminal and Brush Holder



Imperial Ball-Bearing Separator

Solar Self-Contained Generator Lamp.

Me zger Soot-Proof Plug

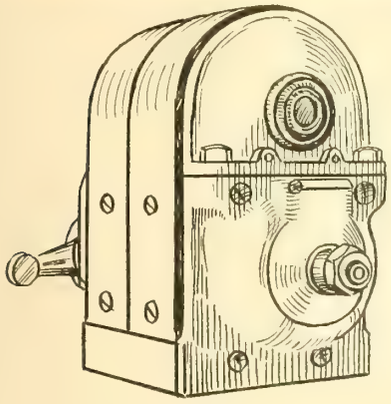
Mosler Spit-Fire Plug.

American Bronze Co., Berwyn, Pa.: Bearing Bronze—It is a well known fact that a considerable part of the wear which necessitates periodical overhauling of a motor is caused by the abrasive action of minute particles of metal which are freed from the bearings, and floating around in the oil, cause rapid wear of the cylinders and bushings. Metallization of oil is claimed to be eliminated by the use of Non-Gran bearing bronze, because of its ability to withstand high shaft speeds without disintegrating. It is being used in several well-known motorcycles, and also comes in convenient cored bars for repair work.

American Circular Loom Co., Aldene, N. J.: Magnetos—In the crop of really new things at the show, was numbered the No-Lag magneto, made for twin engines. It is of the low-tension type with transformer coil, and embraces several novel features. The high-tension current, instead of being distributed to each plug and returning through a ground, jumps simultaneously in both cylinders, one spark occurring at the top of the compression stroke, and the other at the top of the exhaust stroke. The spark in the "dead" cylinder is claimed to clean the plug points, and build up the spark in the firing cylinder. It also is claimed that there is "no lag" between the breaking of the contact, and the making of the spark at the plug. The condensers are placed directly over the circuit breakers, an arrangement claimed to reduce to a minimum, pitting and burning of the platinum points, and also wear on the breaker parts. The armature is carried on ball bearings of the annular type. Moisture is claimed to have no effect on the operation of the instrument, and that a spark is produced at the lowest motor speed.

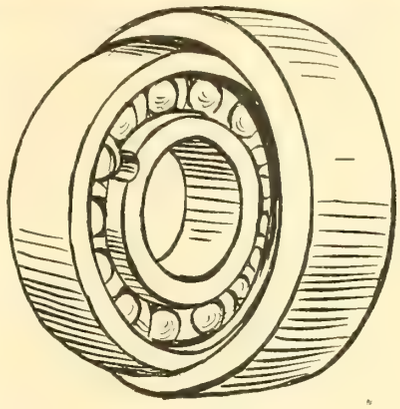
American Vanadium Co., Pittsburgh, Pa.: Steel Castings—Vanadium steel and iron castings, with samples of both bent cold and twisted to demonstrate their structural strength, were shown. Among the exhibits were motorcycle cylinders poured from vanadium iron and the flanges turned from the solid. The metal appeared of remarkably smooth grain.

F. A. Baker & Co., New York City: Accessories—No motorcycle show would be complete without Baker, who, although apart from the two-wheel colony this year, did the largest business since they have taken space at the shows.



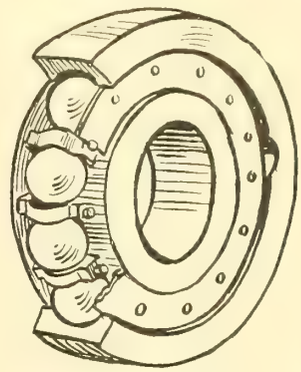
They had the largest and most complete line of motorcycle accessories in the Garden, including many imported and domestic devices, for which they have exclusive distribution. Among their 1912 leaders shown were unit generator gas lamps, tail lamps, tire chains, exhaust whistles, celluloid foot pumps, tire dressing, handlebar mirrors, clothing, saddle brackets, and self-healing inner tubes.

Bantam Anti-Friction Co., Bantam, Ct.: Ball Bearings—Two types were shown, the DKF, an imported bearing with two-piece separator, and the Bantam, domestic, with a unit separator. Both are of the radial ring silent pattern. The DKF bearing is loaded through symmetrically spaced slots in one face of the outer ball race. In the Bantam bearing, the separator is first fully loaded and inserted in the track rings by light pressure.



Barthel, Daly & Miller, New York City: Ball Bearings—This firm are American representatives of Schafer ball bearings, the makers of which claim to be the pioneers in employing 92 per cent. of balls in the raceway, or one less than a full type bearing. Schafer bearings are made both in ball and roller types, and are distinguished by the employment of dustproof plates on both sides, entirely housing the balls from all injurious foreign elements. The separator is of two-piece construction, the bearing being of the side loading type. Special attention is called to the use of the dust caps, which are snapped into grooves and bear on the outer edge, being spring retained. The dust plates do not bear on the separator or inner race, so that there is no cramping of the moving parts.

Benford Mfg. Co., Mount Vernon, N. Y.: Spark Plugs—Heavy mica insulating core and a four-point electrode housed in a recessed chamber, giving a pyramidal ignition of the mixture, are the features of

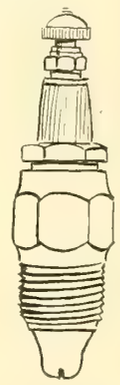


Shown at the Garden Mart

Bosch Enclosed Magneto and Cable Gate

Rhineland Self-Aligning Bearing

Schafer Separator and Bearing Assembly



the Monarch magneto plug. It also is made for battery ignition, with either mica or porcelain cores, and in metric or standard threads.

Bosch Magneto Co., New York City: Magnetos—Very naturally the products displayed at the Bosch encampment proved a magnetic attraction for visitors, especially the giant plug with its innards exposed, which threw a terrific spark, the crackle of which could be heard throughout the Garden, and was a healthy arc lamp for brilliancy. Models of the latest Bosch enclosed magnetos for motorcycles, ZEV and ZE1, were shown, and one of them connected to a plug rack, and fitted with hand wheel, demonstrated how easy, starting now is, with this instrument, because of the extremely low armature speed at which a spark is generated. By far the most interesting demonstration that Bosch offered, was that of a stock enclosed magneto, coupled to a set of plugs, and firing regularly with a stream of water steadily drenching the terminals and contact breaker, in fact saturating the exterior of the entire instrument. This novel test continued throughout the two weeks of the show, and convincingly demonstrated the accuracy of the ground joints of the housings of the vital parts.

Aluminum is used for the end plate housings. On the contact breaker side the plate is in one piece, while on the driving side it is in two parts. The brush holder and secondary cable terminal are located inside the end plate on the right side, where they are absolutely protected. A single screw serves to fasten the cable to the terminal, and these parts are accessible by the removal of two screws in the end plate. Felt packing inserted in grooves in the inner face of the housings, and between the magnets, insure absolute protection against the entrance of moisture, and covered oil wells complete the defense against water, mud, oil, dust and other trouble makers.

New and ingenious arrangement of the short circuiting switch in the contact breaker, renders impossible accidental interruption of the current by mud or water. The breaker box is fitted with a small steel spring, bearing upon the screw which carries the primary current to the circuit breaker. When the breaker is brought to full retard, this spring grounds the primary current automatically. The timing range remains between 20 and 25 degrees, and an additional retard of two or three degrees is required to bring the cut-out switch into play.

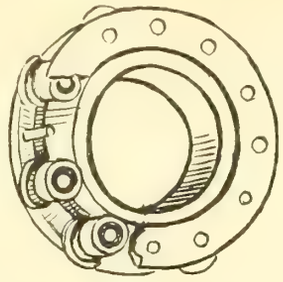
Although previously brought to a state bordering on perfection, the Bosch plug has been improved still further. The points of the electrodes now are crescent shaped, giving a lower electrical resistance, and consequent generation of a spark at lower motor speeds. The crescent electrode also discharges current in the form of a sheet of flame instead of a ball, making ignition more rapid and complete.

Sharp "Cross Roads" Plug

Black Eagle Double Service Plug

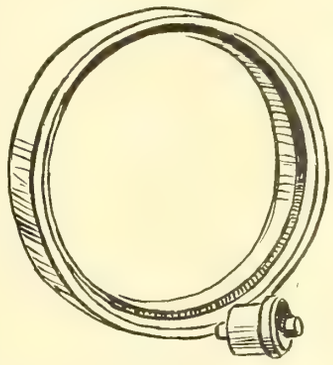
Bower Roller Bearing Co., Detroit, Mich.: Roller Bearings—For some motorcycle work, roller bearings are supplanting balls, having proven more satisfactory, especially in respect to load capacity and durability. Bower bearings are of a compound type, taking care of both radial and thrust loads. The body of the roll takes the load strain, while one end has a double bevel shoulder to meet thrust loads. Both the radial and thrust portions perform their functions independently, and the increase in the load on either, does not affect the other. The body of the roller is in contact throughout its entire length, on the inner and outer raceways, while the thrust shoulder rides in a grooved race of its own. Non-adjustability is advanced as a strong feature, in that it permits regulation of end play without interfering with radial alignment. Large diameter rollers are used, affording low roller speeds and higher shaft speeds, the while retaining long life in the bearing.

Columbia Lubricants Co., New York City: Oils—Motorcycle oils in light and medium grades were offered. These oils are not pitted against price competition and are marketed solely on their quality. The usual claims of high fire test, low cold test, freedom from carbon and density of body, are made. An interesting attraction at this stand was a set of vials, containing fres-



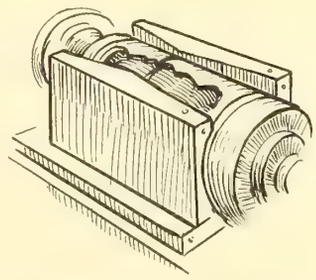
the raw product, crude petroleum, then the higher distillates in the order of their removal, viz.: gasoline, kerosene, parafine, engine oil, cylinder oil and finally, coal tar.

Christian Bros., Co., Brooklyn, N. Y.: Accessories—Hand soap, brass polish and solder that "takes" without heat, were the specialties offered by this house. The solder comes in a collapsible tube, and its "set" is claimed to be derived from atmospheric action when exposed to the air.



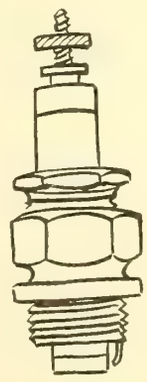
J. Eavenson & Sons, Inc., Camden, N. J.: Hand Soap and Polish—Jesco hand soap and metal polish are the products of this firm. It is claimed that the polish ingredients will not separate and that it will not scratch metal surfaces. Absence of grit or other substances injurious to the skin, without decreasing its cleansing efficiency, are the virtues claimed for the hand soap.

Eisemann Magneto Co., New York City: Magnetos—Like many other good things used in the motor world, Eisemann magnetos come from Germany, in models for single and twin cylinder motorcycle engines. Easily the most important advance which has been incorporated in the 1912 types are the wedge lipped pole pieces, the advantages of which are claimed to be many fold. The top edges of the pole pieces widen from each end toward the centers, concentrating the lines of electrical force at the point where the armature is most heavily loaded. The armature never is entirely out of electrical contact with the pole pieces, owing to the overlapping of the wedge shaped lips, a situation which prevents a broken magnetic field, and induces the retention of magnet strength. Another advantageous feature claimed for the overlapping pole pieces, is, that they permit a gradual electrical break of the armature from the poles, making the torque or pull, more constant. Easy starting, and a strong spark at low speeds, are said to be the leading results gained by the use of the overlapping pole pieces. A lesser refinement is the use of substantial parts with wide air gaps, in the contact breaker, rendering that department practically trouble proof, particularly in the matter of short circuiting by the jumping of the current across gaps.

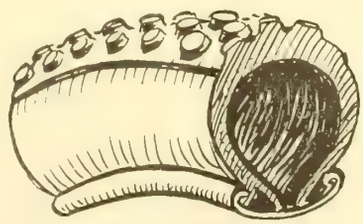


Federal Rubber Mfg. Co., Milwaukee, Wis.: Tires—Offered in two treads, corrugated and studded, Federal motorcycle tires, the products of veteran tire builders long familiar with motorcycle requirements, made their show debut. The casings are of the molded auto type, with inside flap to prevent pinching of the inner tube, and the treads are unusually heavy. Federals are made in both single and double clinch types, in all standard sizes, the double clinch, being applicable to single clinch rims. Inner tubes are made in endless and butt-end styles.

Bower Roller Bearing Separator



Bower Beveled Roller and Cup for Thrust Loads



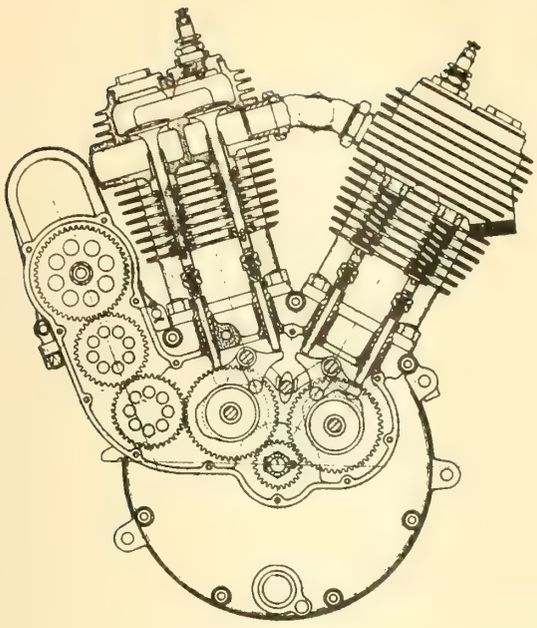
Eisemann Tapered Lip Pole Pieces

V-Ray Spark Plug

Monarch Plug

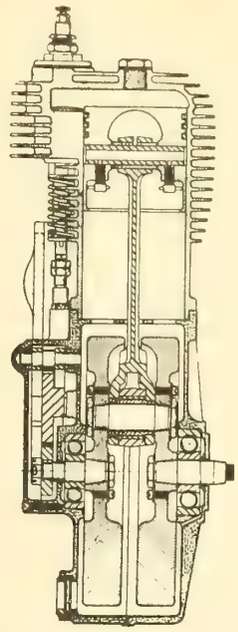
Federal Studded Tread Tire

Peter A. Frasse & Co., New York City: Chains and Tubing—Renold roller chains for motorcycles, and Shelby steel tubing, were shown. Silent chains for motorcycle magneto drive were on tap, and a new short drive silent chain for motorcycles, shortly will be offered. At this stand it was stated that the silent chain in enclosed form, would displace the roller type, eventually, and also considerably accelerate the departure of belt transmission for motorcycles.

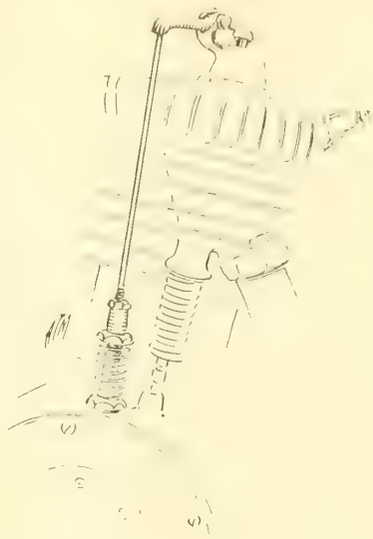


Havoline Oil Co., New York City: Oils—Enjoying an enviable trade in its motor car oils, this concern is offering a motorcycle grade, which is claimed to have given excellent satisfaction in the machines used by the New York and Brooklyn motorcycle police. Despite the fact that it lists at a figure considerably below that which the motorcyclist is accustomed to, the company claims that it is the most costly of its products. It is a highly filtered oil, showing very clear to the light, and is claimed to be as free from carbon as it is possible to reduce an oil, without injuring its lubricating properties.

S. Hoffnung & Co., Ltd., New York City: Chains—Coventry chains, both roller and silent types, were conspicuous at this stand. A new silent chain for motorcycles is about ready to be marketed.



Hartford Machine Screw Co., Hartford, Conn.: Spark Plugs—After several years' experience in the manufacture of spark plugs for others, this company now is offering one under its own name. Close approach to indestructibility, ability to withstand high heat and oil drenching, and quick demountability for cleaning are claimed. The porcelain and central electrode are assembled as a unit, and the latter is claimed to be so designed as to produce a spark of great intensity.



Imperial Bearing Co., Detroit, Mich.: Ball Bearings—Maximum ball insertion for the separator type of annular silent bearing is claimed for this make, on the strength of having but one less ball than a full bearing without separator. The separator is a two-piece steel stamping, comprising a cage and closing ring, permitting individual adjustment of each ball pocket for wear. No pins are used in assembling the separator, and the balls are entirely free in their pockets. Through the use of the maximum number of bearings, it is claimed that the load on each ball is lessened proportionately, as likewise is the breaking factor, and that a greater load capacity is obtained.

International Acheson Graphite Co., Niagara Falls, N. Y.: Lubricant—This exhibit, featuring a lubricant composed of deflocculated graphite, diffused in oil, held much of interest. Deflocculated graphite is the substance reduced to molecular

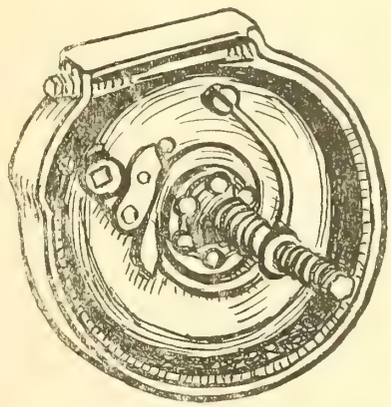
form, the finest atomization possible. Its particles are claimed to be so minute, that the molecules are invisible under an ordinary microscope, or when floating in a ray of sunlight in a room. Intended to be mixed with the cylinder oil in the tank, and fed in the regular manner, Oildag is claimed to increase the snap of a motor, decrease the gasoline and oil consumption, reduce carbonization, and increase the compression, and consequently the power. Its action is of a cumulative nature, and is said to be most effective after it has been used for several hundred miles. One of its chief properties, is that it always remains in suspension in any liquid, or at any rate such is the claim made, and to substantiate it, a bottle of water containing Oildag, and alleged to have been sealed for months, was exhibited, showing the compound thoroughly diffused in the liquid, and no sediment apparent at the bottom of the receptacle. It further is claimed that it never can be separated from a liquid after once being introduced in it, and that owing to its infinite fineness, that it will not clog the smallest oil duct in use.

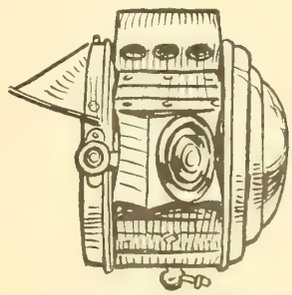
Isaac G. Johnson & Co., New York City: Hardening Pots—While steel castings are the leading product of this concern, it also is offering cast steel carbonizing pots, suitable for hardening or annealing. These are claimed to be well adapted for the treatment of motorcycle parts, such as shafts, gears and cams.



Keystone Lubricating Co., Philadelphia, Pa.: Oils—Unusual freedom from carbon is claimed for Keystone motorcycle oil. What little carbon is created, is said to be of a dry nature, which is carried off by the exhaust pressure, rendering the frequent dismantling of an engine for scavenging, unnecessary.

Link Belt Co., Indianapolis, Ind.: Silent Chains—This company is one of the leading exponents in the country of the silent chain for the transmission of large power units. While not regularly listing a motorcycle silent chain, it is investigating the requirements of this field, and states that in its experimental work with two well-known makes of chain driven machines, a silent chain on the short drive to the countershaft, outlasted three roller chains.

Mutual Auto Accessories Co., New York City: Accessories—Quite the most interesting article at this stand was a laminated shim for taking up play in split bearings. It is made up of thin layers of brass, firmly united by a metallic binder, the shims being removable by raising one corner with a knife, and peeling a layer from the pack, similar to skinning fruit. The device is claimed to eliminate the necessity of filing, or scraping bearings, and to give accurate adjustments as close as 1-1,000 of an inch. The removal of shims is claimed not to affect the rigidity of those remaining in the pack. Another interesting novelty was a quick hardening solder, applied from a collapsible tube like tire cement, and requiring no heat or tool assistance.



New Departure Double Ball Bearing

New Departure Internal Expansion Brake

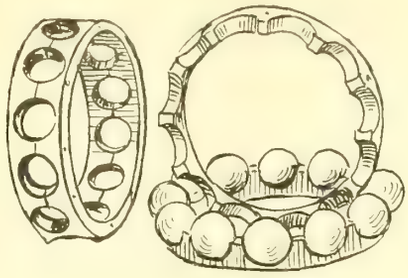
Nathan "Koveraul" Motorcycle Suit

Solar Headlight With Cowl

Nathan Novelty Mfg. Co., New York City: Clothing—Koveraul is the expansive title of the latest motorcycle garment which this house exhibited to show visitors. It is made of a dark, double-texture mackintosh material which does not show dust or grime. It comes in two-piece form, and while wholly protecting the clothing of the rider, is quickly removable, leaving his street apparel in neat order and presentable in a hotel or restaurant. The suit is loose fitting, and no extra leggings are necessary, these being incorporated in the garment.

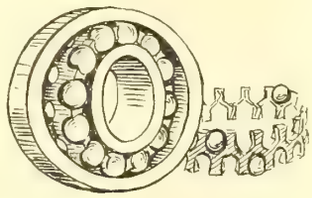
New Departure Mfg. Co., Bristol, Conn.: Ball Bearings and Brakes—Single and double row ball bearings, and coaster hub internal expanding brakes, were prominent in the New Departure array of products. Both types of bearings are of the annular silent pattern, the single row style being a radial bearing only, and the double row taking thrust loads also. The single bearing separator is a split manganese bronze cage, the halves being pinned after the balls are loaded in their pockets.

In the construction of the double bearing, considerable novelty is found. The inner race carries two tracks and two separators, the latter independent, and placed back to back with outward opening pockets. The pockets have a slightly greater radius than the balls, allowing a film of lubricant to be retained around the ball. Individual cones are slipped over the balls to provide an outer track for them to ride on, and the assembly is completed and made permanent, by spinning a shell over the cups, fixing the relationship of all component parts.



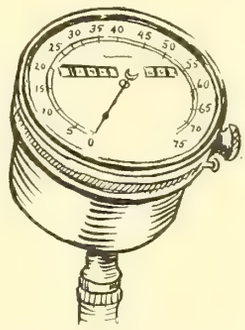
New Miller Mfg. Co., Los Angeles, Cal.: Spark Plugs—In the motorcycle accessory field, no greater variety of devices have been offered than in spark plugs, embodying ingenuity of many sorts. Hailing from Cleveland, the Sharp spark plug, contains features all its own, which are claimed to be the outgrowth of scientific experiment. The central electrode is housed in a shell, which is slotted at right angles, giving four entrances to the interior. When a charge is compressed, this shell, of course, becomes loaded too, and when the spark occurs, it is claimed that the mixture in the shell, being ignited first, because of its close proximity to the flame, rushes from the four slots in sheets of fire, to the combustion chamber, causing nearly instantaneous ignition, and higher engine efficiency. The rapid exit of the mixture from the shell, also is claimed to act as a scavenger on the plug points, reducing fouling to a minimum.

New York V-Ray Sales Co., Syracuse, N. Y.: Spark Plugs—One of the most interesting plugs shown was the V-Ray. It has five electrodes, the central one being caged between the outer four. The tip of each electrode, instead of being plain, is slotted in the form of a V, giving two sparking points. When in operation a sheet of flame, instead of a ball, shoots from the points, and this construction is claimed to increase the speed and flexibility of a motor materially. The spark does not jump to the same points from the central electrode all the time, but skips around among all the wires in the outer cage, sort of giving all points an occasional "rest," and it is claimed, helping to keep them cool and clean. Breakage of porcelains is claimed to have been eliminated by mounting the insulator in a steel shell, which is screwed into a brass sleeve, the latter in turn fitting into the cylinder shell of the plug. When the brass sleeve is screwed in the main shell, no pressure is put on the porcelain, the insulator locking shell being contained within the brass sleeve, and not disturbed. The terminal will, it is claimed, accept any standard form of cable clip, and has a detachable thumbscrew with a tapered milled edge, which is intended to be used as a cleaner on the V points.

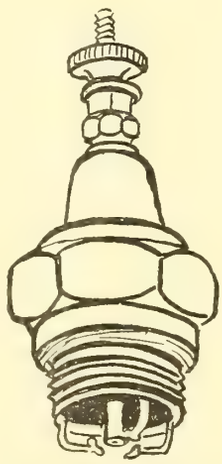


Persons Mfg. Co., Worcester, Mass.: Saddles—Something distinctly new in motorcycle saddles was sprung by this concern, who took considerable pride in being the first to offer a saddle minus the front spring, a type which is quite popular abroad, it is said. The latest addition to the Persons family, which is designated as Model "R," the trusses, instead of being terminated short, are extended at an angle to the pommel. Here connection with the leather is made through an ingenious two-plate combined tension device and truss rocker, which permits the top and tension spring to have a hinge action when absorbing vibration, removing all strain on the leather and metal parts in front.

Progressive Mfg. Co., Torrington, Conn.: Spark Plugs—"Selling for a song," so to speak, in comparison with ordinary plugs, the Black Eagle spark plug, bears down on motordom, with several unique features. It is offered as a spark plug without any apologies for its low price. A substantial spring terminal taking all standard cable clips makes quick attachment or removal of wires easy, while the double electrodes permit of separate adjustment, for either battery or magneto current. Porcelain insulation is used



Rhineland Machine Works Co., New York City: Ball Bearings—To what enormous proportions the ball bearing industry has grown, may be gleaned from the statement that Rhineland bearings come in over 6,800 sizes. They are a German product. Generally speaking, radial ball bearings are pretty much the same in respect to the raceways, the distinctive features being found in the type of separator used. In the Rhineland bearing, it is claimed that the separator, which is made of flexible steel, is so compact, as to accommodate but one ball less than a full type bearing, in which the balls are not separated. A separator is used to prevent the balls "kissing," reducing wear and noise. By the use of the maximum number of balls possible with a separator, it is claimed that the load is more widely distributed, rendering the breakage of balls less frequent. For the flexible style of separator, which is a single unit with no screws, pins or other component parts, it is claimed that it permits the balls to revolve freely and assume new contact points when "shooting" occurs under great pressures, thus preventing the wearing of grooves in the races.

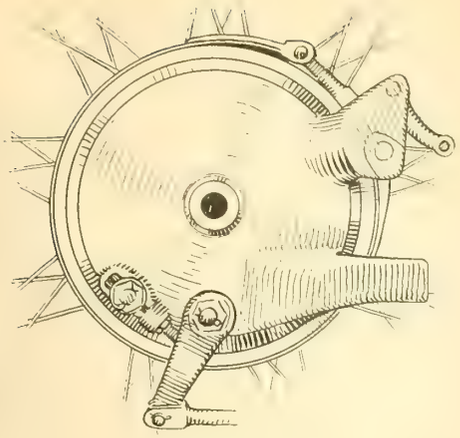


R. I. V. Bearing Separator

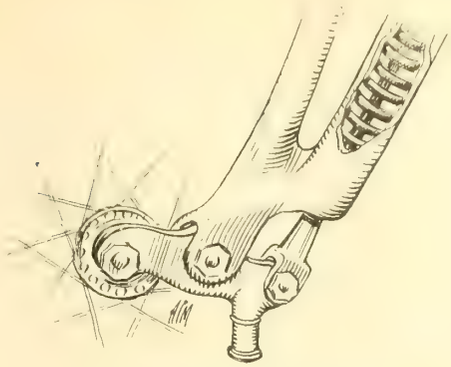
S K. F. Self-Aligning Bearing

Stewart 75 Mile Speedometer

Bosch Crescent Point Plug



Rhineland Bearing Separator



R. I. V. Co., New York City: Ball Bearings—Side slot loading, without the use of excessive pressure, a two-piece anti-friction separator, a reamer fit of each ball to its pocket, and a clever joining of the halves of the separator, are the features of R. I. V. ball bearings of the radial type. Much stress is laid on the gentle method used to charge the races, and the use of a bronze alloy separator to prevent the balls piling up, or jamming at the feeding slot, or developing a clicking noise by "dropping" contact, when in motion. After the separator is split, it is clamped together, and each pocket reamed to fit the ball which it is intended to carry, insuring a perfect seat. When assembled the balls ride on both races, and there is no load on the separator which drags very lightly on the balls. The separators are joined by male and female screws, with long shoulder, which are guaranteed to give positive retention. A one-piece hollow steel separator, with lubricant pockets between the balls also is offered.

Royal Equipment Co., Bridgeport, Conn.: Friction Lining—Raybestos for lining brake bands and facing clutch plates, is the leading product of this concern. Made of long fibre asbestos, with no filling, and claimed to be oil, water, gasoline and heat proof, and in fact indestructible, save only by constant friction, it is widely used for the purposes for which it is adapted. The processes through which it is put, together with its structure base, are claimed to be the secret of its durability, and that it will not rip, fray, tear or otherwise disintegrate, through brake action, if properly attached. For clutch plates it is specially treated to render it highly impervious to grease and oil, and give strong gripping qualities.

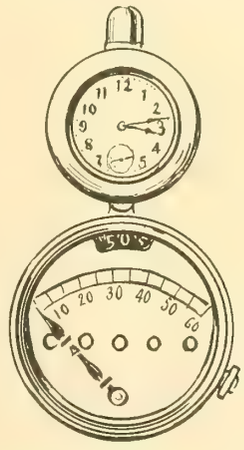
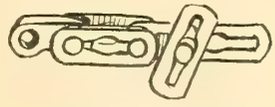
were shown. The twin instruments are built for 42 and 45 degree motors. Easy starting at slow armature speeds is claimed to be obtainable, and among the distinctive features incorporated in the construction of the magneto are a centrifugal circuit breaker, a contact roller with changeable working surface, a two-piece armature rendering replacement simple, large insulating area and variable brush sockets to accommodate different types of motors. Also was shown the standard Splitdorf plug, which is unchanged, the best evidence of the satisfaction it has given.

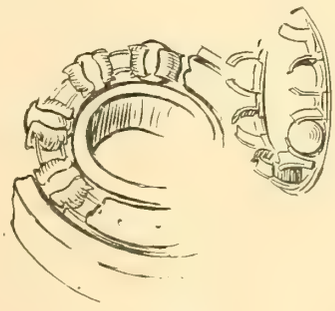
Stewart & Clark Mfg. Co., Chicago: Speedometers—Three models with 90, 75 and 60-mile dials, respectively, will constitute the Stewart motorcycle line for 1912. The 90-mile instrument is a new type, and will take care of the fastest speed that any stock machine can whittle off. Among the improved features of the instruments, are a newly designed flexible shaft, for which it is claimed that it can be tied in a knot without breaking. The driving chain is built of hardened steel links, hooked together, and is housed in a spring wire tube, with plain inner wall to provide a smooth bearing for the chain links. The outer sheathing is of triangular brass wire, forced into the chinks of the inner tube, to retain lubricant, and also strengthening the shaft housing. The exterior surface of the outer housing is smooth, taking a handsomer finish than formerly. Revision also has been made in the odometer mechanism, which now has a positive thumb screw reset, instead of a spring button return. The new arrangement permits the trip mileage to be reset to any figure, instead of to zero only, as with the old apparatus. Instruments are made with front and rear drive, a speedometer of the latter type being exhibited attached to a motorcycle. An illuminated board mounting the various models, in operation, and a display case of parts, proved efficient block signals for halting show visitors.



S K F Ball Bearing Co., New York City: Ball Bearings—Self alignment on cramped or sprung shafts through the seating of the balls in a spherical groove in the outer race, permitting a swivel action, is the most striking feature of these bearings, although they further incorporate other points that command notice. A double row of balls are used, and are carried in a one-piece separator. In loading the bearing, the balls first are sprung into the cage by hand, with the exception of four, two each at diametrically opposite points, and the partially loaded cage then is inserted in the outer race, revolved until the balls seat, and the remaining ones then inserted, the assembly being completed by the aligning of the two races. The disassembly is equally rapid. No rivets or pins are used in the separator, these being claimed to have an unbalancing effect on the separator at high speeds. It is claimed that no wear comes on the retaining points of the ball pockets in the separator, obviating the tendency of balls to become released. To demonstrate the self aligning feature a bent shaft mounted on sets of the bearings was shown revolving, and appeared to turn as freely as if it were perfectly true. Emphasis is laid on the silence of the bearing, and also on the fact that it is standardized to interchange with any similar size bearing of other make.



Wasson Concentric Piston Rings



Jones Speedometer With Watch Mounted

How Standard Speedometer Carries Watch

Baldwin Detachable Chain Link

Hess-Bright Ball Cage

Standard Thermometer Co., Boston, Mass.: Speedometers—Standard speedometers are of the centrifugal type, and for 1912 embody an important refinement in the form of a new driving shaft, which is carried in a rigid tube for half its length. At its lower end the shaft carries a ball-bearing bevel gear driving joint. The carrying tube has two point suspension, giving a rigid support, and the shaft length is gauged to eliminate the necessity of lashing it, to prevent slapping of the slack allowed to take care of the fork travel. Another innovation is the mounting of a watch-holder above the dial cup, making a speed-distance-time combination. The instruments are offered in four models, with 60 or 80-mile dials, and fittings for attachment to 30 makes of machines.

C. O. Tingley & Co., Rahway, N. J.: Tire Sundries—Under the clinging title of Tire Solder, this long established firm offered a rubber compound for sealing cuts, blisters and general laceration of casings, and the patching of inner tubes. The "solder" is self vulcanizing and when dried or cured becomes hard, but still retains its elasticity, approximately of a nature between the inner tube and casing, both of which it resembles in substance. It is applied with the hands by kneading into a rubber wound and allowed to harden, and is claimed not to flake or peel.

Treadwell Engineering Co., Easton, Pa.: Electric Steel Castings—Although more expensive than forgings, steel castings poured from the electric furnace are stated to be far superior in quality and strength. The company claims to have the only electric furnace in the country, devoted to producing steel castings, and its product now is being tried out by some motorcycle manufacturers. Samples of steel castings bent cold, to show their tensile strength, were exhibited.

The Texas Co., New York City: Oils—Texaco oils for motorcycles are claimed to be free burning, leaving no deposit of carbon, to contain no corrosive ingredients that will pit the valves or cylinders, and to be a thoroughly high-grade lubricant for all temperatures. It is offered to the rider on a quality basis, the manufacturers resting their case on the results obtained from a fair trial of their product.

F. A. M. ADOPTS FRANCHISE PLAN

Board of Directors Approves Resolutions Apportioning Racing Franchises on Population Basis—Year Term.

Resolutions governing the granting of track franchises to promoters on a pro rata population basis, were adopted by the board of directors, of the Federation of American Motorcyclists, at a regular meeting held in New York City Friday and Saturday, January 12-13, during the motorcycle and automobile show. Neither of the resolutions proposed by President Hamilton or Chairman Thornley, of the competition committee, were adopted as drafted, but sections of both were incorporated in the proposed statute as accepted by the board.

Directors present were: President G. H. Hamilton, ex-President F. I. Willis, Secretary-Treasurer G. B. Gibson, Chairman J. P Thornley of the Competition Committee, and Chairman J. Leo Sauer, of the Legal Action Committee. To become legal, the resolutions must be voted on favorably by an assembly of at least 20 members of the F. A. M. After much discussion it was decided to limit all contracts to one year, on the ground that the franchise matter was an experiemental one, and that after a year's experience, the directors would be able to make any necessary amendment in the new regulations which would not be possible in long term agreements. It is understood that some promoters are strenuously opposed to the short term provisions of the franchice. The full text of the resolutions follows:

Whereas, it has been found by actual experience that properly built and properly banked board tracks are the safest and most satisfactory tracks for motorcycle racing

Be it Resolved, That the Federation of American Motorcyclists is heartily in favor of the building of approved board tracks and that it will be our policy to protect, as far as reasonable, the builders and promoters who first put up board tracks in any community; and further be it

Resolved, That the charge for regular sanction for races and exhibitions on all board tracks, for each calendar day, shall be twenty-five ($25) dollars; and furthermore, be it

Resolved, That the chairman of the Competition Committee is hereby authorized after having in each case given thirty days notice to the president of the F. A. M., and having received no majority objection from the Board of Directors, to make agreements with board track promoters, owners or managers, upon certain conditions as hereinafter set forth:

Upon payment in advance of a certain sum, as hereinafter set forth, by a board track promoter, owner or manager, the chairman of the Competition Committee, after giving notice as above provided for, may enter into an agreement with one promoter, owner or manager in each city, not to grant sanctions for racing or any other board track within a distance of twenty-five miles, for a period of one year; provided, however, that such agreements may permit the operation of another track within the distance but in another State; or in another city of more than 200,000 population; and furthermore, be it

Resolved, That such agreement may at any time be voided by the chairman of the Competition Committee, with the approval of the F. A. M. Board of Directors, if the rules for competition of the F. A. M. are not properly observed; and further, be it

Resolved, That such agreement may be renewed from year to year, preference in each case being given to the owners, promoters and managers of existing tracks, provided they have conducted their meets during the previous year satisfactorily and in conformity with the rules; and furthermore, be it

Resolved, That the basis of such agreements shall be the payment, in advance, of the following fees per annum:

In cities of one million or more inhabitants, seven hundred fifty $(750) dollars a year; in cities of less than 1,000,000 and more than 500,000 inhabitants, five hundred ($500) dollars per year; in cities of less than 500,000 and more than 200,000 inhabitans, two hundred and fifty ($250) dollars a year; in cities of less than 200,000 inhabitants, one hundred and twenty-five ($125) dollars a year; and furthermore, be it

Resolved, That the making of such agreement by the F. A. M., does not insure the promoter that regular sanctions will be granted to him at any time; it simply insures that no sanction will be granted to any other track, within the distance agreed upon, for the period of the contract; and fruthermore, be it

Resolved, That promoters of board tracks, making agreements as above, shall be required to apply to the chairman of the Competition Committee for regular sanctions, and pay for them in each instance, just as though no agreement were in existence. The agreements shall provide that the promoters making them shall not hold outlaw meets on their tracks or permit others to hold such meets; and furthermore, be it

Resolved, That it shall be the duty of the chairman of the Competition Committee to withhold, suspend or cancel sanctions for violations of the rules, just as though no agreement as above referred to had been made; and furthermore, be it

Resolved, That any and all rulings of the chairman of the Competition Committee involving the suspension, cancelling or withholding of sanction shall be subject to appeal to the Board of Directors direct. That in the making or renewal of agreements, a promoter who has carried on motorcycle racing under F. A. M. sanction satisfactorily and fairly for the longest period shall be given the preference, and that no agreement will be made for a second board track within the distance above stated until the promoters of the first track have had ample opportunity to refuse a renewal of their agreement; provided always that the promoter of such a track has satisfactorily lived up to the rules and regulations of the F. A. M.; and furthermore, be it

Resolved, That the payment of fees for agreements as above mentioned, shall be made to the chairman of the Competition Comittee, when the agreement is executed. All agreements shall provide that the track shall be completed and in operation not more than 90 days from the date of the agreement, after which the chairman of the Competition Committee shall be at liberty to issue regular sanctions to another board track either in existence and proposed; and be it further

Resolved, That all fees collected for such agreements shall be turned over immediately to the National treasurer to be devoted primarily to the expenses of the Legal Committee up to one thousand ($1,000) dollars so collected shall go into the National treasury to be used at the direction of the Board of Directors; furthermore, be it

Resolved, That the chairman of the Competition Committee shall co-operate with the chairman of the Legal Committee in drawing up a proper contract embodying the above provisions, and the chairman of the Legal Committee is hereby authorized to employ efficient counsel in order that such agreements may be so drawn as to protect the interests of all concerned.

F. A. M. Rules Revision During Show.

Chairman Thornley, of the F. A. M. Competition Committee, states that the committee on racing rules revision will take action during the Chicago show. The subcommittee appointed to dratt a new set of rules will submit its report, and it is intended to try to put them through if they are in any acceptable form. Quibbling over language will be tabooed, if President Hamilton has his way, for he is anxious to see the new rules on the slate before the racing season opens.

A large attendance of F. A. M. officials is expected at the Chicago meeting.

MAKING MEMBERSHIP PLANS

Big Chief of the F. A. M. Membership Committee Looks For Early Spring Crop of New Clubs.

Chairman Estabrook, of the F. A. M. membership committee, keeps things stirring in his department, and has a lot of good prospects to report. He says in his weekly bulletin that President Edward Friedman of the Newark Motorcycle Club has assured him that that organization will soon become affiliated.

Pompton Plains, N. J., is also down on the list for early affiliation. D. W. Voorhis helped to organize the club last April, and then took a long vacation. He says that the club will be under F. A. M. colors by February.

Jack Horner, of Plainfield, N. J., is busy tooth and nail (not like little Jack of Christmas pie fame) in forming a 100 per cent. club in that enterprising burg, while his office force is taking turns with the pick and shovel, endeavoring to sink a hole below the frost line in which to place the new Horner registered repair shop sign. Horner is a hustler and will organize his club all right.

Attleboro, Mass., has about 50 motorcyclists, not including the spring crop which will add about 15 more when fully sprouted. Ernest Broadbent and George W. Stevens are canvassing present and prospective riders for the purpose of organizing a club.

H. H. Esbenshade, who conducts a registered repair shop at Waynesboro, Pa., has requested by-laws and club organization papers for the motorcyclists of his town, all of which looks good.

The F. A. M. has Dr. Cook beat "to a frazzle" on the farthest north proposition. F. M. Charlton, of St. Eleuthere, Province of Quebec. Canada, has just taken out membership card No. 12,205, and is the most northern F. A. M. member on the continent.

Registrations of repair shops have mounted to 475 in number. Latest additions to the list are as follows: Walter Goerke, 321 Washington street, Newark, N. J.; Fred Personett, 123 North Main street, Elkhart, Ind.; Billy Burman's Motorcycle Garage, 116 East Cortland street, Jackson, Mich.; The Motorcycle Inn, 112 Hill street, Marion, O.; Doc's Motorcycle Agency, 322 Broad street, Elyria, O ; Doc's Motorcycle Agency, 214 Fourth street, Lorain, O.; H. A. Dickason, 345 Broad street, Elyria, O.; Kittle Mfg. Co., 109 East Seventh street, Los Angeles, Cal.; John Rawlings, 120 Penn avenue, Scranton, Pa.; J. W. Sanders, 1704 Broadway, Lorain, O.; C. A. Fenn, 114 Front street, Bloomington, Ill.; Lon Claflin, 75 West Third street, South, Salt Lake City, Utah; Raymond E. Lee, New London, O.; Nuss Brothers, 1320 Louise street, Munhall, Pa.; J. C. Ellman & Son, 121 East First street, Rushville, Ind.; J. J. Metz, 898 Water street, Meadville, Pa.; E. E. Stillabower, 311 Fourth street, Columbus, Ind.; Mansfield Motorcycle Garage, 50 Park avenue, Mansfield, O.; E. H. Esbenshade, 131 Grant street, Waynesboro, Pa.; Ashtabula Motorcycle Company, 163 Center street, Ashtabula, O.; W. C. Hering, 37 West Fourth street, Mansfield, O.; E. J. Zeman Cycle Works, 1626 Twenty-second street, Two Rivers, Wis.; Gordon Bent Company, 111 Main street, Green Bay Wis.

Riders' Contracts With Promoters.

It having come to his ears that several riders who signed contracts with promoters last year, got the "short end" of the bargain, Chairman Thornley has issued the following statement:

"In view of the fact that a number of contracts were signed last year by riders who did not properly protect their interests, either personal, or as members of the F. A. M., it is earnestly requested by the chairman if the Competition Committee, that every rider who contemplates signing a contract to race for a promoter during the coming season, will, before putting his signature to such an instrument, submit it to the chairman for advice in the matter. Last year unscrupulous promoters endeavored to sign men on contracts which would have forced the latter to ride at outlaw meets, had the promoters seen fit to carry on such racing. Moreover, in some instances, the contracts were so drawn that the riders were very much at sea as to the exact amount of remuneration which they would recive. All of these difficulties can be prevented by submitting a contract to the chairman of the Competition Committee before a rider signs it."

F. A. M. Proposition to Canadian Clubs.

The following proposition to Canadian motorcycle clubs is made by the F. A. M. Board of Directors, at the suggestion of Secretary Thomas Anderson, of the Toronto Motorcycle Club, who was in New York at the time of the meeting:

That the F. A. M. will grant sanctions for race meets in Canada to affiliated clubs only, and will grant a general permission to American F. A. M. riders to compete at meets conducted by affiliated clubs in Canada, and by no other organization.

The Canadian riders who are not F. A. M. members shall not compete at F. A. M. meets in Canada, and that such Canadian F. A. M. members shall not compete, under penalty of suspension, at meets conducted by unaffiliated clubs. Board tracks may be excepted from these provisions.

The South Side Motorcycle Club, of St. Louis, held its annual banquet, January 11, at Van Horn's restaurant. Nineteen members were present.

NEW TRACK FOR INDIANAPOLIS

Plan to Reorganize Indiana Motorcycle Club and Build Fast Board Track in Hoosier State Capital.

Indianapolis, Jan. 15.—With the object of rehabilitating and reorganizing the Indianapolis Motorcycle Club, a meeting was held at the Dennison Hotel, yesterday. It was the first time in many moons, that many manufacturers, dealers and riders have assembled together, and despite the fact that there has been rumors of trade jealousies in this city, those present exhibited the finest kind of a spirit of harmony. Some years ago, when the club was first organized it had the enthusiastic support of the trade, but discord arose and most of the dealers withdrew, especially after the club decided to establish a bar with liquors on tap. In reorganizing the club, this feture is to be eliminated, and the dues are to be reduced from the present sum of $12 per year, to less than half that sum. According to license records there are 750 motorcyclists in Indianapolis, and it is figured that with proper management the club membership can be raised to the 200 mark by next summer.

The father of the progressive movement is W. A. Gibson, of the Empire Tire Company, and it was he who arranged for the meeting at the Dennison, that brought all the dealers together. G. H. Westing, the Indian agent here, was one of the "old guard" to return, and he was elected temporary chairman. Harry Graff, president of the club, was chosen secretary. It was decided at the meeting to inaugurate a movement for a board track, and a committee was appointed consisting of Erwin G. Baker, H. Kinney, J. Merz and Harry Graff, to take the matter in charge. This committee will investigate the matter of sites, and will go to Chicago during the week of the motorcycle show in February and consult with the F. A. M. officials present in regard to the matter of franchise and construction.

The next meeting of the club will be held in February, at which time a banquet will be served at the conclusion of the meeting. At that time the track committee will report, and the matter of the 200-mile race question will be settled definitely.

Celebrate With Annual Banquet at LaPorte

LaPorte, Ind., Jan. 15.—Last Thursday the LaPorte Motorcycle Club held its first annual banquet, 26 covers being laid. At the close of the menu, a series of experience talks was indulged in and the occasion was a most enjoyable one. The coming season promises to be a prosperous one, according to Secretary Carpenter, who predicts that 40 new members will be added to the list.

LOS ANGELES NEW RACE TRACK

Will be Managed by Paul Derkum—Plans to Exhibit Races by Classes—Experienced Officials to be in Charge.

Los Angeles, Cal., Jan. 13.—Good work is being done on the Stadium three lap now being built here. John S. Prince is the designer and constructor, assisted by Paul Derkum, who is to be the manager. It is located about three miles to the southeast of the City Hall and within two blocks of Central avenue, one of the great arteries of the city. Three car lines pass close to the track, while asphalt paved streets lead right up to it from all parts of the city. It is planned to open the track not later than February 4.

The old Coliseum was at least three miles farther out, and with only one car line passing near it, yet it opened with 7,000 spectators. That old track, the first exclusive motorcycle track ever built, was of odd size, three and a half laps, on account of the site.

The new track will differ from the old one in being perfectly circular instead of the old form of two curves and two stretches and will be exactly three laps to the mile and banked all the way around to hold a speed of 100 miles an hour.

Last fall when Jack Prince left Chicago, with the close of the races at the popular Riverview track, it was his intention to at once start work on a new track in Los Angeles. He was delayed several weeks in opening the races at Oakland motordrome, which is near the city of Oakland, a suburb of San Francisco, and 500 miles to the north of Los Angeles, for the great State of California is over 700 miles long, and on the east coast would reach from Boston to Savannah, or the length of eight Atlantic Coast States. Then Prince lost several more weeks in finding a satisfactory location, for land in Southern Carifornia is almost too valuable to build upon.

When the man who has built most of the cycle and motorcycle tracks in this country, finally secured a Chinese vegetable garden, which could not be sold for a number of years, because it belonged to an unsettled estate, his Chicago backers in the Riverview, who had agreed to put up the money for a track in Los Angeles, withdrew their support. Jack said he "would build the track anyway if he had to sell the shirt off his back." Then he interested Paul Derkum, the Los Angeles pioneer motorcycle racer, and together they are building the new track, using the best of material and construction.

Both Prince and Derkum have consulted with Charles Fuller Gates who is in charge of F. A. M. racing affairs in California, and who has seen thirty years of bicycle racing and been mixed up with it much of the time, and every improvement that these three men can think up will be embodied in the new track, which is to be a model in every way.

At the Los Angeles Stadium Class B professional races will be substituted for the former "trade rider" races, and already F. A. M. Representative Gates has persuaded the trade riders to come out as professionals, and without much urging, as good cash prizes will be put up for them by Manager Derkum, who knows both the sorrows of the promoter and the racing man from his own experience, and does not intend to have any high priced "prima donnas" dictating to him and getting all the racing machines in a pool. He has made racing men a plenty out here by his coaching and promoting, like Seymour, Graves, Balke, and others, who owe much of their present success to his help.

In a Los Angeles motorcycle shop some fast racing machines are being made for any emergency that may arise at the new track, and stock machines are being made into racing machines which will do the mile in 42 seconds by actual test. These machines will be given to the Class B men, and when the factories rush out the latest racing creations they will find a lit of Derkum's promising colts already broke to the saddle, doing good work in the Class B races.

The slow fellows will have to go into Class B until they have machines or show form that will entitle them to ride as Class A, and if they do not ride fast enough to win from the other Class B riders, they will go into Class C, which means "cut it out and go to work."

For some time at the new track the Class B boys will have an open race to be run in trial heats, winners taking part in the final, a chance in the free-for-all handicap with the Class A men and a consolation race for the Class B riders, who have not won a prize that day.

A single amateur race for the simon pures will go onto the program as a sort of curtain raiser, in which genuine all-wool stock machines, unstripped, will appear.

Manager Derkum, who says he had to ride for all he ever won and never could count on appearance money, does not believe in giving men a guarantee. Instead he prefers to give big prizes and run point races for the star performers with a peneral handicap and plenty of races for the Class B boys, who are working hard to get into the game.

The point race for Class A means a number of heats in which all the Class A riders must ride and all be scored points according to the way they finish, giving at least three good races between the stars in which every one has a chance to get the big first prize, for, in one heat Walters may have trouble with his machine and score bad, as was cometimes the case at Oakland, and in another heat Balke or Graves may fall down, but in the final balance the one with the best showing of the three races will have won and the others in order of showing by points.

This program will show three kinds of racing each meet, besides the curtain raiser of pure amateurism. The free-for-all handicap will show the difference in the form of the two classes of professionals.

One big change for Los Angeles will be in the starting of the races at the new track. Spectators here are used to seeing a bunch of mechanics and racing men in greasy clothes congregated under the crowded press and official stand, right at the tape, with rubber necks mixed in generously, and everybody getting in each other's way. At the new track this condition will not obtain, for the pits, where the racing men and mechanics will stay, will be quite a ways from the starting point, and the track will have a five foot high strong wire fence, which will be 50 feet away from the track, and with a burly officer at the one gate in that fence, where only contestants, mechanics and officials can pass. All officials will have to remain in the high stand built for them, with the exception of the starter and referee, who will be at the tape. The band stand will be low and in the center field, and connected by wire with the track side, as will be the pits.

A bugle will call out the riders for each race and they will have distance enough between pits and tape to get under way for the rolling start, so that the starter can send them off with a flag and do away with the gun, extra laps, and similar delays. Riders who do not get out promptly on the order of the clerk of the course and his assistant, will be barred from the race, as in old times of bicycle racing, and when a contestant gets the red flag for careless riding or fouls, he will come off the track for the rest of the meet and have to also leave the machine quarters;

Jack Prince has already partly arranged for a saucer track at San Diego, which is a city of 50,000, laying 150 miles to the south of Los Angeles, where there is to be an exposition in honor of the Panama Canal, as it is the first port of entry on the west coast.

There is also talk of another track at San Bernardino, which is about 65 miles east of Los Angeles and surrounded by the thriving cities of Redlands, Riverside and Colton and many prosperous villages.

Indiana Motorcyclists Taboo Open Mufflers

South Bend, Ind., Jan. 15.—At a recent meeting of the South Bend Motorcycle Club resolutions condemning the use of cut-outs in city streets were adopted. The club membership is about 40, and consists of live dealers and enthusiastic riders. Weekly meetings are held during the winter months on Mondays at the various dealers' stores, and the place of meeting is changed every month. A schedule of runs is in active preparation for next season.

Angel City Motorcyclists Form New Club.

Los Angeles, Cal., Jan. 15.—To promote the motorcycle by enlisting and maintaining a favorable popular sentiment toward that form of motor vehicle, and to save motorcyclists the possibility of embarrassment by depositing in each important city and town of Southern California an indemnifying bond, against which a member can make requisition if arrested for indiscretion and unable to produce the cash bail usually required, the Angel City Motors Club of Los Angeles has just been organized, with 30 names on the charter membership list. Philip Younger, contractor, has been elected president, and A. H. McCullough, architect, is secretary. A treasurer and various committees are to be designated at a future meeting.

Arrangements are being made with the various justices of the peace whereby a member of the new club, if arrested for violating speed or other regulations, may, in lieu of putting up a cash deposit, leave his membership card in the Angel City Motors Club, whereby the club becomes surety for his appearance. The club's by-laws declare that a member who has been three times convicted for violations of municipal and other regulations shall be liable to expulsion from the club.

Automobile owners and drivers are eligible to membership in the new club, under the same conditions that govern in the cases of motorcyclists. A clubhouse is to be opened in the heart of the city.

A motorcycle show under the direction of the Angel City Motors Club will be held some time during February, at a date that will enable motorcycle agents to exhibit their 1912 models, many of which have not yet arrived. Options have been taken by the club on three different buildings, from which a selection will be made at an early date, so that space can be apportioned to exhibitors, who will include not only the people who are handling motorcycles, but dealers in accessories. The show will run for at least a week, and it may be decided to continue throughout the second week.

Utica Motorcyclists Elect Officers.

Utica, N. Y., Jan. 15.—There was a large gathering at the annual meeting and banquet of the Utica Motorcycle Club, January 14, and at this meeting these officers were elected for the ensuing year: President, Homer G. Buckley; vice-president, Charles Alt; secretary-treasurer, John J. Weiler. It was voted to postpone the election of road officers until the first meeting in April, so as to secure the most active riders for those positions.

The club is starting off the year in its new home in the National Bowling Alley buildling, at 120 Lafayette street. The rooms are conveniently situated in the central portion of the city and well adapted to the needs of an organization of this character. In the rear of the building is a large covered court where the machines can be stored, and the bowling alleys are on the lower floor.

Located in the same building is the Utica Motor Boat Club and the Aviators' Club. It is a rather happy coincidence that these clubs should have adjoining rooms, and a feeling of good fellowship has already sprung up. The house committee is busy re-decorating and furnishing the club rooms and it is expected that within a very short time that the rooms will present a very attractive appearance.

Enthusiasm in the club is at a high pitch at present and the membership committee is starting in on a campaign for new recruits. With the inducements which they now have to offer, and the large number of local riders which they have to draw upon, they are confident of largely increasing the present membership of 60.

California Motorcyclists Plan Extensively.

Bakersfield, Jan. 15.—In addition to electing officers for the ensuing year, the Bakersfield Motorcycle Club at a recent meeting inaugurated a plan of holding in this city in the near future, under the auspices of the Federation of American Motorcyclists, a convention of all the clubs in the southern portion of the San Joaquin valley, including those of the West Side oil fields, Bakersfield, Ducor, Porterville, Lindsay, Exeter, Visalia, Fresno, Hanford and Tulare. Three hundred and fifty motorcyclists have been invited to attend the convention, the date of which will be definitely determined shortly.

The newly elected officers of the club are: President, Charles P. Clark; vice-president, J. F. Dunlap; recording secretary, P. C. Taylor; secretary-treasurer, Frank Lightner; road captain, L. C. Dunn.

The club has rented a five-room house which will be immediately fitted up as a clubhouse. A garage and emergency repair shop, fully equipped will be erected on the premises. The club also plans the establishment of a race course near the city.

The motorcyclists are evincing great interest in the approaching automobile road race through the West Side oil fields, Washington's birthday, and have consented to assist the Automobile Association of America in patroling the course during the event, in order that accident resulting from fast driving may be averted. In the future the motorcyclists will meet weekly on Thursday night, instead of semi-monthly, as in the past.

Jerseymen Plan 250-Mile Endurance Run.

Newark, N. J., Jan. 15.—It was decided by the New Jersey Motorcycle Club at its last meeting to run another endurance test next Decoration Day, the distance to be 250 miles. Secretary Davis was authorized to apply for F. A. M. sanction.

The track scheme received considerable attention at the meeting. George Kreamer and George Hamilton, the promoters who want to erect the oval, were present to talk the matter over, and so was A. C. Dunlap, manager of Electric Park, where the track is to be located. The idea in a general way is to form a corporation and issue stock, with the club taking a controlling interest. Kreamer wants one-half interest for his work while Hamilton will do the work according to his plans for one-fifth interest. Dunlap is to receive 10 per cent. of the gross receipts, and the only interest is to be through Electric Park.

Californians Elect Officers in Capital City.

Sacramento, Ca., Jan. 13.—With a membership over 150, the Sacramento Motorcycle Club elected at its annual business meeting the following officers: President, E. S. Emery; vice-president, H. A. Ten Bosh; secretary, Roy Emery; treasurer, N. F. Barber; road captain, D. Galloway.

The president appointed the following committees: Competition, W. A. Langley, chairman; H. A. Ten Bosh and F. Murray; publicity, E. Shoemaker, chairman; L. Abraham and H. Cameron. H. A. Ten Bosh, C. C. White and Geo. McCormick were appointed on the board of trustees.

The election was followed by a banquet. Plans were discussed for a number of runs to be held on bright Sundays during the winter, those of the past summer having been highly successful and encouraging.

Recent Motorcycle Club Elections.

Cortland, N. Y., Jan. 15.—At the annual meeting of the Cortland Motorcycle Club, held at the Messenger House, December 18, the following officers were chosen for the coming year: President, H. J. Brownhill; first vice-president, Jesse Phelps; second vice-president, Milton Tucker; secretary-treasurer, R. H. Ames; captain, A. C. Moore; first lieutenant, Robert Clements; second lieutenant, William Hyder.

Baltimore, Jan. 15.—The Chesapeake Motorcycle Club, which was founded last fall has elected the following officers for the ensuing year: President, William L. Allers; vice-president, John H. Lupton; secretary-treasurer, George W. Coggins; assistant secretary-treasurer, Ed. T. McNaney; captain, A. F. Fisher; first lieutenant, Ferd Plitt; second lieutenant, Elmer C. Roof; third lieutenant, John L. Strube; directors, the above named officers and Frederick Kuhl and W. K. Gaither.

Piqua, O., Jan. 15.—Results of the annual election of the Piqua Motorcycle Club are officially announced as follows: President, E. E. Huntzinger; vice-president, I. S. Boyer; recording secretary, Samuel Cain, treasurer, Frank Henn; captain, E. L. Moore.

Mansfield, O., Jan. 15.—The annual election of the Mansfield Motorcycle Club held last week resulted as follows: President, F. R. Dippman; vice-president, C. F. Williams; secretary-treasurer, C. O. Sistor; captain, John Meyers.

A. L. Jordan, San Francisco	1.00

That widespread interest, exceeding that of any other event in American cycling history, has been aroused by the movement to provide a bicycle team to represent this country in the Fifth Olympiad, is now a fact beyond all doubt. From every section of the country come requests for information regarding the holding of the elimination trials; there is also a flood of requests for voting blanks for the riders' popularity contest which only recently was started and is running now in the columns of this journal.

San Francisco, California, not to be outdone by the little town of Reedley in that State, the result of whose valiant efforts for the cause were given to our readers two weeks ago, at last has been heard from the to effect that there will be eleven riders to enter the elimination try-outs; all of whom, according to the form shown by them in the many relay races so popular in the Golden Gate, should make first-class material with more than an equal chance in unpaced events as compared with the less experienced riders of the East at that game. San Francisco riders also are promoting roller races as a publicity stunt for the Olympic Team project and have met with marked success.

Chicago, Grand Rapids, Mich., and Kansas City, Mo., riders also have recently taken up the campaign. Kockler, Nordmark and "Farmer" Bill Blum, of the former city, have received ballots in the popularity contest.

Clubs, Old and New, Working Diligently.

Efforts on behalf of the project in Buffalo, N. Y., the activities of Louis Debo, the N. C. A. representative there, are bearing fruit. Two bicycle clubs have been formed; one has well under way the plans for a six-hour team race to be held over a stretch of city street, having for its object the publicity that will accrue to the Olympic campaign. Another just formed, The Royal Flyers, reports that squads of embryo "flyers" are joining weekly, and that it is the express object of the club to develop a "flyer" capable of surviving the elimination trials next spring, and having the honor of making the team.

Oskaloosa, Iowa, not far from the home of Worth L. Mitten, the popular, classy professional rider, has been heard from as follows:

Secretary, The United Cyclists:

"Will you send to me information how to start a bicycle club? There used to be a club here about six years ago, and they pulled off some big races. This is a place of about 12,000 population, and there are no fairs here. The motorcycle men are going to form a club, and if we can form a bicycle club we will work together and hire the old track and hold races. Any information will be thankfully received.

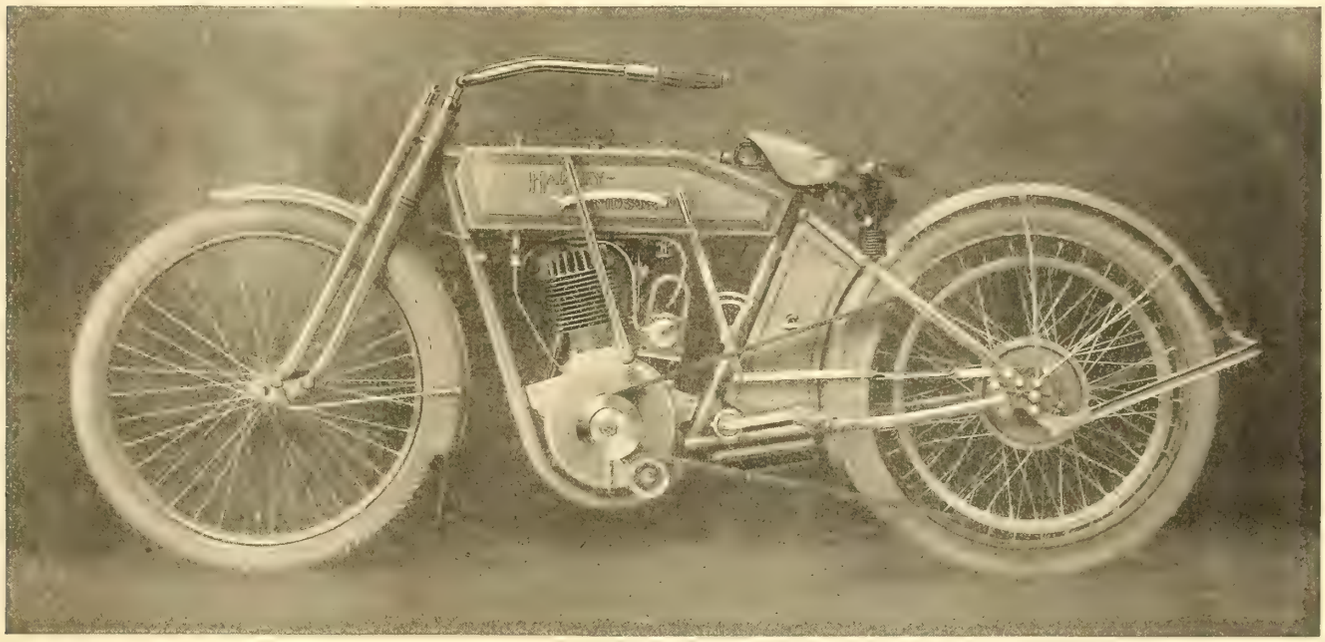
(Signed) C. C."

The St. Louis Cycling Club as yet retains a handsome lead on all clubs in the campaign for funds. This week it has submitted to R. F. Kelsey, treasurer of the fund, $9.00 in addition to the $54.00 with which it already it credited. The amount of the latest contribution of the St. Louisans was made up as follows: Club raffle, $6; Fisk Rubber Co., St. Louis branch, $2; A. C. Clayton & Son Printing Co., $1.

Traveling Salesmen Get Into Line.

None are keener sportsmen or are quicker to recognize the business getting value of any proposition than traveling salesmen. The first crew of these alert, hustling, and ever-optimistic "ambassadors of prosperity" to show their appreciation of the benefits to be derived by the sport and trade through the sending of an Olympic Bicycle Team are those on the staff of the Pope Mfg. Co., when they sent to the treasurer of the fund this week a donation of $25.

Voting Develops New Publicity Feature.



The riders' popularity contest now is most auspiciously launched, in fact is gaining strength daily by leaps and bounds. The rush for voting blanks has been met and ample provision made for future demands, so that all will be supplied immediately on demand. The erroneous impression that this contest would have some effect on the choice of the representing team is fully corrected on the voting blanks. In this respect, it may be well to call the attention of all to the fact that the choice of the Olympic Team is absolutely dependent upon the individual showing made by the various candidates throughout the country, all of whom will have opportunity to compete in the try-outs and elimination races now in progress of planning; the location and schedule for which will be announced immediately sufficient information is obtained from the voting contest as to the most feasible locations.

It should be borne in mind that the winner of this voting contest is the person who First votes for the Complete team receiving the Highest Number of votes, the contest, nor the finally selected representing team having no effect whatever on either result.

Your attention is particularly requested to be given to the voting contest this week, as in response to the demand for information regarding riders' history, from not only prospective voters in all sections of ther country but the daily papers as well in many of the large cities, the bicycle editor is compiling, for publication, a short sketch of the leading nominees on the ballots. Accordingly, help the work along by submitting, wherever possible, photographs and best previous performances of your favorites.

First prize, $10—To the person first voting the complete team of twelve amateur riders in the United States which receives the highest number of votes.

The HARLEY-DAVIDSON
Wins the Big Phoenix Road Race

Here's the Order of Finish

1st.	Dorris	Harley-Davidson	6th.	Valentine	
2nd.	O'Connel		7th.	Steele	
3rd.	Davis	Harley-Davidson	8th.	Brunner	Out
4th.	George	Harley-Davidson	9th.	Hubley	Out
5th.	Barber	Harley-Davidson	10th.	Anderson	Out

THE Harley-Davidson Motorcycle is built for hard, continuous service under the most strenuous conditions—it is not a racing machine, nevertheless it has a persistent habit of "showing the others up," and generally in a most thorough manner.

Harley-Davidson Motor Co., Milwaukee

Second prize, $5—To the next complete vote received. Two years' subscription each to the next five. One year's subscription each to the next ten. All votes as received will be stamped with time and date.

The reader of this paper may send in his vote on the following coupon.

Use this blank for sending in your vote.

My choice for twelve amateur bicycle riders for the American Olympic Bicycle Team is as follows:

. . . . . .

You, and all who are interested in the sport are invited to submit the names and addresses of those to whom it is desired to have voting blanks sent—make your list as large as you like—self-explanatory blanks will be sent promptly and with absolutely no obligation incurred by the recipients. Send your list at once to the bicycle editor, The Bicycling World Co., Box 649, New York City.

Important Meeting of United Cyclists.

On the call of President J. A. Hall, there will be a meeting of the United Cyclists, Tuesday evening, 9:30 P. M., at Brooklyn Turn Hall, Atlantic avenue and Hoyt street. All members are urgently requested to be present.

Old Time Pacemaker Goes Insane.

Having sustained a severe electric shock a few years ago which left him in a highly nervous condition, Daniel J. McCann, residing at 111 Central avenue, Chelsea, Mass., well known as a motorcycle pacer, was sent to the Westboro Insane Hospital, January 16, by order of Judge Albert D. Bossom.

CHAPMAN AFTER EUROPEAN MEN

Sails For Paris to Arrange the Details of the World's Bicycle Championships—U. C. I. Will Approve Program.

Manager John M. Chapman, of the Newark, (N. J.) Velodrome, sailed for Europe on Thursday of this week on the steamship "Baltic," of the White Star line for the purpose of completing arrangements with the Union Cycliste Internationale for the World's Championships, which will be held on the Newark track, August 25, 28 and September 1. It was originally intended to hold the concluding day's racing September 2 (Labor Day), but the change was made to allow the use of Labor Day for a rain date.

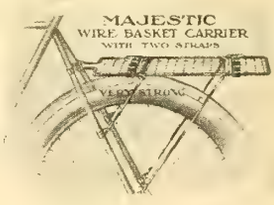
While abroad Mr. Chapman will attend the annual congress of the Union Cycliste Internationale, which convenes at Paris, February 10. He will present his program for the meet to that body through Victor Breyer, the European representative of the National Cycling Association, and action will be taken at the meeting on the support that the component sport-governing bodies will extend.

A strong effort will be made to secure racing men from every European country and it is likely that France will contribute the greatest number of entrants. England will undoubtedly send her best amateurs and that country will wish to retain the championship honors won in the amateur class at Rome last July. France scored the highest number of points in the professional championships at that time and will also make an earnest effort to retain them.

It is also the intent of Mr. Chapman to look over the field of foreign riders while circulating about Europe with the view of engaging some good men to participate in the races at the Velodrome during the coming season. In speaking of his plans in regard to this particular feature of his trip, he said:

"My intention is to sign up the very best men I can secure to ride at the Velodrome next season. My aim is to bring Ellegaard, Friol, Dupre, Pouchois or Rutt over here. I may be able to get only one of these stars, and I may be able to get two of them. Besides, I will sign up several good handicap riders. One man I am after is Moretti. He is an Italian and a great rider, they tell me. Jimmy Moran recommended Moretti to me last year, but it was too late to bring him over here then. I also intend to negotiate with several pace followers. Some of the riders whom I will sign will race here all next season. Others will come over for the world's championships, which will be held at the Velodrome the latter part of August and the first part of September."

Majesticalities



AN EVERLASTING STAND for Bicycles has long been needed. We have produced it. Note the cut. Steel collars **entirely encircle the axle nuts**; no flimsy iron jaws to bend or break. When the stand is spread at the bottom the collars **automatically lock the nuts** and prevent the stand's further spread. Is listed at **$1.00 and guaranteed forever.** Live dealers know the jobbers' discounts.

List price ..... **...$3.00**

Every enterprising jobber in America carries the double ball bearing spring fork in stock. These forks weigh but 16 oz. per pair. Thirty-six 3/16 balls in each pair. Improved 1912 Fork Clips. Thousands of these forks are sold every year.

Retail list **$1.00**

Special Jobbers' Discounts to Dealers.

This strong, light carrier attaches to the frame at **six points!** Is fitted with unbreakable clamps and straps and is a steady seller wherever introduced. Start and push this in your trade.

Send for Catalog.

WORCESTER, MASS.

Strongly Guaranteed

Practically Perfect

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

THE NEW DEPARTURE MANUFACTURING CO., Bristol, Conn.

Coaster Brake Licensors

"America's" Annual Dance, Huge Success.

Resplendent in decorations in the National colors intermingled with those of various cycling organizations of the Metropolitan district, Lyric Hall, Sixth avenue and Forty-second street, New York City, was the scene on Saturday, January 13, of the annual ball of the Century Road Club of America. The ball was one of the most successful, socially and financially, ever held by the club, there being present an ample and enthusiastic representation from practically every cycling club in the city. A handsome silver loving cup offered to the club having the largest representation was won by the Manhattan Wheelmen, to which it was presented by the master of ceremonies, Emile E. Fraysse. The grand march was led by Miss L. Schunzel and Mr. A. P. Bastide. Among those present was a large delegation from the Madison Square Garden Mtorcycle Show, personally conducted by Harry A. Gliesman, the Olympic Bicycle Team exponent; in his party were noted Mr. Arthur Davidson and a corps of salesmen and friends who accepted with alacrity, the opportunity to indulge in the pleasures of the art of Terpischore after the strenuous week at the show in the "big town."

Activities of the Lafayette Wheelmen.

Baltimore, Jan. 15.—With characteristic energy, the Lafayette Wheelmen are industriously planning a lively campaign for the coming season, the Arctic weather apparently having not the least deterring effect upon the cycling enthusiasm of its members, although they are prevented for the time being, by the deep snow, from indulging in their favorite pastime. The first event will be the annual spring road race. Invitations will be sent to riders of Philadelphia, New York and Washington. Following this will be the 12-hour track race open to teams of two men each. This

The club's annual election resulted in the choice of the following officers: President, Ralph Miller; vice-president, John Ruhl; secretary, Edgar R. Boehm; treasurer, Jacob Davis. These officers with Lyell V. Bossom, Howard A. Boehm, and Frank Martin, constitute the board of governors.

STUPENDOUS MILEAGE RECORD

Marcel Plane's Unique Performance in 1911 Century Competition of English "Cycling"—1⅓ Times Earth's Girdle.

Rolling up the enormous total of 332 centuries, ridden on a bicycle within the year 1911, Marcel Planes, a London youth of 21 years, on December 31 rode the finishing century of the score of what is a truly marvelous performance, established a world's record that will be in little danger for some time to come, and won the most remarkable competition of the sort in cycling annals; this contest being known as the Century Competition of 1911, under the auspices of English "Cycling."

In it, mileage was covered in excess of 850,000 miles, over 8,500 checking cards being required. Planes in his titanic task rode 34,366 miles, and all but 1,166 miles of this grand total was done in complete 100-mile rides. In 225 consecutive days he rode 230 centuries. The best previous performance at century "plugging" was that of Teddy Hale who was credited with 313 one-day centuries and 32,479 miles in 365 days, a record made 11 years ago.

On May 15, Planes rode his 100th century. The 200 mark was passed on August 19, and on November 26, 20,000 miles in century chunks had been piled up. As compared with Hale's record the figures do not speak eloquently enough. Hale was a seasoned athlete who already had made a name for himself as a racing man and had a wealthy firm at his back with a substantial payment for his efforts: while Planes has had but a few years experience on the wheel and rode for no other reward than a gold medal.

All the riding was done on the "out-and-home" plan, which obviated any possible advantage from the wind. As his expenses had to be paid out of his own pocket, they were, perforce, microscopic. A day's charges rarely exceeded 25 cents, and frequently were nothing at all. Double tube tires were used and three covers were worn out on the front wheel, and four on the rear. The cost of these varied from $2.55 to $3.15. One new chain, new handlebar, crank axle, and set of balls for the front wheel were required; also blocks for the front brake. The rear brake, a coaster, required a new brake band. In the clothing line, three pairs of cycling knickerbockers were worn out. Two pairs of shoes were required.

The second man, W. R. Wells, a veteran past 50 years of age, scored 387 centuries and over 30,000 in mileage. Third, H. Morris, 181 centuries. A special silver medal was awarded to Mrs. O. G. Elliott, London, she having completed 60 centuries.

Testimonial For Quarter-Century Service.

In recognition of the faithful services of Abbot Bassett as secretary-treasurer of the League of American Wheelmen for 25 years, the Boston Bicycle Club and the Newton Bicycle Club, in which latter he holds a like office, are planning to present him with a substantial testimonial on the occasion of the former club's annual dinner, February 10. A subscription list has been started by the members of both club; a circular issued by the Newton Club states that all contributions should be remitted not later than February 3 to be available.

Royal Canadian Cyclists Elect Officers.

Toronto, Ont., Jan. 15.—The members of the Royal Canadian Bicycle Club of Toronto, at their annual meeting held in the club's magnificent quarters on Tuesday, January 9, elected the following officers for the current year: Hon. president, W. G. Gooderham; president, F. B. Culliton (re-elected); vice-president, A. F. Walton; financial secretary, G. H. Cashmore; treasurer, F. M. Johnston; recording secretary, A. H. Davey.

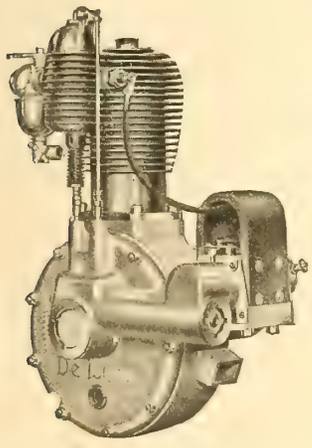
No. 3 STANDARD MOTORCYCLE PEDALS



They are generously proportioned and made with big, soft, easy rubber cushions that minimize the jars and bumps. The deep corrugations insure positive grip that makes the foot stay on. You know what that means.

They Sell for $3.00 Per Pair

Our Products for the Cycle Trade Include:
EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

THE STANDARD COMPANY
TORRINGTON CONN.

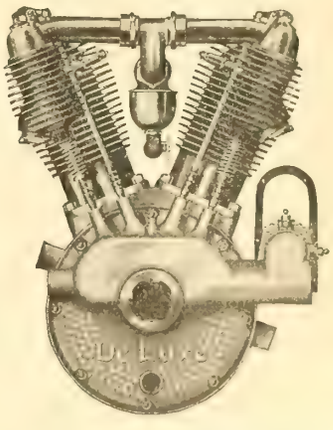
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

POPE MOTORCYCLES

Showered With Compliments at the Show

$175
With
Magneto

$175
With
Magneto

At the New York Show, we exhibited our standard Pope Motorcycles finished in "London Smoke" with wide blue striping.

To say that they were greatly admired is to put it mildly. They were showered with compliments.

Had we been able to make a phonographic record of a few of the nice things said by visitors who viewed our exhibit, it would sound something like this:—

"What handsome, clean-cut machines they are!"

"I like its simplicity of construction and its general air of trimness."

"There's great value in that motorcycle."

"It's the simplest machine to operate and by far the easiest one to handle that I've ever seen."

"The quality and workmanship in that motorcycle couldn't be better if it sold for twice the price."

"It looks like a little thoroughbred."

"It strikes me as the ideal motorcycle—light, compact, and sturdily built."

And so it would continue indefinitely.

See Our Exhibit at the Chicago Show, In Spaces 145 and 146.

It's time to be thinking about your motorcycle tire equipment!

PENNSYLVANIA
Vacuum Cup Motorcycle Tires

are the kind that enable you to ride without anxiety and without unnecessary expense.

The suction hold these tires exert on wet or greasy pavements prevents skidding in any direction. In mud or snow, the cup-shaped rubber knobs moulded on the tread provide better traction and safer "going" than any other device.

The wonderful mileage capacity of Vacuum Cup Tires is due to the fact that after the rubber knobs have worn down, the tread itself comes into use with the "life" of an ordinary motorcycle tire still in reserve.

Increasing demand, and consequent increase of facilities, enables us to announce a substantial reduction in the price of Pennsylvania Vacuum Cup Motorcycle Casings.

For easier, safer, faster and more economical tire equipment, try a pair of these tires on your machine this Spring.

NOTE: Quotations will be forwarded to Jobbers and Dealers upon application.

Motorcycling in the White Mountains of New Hampshire

Going up

steep hills and mountains is no trouble at all for the 8 H. P. M·M Twin — just like riding on level roads.

Read what the man in the picture says

American Motor Company, Brockton, Mass.
Gentlemen:

I have just completed a motorcycle trip through the mountains of New Hampshire. I am so bubbling over with joy, that I must write you how well satisfied I feel with my M·M Twin. The power it showed in tearing up those steep inclines was simply marvelous. Not once did I get stuck on a hill, and believe me there were some corkers, and as for smooth running qualities and speed, I never saw anything like it. With the muffler closed, she would slide through the towns as still as a bird, throttling down to a walk when required. You have never hollered half enough about this wonderful model. If people knew what they could do, you would be swamped with orders.

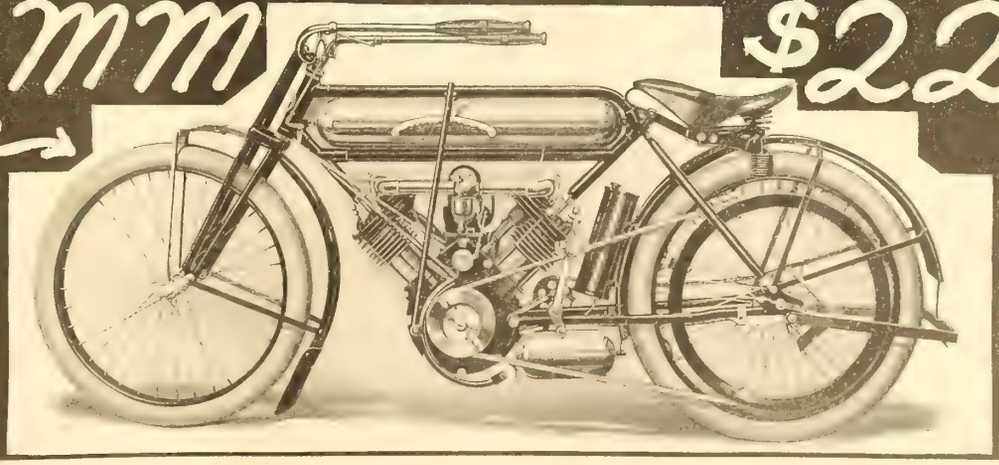
Yours truly,
Albion St., Somerville, Mass.

Geo. B. Graves

Announcement to Agents!

Here is the greatest seller ever offered to the trade in the Twin Line. The big powerful M·M Twin at $225 was the sensation at the New York Show. Of the many lines offered to Agents for 1912, there are only a few twins, although there is a big demand for this type. No agent can satisfy all his trade without a good powerful twin, especially in sections where the roads are hilly or rough.

The M·M Twin is positively without an equal, regardless of price or claims. It is the only Twin having cylinders set at a 90 degree angle giving perfect balance, doing away with all vibration and many other tremendous advantages over the ordinary type.



With our large facilities and 13 years' experience, we are able now to put the twin price down where it is bound to multiply sales. The complete M·M line at $140, $160, $200, and $225, is the best agent's proposition to be had this year.

Get in touch at once — Territory is going fast.

NEW ERA

The Sunday Monday Machine

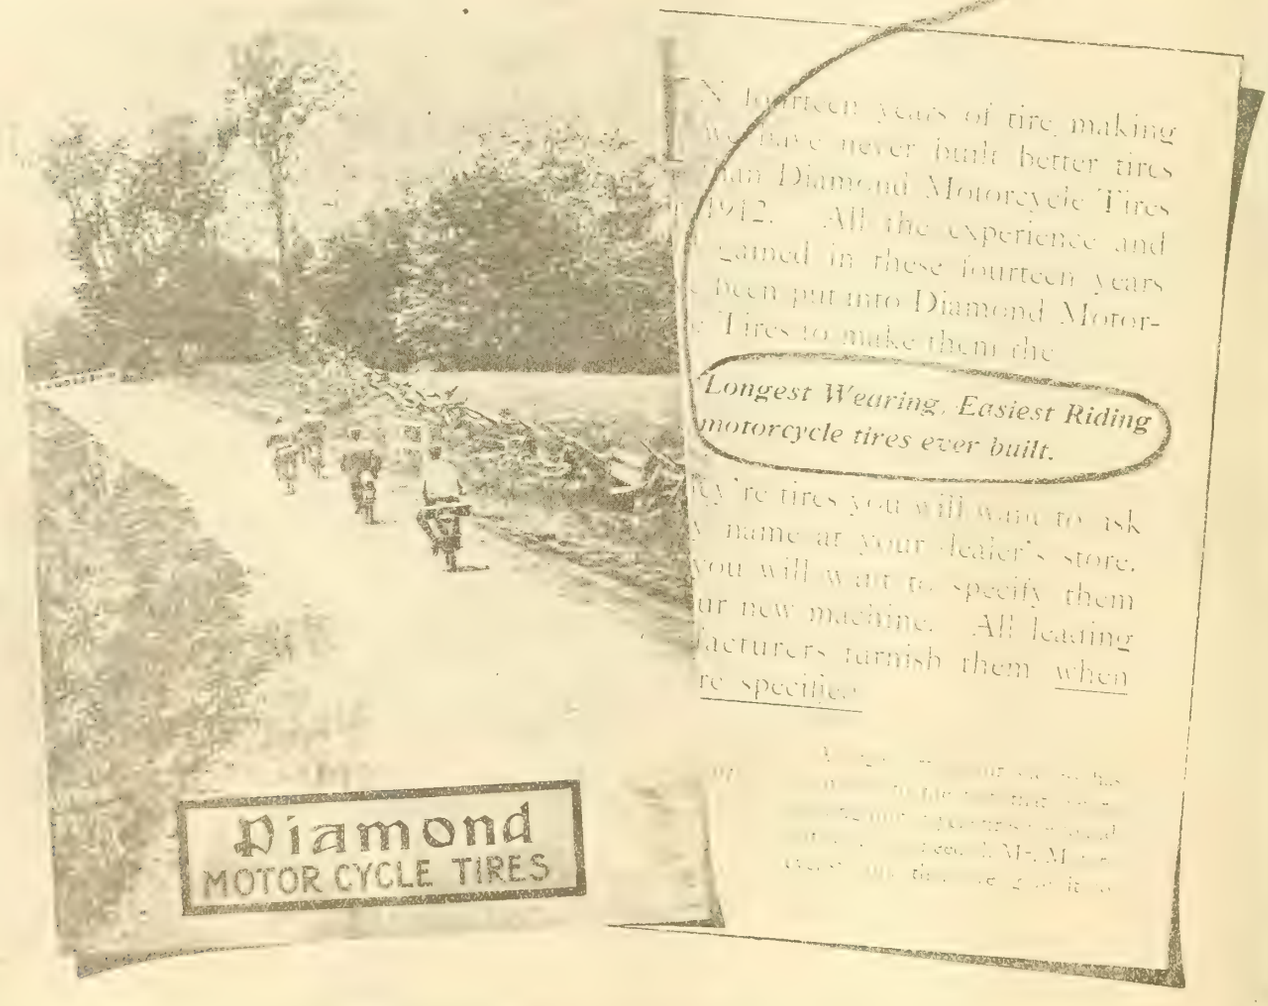
"Anywhere Under Any Condition"

Lowest Fuel Consumption of Any Machine on the Market.
Simplicity of Design and Construction; Lowest Up-keep.
Heavy Frame Construction and Best Material in Motor, Assuring Long Life.
Three Point Suspension Form Seat.
Compound Spring Fork; Mechanically Operated Valves.
Two-Speed Planetary Gear Transmission.
Long Wheel Base; 2 3-4 Inch Tires.
Free Hand Cranked Motor, Developing Over 4 H. P. on High and 10 H. P. on Low.

Bosch Magneto D. U. 1 No. 5 Guarantees Easy Starting

MR. BUYER—To what use do you intend putting your machine during this coming season, commercial or pleasure?

The man who uses a machine in his business, must have a machine that will be in working condition ten hours a day, 366 days in the year, minimum fuel consumption and up-keep, simplicity in construction and one so easily handled that a novice can run it.



The man who buys a machine for pleasure purposes only must have one that is powerful enough to keep him at the front of the bunch, up hill and on the level, and in this day and age one of the best ways to do that is to own a machine with a *real* two speed transmission, three point suspension form seat and spring fork, long wheel base, so that he can hold to the roughest roads, and as a last and biggest item, a motor, powerful, willing and always on the job. You will find all of these items embodied in the 1912 New Era.

MR. DEALER—Are you a live wire? If so, get in on *the one big best bet* in agency propositions. Write for catalogue and particulars.

Does It Cost too Much to Own a Good Motorcycle?

At the New York Show a certain motorcycle manufacturer was asked why he did not make a large tubing frame like the Pierce. He replied, "it costs too much."

YES! Pierce workmanship and material always did cost too much for other manufacturers to equal.

AS A RESULT—Pierce frames are at least three times as strong as any small tubing frame; Pierce engines have greater efficiency and lasting properties than other motors; Pierce transmission and all working parts are unappoached by the product of other factories.

EMBLEM
Motorcycles

"They are different because they are better"

Everything that is best in modern motorcycle construction is incorporated in Emblem Motorcycles for 1912. Almost every motorcycle boasts of some of these improvements—Emblem Motorcycles have them all, including the Free Engine Clutch.

Compare the entire line of famous Sturdy Emblem Motorcycles with any other first class make and you will see the great difference in price, and at the same time more dollar-for-dollar value than in any other make of motorcycle manufactured. The 1912 EMBLEM is racy looking, possesses unlimited speed and reserve power, is built to withstand the roughest possible service, because nothing but the finest material possible to buy enters into its construction. Improved factory methods and co-operative labor have made it possible to give you all this value at a minimum cost.

A Motorcycle Tire Machine That Prevents Human Mistakes

THE GOODYEAR WAY

There are two kinds of motorcycle tires.

One is hand-stretched. That is, the plies of fabric, of which the tire is built up, are stretched, one at a time, by hand, over an iron core. Naturally some of those plies are drawn tighter than others. The tight ones take up most of the strain—soon break down under it. This is the common type tire.

The other kind—the Goodyear—is built up on a tire building machine. Every ply goes on at the same tension. Every ply bears an equal part of the strain. The strength is uniform—the tire **lasts.** This is the **Goodyear** type tire.

And this is the **tire** for which the 13 leading motorcycle manufacturers in America have made contracts for their 1912 output. The tire that holds all world's records—amateur and professional. The tire that you will come to eventually.

Extra Thick Treads for Endurance

Goodyear Motorcycle Tires are results of over 13 years successful auto tire building experience.

You get more **wear** out of them because they are built with extra thick treads. These treads have a toughness—a puncture resistance that is equalled by no other tire on the market.

To prove this, we test our tread and the tread of every other make tire on an endurance machine. If ours isn't toughest, doesn't outlast all others, it never reaches the market. So in our claim for the greatest endurance, we are merely stating a fact that any one can verify.

Our tires are also made larger than most others. Hence there is extra strength to take care of overloads, and extra cushioning effect to make the tires ride easier.

Without a penny of extra cost, they offer you the strength and endurance of best auto tires adapted to motorcycle needs by the world's greatest tire experts—the same motor tire builders who built such service into Goodyear No-Rim-Cut Auto Tires.

You ought to investigate these money and trouble-saving tires at once. They fit all standard rims. They satisfy with a service rendered by no other tire.

Write for our booklet on Motorcycle Tires.

BICYCLING WORLD and MOTOR CYCLE REVIEW
(FOUNDED 1877)

Vol. LXIV. New York, U. S. A., Saturday, January 27, 1912. No. 19

BRAKE MAKERS ENTER PLEA

Not Guilty of Violation of Sherman Law—Individuals Charged Claim Grand Jury Is Without Jurisdiction.

Buffalo, N. Y., Jan. 23.—Indicted January 8 by a Federal grand jury for alleged violation of the anti-trust law by controlling coaster brake prices, the six companies manufacturing coaster brakes under the New Departure patents, to-day pleaded not guilty before Judge Hazel in the United States Court in this city. The defendant companies charged in the indictment are the New Departure Mfg. Co., Bristol, Conn.; Corbin Screw Corporation, New Britain, Conn.; Aurora Automatic Machinery Company, Aurora, Ill.; Eclipse Machine Company, Elmira, N. Y.; Miami Cycle & Mfg. Co., Middletown, O.; Buffalo Metal Goods Company, Buffalo, N. Y.

The eighten individual members and representatives of the concerns, who are similarly charged, entered pleas in abatement, contending that the grand jury having begun its investigations last year was without jurisdiction after January 1, when certain new laws regarding procedure became effective. Attorneys for the individuals were given 20 days in which to file motions.

Baker's New Catalog Is Classy.

One of the most attractive cover designs ever "fitted" to a motorcycle accessory catalog, is worn by the 1912 sundry book issued by F. A. Baker & Co., 10 Warren street, New York. The scene is a pastoral one, showing three motorcycle parties at a T road junction, and features the solo, tandem and sidecar form of motorcycling. There are 64 pages of interesting reading every standard motorcycle accessory on the market, also several domestic and imported matter and illustrations covering practically offerings that are quite young in point of years. Baker also makes a specialty of complete power plants, listing Indian single and twin motors equipped with carbureter and magneto.

Pierce Cycle Co. Changes to Trusteeship.

At a meeting of the creditors of the Pierce Cycle Company, held in Buffalo, January 10, Lawrence P. Hancock was appointed trustee, and was directed to continue the business in the same manner and along the same lines as it has been conducted heretofore.

The only practical effect of making the change from a receivership to a trusteeship was to impose considerable extra work for making reports and adjusting the affairs of the company so as to close the receivership. This change and extra work has deferred the payment of current accounts, but Trustee Hancock purposes on February 1 to begin payment of these accounts.

Waverley Removes Plant to Jefferson, Wis.

With the completion of a new factory in Jefferson, Wis., affording greatly enlarged facilities for the production of Waverley motorcycles on a large scale, the Waverley Mfg. Co. has removed its plant from Milwaukee. A Chicago office will be maintained at 440 Marquette building, from which that territory will be looked after.

Reading-Standard Elects Executive Officers

At a meeting of the directors of the Reading-Standard Company, held January 19, at Reading, Pa., the following officers were elected for the ensuing year: President, Abner S. Deyshar; vice-president, Jacob B. Fricker; secretary, William F. Remppis; treasurer, John M. Hill, all of Reading.

Curtiss Will Make a Side Car.

Hammondsport, N. Y., Jan. 23.—The Curtiss Motor Company makes the announcement that it will immediately place on the market a flexible side car.

BRITISH EXPORTS AND IMPORTS

Fine Showing in the Bicycle and Motorcycle Trade For the Year Just Closed—Imports of Parts Increasing.

During the month of December, the United Kingdom exported 10,083 bicycles valued at $208,570 as against 8,914 valued at $187,620 in the same period in 1910, and 6,720 valued at $150,730 in 1909. Exports of cycle parts during December, show a steady decline in the three years, amounting to $526,630 in 1911; $582,090 in 1910, and $587,010 in 1909. The export of complete bicycles, however, handsomely surmounting this and raising the total accordingly.

These figures, aggregated with the values for eleven months of 1911, as published in these columns, December 30, give a total for the year just closed of 146,718 bicycles at $3,006,590; 1910, 129,106 bicycles at $2,712,555 and in 1909, 105,135 bicycles at $2,312,895. Parts exported in 1911 were valued at $7,114,405; in 1910, $7,073,880; 1909, $,876,455. Total value of exports of cycles and parts by years being: 1911, $10,120,995; 1910, $9,786,435; 1909, $8,189,350.

Imports of complete bicycles in the corresponding periods are decreasing, while the value of parts brought in is increasing yearly; although that of December, 1911, is considerably less than the same month of 1910, the increasing importation of parts is such as to cause a steady rise in the total values of imports. The figures are as follows: For the month of December, 1911, bicycles, 11, value, $355; parts, $77,605. December, 1910, bicycles, 15, value, $505; parts, $22,730. December, 1909, bicycles, 22, value, $675; parts, $60,510. Total value of yearly imports, bicycles and parts: 1911, $1,138,720; 1910, $1,047,735; 1909, $883,240.

The English motorcycle export business gives evidence of rapid growth, particularly

when comparing the figures of 1911 with those of 1910. During December 1911, 876 machines were sent out, valued at $172,620; parts, $59,910. In that month, 1910, 455, at $68,960; parts, $19,020 and in 1909, 317 at $57,120; parts, $27,690. Yearly business as follows: 1911, 7,357 machines valued at $1,394,650; parts, $399,585. 1910, 3,341 at $612,910; parts, $189,470. 1909, 1,844 at $345,-705; parts, $181,470.

The figures for the December motorcycle imports are: 1911, 77 at $10,665 parts, $18,-435. 1910, 47 at $7,705; parts, $15,740. 1909, 89 at $18,930; parts, $12,220. Yearly imports: 1911, 1,351, at $210,430; parts, $328,-555. 1910, 1,387 at $221,485 parts, $274,75;5. 1909, 1,442 at $205,180; parts, $147,080.

Straightening a Show Report Tangle.

Consequent to the abnormal pressure which exists on a trade publication during the show period, errors are liable to occur. To those familiar with Harley-Davidson construction, the designation of the lubricating system as of the gravity sight feed type, and the double pricing of the new chain twin at $285 and $275, respectively, according to the inclusion or omission of the free wheel, undoubtedly were interpreted as inadvertent errors, while to the layman they were a straightforward statement of information.

The fact remains, the Harley-Davidson chain twin will list at $285 only, including free wheel, and will not be marketed without this device. Further, be it known, that Harley-Davidson lubrication is of the semi-automatic vacuum feed system, the oil being drawn from the tank, chiefly by a partial vacuum created in the crank case, by each upstroke of the piston, and supplemented by gravity flow. This vacuum is maintained by a check valve, and is claimed to perform its function in all temperatures. A standpipe in the motor base takes care of any excess lubricant.

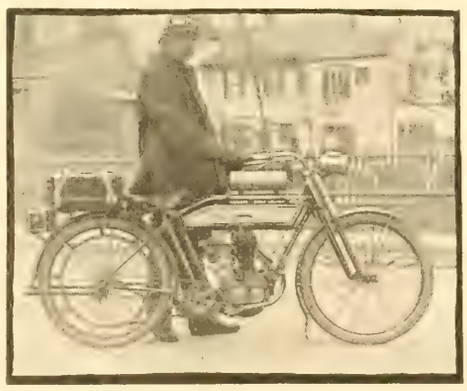
Indian Plucks Three More British Scalps.

In three recent and prominent motorcycle reliability contests, in Great Britain and Ireland, where this form of contest is in high favor, Indian motorcycles, distinguished themselves, in competition with the best English and Continental makes. On December 26, F. B. Roper, driving an Indian sidecar, with total passenger weight of 336 pounds, won first prize in the Sheffield & Hallamshire M. C., 170-mile reliability, maintaining a mimimum speed of 20 miles per hour. Under most severe weather conditions, C. B. Franklin, on an Indian, was the only one to earn a perfect score for hill climbing and reliability, in the Dublin (Ire.) and District M. C. trials on December 27. Elsewhere in Great Britain on these dates, Indians also gathered scalps. In the annual winter run of the Motor Cycling Club, from London to Exeter, and return, three Indians, two of them sidecars, won gold medals, arriving at all controls on schedule.

Oberwegner to Handle Excelsiors.

Toledo, O., Jan. 23.—Placing a large order as a starter, the Oberwegner Motor Company, of this city, has become distributor for Excelsior motorcycles for northwestern Ohio, southern Michigan and northeastern Indiana. During the week which closed last Saturday, the Oberwegner company had on display at its headquarters, 139 Michigan street, the entire exhibit of Excelsiors shown at the recent New York show. As the display was made during the time of the Toledo automobile show, it attracted many out of town visitors.

Rogers to Try Aeroplaning in So. America.



Baltimore, Jan. 23.—George W. Rogers, known to the local motorcycle racing fraternity as "Flying Fish" Rogers, who made quite a reputation at Prospect Park and other tracks during the past season, was in town for a few days bidding good-bye to his many friends, as he will shortly depart for South America, where he will give exhibitions in an aeroplane. He has abandoned motorcycle racing for flying, as he expects to become famous as an air pilot.

Pierce Motorcycles For Philippine Islands.

Last year the Pierce Cycle Company, of Buffalo, N. Y., sold 11 four-cylinder Pierce motorcycles to the Government of the Philippine Islands. As a result of the satisfactory work and service given by these machines, the Pierce company has placed its general agency for motorcycles and bicycles with Wisner & Company, Manila, and has received from them an order for 27 machines. They will push both the single and four-cylinder types of motorcycles.

Dunlop Canadian Employees Dance.

Toronto, Ont., Jan. 22.—The manufactory of the Dunlop Tire and Rubber Goods Company at Toronto, was the scene of a highly enjoyable musicale and ball on Friday evening, January 19, for which the employes of the company and many guests gathered. High class talent provided the musical numbers on the program, A. A. Briggs, the advertising manager, acting as chairman. It is the intention to make the event an annual affair.

WM. R. SPEAR, NEWARK, N. J.
Well known member of the Reading Standard Company's sales force.

Heil's Business Is Growing Fast.

Paterson, N. J., Jan. 24.—Norman E. Heil, proprietor of Heil's Motorcycle and Bicycle Store, Van Houten and Washington streets, this city, will handle a big line of machines the coming season, including the Merkel, Reading-Standard, Marvel and M-M. Harvey Snyder, who is well known as an endurance rider, and as a motorcycle salesman of much experience, has been engaged by Mr. Heil to assist in the selling end. The business which was established about a year ago has been a very prosperous one.

Goldsmith Increases His Yale Territory.

The Gotham Motor Co., New York City, which largely is composed of Louis Goldsmith, and holds the Yale motorcycle agency for New York City, has received a large slice of new territory for the coming season. The enlarged district comprises Westchester, Kings, Queens and New York counties, in which sub-agents will be appointed.

Kircherer Makes a Good N. S. U. Sale.

E. C. Kicherer, manager of the Sun Motor & Supply Co., New York City, showed the Bicycling World man, an order for two N. S. U. 7-horsepower DeLuxe twins, and two 4-horsepower coast-to-coast singles, from the Mt. Vernon (N. Y.) Police Department. The sale, which is a repeat order, represents a $1,300 transaction.

Tresemer Joins Indian Selling Force.

J. Otto Tresemer, Columbus, O., one of the best known motorcyclists in the Buckeye State, has caught the selling fever and entered the trade. He now is attached to the sales staff of the Barr Motorcycle Company, local representatives of the Indian. Tresemer predicts a stupendous increase in motorcycling in his territory this year.

Yale Motorcycles at the Toledo Show.

At the Toledo automobile show which closed last Saturday night, the Consolidated Mfg. Co., which manufactures the Yale motorcycle and bicycle in that city, made a splendid exhibition of its products. The stand was crowded with visitors at all times during the week's continuance of the show.

Mercier Now Becomes Store Manager.

Fernard Mercier, the New York racing man, who campaigned on an Indian last season, will ride an Excelsior at the meets this year. He also has abandoned his repair shop venture, to take the management of the Central Motorcycle Company, 1220 Bedford avenue, Brooklyn, N. Y., which has the Flanders and Excelsior representation.

Formerly located at 764 South C St., Tacoma, Wash., the Pierce Motorcycle Agency has removed to South Eighth St. and Pacific avenue.

Motorcycles at the Coming Brooklyn Show.

A. H. Patterson, of Brooklyn, N. Y., the leading motorcycle and bicycle dealer of that section, will as usual, be prominently represented at the automobile show in the Twenty-third Regiment Armory, during the week of February 24-March 2. He has secured a space 17 x 34 feet on the main floor, near the entrance, and will show Indian, Pierce and New Era motorcycles, and several types of sidecars and delivery vans. At present it looks as if Patterson would be the sole standard bearer of the motorcyclists in the show, the other dealers showing a disinclination to be "among those present." However, Patterson tried out the show venture last year, and the results were so gratifying, both from a sales and advertising standpoint that he is a strong advocate of them, as business accelerators.

Buffalo Cycle Trade Association Election.

Bicycle dealers in the Bison City are enthusiastic over trade prospects for the coming season, as there seems to be a pronounced renewal of interest in western New York in favor of the foot-propelled vehicle. At the annual meeting of the Buffalo Cycle Trade Association, the following officers were elected for the ensuing year: President, Edward Young; vice-president, A. H. Olief; secretary, H. Griegbraum; treasurer, F. D. Barton; directors, A. F. Schwegler, George Ferrand, A. J. Nabinger.

President Young is a veteran cyclist, having joined the Buffalo Ramblers Bicycle Club in 1889, and later became its president.

Trade Doings in the Extreme Northwest.

Tacoma, Wash., Jan. 20.—There are now a round dozen of Merkel motorcycles, all bright yellow in color, splashing about the streets and boulevards of Tacoma, in spite of the rainy weather. Ray Day, who is the Tacoma agent for the Merkel, is jubilant over the number of sales he has made since the close of the buying season, as all of the twelve cycles have gone from his agency within the past two months.

Frank P. Fentress, for years in the bicycle and motorcycle business in Tacoma, has been made direct factory agent in Tacoma and Pierce county for the Excelsior auto-cycle.

Another H-D Motor For Uncle Sam.

It is with considerable pardonable pride that the Harley-Davidson Motor Company, Milwaukee, reports an order from Uncle Sam for one of its machines equipped with "Ful-Floteing" seat and "Free Wheel" for use in the reclamation service at Boise, Idaho. It is stated that this order was secured in open competition, and was not closed on price concession basis. Harley-Davidson machines are not strangers to Uncle Sam's men, being used in the Philadelphia Navy yard, Geological Survey and Forestry service.

STORE OF THE INDIAN AGENT AT TAUNTON, MASS.
In the foreground is the proprietor, Oscar Beauvais, a member of the Taunton Motorcycle Club, and his two children out for a ride.

Flanders Mfg. Co. Officers Elected.

At the annual meeting of the Flanders Mfg. Co., of Pontiac, Mich., held January 15, these directors were elected: Walter E. Flanders, Dr. J. B. Book, William T. Barbour, Scott Brown, of South Bend, secretary of the Studebaker corporation; Newton Gunn, of New York, general manager of the Studebaker corporation; Don C. McCord and W. Kopmaier, Milwaukee. The directors elected Walter E. Flanders, president; Don C. McCord, vice-president, and H. L. Stanton, secretary-treasurer.

Knight Succeeds Handin With Thor.

E. J. Knight has been appointed acting sales manager of the Aurora Automatic Machinery Co., of Chicago, makers of Thor motorcycles, to succeed J. A. Handin.

Trade Brevities from the Ohio Capital.

Columbus, O., Jan. 23.—P. I. Haynes & Co., agents for the Harley-Davidson, have moved from their former location at 51 East Gay street, to more spacious quarters at 45 North Third street.

The Franklin Cycle & Supply Co., agents for the Excelsior, Thor, and Reading-Standard, announce that 203 machines were sold by them last year.

M-M Reduces "Twin" to $225.

By lopping $50 off the list price of the M-M 8-horsepower twin, the American Motor Company, Brockton, Mass., has brought its big "double" in the $225 class, making it one of the lowest priced twins on the market. It will come equipped with a clutch at $240.

PROVIDENCE, R. I., DISTRIBUTING DEPOT FOR EXCELSIORS
From left to right, the motorcyclists are: James Shippee, Harold Winslow, H. N. Davis, Sec'y New Jersey M. C.; Wilbur Johnston, Adolph Tornquist, Hirah G. Baxter, Proprietor; Dr. C. M. Greene

NEW YORK, JANUARY 27, 1912.

Trade Should Watch New Legislation.

No better illustration of the need of motorcycle dealers watching legislation, and forming trade associations to safeguard their interests when legislators feel impelled to prescribe for the motorcycle business, well could be asked for than the predicament in which New Hampshire dealers now find themselves as a result of their carelessness or ignorance as to what was going on when their legislature was wrestling with the new automobile law, which went into effect January 1. Of course it includes motorcycles in its provisions; rather, it enmeshes them in far-reaching tentacles from which there is no escape.

By far the most unfair provision of the law as applied to motorcycles, is in requiring dealers in motorcycles to pay the same registration fee, $40, as automobile dealers. Its injustice needs no magnifying glass to discern, for not even its fathers righteously can contend that the dealer dispensing an article selling at a few hundred dollars, with a limited trade and close commission, should pay the same fee as the agent whose lines involve the exchange of thousands of dollars with commissions in proportion and a large clientele.

If the dealers in other States where legislation affecting motorcycles is pending, and this is the open season for motor vehicle mulcting, would not awake some fine morning and find themselves similarly squeezed, it behooves them to camp on the legislative trail themselves, or put an attorney there, to see that they are not "milked" when a statute is enacted. Legislators have a peculiar liking for devising revenue bring regulations for automobiles, the very name of which savors of wealth, or that is the popular impression nowadays, anyway, and as a motorcycle also burns gasoline, it naturally is corraled too, as a likely money getter for the State.

However, when the average legislator who sits in the halls of state these days, begins to enact laws for the regulation of motorcycles, he is floundering about in the sea of total ignorance of the subject. He knows nothing about the business, its margins of profit, the financial status of the dealers or of any of the statistics which should be at his finger tips to enable him to intelligently and justly deal with the subject in hand. If the dealers do not want to suffer for the ignorance of the lawmakers, they must make up their minds to enlighten the solons on the subject of motorcycles.

For the trade to best combat impending adverse statutes seems to be through the organization of local trade associations, with specially deputed committees to follow up legislative matters, who will cooperate with each other in the development of cohesive plans for opposing contemplated legislation of a class or unfair nature. Not only should the dealer be alive to his own interests when motorcycles hold the attention of lawmakers, but he should also consider legislation from the rider's standpoint, for if the use of motorcycles is made onerous or annoying by strict regulations, the dealer will be hit through the falling off in sales.

Ill Advised Use of the Motorcycle.

An illustration of a motorcycle racer in action, occupied a prominent place in a quarter-page advertisement of a widely exploited beverage in a Sunday paper recently. It is nothing to the credit of the motorcycle to be used in exploiting liquor, for the rider who is under its influence to the slightest degree, while operating his machine is a serious menace to himself and to other users of the roads. It is to be hoped that the publicity promoter for this particular beverage will find some other subject with which to illustrate his copy, for while he did not say so directly, it didn't require a great deal of imagination to conjure up a phrase something like this: "Tank up on —— if you want to win." Such advice, either given or implied, is dangerous, and while in justice to the advertisement it counseled against the immodarate use of liquor its effect is likely to be more harmful than helpful to the motorcycle cause.

Just a Trifling Winter Suggestion.

During the dull winter months many motorcycle dealers and repairmen have plenty of spare time and often are put to it to find something to do. A very profitable way to use up spare time in the off season is to make up special wrenches and tools for assembling and dissembling machines. When the rush comes in the spring these special tools will save a great deal of valuable time and return their cost many times over. In fact the cost is limited to that of the raw material, which in itself is a trifle, as plenty of suitable stock for the purpose always is to be found idle in a shop of any pretensions. The tip is equally applicable to bicycle dealers and merchants in other lines who sell and repair bicycles, although the latter may have other employment for their workmen in the winter season, time thus spent will prove remunerative when the rush begins.

Why Use of Vanadium Increases.

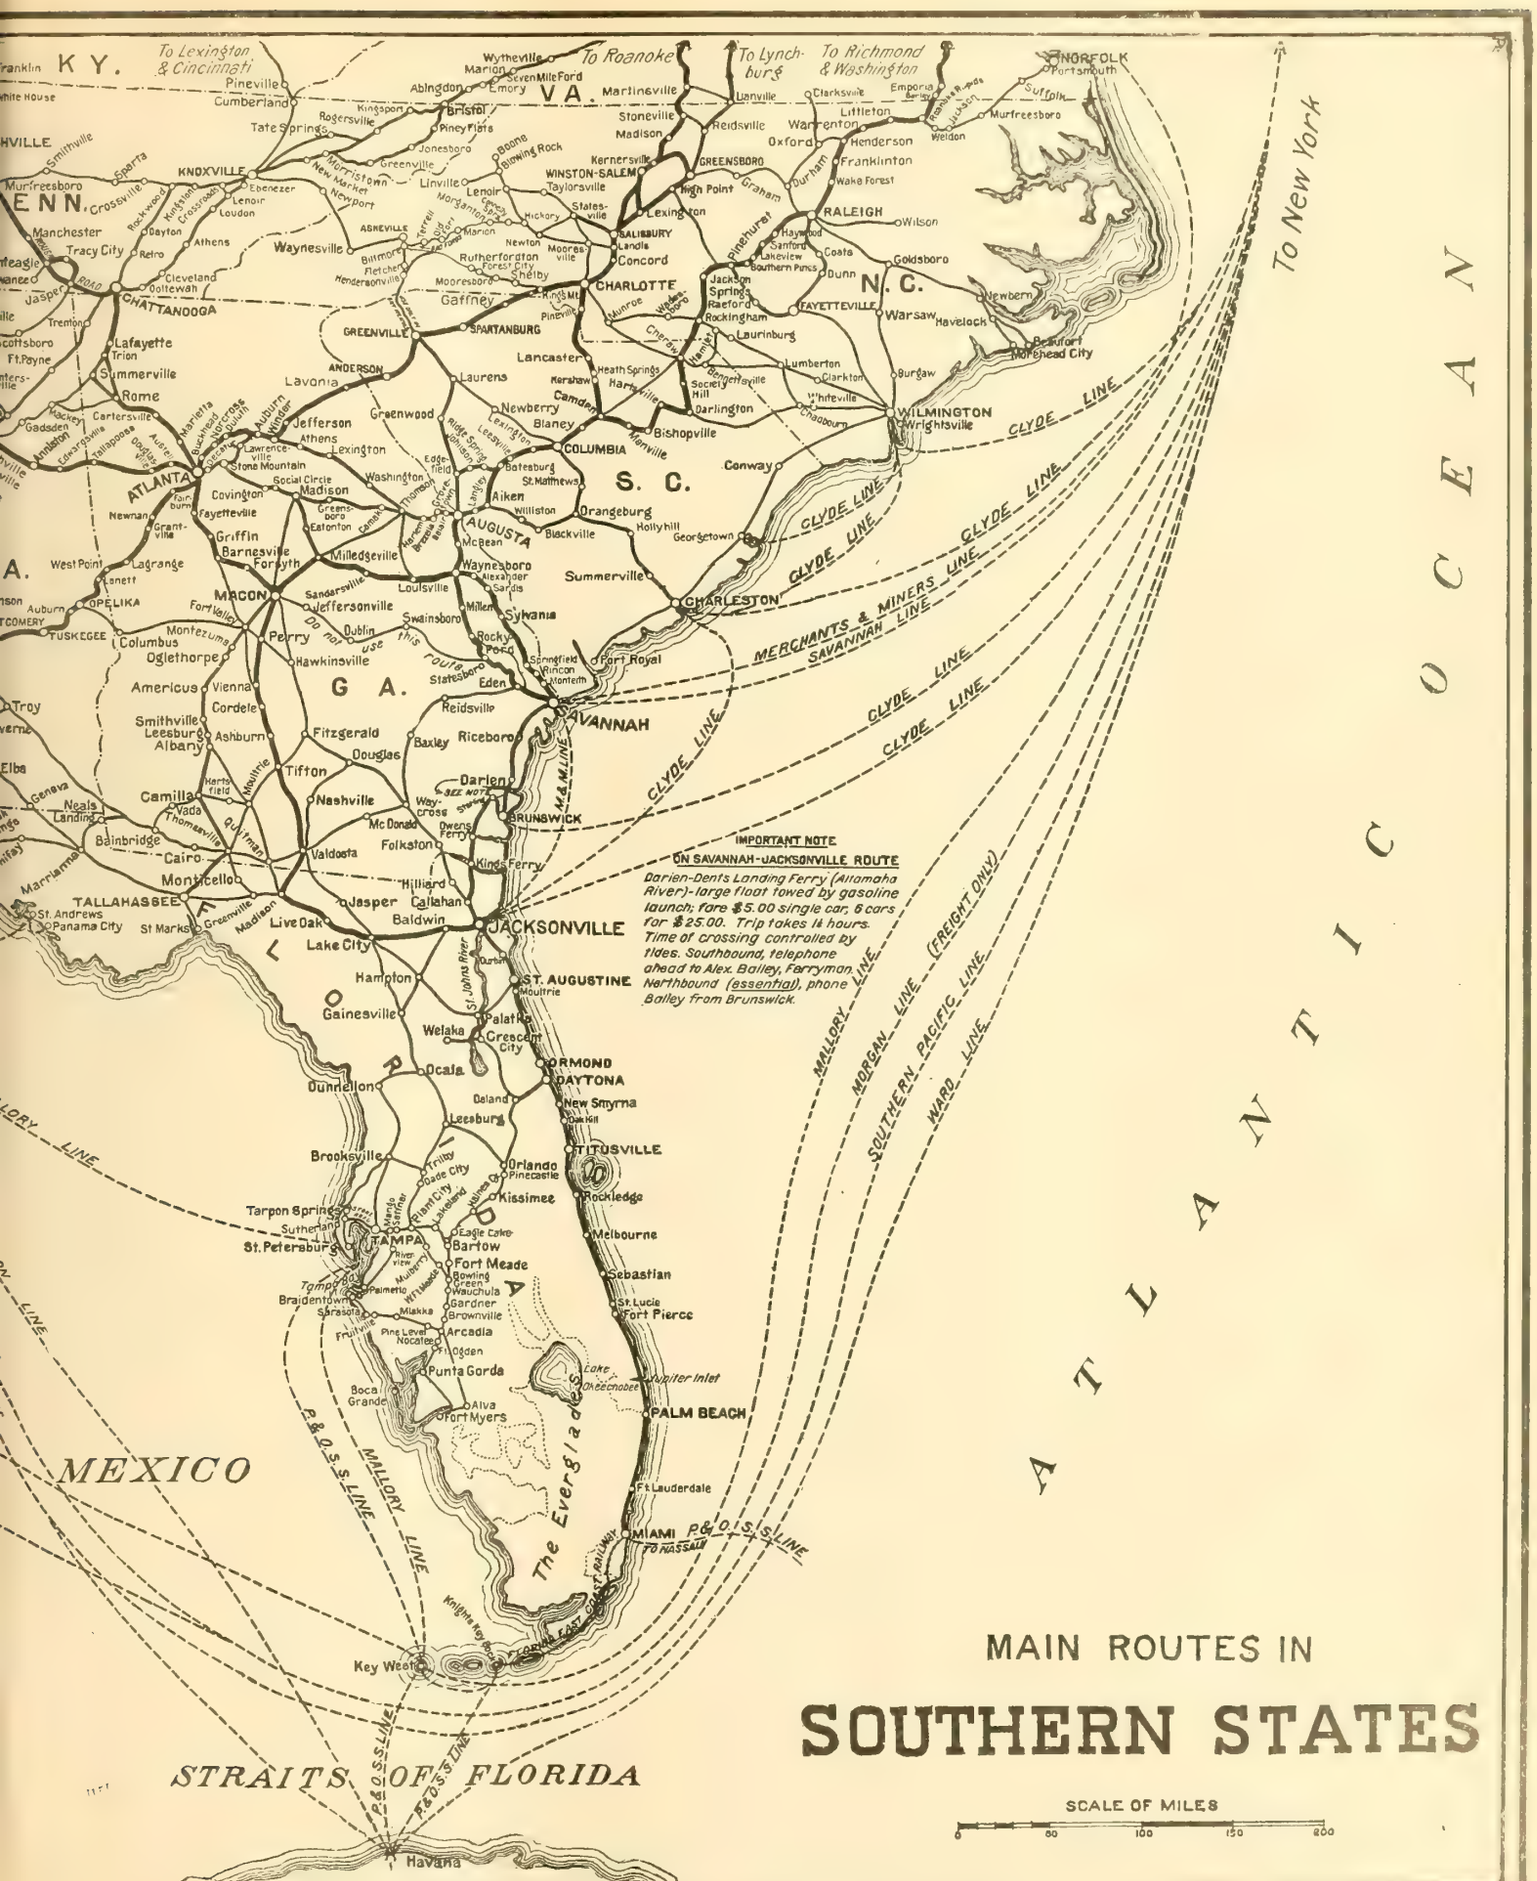
Carbon will increase the strength of iron and steel, but it also is certain to make the metal more brittle. This, of course, renders the introduction of carbon unsatisfactory and undesirable. Consequently, vanadium is gaining in popularity, especially in motor vehicle construction, where the continuous vibration to which the machines are subjected, crystallizes the ordinary steels in a short time, causing frequent breakages. The largest deposit of vanadium ever discovered was in the Peruvian Andes in South America, but since the great value of the metal became known, constant search for new deposits is being prosecuted in mineral regions throughout the world.

NEW ROUTES IN THE SOUTH

Latest Map of Main Traveled Road Makes Trip to New Orleans Possible—Highways Being Rapidly Improved.

Intimately connected with movement southward of tourists during the winter season is the publication of late and accurate maps containing a correct layout of the main traveled highways. To the motorcycling tourist or the long distance traveling cyclist, this class of information appeals as strongly as to the automobilist and all are benefited.

Through the courtesy of the Touring Bureau of the American Automobile Association this week's issue of the Bicycling World and Motorcycle Review is enabled to present to its readers the accompanying high class map presented by Manager Robert Bruce for the guidance of tourists southward. This map contains in addition to the better known roads to the southland leading mainly to Florida, the new route, recently chartered by a personal representative of the A. A. A. Touring Bureau, from Atlanta to New Orleans. Larger reproductions of this map, which also includes the northern and eastern States, is furnished by the Touring Bureau, 437 Fifth avenue, New York, for 25 cents.



It is now possible to make a satisfactory trip awheel to any of the great southern centers. Vast improvements have taken place in road conditions within the past two years and the next year promise to be strongly productive of good highways, especially in the States of Georgia and Florida. However, the movement for highway improvement is general throughout the South, and the time is not far distant when the main roads will compare favorably with the fine highways of the New England States.

Good Roads Coming For Canadians.

The legislature of the Province of Quebec, Canada, has come to a decision to make a radical move towards the betterment of roads under its jurisdiction. The huge sum of $10,000,000 has been appropriated for the purpose and the work contemplated is the creation of a network of macadamized highways aggregating 3,300 miles in length. The project includes the laying of four thoroughfares between the cities of Montreal and Quebec, two on each side of the picturesque St. Lawrence river, and a highway from the City of Quebec to the United States boundary line by way of Sherbrooke. Roads from Quebec to Gaspe and Tadousac, and from Montreal to Ottawa, Ontario, are also contemplated.

This announcement has been received with considerable enthusiasm by the autoists and motorcyclists of the Province, as the nature of Quebec's roads has always been a great hindrance to traffic.

Good Roads Coming For Canadians.

The legislature of the Province of Quebec, Canada, has come to a decision to make a radical move towards the betterment of roads under its jurisdiction. The huge sum of $10,000,000 has been appropriated for the purpose and the work contemplated is the creation of a network of macadamized highways aggregating 3,300 miles in length The project includes the laying of four thoroughfares between the cities of Montreal and Quebec, two on each side of the picturesque St. Lawrence river, and a highway from the City of Quebec to the United States boundary line by way of Sherbrooke. Roads from Quebec to Gaspe and Tadousac, and from Montreal to Ottawa, Ontario, are also contemplated.

This announcement has been received with considerable enthusiasm by the autoists and motorcyclists of the Province, as the nature of Quebec's roads has always been a great hindrance to traffic.

February 1, Dayton, Ohio—Annual dinner of the Dayton Motorcycle Club.

February 1, Buffalo, N. Y.—Sixty-fifth Infantry A. A., Arsenal, bicycle races and athletic games.

February 3, New York City—Company "K," 22d Regiment and Morningside Athletic Club, bicycle races and athletic games.

February 3-10, Chicago(Ill.—Eleventh annual motorcycle and automobile show in Coliseum and First Regiment Armory, under auspices of National Association of Automobile Manufacturers.

February 10, Chicago—North Shore Motorcycling Club show wind-up smoker.

February 14-16, Colorado Springs, Colo.—Automobile and motorcycle show in Temple theatre.

February 24, New York City—Century Road Club Association annual dinner at the Broadway Central Hotel, Broadway and Third street.

February 24-March 2, Brooklyn, N. Y.—Annual automobile and motorcycle show in Twenty-third Regiment Armory.

February 26-March 3, Quincy, Ill.—Second Annual Mississippi Valley Automobile Show, under the patronage of Quincy Auto Club, at Highland Park Pavilion.

February 21-28, Toronto, Ont.—Motorcycle show in Toronto Armory.

March 4-11, Denver, Colo.—Motorcycle and automobile show in Auditorium.

May 5, New York City—Atlas Bicycle Club 15 mile handicap road race, Floral Park, L. I., open. Rain date, May 12.

April 21, New York City—New England Wheelmen 10 miles handicap road race, Floral Park, L. I., open. Rain date, April 28.

June 16, New York City—Century Road Club of America, New York State Division, 50 miles handicap road race, Floral Park, L. I.

July 7, Stockholm, Sweden—Olympic games under the auspices of the Swedish Olympic Comittee and with the patronage of the King of Sweden; bicycle road race, 200 miles round Lake Malar, sanctioned and under the rules of the Union Cycliste Internationale, open only to amateur riders registered with affiliated National sports governing organizations: For the United States, the National Cycling Association; Chairman, Board of Control, R. F. Kelsey, Room 914 Tribune Bldg., New York City, United States. Entries close May 20 with the American Olympic Bicycle Team Committee, same address.

August 11, New York City—New England Wheelmen second annual bicycle marathon, Floral Park, L. I., open. Rain date, August 18.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I

Cash Balance from the Buffalo Meet.

President W. G. Schack, of the Buffalo (N. Y.) Motorcycle Club states that in accordance with his announcement at the Atlantic City meeting of the motorcycle manufacturers last August, the surplus remaining from the fund raised by the Buffalo Club to conduct the last F. A. M. meet, will be turned over to Treasurer Weschler, at the next meeting of the Motorcycle Manufacturers' Association, during the Chicago automobile and motorcycle show. When the announcement of the disposition of this surplus was made, W. F. Hapgood, of the Hendee Mfg. Co., offered a motion, which was carried, that the manufacturers donate their individual shares of the fund to the Legal Action Committee of the Federation of American Motorcyclists.

Coralled Motorcycle Cop With the Rest.

Tampa, Fla., Jan. 20.—It was a burlesque of that canine tragedy entitled "Dog Eat Dog," that was enacted here yesterday when Patrolman Russ gathered in a flock of bicyclists and motorcyclists, among whom was Motorcycle Officer John Marsicano, for riding on the sidewalk in leaving the Tampa Bay athletic grounds. Marsicano failed to respond when his name was called in court, having overslept. The judge ordered a bond of $6 collected from him and estreated. Marsicano appeared after court had adjourned, and after a reprimand, was discharged under suspended sentence as were the other offenders. Marsicano has considerable reputation, locally, as a racer, but this latest experience no doubt will curb free exhibitions of his skill.

MOTORCYCLE TRACK FOR NEWARK

New Jersey Motorcycle Club Accepts Kreamer's Proposition for High Banked Four Lap Saucer.

At a meeting of the New Jersey Motorcycle Club, held at Newark, January 23, it was voted to accept the proposition submitted by George I. Kreamer for the construction of a track for motorcycle racing in that city, to be run under the auspices of the club. Kreamer and George Hamilton, of Ridgewood, a member of the club, were rival bidders, and their propositions were practically the same, but when it came to a vote the members favored Kraemer because of his reputed experience in track building and by a ballot of 14 to 6 accepted his offer.

Kreamer, who has been negotiating with the club for several weeks, last night presented a detailed proposition of what he would do.

Kreamer figures that $15,000 will be necessary to build the track, secure riders and meet other expenses incident to holding races. Of this amount, he says, $6,500 will be the cost of the lumber. The affair is to be a four lap saucer, perfectly round, built on an angle of 56 degrees and banked 16 feet high. This, it is figured, will permit a speed of 100 miles an hour. There are also to be a grandstand and six tiers of bleacher seats.

With the club's approval, Kreamer will now proceed to organize a stock company to finance the proposition. He proposes to issue $15,000 shares of stock at $1 per share. The New Jersey Club will receive 1,000 shares of the stock gratis as a bonus for its moral support. It is said strong financial support is forthcoming, and that the track will be ready for racing in May, on a site to be immediately determined upon.

An Autoist Who Rides the Motorcycle.

Rarely does the sun set nowadays without the discovery of a new field of usefulness for the motorcycle. One of the latest uses to which it is being put, for which it is particularly adapted, and successfully competes with its bigger brother, the motor car, was revealed by an automobilist, who dropped in at the Indian wigwam at the recent Madison Square Garden show in New York City. Although the owner of six automobiles, he stated that he constantly kept two Indian machines in service on his country place, near the metropolis. One of the machines he reserves for his personal use, in making informal calls on his neighbors, traveling to the golf links, and taking pleasure spins, when he desires a change from car riding. The other machine is used for messenger service on his estate, and both have proven so utilitarian and convenient as to have established themselves firmly for the service in which they are employed.

EASTERN TOUR DIPLOMAS AWARDED

Thirty-Three Tourists Receive Engraved Certificates from Secretary Gibson—Westerners to be Honored.

Upon receipt this week from Tourmaster B. A. Swenson, of Providence, R. I., of the names of the 33 participants in the F. A. M. Eastern District motorcycle tour from New York to Buffalo, last July, who completed the contest under the conditions entitling them to an award, Secretary Gibson has forwarded to each man an engraved certificate, a duplicate of which is illustrated on this page. This certificate constitutes the formal recognition by the F. A. M. of the performances of those riders who made the tour under the rules prescribed, and undoubtedly will be highly appreciated by those who receive them, the more so in later years, as they serve to recall one of the most enjoyable occasions in the history of their motorcycling days. Similar "diplomas" are awaiting those members of the Western touring party who qualified, when their names are received from Tourmaster Whitney. The honor men of the Eastern tour are the following:

Merle B. Mann, Hartford, Conn.
B. A. Swenson, Providence, R. I.
A. P. Howe, Boston, Mass.
Eugene Miller, New York City.
J. P. Seery, Camden, N. J.
F. L. Kidder, Worcester, Mass.
John Kay, Providence, R. I.
H. N. Davis, Newark, N. J.
G. H. Hinman, New Haven, Conn.
William Wood, New York City.
Robert Buttlar, Jr., New York City.
Peter A. Cox, New Haven, Conn.
Philip Kennard, Tampa, Fla.
D. P. Leahy, Hartford, Conn.
P. W. Stevens, Newark, N. J.
P. H. Sheridan, Cleveland, O.
George Riechey, Newark, N. J.
Clifford Frazier, Pawtucket, R. I.
H. M. Howard, Westminster, Mass.
Adolf Tornquist, Providence, R. I.
Albert Burrill, Utica, N. Y.
Charles Dahlenburg, Miami, Fla.
John W. Brewer, New York City.
H. J. Krackowizer, New York City.
Russell Coes, Worcester, Mass.
H. G. Truppner, Newark, N. J.
Fred Voelker, New York City.
John W. Howell, Camden, N. J.
H. F. McPayne, Pittsburgh, Pa.
M. E. Gale, Angola, N. Y.
J. B. Simmons, Wilmington, Del.
E. L. Buffington, Providence, R. I.
H. F. Smith, Medford, Mass.

Winnipeg Votes to Affiliate.

Winnipeg, Man., Jan. 20.—The Winnipeg Motorcycle Club decided, at its annual meeting, held the first week of the new year, to take up full membership with the Federation of American Motorcyclists, thus forming another link in the chain of F. A. M. clubs stretched across the Dominion. Expectations are that by the spring the following clubs will have become connected with the great association: Toronto, Hamilton and London, in Ontario; Winnipeg, Manitoba, and Vancouver, British Columbia.

The report of Secretary J. M. Moorhouse showed that the membership had reached a total of 80, and the prophecy was made that 150 names would be on the roll by June 1 next.

"BY THIS SIGN YE SHALL KNOW"

During the Past Year 141 Clubs Joined the F. A. M.—New Publicity Plan For Registered Repair Shops.

Bangor, Me., Jan. 20.—Despite the fact that Jack Frost reigns supreme in most parts of this big country just now, he has been unable to freeze out enthusiasm in the F. A. M. Affiliations continue to flow in, and there now are 216 clubs affiliated in a common cause. The latest members of the fast growing family are as follows: No. 215, West Side Motorcycle Club, Maricopa, Cal., 13 members; No. 216, Grand Rapids (Mich.) Motorcycle Club, 17 members. During the calendar year which ended December 31, 141 clubs affiliated, an average of nearly 12 per month. From the present outlook, this record will be licked to a frazzle this year.

So many of the newly registered repair shops are interested in the organization of local clubs, that the Chairman, hereafter

CERTIFICATE AWARDED TO F. A. M. EASTERN DISTRICT TOURISTS

The Free-Wheel Control—the Sm

HARLEY-DAVIDSON MOTOR COMPA

othest Operating Clutch in the World

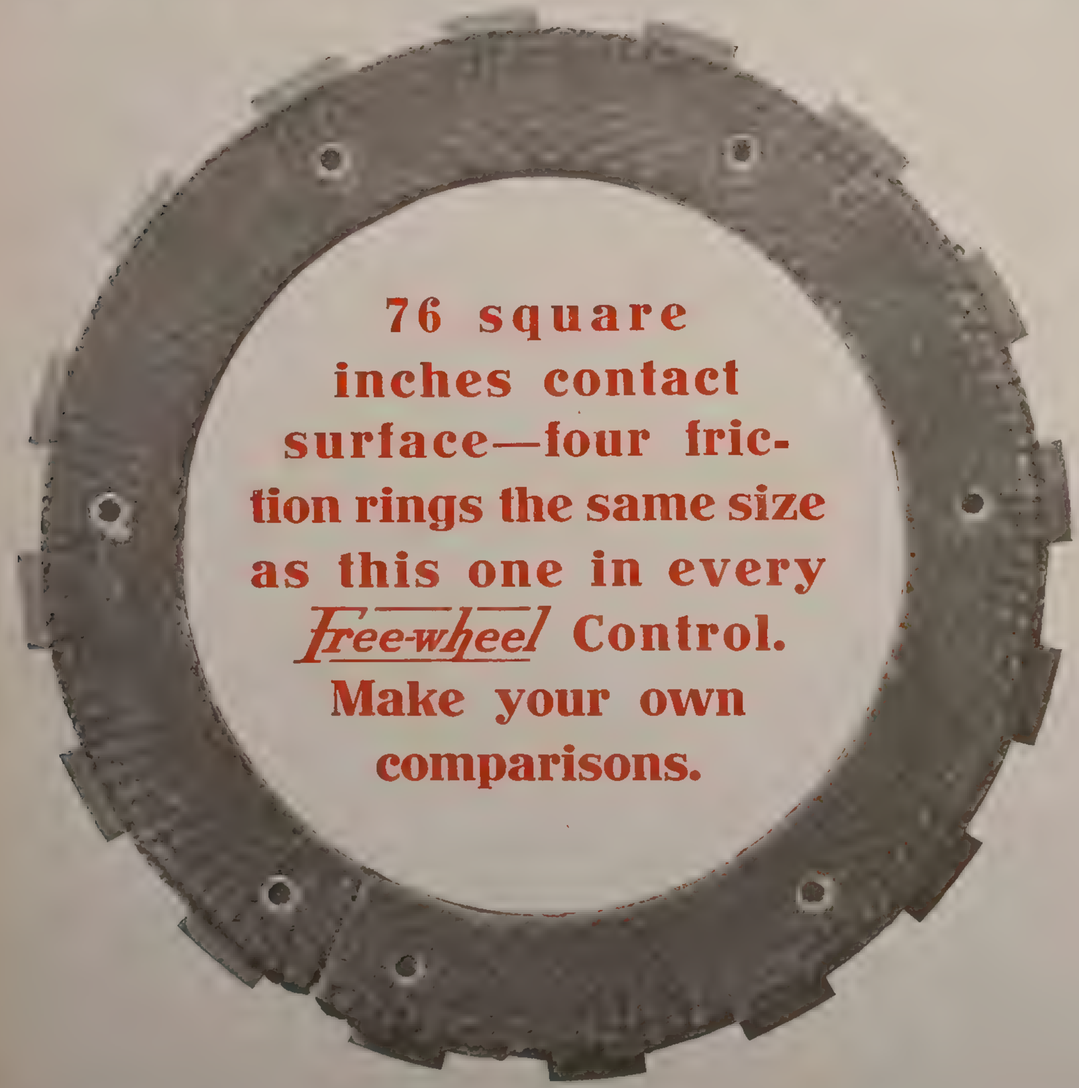
COMMON SENSE is enough to convince anyone open to conviction that the rear wheel is the only logical place for a clutch on a motorcycle. It's the only place where there is room to make the various parts large enough to do the work required.

It requires no mechanic to see that the dry plate clutch of the Harley-Davidson cannot throw oil or grease on to the machine or rider because no oil or grease is used.

The Free Wheel Control on the new Harley-Davidson is in such great demand by riders who want "something better" than the ordinary "free engine clutch" that we have been obliged to secure a separate building for the use of the clutch department exclusively. We are now operating the largest stamping presses in the motorcycle business—two of them—with 400,000 pounds capacity, and we have to work them to the limit to make enough Free Wheel Controls to take care of our orders.

You know yourself that nothing is so convincing as a trial. All our dealers have their demonstrators now. Take a ride on a 1912 Harley-Davidson yourself.

The Harley-Davidson Free Wheel Control is not a makeshift attachment or an after-thought added on "to meet competition." It is built **for service** and should last as long as the machine itself, with the possible exception of the replacement of the friction disk facing once in two or three years. This facing is an asbestos composition that cannot possibly burn, char or go to pieces from heavy overloading or abuse, and is subject only to natural wear.



The two ball bearings have 3 inch races. The ball thrust bearing has 2¾ inch races. The very size of these parts guarantees a life-time of wear if given as much care as any ordinary hub receives.

The friction faces and the ball bearings are the only parts in the Free Wheel Control **which could possibly wear out** or cause trouble, and they have been made so unusually large that their life will be nothing short of phenomenal, when compared with other prevailing types of under-sized attachments which have been offered to the public for the past year or so.

Even such little details as the rivets used to fasten the facing material to the clutch plates have received proper attention. Even these rivets are made in our own plant. They are not common clinch rivets. They are **swaged bronze**, large, hollow and indestructible, and **will not tear out** or cause trouble like the kind used in the ordinary clutches do.

HARLEY-DAVIDSON MOTOR COMPANY, - - - - - Milwaukee, Wisconsin

will consider them as good "club prospects," and supply them accordingly with affiliation papers, by-laws and other club propaganda. This literature, supplemented with that sent out by National Secretary Gibson, will assist repair shops materially in the work of club organization.

Otto F. Schacht, Waseca, Minn., writes that the F. A. M. is a rather scarce commodity in that section, but he believes that a strong demand for it can be created. Accordingly he cheerfully has volunteered to play the role of missionary and preach the F. A. M. gospel.

Although burning the midnight oil in large quantities these times, the Chairman finds his correspondence quite overwhelming. Therefore he begs the temporary indulgence of his many friends who may feel that their communications are being neglected.

Watch That Repair Shop List Grow.

Like the New York sky towers which appear to grow in a night, the family of F. A. M. registered repair shops is multiplying rapidly. Latest additions are as follows: F. P. Fentress, 47 Commerce street, Tacoma, Wash.; Greenough & Greenough, 24 King street, Charleston, S. C.; A. J. Gladwell, 207 S. Main street, Lima, O.; Motorcycle & Supply Co., 42 Walton street, Atlanta, Ga.; Charles S. Cobb, South street, Plainville, Mass.; Kenton Motorcycle Co., 122 S. Detroit street, Kenton, O.; The Petmecky Co., 505 Commerce street, Austin, Tex.; P. J. Arbuckle, 813 Ninth street, Greeley, Colo.; American Motor Co., 2724 Michigan avenue, Chicago, Ill.; Consolidated Mfg. Co., 145 Michigan avenue, Toledo, O.; D. & M. Hardware Co., Hortonville, Wis.; A. L. Johnson, 311 N. Fourth street, Rockford, Ill.; R. L. Davis, 911 W. Broadway, Louisville, Ky.; B. L. Howell, 27 North street, Danville, Ill.

To encourage proprietors of F. A. M. registered repair shops to advertise their establishments more widely than is the present custom, and secure the full measure of prestige and trade which naturally accrues with such appointment, the Chairman has had prepared a neat design of electrotype, illustrated herewith, which he will furnish to F. A. M. shops on application, for use on stationery, cards and other business literature.

Since first announced the demand for the cuts has been so heavy, as to indicate that many dealers are alive to the opportunity presented to strengthen their business, and propose to take advantage of it. In response to requests for larger size cuts for use in catalogs and newspapers, the Chairman now is having a consignment of these prepared.

In announcing this new departure into the field of advertising, the chairman discharged at dealers the following publicity gun:

To Repairers:

How do you like this little sign of the "Registered F. A. M. Shop?"

Don't you think this little endorsement of your shop is worth sprading around among your regular and possible customers? You might get a few more if you go after them right. You might declaim a few of the old ones who have a "Grouch," if you live up to your new year's resolutions, and you may hold all of these against your competitor if you apply tact to a good policy and well-known business principles.

There is nothing in sight at present which can beat advertising as a business getter, while it is each man's problem to get and hold his business prospects. Make your policy an aggressive and liberal one so that at the end of the year you may retain all of your original customers and may have acquired much of the new business.

Why not get up some business-getting cards or circulars, embellishing same with this ornamental cut and make a business of placing these within a wide radius.

Attract attention to your advertisements in the local papers by using this little sign:

F. A. M. REPAIR SHOP SIGN

Do the same thing for your business through using it on your stationery, bill heads and business cards, and see to it that these latter are delivered to every customer.

Make your customers feel easy and at home and plan for their comfort and entertainment while waiting; furnish them with copies of the latest motorcycle journals, etc. This is educational and good business.

We want to make your place a popular recruiting station for the F. A. M. and are doing all we can to attain this end.

The chairman solicits your co-operation and active participation in local advertising and actual hard work along the lines of popularizing the sport and pastime of motorcycling and in building up the membership of the F. A. M.

The chairman will be glad to receive requests for the "Repairman's Special Electro" from all who will use it. Not furnished to other than F. A. M. shops.

Annual Meeting of the Chattanoogans.

Chattanooga, Tenn., Jan. 23.—Officers were elected at the January meeting of the Chattanooga Motorcycle Club as follows: President, O. G. VonLong; vice-president, Wells Boyd; secretary, Jesse J. Lesh; road captain, Ed Marler. After the meeting a "Dutch lunch" was served and was followed by a smoker. Informal talks were indulged in and there was music a plenty.

Tacoma Club to Affiliate with F. A. M.

Tacoma, Wash., Jan. 20.—After having fallen several points below par on the "live motorcycle club exchange," the Tacoma Motorcycle Club, took an upward trend at its first meeting of the year, and seems due for a long rise. That it has not dropped entirely off the quotation board is due to the activity of about a score of its members and they were on hand in force at the meeting to try and start a big bull movement. The rising market began shortly after F. A. M. State Commissioner J. F. Gorman, had spoken in behalf of the national organization, and succeeded in persuading all of the 21 present to fill out membership applications. Then the club enthusiasm went up in jumps, and a set of real officers were nominated as follows: President, Clint Hall; vice-presidents, Dr. Button, L. Freeman, L. Huggins, A. A. Richardson; secretary-treasurer, A. F. Hoska, Jr.; captains, Ray Packard, R. Hachaway, A. R. Wisner; lieutenants, Fred Folkes, B. Oxley, L. Freeman, A. A. Richardson, R. Sands; trustees, M. Martin, J. C. Lilienthal. The election wil loccur February 12. Immediately following the nomination of Hoska for the secretary-treasurership, a motion was made and carried, that nominations for this office be closed, action which constituted a delicate compliment to the nominee's past work.

Ladies Entertained by Los Angelans.

Los Angeles, Cal., Jan. 20.—At the monthly reception tendered to ladies by the Los Angeles Motorcycle Club, last evening, the new entertainment committee, appointed January 1, consisting of Messrs. Burford, Nale and Brown, showed a keen appreciation of the importance of their duties by having the clubhouse prettily decorated with Japanese lanterns and palms, introducing a string orchestra to the house, and serving a "bang-up" lunch. The large crowd present thoroughly enjoyed the novelty.

The club is about to rearrange the entire house, and purchase new furniture, carpets and fixtures, preliminary to starting a campaign for new members in the spring that will outdo all efforts of the past. A committee is at work now making arrangements for a motorcycle show, the date for which has not been set. Last winter's show was a big success and dealers and riders are looking forward to this one impatiently.

Winter Riding In Central Indiana.

Crawfordsville, Ind., Jan. 22.—Severe winter weather has not entirely discouraged the members of the Crawfordsville Motorcycle Club from riding throughout the year. Two enthusiasts have not stored their machines and have been braving Old Boreas bravely with the thermometer below zero. Secretary Miller states that the prospects for the coming season promise much in the way of enjoyable runs and a large increase in membership is assured.

Many Activities of the Columbus Club.

Columbus, O., Jan. 20.—As this is leap year Cupid is apt to be a busy youngster when the Columbus Motorcycle Club stages its second annual dance in A. C. R. Hall on February 1. The committee of arrangements is composed of Fred Hare, Herbert Siebold, James Sugar, (isn't he the candy kid), Harley Funk and G. H. Bangham.

Just now the club members temporarily have transferred their affections from motorcycles to bowling. A bowling league has been formed, with Nelson Redden as president. Teams have been made up between the riders of the various makes of machines and there is a great rivalry among them for the supremacy of the alleys. All of the teams are entered in the city tournament and are affiliated with the American Bowling Congress.

G. H. Hamilton, president of the F. A. M., was in the city this week, presumably looking into Columbus claims for the national assembly and racing tournament this summer. W. H. Snyder, the local dealer, who went to the New York show to boost Columbus for the meet has returned, and is much pleased with the result of his efforts. He states that he found plenty of encouragement and favorable sentiment for Columbus.

Marylanders Hold Their Annual Meeting.

Baltimore, Jan. 24.—Since its organization about a year ago the Maryland Motorcycle Club has enjoyed a decided growth. Starting with a charter membership of six it has climbed to 80 in number, and soon expects to eclipse the century mark. At the annual meeting recently held, the following board of officers was chosen for 1911: President, Frank O. Boyd; vice-president, August Zimmermann; treasurer, William Wood; secretary, Elmer Snyder; captain, W. S. Standiford; lieutenants, William F. McCauley, Herbert Stubbs; executive committee, Bert Heinz, Howard Essig.

The club has been fortunate in securing the services of Osbarne I. Yellott, the recognized authority on motor laws and regulations in the State of Maryland, as counsel. Mr. Yellott is also an earnest advocate of

UP TO DATE, AND VERY FETCHING

the good roads movement. The club is endeavoring in numerous ways to attract to its ranks all riders who have not yet realized the vast benefits to be derived in belonging to a well-organized body, working for the benefit of the motorcyclist in general and the promotion of sport along the right lines.

Frequent social affairs are being held during the winter months and the chief among these is the annual banquet which is slated for January 31. This event promises to far surpass last year's function, which was conceded to be the best thing of its kind ever conducted by the club.

For the benefit of those members who want to demonstrate their club connections on the road, an official club emblem has been devised, and is reproduced in the accompanying illustration. Brass and silver are the materials used and the insignia is intended for mounting on the front mud guard. For a foundation a wheel design was selected, the club name being mounted on the rim, and in the center the F. A. M. emblem was inserted, making a pretty combination, which serves a double purpose.

Motorists of Southern Jersey Dine.

Atlantic City, N. J., Jan. 22.—Very much of a good time was had at the recent annual banquet of the Atlantic City Motorcycle Club, a photograph of which appears on this page. The walls were placarded with up-to-date signs and much fun was extracted from them by the jolly party.

Twenty members have been added to the list during the past season. Negotiations are in progress for a club house with several desirable sites in prospect. The officers shown in the banquet picture at the head of the table, reading from left to right, are: William Shannon, treasurer; Albert C. Stephany, president; William Haenline, vice-president, and William F. Specht, Jr., secretary.

Davenporters Re-elect President Hunt.

Davenport, Ia., Jan. 20.—At the annual election of the Davenport Motorcycle Club, January 12, officers were chosen, viz.: President, Dr. W. F. Hunt; vice-president, Philip Wagner; secretary, Edward Soone; captain, W. Erickson; lieutenants, J. M. Epperly, Lloyd Alvord.

WHEN ATLANTIC CITY MOTORCYCLISTS BANQUET THEY BELIEVE IN SIGNS—IT MAKES THEM HAPPY

F. A. M. "CRADLE OF LIBERTY" DESTROYED

Fire gutted the building which formerly was occupied by the Kings County Wheelmen, Brooklyn, N. Y., Wednesday, January 24. It was a famous rendezvous of cycling days, but perhaps its greatest claim to prominence was that it was the birthplace of the Federation of American Motorcyclists, which was founded within its historic walls, by R. G. Betts, on September 7, 1903. The illustration shows the founders of the F. A. M. assembled in front of the building on that epoch making day.

Marietians Will Have Lecture Course.

Marietta, O., Jan. 22.—There was a large gathering of the Marietta Motorcycle Club on the ocasion of the annual meeting, held the first week of the present month. Officers were elected for the ensuing year as follows: President, Edward Baumgartner; vice-president, Earl Oesterle; secretary-treasurer, Blaine Johnson; captain, Arthur Bender; first lieutenant, G. R. Yeomans; second lieutenant, Raymond Miller; board of directors, the above named officials and Henry Baker and Frank Nolan. Standing committees were assigned as follows: Membership—Frank Nolan, chairman; Raymond Miller, Earl Oesterle; House—Arthur Bender, chairman; Leslie Meredith, G. R. Yeomans; Entertainment—Henry Baker, chairman; Earl Oesterle, Raymond Miller. After the completion of business a banquet was served.

At the February meeting of the club G. R. Yeomans will deliver a lecture on "Gasoline and Its Uses;" Frank Nolan will also talk on "Magnetos," and Blaine Johnson will say something about "Tires." At this meeting ladies will be invited to attend and hear the lectures, all of which will prove to them that "the club" is not simply a bluff on the part of the men to get away for the evening, but a benefit to all who attend.

Georgia's Capital Organizes a Club.

Augusta, Ga., Jan. 22.—An enthusiastic meeting of motorcyclists organized a club on the evening of January 15 at the Chamber of Commerce with 51 charter members. Officers for the first year were elected as follows: President, Chester Story; vice-president, E. W. Watson; secretary-treasurer, Hugh Saxon; captain, L. H. Fourcher; first lieutenant, M. B. Buford; second lieutenant, C. H. Story.

A pleasing incident of the meeting was the donation by the promoters of the New Years' Day race meet of the net proceeds to the club treasury. Arrangements are being made for a centrally located club room which will be nicely furnished.

Arthur Mitchel, the well-known racing man, who is traveling in the South for a well-known supply house, was present and explained to the meeting the many advantages of affiliating with the F. A. M. He also related a number of interesting experiences in his racing career, stating that he is now out of the racing game—for the present at least. The question of F. A. M. was postponed until next meeting.

Plans for a banquet and smoker are under way and an endurance contest is scheduled for the early spring. A big club meet is also proposed for a date in April on the Georgia-Carolina fair grounds track.

Motorcyclists Elect Officers in Madison.

Madison, Wis., Jan. 23.—The annual meeting of the Four Lakes Motorcycle Club elected the following board of officers for the ensuing year: President, A. G. Aldrich vice;-president, John Sumner; secretary, F. W. Huels; treasurer, Charles H. Gratiet; captain, L. A. DuBois; first lieutenant, F. W. Huels; second lieutenant, N. L. Ester. The club has 25 members at the present time, nearly all of whom belong to the F. A. M.

FOR A 20000 MILE TOUR

Scheme Presents Possibilities of Rivaling the "Glidden" of the Autoists—Prominent Tradesmen Present Plan.

Motorcyclists will have a big national tour of 2,000 miles this summer, patterned after the Glidden automobile tour, if the plans proposed by A. B. Coffman, of the Consolidated Mfg. Co., Toledo, Ohio, and A. J. Musselman, of the American Motorcycle Co., Chicago, materialize. While of course the project as yet largely is in embryo, it has developed to an extent which indicates its magnitude. Ten days are calculated on as sufficient to cover the total distance named, which would call for daily runs of 200 miles.

It is the aim of the fathers of the tour to make it an annual affair and to offer two trophies, one for trade contestants, the other for private owners. The trade trophy will have a value of $150, and will be a permanent challenge cup, while the private owner prize, also a cup, will be worth $100, and will become the permanent property of the competitor winning it each year. Prizes will be awarded on a scoring basis.

Of course it is proposed to have the tour start sufficiently prior to the F. A. M. meet to allow it to finish in the city where the meet is to be held, and the awarding of the meet for this year is yet to be made, so that this portion of the tour plan must remain tentative for the present. President Hamilton, of the F. A. M., is said to be heartily in favor of the national tour.

Want National Capital Law Modified.

Washington, D. C., Jan. 22.—At the last meeting of the National Capital Motorcycle Club, resolutions approving the action of the commissioners of the District of Columbia in making it unlawful for more than one person to ride on any one motorcycle at one time, provided the said ordinance be enforced only in cases of motorcycles carrying an extra person in front of the operator of such motorcycles. The club, however, in its resolution, condemns as being unjust and not in accordance with the spirit of the law, the enforcement of the ordinance in cases of motorcycles carrying an extra person in the rear of operator.

It was voted to forward a copy of the resolutions to the chief of police of the District of Columbia, and a committee was appointed to wait upon the commissioners and the chief of police with the view of having the ordinance modified.

Rochester Forms New Motorcycle Club.

Rochester, N. Y., Jan. 24.—The Flower City Motorcycle Club has just been formed with the following officers: President, H. George Hammon; vice-president, J. J. Malone; secretary, William Krieg; financial secretary, A. D. Cook; treasurer, C. Allen.

PRINCE'S NEWEST SPEED BOWL

Banked 50 Degrees All the Way Round the Third Mile Stretch at Los Angeles—Opening Meet on February 11.

Los Angeles, Jan. 22.—The new Los Angeles Stadium will be completed and thrown open in time for practice riding February 4, and it is now the plan to hold the first races February 11. This track, which was designed and is being built by Jack Prince, will be the most modern speedway on the Pacific slope, and Prince, who has constructed tracks at Springfield, Mass., Chicago, and Salt Lake City, for the exclusive use of motorcycle riders, besides the tracks at Oakland, Playa del Rey, Los Angeles, and other points in California, thinks it will witness the making of new records before it has been used a month.

The track at the new Los Angeles Stadium marks an advance in track making. It is a third of a mile in circumference, built all the way round at an angle of 50 degrees.

"It is the fastest track I have ever built," Prince declares. "Manufacturers have more than kept pace with me. Each time I have built a new track—and I have constructed four since I built the old Coliseum track here three years ago—I have made the angle of the banking a little greater. At San Francisco I went to 40 degrees, and no sooner had we opened the track than two of the companies sent out machines that 'skidded' when they were opened up. This track will easily hold a speed of 100 miles an hour, and it will not surprise me to see that mark beaten before the track is a month old. Eighty-three miles were reeled off by a four-year-old machine on the motordrome at Venice, and the third of a mile circle I am building here will be safer and faster than the Venice track.

"The machines that are being turned out this year are faster than ever. While the cubic displacement of the engines has not been enlarged, it is claimed by at least two of the factories that their so-called seven-horse engines are developing twelve-horsepower on block test. This being true it seems to me that Los Angeles should see every known record fall within a short time."

It is claimed that the Coliseum in Los Angeles, referred to by Mr. Prince, was the first motorcycle racing track in the country. It was opened March 7, 1909, and for a time held all the world's records. It had three laps to the mile.

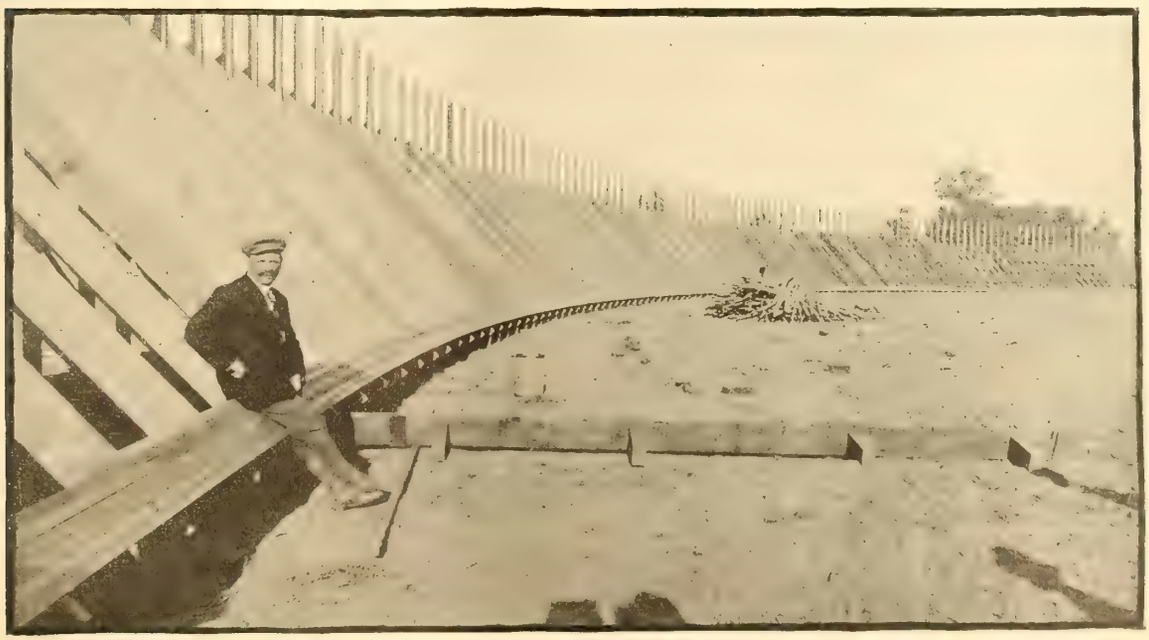
Paul J. C. (Dare Devil) Derkum, manager of the Los Angeles Stadium, has announced that motorcyclists must ride to win on the new track, or forfeit their ratings and chances at the purses.

All motorcycle racing on the Pacific Slope is now in charge of Charles Fuller Gates, who will personally act as referee at the new track and co-operate with Derkum in inaugurating the Class B plan to insure fast races. Mr. Gates has appointed the following officials: Starter, John S. Wiese; chief timer, George M. Adair; chief scorer, John H. Dielman; chief judge, F. A. Carroll; announcer, Howard Tuttle; clerks of course, John J. Farrell and H. H. Day.

As soon as he completes the Stadium here Jack Prince will leave for Baltimore, Md., where, in connection with Howard A. French, he will build a track, which, according to recent advices from that city, promises to assume ambitious proportions as a general athletic stadium.

Racing is expected to continue in Los Angeles until the latter part of April or early in May. Then the professionals will leave for Chicago to open the season at Riverside track.

First Speed Menu for Prince's Piepan.



Five events are slated to inaugurate the speed baptism of Jack Prince's new motordrome at Los Angeles, on February 11. The card follows: Two-mile private owner, 30½ class; medals. Two-mile Class A professional, three heats for points; $70, $45, $35. Six-mile free-for-all professional handicap; $50, $40, $30, $20, $10. Three-mile consolation for non-winners, Class B; $15, $10, $5. Instead of the meaningless trade rider class, the promoters have created two new professional subdivisions, designated Classes A and B. The latter class will include those professionals who do not ride fast enough to qualify for Class A, which naturally will be composed of the top notchers. Whenever a Class B rider shows form equal to a Class A rider, he will be transferred to Class A, and vice versa. It will be noticed that there are no events billed for trade riders.

Graves Says He Is Still a Free Lance.

M. J. Graves, the professional motorcycle racer, of Los Angeles, Cal., states that as yet he has closed negotiations with no manufacturer to ride his machines in races this season. Graves drove Excelsiors in races at Ascot Park, about the first of the month, which created the impression that he had signed up for this mount, but he says he still is a free lance. It is quite likely that he will be on some factory racing staff when the new Los Angeles track makes its debut.

Motorcycle Races For Cortland, July 4th.

Cortland, N. Y., Jan. 24.—Preparations are being made by the Cortland Motorcycle Club for a big race meet at the fair grounds, July 4th. The track, which is a half-mile circuit, is claimed to be one of the best in the State, and $495 in prizes will be offered. Seven events will be programmed, and sanction already has been applied for.

BUILDER JACK PRINCE AND HIS PARTIALLY COMPLETED LOS ANGELES STADIUM

MANAGER PAUL DERKUM

NOWLIN NAILS VICTORY AT TAPE

Rip-Roaring Windup at Tampa Races—Policeman Hanna Plays Promoter—May Build Board Track.

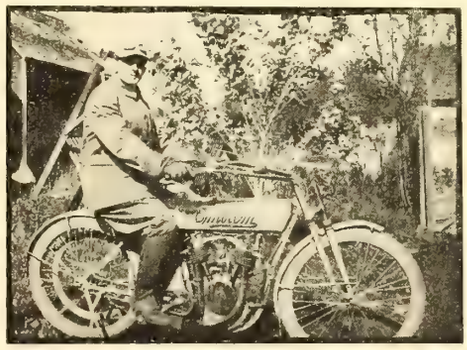
Tampa, Fla., Jan. 19.—Exchanging the best speed swats their machines possessed, all the way, and swapping the lead now and then, Albert Nowlin and John Marsicano fought a spectacular seven-mile gasoline duel, at the motorcycle race meet here today, at the Tampa Bay half-mile dirt track, the former winning by a wheel, in a heart-breaking finish that stirred the crowd to a frenzy. It easily was the closest and most sensational motorcycle race ever witnessed here, and far outclassed the two other events in sporting worth. When the day closed, honors were even, between Nowlin and Marsicano, the latter trimming his erstwhile conquerer, over the 15-mile route, when Nowlin's machine balked. Eino Johnson, who thriftily collected third monies in these events, added to his "pile" by a victory in the five-mile stock class.

In the star number, both Nowlin and Marsicano counted plenty of enthusiastic admirers. Nowlin, on an Indian, took the lead, and led the field until the sixth lap, when Marsicano put his Excelsior alongside on the back stretch, and for a short time it was a neck and neck struggle, but the gaff was too strong for Marsicano, and he fell back a bit, but still had plenty of fight left. Encouraged by his friends, Marsicano went for Nowlin again, after a brief spell, and passed him in the stretch, on the eighth lap.

Nowlin had no thought of surrendering so easily, and hung close to his rival, the meanwhile planning a coup to recover the lead. Marsicano stayed in front, until swinging the upper turn in the bell lap, when he faltered for an instant, and Nowlin, ever alert for the opportunity, took advantage of it and flashed his spurt. Down the stretch they came, fighting desperately, with Nowlin slowly but surely overhauling his man, and flashing across the line to victory, by a wheel's margin.

There was promise of a repetition of this rare "mill," in the 15-mile session, until Nowlin "blew up," and then the affair lost its glamor. Nowlin showed the way until the 18th lap, with Marsicano close coupled. In the next circuit Marsicano seized the lead, and hod no difficulty in holding it, for Nowlin had "shot his bolt," and fell back steadily, although he managed to collect second money.

Nowlin's hoodoo clung to him for the rest of the day, for he also "passed out" of the stock event early, owing to motor ailments. Joseph D. Hanna, F. A. M. state commissioner, conducted the meet under the title of the Tampa Motordrome Racing Association, jointly with the Town Criers' Association, the proceeds to be devoted to providing Tampa with her first town clock. Hanna plans to put on future meets on the same track on all holidays for the present. He ultimately hopes to interest capital in the erection of a board track outside the city limits, and operate Sunday meets. The summary:



Seven-mile professional—Won by Albert Nowlin (Indian); second, John Marsicano (Excelsior); third, Eino Johnson (Indian). Time, 9:04⅕.

Fifteen-mile professional—Won by John Marsicano (Excelsior); second, Albert Nowlin (Indian); third, Eino Johnson (Indian). Time, 19:08.

Five-mile stock, professional—Won by Eino Johnson (Indian); second, Louis Torres (Harley-Davidson); third, R. L. Malone (Harley-Davidson). Time, 6:52⅖.

An Enthusiastic Emblem Rider.

J. Romain Lipe, of Johnstown, N. Y., is probably the best known motorcycling tour-

J. ROMAIN LIPE, JOHNSTOWN, N. Y.

ist in his vicinity. Weather and the many hills that abound in that part of New York State have no deterring effect on Mr. Lipes' enthusiasm, for he rides his Emblem twin the year round, and is rolling up a mileage with it that is the envy of all the local riding fraternity.

Race Course Privileges Curtailed in Toronto

Toronto, Ont., Jan. 22.—By the action of the Parks' Committee of the Toronto civic government in refusing to sanction the holding of an auto-motorcycle race-meet on the half-mile exhibtion track on September 21, the motorcyclists of the city have taken it that the city fathers intend to boycott all motor racing in future, and unless immediate action is taken in the erection of the much-talked-of board saucer, it is believed that the riders are in a fair way of being without an oval upon which to race this coming summer. The fair-ground speedway was the only available place for speed contests last season, and quite a scare has ben raised among the single-trackers who take the attitude of the present exhibition board as a sort of forecast of impending trouble. It is the opinion of the riders, spurred on by this incident, that the club should crystallize long-standing plans for a board bowl without delay.

FRENCH'S NEW BALTIMORE TRACK

Will Be a Third-Mile Circle, With Cinder Path Inside, and Place For Aeronautical Contests, Etc.

Baltimore, Jan. 22.—When Howard A. French gets through planning and building he is going to have the most novel motordrome in the world. The three-lap saucer will not be different from other similar bowls, but the inclosure will become an amphitheater, for it will be used for a number of purposes. French has just announced his intentions, and the wideness of their scope has brought to him many congratulations for his thoughtfulness. As proposed, inside the board track a cinder path will be laid out, being four laps, on which the marathoners of this and other cities can perform. There is but one good track in this city and the athletes here are showering praise upon French for providing a place for their meets.

Then the place, at a short notice, can be converted into an aerodrome, as it will be large enough, and with pylons inside the board track, the birdmen would find racing and performing their stunts quite an easy matter. With the erection of a rostrum in the center a simple thing, the motordrome, with its proposed seating capacity of not less than 4,000 and probably a great deal more, would be an ideal place in summer time for open-air meetings, conventions and conferences.

The bicycle riders, of course, would be given permission to promote their own races and opportunity would be afforded them to run endurance contests and sprints on any night. French proposes to run a motorcycle meet only one night a week during the season, and possibly on all holidays. The other days and nights would be left open to be filled by the bicycle men, athletes, birdmen, etc.

French has written to Jack Prince asking him to send the cost of the track and the stands before he leaves Los Angeles for this city sometime early next month. French also sent word to Prince that the F. A. M. will grant no sanctions for board tracks other than absolutely circular in shape. French took the question up with the F. A. M. while in New York and had the question settled.

Canadian Motorcyclists Play Good Euchre.

Toronto, Ont., Jan. 22.—At the monthly euchre of the Toronto Motorcycle Club, held on Wednesday evening, Jack Gilley made a clean sweep, scoring a win in every round of the game, for which he was presented with a handsome silver-mounted cane. Over 50 members were present. Proof copies of the club's constitution were distributed for the perusal of the members, before being bound in book form.

OLYMPIC CAUSE BOOMING EAST, WEST AND SOUTH

Jersey City's "Live Wire," Charley Hansen, Jumps to the Front with Results of Individual Efforts—"Six-Pointers" of Chicago Voting Solid for "Windy City" Team - Kentucky Coming—Voters Hustling.

To send a bicycle team to the Swedish Olympic Games in July now appears to be the chief aim of every one interested in all branches of the pastime. Those who ride for recreation, those who ride in competition, track racers, road racers, mileage men, century riders, veterans of the sport, many well beyond the prime of life some of whose names have had national prominence, the rising generation, legions of whom are eager for the honors that once again give auspicious promise of materializing in the field of one of the greatest of sports—cycling, all are aroused and working industriously and, moreover, fruitfully, for the common good. It now remains for those connected with the commercial side of the bicycle—the manufacturer, the jobber and dealer, to realize what a great business-getting impetus will be given the industry by their support and the consummation of the project.

Hansen Exemplifies Ferguson's Suggestion.

What is being done by individual effort is strikingly illustrated this week in the entry to the subscription list, the result of the work of Charles Hansen, of Jersey City, who followed the suggestion embodied in a letter from E. Lee Ferguson, of the C. R. C. A., as published in these columns lately, to wit—"it's the little things that count, start a coin contribution among your friends"—and Hansen did so—the result, a contribution to the fund of $18.24 in pennies, nickels and dimes, accumulated since December 4.

"Something Doing" in the Lake Metropolis.

The riders' popularity voting contest is serving to stir up more interest than any movement yet devised, as is attested amply by the deluge of requests for blanks and the immediate return of the filled ballots. As mentioned in the last issue, Chicago already has been heard from, although with a mixed ballot, and now comes the first solid ballot for Chicago riders as follows: H. Hultgren, N. Kockler, B. Herrick, E. Kockler, Avid Peterson, P. A. Nordmark, J. Slattery, S. Schluter, B. Blum, A. Blum, E. Harlow, J. Horsch. (Signed) C. L. Schofield. Accompanying this ballot was the following letter to the bicycle editor; note the prediction it contains:

"The newly reorganized Six-Point Cycle Club, formerly one of the leaders in Chicago cycledom, sends the above riders' names. This city has not been active of late, but now that we have taken up the revival as aroused by the Olympic Team, we assure you of the best prospects for the season of 1912 and you will hear from us later. Wishing you success from our members, we are,

"The Six-Point Cycle Club,
"C. L. Schofield, President."

Supscriptions Pledged to the American Olympic Bicycle Team Fund.

"Old Kaintucky" Contributes a Candidate.

Another illustration of how the Olympic proposition is taking the country over, is shown in the following letter received from D. M. Campbell, of Gray, Ky., by Chairman Kelsey, of the N. C. A. Board of Control. Mr. Campbell says:

"In expressing a desire to prepare myself to be eligible for selection on the American team for the Olympic road race, would like to state that I am 34 years old and an amateur, and desire to become registered with the N. C. A. so as to get into the trials and elimination races to select the Olympic team.

"Would like to know whether trials will be held in the vicinity of Louisville or Indianapolis, and whether I will require a traveling permit to attend these races or any track races that may be run in connection. I expect to go to Hot Springs, Ark., for a month beforehand to get into condition.

"Have been in the mercantile business all my life, but have a good set of rollers and a Columbia racer, and use them every night."

In all probability the nearest elimination trials for Campbell to compete in will be either in St. Louis or Buffalo. No traveling permit is required under present day rules, except the usual N. C. A. registration card, which is good the world over, where the governing bodies are allied with the Union Cycliste Internationale.

New Yorkers Distribute Race Prizes.

Another master stroke for publicity was completed Saturday last in New York City, when the prizes were distributed to the winners of the unique Thanksgiving Day race of the Olympic committee before a crowd which packed the floor of Alhambra Hall, on the occasion of the reception and ball of the Century Road Club Association. The presentations were personally conducted by Chairman H. A. Gliesman, of the race committee, and were preceded by speeches by Mark Eisner and E. Lee Ferguson, counselors, respectively, for the Motorcycle Dealers' Association and the C. R. C. Association, and in whose remarks were explained the aims and objects of the Olympic

team proposition, concluding with a short life history of the late Colonel Albert A. Pope and George N. Pierce, pioneers in the manufacture and marketing of bicycles and the founders of the respective firms which donated the two leading prizes of the race, a fully equipped racing bicycle each.

Other donators to the prize list were: J. W. Grady & Co., Diamond Chain Co., New Departure Mfg. Co., Corbin Screw Corp., Eclipse Machine Co., F. A. Baker & Co., Bevin Mfg. Co., The Standard Co., Veeder Mfg. Co., Bridgeport Brass Co., United States Tire Co., Fisk Rubber Co., Whitney Mfg. Co., Julius Bindrim, Henry Kest, Progressive Cycle Co., Rose Mfg. Co. and the Bicycling World Co.

From Germany comes the significant news that the German Imperial committee, rather than forego cycling representation in the Swedish Olympic Games, has applied to the Union Cycliste Internationale for licenses. This is a bitter pill for the German Cycling Federation, which has been at war with the sports controlling body, and who applied direct to the Swedish committee for entry. They were refused, and by applying as above, admit the futility of outlaw organization.

Owing to the lack of space the voting blank will not be published in this issue, but all who are interested in the cycling industry and sport are invited to submit the names and addresses of those to whom it is desired to have voting blanks sent—make your list as large as you like—self-explanatory blanks will be sent promptly and with absolutely no obligation incurred by the recipients. Send your list at once to the bicycle editor, The Bicycling World Co., Box 649, New York City.

Interesting Race at Millrose Games.

Although Eddie Goodwin won the five mile flat floor bicycle race for a Columbia bicycle, known as the "Brooklyn Standard Union" trophy, with W. Waeldner second, at the games of the Millrose Athletic Club, 47th Regiment armory, Brooklyn, Saturday, January 20, the race of the evening was for the third place, between Jack Townsend and H. J. Murphy. Two preliminary mile heats resulted as follows, the riders finishing in the order named: First heat—W. Raleigh, N. Y. A. C.; N. Gutoff, W. A. C.; W. Waeldner, Atlas B. C. Time, 2:52⅗. Second heat—E. Goodwin, I. A. A. C.; H. J. Murphy, Atlas B. C.; J. Townsend, I. A. A. C. Time, 2:54⅕.

Owing to the fact that the armory management had permitted the floor to retain its slippery waxen luster, slow time and cautious riding prevailed. In the final heat Gutoff was the first to fall, concluded he had enough; Murphy scrambled to his feet and made a quick get-away after his intimate acquaintance with the floor and took up the riding with the loss of one-half lap; four laps, half-mile later, at the finish of two miles, Goodwin slipped but managed to right his wheel in time when rounding the turn into the home stretch. Waeldner, following closely, swerved out to escape the expected fall and Townsend and Raleigh did likewise. The former went down first and made a lightning recovery, getting started again before Murphy could get through the jumble.

With half a lap separating them from the flying leaders, Townsend and Murphy put up a terrific duel for the remaining three miles, urged on by the thought that each mile would mark the elimination of one or the other, as at the start it had been announced that "miss and out" rules would prevail, but this was abandoned by the officials when it was seen that to do so would deplete the field. No appreciable gain could be made on the leaders, Goodwin and Waeldner, and they finished in that order, with Townsend and Murphy, about evenly matched, fighting out the last of their hair-raising sprints in an "inches" finish over the tape. Time, 13:53⅕.

CHARLES HANSEN
The hustler from Jersey City, who has set an example by collecting $18.24 in small change for the Olympia Fund.

Manhattan Wheelmen Choose New Officers.

The Manhattan Wheelmen, with headquarters at 38-40 Carmine street, New York City, have elected the following board of officers for 1912: President, James Barry; vice-president, Frank Trainor; financial secretary, Anthony Rivello; corresponding secretary, Lawrence Corri; treasurer, George Crescia; sergeant at arms, William Tussie; assistant sergeant at arms, Nathan Schefflin; captain, George Crescia; first lieutenant, Emile Bagalatti; second lieutenant, Arthur Gatti.

COLLINS STARTS YEAR WELL

Takes First European Motor Paced Event at Velodrome d'Hiver—Press Calls Him "King of the Winter."

America's pace-following champion, Elmer L. Collins, of Lynn, Mass., started in the new year in Paris by scoring a win a week after landing on foreign soil. On January 7, at the Velodrome d'Hiver, he defeated Nat Butler, Bobbie Walthour and Jimmie Moran in an hour race, the riders finishing in the order named. In a letter just received from Collins, he says:

"Rode my first race of the year January 7 and won. Am pleased to say that this race was called the "Criterium d'Amerique," and this makes twice that I have won American championships in one year. I rode my new Columbia racing wheel and like it very much. All the other boys rode foreign makes. The newspapers call me 'King of the Winter,' but I did not know before that I was 'chilly.' Expect to ride in the six day race in Berlin, which is to be held some time in February."

Speed Cyclists, From Afar, Renew Ties.

Now that many of the professional pedal artists, who composed the large field that competed during the past season at Salt six-day race in New York City, are chasing si-day race in New York City, are chasing coin and glory in the respective lands of the franc, mark, or pound sterling, there are yet others apparently "with nothing to do 'til next season." Their activities at the present time consist principally of seeing the folks at home. Those who have been burning up the rails homeward bound are: Champion Frank L. Kramer, a week's visit to his parents at Evansville, Ind.; Lloyd Thomas, for the winter to his home in San Francisco; William Palmer, Jr., via San Francisco, back to the land of the kangaroo until next May, when both he and Thomas will ride for Manager Macfarland at Salt Lake City.

Fogler Wins a Tandem Paced Race.

Late advices from Paris show that cycling activities there are in a flourishing condition and the scores in the various races demonstrate that the big squad of Uncle Sam's boys now in Europe is rapidly rounding into form and all of the riders will eventually get their share of the prizes.

On January 14, at the Velodrome D'Hiver, the order of finish in the 25 kilometers tandem-paced race, was as follows: Joe Fogler, Eddie Root, Jimmie Moran and Fred Hill. Time, 13:15.

At the same meet was run an hour motor-paced race for the European cracks, in which Guignard, the winner, covered 71.625 kilometers; Parent, Seres and Darragon finishing in the order named.

Successful C. R. C. Association Ball.

With more than 400 in attendance, members and friends of the representative metropolitan cycling clubs, at Alhambra Hall, New York City, January 20, the fourteenth annual reception and ball of the Eastern Division, Century Road Club Association, might well be styled the largest and best ever in the history of that organization.

In addition to being a gathering of the clans of the "Greater City," among those present being noted the seasoned veterans and many of the younger exponents of the cycling pastime, the affair also served to bring about a closer acquaintance with those from out of town, clubs from Jersey City, Bayonne, Hoboken and Hackensack sending their quota. Club colors decorating boxes were those of the Century Road Club of America, New England Wheelmen, Bronxdale Athletic Club, and the C. R. C. A.

An unu-ual feature was the distribution of the prizes to the winners of the Thanksgiving Day race of the American Olympic Bicycle Team Committee, a permission generously granted by the ball committee and which privilege was appreciated by the recipients, as it undoubtedly contributed materially to the advancement of the Olympic Team cause through the acquired publicity, the object for which the race was promoted.

The grand march, held directly after the awarding of the prizes, was led by Henry Kest and Miss Bieregel, with George Bieregel and Miss Kest in second place.

The next event on the association's schedule for the coming season, is the annual spring century run, to be held on the last Sunday in the month of April, as in previous years, with a special fast division, designed to meet the requirements of the riders in training for the Olympic Team try-outs, with only the best of pacemakers in attendance.

Rides in Snow With Anti-Skid Chain.

Baltimore, Jan. 22.—Snow hereafter will be no bar to touring for the members of the Crescent Bicycle Club. Joseph F. Solan, a member, has demonstrated his inventive genius by equipping his bicycle with an anti-skid chain. He manifested the effectiveness of the chain by taking a spin out into the country a few days ago. He found the snow very deep, but he had no difficulty in getting along with the new attachment to his wheel. Riding on the ice was also easy.

The chain has made a hit with the club and all the members have ordered them for use when the next snow storm hits the city. They intend to enjoy the novel experience of touring in the snow, and while a few days ago they were anxious for the white blanket to disappear so they could pull off some club races, they are now pulling for more snow so they can get out on the road and test the efficiency of the chain for themselves.

CRESCENT STRONG ON MILEAGE

Final Scores for 1911 Show Excellent Mileages and Close Contest for First Honors—Contest Renewed for 1912.

Baltimore, Jan. 15.—Forging ahead in the last month, August T. Leimbach won the 1911 century-mileage contest of the Crescent Bicycle Club with a total of 10,615 miles, 27 single centuries and one double century, totaling 13,515 points. Charles E. Thoms, who led the members for eight months of the year, finished second with 11,204 miles, 21 single centuries and one double century, totaling 13,504 points, just 11 points behind the leader. William Leimbach wins the bronze medal for third place with a score of 12,835 points secured by riding 10,335 miles, 23 single centuries and one double century.

During the year the members broke all records for club mileages and centuries, reporting during the twelve months, 52,363 miles, 113 single and three double centuries. The totals piled up by each one of the three medal winners broke all previous club records for individual marks, while the monthly club record was broken several times.

The fight between the Leimbach brothers and Thoms was close throughout the year, a difference of only six points separating the three at the first of December. During the last month William Leimbach practically withdrew from the fight for the lead, which his brother clinched with a century on the last day of the year, Thoms leading until that time. If wet weather had been experienced on the last day Thoms would have been the winner.

The contest reflects the healthy condition of the Crescent Bicycle Club, which is about to enter upon its sixth season. For the coming year the members have planned the largest program in the club's history and all are working with a will for the success of the organization. The 1912 century-mileage contest started at the first of the present month and will continue throughout the year with the same awards as the one just closed, the scoring being figured an the same plan, one point for each mile and a hundred extra points for each century. Summary of the 1911 contest:

	Miles.	Centuries.	Points.
A. T. Leimbach..	10,615	29	13,515
C. H. Thoms.....	11,204	23	13,504
Wm. Leimbach ..	10,335	25	12,835
F. M. Sanborn....	5,128	8	5,928
L. M. Sanborn....	4,412	8	5,212
F. E. Mommer...	2,534	21	4,634
A. J. Baker.....	1,854	4	2,254
J. F. Huber.....	1,943	1	2,043
C. E. Berigtold...	1,491		1,491

Motorcycle Thief Gets Jail Sentence.

C. C. Hoffman, a former employe of H. A. Gliesman, 782 Eighth avenue, New York City, who recently confessed the theft from the proprietor's store of a motorcycle and personal effects two years ago, at the hearing which followed his arrest, received a 13 months reformatory sentence, despite Gliesman's clemency plea.

A. T. LEIMBACH, C. H. THOMS AND WILLIAM LEIMBACH, OF CRESCENT B. C.

CHANCE FOR FORIEGN TRADE

British Motorcycle Exports and Imports—Latter Show Heavy U. S. Increase—Possibilities of a Fine Market.

In a report issued by the Bureau of Manufactures, Department of Commerce and Labor, under date of January 9, an article of much interest to the motorcycle trade from the pen of Consul General John L. Griffiths, London, is published. It treats of the late motorcycle exhibits at Olympia Show, and the possibilities for American manufacturers to secure a footing in Great Britain. The report says that at the cycle and motorcycle exhibition recently held in London there were over 250 exhibitors, while the value of the machines displayed is stated to have been not less than $500,000. This included the pedal cycles as well as the motorcycles, but the exhibits of the latter dominated the former, both in number and in the interest shown by visitors.

From the following figures, giving the imports and exports of motorcycles for the United Kingdom in the three years ending 1910, it will be seen that whereas the total imports have been fairly even the exports have more than trebled:

Imports from—	1908	1909	1910
Belgium	820	722	707
France	42	25	35
Germany	440	617	401
Netherlands	22	6	3
Switzerland	13	23	19
United States	3	45	208
Other foreign countries	.....	4	13
British possessions	.....	.....	1
Total value..	$176,450	$199,017	$215,571
Total number	1,340	1,442	1,387
Exports to—	1908	1909	1910
Foreign countries	116	157	386
Australia	257	617	854
British India	116	205	256
Cape of Good Hope	40	71	185
Natal	16	24	47
New Zealand	254	543	900
Transvaal	89	100	201
Other British possessions	169	167	512
Total number	1,048	1,884	3,341
Total value..	$181,063	$336,475	$590,545

The marked rise of the motorcycle to public favor is attributed to its reliability, cheapness, and the pleasure experienced in riding it, and also to the introduction of the side car, in which an additional passenger may be carried. Among the most interesting and popular types are the light-weight machines for single riders. These have engines of 2 to 2¾ horsepower, 1 or 2 cylinders, 2 and 3 speed gears, run 100 to 120 miles per gallon of gasoline, and sell for $219 to $243. The popular passenger machine is 3½ to 6 horsepower, has 1 or 2 cylinders, is fitted with a clutch, is hand starting, and is geared like a car. It is capable of 70 to 80 miles per gallon of gasoline with the side car attached. The machine sells for $268 to $316, and a side car to suit is $25 to $85 additional. There are, of course, higher-priced machines on the market, but the foregoing meet the most popular demand.

"Miniature" motor cars have 3 or 4 wheels and are geared and controlled like a car. The engines are of 6 to 8 horsepower, with 1 or 2 cylinders, and are capable of 45 to 60 miles per gallon of gasoline. The price is $438 to $535. These machines however, are less favored than the true motorcycle.

Motorcycles weighing less than 100 pounds have been designed for women, and the prices are about the same as for the light-weight machines previously mentioned.

Among the latest motorcycles placed on the market are machines which are started by the movement of a lever (as in a motor car), which sets the engine in motion and obviates the necessity of running beside the machine before mounting and then pedaling to start the engine. With these motorcycles it is possible, by the manipulation of three levers on the handlebars, to control the machine. They are also fitted with two and three speed gears with which almost any hill may be climbed and the pace varied from 5 miles an hour to 20 and upward.

One point that is mentioned in a trade journal, which indicates the tendency of the chief type of engine, is the great increase in the number of large single-cylinder engines for passenger work, instead of competition sizes; in other words, motorcycle manufacturers cater more for tourists than for those desirous of indulging in racing and speed work.

In the Sunday Observer it is stated that "there is practically only one make of machine sent over ti this country from America, and an exceedingly worthy example it is. It has even served a useful purpose in adding the spur of international competition to encourage British manufacturers to make still further progress, nor have they failed in the least to respond, as can be gathered from examining the vehicles that are already staged."

Although American motorcycles imported into Great Britain are increasing in number, the possibilities of the market in these machines do not appear to have been fully realized. Direct stock depots should be opened in London under competent sales managers, by whom local agents could thereafter be appointed in the principal cities and districts; and in addition to advertising the features and prices of the machines, speed and hill-climbing accomplishments—performed in this country in the various competition trials—should be given wide publicity. Although the trade is practically monopolized by British manufacturers at the present time, there do not appear to be any insurmountable obstacles in the way of American motorcycles securing a profitable English market. Reliability, smoothness in running, resiliency, and moderate prices are the chief points to be demonstrated.

Before approaching the English market in the large manner indicated it would be advisable for the American manufacturer to send to London a representative who could thoroughly investigate all the local conditions and determine the best plan to pursue in order to secure the most attractive results.

Preparing for C. R. C. Association Dinner.

Saturday evening, February 24, is the date set for the annual dinner of the Century Road Club Association dinner, and the place chosen is the Broadway Central Hotel, at Broadway and Third street, New York City. The committee in charge is striving to make the event a reunion of all those who are interested in present day cycling, with those who have been prominent in years gone by. Many race meet promoters have been invited to be present and the co-operation of all cycling clubs is asked. Here is the menu:

Blue Points
Olives Celery Sweet Mixed Pickles
Chicken Gumbo
Baked Green Blue Fish au Madere
Pommes Persillade
Tenderloin of Beef, Pique Jardiniere
Roman Punch
Stuffed Vermont Turkey—Cranberry Sauce
Candied Sweet Potatoes
Lettuce Salad
Cheese Crackers
Metropolitan Ice Cream Assorted Cakes
Cafe Demi Tasse

Many old timers will entertain with brief addresses which will give way to an elaborate musical program following the dinner. Over 300 tickets have been sent out to date, and returns have been coming in fast to Chairman R. A. Van Dyke, 148 West 129th street, New York. The other committeemen from whom tickets may be obtained are Paul Thomas, Tarrytown, N. Y., and Sylvain Segal, 100 West 88th street, New York City.

Iver Johnson Wheelmen Annual Election.

At the annual business meeting of the Iver Johnson Wheelmen, of New York City, officers for the ensuing term were elected as follows: President, H. Kaiser; secretary, C. Irwin; treasurer, G. Bielefield; captain, F. Woisin; racing committee, C. Akuntus, chairman, H. Kaiser and F. Woisin. The financial report showed the club to be in a flourishing condition, consequently an extensive point system competition, with the handsomest medals yet offered, will be one of the many interesting features for the next season to encourage the growing and ambitious element of the club.

NEW HAMPSHIRE MOTORCYCLE LAW

Heavy License Tax on Dealers Makes Doing Business Burdensome—Private Owners Must Furnish Numbers.

Without any blare of trumpets or other spectacular celebration, in fact as quietly and peaceful as a lamb going to slaughter, New Hampshire, which is one of the New England State group, inherited a new motor vehicle law on January 1, which makes the lot of the motorcycle dealer, in the Granite State, an unenviable one. Not only is the dealer required to pay a fee of $40, for the registration of all machines owned by him or under his control, but he further is mulcted at the rate of one-half the regular registration fee, based on horsepower rating, for each motor vehicle in excess of one which he regularly rents for hire.

The injustice of the extraction of this fee from motorcycle dealers becomes magnified when it is remembered that motor car dealers selling machines costing as high as $6,000, on which the profit is large, pay no more than the agent who handles motorcycles at $400, on a meager commission basis. Motor vehicles are specified to include motorcycles, but here the sidecar and forecar also receive body blows, for they are not eligible for registration as motor cycles, and carry the motor car fees and regulations.

Private owners must pay $3 for registration, which is annual, and carry two-inch numbers, to be furnished by themselves. The holder of a registration certificate may operate a motorcycle without a private operator's license, while the holder of the latter, who need not be an owner, may operate any registered machine.

Sections of the law of particular interest to private owners and dealers in motorcycles follow:

Section 1. "Motorcycle" shall apply only to motor vehicles having but two wheels in contact with the ground, and with pedals and a saddle on which the driver sits astride.

"Motor Vehicles" shall include, automobiles, motorcycles, and all other vehicles used upon highways, propelled by power other than muscular popwer. * * *

"Dealer" shall include every person who actually is engaged in the business of buying, selling or exchanging motor vehicles, on commission or otherwise, or any person who lets for hire two or more motor vehicles.

"Garage" shall mean every place where five or more motor vehicles are stored or housed at any one time, except only such places in which motor vehicles are kept by the owners thereof without payment for storage.

"Automobile" shall include all motor vehicles except motorcycles.

"Operator" shall mean any person who operates a motor vehicle, other than a chauffeur.

"Non-resident" shall apply to residents of States, districts or countries, who have no regular place of abode or business in this State for a period of more than three months continuously in the calendar year.

Section 2.— * * * but no such number plates shall be furnished by the secretary for motorcycles. The horsepower of every motor vehicle sought to be registered shall be determined by the secretary. * * * In determining such horsepower the secretary may employ the rating established by the Association of Licensed Automobile Manufacturers so far as the same may be applicable. * * * The registration of every motor vehicle shall expire at midnight on the 31st of December of each year. * * *

Section 3. A motor vehicle owned by a non-resident of this State, who has complied with the laws of his State, district or country, relating to registration and licensing of motor vehicles, may be operated on the ways of this State for a period not exceeding ten days in any one calendar year without registration. * * * Every such vehicle so operated, shall have displayed upon it, the distinguishing number or mark of the State, district or country in which the owner resides. * * *

Section 4.— * * * The secretary shall furnish at his office, without charge to every manufacturer of, or dealer in motor vehicles, whose vehicles are registered under the provisions of this section, six pairs of number plates * * * but no such number plates shall be furnished by the secretary for motorcycles.

Section 6. Every motorcycle operated in or upon any way shall have conspicuously displayed thereon its register number, so that said register number shall be visible at all times during daylight. The letters N. H. and numerals denoting the year of the registration shall also appear with the register number in characters not less than two inches in height.

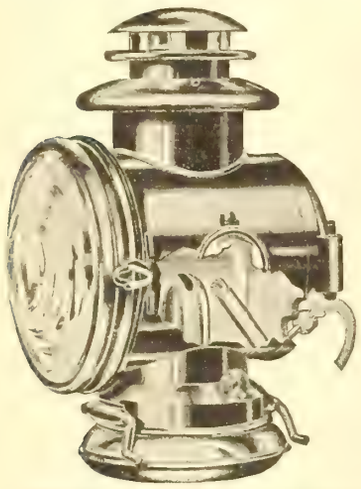
Section 12. Every person having control or charge of an automobile or motorcycle, shall whenever upon any public street or way, and approaching any vehicle drawn by a horse or horses, or approaching any horse upon which any person is riding, operate, manage and control such automobile or motorcycle in such a manner as to exercise every reasonable precaution to prevent the frightening of such horse or horses. * * * The person in control of such automobile or motorcycle. * * * shall upon request by the raising of a hand by the driver or rider of such horse or horses, reduce the motive power to a full stop. Upon approaching any intersecting way or a curve or corner in a way, every person operating a motor vehicle, shall slow down and give timely signal.

Section 13. Every person operating a motor vehicle. * * * shall run it at a rate of speed at no time greater than is reasonable and proper under all the circumstances. * * *

Section 14. * * * It shall be conclusive evidence of a rate of speed greater than is reasonable and proper. * * * if a motor vehicle is operated on any way outside of a thickly settled or business part of a city or town at a rate exceeding 25 miles per hour for a distance of a quarter of a mile. It shall be conclusive evidence * * * if a motor vehicle is operated on any way inside the thickly settled or business part of a city or town at a rate of speed exceeding 15 miles per hour for the distance of one-eighth of a mile, or if a motor vehicle is operated on any way upon approaching an intersecting way, or in traversing a crossing or intersection of ways or in going around a corner or a curve in a street or way where the operator's * * * view of the road traffic is obstructed, at a rate of speed exceeding 10 miles per hour; provided, however, that in civil actions this evidence shall be prima facie only.

Section 16.— * * * Any person convicted of a violation of this act, * * * shall be punished by a fine not exceeding $25 for the first offense, and not exceeding $100 for any subsequent offense during any calendar year. * * * Upon a third or subsequent conviction in the same calendar year, the secretary shall forthwith revoke the license of the person so convicted, and no new license shall be issued to such person for at least 30 days after the date of such revocation.

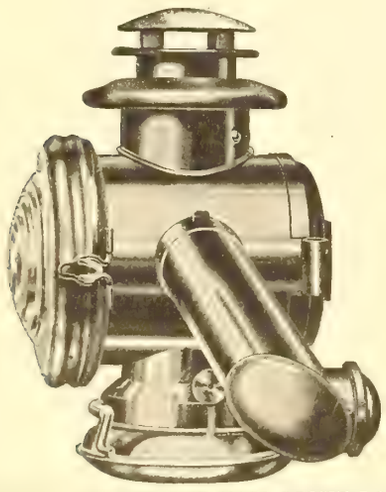
Section 19.—Whoever * * * operates an automobile or motorcycle recklessly or while under the influence of intoxicating liquor, or so that the lives or safety of the public might be endangered, or upon a bet, wager or race, or * * * for the purpose of making a record, * * * shall be punished by a fine not exceeding $100, or by imprisonment not exceeding six months, or both. * * * A conviction of a violation of this section shall be reported * * * by the court or trial justice to the secretary.* * * who shall revoke immediately the license of the person so convicted.



Road Improvements on Pacific Slope.

One can now travel from Lake Cushman, in the heart of the Olympic Mountains, Wash, to the Pacific Ocean by motorcycle. The Government has been quietly working and has completed a wide level trail along the line of the old McNeil survery made in 1882. It is also the intention of the Government to build such a trail from Longmire Springs, near Mt. Tacoma to Mt. Adams on the west side of the Cascades, and thence to Mt. St. Helena. A trail from Hoods Canal to Lake Cushman west through the Olympic reserve to the Quinalt reservation has also been mapped.

The "Motorcycle Boys," a Detroit social club of riders, will give their first annual ball at the Coliseum, that city, Wednesday evening, January 31.

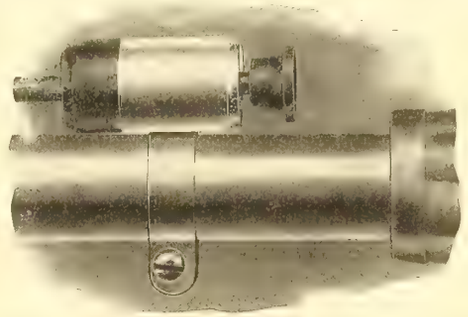


New Lamp For Motorcyclists.

Something distinctly new in motorcycle lamps is offered by the C. T. Ham Mfg. Co., Rochester, N. Y., in their latest Duplex model. Ordinarily it is a sturdy oil lamp, built on the coldblast principle which insures it staying lighted in high winds, and on rough roads, and an acetylene burner

HAM LAMP WITH OIL-ACETYLENE BURNERS

attachment is offered in addition, for converting the lamp into a high power illuminator where a stronger light is required. In other words two lamps in one are obtainable with the use of the acetylene bur-

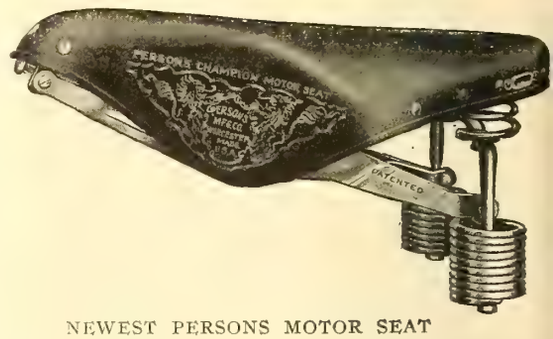


HOW DETACHABLE RED TAIL LIGHT LOOKS

ner attachment. The sectional lamp in the upper illustration shows the application of the acetylene burner, which may be fed from a generator or gas tank. The gas burner may be brought into action simply by turning on the gas, which will ignite automatically from the wick flame, and the wick may be lighted in the same manner by turning it until it comes in contact with the gas flame. The change from one burner to the other can be done while the machine is in motion, it is claimed. The lower illustration shows the red rear signal attachment, which is a tube 7½ inches long with a silvered interior and a rudy jewel at the outer end. The tube snaps on to the left side over the side jewel through which the tube takes its light, making a very effective and easily handled attachment that seems to serve its purpose to the letter.

Connecticut Magneto Cut-Out With Lock.

Since the magneto came into use on motorcycles, the measure of protection afforded against theft of a machine has been less than in the days of the battery system, when the removable switch key provided a removable switch key provided a non in-



MAGNETO SWITCH WITH DETACHABLE LOCKING KEY

considerable degree of safety from the designs of the "something-for-nothing" gentry. Although magneo cut-out switches have been marketed for some time, it has remained for the Connecticut Telephone & Electric Co., Meriden, Conn., to offer the first apparatus of the sort, embodying a locking system with detachable key, which, when removed, leaves a gap in the ignition circuit, and renders the motor non-starting, while the line is open. Designed for attachment to the handlebar, convenient to the rubber grip, the switch, as the associated illustration shows, is of the "barrel" type, and the key, when in its socket, short circuits the current by a slight thumb pressure. A quarter turn of the key permits its removal from the switch barrel. The Hendee Mfg. Co., has adopted the switch as standard equipment on its 1912 models.

Person's Motorcycle Saddles For 1912.

Larger tops, having increased width, and decreased length, affording that desirable requisite known to saddle makers as sufficient "depth" of seating surface to provide a comfortable and ample seat, will be the stellar features of the 1912 line of motorcycle saddles, which the Persons Mfg. Co., Worcester, Mass., one of the pioneer producers of motor seats, will offer. They will be made in two models, designated as "R" and "S" and will differ in construction only in that the former will not include a front spring. Typical Persons construction is

NEWEST PERSONS MOTOR SEAT

exemplified in the illustration of the Model "R." The tops measure 12½ inches across the cantle, and in combination with the decreased length, are stated to be particularly desirable for tandem use. Other refinements over previous models include increased clearance between the lower rear springs. All solid parts are drop forgings. Of course the Persons patented compound rear spring suspension is used. Both models have divided trusses to straddle frame tubes and afford low riding position. Altogether the Persons line is most attractive in character, and should make a hit.

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

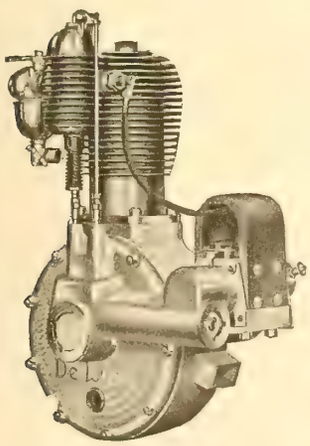
Insuring Comfort to the Motorcyclist

and Adding Pleasure to the Day's Ride

by equipping the motorcycle with



No. 3 STANDARD MOTORCYCLE PEDALS

They are generously proportioned and made with big, soft, easy rubber cushions that minimize the jars and bumps. The deep corrugations insure positive grip that makes the foot stay on. You know what that means.

Our Products for the Cycle Trade Include:
EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

THE STANDARD COMPANY
TORRINGTON CONN.

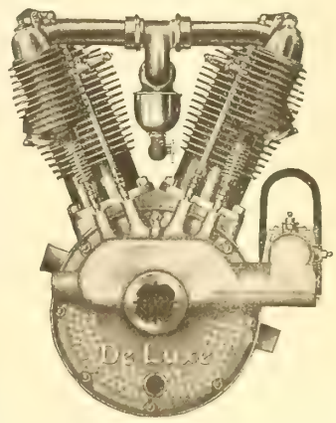
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

DIAMOND CHAINS

For Bicycles and Motorcycles

Our types and sizes meet every service condition. With a good record extending over twenty-one years and with the most practical connecting link ever offered, Diamond Chain is the logical equipment.

Diamond Motorcycle Chains do their work right in bad weather as well as good and are in every way a mighty good investment in a place where it pays to be careful.

We recommend the following for motorcycle work:

For main drive, Diamond No. 150 Roller Chain
For starting, Diamond No. 29 Block Chain

Of course, we make other sizes. Better start with Diamond Chains than come to them later.

For Safety and Service
It must be a SOLAR

That's the verdict of the users of 80 per cent of the high-grade American bicycles.

The test of experience has proved them to be the quality lamps for every purpose—the only lamps absolutely reliable and dependable at all times.

You should have Solars on **your** bicycles.

BADGER BRASS MANUFACTURING CO.
Kenosha, Wis. [48] New York City

It's the endurance test that proves

the quality of a motorcycle tire. Hard, grinding road tests with

KOKOMO TIRES

proved our claims for their durability. Being made from the purest grade of rubber and highest quality of other necessary materials they assure the rider greater service and more mileage. KOKOMO is the highest standard for motorcycle tires.

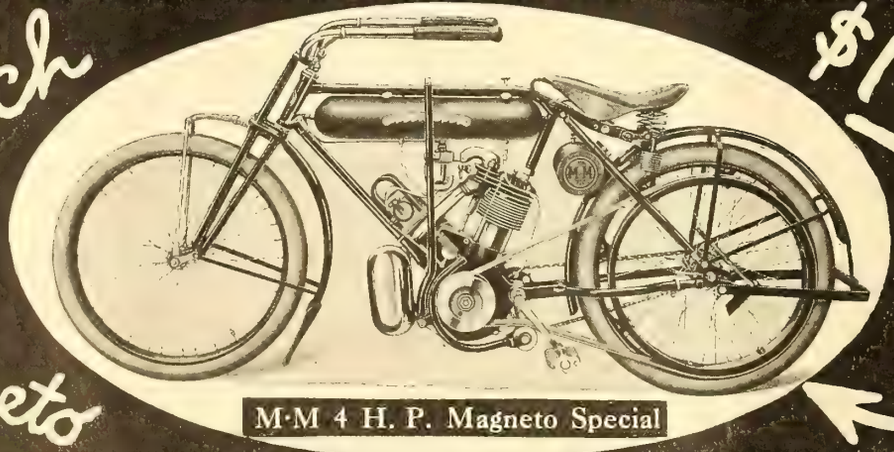
DEALERS! DEALERS!

The season of 1912 promises to be a record breaker for KOKOMO sales. We are shipping to all territories, which makes good our prophecy that there will be more KOKOMO tires sold during 1912 than ever before—and the season has just begun. Don't delay matters, send in for our agent's proposition today.

New Circular on request.

Kokomo Rubber Company

Kokomo, Indiana, U. S. A.



Agents—STOP and consider

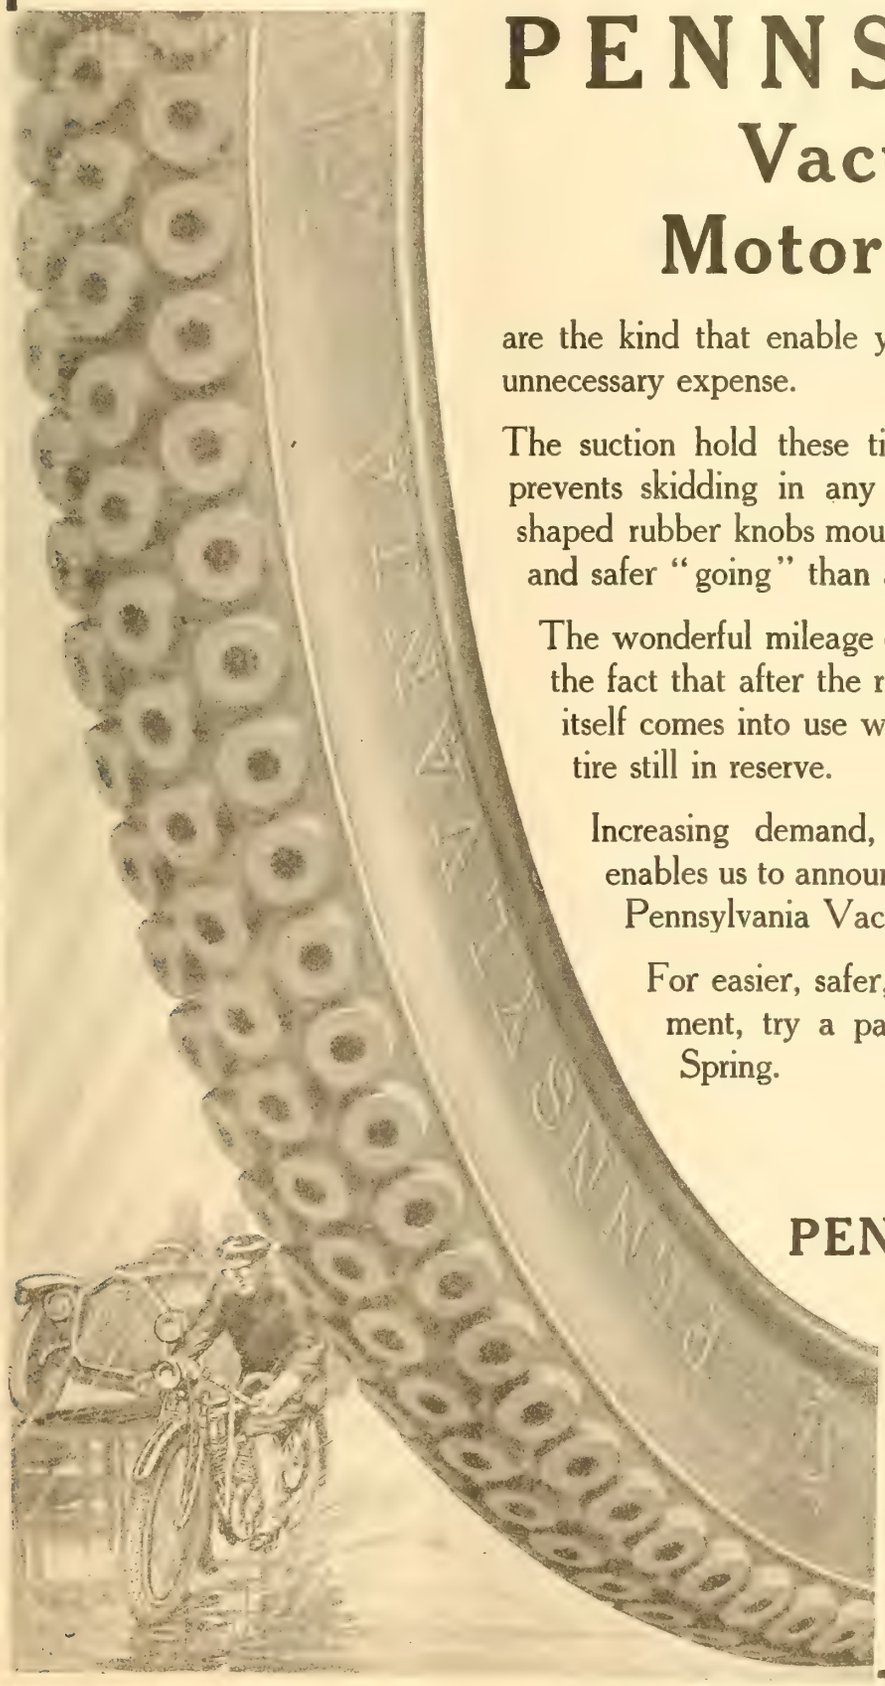
what we are offering—Here is positively the Most Motorcycle for the money—offered this season.

A machine with thirteen years' proof behind it — not a new and untried experiment—Possesses latest 1912 improvements.

Where else can you find a full grown, 4 H. P. motorcycle with standard equipment throughout—including Bosch high tension magneto—for $160? It's a proposition that defies competition.

Bosch Magneto

$160.



M·M 4 H. P. Magneto Special

Since announcing the M·M "Special" line at $140 and $160 we have been closing up agencies right and left. Agents receiving machines wonder how we can turn out such a wonderfully fine motorcycle at such a low price.

The secret is simply this:—Our thirteen years in the industry have given us an experience and equipment without a parallel in the country and furthermore all the water, the hot air and big expense has been boiled out of our proposition. You get the benefit in high quality and low prices. The live ones are ordering their demonstrators now.—Get your application in early.—Write to-day.

AMERICAN MOTOR CO., 718 Centre St., Brockton, Mass.

It's time to be thinking about your motorcycle tire equipment!

PENNSYLVANIA
Vacuum Cup Motorcycle Tires

are the kind that enable you to ride without anxiety and without unnecessary expense.

The suction hold these tires exert on wet or greasy pavements prevents skidding in any direction. In mud or snow, the cup-shaped rubber knobs moulded on the tread provide better traction and safer "going" than any other device.

The wonderful mileage capacity of Vacuum Cup Tires is due to the fact that after the rubber knobs have worn down, the tread itself comes into use with the "life" of an ordinary motorcycle tire still in reserve.

Increasing demand, and consequent increase of facilities, enables us to announce a substantial reduction in the price of Pennsylvania Vacuum Cup Motorcycle Casings.

For easier, safer, faster and more economical tire equipment, try a pair of these tires on your machine this Spring.

NOTE: Quotations will be forwarded to Jobbers and Dealers upon application.

FEDERAL TIRES

Comfort—Safety—Speed Mileage

Motorcyclists who demand these qualities recognize Federal Motorcycle Tires as the tires that best meet their expectations.

The undeniable quality of Federal Motorcycle Tires tells in the long and satisfactory service they render in actual service under every conceivable road condition—their extreme durability emphasizes the quality built into them.

Federal Motorcycle Tires are made from the highest grade materials and with the same skill, brains and experience that enters into the making of Federal Automobile Tires.

Investigate Federal Tires and you will quickly distinguish the difference between them and ordinary motorcycle tires

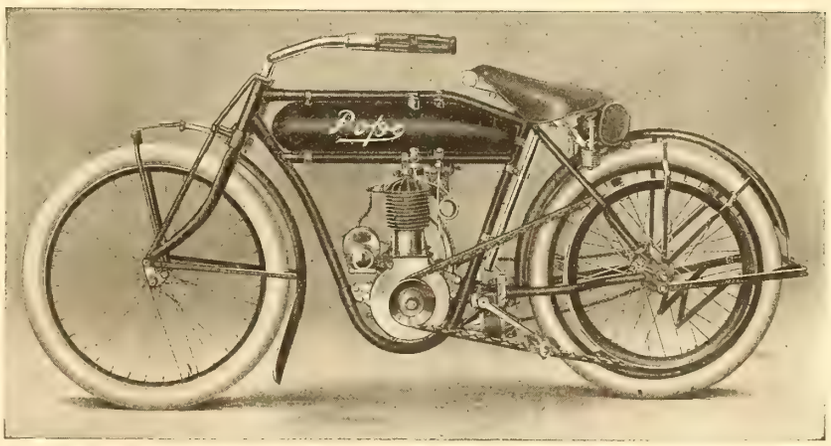
Federal Rubber Manufacturing Co.
MILWAUKEE



POPE MOTORCYCLE

With Imported Magneto—$165

Quality is the first consideration in a motorcycle. An examination of the POPE will show that no machine, regardless of price, embodies better materials or workmanship. This means reliability. Conceding these facts, why pay more for a motorcycle? The Pope's price is an added inducement and gives the machine a selling advantage over all others. A large demand has been the logical result of the Pope's quality and price.

Carrying Out Original Plan

By manufacturing in large quantities we have reduced the cost of production to a minimum, Thus we are able to carry out our original plan of putting the price low enough to popularize motorcycling in a large way and create a demand among new classes of riders.

See the Machine in Spaces 145 and 146 at the Chicago Show. Then consider the price. Let us give you details of 1912 Eclipse Free Engine Pulley.

EXCELSIOR AUTO CYCLE MOTOR MFG. & SUPPLY COMPANY CHICAGO ILL.

Always Makes Good.

Model "7 T"—7 H. P.—$250

THE GREATER EXCELSIOR

"The Good Old X" built better than ever through increased facilities and ample resources and backed by a more liberal guarantee and even stronger support of the dealer and rider than heretofore. We shall continue the distribution of the

EXCELSIOR AUTOCYCLE

through established dealers only and shall aid and support them by an aggressive campaign of general publicity. The powerful organization now behind the EXCELSIOR AUTOCYCLE enables the procuring of the best of material and skilled engineers and workmen, resulting in the production of a machine that is better than ever in Design, Material and Workmanship.

Six Models for 1912, ranging in price from $175 to $250. Twins, 6 and 7 H. P. respectively; singles, 4 H. P., Belt and Chain drive, all with free motor clutch and every up-to-the-minute improvement and refinement.

Live Dealers Take Notice

The New York Show pretty thoroughly closed up the Eastern territory but there are still some good openings in the West for live dealers who appreciate the value of sterling quality backed by a powerful organization of experience, capital and factory facilities.

Our 1912 catalog tells the whole story of Excelsior Excellence. Write for it NOW.

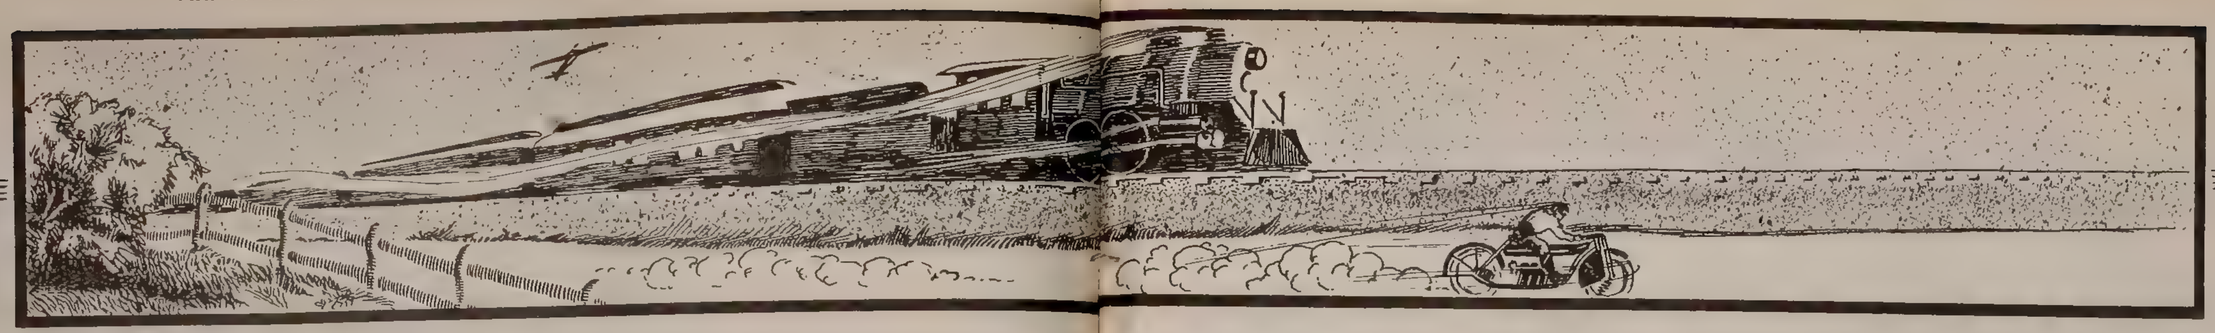
HENDERSON MOTORCYCLE COMPAN

ERSON 4 CYLINDER

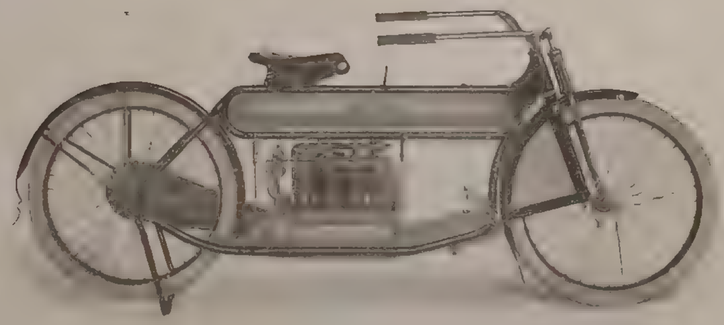
A motorcycle possessing "get there" qualities in combination with beauty of design, cleanliness and strength.

The HENDERSON has the good points that discerning purchasers of motorcycles are now demanding. Flexible power is beginning to be a vital essential. The power of the HENDERSON is so applied that one can throttle down upon approaching a steep hill and then eat it up in such a way that the rider is tempted to believe someone has moved the hill.



The lack of noise and vibration make it popular with people who want the best. Its low center of gravity, easy handling and easy riding qualities, combined with its great power, gives the rider a new sensation of smoothness and complete motorcycle satisfaction that he has heretofore been unable to obtain.

DEALERS



Right now, you are impressed with the idea of sending for our catalog and agent's proposition because the HENDERSON 4 cylinder looks good to you. While the thought is still active, sit right down to the job of mailing postal and request for all information. Do it immediately.

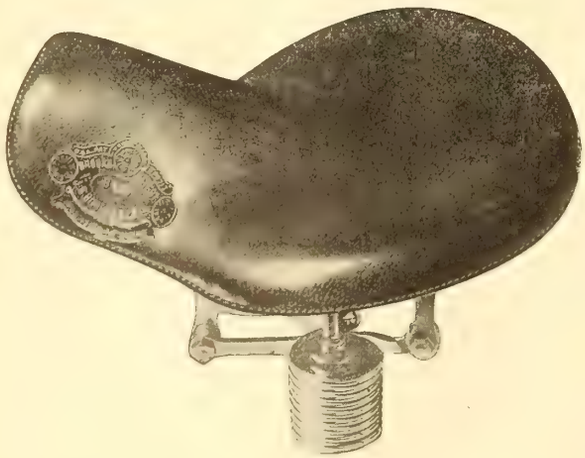
HENDERSON MOTORCYCLE COMPANY, 272 Jefferson Avenue, Detroit, Michigan

B 170 Seat part has carefully moulded steel base, is amply and comfortably cushioned and covered over all with substantial leather.

Spring-framing includes the BROOKS PATENT COMPOUND SPRINGS, and is practically identical with the well-known B104.

Particularly low built, it is shaped on anatomical lines, and—you sit IN it rather than ON it.

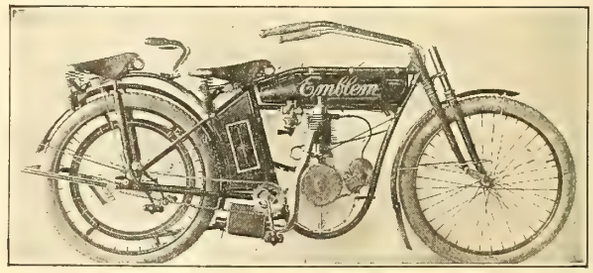


Two new models of the

BROOKS—

the original and only genuine compound-spring saddle.

J. B. BROOKS & CO., Ltd., 73 Criterion Works, Birmingham, Eng.



Distributing Agents for U. S. A.
THE D. P. HARRIS HARDWARE CO., 48 Warren Street, New York

B 400 Note position of compound-springs, which are placed immediately under the weight-carrying portion of the seat, which latter is not hinged to any fixed point at the peak, but constrained to move in a true vertical direction. This position, in conjunction with the compensating action of the spring, means unlimited elasticity without bounce. Seat part is comfortably cushioned and covered with substantial leather, has steel base carefully moulded on anatomical lines, and, again—you sit IN it rather than ON it.

Western and Southern Life Insurance Co.

Kenton, O., Jan. 28, 1912.

Gentlemen:—I purchased from your agent here a 4 H. P. Emblem motorcycle June 10, 1911, and have used it in my life insurance business to the extent of better than 5,000 miles. My total repair bill was 25 cents for one platinum point spring and packing for left fly wheel. I still have a **new** machine and wouldn't trade my machine for anything I have seen in the motorcycle line up to date.

(Signed) J. E. PELKIE, Asst. Supt.

FISK

MOTORCYCLE

TIRES

FISK Motorcycle Tires, under intelligent usage, will not blow out, rim-cut nor will the tread become loose from the fabric. It is not unusual for them to run 5,000 miles and still be in perfect condition.

They are of the regular automobile type construction and furnished with the Fisk Superior Pure Para Inner Tube.

The GRIPFAST MOTORCYCLE TREAD positively prevents skidding. It grips the muddy road and holds fast. Spills are of rare occurrence. This tire will carry you through heavy going where machines equipped with other types would stall.

The BAILEY TREAD has all of the advantages demonstrated by this reliable construction in automobile use and our CORRUGATED TREAD is unexcelled for all-round conditions.

Motorcyclists who have used and experimented with many makes pronounce Fisk THE BEST.

BAILEY TREAD

DEALERS who are seeking a Motorcycle Tire that will stand up to heavy work can rely upon the Fisk to meet the severest test, and will find it to their advantage to have a complete stock always on hand.

"STANDARD"

SEAMLESS STEEL

TUBING

THE BACKBONE OF YOUR MACHINE

is the *tubing* of which it is constructed.

The *boast* of the *largest* motorcycle manufacturer is that he has *never* had a frame go wrong in *ordinary* usage and this manufacturer uses *"STANDARD"* Tubing entirely; also our rims, mudguards and pulley belt rims.

At the recent Madison Square Garden Show, New York City, *sixteen* motorcycle exhibitors displayed sixty-five models. Of the sixty-five models, *fifty-seven* were made in whole or in part of *"STANDARD"* Tubing.

Fourteen of the sixteen exhibitors, the country's *best* and *largest* motorcycle manufacturers, use *"STANDARD"* Tubing and price is *not* their reason—it's *quality*.

They have tried *other* tubing but it *failed*. It did not give the *combination* of *lightness, strength* and *finish* that a *first class* motorcycle frame requires and which the use of *"STANDARD"* Tubing *insures*.

When you order your machine, it *would* be well to ask what tubing it is made of, or better still write us and we will tell you *who* uses it.

Remember the *strength* of the *frame* and *rims* of your motorcycle *dictates* its capacity to carry *heavy* loads or to *"Speed her up."*

What Our 13 Years Saves You Motorcyclists

Motorcycle Tires Built on No-Rim-Cut-Tire Machine
Extra Service — No Extra Cost

When you buy a new machine, or re-equip your old, you can now have tires that are *past the experimental period*—tires that are based on over 13 years auto tire-building experience—tires that are as nearly perfect in their rendering of service as any pneumatic tire can be. And at no additional expense to you.

With Goodyears at your command, it is folly to *experiment* with *motorcycle* tires.

Tested Tires—Thicker Treads

Year after year—on tire testing machines—we have proved out every fabric and formula, every method and theory for adding to tire worth. We perfected the No-Rim-Cut Auto Tire. The sale of this tire now exceeds every other type of tire.

And out of the same experience has grown our great line of Motorcycle Tires.

To take care of overloading, we built these tires larger and stronger than most others. To guard against punctures, we built them with thicker treads. We have spared neither pains nor expense to make them the toughest, most enduring tires on the market. Comparative tests prove them to *be so.*

The Goodyear Tire Machine

We build our tires on the Goodyear Tire Machine —the same machine on which we build No-Rim-Cuts.

A motorcycle tire is built up of successive plies of fabric laid one over the other. The common way is to stretch these fabrics on over an iron core *by hand.* There is a limit to human endurance. Consequently some of those plies go on at a lower tension than others. Those that are pulled the tightest get most strain—and give way first. Result, *Blowout—Ruination.*

Our tire making machine banishes the human element of fallibility. It stretches each and every ply with an unvarying tension. Every ply gets an equal share of strain. No ply gets more strain than it can sustain. Hence the strength is uniform—*the tire lasts.*

Also we use a fabric of vastly greater tensile strength than commonly used. Instead of being closely woven, our fabric is woven loosely so that the rubberizing process can embed every thread in rubber. So the threads are separated—can not rub together, cause friction and thereby weaken.

All this extra care pays *us* because it is good business to build a tire which can be depended upon. We invite you to investigate these tires. *Send today for our book on Motorcycle Tires.*

Vol. LXIV. New York, U. S. A., Saturday, February 3, 1912. No. 20

MOTORCYCLE MAKERS' MEETING

Manufacturers Will Convene at New Southern Hotel, Chicago, Wednesday, February 7, During Show Week.

President A. B. Coffman, of the Motorcycle Manufacturers' Association, has issued a call for a meeting to be held in the parlors of the New Southern Hotel, Chicago, Wednesday, February 7, at 10 A. M. Luncheon will be served immediately after adjournment. A full attendance is desired, as matters of considerable importance to the trade in general will be considered, among them a project for a tour of national character.

Chicago Cycle Supply Co.'s Narrow Escape.

Coming shortly after its removal to its present commodious location, 22 West Lake street, the Chicago Cycle Supply Company felt the breath of the fire which visited the block in which the building is located, on January 25. The basement of the four-story building was filled with water, and the rest of the structure with smoke. In a letter to its customers the company says:

"While our stock was fully covered by insurance, we are very thankful that we escaped the flames, as we have just become settled in our new building, and it has taken us a whole year to have put our stock back in its present effective condition, and had the building burned, our actual business losses would have been double the amount we could have collected on our merchandise loss."

Over 875,000 Tires from Two Factories.

If anyone is laboring under the impression that bicycling has totally succumbed to overweening prominence of the motor-driven vehicle, authentic figures of bicycle tire production during 1911 are apt to dispel the illusion. According to the United States Tire Company, the Hartford factory of that corporation turned out in the twelve months ending December 31, a total of 443,445 tires for bicycle use, and very few of them were consigned to export. The Indianapolis plant of the same concern turned out fully as many tires as were turned out at Hartford. As this production is alone sufficient to equip almost half a million bicycles it is evident there is a tremendous output of pedal propelled machines being made and marketed every year.

N. Y. S. G. Co.'s Employes Share Profits.

Out of the earnings of the New York Sporting Goods Co. for 1911, the board of directors of that concern have apportioned a bonus to employes based on length of service, as follows: Less than one year's service, 1 per cent. of salary for year of 1911; one year's continuous service, 2 per cent.; two years, 3 per cent.; three years, 4 per cent.; four years, 5 per cent.; five years, 6 per cent.; six years, 7 per cent. The apportionment of profits is a voluntary premium in recognition of employes' efforts in behalf of the company's business, and it is hoped to continue the plan at the end of each financial year.

Corbin Coaster Brake at Chicago.

The Corbin Screw Corporation, of New Britain, Conn., manufacturers of Corbin brakes for bicycles and motorcycles, are sending a strong force of representatives to Chicago for the show. William E. Diehl will head the selling force. His headquarters, 65-67 West Lake street, the western office of the Corbin people, will be at the disposal of the trade during the show.

Stein Will Make Motorcycle Tires.

Akron, O., Jan. 29.—The Stein Double Cushion Tire Company has commenced to manufacture and market motorcycle tires, and will make a strong bid for business in that special field.

FOR BOOMING THE BIG TOUR

Plans For a National Endurance Run Is Assuming Proportions That Indicate Success—Ex-President Favors Plan.

The big 2,000 mile motorcycle tour proposed by A. B. Coffman and A. J. Musselman, is beginning to assume actual form, and with the hearty co-operation of F. A. M. officials and the associations support its success will be a foregone conclusion.

While it is impossible to lay out a definite route at this time, a decision will be reached before many weeks and actual work on this part of the tour will start.

The publicity this tour will give motorcycling in every town through which it passes, should not be overlooked by the dealers throughout the country. In order to secure the route of the tour through their town, dealers should get busy and offer some inducement to the riders and management of the tour in order to have their city included in the itinerary.

Inasmuch as the trophies will be of greater value than those ever offered for perfect scores in any motorcycle tour in this country, every manufacturer will use his best efforts to capture the trade rider's cup and it should be the height of ambition of every club in the country to pick off the private owner's cup. These cups are valued at $150 and $100 respectively, purchased at wholesale prices.

A suggestion to the clubs on and adjacent to the route of this tour, would be that they send a rider to represent their particular club to compete for the private owner's cup, riding under his particular club's colors. This cup to be retained when won one time, while the trade rider's must be won three times in succession to retain ownership.

The value of a tour of this kind to the

motorcycle fraternity at large cannot be over estimated.

The question of sending a representative to compete for the private owner's cup from the various clubs should be discussed right now, as the riders have ample time at their club meetings this season of the year.

Messrs. Coffman and Musselman would be glad to have expressions from the various clubs throughout the country giving their ideas of the tour and what they think of each club sending a representative to compete for the private owner's cup. A B. Coffman can be reached at 120 Tenth street, Toledo, O., and A. J. Musselman at 1356 Wells street, Chicago.

Ex-President F. I. Willis of the F A. M., and the present chairman of the press committee of that organization, has given the proposed tour his endorsement. He says: "It is a tour that deserves the support of the entire trade. There is a vast amount of work connected with such a tour and inasmuch as it is one that will result in a great benefit to the trade at large as well as the riders, the writer takes pleasure in heartily endorsing it."

Schneitter Will Move to Springfield, Mo.

The Schneitter Sporting Goods Company, which started business at Warrensburg, Mo., many years ago, with an old bicycle and a few supplies, has leased one of the finest business corners in Springfield, Mo., and will on and after February 20 be located in that city. H. C. Schneitter, president of the company, which now handles practically everything appertaining to sporting goods, attributes his initial success to the bicycle business, and his company will continue to feature that line.

With 20 members, the Chicago Motorcycle Dealers' Association was formed Jan. 28. It is expected all in the city will join.

An Argument For Machine Made Casings.

In a replacement report recently received by the Goodyear Tire and Rubber Company, of Akron, O., from a large eastern territory, it was noted that but two replacements of motor cycle tires had been asked for by riders during the year, a fact so unusual that it could hardly be believed. In reasoning out the matter Manager S. A. Falor, of the Goodyear motorcycle tire department, states that it is no doubt due to the fact Goodyear motorcycle tires as well as No-Rim-Cut tires, are built on a special machine.

"This avoids the uncertainty in carcass building that accompanies hand-made tires," says Mr. Falor, "and is one instance where a machine-made articles is superior to a hand-made article. Were motorcycle tires made from one piece of fabric, hand-making would be superior, but inasmuch as the carcass of the tire is made up of many plies of fabric, each being stretched at high tension over an iron core, one layer at a time, the fine mechanism of the Goodyear machine eliminates all possibility of one layer being pulled tighter than another. Each layer must be laid on at exactly the same tension in order that the carcass when vulcanized becomes a perfect whole of uniform strength.

"It is no longer a secret that the Goodyear company have closed contracts with 13 of the leading motorcycle manufacturers of the United States to equip 1912 machines. This means that about one machine in every three will be equipped with Goodyear tires for the coming season."

Kokomos to be Made at Galesburg, Kan.

Galesburg, Kan., Jan. 29.—Having purchased the plant where the Kokomo motorcycle was manufactured at Kokomo, Ind., and moved the equipment to this city, the Shaw Mfg. Co. will henceforth continue the making of Kokomos here in addition to producing the Shaw motor attachment, designed for converting a bicycle into a motorcycle. The Kokomo will be driven by a 3½-horsepower motor and sell for $235.

New Departure 1912 Catalog-Treatise.

An interesting and valuable contribution to the ball bearing literature of the present year is the Engineering Edition of catalog-treatise, issued by the New Departure Mfg. Co., of Bristol, Conn. This is fresh from the press, contains 76 pages, and has been prepared by the company's staff of ball bearing specialists and engineers. It gives valuable information of a technical character, and is illustrated by fine engravings.

The New Departure Mfg. Co. offers to send this catalog on request to manufacturers, purchasing agents, designing and mechanical engineers, and other responsible persons who are interested, and it is suggested that such requests be made on the letter head of the firm with which they are connected.

MODEL SALESROOM AND REPAIR DEPARTMENT OF GEORGE N. HOLDEN, BOSTON INDIAN AGENT, 141 MASSACHUSETTS AVE.

Rick & Company After Jobbing Trade.

F. F. Rick & Co., Buffalo, N. Y., make the announcement that they are making progressive efforts to secure business through the dealer, in spite of a rumor that not in a position to sell dealers. The house travels bicycle supply salesmen, issues an illustrated catalog, and performs other functions that constitute a jobber. It controls five big selling specialties.

Ramis Takes Jacksonville Emblem Agency.

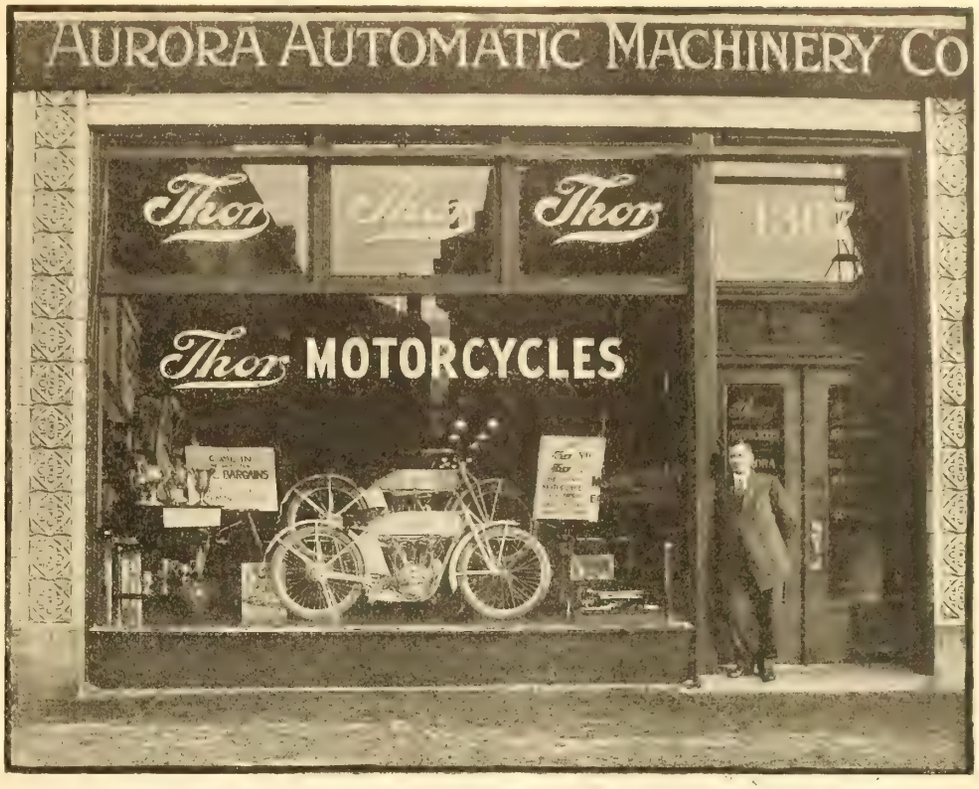
Jacksonville, Fla., Jan. 29.—James S. Ramis, for ten years president of the Ramis Company, handling furniture and bicycles, has organized the Ramis Cycle Company, located at 7 East Church street, and taken the agency for Emblem motorcycles and bicycles, and will also carry a line of bicycles made especially for the company and carrying the Ramis nameplate.

New Agencies For Reading Standard.

The Randall Mfg. Co., of Baltimore, has taken on the exclusive agency as distributor for the Reading Standard for the State of Maryland, placing a large specified order with the signing of the contract.

E. L. Durham & Co., Charlotte, N. C., have closed for an exclusive agency for R-S machines in that section.

Canadian business with the R-S promises to be strong this season. The T. Eaton Co., Ltd., with main stores in Toronto and Winnipeg, has found it necessary to demand an express shipment of machines in advance of the first carload to satisfy immediate demands. The Eaton company is R-S distributor for most of the Dominion of Canada.



Where to Buy Motorcycles in Savannah.

Savannah, Ga., Jan. 29.—Agencies for motorcycles in this city for 1912 have been placed as follows: Oakman & O'Neil, Yale, Pope and Merkel; George W. Thomas, Pierce; Harris Tire Company, Indian; Williams Motorcycle Company, Thor and M-M.; Balfour Hardware Company, Harley-Davidson and Excelsior; O'Neil & Burch, Flanders.

The Savannah police department has added another motorcycle officer to its force. This time the mount is an Excelsior, making three of this make now in the department.

New Bicycle Store at Savannah.

Savannah, Ga., now boasts of another bicycle store, the Forest City Bicycle company having opened for business at the corner of Bull and Park avenues, under the management of A. W. Moreland, with a complete stock of wheels and supplies and fully equipped repair department.

AURORA AUTOMATIC MACHINERY COMPANY, 1307 MICHIGAN AVENUE, CHICAGO
F. D. Freeman, Cook county sales manager for the company, arranged the display, and it is he who stands in the doorway, ready to explain the many up-to-date features on the new white 5 and 7 h. p. Thors

Mitchel Will Sell Cycles and Supplies.

Arthur Mitchel formerly on the racing staff of the Merkel-Light Motor company, and well-known as a cyclist and motorcyclist, is now selling the Excelsior line of bicycles for the Excelsior Cycle company, of Chicago, and the Chicago Cycle Supply company's line of motorcycle and bicycle supplies. Mitchel will cover the Southern territory.

McBride to Handle Excelsiors in Ontario.

Toronto, Can., Jan. 30.—Percy A. McBride, Excelsior agent at Toronto, announces that he has secured the contract for the whole of Ontario for the Chicago flyer. He is placing agencies in Hamilton, London, Ottawa and other centres of his territory, but he will retain the retail branch at Toronto. McBride has also taken on the Majestic sidecare as a side line.

IMPOSING STORE FRONT AND WINDOW DISPLAY OF THE TOLEDO SPORTING GOODS COMPANY, TOLEDO, OHIO

When a rider has the feeling of security that goes with a CORBIN BRAKE he finds greater speed and control possibilities in his machine—*speed*, born of confidence in his ability to check the machine suddenly, if the emergency arises, *confidence* in approaching the crest of a hill that the descent has no dangers for him—the CORBIN BRAKE will hold on any grade.

NEW YORK, FEBRUARY 3, 1912

Export Ambitions—England vs. America.

If American manufacturers of bicycles and motorcycles seriously are considering a campaign for export business along broader and more extended lines, and we have every reason to believe that several makers in both divisions are, it is timely that the attention of all concerned should be called to the significant figures in the report of the 1911 export and import business of the British makers, as published in the news columns of our January 27 issue.

The grand total of British exports of complete machines, both bicycles and motorcycles, and their respective parts, amounts to almost $12,000,000. The imports of the same articles—and here it should be emphasized, that while the importing of complete machines is decreasing, that of parts is increasing steadily—aggregating but $1,500,000; leaving a balance in the cash drawer of over $2,000,000—a mightily comforting fact—for John Bull, and one of which he is full cognizant. He also realizes, as we must admit, that a year's export business in these lines of twelve million dollars is a tremendous advantage in the race for the world's trade.

Considered separately, each branch of the twin industries show a healthy, steady growth throughout the three years quoted, 1909, 1910, and 1911; but it is in the motorcycle business that the ratio of increase of exports is remarkable, approximating in 1910, some 50 per cent. over that of 1900, and in 1911, the value of motorcycles sent out was more than double that of the year previous. In this respect, Great Britains 'cycle trade compares favorably with that of American cash registers, typewriters and sewing machines which to say the least are phenomenal. As a final word on the matter to the cycle trade, those of our English brethren who "have their ears to the ground," freely predict that the figures again will be more than doubled in British export business during the present year.

The Unsavory Side of Racing.

It is no wonder that professional motorcyclists bear such an unsavory reputation as a class, when some of them are detected in such barefaced cheating as "ringing in" for double expense money, from both promoters and factories. A prominent manufacturer, who has been a staunch supporter of racing in the past, remarked recently that he is pretty thoroughly disgusted with the crookedness of some professional riders, and is very much inclined to retire from the track, until a fresh and cleaner crop of professionals and amateurs are developed. Upon being pressed for reasons, he stated that he had learned of occasions where some of his men had had their expenses advanced by promoters and then had collected again from the factory on the same account.

This surely is double dealing with a vengeance, and while the guilty ones may profit temporarily by it, it serves to hasten the time when the manufacturers will withdraw from racing and force the riders to seek other fields of livelihood. The rider who "plays" the promoter, the manufacturer and the accessory people ruthlessly, for selfish ends, is a grafter and a crook, who is killing the golden egg goose, not only for himself and the rest of his ilk, but also for those few racing men who compete for glory or honest cash and refuse to debauch themselves for a few dollars. It is a sad but true fact, that motorcycle racing in this country today, as a whole, has descended to a disgraceful state of chicanery and petty crookedness and lawlessness, and a clean, honest rider cannot long remain in it without becoming seriously warped morally. "Get the money," and "win any old way, but win," seem to be the only creeds or rules that most riders know or profess.

Evasion of the rules is a popular pastime, and the riders who are successful in this respect take pride in boasting of it, and are looked upon as "clever" by their satellites. The terms "private owner" and "trade rider" are farcical, and their limitations are frequently and flagantly violated. They should be abolished in favor of a classification less elastic and offering less opportunity and temptation for infringement.

There will be more racing the coming season than ever before, there will be a new and more stringent set of competition rules, and very likely there will be more trickery and open and shut lawlessness among the riders. It is to be hoped, for the sake of the sport, that the governing officials will apply the punishment screws more tightly than heretofore on those habitual offenders who have done so much to bring racing to its present chaotic and discreditable state.

An Opportunity for Chicago Exhibitors.

Without question the influx of municipal officials into Chicago during the coming week will present a fine opportunity for motorcycle manufacturers to impress upon them the fact that the two-wheeled machine is an indispensable adjunct to effective government.

Upon the invitation of the management of the Chicago show, mayors, heads of departments and many others interested in procuring motor driven appliances for municipal use will visit the show and look over the commercial exhibition. Motorcycles for the police departments, for the assistant chiefs of fire departments in the smaller cities, and for the use of foremen and messengers in the various other departments of city have become a necessity.

On another page we print a list of the show's municipal guests. Every maker should make a note of who will be present and see that none get away without viewing the motorcycle exhibits. The seeds for future business can be successfully planted, and a fine crop of results is sure.

MEN AT THE WHEEL
OF THE
CHICAGO SHOW

CHICAGO SHOW PRESENTS RARE OPPORTUNITY

City Officials From Eighty Municipalities Will Visit Exhibition During "Commercial" Week, at Which Time Motorcycles Will Be Shown — The Two-Wheeler Indispensable for Civic Department Equipment.

They certainly "do things" when it comes to bewildering the beholder with decorative effects in Chicago. Never has the good old Coliseum appeared to better advantage, and never has the visitor been so artistically impressed as at the Twelfth Annual Show of the National Association of Automobile Manufacturers now in full swing in the Coliseum and First Regiment Armory in the Big City by the Lake.

General Manager S. A. Miles calls the decorations "a study in mosaics," and he hits the nail on the head. That is just what they are, and the effect is pleasing. You get a dim impression of the Alhambra when first entering, and this impression of Moorish art never leaves you, although it always remains merely an impression, and not a distinctive typical reality, for when you look again you see some of the characteristics of a Japanese temple in the architectural effects.

During the past week the show has been devoted exclusively to the motorcycle's big brother—the pleasure type of automobile—and it is not until next week that motorcycles will be seen on exhibition. They will be shown on the second floor of the Coliseum Annex, and will display the cream of the trade's productions. All the center space of the second floor will be devoted to motorcycles, and the exhibits will be the best ever staged in a Chicago show.

Besides the usual two-wheeled motorcycles, there will be on the floor a number of machines adapted for light delivery service such as is required by small retailers —butchers, bakers, shoe dealers, hatters, men's furnishing stores, druggists, florists and so on. For this kind of work metal box bodies are provided, either built on a three-wheeled machine or made with one wheel, so that it can be attached quickly at one side of a regular two-wheeled motorcycle. The carrying capacity is commonly from 200 to 300 pounds, and the machines are much more economical to operate and maintain than even the smallest motor delivery wagons. For one thing, they do not require a garage for overnight storage.

The fact the motorcycle exhibits will be staged during the second week of the show —at the same time the commercial automobiles are shown—ought to make business lively for motorcycle makers who are making a bid for municipal equipment of the two-wheelers for police, fire and other department officers and associates.

In all it is known that 80 cities will be represented officially during the second week of the show. These cities are scattered throughout the country from Scranton, Pa., to Fort Worth, Tex., and from Mankato, Minn., to Little Rock, Ark. Twenty-four are in Illinois, 12 in Iowa, 11 in Ohio, 9 in Michigan, 5 in Pennsylvania, 4 each in Wisconsin and Minnesota, 2 each in Indiana, Kansas and Kentucky, and one each in Arkansas, Oklahoma, Texas and the District of Columbia.

Mayors from at least 40 cities are expected, and these, together with various members of their respective commissions on public safety and public works, presidents of councils, their fire and police chiefs, superintendents of streets, health commissioners, city engineers and various

COLISEUM AND COLISEUM ANNEX, ON WABASH AVENUE, CHICAGO, WHERE THE SHOW IS IN PROGRESS

A STUDY IN DECORATIVE PERSPECTIVE

other city officials, will make an imposing civic delegation bent on inspecting the various types of motor fire apparatus, patrol wagons, ambulances, dump trucks suitable for street construction and street cleaning work, and other special types of power wagons suited for the diversified requirements of different departments of city work, and into which the motorcycle enters as a vitally important factor.

The widespread and earnest interest taken by city authorities in self-propelled vehicles is revealed by communications received by Manager Miles, from numerous municipal authorities. For example, President C. H. Rudolph, of the board of commissioners of Washington, D. C., who proposes attending the show, writes that $16,500 has already been appropriated for the purchase of motor vehicles for the capital city this year and that the fire, police, street and engineering departments are interested in the subject. Mayor Von Bergen, Jr., of Scranton, Pa., who expects to visit the show, in company with the director of public safety, reports that his city has appropriated $41,000 for the purchase of motor vehicles for the departments of Public Works and Public Safety. Fire Chief Hafer, of Little Rock, Ark., writes that he is trying to get the mayor and police and fire committee to attend the show and that his city may buy two combination pump and hose wagons. Mayor Grant, of Oklahoma City, expects to visit the show

Chief executives of other cities who have written that they will be in attendance are the following, arranged by States:

Illinois: Aurora, Thomas Sardus; Danville, W. C. Lewman; Decatur, Dan Dinneen; Elgin, Albert Ehrman; Jacksonville, George W. Davis; Joliet, E. M. Allen; Kankakee, S. W. Alpiner; Kewanee, B. F. Baker; La Salle, Thomas F. Doyle; Mattoon, E. C. Guthrie; Moline, M. R. Carlson; Peoria, E. N. Woodruff; Rock Island, Harry M. Shriver; Rockford, W. W. Bennett; Sterling, W. J. McDonald.

Indiana: Hammond, J. D. Smalley.

Iowa: Council Bluffs, Thos. Maloney; Dubuque, D. J. Haase; Fort Dodge, John Ford; Iowa City, G. W. Koontz; Keokuk, J. F. Elder; Mason City, F. M. Norris; Waterloo, John R. Rector.

Kansas: Atchison, C. D. Walker; Leavenworth, Albert Dodge.

Kentucky: Lexington, J. E. Cassidy.

Michigan: Benton Harbor, C. M. Ryno; Port Huron, J. J. Bell.

Minnesota: Mankato, C. T. Taylor.

Ohio: Elyria, D. S. Troxel; Findlay, E. L. Graves; Marietta, C. F. Lufer; Sandusky, George Lehrer; Youngstown, F. A. Hartstein.

Wisconsin: Eau Claire, J. S. Fleming; Fond Du Lac, Frank J. Wolff; Racine, W. I. Goodland.

WHAT THE EXHIBITORS WILL DISPLAY

In the matter of exhibitors at the Chicago motorcycle show in the Coliseum Annex, there will be 16, the same number as at New York. Of the machines exhibited, but one, the Wagner, produced by the Wagner Motorcycle Co., St. Paul, Minn., was not shown at Madison Square Garden, New York, last month, and consequently will have its first and formal 1912 unveiling for public inspection. The American Motor Co., Brockton, Mass., who manufacture the M-M, and who exhibited at New York, will not be represented by an exhibit in the big show, but will hold a private show at its Chicago branch, 2724 Michigan avenue.

With the exception of the Wagner, all of the machines which will be on exhibition at the show, have been fully described and illustrated in these columns when they first were announced by the makers, and in the New York show numbers. Undoubtedly some machines will show some minor changes and perhaps there will be a few radical ones too, as a result of suggestions and criticisms offered at New York.

The complete list of motorcycles which will be shown is as follows:

EMBLEM.

A new style of inlet valve dome and cap adopted since the New York show will be one of the fresh refinements to be found in the Emblem. It is whispered that there will be a few more new things uncovered. Distinctive features of interest to the mechanically inclined are the triangular reinforced tubing, double ball bearing motor, interchangeable ignition provision, and cushion tandem attachment with adjustable foot rests. Substantially the same models as staged at New York will be on exhibition. Emblem interests will be looked after by W. G. Schack and L. S. Taylor.

EXCELSIOR.

Plenty of features which have suffered no diminution of interest through having been exhibited at New York will bristle prominently on the Excelsior. The new chain models, of course, are the strongest magnets, but the belt models by no means have been neglected. Chain drive, cradle spring forks, counter-shaft clutch, camelback frame, cushion spring seatpost, and double handlebar, are the topline fresh features of the chain models, while on the belt types the unit control of clutch and idler looms most prominently in the changes.

FLANDERS.

Since the New York show an Eclipse clutch has been added to the Flanders as standard equipment. An improved enamel finish and a polished motor base are other refinements adopted. While there is but one Flanders model, taking New York as a criterion, it is likely to be shown in generous numbers.

HARLEY-DAVIDSON.

The Floating spring seat and free-wheel clutch are the most prominent features of the new Harley-Davidsons. Substantially the exhibit will consist of the same machines shown at New York, together with parts. The new chain twin is the very latest member of the family and introduces the largest number of fresh offerings from the designing room. There are numerous refinements of a secondary nature, which are common to all models.

HENDERSON.

So much originality is incorporated in the four-cylinder Henderson that it is difficult to see how the machine well can fail to prove a mechanical mecca long after the show season closes. Its underslung frame, big lusty motor, operating controls and lesser details furnish ample food for long and interesting analysis. The provision for a passenger riding in front of the operator, by the mounting of a detachable saddle forward on the top frame tube is the first attempt in this direction to meet the demand for extra passenger accommodations.

INDIAN.

The Indian exhibit at Chicago will be a duplicate of that at New York, and will comprise six models as follows: One each of the regular 4 and 7 h. p. types with chain drive; one regular 4 h. p. with belt

drive; one each of the Tourist Trophy 4 and 7 h. p. single speed types; one T. T. 7 h. p. two-speed with sidecar. Sectioned twin motor, two-speed, parts and the Tourist Trophy. Evidently considering that the 32 new mechanical conceptions in the T. T. types, together with 14 in the standard models, which served as the basis of the announcement of the 1912 models, were quite ample for a season's offering, there have been no further changes or additional refinements save in two instances: the housing of the foot starter ratchet mechanism, and the adoption of a magneto switch with lock and detachable key. The personnel of the Indian show staff will include George M. Hendee, Oscar Hedstrom, F. J. Weschler, Perry S. Newell, D. E. Dunn, Roy Bowser, Don Klark, and P. B. Whitney with assistants from the Chicago branch. The Edwards-Crist Co., Chicago retail agents also will exhibit.

MINNEAPOLIS.

A full line of Minneapolis machines including the van, the new belt two-speed and the spring frame models, not forgetting the chain types, will be staged. The spring frame, which is of orinigal design, and the pioneering of the way in the fitting of a two-speed to a flat belt model, are the things in which the Minneapolis folks take particular pride this year. The big 5 h. p. single with unit power plant also is typical of this make.

MERKEL.

Merkel is one of those makers which will duplicate its New York exhibit at Chicago. Five models will be shown as follows: One 7 h. p. twin with tandem; one 7 h. p. twin belt drive; one 6 h. p. twin, chain drive; one 4 h. p. single, chain drive, and one 4 h. p. single belt drive. All but the latter model will incorporate the well-known Merkel spring frame, the exception of course being fitted with a rigid frame.

M-M.

Counting the M-M display in its local branch, there will be 17 makes on display in Chicago next week. At 2724 Michigan avenue, a full line of the four 1912 models will be awaiting inspection, and Manager Greene will hold open house all week. The salesroom will be attractively decorated and invitations extended to show visitors to drop in. In response to the demand for sidecars which was strongly evidenced at the New York show, the M-M people are planning to produce a vehicle of this sort.

NEW ERA.

Twenty specific important improvements for 1912 make the New Era the subject for absorbing study, particularly because of the many constructional novelties embodied, and the abrupt disregard of standard practice. The standard model is a 4 h. p. single, made in solo and tandem type, and among other things includes 2¾ inch tires.

PIERCE.

All of the members of the 1912 Pierce line will be introduced to show-goers at Chicago. The exhibit will consist of one 7 h. p. four-cylinder, and three 5 h. p. singles. In addition the familiar pedestal mounting a sectioned clutch and sliding gearset as used on the four cylinder, will again do educational duty, assisted by a very complete display board of parts.

POPE.

It is a year since Pope motorcycles have graced a Chicago show, and although very few and minor changes have been made in the interval, the return in a fresh setting after such an extended absence will tend to make familiar things look strange and new again. The exhibit will be essentially the same as at New York, no changes having been made in the interval.

R-S.

As one of the oldest American makes, a show hardly would seem complete without the R-R present. All three models, the 4 h. p. singles in both belt or chain drive, and the 7 h. p. twin with direct chain from undergeared countershaft will be in the lineup, together with sectional parts. The R-S show forces will be composed of W. F. Remppis, W. B. Glasser, W. E. Dewey, W. G. Rhodes, W. G. Schaeffer and J. B. Trossel.

SCHICKEL.

It was at the last Chicago show that the Schickel two-cycle machine made its bow to the public, so very properly it has come back this year to celebrate "old home week." It will be located, not on motorcycle row, but in the main gallery in the Coliseum itself. Among the factory representatives present will be Norbert H. Schickel and H. J. Krackowizer.

THOR.

Being excellently located on Michigan avenue, the local automobile row, it would not be surprising if there were two Thor shows, one in the Annex and the other in the retail store. With their handsome white "skins" it naturally follows that the Thundergods will be one of the striking show features at Chicago as they were at New York. The complete line will be displayed, and visitors will be welcomed by E. J. Knight, of the sales department, and F. D. Freeman, retail branch manager.

WAGNER.

At this writing the 1912 Wagner may be likened to a rose about to burst its petals and unfold its attractions to view. Two models will be exhibited the 1912 4-horsepower single, and the model "M" a lower powered machine. The "4" is the leader and embraces many refinements, while the smaller model is attractively priced. Edward Worthington, and Frank Campbell will be in command of the exhibit.

YALE.

Mechanical oilers, Eclipse clutch as standard equipment, 2¾-inch tires, long-stroke motors, independent clutch and idler control, and a light twin, that is a brand new model, are the leading refinements incorporated in the 1912 Yales. The complete line of four models, magneto and battery singles of 4 h. p., and magneto twins of 5 and 7 h. p., will hold court and receive their subjects during the week. A. B. Coffman, and D. J. Welch will do the receiving honors for the factory.

MOORISH ART AND JAPANESE TEMPLE EFFECTS ENSEMBLE

The Indian MOTOCYCLE holds all official records

There are records and records. There are State records, economy records, endurance records, track records. But the only records that count are those officially recognized by the F. A. M. The INDIAN holds all official records, both professional and amateur, as tabulated, on these two pages. Look them over. They contain the story of INDIAN supremacy.

Always the leading holder of record honors, the Indian machine closed the year with the greatest contest triumphs of its career, holding not only all American official speed records, both professional and amateur, but also all the 1911 F. A. M. championships, the transcontinental record, and also all economy class records save one.
—The Bicycling World and Motorcycle Review, Jan. 6th, 1912.

Speed Records Compiled from Official Documents in the Office of J. P. Thornley, Chairman F. A. M. Competition Committee. Other Data Tabulated from Reports of F. A. M. Sanctioned Contests by J. J. O'Connor, Official Compiler.

Who the Exhibitors Are and Where to Find Them

MOTORCYCLES

All motorcycle exhibits in Coliseum Annex unless specified otherwise.

Aurora Automatic Machinery Co., Aurora, Ill. (94-95)—Thor.
Consolidated Mfg. Co., Toledo, O. (127-129)—Yale.
Emblem Mfg. Co., Angola, N. Y. (147-150)—Emblem.
Excelsior Motor Mfg. & Supply Co., Chicago, Ill. (131-132)—Excelsior.
Flanders Mfg. Co., Pontiac, Mich. (80-81)—Flanders.
Harley-Davidson Motor Co., Milwaukee, Wis. (124-126)—Harley-Davidson.
Hendee Mfg. Co., Springfield, Mass. (136-139)—Indian.
Henderson Motorcycle Co., Detroit, Mich. (114)—Henderson.
Miami Cycle & Mfg. Co., Middletown, O. (153-155)—Merkel.
Minneapolis Motorcycle Co., Minneapolis, Minn. (79)—Minneapolis.
New Era Auto-Cycle Co., Dayton, O. (142-144)—New Era.
Pierce Cycle Co., Buffalo, N. Y. (151-152)—Pierce.
Pope Mfg. Co., Hartford, Conn. (145-146)—Pope.
Reading Standard Co., Reading, Pa. (133-135)—R-S.
Schickel Motor Co., Stamford, Conn. (1, Coliseum Gallery)—Schickel.
Wagner Motorcycle Co., St. Paul, Minn. (130)—Wagner.

Note. — All motorcycle exhibits save Schickel will be located in the center of the second floor of the Annex. Schickel will be in the main building gallery.

ACCESSORIES

Space numbers prefixed by "A" are in Armory; others in Coliseum.

Batteries.

National Carbon Co., Cleveland, O. (40)—Dry cells.

Bearings.

American Bronze Co., Berwyn, Pa. (81)—Non-Gran bearing metal.
Bower Roller Bearing Co., Detroit, Mich. (253)—Roller bearings.
Cramp & Sons Co., Wm., Philadelphia, Pa. (55)—Bronze and alloys.
Rhineland Machine Works, New York City (13A)—Ball bearings.
Standard Roller Bearing Co., Philadelphia, Pa. (5A)—Roller bearings.
Timken Roller Bearing Co., Canton, O. (33)—Roller bearings.
U. S. Ball Bearing Co., Oak Park, Ill. (7A)—Ball bearings.

Belts.

Graton & Knight Mfg. Co., Worcester, Mass.—Leather belts.
Frank Mossberg Co., Attleboro, Mass. (31A)—Leather belts.

Brake Lining.

Royal Equipment Co., Bridgeport, Conn. (9A)—Raybestos friction lining.

Brazing Apparatus.

Turner Brass Works, Sycamore, Ill. (103)—Portable brazing outfits.

Carbureters.

Byrne, Kingston & Co., Kokomo, Ind. (75)—Kingston carbureter.
Findeisen & Kropf Mfg. Co., Chicago, Ill. (19A)—Rayfield carbureter.
Stromberg Motor Devices Co., Chicago, Ill. (76)—Stromberg carbureter.

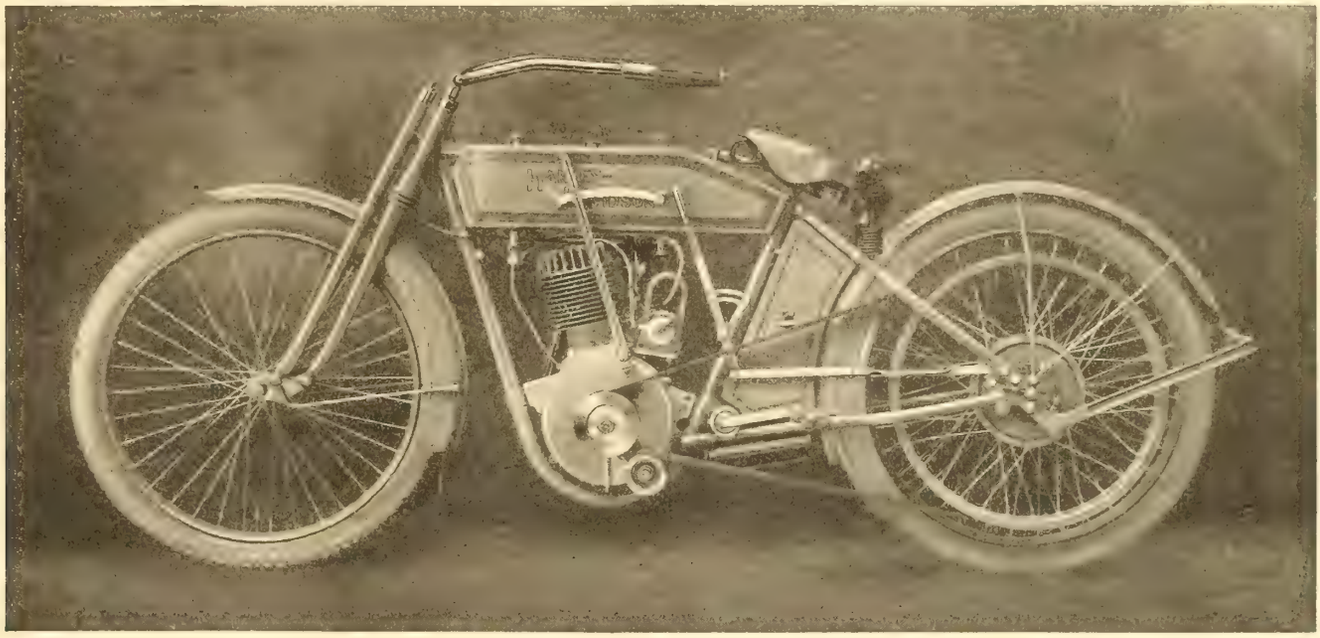
Short Grass Club Is "Getting Busy."

Pratt, Kans., Jan. 30.—A meeting was held at the office of Dr. B. J. Patterson, vice-president of the Central District of the F. A. M., last night, and the Pratt division of the Short Grass Club was organized. E. H. Clark was elected captain and Thomas Hodges was chosen as lieutenant. Leslie Pitzer was appointed F. A. M. commissioner. The Short Grass Club is the big club of the West, and this year will have a tour that will far eclipse anything previously given.

Pictures may look nice, but they

JUST at present about all that some manufacturers are showing in the way of 1912 models are pictures.

No one who has investigated as he should is going to hand over money to any manufacturer now-a-days on the strength of hand made dummies stuck together for show purposes. Dealers are no longer interested in models that have never been built, because, there is no profit in the sale of something they can't get.



Thanks to bitter past experience most dealers know that "financial difficulties," "re-organizations," "disputes" and constant internal friction will raise the dickens with the production end of any factory.

Today it is not only the machines that count, but the people back of them as well. The dealers won't be fooled again by any manufacturer, whether the same one or not.

The motorcycle business will be good next summer. There is no question about that, but what the dealer wants is machines when he needs them, not simply pictures to look at or promises which may or may not materialize.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I

Good Racing Prospects For Savannah.

Savannah, Ga., Jan. 29.—That this city is not to be an idle place the coming season, as far as motorcycle racing is concerned, was evidenced at a recent meeting of the Savannah Motorcycle Club, at which time a comittee was appointed to consult with the owners of the local racing track, with the object of getting it converted into a motordrome.

Motorcycle racing has always stood high in this section, and now that the Savannah Motorcycle Club is a member of the F. A. M., and that Augusta, her sister city, has joined that body, it is a strong possibility that Savannah will have one of the finest tracks in the South.

The track now as it stands is a half-mile, dirt track, has a fine grandstand in good condition. The track, if secured, will be paved and put in first-class condition, and the opening date will no doubt be May 30, which day is set as Memorial Day in the South.

Revival of Blue Laws in Ontario.

Toronto, Jan. 30.—The motorcyclists of this city are fearful lest the staid fathers at the City Hall place a ban upon Sunday pleasure trips. A by-law just has passed its first reading, placing a restriction on tobogganing and kindred sports on the Lord's Day and a threat that motorcycling may also be tabooed, has the riders winking. A bitter fight is waging over the question of Sunday pastimes and naturally the motorists have taken sides with the broad-minded faction.

Site Selected For Indianapolis Track

Indianapolis, Feb. 1.—Motorcyclists here are awaiting eagerly the meeting and banquet which is to be held at the Denison Hotel soon after the conclusion of the Chicago motorcycle show. A large delegation of Indianapolis motorcyclists are to be present at the show, where they will talk board track, 200-mile race and a few other things.

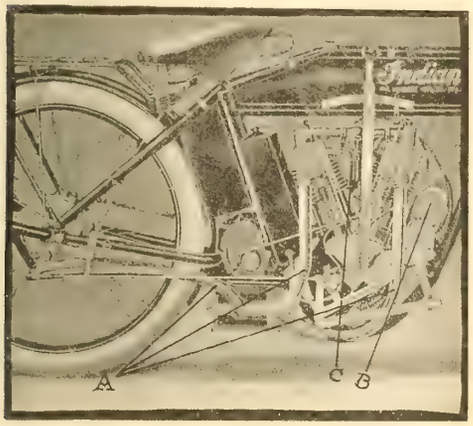
At the forthcoming banquet and meeting it is to be decided definitely whether or not Indianapolis is to pull off the proposed 200-mile race at the Speedway. At this meeting the Indiana Motorcycle Club is to be re-organized, and the officers elected.

In a letter to the Indianapolis Motorcycle Club Chairman J. P. Thornley, of the F. A. M. competition committee, has stated the conditions governing the construction and management of a board track, and he has also advised the promoters to use the big saucer for events other than motorcycle racing in order to make it a better paying proposition. He has suggested that the track be built so that, with the aid of circus jacks and seats, the structure may be turned into a huge amphitheatre, where athletic carnivals, horse shows and football games might be held. The track is to be three laps to the mile, with a 50 degree rise, and in the center there will be practically 1,400 square feet of space that may be used for other attractions, when motorcyclists are not using the track. The committee which is to suggest a site is ready to make its report at the coming meeting. A location near the water works, on the Riverside Park car line has been selected as the best and most available.

Toronto Motorists Keep Things Moving.

Toronto, Jan. 29.—With their new leader, President Fred Johnston, setting a perfect example, the members of the Toronto Motorcycle Club have leaped into a state of activity with a rapidity that is astounding. Himself a thousand volt live-wire, President Johnston, only a month in office, has inculcated a feeling of vigor in the whole membership so that a record year is not only hoped for but anticipated. Special sessions of the executive are being held at regular intervals and plans are already being laid for the coming summer. So anxious is the president to have all arrangements of a preliminary nature settled upon that he has decided to call off the last two events of the club's winter social program, and substitute therefore two summer campaign business meetings.

It is the intention to hold race-meets this coming summer at least once a month. Last season only two club meets were staged. The time between will be occupied in week-end excursions and endurance runs.



Captain McCarthy has been chosen archivist for the purpose of keeping records and reports of all club events, while W. M. Gladish has been empowered to carry on a publicity campaign.

THE MOTORCYCLE AND THE MOTOR CAR

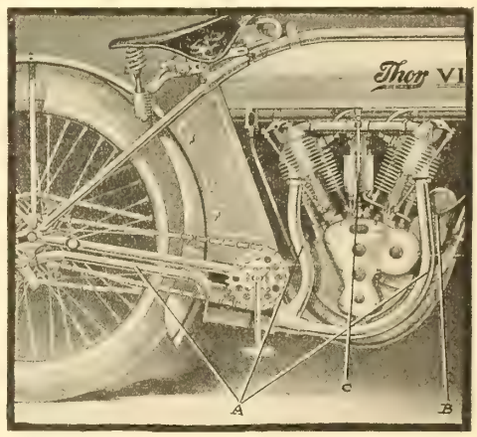
Influence of One on the Design of the Other and Instances Wherein the Builders of Both Vehicles Have Inter-learned and Borrowed with Profit.

(By A. H. BARTSCH)

Quite naturally, it may be assumed, very few of the thousands of motorcyclists who visited the recent automobile and motorcycle show held in Madison Square Garden, New York City, took advantage of the excellent opportunity afforded them to compare the motorcycle and the motor car, in their relation to each other, from the standpoint of mechanical resemblance. And also, to note the influence each has exercised upon the advancement of design and construction exemplified in the other during its period of development. That period, of course, has not closed, and will not while either agent of transportation is produced, but to-day the motorcycle and the motor car have become standardized in a broad sense. The march of progress has been greater in the latter than in the former, due to the immense concentration of engineering and manufacturing abilities brought to bear to meet the enormous demand.

(A) Symmetrical Exhaust Piping on Indian, (B) Waterproof Magneto, (C) Multiple Jet Carbureter

While the very idea that the motorcycle designer's efforts have been of the slightest assistance to the automobile engineer in arriving at the present high state of efficiency to which he has brought his car, may seem highly ridiculous to the person who has but contempt for the two-wheeler, and a flight high into the realms of imagination, even to the motorcyclist himself, such is the case. The latter's incredulousness easily is traceable to his but cursory knowledge of the development of both vehicles, and his natural and well grounded impression that each type has progressed through its stages of development indifferent to the advances of the other, because of the wide disparity in the problems which required practical solution to enable both to enjoy their present popularity born only of successful achievement.



To those of us who have known the motorcycle since its babyhood and have watched it grow, and also have noted the development of the motor car, through natural interest, due to its close general relationship with its two-wheeled brother, there plainly is apparent a close mechanical connection, especially so, since the introduction of the automobile type of motor having a high ratio of power and capacity to light weight. This factor of weight to efficiency is, as the merest tyro can observe, the chief desideratum in constructing the power plant of the modern motorcycle.

Silence.

As a potent example of the influence exercised by automobile practice on motorcycle design, let me cite one of the most important problems which confronts the motorcycle engineer to-day, viz.: the producing of a smooth running and practically noiseless engine possessing great power. No doubt, if motor car designers had allowed their present cars to perpetuate the big, noisy blunderbusses of days past, there would be lacking that highly desirable influence, and suggestion, impressing itself gradually but forcibly on the motorcycle constructor. The effect of this influence is to be seen in the effort to secure in the 1912 models, sweeter and smoother running without any sacrifice of that wonderful power which made their predecessors famous. Were it not for the extreme absence of noise in the 1912 motor car, we hardly would notice the unusual degree in which silence has been obtained in our motorcycles of current vintage. This indeed, is a much to be commended trend.

Of course, in pursuit of the solution of the noise problem, the motorcycle designer is "up against" much more difficult conditions, than those which best the automobile engine builder, for motorcycles, at present, I regret to state, are compared solely on a power basis. Therefore, it is quite too much to expect that power will be sacrificed deliberately to any extent in order to obtain sweeter and quieter operation. On the other hand, however, it scarcely is possible that the insistent public demand for a near approach to silence in a motorcycle in all that the name implies, much longer can be ignored by the makers. Let us hope not, at any rate, for it should, and fortunately is realized, by those most vitally concerned, that public antagonism to the motorcycle is created and fostered chiefly by the abuse of the muffler cut-out. Therefore, an engine which is so designed as to necessitate the use of a cut-out, in order to produce even normal power, brands the designer as lacking in mechanical ability, and is detrimental to the advancement of the entire industry.

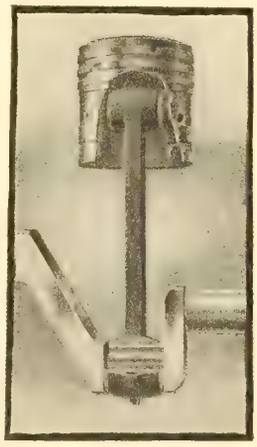
In automobile practice, it has been found that a long exhaust pipe, of proper diameter, fitted to the muffler, is a most valuable attachment in silencing the volume of sound issuing from the motor. This auxiliary is termed technically a "tailpipe," the reason for the designation being quite obvious. This feature, I notice, has been applied to motorcycles with excellent result. Therefore, why should manufacturers continue using tiny 12-inch pipes, with inefficient mufflers, and covering these shortcomings in a crude manner, by tacking on a cut-out. While a cut-out may be necessary, under the conditions stated, an exhaust system, properly designed, will not require a cut-out, in order to secure a measurable degree of power production, and with such a contraption eliminated, the motorcycle will gain many new and desirable friends and riders.

(A) Thor Also Has Pleasing Exhaust Leads, (B) Protected Magneto, (C) Twin Jet Carbureter

Long experience has taught the motor car designer and dealer that silence is a mighty strong and valuable selling argument and it would be most pleasing to many in the motorcycle trade to see the manufacturers provide their agents with similar sales ammunition. Silence is well worth the few drawbacks, if it really is encumbered by any, which it may entail, and it certainly behooves the motorcycle designer

Light Piston Construction Used by Harley-Davidson

to continue striving along these lines. The silent motor car is everywhere, so that opportunity for reproduction incessantly is knocking for admission in motorcycle shops —let it in.



Power.

In scrutinizing the methods by which high power is obtained from small, slender looking motors, one is impressed with the fact that the motorcycle designer must have taught the motor car builder a few lessons, inasmuch as the former was first to employ the formulas for securing great power with light weight, which have been adopted on many cars of to-day. One illustration will suffice. It is but a few years back that motor cars intended for public consumption were fitted with engines carrying such heavy cast iron pistons that a real "live" motor was unknown. Manufacturers hesitated to fit light pistons to their touring car engines, although racing experience must have demonstrated to them, the value of light weight pistons. Nevertheless it was not until automobile makers acquainted themselves with motorcycle construction that they realized the very general extent to which light pistons and other reciprocating parts were employed in touring models, and how largely these "pared" members were responsible for that snappiness and "jump" ever present in a healthy motorcycle engine. Then it was that the car designer woke up, and gave serious consideration to lightening his engine.

Motorcycle manufacturers went "the limit," with their pistons on lightening, with the inevitable result that broken pistons became frequent in racing machines, and the builders, wisely learning their lessons, returned to a sturdier and safer type of piston. Rationalism in piston construction plainly was to be seen in the types exhibited at the last Garden show.

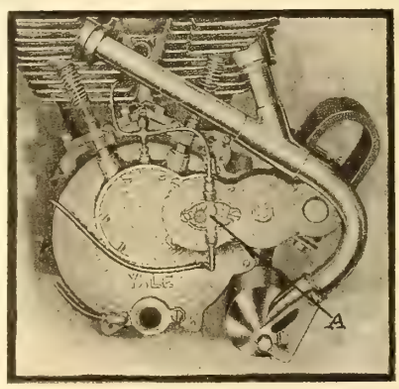
In crowding the last breath of power from racing motors, designers pushed the compression up to a point where chronic overheating developed. Although productive of excessive power, abnormal compression is exceptionally injurious to the motor, and when the ailments which followed its adoption manifested themselves the natural remedy was applied and the pressure reduced until the detrimental symptoms were eradicated and an engine of exceptional power and softness was obtained. It is interesting to note that a very prominent racing motor has surprisingly low compression, contrary to the very general impression.

It is reported on good authority that some motor car designers now are being confronted with these identical problems, so that they undoubtedly could borrow a few leaves from the motorcycle designer's book of experience very profitably. I am advised, too, that the present day valve gear of the automobile motor owes much of its original design to the earlier high speed motorcycle engine. However, motor car engine practice of to-day well is worth studying by those motorcycle makers who are interested in bringing their machines to a high state of efficiency. An interesting observation of the motorcycle makers with regard to their attitude in improving their product conveys the impression that

Pierce Pistons are Trim and Slender

they are much more ready to profit by the lessons taught in racing, and employ the knowledge gained in bettering their touring models, than are the automobile builders. It appears, therefore, taking results into consideration, that motorcycle racing, unquestionably has improved "the breed," although some dabblers in it profess not to so believe.

Lubrication.



There is a decided advantage in favor of the motor car maker when we begin to delve into oiling systems. On a basis of deduction, it would seem that as builders of very high speed engines, the motorcycle designers would pay the greatest attention to lubricating them, but none will deny that automobile oiling has come in for much greater thought and attention than the motorcycle power plant. Forced lubrication is rather rare in motorcycling circles, although it is obtaining presumably a firm foothold in this country and abroad, while at the last New York show we find the drip or gravity feed system in large numbers, and in many cases, supplemented by the hand pump for emergencies. Viewing the situation broadly, tendencies and practice indicate flattery of the automobile oiling specialist.

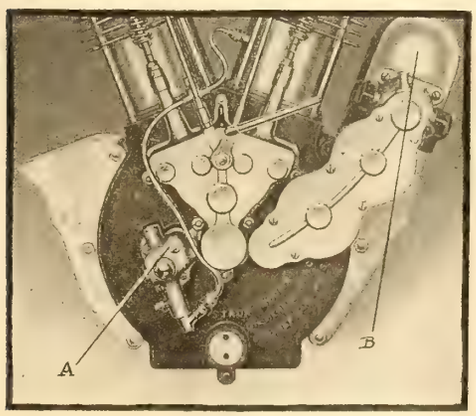
The advantages claimed for and possessed by a mechanical force feed lubricating system need no emphasizing. High speeds cannot be maintained otherwise, unless with ill effect, for it is not so much a question of securing a quantity of oil at a pressure, as of obtaining that quantity of good and cool lubricant in the proper place at the proper time. It necessarily may increase the cost of production, but even so, is well worth the additional outlay, for it can be made so simple and thoroughly fool proof as to dissipate the prevailing delusion of the need for a hand pump.

For supplying cool and clean oil to the motor, a particularly efficient apparatus which was shown for the first time at the Garden last month was the new Bosch oiler. While at present produced in automobile type only, I believe, its simplicity and positive action has much to commend it for motorcycles also. It is built in unit form, with any required number of feeds, the units being added as desired, much as a sectional bookcase is expanded. I believe that this apparatus could be adapted for motorcycle use very nicely, and by placing the operating mechanism of the lubricator within the oil reservoir and actuating it by a shaft from the motor, a neat, inconspicuous and well-protected oiling system would be obtainable.

Carbureters.

In regard to any influence which the motor car carbureter may have exerted on its motorcycle prototype, I find myself quite unable to locate other than the adoption of the multiple jet. Vice versa there is even less copying in this department. Both have their respective operating levers and controls, likewise auxiliary air inlets, either automatically or mechanically governed, and so on. Car designers might, however, compare the accessibility of a motorcycle carbureter with that of an automobile. Let the designer put a watch on himself while he removes the spray nozzle of a motorcycle carbureter, duplicate the feat with his car mixing plant and make a

Yale Uses Two Oil Pumps—Mechanical (A) and Hand Actuated



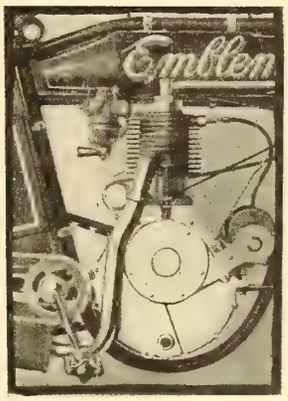
comparison. It is likely to prove distasteful, but it may cause an awakening which will redound to the benefit of the car buyer. A motorcycle spray nozzle can be dismounted in two or three minutes, while on most cars the operation is indeed trying.

Ignition.

Turning to the magneto, the so-called heart of the motor, it is the one component accessory which has been the greatest factor in making the motorcycle the reliable vehicle it is to-day. It is interesting to know that the high tension type of magneto was used to a considerable extent on motorcycles, before it became a regular fixture on cars. In view of its universal adoption by the car builders to-day, who in their specifications lay considerable stress on the magneto equipment, it seems strange that the motorcycle should have led the way in this advance, but the fact is undeniable, and it indeed is a triumph for the little fellow of the road.

When we take up the methods of attaching the magneto to the motor, we find the tables turned, for the motorcycle builder, I regret to state, has much to learn from his automobile brother. However, he is learning rapidly at present, as was made plain to anyone who studied magneto-mounting on the motorcycles at the New York show. At least two makers, fastened their instruments with steel straps, instead of the conventional bolts, which insist on rusting if not protected, and then become well nigh immovable.

Quite a number of magnetos were placed in a more protected position than formerly, either higher from the road at the front of the motor, or in the rear of the cylinders. This item of location, however, is less important than formerly, for the more popular instruments now are more or less enclosed and will withstand any amount of punishment from mud and water without "shorting." This immunity is especially true of the new "Z" types of Bosch magnetos, their secondary cables being held in position by a sharp pointed screw, which swells the insulation as it passes through the strands of wire, and makes the entrance of water to the carbon brush impossible,



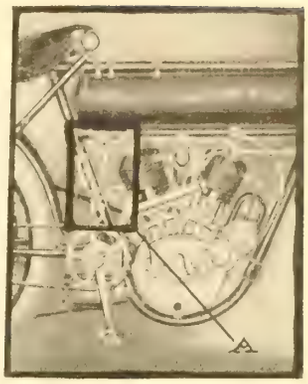
(A) Indian Gear Pump and Distributer Valve (B) Magneto Bed Bolted to Motor Anchor Plates

because of the expansion of the cable to form a tight fit in its bushing.

Bore and Stroke.

The long stroke motor has not attained that degree of prominence in motorcycle circles, which has ben responsible for its wide exploitation in automobile realms as the greatest advance in motor design in recent years. It is true of motorcycle practice that "square" motors, in which the bore and stroke are equal, are quite few, but to find an engine with a stroke one-fourth greater than the bore, also is a rarity. A sort of happy medium between "square" cylinders and long strokes seems to have been struck in a moderate excess of stroke over bore. This is due to limitations which the motorcycle designer must observe in laying down a motor, for the stroke necessarily must be kept within normal limits, to facilitate easy removal of the cylinders without requiring a dismounting of the tank or other components.

Emblem Long Stroke Motor—4 in.



Of course, it is obvious that cylinders require removals at more or less frequent periods in order that accumulated carbon may be divorced from the combustion chamber, piston and rings. This carbonization is due in equal measure to the use of poor oil, crude lubricating systems and unprotected carbureter air ports, the latter constituting an excellent avenue of ingress for dust, pebbles and all sorts of flying matter. Taking these facts into consideration, it hardly seems possible that while present frame and tank styles remain popular, motorcycle designers will adopt longer stroke motors than at present are in vogue.

Tanks.

In comparing fuel reservoirs on motorcycle and automobiles, it definitely may be said that the former have of recent years felt the influence of the latter, as exemplified in the fitting of larger tanks and filler nozzles. However such automobile tank refinements as strainers and gauges yet are rarities on motorcycles.

Cooling.

Present cooling system on motorcycles are exactly the opposite to cars as regards

Merkel Double Oiling System: (A) Sight Feed and Hand Pump

number and type. That is, while water cooling is almost universal and air cooling almost extinct in motor car circles, the other extreme obtains on motorcycles. In fact there are no water cooled motorcycles in America, but the system has a few advocates among British builders. Therefore there seems to be comparatively little room for comparison here, but the success of water cooling on motorcycles has to my mind yet to be demonstrated. Water cooling involves additional mechanism, additional weight and very careful design. Then too, special material must be used in order that the entire system can be built to withstand successfully vibrational stresses. Taking these conditions into consideration, it appears, that for the present at least, and while motorcycle engines are restricted within present limits, water cooling is undesirable and unlikely to meet with adoption to any appreciable extent, at least for some time to come.

Other Details.

Again returning to the desideratum of silence, I find that some designers, in their pursuit of noiselessness, follow the, to my mind, questionable practice of fitting individual valve spring covers, in order to prevent the click of the valves and tappets becoming audible. Of course, valve springs are subjected to considerable heat under ordinary working conditions, and in time become weakened by a high temperature, despite the neutralizing effect of air cooling. Therefore, the enclosing of the valves seems other than good practice on a motorcycle, for the heat would be retained in the stem housings, and the springs naturally would be subjected to even higher heat than at present, with a corresponding shortening of their life.

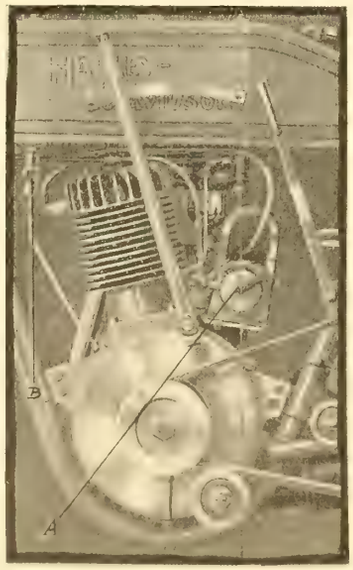
However, as a preventative of wear, valve covers would protect the guides from dust and grit in no small degree, and this undoubtedly is an advantage, but it hardly offsets the injurious effects accompanying the enclosing of the springs where such terrific working temperatures prevail. In connection with valve guides, I noticed at the New York show, that there is a tendency to follow car practice in the use of long guides of the detachable type, which

is a desirable refinement. Heretofore, valve guides, in most instances have been too short, and poorly made, so that they not only caused sticking and rendered unsatisfactory service, but worst of all, were removable only at the factory. There are a host of "hard to locate" troubles in store

Another Long Stroke Motor—Pierce Single

for the rider who is so unfortunate as to own a motor with improper valve guides, and manufacturers, to whom these remarks apply, should fit guides of sufficient length, which can be removed easily for renewal, or at least rebushed.

Motor car influence has been felt strongly in designing the brake systems of the leading motorcycles of the day. Greater working surface is contained in current brakes, making them safer and more efficient, as well as more durable. While coaster brakes were satisfactory for light bicycles, they never were of much use on their much speedier and powerful offspring, until the band was incorporated in the braking mechanism in lieu of the tiny expanding shoes, but even now there is plenty of room for improvement. Two brakes, acting independent, are an ideal system, if they both are of good design. Why should the makers now not strive to provide their machines with means for stopping quickly—they certainly can travel fast enough?



In the gradual conquering of the problem of starting a motorcycle without exertion, again is disclosed the influence of the automobile, as exemplified by the introduction of the foot starter, and if we become more languid, we might insist on a self-starter; perhaps we will get that too, in time. The fact remains, however, that the influence of the motor car is being felt all too lightly in respect to easy starting, for every motorcycle should have a clutch at least, if not several speeds as well. Space considerations complex the problem very much, but it sincerely is to be hoped that such desirable advances will be made, and made soon, as all motorcycle enthusiasts are not so athletic as to be able to start a 250-pound machine, even on a level road. And even, if they were physically capable, there are not a few who do not care for the exertion necessary.

There is one feature which hardly will bear copying from the automobile, and that it the foot-controlled clutch. It seems far safer to verse the clutch control in a hand lever operated from the grip preferably; as yet we need our pedal extremeties for balancing at low speeds.

Quick detachable wheels are of greater importance than we have realized probably, and although a good design seems far off, it must be found, and adopted, since the removal of the entire wheel is the sole method of tire replacement at present. I do not overlook the changing of a butt-end tube without necessitating the removal of the wheel, but when casings or endless tubes, require replacement, and these types are in the great majority, out must come the wheel. At present too much mechanism has to be disturbed and re-adjusted, to make tire changing other than most disagreeable and to be dreaded by the average rider.

With regard to power transmission from the motor to the rear wheel, there are numerous difficult conditions with which to cope. I believe that the belt is likely to hold its own for some time to come, although the chain is making headway steadily, but this progress seems to me to reflect a sporadic and unstable demand, and not because a chain has proven decidedly more superior for all around motorcycle work. The belt drive has a very good point in its favor in the wide latitude in gear changing which it permits.

Shaft drive commands consideration, for it seems to hold much as a desirable transmitting medium, but weight, spring couplings, size and cost of manufacture are deciding factors which militate against it making greater progress. It is highly successful on cars, and if the main objections to its use on motorcycles could be removed, we again would have copied, and wisely. There is no question but that the shaft drive is better for motorcycle use than either belt or chain, but cost and complication are the prohibiting forces.

(A) Harley-Davidson Prefers Rear Magneto Mounting, (B) And the Vacuum-Gravity Oiling System

The last and most youthful motor car influence which is being felt in motorcycle circles, is the very interesting connecting link being forged by the appearance of that hybrid vehicle termed the monocar. It is rising to popularity in Great Britain, but in America it yet is unknown although members of the family as exemplified in the tri-car and sidecar are destined to enjoy great popularity from now on. Perhaps the monocar will have its day here in due time. There are great and attractive possibilities for a machine of this type, and it may be that it will influence the design of the motorcycle proper. At any rate, it is quite probable that it will bring motorcycles and motor cars even closer together than they ever before have been, and engender a more friendly feeling between the users of both types of vehicles than now exists. Let us hope so.

1878—Boston Bicycle Club—1912.

Bearing words of good fellowship and expressing fraternal spirit in every line of two really good examples of poetry, one by Quincy Kilby, B. B. C., to the Pickwick B. C., of London, the other by R. D. F. Paul of the latter club, in reply, "Circular Number 591," brings to members the announcement of the annual dinner of the oldest bicycle club in America, the Boston Bicycle Club. As the heading of this article reads, so does that of the circular, which continues:

"The Thirty-four Anniversary of our First Annual dinner constituting our Thirty-fifth gathering at the festive board will take place at the Rathskeller of the Copley Square Hotel on the evening of Saturday, February 10, 1912, at seven o'clock.

"It is the special desire of the committee to have as full attendance as possible, with a good representation of the junior members.

"In accordance with vote of the club, given three weeks ago, the committee will distribute the medals commemorative of attendance upon the 'Wheel about the Hub' to those entitled to them.

"Our fellow member, Abbot Bassett, for twenty-five consecutive years Secretary of the L. A. W., will be the guest of honor of the club."

Frederick Whitney, C. C. Ryder, and J. Rush Green compose the committee on the 1912 dinner.

Annual Meeting of the Rock Islanders.

Rock Island, Ill., Jan. 29.—At the annual meeting of the Rock Island Motorcycle Club, held at Koch's Motorcycle garage, January 19, the following officers were elected: President, Guy L. Munger; vice-president, S. C. Hemenway; secretary-treasurer, Ben. A. Koch; captain, Samuel Switzer; first lieutenant, Roy Wilmerton; second lieutenant, Charles Bleuer. The club has a total of 23 members, all of whom were present at the meeting. A plan for increasing the membership to over 50 is being considered by the officers.

PROVIDENCE RETURNS TO SHOW CIRCUIT IN FINE FORM

13 Motorcycles Staged in Little Rhody's First Motor Exhibition Since 1908—Dixie Garden Decorations Make Handsome Setting—Big Armory Main Floor Larger Than New York's Garden Arena—Large Attendance Drawn from Southern New England.

Providence, R. I., Jan. 28.—In the comparatively rational and peaceful manner in which men and events alike, "pass on" in New England, when their terms expire, the Providence automobile and motorcycle show, which has been running all week in the magnificent State Armory, came to a close last night. The finale was conspicuous for the absence of that general abandon and effervescence, which characterizes the annual falling of the curtain on the New York motor exhibition.

Four years elapsed between the show just closed and its predecessor, and it naturally follows that the city was "ripe" for a motor display. It goes without saying that last week's exhibition was the greatest of its kind ever held here, and in the matter of decorations, at least, there are not a few, who saw both the New York and Providence shows of the present season, who unhesitatingly award the "dress" honors to Roger William's city.

In keeping with the city's reputation as an active motorcycle center, this industry was well represented by the Indian, Harley-Davidson, Excelsior and Pope, a total of 13 machines being staged. Of course local dealers sponsored the motorcycle displays, although in some cases, loyal support was tendered by the factories. The motorcycle exhibits were located in the basement, but this was made to appear so comfortable through the agency of tasteful decorations, a ladies orchestra, and a restaurant, that it truly may be said that the machines appeared to better advantage than they have in the basement of old Madison Square Garden.

It required two spaces to accommodate the exhibt of B. A. Swenson, who had practically the entire New York show tribe of Indians, including the sidecar, encamped on his reservation. He showed six machines, including singles and twins, regular and T. T. models, a sectioned twin motor and two speed, and a complete line of accessories, and motor clothing. By long odds the most novel and original machine at the show, was the "Indian Jr" which Swenson himself built on Indian lines, for his heir apparent. The machine mounts a 1¼-horsepower motor, and weighs 70 pounds. The sidecar outfit proved a star attraction, particularly, with the ladies. It seemed to possess a fascination which was irresistible, and won many enthusiastic admirers.

It was the first time Harley-Davidson machines were exhibited at a local show, but their debut was an auspicious one, the entire New York Garden galaxy of four models being on parade. Clarence Loftes, the local agent, had a well-arranged exhibit, and a large corps of assistants to dispense literature and information to the steady crowd of visitors, who tarried at the booth. Loftes maintained a demonstrator outside the armory, and said that it was kept busy all the time. He discovered a deep interest on the part of visitors, in the sectioned model and display parts, indicating a tendency of show-goers to familiarize themselves with motorcycle structural details, as they have with motor cars. He also reported a widespread interest in the sidecar, and believes that from indications, the makers will be swamped by the demand when the touring season is well under way.

On the same side of the "row," and but a few spaces removed, Hirah Baxter and the Excelsior were camped. Two of the New York show models, a single and twin, belt drive, were on the firing line. It also was the first time these machines were present at a local exhibition, but Baxter now is firmly convinced that buying show space is a gilt edge investment. He likewise unearthed a rich vein of sidecar interest, which he predicts will assay high in business returns.

One Pope motorcycle was on deck at the Pope-Hartford motor truck exhibit. Standing alongside a big freighter it looked lonesome, and was so overshadowed that it required keen scrutiny to discover it.

Lavish requisition on the usual show decorative "props" including bunting, lattice work, electric lights and smilax, was made. The predominating decorative scheme was that of a Southern garden, and

RHODE ISLAND STATE ARMORY, WHERE THE PROVIDENCE AUTOMOBILE AND MOTORCYCLE SHOW WAS HELD

the artisans outdid themselves in obtaining the desired effect. The roof of the main hall was canopied with blue bunting, studded with strings of electric lamps, which, when illuminated, realistically conveyed a night sky effect. The "distance" impression was most effective.

Blue and white bunting on the walls and roof, red and green floor carpet, white lattice work fringing the exhibits at a ten-foot elevation, and studded with electric lights, smilax and poinsettias were so combined as to form a most harmonious setting. Red and green panel signs with gold lettering, and triangulated to be read both ways, indicated the identity of each exhibit. The basement decorative scheme was simliar to the arena, save for the sky canopy. An interesting feature of the decorations was their suspension by cords, from girders and walls, no nail or screw fastenings being used, owing to a state prohibition.

On the opening night the attendance was immense, over 20,000 people passing the gate. Of course this was a record, but the four years' longing was not to be satisfied in a night, and the attendance continued strong until the final day, when it was lightest.

Strange to say, accessory exhibitors were quite few, especially those offering motorcycle accoutrements. The motorcycle and accessory exhibitors and their wares were the following:

B. A. Swenson—Indian motorcycles. Six machines; sectioned parts. Show staff—B. A. Swenson, J. G. Edwards, W. N. B. Turney, E. C. Spencer, F. Labonte, Edward Spencer, Carl Swenson.

Elmwood Cyclery—Harley-Davidson motorcycles. Four machines; sectioned model and parts. Show staff—J. C. Loftes, Alvin Loftes, Arthur L. Boyce, W. J. Walker, Gorden Koerner, A. Fazzi, Eric Carlson, John Youngberg, Carl Youngberg.

Hirah G. Baxter—Excelsior motorcycles. Two machines. Show staff—Hirah G. Baxter, W. C. Blanchard, William Place, Jr., Leon P. Brown.

Rhode Island Motor Car Co.—Pope motorcycles. One machine.

ACCESSORIES.

B. A. Swenson—Full line motorcycle supplies, clothing, imported leggings.

Waite Auto Supply Co.—Speedometers, spark plugs, goggles, tools, ammeters, polish.

National Tube Co.—Shelby seamless steel tubing.

Post & Lester Co.—Plugs, speedometers.

Kincaid Oil Co.—Oils, greases.

Narragansett Chemical Co.—Oils, soap, greases.

B. F. Green & Co.—Cravenette clothing.

Armory Showlets Shot on the Wing.

That Harley-Davidson new twin chain driver was a powerful magnet in pulling the crowd to Loftes' layout. On the other side of the "war shed," Swenson had something classy in a fire cart red T. T. two-speed sidecar rig.

That "Indian, Jr.", had lots of folks guessing. They would sight it, make an optical meal on it, ask a few questions, take away a catalog, and return later to fire this: "I don't see the Junior listed in the catalog. Why?

On the opening night the lights went out and stayed out for half an hour. Baxter was fortunate enough to be opposite a car equipped with large electric lamps, and the auto man accomodatingly turned them on, flooding the Excelsior space with light while the rest of the tenants in the lower region were in Stygian darkness.

Those Loftes roosters were in great demand. Absolutely silent, too.

All of the dealers were enthusiastic over the outlook for a big season. While

THE SOUVENIR THAT SWENSON GAVE

Swenson booked 12 orders, and Baxter 17, all figure that it was not the actual sales during the week which counted for so much, but the long line of newly interested persons and prospects who would ripen into buyers later.

Pick this, while it's in bloom. Walter Bardgett, ex-bicycle racer and referee, now is a full fledged scribe. Honor bright, Walter now presides over the sporting page of the Providence Evening News, and had a daily show story. He is well versed in piston displacement formula and all the rest of the technical lore, now. During show week he exchanged monickers with all the auto, motorcycle and bicycle men, and local sport writers, so he sort of got away to a flying start.

Overheard several times at Swenson's space "Say Al, get one of those gold Indian pins for me?" "Gold pins? What do you mean?" "Oh say, Al, don't play ruzzielamb, I'm wise to the pin donation. If you have'nt any for me all right." "Say, look here, what are you driving at on this pin racket, anyway?" "Why, I was talking with a fellow upstairs, and he had a five dollar gold piece scarf pin with the Indian head out. He said you were giving out a very few to favored friends, so I just naturally wanted to get in on one if possible." "Ha! Ha! So you fell for that yarn, eh? Well, I can't afford to give away five dollar gold pieces, but here is a 'diamond' watch fob that you will like better."

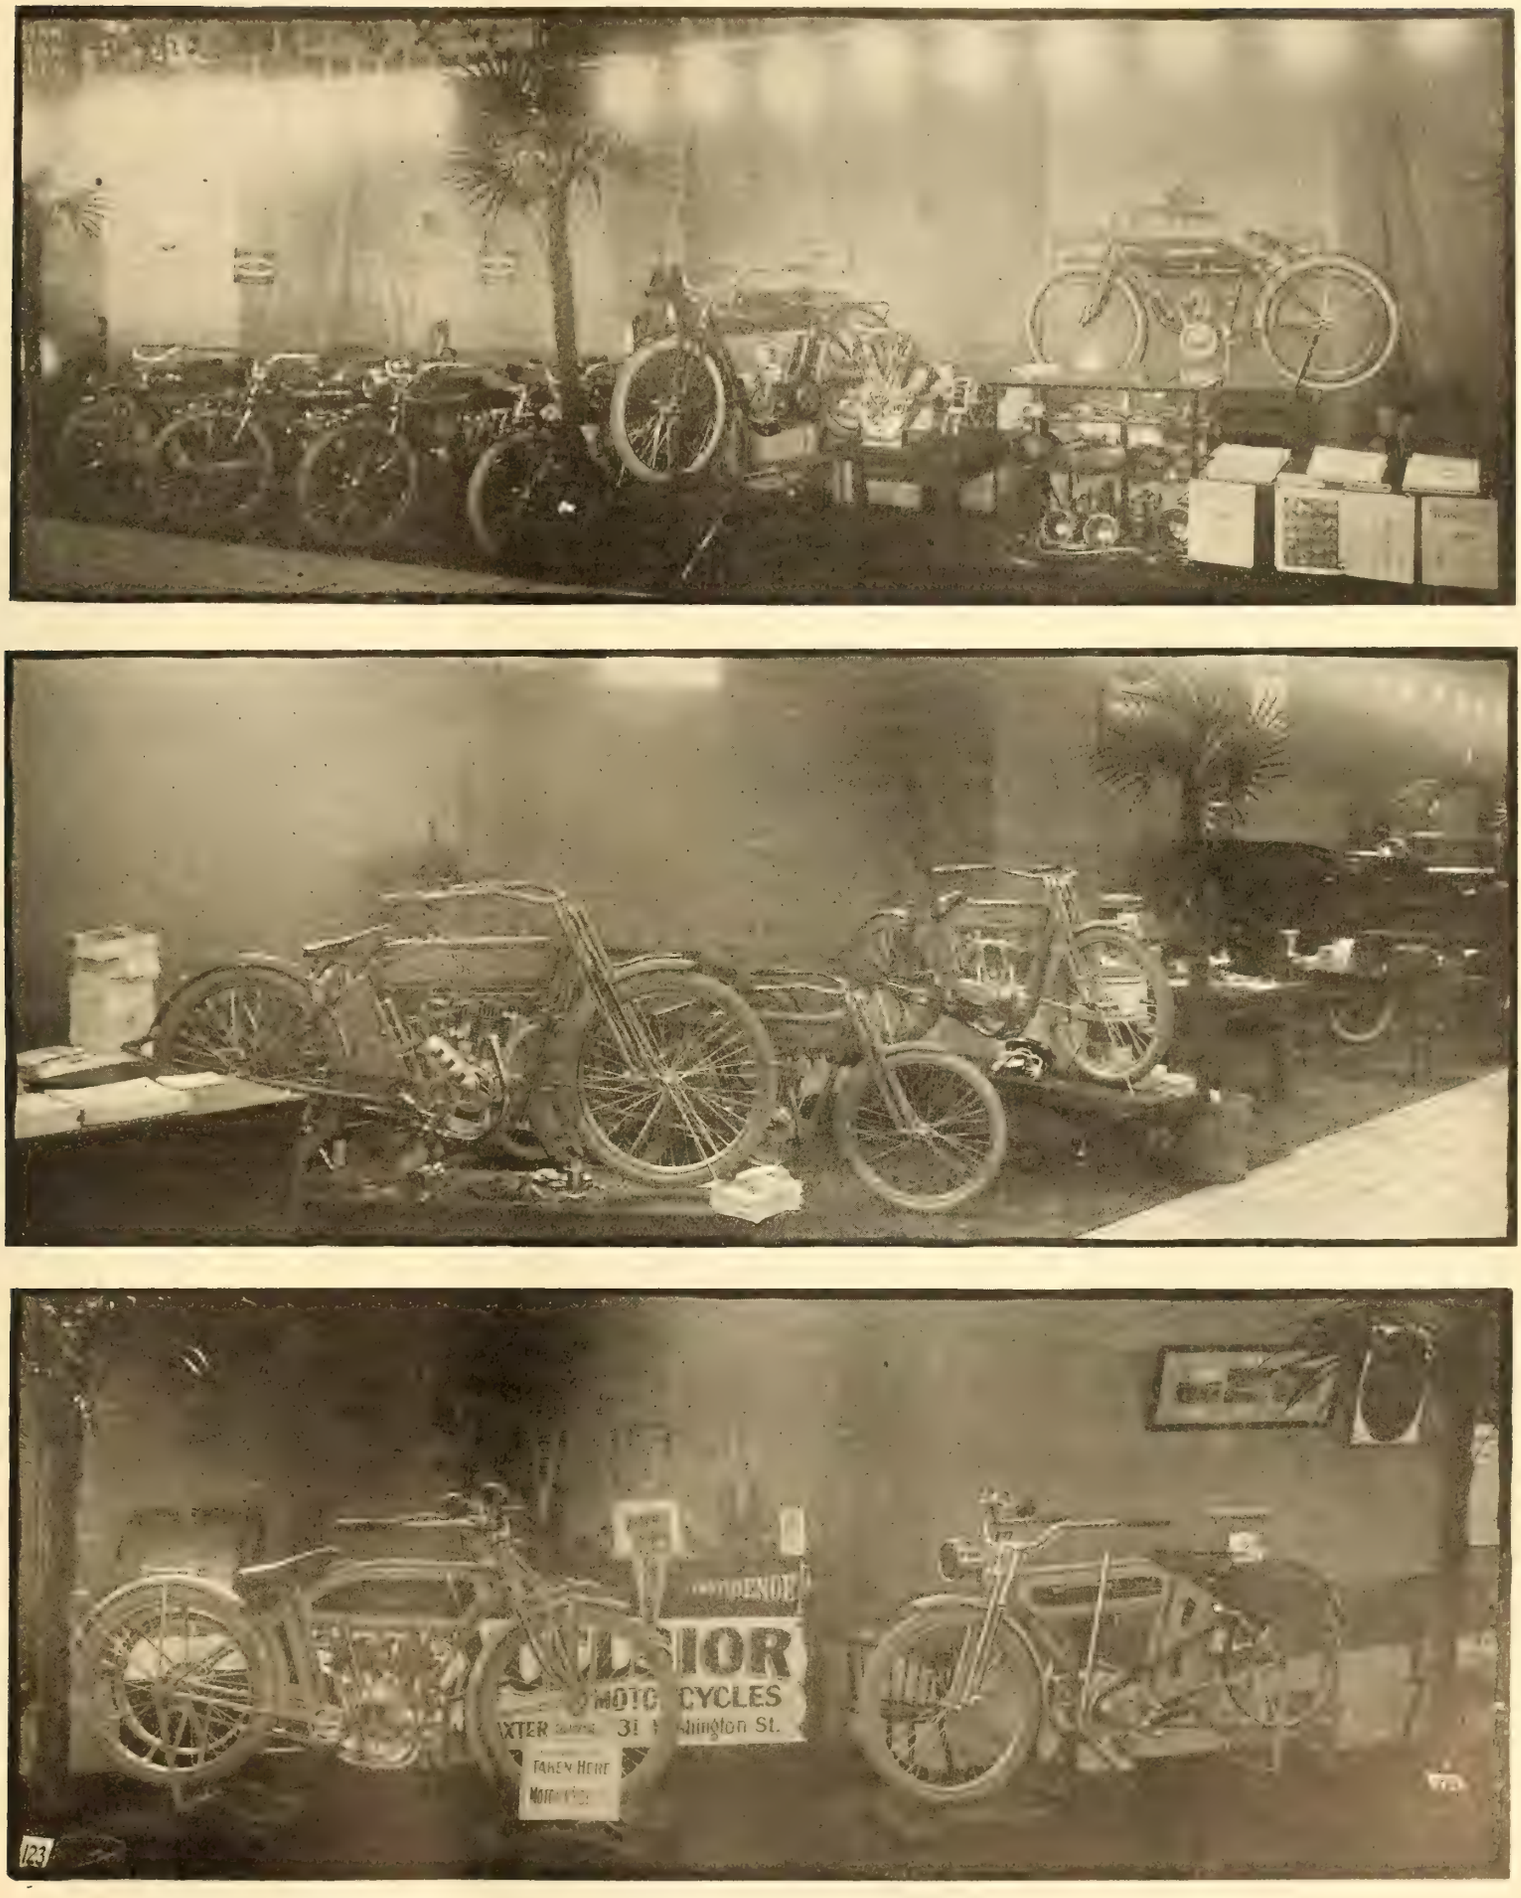
Did you get one of those classy Indian watch fobs with three "stones" in the head feathers? They were in great demand. The feathers bear inscriptions telling of Indian victories. A Swenson advertising idea that made a hit.

C. A. Persons, the Worcester saddle man, was on hand frequently accelerating the demand for his sidecar and saddle. He though the decorations surpassed those at New York.

Here is Swenson's idea of a fully equipped machine for two, as applied to one of his regular "sevens:" Swenson tandem attachment, Holden spring seat post, Purdy exhaust whistle, Old Sol lamp, Jones speedometer, watch holder. Did he forget anything?

Many dealers in small towns throughout Massachusetts, Rhode Island and Connecticut, brought prospects to the show and closed sales. Among the dealers who escorted parties from out of town were Oscar Beauvais, Taunton, Mass., George P. Williams, New Bedford, Mass.; C. V. Pendleton, Jr., Norwich, Conn.; E. Broadbent, Attleboro, Mass.; Archie Brown, Wakefield, R. I.

In and About Providence Agencies.



Providence, R. I., Feb. 1—Hirah G. Baxter, agent for Excelsior motorcycles, will take possession of new quarters at 172 Washington street, corner of Snow street, shortly. The new store, which is but a few blocks removed from the present establishment, and situated on the same thoroughfare, in the heart of the automobile district, will, of course, offer improved facilities for handling Excelsior sales and repairs.

Pope motorcycles will be sold in this territory hereafter, by the Rhode Island Motor Car Co., 69 Broad stret, who have handled Pope cars for several years. They are the first of the local automobile concerns to take on motorcycles.

Wearwell Discontinues Marion Factory.

Kokomo, Ind., Jan. 27.—Announcement is made by the Wearwell Rubber Co. that its branch factory at Marion, Ind., has been discontinued, and that in the future it will manufacture its lines of mechanical rubber goods, materials for repair outfits, bicycle and motorcycle casings and tubes, vulcanizers, gasoline motors, etc., at the Kokomo plant. G. R. Van Aucken, who was general manager of the company, has severed his connection with the house.

Three Treiber brothers, W. H., C. F. and W. C., will open a motorcycle store at 105 Grove avenue, Elgin, Ill.

THE INDIAN, HARLEY-DAVIDSON AND EXCELSIOR EXHIBITS AT THE PROVIDENCE MOTORCYCLE SHOW

Latest F.A.M and Club News.

ESTABROOK'S WEEKLY BULLETIN

Three New Clubs and Nineteen More Repair Shops—Legal Action Committee After Information on State Laws.

During the week which closed January 27, clubs affiliating with the F. A. M. were as follows:

No. 217, Turlock (Calif.) Motorcycle Club, M. E. Cooper, secretary; 12 members.

No. 218, Tacoma (Wash.) Motorcycle Club, A. F. Hoska, secretary, 1307 Pacific avenue; 21 members.

No. 219, Quaker City Motorcycle Club, Philadelphia, William A. Stark, secretary, 2512 North Gratz street; 27 members.

Chairman Estabrook's bulletin continues to prove interesting and shows that he is actively "on the job." He says:

Wauchope Bros., enthusiastic motorcyclists of Lodi, Cal., and members of the Stockton M. C. and F. A. M., as well, are planning to organize a local club and have set the date for its accomplishment on April 7 which is also the date of their sixth anniversary in business in Lodi. They are making an early start so as to have everything in readiness on the above date, and plan to take it upon themselves to give prospective club members and friends a fine banquet interspersed with varied entertainment.

Leon F. Riche, of Great Barrington, Mass., reports local conditions as favorable for forming an F. A. M. club in the early riding season. There are about 40 local riders in the immediate vicinity of Great Barrington, many of which have expressed a desire to join a local club for the benefits which organization offers in addition to sociability and companionship.

C. A. Jenner, physical director at the Brush Union School, Brush, Colo., is an enthusiastic motorcyclist and reports the local road and other conditions as exceptionally fine for the sport in his locality. He has it in mind to organize the local riders into a club in order that sight-seeing runs or short tours may be the more enjoyable.

Henry Fisher, of Southold, N. Y., believes in sociability, clean sport and companionship in motorcycle trips and tours and so is working to organize a local club.

The Legal Action Committee of the F. A. M. is now functioning in a manner which should be pleasing as well as profitable to all members, in that present and prospective State laws or local ordinances will receive a measure of consideration by the F. A. M. Co-operation with as well as assistance, is offered to local clubs and officers and to F. A. M. State officials in combating drastic and burdensome measures that exist at present, or that are in prospect. With a view to being helpful and to learn of existing State laws which annoy motorcyclists, the chairman of the Legal Action Committee is plying the F. A. M. commissioners of the several States with a list of questions to which it is hoped a ready response will be given. All motorcyclists should join the F. A. M. and give us their support in this work.

For the week ending January 27 repair shops were registered as follows: E. R. Kahrs, 650 Ellis street, Augusta, Ga.; West End Electrical & Cycle Company, Green and Maclay streets, Harrisburg, Pa.; Miner & Houseknecht, 46 Main street, Batavia, N. Y.; F. Schwarz, 447 West North avenue, Chicago; South Side Cycle Company, 1623 South Broadway, St. Louis; Holdridge & Gordon, 903 H street, Modesto, Calif.; Thomas Tauber, 628 Walnut street, McKeesport, Pa.; H. Von Der Linden, 52 Market street, Poughkeepsie, N. Y.; Walker Bros., 105 Court street, Bowling Green, O.; R. F. Hofheinz, 220 East Commerce street, San Antonio, Tex.; Chase Motor Company, Charles and Read streets, Baltimore; R. E. Rodgers, 409 Chess street, Monongahela, Pa.; Chicago Motorcycle Works, 738 Sheridan road, Chicago; Excelsior Autocycle Company, 473 Woodward avenue, Detroit, Mich.; T. W. Long, 43 East Wheeling street, Washington, Pa.; Thomas Bouchie, 903 North Seventh street, Vincennes, Ind., J. M. Williams, 18 Seventh street, Franklin, Pa.; William H. Danner, Washington avenue, Siegfried, Pa.; R. C. Brazenor, 1507 Bushwick avenue, Brooklyn, N. Y.

Cards are out for a social and dance under the auspices of the Little Rhody Cycle Club, Providence, R. I., Tuesday night, February 6, in K. of P. hall, Elmwood. During intermission there will be home trainer races and exhibitions by Alvin Loftes.

JANUARY MEMBERSHIP REPORT

Secretary-Treasurer Gibson's Bulletin Shows 402 New Members, California Leading—Shop List in Preparation.

January rolled up a total of 402 new members for the F. A. M., a gain of 169 over December figures. The number supplied by each State was as follows: New Hampshire, 1; Vermont, 1; Massachusetts, 10; Connecticut, 4; New York, 20; Pennsylvania, 34; New Jersey, 3; Maryland, 10; North Carolina, 1; South Carolina, 9; Georgia, 1; Florida, 3; Alabama, 1; Mississippi, 1; Louisiana, 9; Texas, 21; Ohio, 47; Indiana, 15; Michigan, 19; Wisconsin, 6; Illinois, 6; Missouri, 14; Kansas, 9; Minnesota, 1; Iowa, 12; Nebraska, 2; South Dakota, 1; Arizona, 1; New Mexico, 1; Colorado, 2; Montana, 1 California, 104; Oregon, 1; Washington, 25; Canada, 3; Panama, 3. Lost card issued in January, No. 12,466.

By F. A. M. districts the division of the new members is as follows: New England, 16; Atlantic, 67; Peninsular, 15; Gulf, 31; Lake, 107; Central, 25; Southwestern, 108; Pacific, 27; Insular, 3; Canadian, 3.

Renewals for January totaled 153, the districts contributing their quotas as follows: New England, 17; Atlantic, 55; Peninsular, 4; Gulf, 2; Lake, 42; Central, 2; Southwestern, 20; Pacific, 11.

Secretary-Trasurer Gibson has issued a circular letter to all holders of registered repair shop certificates, announcing that his office will compile and circulate broadcast over the country, a booklet containing the names and addresses of all trade members to whom repair certificates has been issued. He desires that every one receiving his notice shall reply at once giving correct business addresses and other information that may be requested for publicity. The booklet is to be issued about March 1.

A. C. Banta, F. A. M. No. 326, of San Jose, Calif., is the fourth person to receive the F. A. M. official award of $25 for supplying information leading to the arrest and conviction of a motorcycle thief. An escaped convict from New Jersey, named Kruger, stole an Indian motorcycle last November, belonging to O. E. Chase, of San Francisco. Banta caused his arrest.

BIG FEAST IN LITTLE RHODY

Providence Motorcyclists' Annual Banquet a Session of Joyous Jinks—Swenson and Scott the "Fun Kings."

Providence, R. I., Jan. 29.—There have been larger and more pretentious social functions held in this city, but it is safe to say that none were more enjoyable, and abounding in good humor, than the seventh annual banquet of the Providence Motorcycle Club, at Perkins' on Weybosset street, yesterday. Thirty-five members and guests sat down to a most appetizing but not digestion wrecking feast, which was benevolently assimiliated with keen zest, intermingled with sparkling repartee. The tables were arranged in the from of a "U," with the guest board forming the bridge.

Naturally the banquet committee, composed of A. R. Magee, chairman, L. P. Whitcher and John Kay, did not overlook the excellent opportunity which the selection of a menu afforded, for the drafting of an original and distinctly motorcycling style of food program, incorporating local and trade "hits." The style and typographical makeup of the order of courses was of a high standard. It contained a list of club officers, together with photographs of President E. L. Buffington and Treasurer B. A. Swenson, and constituted a most appropriate souvenir of the happy occasion. Here is the gasoline flavored feast which the fascinating waitresses set before the ravenous "35:"

Olives a la John Kay Blue Streak Celery
Roast Saddle (Spring Chicken)
T. T. Mashed Potatoes
Boiled Onions a la P. M. C.
Big Four Mashed Turnips
Hot Butt End Rolls with Hard Grease
Magneto Pineapple Tapioca Pudding with
Carbureter Whipped Cream
Assorted Side Car Ice Cream
Race Track Cheese Swenson Coffee
Gasoline Medium Oil
Ignition Cigars

When Banquet Chief Magee's excellent Havanas began to spark, the feed accoutrements were removed, and Toastmaster Buffington, who graces the presidential chair with becoming dignity, introduced in his own original style, B. A. Swenson, the leading dealer in the State, as the initial speaker of the evening. When Swenson arose he was greeted with loud applause, a true measure of his popularity.

He chose for his topic, the contests planned for the coming season, which hold interest for the local riders, and touched first on the contemplated series of New England quarterly trials, which undoubtedly will be the blue ribbon motorcycle events of the year in that district. Outlining in brief form, the tentative plans already formulated for the trials, he said that, in all probability, the Providence club would be invited to conduct one of these trials.

As now scheduled the promoters of the trials, of which there will be four, to be held at probably approximate quarterly intervals, plan to apportion them among the Springfield, Worcester, Providence and Boston motorcycle clubs, and it is likely that the Providence club will be designated to conduct the third event in the fall. Swenson dwelt on the widely beneficial effects which these events would have, in popularizing the sport in New England, particularly in the immediate districts where they are held, and of the manifold pleasure inducements which they would offer to riders to participate.

What the Club Contest Calendar Contains.

The speaker also directed attention to the first notable club road event of the season, the annual "herring run" to Taunton on Patriot's Day, April 19. This junket always attracts a large turnout, for it has the reputation of being a huge "joy ride" all the way. It also is possible that the club may promote a tour during the summer, recalling the F. A. M. Eastern tour to Buffalo last summer, which had its birth in Providence.

Perhaps the stellar number on the club calendar is the annual triangle run in the fall, which now is the oldest motorcycle event in the country. Its perpetuation attests of its popularity, which ever is increasing with each renewal. There was marked interest shown when Swenson spoke of the good prospects for a board track at Narrangansett Park, made famous by the ponies in days past. The board saucer will be built inside the dirt platter where the equine flyers formerly pranced, and will be a third of a mile circuit. There are excellent transportation facilities, and as Providence is one of the keenest racing centers in New England, the success of the venture seems assured. Swenson rang off with a few yarns that "brought down the house."

When the toastmaster said, "Gentlemen, we have with us this evening, William 'Wallet' Scott, of Providence, the West Indies, South America and other regions," and intimated an entertaining discourse from the returned globe trotter, he was most conservative. And "Buff" never has been noted for radicalism. "Scotty"—beg pardon, no connection with the Midas of Death Valley if you please—was into his post-prandial gallop very quickly. Maybe his recent transition from an equatorial atmosphere was of able assistance in enabling him to "get away" rapidly, although he long ago acquired the "starting on the spark" habit.

Scott Columbused around the West Indies, specifically St. Thomas, and also in South America, last winter. Naturally his store of information is unusually complete—he has a keen scent for news anyway—but unfortunately space does not permit of an extensive recounting of his observations. However, he will obligingly furnish full details to those interested, on application. Take it from Scott, if you would tour the West Indies, or South America, enjoyably, leave your motorcycle home, unless you are a rough rider like Swenson, for the "roads" are considerably "mussed" with ruts, sand and rocks. Incidentally, a respectable hill, to relieve the monotony. He strongly recommends a pony, and expounded a bit of financial gospel, to the effect that the "giddap" should be purchased in New York, and if returned to the port of embarkation, with good compression, tight bearings and a healthy diaphragm, it reasonably might be exchanged for its cost,

SOME OF THOSE WHO BANQUETED AT PROVIDENCE

less slight depreciation deduction, which may be termed "rent."

By this time, Scott had his audience well saturated with tropical humor, and suddenly flickered off the film, to return instantaneously in serious vein. He complimented the club on the enviable reputation it enjoyed throughout the country, and even abroad, as a progressive organization, and urged the members to even greater efforts. Members should be unwilling to rest on their past achievements, but should strive earnestly and vigorously to advance the club to a position of strength, prestige and influence second to none. The goal is possible, but the price is hard and enduring effort.

In paying well deserved tribute to Swenson, as the father of the club, and who chiefly is responsible for its present success, and the advantages and pleasures which the members enjoy, the speaker counseled against permitting a few willing workers to bear the burdens of club administration, unassisted, for too long a period, reminding his audience that "all work and no play," etc. Every member should do his share, for in numbers lies the secret of great accomplishment with least effort. In concluding, Scott urged upon the members, that if the club is invited to conduct one of the quarterly trials, every member should exert himself to the end that the local event will surpass all others in size, administrative efficiency, and favorable result. He relinquished the floor amid a tremendous ovation.

When the Real Hamlets Came On.

Toastmaster Buffington then announced that the banquet committee would offer some professional vaudeville as a change of bill. William Hughes, Jr., rendered several popular solos in an excellent tenor voice, with Mrs. Alice L. Smith at the piano. Thomas Mulgrew "got across" regularly, with singing sketches and stories. His impersonations of a baseball fan, in which he introduced several local diamond idols was a smashing "home run," the "ball" being lost.

J. Gould, as an exponent of the black art —no, not shoe shining, Pandora—juggled cards, "opened" handcuffs, and otherwise gave ocular exemplification of sleight of hand in an entertaining manner. His manipulation of the "bracelets" was particularly good.

When the "vod villians" had escaped, the toastmaster again declared vocabulary exercise in order, and presented Walter "Asbestos" Bardgett,—yes, he's absolutely fireproof—who used to instruct railway men to "cut him off at Buffalo," but now "roundhouses" at Providence. Walter is going to operate the Melrose bicycle track there the coming season, and as he has campaigned on the saucers himself for well night a score of years, and capped it with a season as referee on the N. C. A. Eastern circuit, he is pretty well equipped to occupy the managerial dais and enjoy the delectable sensation of Joewelching contracts to his ex-colleagues of the velodromes, coliseums and dromedaries. See that hump?

Be that as it may, Walter was powerful serious, when he remarked that fake racing always resulted in a quick demise of the sport in the locality where such practice prevailed, and that to survive and long be successful, racing must be absolutely clean and honest. He discerned fine possibilities for a revival of bicycle and motorcycle racing in Providence, and plans to introduce many innovations in the operation of the Melrose track, which he believes will become popular.

Touring, and how to do it properly, was the timely topic, selected by Frank Domina, ex-president of the club, who dabbles in racing, when he is not charlesjgliddening about America, or Europe. There is a world of significance in his remark that the Berkshire Hills, of Massachusetts, and the White Mountains, of New Hampshire, offer as pretty scenery as any part of Europe. He opined that Great Britain can be "done" very thoroughly by motorcycle, in six weeks, and all Europe that is "worth while," in 11 weeks.

A motorcycle can be shipped from New York to Liverpool for $5, and the railroad fare saved in traveling on the "other side" will cover the water transportation both ways. Furthermore, with a motorcycle, places can be visited that would be impossible via railroad itinerary, and on the whole, this is the most economical way to really "see Europe." The speaker stated that the cost is not nearly so excessive as the average rider thinks for, and that the trip is well worth while, to riders who can take it.

Toastmaster Buffington brought the speechmaking to a close, with a few apt remarks on the superb quarters which the club will possess when the new sales and service building, now being erected by Swenson, on Broad street, is completed, in the spring. The location is on a trunk touring route through the city, and it confidently is anticipated that the attractions of the new clubrooms will prove irresistible to unattached riders, and result in a large increase in membership.

"Now the Best of Friends Must Part."

After five solid hours of feasting, fun and frolic, the merry party braved the flashlight, and, voting unanimously that the "seventh annual" was the "best ever," dissolved in the darkness.

Those present were: E. L. Buffington, F. E. Domina, J. G. Edwards, B. A. Swenson, A. V. Howe, Edward A. Lutz, Albert B. Carlson, John Kay, E. C. Spencer, W. D. Burt, A. R. Magee, E. Domina, J. Edward Price, C. H. Westcott, L. P. Whitcher, H. H. Smith, W. L. Hughes, Jr., F. Labonte, George W. Hayden, G. Koerner, J. C. Loftes, N. T. Granlund, H. E. Winslow, W. W. Scott, George O. Moody, S. R. Green, all of Providence; W. A. Bardgett, Buffalo; J. J. O'Connor, New York City; George F. Fleurant, F. L. Pond, Woonsocket; Joseph T. Leddy, C. H. Frazier, Pawtucket; Charles W. Rayhill, Warwick; Charles J. Ephraimson, Natick; David R. Clark, Cranston.

Sparks from the Banquet "Battery."

Providence motorcyclists have good hours. Glimpse the clock, but get it right ——"p. m."

If you would like to know "why Scott went to South America"—ask Swenson. Tee-hee-hee.

When the handcuffs were passed around for inspection, Spencer handled them carelessly, and they "bit" him on both wrists. Then he became so highly excited that his collar made a "break for liberty," and half succeeded in escaping. "Throw your chains away," someone advised him. "I would if I could, but I can't," he explained piteously. He was "chained to himself" for ten minutes, while the other "panned" him unmercifully.

Poetry doesn't dissolve well in a gasoline atmosphere, ordinarily, but Scott must have inherited some of his distinguished ancestor, Sir Walter's verse-ability. "In the Spring Time" went the route without missing a shot, and lapped the field over and over again. It certainly was a winning mixture, and produced a distinctive exhaust.

While we feel that the broaching of commercial topics at a social function, is highly indelicate, we cannot help but admire the deft way in which some business folk are eternally lassoing trade. Swenson disposed of a "7" to one of the banqueters during the session, and the deal was'nt "framed" for the occasion, either.

These club banquet photos usually are taken "before." This one was taken "after," and they all look pretty rational. Oh, Providence isn't a wild town.

Some folks were mighty curious to know what the scribes found so interesting in the "inlet manifold" of the dining room, but those who "butted in" did not stay. Tastes and temperaments are so artistic nowadays.

Scott and Swenson sure can "come back" as raconteurs. Bardgett has a Balzacian style that's all his own.

There was no "ignition" trouble this year. Last year a rantankerous batch of "plugs" were abroad, and shortly after the "current" passed through them, they broke down and "sparked all over," "blew out," and made a big fuss generally.

That polite "no smoking" sign. Some saw it, others did not. For a long time nobody saw it, and it was not disturbed, either. It hung conveniently beneath a coat rack. Look for it in the picture.

All the local scribes were there.

Three cheers for the P. M. C. They are one "live" fleet.

Toledos Meet and Elect Officers.

Toledo, O., Jan. 29.—Six new members were elected at the annual meeting of the Toledo Motorcycle Club, which was held at the club rooms, 46 Colonade building, last Friday evening. Officers for 1912 were elected as follows: President, E. Ehingen; vice-president, A. B. Coffman; treasurer, J. W. Siler; recording secretary, H. H. Giese; financial secretary, E. F. Miller; captain, S. J. Chubbuck.

The financial secretary's report showed a healthy condition of the exchequer and the recording secretary's list of new members taken in during 1911 was very gratifying.

The new club rooms in the Colorado building are more easy of access than the old club house, corner Ashland avenue and Prescott street.

When the meeting adjourned and all hands repaired to the Spitzer Cafe where a buffet lunch was enjoyed in the Motorcycle Cave. Addresses were made by several of the members and Captain Chubbuck, one of the oldest endurance riders in the country, F. A. M. Member No. 187, entertained those present by relating a few of his experiences of "enduring" in the old days, before the advent of comfortable riding machines. Vice-president Coffman told about the big National Motorcycle tour, he is formulating with A. J. Musselman, of Chicago, explaining in detail the great benefit it would be to the trade and motorcyclists in general, and asked the club to support the measure.

Quaker City Has Harley-Davidson Club.

Philadelphia, Jan. 29.—Having reached a membership of 35 within the space of six weeks and with the prospect of mounting well up to the 100 mark in the near future, the Harley-Davidson Motorcycle Club, of this city, bids fair to become a strong factor in motorcycle circles. The opening reception of the club, held January 4, proved to be a success in every way.

The club members are looking forward to establishing themselves in a club house. They are now arranging a theatrical benefit at the Grand Opera House with the view of raising funds to defray the expense of furnishings. The officers of the club are as follows: President, H. B. Sellers; vice-president, Elwood C. Rorer; secretary, F. Ralph Shenck; treasurer, Howard Kolp; captain, Alexander Klein; first lieutenant, William Jaggards; second lieutenant, Vincent Buhl.

Reade Again Leads San Jose Club.

San Jose, Cal., Jan. 27.—Charles D. Reade the popular president of the San Jose Motorcycle Club again has been elected to the head of that organization. Reade is one of those wide awake enthusiastic men who has the happy knack of pleasing the ladies, a number of whom are among the riders of the club. He is a great organizer, plans all kinds of runs during the season, and is a supporter of all things that tend for the betterment. He has been instrumental in the success of the local organization, is a track man who will, it is expected, come to the fore this coming season, and is decidedly in favor of the establishment of good roads, and has his knife deep into the heart of the "open muffler boob."

The club has the happy faculty of doing the right thing at the right time, and is early in the field with anything that tends to improve conditions. A deputation awaited upon the mayor and common council last week, and presented a petition asking that body to pass on the ordinance which has been framed against the use of the open muffler in the city limits. The ordinance has been framed by City Attorney H. Johnston, and provided for the arrest of any motorcyclist who fails to close his muffler while within the city limits. The ordinance was given first reading and laid over till next meeting. This, of course, does not mean that it is out of sight. It will be passed with a rush.

CHARLES D. READE
Again Elected President of the San Jose (Cal.) Motorcycle Club

Captain of the Peorias Is Convalescing.

Peoria, Ill., Jan. 30.—Capt. Earl Schanemeyer, of the Peoria Motorcycle Club, who was bady burned by an explosion at the works of the Royal Cleaning Company, of which he is the manager, is now convalescent and anxious to be astride his new twin-cylinder motorcycle and regain the club championship, which he held in 1910.

Some Live Ones at Prescott, Arizona.

Prescott, Ariz., Jan. 27.—That the Yavapai Motorcycle Club of Prescott, has been doing things by the fact that the local chamber of commerce is contemplating the construction of a good mile race track in connection with a fair grounds.

During the past season one road and two track races have been held, and the interest shown at each of these events is a fair indication that motorcycling is sure to become a lively sport in Arizona. The formation of an affiliated F. A. M. club in Prescott has in a great measure led to the proposed F. A. M. club in Phoenix, which organization will add to the interest of the sport in both cities. The Prescott aggregation at present numbers 20 enthusiasts, but the roll is steadily increasing.

Seven machines were entered in a road race here recently. The event was won by Jack Crawford on a Harley-Davidson single. The course lay partly in the mountains and partly over prairie, and the 44-mile stretch was reeled off by young Crawford in 1:13:12. The road was in rather bad condition and only two machines came through without mishap.

"Shorty" (Roy) Belding made himself the local favorite at the half-mile track by winning an interesting handicap on a 7-horsepower Indian, in which one other twin and two singles were entered. His best time for one mile was 1:20⅕. During another race, a Curtiss-Waverley single, driven by Ray N. Vyne, covered two laps in 1:25⅖.

Weather conditions for motoring are ideal here nearly all the year round. Road conditions are fairly good, but there are many very steep hills. The Teritorial Highway, now under construction from the Grand Canyon to the southern part of the territory, will when completed afford an interesting day's trip from Prescott to Phoenix.

Invincibles Make Plans For Coming Season.

Brooklyn, N. Y., Jan. 31.—Directors of the Invincible Motorcycle Club met last night and instructed the competition committee to assemble at the clubrooms on February 6 and draft plans for a single and double century run on Long Island, and submit the same at the regular club meeting on February 13. Sunday, May 5, is the date talked of for holding the contest, but of course it has not been permanently selected yet. The club competition committee is composed of Captain J. P. Fawcett, first lieutenant; D. R. Thompson, second lieutenant; H. E. Stout, J. B. French and Walter Goerke. Discussion also will be taken up of the advisability of repeating the Long Island Motor Parkway road race of last year. The house committee also will meet on February 6, to discuss the proposed installation of a work bench and tool equipment in the club garage, for the use of members. The committee also plans to purchase and install steel lockers and rent them to the members.

Fresh recruits are joining daily the ever increasing campaign to provide funds for an American Olympic bicycle team. The riders themselves also have been quick to follow the example of Charley Hansen of Jersey City, the story of whose exploit in raising a contribution of $18.24 was told in these columns last week, as word has been received at headquarters of the starting of a number of such subscriptions in various sections of the country.

St. Louis C. C. Banquet and Discuss Team.

Over 50 of the leading cycling enthusiasts of the St. Louis Cycling Club sat down on Saturday evening, January 20, to the annual banquet of that industrious veteran bicycle organization of the Mississippi valley, at the Marquette Hotel. After enjoying the excellent repast furnished by the committee, Toastmaster Robert E. Lee took charge of the ceremonies and introduced the speakers who discoursed entertainingly on their respective subjects: Roy E. Britton, president of the St. Louis Automobile Club, spoke on "Good Roads Improvement in the United States;" W. M. Butler, "The Preservation of Health by Bicycle Riding;" C. L. Barr, "The Olympic Bicycle Races in 1912;" O. B. Henry, "The New Rider." Other speakers were, R. M. B. Tidd, H. G. Wolzendorf, Percy Stone, C. B. Jansky, and Joseph Forshaw.

Olympic Prize Winner Tells Graphic Story.

Mr. Forshaw, running under the colors of the Missouri Athletic Club, finished third in the Marathon run of the 1908 Olympic games in London and was therefor able to give a very instructive and extremely interesting talk on athletics in general, dealing particularly with the Olympic games. The topic of sending an American bicycle team to compete in the Olympic races in Stockholm next July, is a live one in St. Louis, and Forshaw was very enthusiastic in his belief that a representative American team should be sent, and said that in the old countries bicycling is a much more advanced sport than it is in this country, and the bicycle races are among the principal events; that the interest shown in this most severe test of the human strength is of the keenest sort. In London a banked concrete bicycle track with 2¾ laps to the mile for the holding of the races was in the center of the Stadium, and the races were witnessed by a throng of sport lovers numbering 2,000,000, gathered from all parts of the world, and is a sight that will stand clearly before the memory forever. Not to have America represented in this great contest of trained men fighting for the love of the sport, Forshaw believes, would be an injustice to our record as an athletic and sport loving nation.

Veterans and Champions Enlist.

Fred I. Perreault, a prominent member and official of the Century Road Club of America has taken up the work in Boston and is now laying the plans for a try-out race there.

Chicago again has been heard from, this time with the information that the riders there are now in full training, using roller trainer machines and doing gymnasium work. They also want assurance of a try-out race being held there.

James J. Huey, the winner of last year's Pacific Coast amateur championship held at Los Angeles, is at present in Salt Lake City and states that he has begun training to be in condition for the preliminary races.

Under the auspices of Walter A. Bardgett, a celebrated road rider in and around Buffalo and Rochester during the early 90s who later developed championship calibre as a professional, to graduate last year as a referee at the Vailsburg Velodrome and now sporting editor of the Providence, R. I., Evening News, has been launched a vigorous campaign for funds and riders in the home city of Alvin Loftes, one of the leading favorites among the candidates for the team.

Voters Combine on Popularity Ballots.

The voting contest has developed an interest in the various riders beyond all expectations giving evidence by the hundreds of votes turned in from any one of a number of localities that the Olympic Team and the voting contest aparently are the chief topic of discussion wherever wheelmen congregate as the ballots are arriving in quantities voting solid for favorite teams.

So far, eastern riders are in the lead in point of votes registered, but as other sections are taking up the question and the blanks are being mailed out to the heavy lists of names submitted, it well may be expected that the lead now held by Brooklyn and New York will be threatened, as Chicago for instance, is voting solid for practically one team.

The conditions and rules of the contest should always be borne in mind, they are simple, yet important. All who are interested are qualified to vote—not once, but as often as desired, and for any team or individuals that you may consider as possible winners under the rules, which are: To to the person First voting the complete team of 12 amateur bicycle riders which receives the Highest Number of votes, will be awarded a prize of $10. To the Second person voting the complete team to receive the Highest Number of votes, will be awarded a prize of $5. Two year's subscription to the Bicycling World will be given to

each of the next five so voting, and one year's subscription to each of the next ten. Al votes as received are immediately stamped with date and time.

Riders' Photographs Urgently Requested.

Taken at random from a sheaf of ballots just received are the following names: Paul Heidrick, Joe Noe, Gus Wohlrab, Jesse Pike, Alvin Loftes, Carl Ericson, Joe Kopsky, John Becht, Isadore Taub, Stanley Carman, Arthur Dawson, Frank Blatz, Jr., Charles Hausenbauer, Charley Hansen, Jerome Steinert, Thomas LaRossa, Fred Perreault, Bob Lawson, Bert Baker, and Raymond Nelson, the latter being the present holder of the world's records for 50 and 60 miles made in 1908.

All of the above who have not already done so and all others who know that they are being voted for, should send their respective photographs and a short sketch of their racing careers to the bicycle editor of this paper as soon as possible. By so doing the cause would be greatly benefited at only a trifling expense. The benefit derived would be in the publicity given the movement, as several of the leading metropolitan dailies have repeatedly requested this material be furnished for publication as soon as it is compiled at this office. All of which would be of great assistance in the work of solicting subscriptions, thus giving early assurance of the completion of the fund. A photograph of Charles Hansen, Jersey City, was the first to be published in these columns in the issue of January 27.

This week it is that of Jesse Pike, West Hoboken, N. J., a member of the Century Road Club of America. Pike has been riding in competition for four years and during that time has finished well up in a number of races at middle distances, winning the 1910 Plainfield race which has succeeded the famous Irivngton-Milburn. His most notable long distance performances are: 100 miles unpaced record trial in 5 hours 26 minutes, and the round trip, New York-Philadelphia, 201 miles in 14 hours 27 minutes in 1910.

JESSE R. PIKE

..Remember, voting blanks are to be had any time for the asking. All who are interested in the cycling industry and sport are invited to submit the names and addresses of those to whom it is desired to have voting blanks sent—make your list as large as you like—self-explanatory blanks will be sent promptly and with absolutely no obligation incurred by the recipients. Send your list at once to the bicycle editor, The Bicycling World Co., Box 649, New York City.

Exciting Cycle Race at 8th Regt. Armory.

What proved to be the most exciting event of the annual games of Hospital Corps of the 8th Regiment and St. Francis De Sales, held at the 8th Regiment Armory, New York City, February 1, was the two-mile handicap bicycle race, the final of which was won by Jack Townsend, of the Irish American A. C., from the 30-yard mark. Six men qualified for the final, the field including Willie Van Den Dries, New York A. C., and E. H. Goodwin, Irish American A. C., from scratch. During the second mile both Van Den Dries and Goodwin fell, but the field gained a lap before they remounted. Goodwin again fell and retired.

The finish showed Otto C. Brandes, 8th Regt. A. A., (90 yds.) in second place, and Nat Gutoff, Atlas B. C., (110 yds.) in third place. At the conclusion of the race Townsend was suspended indfinitely by the U. C. A. for wide riding of Goodwin in the early stages of the race, though his position as a prize winner was not effected thereby.

Lapize-Georget Win French "Six-Hour."

With 18 teams, composed of many of the pick of the world's best speed merchants, the six-hour team race in the Paris Velodrome on Sunday last, January 28, furnished Parisians with their first, though abbreviated, taste of team racing, as conducted under conditions similar to the Madison Square Garden event. Three American teams were entered, of which the Fogler-Moran combination finished second. The winners were Lapize and Emile Georget; 146 miles were covered in the six hours.

Irish-Amer. Cycle Race Won by Goodwin.

Eddie Goodwin had his usual winning streak working smoothly on the occasion of the annual athletic games and flat-floor bicycle races under the auspices of the Irish American Athletic Club at Madison Square Garden, New York City on the evening of January 25. Goodwin rode an excellent race throughout and again demonstrated his unquestioned class.

BERLIN HAS A RACE WAR

Opposition Six-Day Meet Promoters Hurl Chalenges and Recriminations—Another Race Set For February 23-29.

War is on—Berlin six-day race promoters are the principals, according to latest advices from the German capital. It appears that during the past week the rivalry between two promoters to secure the services of the riders for either of the two races that evidently have been in contemplation, reached such a stage as to determine one of them, Paul Schwarz, to make the offer, in addition to giving larger prizes and guaranteeing payment, to build an entirely new track, to be known as the Hippo-Velodrome within a few blocks of the location of the Sport Palace, where now is being run the race which started on February 1, under the proprietorship of M. Rostin and Floyd A. Macfarland as director. Schwarz in his bid for the riders reminds them of their experience under the opposition's management in the three previous annual Berlin races, holds out the inducements of an up-to-date track and furthermore widely heralds the fact that all prize money is deposited in advance with one of the leading banks, and that the payment of the riders, therefore, is in no way dependent upon the gate receipts.

The prizes offered, at least on first reading, appear to be far more remunerative, they are, from first to sixth team as follows: $2,500, $1,250, $1,000, $750, $500, $250.

Every inducement has been put forth to persuade the riders to refuse to participate in the first race, in other words, "Wait for the big show," and in the meantime Schwarz is proceeding with the building of his track and the problem of its sanction is yet under consideration by the V. D. R., the sports governing body which however, does not protect promoters by franchises, resulting in the present situation. Entries for the second race close February 12, the race date is February 23-29.

Route For the Tour de France Settled.

One of the greatest bicycle road races of the world, if not the very greatest, is the "Tour de France" and the dates for this year's event, the 10th annual, just have been announced, according to advices from Paris. Thirty days of continuous road racing makes up the schedule which is in stages as follows: Paris to Dunkirk, June 30; Dunkirk to Longevy, July 2; Longevy to Belfort, July 4; Chamonois to Grenoble, July 8; Grenoble to Nice, July 10; Marseilles to Perpigna, July 14; Perpigna to Luchon, July 16; Luchon to Bayonne, July 18; Bayonne to LaRochelle, July 20; LaRochelle to Brest, July 22; Brest to Cherbourg, July 24; Cherbourg to Havre, July 26; Havre to Dieppe to Paris, July 28.

C. R. C. ASSOCIATION MILEAGES

Moore, of New Jersey, Tops List 13,521 Points—Contest Fairly Close for Second and Third Positions—The Score.

With but four months riding on a bicycle previous to entering the 1911 century and mileage competition of the Century Road Club Association, Duane W. Moore, of Bayonne, N. J., finished with a lead of 5,525 points over the second man in the score and a total of 8,521 miles, 44 centuries, and 3 double centuries. Although a novice at the cycling game, Moore has been an athlete in active competition for 24 years, having been a member of the track team of the Pastime A. C., New York City, for five years, and during that time has earned excellent records at discus and hammer throwing, and shot putting. While on that team, he was never defeated in a foot race for men weighing over 200 pounds.

Isadore Taub, who finished in second place with a score of 7,996 points, although having ridden in competition for the past four seasons, did not develop as a contender until this year, having ridden but three centuries in 1910. During 1911, Taub won the individual handicap record run of the Eastern Division, C. R. C. A., covering the course in 5 hours, 52 minutes, and finished in second position in the club championships. In the mileage competition, he rode 5,296 miles, 25 centuries and one double century.

John M. Mitchell, of Greenwich, Conn., with 7,022 points, landing him in third position, is the veteran of the trio, having ridden his first century in 1900. Mitchell's score is 5,422 miles and 16 centuries. Summary:

	Miles.	Centuries.	Points.
D. W. Moore	8,521	44	13,521
Isadore Taub	5,296	25	7,996
J. M. Mitchell	5,422	16	7,022
A. Horry	3,859	23	6,159
J. A. Olson	2,300	23	4,600
W. Fuchs	3,190	14	4,590
R. W. Zarr	2,363	16	3,963
E. States	1,800	18	3,600
Henry Kest	2,246	8	3,046
Sylvain Segal	2,303	2	2,503
George Bieregel	1,821	2	2,021
J. W. Clement	1,713	2	1,913
O. L. Moore	1,265	4	1,665
A. R. Cooley	1,404	2	1,604
H. W. Jaeger	800	8	1,600
M. Cigal	600	6	1,200
J. P. Berlenbach	486		486
C. W. Robinson	234		234
F. W. Lilenthal	100		200
H. Baum	100		200
J. J. O'Connor	100		200
O. Zimmerman	100		200
A. Kaiser	100		200
C. E. Jaeger	100		200
H. W. Zarr	177		177
L. Segal	148		148
H. Kelly	106		106
Bert Baker	19		19

Double Centuries—D. W. Moore, 3; Isadore Taub, 1.

Eastern Division Greets National Officers.

Curtailing the regular business meeting in anticipation of the good times arranged to follow immediately, the Eastern Division Century Road Club Association, on January 26, made a festive occasion of the introduction of the incoming officers. Chairman Kest, of the entertainment committee, ably and efficiently conducted the ceremonies and in turn presented, for their initial official appearance, the following National officers: President, Paul Thomas; secretary, Sylvian Segal; and the chairman of the road records committee, A. R. Cooley. The honors received by the latter were, so to speak, "double barreled" as he also is centurion of the Eastern Division.

Speeches, fairly ringing with loyalty for their favorite pastime, were forthcoming from each respectively, and were accorded an enthusiastic welcome, to be succeeded by the rendition of popular airs by the club quartet, composed of Harry Baum, Albert Kaiser, Sylvian Segal and Howard Zarr, accompanied on the piano by Miss Baum and Ben Golden.

Woman Describes Cycling Tour in Holland.

As the leading feature of the entertainment at a recent social meeting the Irondequoit Chapter, D. A. R., at Rochester, N. Y., a very interesting descriptive discourse was given by Miss Anna Rockfellow, on her bicycle tour through Holland.

D. W. MOORE

J. M. MITCHELL

ISADORE TAUB

BIG BERLIN RACE NOW ON

Sixteen Teams Competing in the Six-Day Contest in German Capital—A Classy Field of International Character.

With an entry list of exceptional caibre, and which for class promises to outshine anything of the kind so far run in Europe, the Berlin six-day bicycle team race, slated to start February 1, ought to prove a great drawng card in the German capital. Floyd Macfarland, the well-known American rider-manager, has become associated in the management. The teams are:

Root-Hill, Fogler-Moran, Collins-Walthour, Galvin-Wiley, Poulain-Miquel, Comes-Leon Georget, Halstead-Drobach, Rutt-Stol, Saldow-Lorenz, Stabe-A. Stellbrink, Techmer-Tadewald, Kudels-Carapezzi, Crossmann- Rudel, Marx-von Natamer, Hoffman-Pawke, Schallwig-Sonntag.

Of the European teams, the German and French sport dopsters are featuring the Rutt-Stol and Saldow-Lorenz combinations as the probable winners, but there is a guess coming to their compatriots that the boys from New York and Boston, Root-Hill and Fogler-Moran, will be there or thereabouts at the finish

The financial provisions are not the least interesting and at least have the appearance of being ideal from the riders' point of view. The riders and management will divide on percentage. Each day every team will draw a stipulated sum for expenses and in addition a committee, composed of eight disinterested parties, will supervise the handling of the box-office receipts and tickets; the riders also will have in Rutt and Lorenz, a representation on the committee. There will be bonus money according to the "box office worth" of the riders, and the prizes are as follows: $1,250, $1,000, $750, $500, $250, $200, $150.

Bronx Cyclists Trip "Light Fantastic."

Tastefully decorated with various club colors and emblems, Niblo Gardens, Third avenue and 170th street, on Saturday evening, January 27, was the scene of the highly successful ball of the Bronxdale Athletic Club, a hustling "Bronnox" organization actively interested in all branches of sport and cycling in particular. With a full quota of members and friends, there also were present large representations from the Century Road Club of America, the Century Road Club Association, and the New England Wheelmen.

New Cycling Club For Monumental City.

Another bicycle club in Baltimore! Here's luck to them! This time its the Yale Bicycle Club; the officers: President, E. Holofeener; secretary-treasurer, A. Barsotte; captain, L. Fink; sergeant-at-arms, J. Fink; color bearers, E. Moore, J. Rahn.

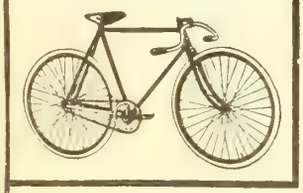
E. C. W.'S FIFTH ANNIVERSARY

Active Brooklyn Cycling Organization Celebrates Birthday with Theatre Party and Banquet—Track Team.

To hear of the Empire City Wheelmen of Brooklyn, participating in anything other than a bicycle race and be concerned in any matters of a "sassiety" nature, at least insofar as relates to the club, as to conduct a club theater party and banquet, is on first report, rather startling news, and must indeed have had more than an ordinary incentive to induce that most busy of bicycle riding aggregations to so far digress from its unvarying slogan of, "A bicycle club for bicycle riders—not a club house club," which undoubtedly has contributed in no small degree to the desirability of membership therein, the success of its members in racing events, and its widespread and deserved reputation of producing winners.

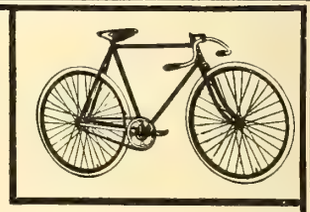
The occasion, as may be gathered from the foregoing, the "Empires" first venture of the sort, held January 27, was in celebration of the fifth anniversary of the club, although the little band it was then, had been recognized for two years previous to organization as the "Cycle Path Cork Pullers," a name adopted in commemoration of an incident which laid the foundation and from which began the club history.

Under the able management of Vice-president Robert E. Bennett and Treasurer Harold F. Missimer as the anniversary committee, no detail was omitted to make it one of the most successful affairs of the present metropolitan cycling social season. The first half of the program consisted of witnessing, en masse, a performance at the Star Theatre of Al. Reeves' show, "Flying High,"—commensurate in every particular with the ideals and ambitions of the far from snail-gaited wheelmen.



Adjournment then was made to the Brooklyn Hoff-Brau and after enjoying a very excellent repast, President Tommy Murphy, the suave, in his suavest, most urbane manner introduced the speakers.

The club's formation and history was graphically given by one of the chief instigators, its first president, and the present captain, Samuel Barnett. In his discourse, this cycling enthusiast related how, on a Sunday morning some seven years ago, one Franklin Fisher rode up to a company of wheelmen, among whom were Lew Weintz, Lawrence Hoppe, "Pop" Rhodes, Carl Ericson and Charley Frommeyer at the Ocean end of the Coney Island Cycle Path, and displaying a gilded cork tied to his saddle, replied to the friendly "joshing" that it was there to remain until he was defeated in a sprint and then it would go to the victor. All immediately took up the challenge and after three attempts on succeeding Sundays, Weintz became the holder of the cork and thereafter a "cork" race has been an established weekly feature in all seasons and under all possible weather conditions.

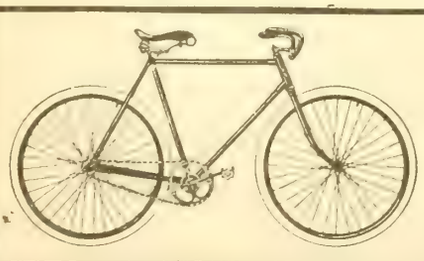


To appear a possibility, one must of necessity be more than ordinarily good at the game as from that "bunch" of "cork pullers" have developed riders who have figured largely in the big winnings of the period in races of national and even international importance. Shortly after the inauguration of the races, Fisher, holding the cork, appeared at the start with part of a one dollar bill glued to it. The N. C. A. took a hand and the fight for reinstatement cemented the club together effectively.

The club, first meeting alternately at members' residences, was formed with 23 charter members, of whom eight remain, a circumstance explained by the principal object as stated in the slogan of the club which also accounts for the fact that more applications are received in a year than any other metropolitan cycling organization, although the membership is one of the most modest, numbering but 53 at the present time, due almost wholly to the rigidly required ability of applicants as riders.

The latest activities are the incorporation, now in progress, the proposition to apply for membership in the N. C. A., and the formation of a track team to carry the colors for the first time on the Eastern board track circuit during this season.

How to Satisfy Your Customers and Make Money



The successful bicycle dealer realizes more fully today than ever before the *absolute necessity* of selling a bicycle having exclusive, distinctive features, tried and proved. (*Satisfied Customers*). A bicycle his competitor cannot duplicate in name or quality (*Sells at a Profit*). AROUND THE WORLD IN 90 DAYS

If You Were Riding Around the World What Motorcycle Would You Buy?

After investigating the design and construction of all motorcycles with particular reference to strength of frames; power and strength of engines; durability of transmission; grade of material and workmanship in all the parts of the machine and the adaptability for meeting all road requirements, you would be compelled to choose a PIERCE.

Single Cylinder Models

Four Cylinder Model

A Few All-Important Facts

A Pierce frame has never been known to break. (Something no other manufacturer can say.)

Pierce engines develop 5 and 7 horsepower from less cubical displacement than any other motorcycle engine.

Pierce machines are made so well and run so smoothly that they do not shake to pieces but last for years.

Your motorcycle should be a PIERCE—

A Single Cylinder for Simplicity,
A Four Cylinder for Advanced Design.

ONLY THE GOOD ENDURES!

THE YEAR 1912 IS OUR 20th ANNIVERSARY IN THE SADDLE BUSINESS AND THIS IS OUR LATEST PRODUCT

We lived through the storm of the so-called "bicycle slump," in fact, we are the only Saddle manufacturers in existence today who can claim twenty years of genuine practical experience in saddle making. During all that time our product has been recognized as the highest standard of quality. Others have imitated and tried to follow, but there has been—and still is—ONLY ONE PERSONS.

Without Front Spring for Low Position

We hold the original patents on compound springs for saddles. These were first used by us in bicycle seats of the suspension type of which we are the originators, as the trade well knows. When the motorcycle came we built the first motorcycle saddle in this country, employing our patented compound spring construction, which is THE ONLY CORRECT AND POPULAR DESIGN IN USE TODAY.

THE ONLY MOTOR SEAT WITH COMPOUND SPRINGS

Other makers have repeatedly changed their spring construction in their endeavor to work out something "just as good" as Persons patent until this, our twentieth anniversary, finds us still building the only genuine compound spring saddle free from all impediments and obstructions that destroy perfect spring action.

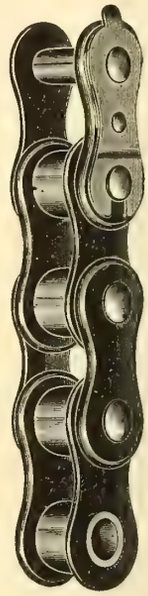
THESE ARE ONLY A FEW OF THE SOUND REASONS WHY YOU SHOULD CHOOSE A SADDLE OF RECOGNIZED STANDARD QUALITY INSTEAD OF A CHEAP SUBSTITUTE BUILT BY INEXPERIENCED PEOPLE.

THE PERSONS MANUFACTURING COMPANY, Worcester, Mass.

WHITNEY

THE GREATEST MILEAGE

can only be obtained by the use of materials which will resist the most wear. Through our untiring efforts to produce nothing but the best and our years of experience in chain making

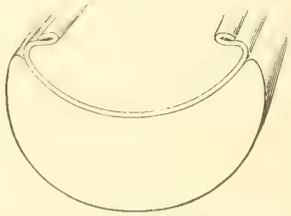


"Whitney" Motorcycle Chains

have gained a remarkable reputation for their strength, accuracy, and wearing qualities.

If you've never tried a "Whitney" chain get one when your chain is worn out. Compare results. We know you'll be pleased.

"Whitney" Chains Are Built for Strains



THE WHITNEY MFG. CO.

Heitger 1912 Carbureters

PRICE NET $9.50
Metal or Glass Bowls

Model H is the new one, the acme of simplicity. Has but ONE gasoline adjustment, but has TWO feeds, one for High speed, one for Low, that give maximum results at all speeds. Once adjusted, stays adjusted. Easily adjusted and understood by the novice. Gives satisfaction where others fail. Threads and fittings for any machine. Our model G-D is of the double gasoline adjustment type or mechanical needle, having separate adjustments for low and high, used by manufacturers and thousands of riders the past season. Either type makes a motor run faster and smoother and use less gasoline. Both guaranteed to give satisfaction. 1912 catalog now ready.

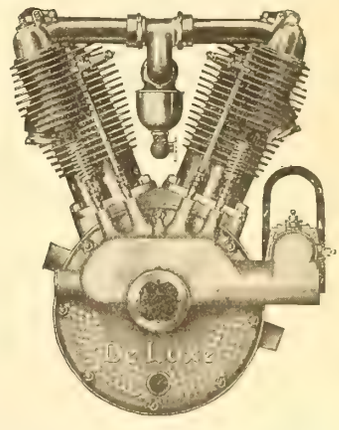
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.	Simplified design throughout.
One part crank case with cover.	Reduced number of parts.
Improved cam and magneto drive.	Quiet running motor.
Oil tight motor.	Large Ball Bearings mounted in steel lined pockets.
Large Valves.	

Equipped with Bosch Magneto.



These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Reliance
(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that **ninety per cent.** of all plug troubles are caused by **carbon and soot you begin** to appreciate why the Reliance **should be your** first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.

Regular Type $1.00
Magneto Type $1.25

For sale by most dealers; if yours does not carry, write and we will ship prepaid at prices quoted.

KOKOMO TIRES

Building Motorcycle Tires and a Reputation

Sixteen years ago we began the manufacture of tires. During those sixteen years we spent a lot of time experimenting, making improvements and studying to produce a more efficient tire than competitive manufacturers. WE MADE GOOD.

KOKOMO Motorcycle Tires

embody four-ply construction from the finest fabrics known to the industry. They have demonstrated their superiority in every detail over the regular three-ply tire manufactured by others. It's the experience, facilities, materials and organization that have produced the Perfect Motorcycle Tire—The KOKOMO, and won for us a world-wide reputation. You are taking no chances in using KOKOMO MOTORCYCLE TIRES, instead, you feel confident you are getting your money's worth of tire efficiency.

Continental-Erie
Motorcycle Tires

¶ Does the average rider know how a tire is built, from what materials it is made? It is safe to say that he does not.

¶ He will accept the dealer's word that any old tire that bears outward appearance of "quality" is good enough.

¶ The dealer who shows you a Continental-Erie Motorcycle Tire shows you the best that can be made anywhere. From the purest grade of crude rubber, the highest quality of other necessary materials are Continental-Erie Tires made—in one style tread only. They give longer service and make for a noticeable decrease in tire expense per season.

POPE MOTORCYCLE

With Imported Magneto—$165

Quality is the first consideration in a motorcycle. An examination of the POPE will show that no machine, regardless of price, embodies better materials or workmanship. This means reliability. Conceding these facts, why pay more for a motorcycle? The Pope's price is an added inducement and gives the machine a selling advantage over all others. A large demand has been the logical result of the Pope's quality and price.

Carrying Out Original Plan

By manufacturing in large quantities we have reduced the cost of production to a minimum, Thus we are able to carry out our original plan of putting the price low enough to popularize motorcycling in a large way and create a demand among new classes of riders.

See the Machine, then consider the price. Let us give you details of 1912 Eclipse Free Engine Pulley.

A Man Came Up To Our Stand

At the Chicago Show on Wednesday, and Said:

"Yours was the first motorcycle I looked at when I came in this afternoon. I've seen them all since and now I have come back to give you an order for one of the big fellows to be delivered in March. You see," he added confidentially, "I have never owned a motorcycle before, so I thought I would see them all together at the show before buying. The Emblem seems so big and strong and easy to understand that I am sure I'll have no trouble in learning to run it."

Yes, that's the Emblem through and through—"Big and Strong and Easy to Understand." Mechanically perfect in construction, yet without the frills that drain the rider's purse and keep dealers in a constant state of apology. From the $175 single to the $250 twin, Emblem Motorcycles are built to withstand hard knocks, and they have made good. "Motorcycle Satisfaction"—which means Speed-Power-Economy—is the lot of the Emblem Rider. Have we an agent in your town?

"If it's FEDERAL -it's right"

Yale Perfection

The Yale motorcycle is one of power, endurance and positive dependability. Mechanically it is absolutely perfect, and for quality its equal cannot be found.

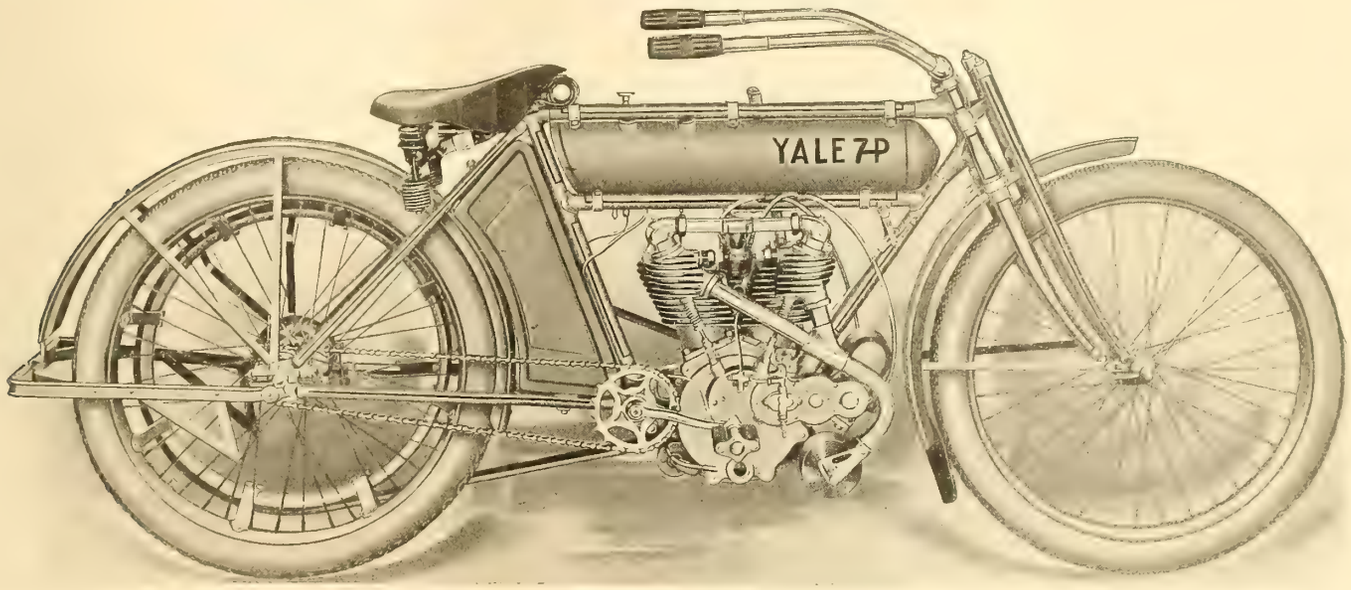
There's a reason for the high standard of the Yale. Every part of the machine is made in our own factory, by the most skilful workmen, under the most modern conditions and under the supervision of men who know how to build motorcycles that are of the highest possible quality, and absolute mechanical perfection.

While some manufacturers are forced to have their parts built as cheaply as possible, often at the sacrifice of quality, the Yale is built in its own factory, regardless of cost—quality being the first consideration.

Model 25, 5 H. P., $260

The Yale is completely, from the smallest to the biggest part, built in our own factory. We do our own work because to have part of this done outside of our factory would not enable us to so completely supervise the construction and test every part that goes to make up the Yale.

Do you, Mr. Dealer and Mr. Rider, realize what this means to you? Do you realize why the Yale stands at the top of the list—why the quality and worth of the Yale is undisputed, why it is the best motorcycle built?



Of course you do. You cannot help but know that Yale stands for Quality.

THE CONSOLIDATED MANUFACTURING

Yale Dependability

If it's something good, the Yale is sure to have it. Right now we are equipping all 1912 Yale machines with the Y-A Absorber—the one that absorbs all the shocks. It is better and gives more comfort than any spring seat post could possibly give. That is why you find it on the Yale. It's a part of the Yale policy and Yale quality.

This is the most effective Shock Absorber to be found anywhere. The steel bolts inside the springs keep the saddle from tilting and side-swaying. When in action, the hanger attached to the rear stays works up and down on the bolts, according to the irregularities of the road, while the rider maintains an even position. It is made throughout of the best material, nickel plated and highly finished. It is guaranteed in every respect.

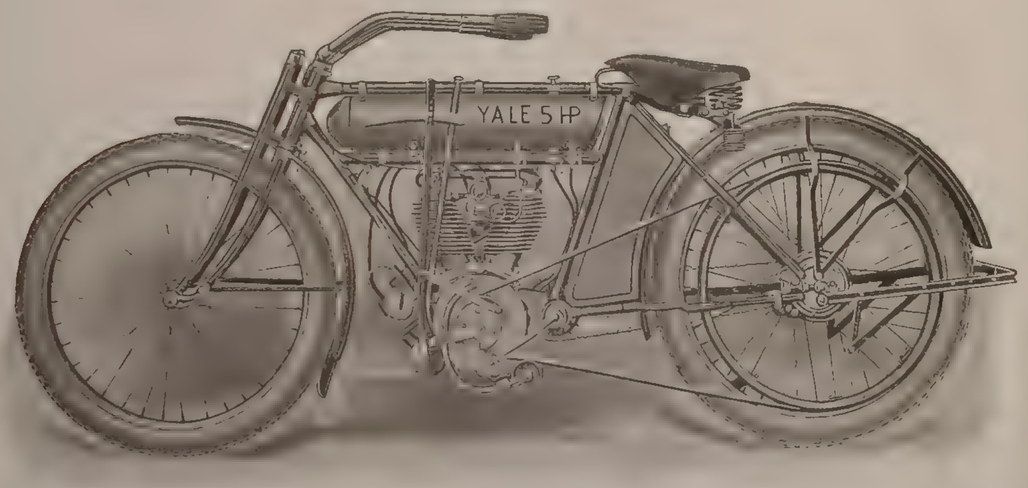
Model 27, 7 H. P., $285

Y-A Shock Absorber Free to 1912 Yale Buyers

Every person buying a 1912 Yale will have the machine equipped with one of these Shock Absorbers. Riders who have already purchased a 1912 Yale will, as soon as we have a sufficient number of Shock Absorbers on hand, receive one of these absolutely free of charge.

It's part of the Yale policy—every Yale rider will at all times get the highest quality machine and all the desirable features.

Just remember this—it's a big feature—write for the Yale booklet; or, if there is no dealer in your territory, write for our agency proposition.



O., 1751 Fernwood Avenue, Toledo, Ohio

Extra Service Motorcycle Tires

Goodyears Built on Flaw-Proof Tire Machine

America's only motorcycle tires built on a tire machine are Goodyears. Hundreds of tests have proved them unequalled in endurance. They are the tires that the 13 largest motorcycle manufacturers have contracted for, for their 1912 output. They mean an endless saving of trouble and expense for motorcyclists.

We have been building auto tires for 13 years. During this time we have secured the most expert tire building talent in the country. We have learned how to build serviceable tires.

Our investigation of materials and methods has been carried to the extreme. We have compared all the best fabric and analyzed every compound. We have tested every tread and tried every tire building method used here and abroad.

We have adopted the best methods — the best materials. And we had the world to choose from.

The Only Safeguard

Out of this experience we created a tire that the world now acknowledges to be without equal—The Goodyear No-Rim-Cut. In two years the sale of this tire increased 500%. It is today's greatest seller.

This tire we built on a tire building machine of our own invention. It is the only method that safeguards the tire against a certain kind of flaw that is bound to creep into all hand made tires. The patent is controlled by us.

Goodyear Motorcycle Tires are built on this self same tire machine.

In building a tire, a number of plies of fabric are stretched over an iron core. To secure uniform strength and endurance every successive ply must be stretched on at a **uniform tension.** If one ply is loose and the next one tight, the tight ply gets all the strain—eventually gives way, and the tire is soon ruined.

The Usual Way

The usual way is to stretch on these plies of fabric by hand. But no human being can do this and maintain an even tension throughout. So the hand made tire is less reliable and less lasting.

Our Way

To secure a uniform tension mechanical means must be adopted. This means is found perfected in our tire machine. Hour after hour, and day after day this machine stretches on ply after ply without the slightest variation.

There can be no loose plies and tight plies. All plies are stretched on at the same tension and every tire is as good as its brother.

Most Successful

With such construction as this, the phenomenal success of these tires is what one would only expect. The 13 leading manufacturers of motorcycles have contracted for these tires for their 1912 output. In the coming season every third new motorcycle you see will be equipped with Goodyear Tires.

Most Economical

Goodyear Motorcycle Tires cost you no more than any standard tire. You get extra service—extra mileage—less trouble—less expense. You get all these extras free. They are all included in the Goodyear price, which is the same as other tires.

Let us send you booklet telling all about our line of motorcycle tires.

THE BICYCLING WORLD (FOUNDED 1877) and MOTOR CYCLE REVIEW

Vol. LXIV. New York, U. S. A., Saturday, February 10, 1912. No. 21

"EXCELSIOR" AND "EXCELSIOR"

New Independent Company, Making Bicycles and Motor Frames, Composed of Former Employes of Excelsior Co.

Chicago, Feb. 7.—Excelsior is a magic word in local motorcycle circles these days, and the very breathing of it is quite sufficient to arrest the full attention of anyone who knows what it stands for. Its utterance galvanizes the acoustic sense to alertness like the midnight warning of Paul Revere aroused the patriots of Lexington. With the constant business effervesence in Excelsior Motor & Mfg. Co. affairs at present, there is much trade curiosity as to the relation of that concern with the Excelsior Cycle Company.

Although bearing the same surname there is no financial relation, the interests in each company being independent. The Excelsior Cycle Company is composed of James C. Baine, Peter P. O'Horo and Ernest Unger, all former manufacturing managers with the old Excelsior organization. Last August this trio severed their existing Excelsior connection, acquiring the bicycle manufacturing end of the business, incorporated under the present title, for $30,000, and continued the manufacture of Excelsior bicycles. Recently they have brought out a line of motorcycle frames and forks, which are produced for the trade only.

All of the members of the firm are veterans in the bicycle business with which they have been identified for more than 20 years in the production end. Baine was superintendent of the motor and frame assembly for years, in the old Excelsior organization. Harry Svensgard, who also is a veteran of the bicycle industry, is the sales manager of the Excelsior Cycle Company; he also controls the Excelsior Auto-Cycle Company of Detroit, which is the local distributor for Excelsior motorcycles and the new company's line of bicycles. Arthur Mitchel, the ex-racing man, is traveling Southern territory, representing the Excelsior Cycle Co.

New Pedalless Motorcycle for Detroit.

Detroit, Mich., Feb. 6.—Organized to manufacture a new motorcycle which is pedalless and starts before the rider mounts, the Morse-Beauregard Mfg. Co. has been incorporated with a capitalization of $10,000. Officers of the company are: President, William Morse; general manager, William Beauregard; secretary and treasurer, Frank E. Whipple. The company proposes to secure a site and begin erection of suitable factory buildings in the near future.

American Motorcycles at Winnipeg Show.

Toronto, Feb. 5.—Herb. Kipp, the traveling Canadian representative for the Indian, is in Winnipeg, where he is arranging for the display of the Hendee models at the Winnipeg motor show, to be held February 12 to 18. Other makes to be shown at this display include the Flanders, Merkel, Excelsior and Triumph.

Chicago Cycle Supply Co. Incorporates.

Richard J. Collins, Hans P. Hansen and Charles J. McCormick constitute the incorporators of the Chicago Cycle Supply Company, with headquarters at 22 West Lake street, that city. The capital stock is set at $30,000, and the company will handle bicycles, motorcycles, supplies, etc.

Another 4-Cylinder Makes Its Appearance.

Harrisburg, Pa., Feb. 5.—Charles Gearhart, of Mt. Holly Springs, is exhibiting at the automobile show in progress here this week, a four-cylinder motorcycle, which he has constructed on special lines, with a view of manufacturing in large quantities before the season is over.

CHICAGO LOCAL TRADE ORGANIZED

Details of Recent Movement to Bind Trade to Harmonious Effort for Publicity—Some of the Plans Proposed.

Permanent organization by the motorcycle dealers of Chicago was effected January 27 by the election of the following officers: President, H. W. Angsten, of the Angsten-Koch Company; vice-president, R. C. Crist, of Edwards-Crist Company; secretary, F. D. Freeman, manager for the Thor for Cook county. A board of directors of 11 representative tradesmen were elected as follows: J. E. Edwards, Indian; J. V. Hurley, Thor; C. H. Lang, Harley-Davidson; Fred I. Huyck, Merkel; A. S. Clausen, Yale; I. H. Whipple, Flanders; Guy M. Greene, M-M and Eagle; L. J. Leonard, Excelsior; A. J. Musselman, American; R. R. Hill, New Era; H. E. Halbert, Reading-Standard.

One of the principal objects of the organization was to devise a suitable method of more fully acquainting the public of the delights of motorcycling and with the uses to which motorcycles can be put. A cooperative plan was suggested whereby local newspaper advertising could be done under one general head, all of the houses represented receiving an equal amount of publicity.

In the matter of apportioning the expense of such a project, it was suggested that the relative amounts of business done by the various dealers be considered as a basis, using the present year as the one on which to arrange the proportions of the sypace rates for which they must pay.

It was decided to establish no initiation fee to applicants for membership in the association, provided they apply before an early date, to be decided on at a future meeting.

THOR KEEPS OPEN HOUSE

Special Train Load of Guests Visit Factory at Aurora, Ill.—Jolly Time Interspersed by Inspection of Plant.

One of the big events of show week in Chicago was the special excursion which the Aurora Automatic Machinery Company ran to the factory at Aurora, Tuesday. Over 80 were in the party, which largely was composed of dealers. The excursion was given by the Thor folks to acquaint its guests with the manner in which Thor motorcycles are produced. Vice-President E. N. Hurley, and his first lieutenant, Sales Manager E. J. Knight, concluded the party in three chartered cars on the Aurora, Elgin and Chicago Electric line. The party left Chicago at 11 A. M., and upon arrival in Aurora a luncheon was served, followed by vaudeville. Parodies on popular songs, in which liberties were taken with Thor executives, "took" well. Following the entertainment special trolleys were taken to the plant, where a photograph of the party was taken. Guides then were assigned to conducting the visitors through the plant, where Thor machines were seen in their many interesting stages of construction. There were a goodly number of dealers who then and there saw, for the first time, a machine built completely Following the inspection of the plant, refreshments again were served, and the return trip then begun, Chicago being reached at 5:45 P. M.

Among those in the party were E. N. Hurley, E. J. Knight, Wellington Quirk, H. Knipp, J. L. Minor, Paul Houke, R. P. Hogan, G. H. Kaufman, E. Roobart, R. T. Hovner, W. T. Purdy, P. Van Wyngarden, P. Sorenson, W. H. Steinbell, W. H. Wallbaum, J. M. Brechbiel, W. J. Cameron, C. R. Schwarz, E. W. Bodell, R. E. Buell, John Peska, Daniel Popini, E. W. Matthews, W. Knust, Ira H. Whipple, C. J. Welch, Daniel Griffith, Chicago; Leland Ratford, Martinsville, Ind.; John Sink, Evansville, Ind.; Paul Kottlowski, Indianapolis, Ind.; M. Brotherson, Joplin, Mo.; J. H. Tubman, Lincoln, Neb.; W. R. Brightenburg, F. B. Black, Raymond, Neb.; Nels A. Rosendahl, Minneapolis, Minn.; A. J. Keeley, Aurora, Ill.; O. Kuball, Kenosha, Wis.; H. Brossel, Mortomgrove, Ill.; W. B. Lewis, Logansport, Ind.; J. Barnes, Racine, Wis.; J. H. Loving, Alliance, O.; W. Veltman, Grand Rapids, Mich.; P. J. Van Drunen, S. Holland, Ill.; A. L. M. Berwys, Grand Rapids, Mich.; Byrd E. Moore, Des Moines, Ia.; Edward Hunter, Jr., B. R. Merrill, Des Moines, Ia.; S. J. Wilson, Tylertown, Wis.; A. J. Crawford, Cambridge, Ill.; R. T. Lautz, La Grange, Ill.; Earl King, Mandles, Ill.; C. W. Fisher, Louisville, Ky.; A. P. Brown, McComb City, Ill.; Russell Smiley, Dayton, Ill.; O. H. Hemlepp, Ashland, Ky.; W. H. Dunne, Toronto, Can.; Lee Clafson, Marless, Ill.; C. O. Horstman, W. Cutler, Peoria, Ill.; E. J. Hawkins, J. A. Zucker, Cleveland, O.; Albert Eckler, Akron, O.; H. A. Schultz, Monticello, Wis.; J. J. Lantry, Milwaukee, Wis.; G. I. Muffley, Vermont, Ill.; H. M. Bandfield, Waterloo, Ia.; B. L. Tullis, Kenton, O.; L. P. Birkenbach, Columbus, O.; Fred Personnette, Elkhart, Ind.; G. H. Snyder, South Bend, Ind.; J. A. Sheppard, Hammond, Ind.; G. W. Setly, Cedar Rapids, Ia.; A. J. Eddy, Aberdeen, S. D.; W. L. Druven, Preston, Can.; Charles Zimmerman, Evanston, Ill.; L. B. Lyman, F. H. Harris, Akron, O.; W. J. Hilliard, Elmhurst, Ill.; Geo. H. Kaufman, of the Bicycling World and Motorcycle Review.

THIS IS THE BIG PARTY THAT WAS ENTERTAINED BY THE MAKERS OF THE THOR, AT THE AURORA FACTORY

French is Pushing Things in Baltimore.

Baltimore, Feb. 6.—One of the happiest dealers in town is Howard A. French. He is the local distributor for the Indian and he is patting himself on the back, for he shows proof that he has sold since the first of the year 50 of the latest models, and he says prospects point to sales of at least 500 machines during the present year. Last year he sold approximately 250 motorcycles and about 700 bicycles. With revival of interest in bicycling he expects to sell at least twice the number in 1912 that he did in 1911.

Most of the machines recently sold were to commercial houses. Business men are realizing in this city that the motorcycle is a great thing. Those who have experimented with them have discovered that they save time and considerable expense. As a result they have proven walking advertisements and French says he has profited. Three commission houses have just ordered machines sent to Florida for use of their agents in that State. The men will use them in going from farm to farm to purchase products for the Baltimore market. The firms who purchased them figure that the time and money saved will be a big item in their business.

The street cleaning department and the gas company have acquired Indians for the use of their inspectors. Other commercial houses have fallen into line, and many more are expected to do so in the not too far future.

New Thor Agent at Portsmouth, O.

Portsmouth, O., Feb. 5.—Paul Rein has taken the agency for the Thor for this district, and in connection will open an up-to-date repair shop, adjacent to the plant of the Portsmouth Automobile and Machine Company.

BISON CITY TRADESMEN ORGANIZE

Permanent Body Formed Embraces All Phases of the Cycle Industry—Numerous Trade Abuses Discontinued.

Buffalo, N. Y., Feb. 5.—At a meeting held at the offices of the Vim Cycle and Hardware Company, 137 Broadway, January 29, the bicycle and motorcycle dealers, the local manufacturers and the local jobbers permanently organized the Buffalo Cycle Trade Association, with the following officers to serve for the first year: President, Edw. Young; secretary, H. Krigbaum; treasurer, F. D. Barton; directors, A. F. Schwegler, A. Nabinger, George Ferrand. Monthly meetings are to be held on the last Friday in each month at the various business houses operated by the association members.

The spirit shown at these meetings of the local trade has been most friendly, and has probably done more to harmonize the trade in Buffalo than anything else attempted in past 10 or 15 years. Already, the committee, composed of President Young, George Ferrand and John W. Henry, has been able to correct a number of abuses that have existed in the trade for a period of years, and which have proven a great drawback to the trade in general.

Dues in the new organization have been placed at $2 per year, and the purpose is to push the industry in all the branches covered by the association's work.

Marsh's Will Continue at Brockton.

Brockton, Mass., Feb. 5.—According to W. T. Marsh of the American Motorcycle Company, motorcycles only will be manufactured in Brockton. It has not been decided definitely where the automobile end of the business will be located, but it is certain to go to some town in Ohio or Indiana. A. R. Marsh is at present in the West and until he returns nothing will be done.

"It is certain, however, that the automobiles will not be manufactured in this city; in fact, it never was intended that they should," Mr. Marsh says. "The company has been experimenting for several years perfecting the auto model, and now that this is completed they are ready to manufacture. From the first it was decided to locate in some Western town, and several places in Ohio and Indiana have opened negotiations with the company. The motorcycle will continue to be made in Brockton indefinitely."

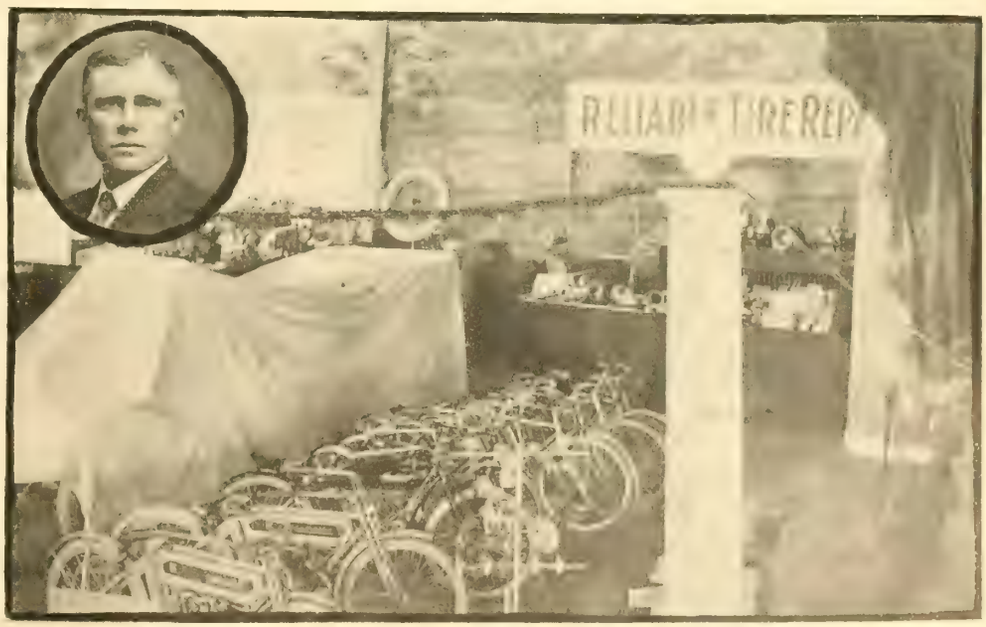
Some Big Mail Order House Profits.

As a significant indication of the proportions which the mail order house proposition is attaining, we cite the fact that the common stock of one of the Chicago catalogue concerns recently has been in much demand, the cause for which, Wall street assigns, is that the dividend is to be raised from 7 to 10 per cent. It is said that this house has over 6,000,000 customers and that it earned for the year ending December 31, 1911, approximately 16 per cent. Another reason given, is the anticipation of increased business that will accrue if the parcels post legislation is adopted.

UNLOADING SHIPMENT OF 30 INDIANS AT F. A. BAKER & CO.'S, NEW YORK CITY

"Abe" Keeps Up With the Times.

Middletown, O., Feb. 6.—Abe Levy, of the Middletown Bicycle and Automobile Company has recently installed a very complete equipment of machinery which will place his establishment on a par with the best in the State for special repair and manufacturing purposes. The new equipment includes the latest gasoline engine for power, lathes, drill press and complete building outfit.



New Eras and Popes in Philadelphia.

Philadelphia, Feb. 8.—The Auto Motor Cycle Company, 2216 North Broad street, agent for New Era and Pope motorcycles, is enlarging and refitting its store preparatory for the rush of early spring trade. In addition to motorcycles, a complete line of bicycles and supplies will be carried.

Boulevard Cops on New Model Indians.

The motorcycle cops on the Hudson County boulevard, Jersey City, N. J., will shortly come out with 1912 mounts. The equipment will be 18 7-horsepower twin-cylinder Indians. The sale was made by A. G. Boller, of Union Hill, N. J., the local Indian agent.

It is reported that E. C. Kicherer, New York City agent for Flanders and N. S. U. motorcycles, at 206 West 76th street, is contemplating taking the Excelsior also.

VOSS BROS.' EXHIBIT AT PEORIA, ILL., MOTORCYCLE SHOW

When a rider has the feeling of security that goes with a CORBIN BRAKE he finds greater speed and control possibilities in his machine — *speed*, born of confidence in his ability to check the machine suddenly, if the emergency arises, *confidence* in approaching the crest of a hill that the descent has no dangers for him — the CORBIN BRAKE will hold on any grade.

NEW YORK, FEBRUARY 10, 1912

The N. C. A. and What It Stands For.

Rounding out thirteen years of eventful life the National Cycling Association has successfully withstood the storms that have hovered over its devoted head, and at the present day is so firmly established as the cycle race sport governing body that nothing less than an earthquake would stand a chance of shaking its stability.

Probably no sport governing organization, not even the League of American Wheelmen, or the Amateur Athletic Union, has ever been the target for as much undeserved vituperative malice as the N. C. A., unless perhaps the National Cyclists' Union of England, yet today both the N. C. U. and N. C. A. are excellent examples of the fact that honesty of purpose and persistent effort will win out in the end.

The most violent enemies of the N. C. A. who expended their vituperatives against its policies and rulings a dozen years ago have sunk into oblivion, and the enemies it possesses today are chiefly offenders against the rules, or irresponsibles who are "agin' the government" on general principles. As long as the organization stands for fair sport convulsions by the above named classes cannot affect its standing.

One of the founders of the Union Cycliste Internationale at Paris, April 14, 1900, it has since maintained a strict alliance with that body, and it also affiliated in this country with the Amateur Athletic Union and the American Automobile Association. It is a matter of regret that a misunderstanding of a technical matter should have severed the alliance that once existed between the N. C. A. and the Federation of American Motorcyclists. The breach is not an irreparable one, however, and is possible of readjustment.

Indications point to a marked increase of interest in cycling of all kinds this summer. The World's Championships will be held in this country the latter part of August, and the movement to send a team of cyclists to the Olympic games is well known. Good sport and more of it should be the National Cycling Association's watchword from now on.

Cycle Industry's Sales Opportunities.

It has been said, and not without considerable truth, to the shame of many who chiefly are responsible for the conditions which permit of foundation for the allegation, that those to whom the welfare of the bicycle industry should be of first importance—the manufacturer and dealer, with the exception of a few isolated cases—are neglectful of the unquestioned opportunity for the advancement of their buslness interests in that they ignore, or at best view with passive attention, the revival of cycling as a pastime and sport which to the least observant and as a matter of production figures has been developing, steadily and surely, to a degree dreamed of, yet considered unattainable during the "lean years" following the great slump of a decade ago.

It also has been alleged, also with considerable truth, that manufacturers and dealers treat the making and selling of bicycles in about 98 per cent. of their respective cases as a necessary evil to be dispensed with in the easiest possible manner, incurring the least possible effort—in effect to comply all too readily with the request for cheaper and yet cheaper goods all along the line, from the consumer up, rather than to make a bona-fide bid for business of "quality," as is the rule, rather than the almost hopeless exception, in practically every other line of commercial activity.

Veterans predominate in every department of the industry. All can recall the prosperity, unequalled in any other, before or since, which rewarded those connected with the business in whatever capacity so long as was maintained the standard of quality instead of acquiesing to the call for lower price. We cannot expect to restore those halycon conditions; the situation in many respects is different, but, there are today, as there were then, legions who are amply supplied financially and intelligently appreciative of the benefits derived from the use of the better grades of goods if the advantages are conclusively shown them.

On the threshhold of another season, no better opportunity could be desired than that created and now firmly established in the movement carried through since October last by this publication—that of providing, financing and sending a team of bicycle riders, to be chosen by process of elimination contests from every section of the country, to the games of the Fifth Olympiad, which now are attracting world wide attention, have received columns of space in the reading pages of the daily press throughout the country, and, as the time approaches and the games are eventually run, will accrue a hundred fold more of the best possible publicity than ever has been awarded the cycle industry.

Throughout the past six issues of this journal there have appeared in its news columns, articles marking the progress of this campaign for the advancement of the industry which are truly remarkable in the results attained. In 21 cities and towns from coast to coast, their population approximating fifteen millions, the campaign of developing riders, and in many instances working faithfully for the funds.

Manufacturer and dealer, that is your opportunity; take up the work, support it morally and financially. If you make or sell any goods such as are suitable for the use of riders in contests of 150 and 200 miles, follow up the clubs and individuals cited in the aforementioned articles. Dealers owe it to themselves to use every effort to secure publicity in the local press—your matter will be used, the proposition is one of live and growing sporting interest—if you are not conversant with the matter or desire more information, a request for it will suffice. Above all,—Start—Immediately!

February 12, Brooklyn, N. Y.—Knights of St. Anthony five miles flat-floor bicycle race and general athletic games, open, at the 47th Infantry Armory.

February 14-16, Colorado Springs, Colo.—Automobile and motorcycle show in Temple theatre.

February 17, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletc games, open, at the 74th Regiment Armory.

February 21, New York City—Pastime A. C. five-men pursuit flat-floor bicycle race, invitation, and general athletic games at the 22nd Regiment Armory.

February 21-28, Toronto, Ont.—Motorcycle show in Toronto Armory.

February 23, New York City—High School of Commerce, two miles handicap flat-floor bicycle race and general athletic games, open to all, at the 71st Regiment Armory.

February 24-March 2, Brooklyn, N. Y.—Annual automobile and motorcycle show in Twenty-third Regiment Armory.

February 24, New York City—Century Road Club Association annual dinner at the Broadway Central Hotel, Broadway and Third street.

February 26-March 3, Quincy, Ill.—Second Annual Mississippi Valley Automobile Show, under the patronage of Quincy Auto Club, at Highland Park Pavilion.

February 29, New York City—United Spanish War Veterans, two miles handicap flat-floor bicycle race and general athletic games, open, at the 22nd Regiment Armory.

March 1, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

March 2, New York City—Dominican Lyceum two miles handicap flat-floor bicycle race and general athletic games, open, at the 71st Regiment Armory.

March 4-11, Denver, Colo.—Motorcycle, motorcycle accessories and automobile show in Auditorium.

March 16, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 5, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 13, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 14, Brooklyn, N. Y.—Atlas Bicycle Club first annual spring century run, open, Start from Prospect Park Plaza.

April 21, New York City—New England Wheelmen 15 miles handicap road race, Floral Park, L. I., open. Rain date, April 28.

April 26, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 28, New York City—Eastern Division, Century Road Club Association annual spring century run, open. Start from Columbus Circle.

May 5, New York City—Atlas Bicycle Club 15 mile handicap road race, Floral Park, L. I., open . Rain date, one week later, May 12.

June 16, New York City—Century Road Club of America, New York State Dicision, 50 miles handicap road race, Floral Park, L. I. Rain date, June 23.

July 7, Stockholm, Sweden—Olympic games under the auspices of the Swedish Olympic Committee and with the patronage of the King of Sweden; bicycle road race, 200 miles round Lake Malar, sanctioned and under the rules of the Union Cycliste Internationale, open only to amateur riders registered with affiliated National sports governing organizations: For the United States, the National Cycling Association; Chairman, Board of Control, R. F. Kelsey, Room 914 Tribune Bldg., New York City. United States entries close May 20 with the American Olympic Bicycle Team Committee, same address.

August 11, New York City—New England Wheelmen second annual bicycle marathon, Floral Park, L. I., open. Rain date, August 18.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I. Rain date, September 29.

FIGURES OF INDUSTRY'S ADVANCE

Most Imposing Display of German Exports, Comparatively Small Though Gradual Increase—United States Gains Rapidly.

Official returns of the exports and imports of bicycles, motorcycles and parts in the German Empire denote a healthy condition of those industries in that country; the exports particularly are impressive, increasing steadily during the past three years. That any one country exports in a single year bicycle parts valued at over $18,000,000 must come as a sad blow to those dear folks who have read—at various times—the burial service over the "antiquated wheel." According to the German figures this "antiquated vehicle" is very much alive and "kicking."

The value of motorcycles exported during the years 1909, 1910, and 1911 respectively are: $323,500, $302,250, and $415,750; of bicycles, including tricycles and wheel chairs: $1,379,250, $1,555,500, and $1,620,500; of parts for motorcycles (except motors and motor parts), bicycles, tricycles and wheel chairs; $13,642,500, $16,284,750, and $18,265,500.

Imports of the various items in the years 1909, 1910, and 1911, respectively, were valued as follows: Motorcycles, $39,250, $49,250, and $62,500; bicycles, including tricycles and wheel chairs: $40,500, $62,000, and $62,500; parts for motorcycles (except motors and motor parts), bicycles, tricycles and wheel chairs: $119,500, $168,000, and $118,500.

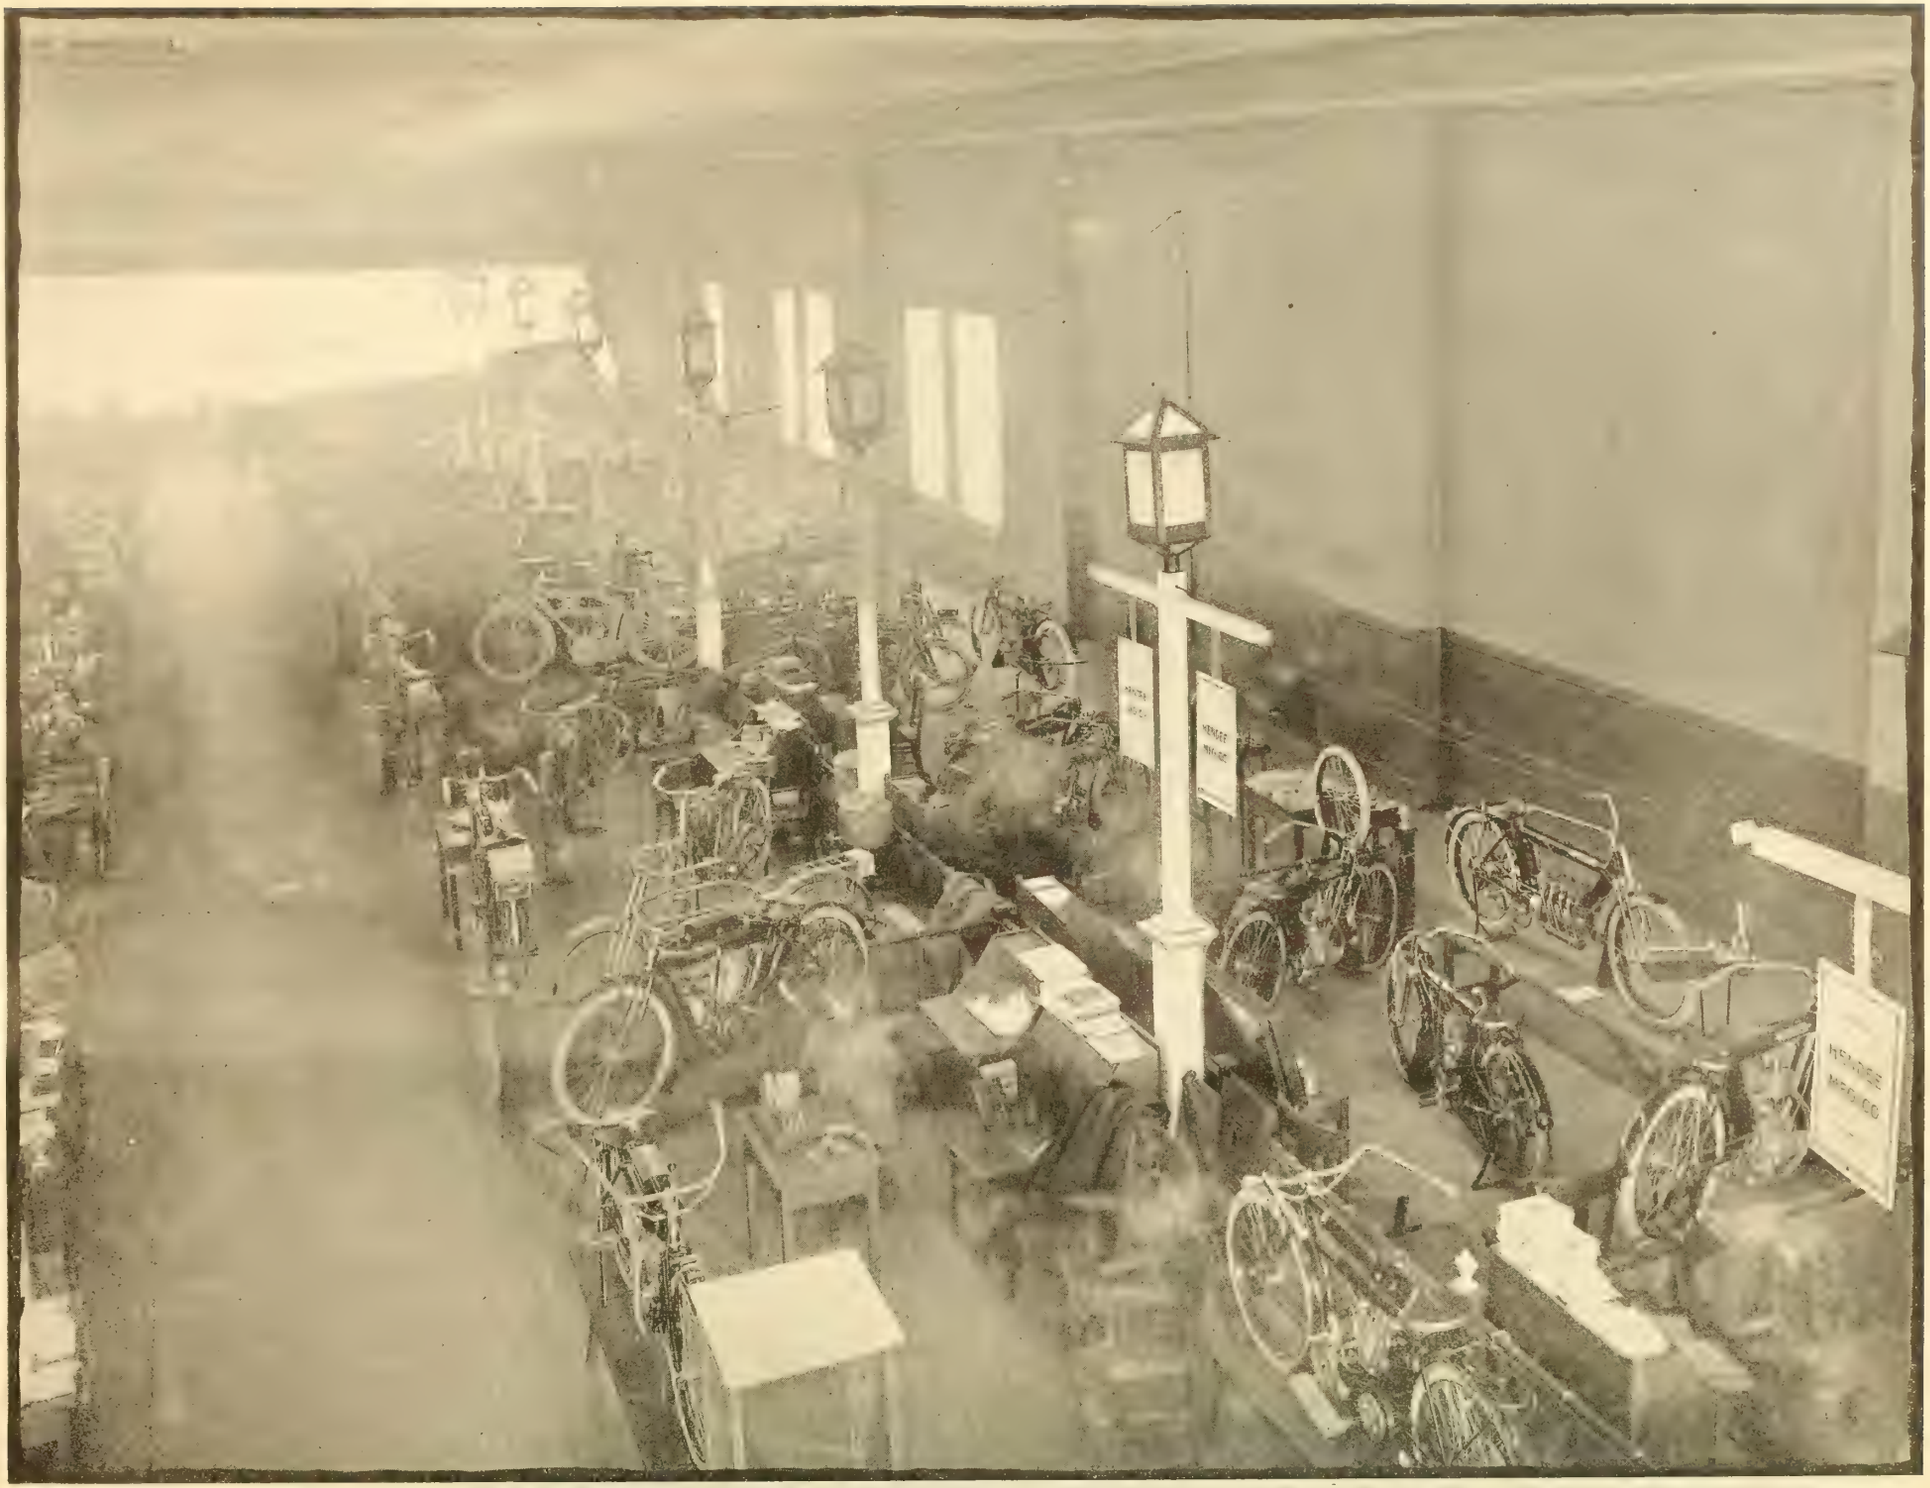
U. S. Imports and Exports Leap Forward.

With the close of 1911, an encouraging increase in the export of bicycles, motorcycles and parts (except tires) is shown in the figures for 12 months as compared with the same period in 1910 and 1909. The total value of business for the year just closed is $961,673, a gain of $233,116, or approximately 29 per cent. over 1910 with $728,557. Export values in 1909 amounted to $680,616.

The month of December, 1911, has to its credit $79,829, as against December, 1910, with $56,879; thus showing a yet larger ratio of gain, its business being 39 per cent. in excess of that of the previous corresponding period, or $22,950.

Prior to July 1, 1911, shipments from this country of foreign merchandise in the above lines were included in the reports of "All other manufacturers of iron and steel," or "All other manufacturers of wood," therefor the statistics date from that time and show a value of $5,334.

Imports also were included in like manner, their values for the six months, July to December inclusive being $62,467 and for the month of December, $20,774. The new classification will improve matters.



Industry's Progress Again Mirrored at Chicago

Chicago, Sunday, Feb. 4.—Although this was supposed to be moving-in day for the motorcycle and accessory exhibitors at the Coliseum show, which will enter its second week to-morrow, comparatively few did so. Some of the exhibits were delayed in transit, and others were at local agencies, so that little was done at the show in the way of putting things to rights. Several exhibits were run in, and unpacked in the morning, but no great effort toward making the booths look pretty was attempted. In the afternoon the building was practically deserted by the motorcycle trade. It was a bleak day, with a light flurry of snow falling, and a biting cold wind blowing, and the dealers were to be found in the local agencies or hotel lobbies, discussing a wide range of topics. Everybody seemed quite satisfied to stay indoors and let the Coliseum take care of itself for the day. Tradesmen arrived on every train and many were away behind time. Hardly an out of town visitor but complained of something in the railroad service, the most popular causes of dissatisfaction appearing to be lack of heat, dining cars and slow time.

Chicago, Monday, Feb. 5.—To-day broke bright and clear, and the tradesmen were on hand at the Coliseum early to put their "houses in order" before the crowds descended on them. There was activity on every hand, and by noon all debris had been cleared away and the show was under way. All of the exhibits were in place except the Schickel, which arrived Monday night. This exhibit is not in the Annex with the main colony, but on the second gallery of the Coliseum proper, among the accessory people. Over in the Armory, which is reached through a cloth subway, where breezes far from gentle cavert gaily, and is unofficially designated as "Pneumonia Boulevard," the Edwards-Crist Company, local agents for the Indian, have the largest motorcycle exhibit in the show, 16 machines being staged.

There are 17 makes of machines on display, one more than at New York, although there are two machines, the Wagner and Iver-Johnson, which are making their debut on the 1912 show circuit. In fact this is the first time the Iver-Johnson, which

ENCOMPASSED WITHIN THE BARE WALLS OF THE COLISEUM ANNEX THE FAIREST PRODUCTS OF THE INDUSTRY ASSUMED THE ROLE OF "BEAUTY ADORNED"

emanates from the Iver-Johnson Arm & Cycle Works, Fitchburg, Mass., has been seen at any show. Over on Michigan avenue, the M-M is holding a private show at its branch, and has a full line of models on view. This machine was in the motorcycle colony displayed at the New York shows.

From a decorative standpoint the Chicago motorcycle show is absolutely nil. While the Moorish mosaic palace fantasy in the Coliseum itself severely strains the vocabulary to describe it, the Annex regalia is not much more extensive than the fig leaf apparel in which Adam disported in the Garden of Eden. It would seem either that decorative material was exhausted by the effort in the Coliseum, or else Manager Miles feared that if the show tailors were turned loose in the Annex, they might outdo their Moorish creations in the extravagantly decorated Coliseum.

At any rate, the extreme simplicity of the Annex decorations are not at all popular with the exhibitors. At either end of the hall are balconies across which are strung streamers of green and white bunting. The motorcycle exhibits are tucked away under the balconies, and in a double column aisle next the far side of the hall from the entrance. Forming a separating center wall for the exhibits, a number of plain white posts carry wires and signs. No attempt is made to conceal the wiring, and there is nothing gorgeous about the signs displayed either.

When the hall becomes fairly well filled with people, it is a case of follow the crowd, which moves slowly in an irresistible tide along the aisles. At times the flow of humanity becomes jammed and ceases flowing, until the blockade is broken by the dissolution of the crowd at the place of congestion. There is general complaint of the narrowness of the aisles, and the smallness of the exhibits, and it is felt that all of the Annex should have been set aside for motorcycles. Practically half of the hall is occupied by automobile accessory people, in which the motorcycle visitors are not interested, and whose deserted booths are in sharp contrast to the crowds which congregated at the motorcycle stands.

Only the motorcycle enthusiasts, or the visitor who stumbles upon it, is apt to find the motorcycle section, for there is absolutely nothing in the way of a sign in the Coliseum, or over the door of the Annex, to indicate what or who are to be seen in there. Emerging from the gorgeous atmosphere of the Coliseum to the decorative void of the Annex, is a transition which comes all too sudden for the average visitor, and as soon as he recovers his poise he usually isy not slow to comment upon it in more or less forcible language.

Unlike Madison Square Garden the building is well heated, and when the crowd was densest on the opening night, the heat was suffocating.

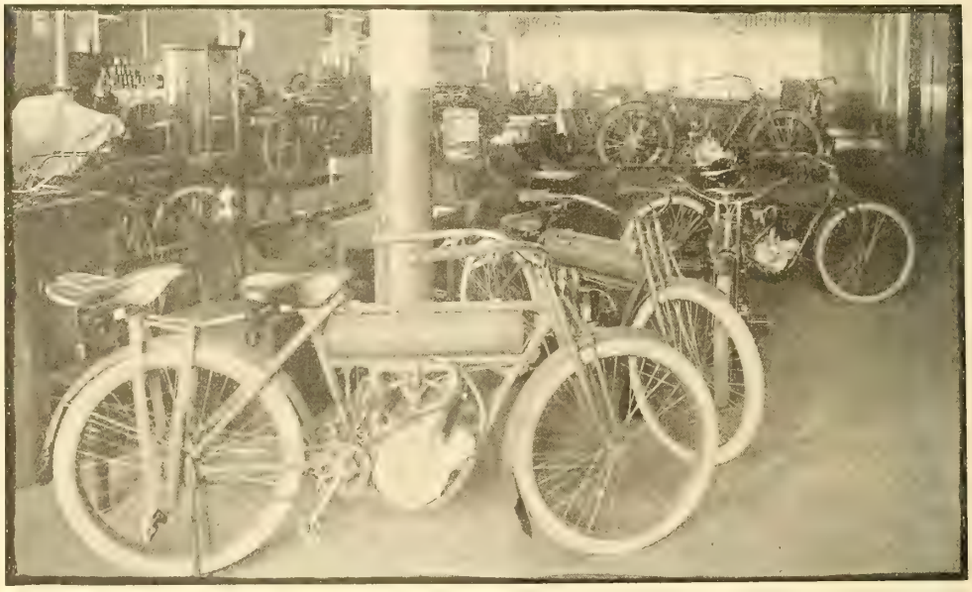
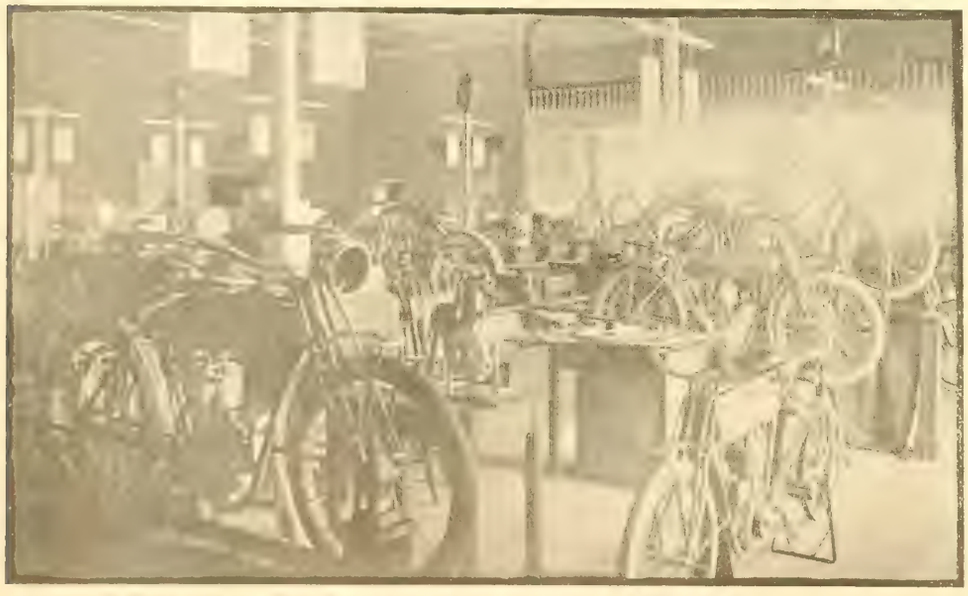
EMBLEM.

Emblem Mfg. Co., Angola, N. Y.—Five machines; four singles; one twin.



Representing the Factory—W. G. Schack, L. S. Taylor, R. P. Colwell.

Changes or New Features Since Last New York Show—By dropping the lower horizontal frame truss the enlargement of the tank has been made possible, so that greater traveling radius on one filling is secured. The tank now holds two gallons of gasoline, and one-half gallon of oil. The exhaust valve stems have been threaded and fitted with hardened screw caps and lock nuts to take up wear, and allow the valve timing to be maintained at maximum, constantly. An entirely new style of inlet cage has been adopted, which is lighter, more durable and has larger passages, permitting the induction of a greater charge of mixture in a given time.

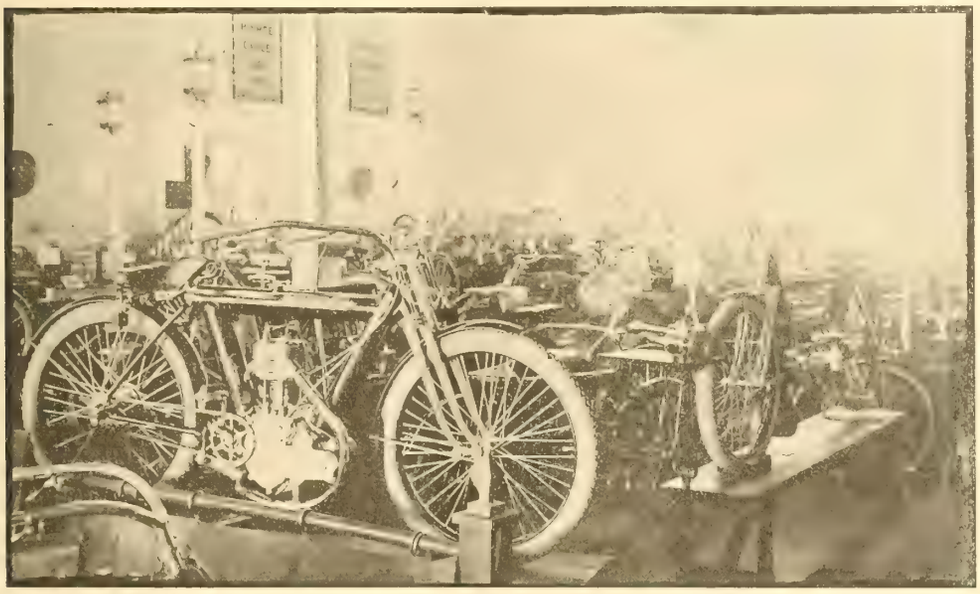


Some Features of Which the Makers Are Proud—Stability and sturdiness seem to exude from every pore of the Emblem. Externally it is a solid, substantial appearing machine, and this impression is borne out by the makeup of its "innards." Although internal frame reinforcement is accepted as a matter of course these days, a triangular girder inserted in the Emblem frame tubes throughout their length implies a practically indestructible foundation for the power plant.

Emblem is another motor that is full ball bearing, the New Departure double row type being used. In counting up the field of makers who are employing shock absorbing devices in the pursuit of more comfortable riding machines, Emblem is a pioneer, having brought out its spring seat early last year. Time was when fuel tanks were made of copper almost universally, and while it was acknowledged to be ideal for the purpose, gradually other metals superseded it to a large extent, but Emblem tank specifications still call for copper.

With the introduction of spring tandem attachments, the pleasure of riding "two up" was rendered much more enjoyable and attractive. However, it remained for the Emblem folks to blaze the way in the introduction of adjustable foot rests, which in combination with adjustable handlebars, would seem to represent the ultimate in rear passenger accommodations for some time to come. One of the inconspicuous, but nevertheless, sure to be appreciated, wrinkles, in connection with the tandem, is

MERKELS MADE AN EFFECTIVE SHOWING ON THE CENTRAL AISLE



POPE AND NEW ERA EXHIBITS SHOWED FULL LINES OF MODELS

that all frames are built with lugs, permitting the attachment of the rear seat apparatus at any time, without the necessity of having special fittings made. The scheme of mounting or demounting the tandem is so worked out as not to interfere with the removal of the rear wheel.

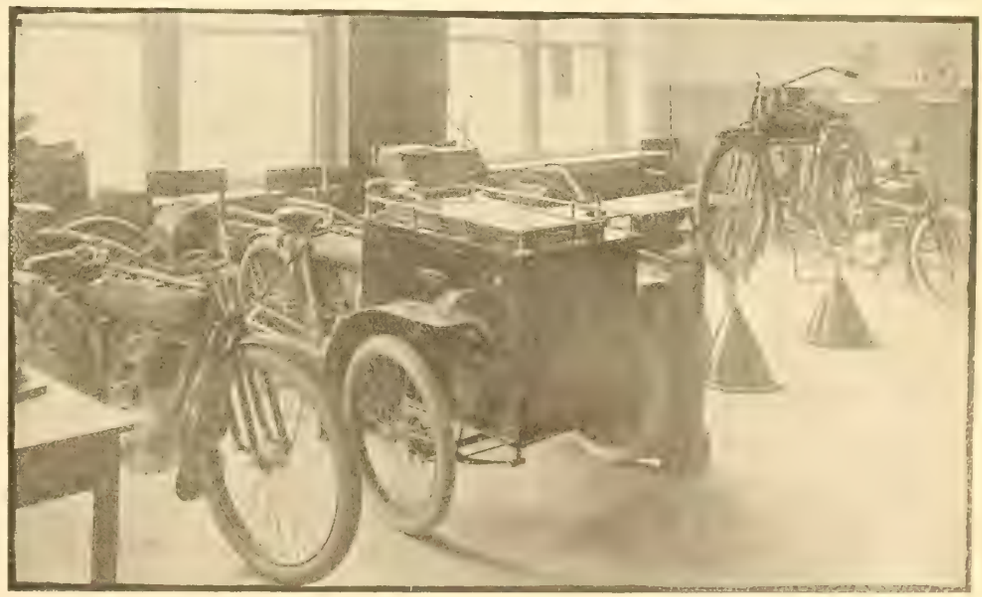
A pert looking channel iron rear stand, hinged on an independent frame lug and seating under load in a lower rear stay lug, will impress favorably the connoisseur in stand construction. Another of the "little things" that help sidestep a lot of trouble sometimes, is the fitting of chain stops to the tank caps so that they will not become lost if they unscrew, or fall to earth, and pick up dirt to cause carbureter trouble during a refilling process. The stops are lengths of coiled spring which are easily removable. The 1912 output of Emblem motorcycles is scheduled to reach 2,000 machines, of which 800 will be twins.

INDIANS, AS IS CUSTOMARY, MADE THE MOST ELABORATE SHOWING

PIERCES WERE WELL STAGED FOR THE VISITORS' OBSERVATION

easier riding and less fatiguing machines. The most prominent refinement in the spring frame for the coming season is the incorporation of a friction shock absorber in the hanger cluster to check violent rebound.

It is almost a State secret that this device was discovered accidentally, but this is how it came about. In going over the machine to seek if possible where improvements might be effected with profit, Designer Joseph Merkel decided to enlarge the hanger hinge in order that even greater bearing surface might be embodied to secure a construction so substantial that competition arguments of alleged weakness at this point would effectually be exploded. After constructing the new hinge on the lines decided on, he tried it out and was agreeably surprised to find that the machine rode much smoother and more comfortable than before. At first this was not charged to the hanger hinge, but eventually



MERKEL.

Miami Cycle & Mfg.Co., Middletown, O.—Five machines; three twins; two singles.

Representing the Factory—K. B. Jacoby, J. F. Merkel, E. M. Jackson, Edward Buffum, Fred Huyck, O. K. Newby, F. P. Lee.

Changes or New Features Since Last New York Show—Metal guard enclosing short drive chain.

Some Features of Which the Makers Are Proud—Spring frame and Merkel are names that have been synonymous in motorcycles since the early days of the industry, so in these piping times of white heat competition, it is with considerable satisfaction that this manufacturer takes note of the support which its long campaign in the interests of a comfortable riding machine at last has been accorded by other makers, who this year have embraced various types of shock absorbing devices to meet the insistent demand of riders for

MINNEAPOLIS ALSO SHOWED DELIVERY VAN FLANDERS OCCUPIED CORNER

EXCELSIORS WERE IMPRESSIVE HERE IN GREAT NUMBERS

by a process of deduction, the real cause of the smoother running was found to be in the new hinge bearing. It then was perfected by the insertion of bronze friction discs.

Now having exhausted its stock of old style open Bosch magnetos, the Miami Company will equip all Merkels hereafter built, with the new enclosed type which is slightly smaller. Not a little of the speed which the Merkel possesses is due to the liberal use of ball bearings in the motor. All shafts except the wrist pin ride on imported F. & S. balls, which are noted for their freedom of running and long life without replacement.

For the coming season the output already decided on is 3,500 machines, with a possible increase to 4,000. It will be divided about equally between twins and singles. At present the twins are leaders in popularity among the experienced riders, but the company finds that in April and May when new riders are taking up the sport, the sale of singles increases rapidly, so the yearly output is about evenly divided between twins and singles.

READING STANDARD.

Reading Standard Co., Reading, Pa.—Five motorcycles; three singles; one twin; one motorless chassis. Two bicycles.

Representing the Factory—W. F. Rempis, W. B. Glasser, W. G. Rhodes, W. E. Dewey, H. E. Halbert.

Changes or New Features Since Last New York Show—None.

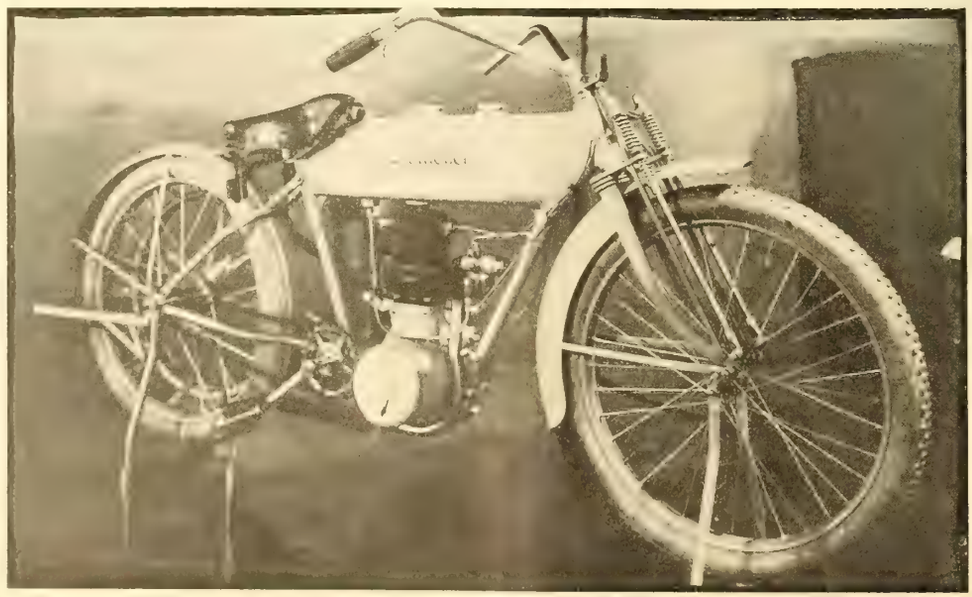
Some Features of Which the Makers Are Proud—The motor is the subject on which the R-S folks like most to dwell, and indeed there are numerous good points in it that are well worth telling about. Low compression is used, and if you ask why, they will tell you because it makes a cooler and smoother running engine, which is longer lived. Flywheel balance has been obtained to a rare degree, it is said, and there is no laboring at slow speeds.

Vanadium steel, the kind that has made certain motor cars famous, is used extensively in the R-S engines. Its enormous strength is well known. The rider whose engine persists in oiling the roads, the operator and the machine too, will appreciate the pains taken to make R-S motors oil-tight. It was R-S who introduced the parallel mechanical valves, and they are retained in improved form. Of course, they are interchangeable, always have been, and this year, one half-time gear, carrying a double cam, reduces the number of operating parts by 50 per cent.

Comparison of the R-S cone clutch with some of the "watch fob" runabouts for size, is apt to be favorable to the former. It is a big sturdy spider, and is an original product. Chain replacement should be nil on the R-S, for the driving sprockets are nearly as large in diameter as the motor base, so that the chain travels very slowly, comparatively speaking. Makes less noise too, than a fast running chain. Comfort is cultivated by the R-S folks, by the employment of a shock absorbing seat post, which is an auxiliary member placed back of the regular seat mast. This device appeared on last year's models, so that it has had a season's test, and still is retained unchanged. Therefore the natural inference is that it has qualified. Stock has been ordered and is coming through for 2,000 machines, of which 400 will be twins, and the remainder, singles.

SCHICKEL.

Schickel Motor Co., Stamford, Conn.—One machine; a 5-horsepower single.



Representing the Factory—R. M. Hillas, L. J. Carling, H. J. Krackowizer.

Changes or New Features Since Last New York Show—None.

Some Features of Which the Makers Are Proud—No valves, no cams, no springs, no tappets, no gears, is the Schickel slogan, for the motor is of the two-cycle, or explosion every revolution type. It has less parts than any other motorcycle engine marketed in this country, so simplicity rightfully may be said to be its cardinal feature. It has but one flywheel, which is a drop forging, the crankpin and main shaft being integral. The shaft ride in ball bearings.

The ignition system bristles with novelty. The Eisemann instrument is housed in a right extension of the motor base, and the spark timing is secured by rocking the magnets within a limited are on the armature, a system which produces a maximum spark at any point in the range. The armature drive is through a banjo shaped steel spring disc, coupled to the crankshaft, dispensing with gears.

Although the tank-in-the-tube style of

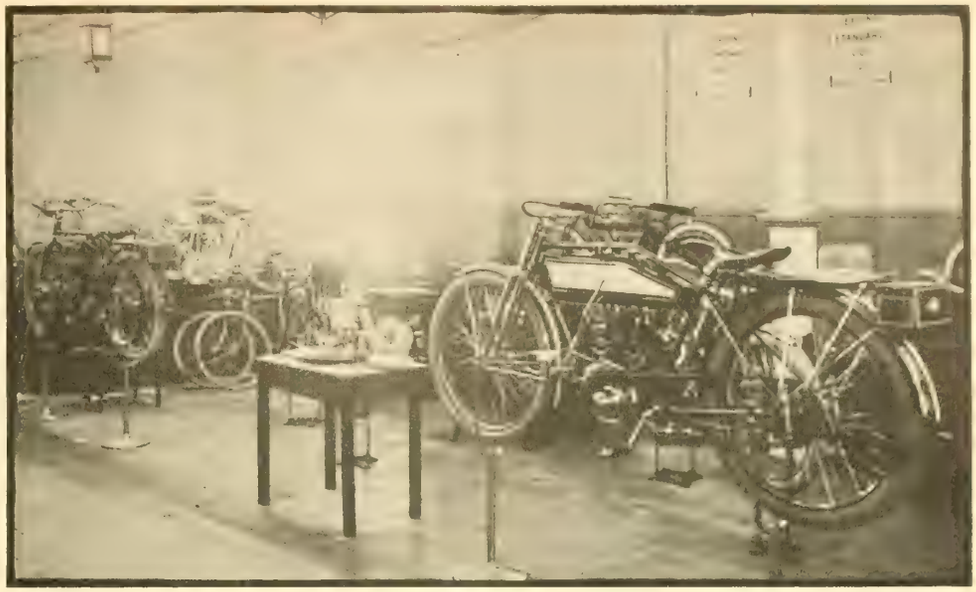
SCHICKEL HAD ITS DISPLAY IN THE COLISEUM GALLERY

frame is used, the similarity ends there. The upper member is an aluminum casting, which is poured around the tubular member of the frame. There is but one compartment in the tank, the gasoline and oil hobnobbing continuously, in a fixed proportion. They enter the motor together, and then separate and perform their work. However, they soon reunite in the exhaust passage, so are not long separated.

Idler control of the flat belt produces the desired free engine effect, but the method of control is original. A twist grip with stay set mechanism, permits of the belt tension being regulated to any degree, and more gradually than with a ratchet control. The Schickel plant will produce 600 machines this season.

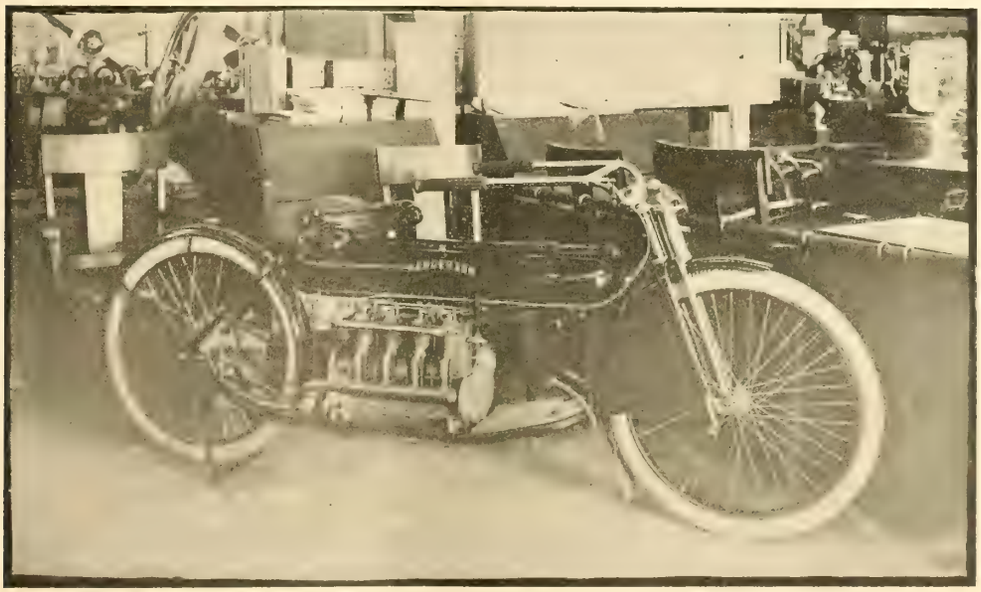
PIERCE.

Pierce Cycle Co., Buffalo, N. Y.—Four machines; three singles, one four-cylinder.



Representing the Factory—W. A. Johnson, E. R. Durkee, Elbert Jenkins.

Changes or New Features Since Last New York Show—None.



Some Features of Which the Makers Are Proud—Descended from automobile lineage, it is but natural that the Pierce line should incorporate a model highly seasoned with motor car mechanical spices. It was the first American machine with four cylinders and shaft drive, and also the father of the tank-in-the-frame construction. The motor is a small replica of the car engine, even to the mechanical valves, T cylinders, magneto distributer, ignition buss-bar, outside flywheel and gear driven oil pump Continuing the comparison, the Pierce "four" also has the multiple disc clutch, sliding gear transmission, shaft drive, long wheelbase and double brakes, features all common to automobiles.

A great deal is heard of long stroke engines in the automobile field these times, and the very general adoption of this construction in various ratios, indicates that it must contain some advantages. The Pierce single is one of the longest stroke motorcycle engines built, which accounts chiefly for its remarkable pulling power at low speeds. Exclusiveness is found in the roller bearings on the connecting rod "big end" on the singles, the bearing casings being made of drawn nickel steel. Tests of these bearings for 10,000 miles are claimed to have disclosed no wear.

In respect to general frame and fork construction, both the "four" and the single, are alike, but in power plants and drives, they, of course, differ widely. Automobile influence again is discovered in the use of Vanadium steel in the forks, the springs being so combined as to provide a hygienic cushion. To the average rider, it might appear immaterial whether cylinder head flanges were horizontal or vertical, but the Pierce people claim that the latter give 75 per cent. increased radiating surface. So they use the upright flange. They also use one inch handlebar tubing, instead of the customary ⅞-inch bar. Greater factor of safety, of course. How many Pierces will be built in 1912? Present schedules call for 1,500 machines, of which 1,000 will be singles.

READING STANDARDS MADE A REPRESENTATIVE DISPLAY, INCLUDING BICYCLES

THE FOUR-CYLINDER HENDERSON ATTRACTED UNLIMITED ATTENTION

NEW ERA.

New Era Auto-Cycle Co., Dayton, O.—Two touring machines; one delivery van.

Representing the Factory—C. B. Hull, C. W. Mason, R. R. Hill, C. E. Way.

Changes or New Features Since the Last New York Show—In the adoption of a rear axle of a knockout type, this construction now practically universal in front axles, is brought to a logical completion. Its advantages already conclusively demonstrated, in its forward application, are even greater when incorporated in a rear axle, where occasion arises for removal of the wheel much more frequently. The casting of an extension shield on the motor base to partly encircle the motor drive sprocket and chain, and protect the rider from oil, and from risk of having his clothing become entangled in the mechanism, is a refinement whose worth needs no argument to convince. To secure a more gradual and softer clutch engagement, the clutch toggle actuating cone has "stepped" faces, so that it can be slipped or engaged and disengaged to a selective degree, similarly to the selection of a desired gear ratio in a two-speed. Greater accessibility to the carbureter is obtained by the adoption of a longer inlet pipe, bringing the mixing apparatus well below the saddle. A metal barrel oil pump, built into the oil tank, supersedes the external device with glass barrel hertofore used.

Some Features of Which the Makers Are Proud—Four years ago, when it made its debut in the motorcycle arena, the New Era was equipped with a clutch and two-speed gear, being the first American machine to embrace these features. It is with

The Biggest Day

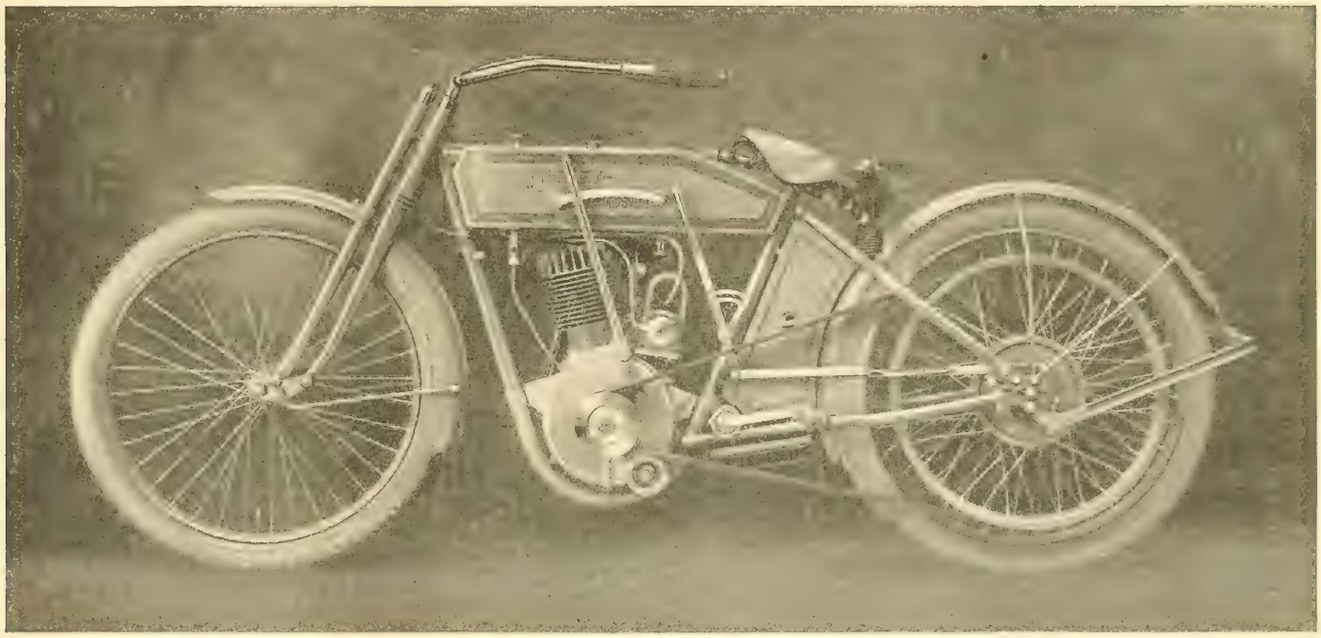
TODAY (February 2d) we reached the high water mark for a single day's business, receiving orders for machines more than enough to make two full carloads, all for immediate shipment.

In addition to this, we received eleven contracts covering a total of 62 machines, from new dealers who never handled the Harley-Davidson before.

We just returned deposits to three dealers whose letters reached us too late, we having closed up the agency with some one of their competitors just previous.

From one town in South Carolina, Camden, we just received letters from three dealers who all wanted the Harley-Davidson agency. Of course only one dealer got the business. His two competitors we were obliged to turn down.

We were obliged to turn down a dealer in Putney, Ga.—he was too late—his competitor is now selling Harley-Davidsons.



In Scandia, Kans., and in Charleston, W. Va., others have come too late.

At Palco, Kans., two dealers sent deposits the same day. We had to return one. It came just four hours too late.

In none of these towns were Harley-Davidsons ever sold before.

HARLEY-DAVIDSON MOTOR C

y in Our History

Today's mail brought 606 inquiries from people who were sufficiently interested in the new Harley-Davidson to write for a catalog. Besides these regular inquiries we received letters from 33 dealers requesting an agency proposition.

Mr. Dealer, if you want to sell motorcycles this year that will stay sold, if you want to make a better profit from your business by selling more machines than your competitors, we urge you to visit the factory building your machines and see for yourself whether they are running half time taking an inventory of old 1911 left-over stuff, or whether they are working two shifts, night and day, building real 1912 motorcycles to take care of their dealers when the busy season comes.

We always deem it a pleasure to take our dealers, or other dealers for that matter, through our factory and show them just how Harley-Davidsons are made.

OMPANY, Milwaukee, Wisconsin

The Biggest Day in Our History

TODAY (February 2d) we reached the high water mark for a single day's business, receiving orders for machines more than enough to make two full carloads, all for immediate shipment.

We always deem it a pleasure to take our dealers, or other dealers for that matter, through our factory and show them just how Harley-Davidsons are made.

HARLEY-DAVIDSON MOTOR COMPANY, Milwaukee, Wisconsin

pardonable gratification that the makers have noticed the steady growth in popularity of these devices, which they were the first to offer. Easy starting is an important essential of a machine which pretends to reflect the very latest practice of present day motorcycle design, and in the New Era possession of this accomplishment is certified by the use of a special Bosch magneto, and a quick priming device leading from the carbureter to the inlet pipe. The magneto is claimed to give a maximum spark at 55 revolutions with the circuit breaker fully retarded. Priming is accomplished by turning a faucet which admits a charge of gasoline in the inlet passage directly at the valve cage.

Simplicity and maximum efficiency are gained by utilizing the magneto gear train to actuate the valves, the two central gears which usually run idle, carrying integral forged cams which trip the valves, dispensing with the usual magneto driving spur gears. This is an exclusive New Era feature, each gear of the train performing primary function. The use of a roller bearing on the lower end of the connecting rod, the rollers floating in a retainer between the crank pin and rod ring inner wall, provides a long lived surface at this vital point.

Large automobile type roller bearings also are used in the rear hub, and the use of a large cone clutch, leather faced, insures a high percentage of power delivery to the gearset. The application of a cooling fan to the delivery van renders it immune from overheating ailments, and confers on the motor the ability to withstand sustained low gear work in warm temperature successfully. "Holding the road," is one of the accomplishments which the New Era is claimed to possess in high degree, due to its low center of gravity, and low saddle position, the latter it is asserted being closer to the ground than the saddle on any other motorcycle. The 1912 output is set at 1,500 machines, of which 600 will be delivery vans, and the remainder pleasure models of characteristic type.

POPE.

Pope Mfg. Co., Hartford, Conn.—Three machines; all singles.

Representing the Factory—F. W. Starr, M. G. Littlefield, G. A. Carey, H. M. Musselman.

Changes or New Features Since Last New York Show—With the lengthening of the stroke 5-16 of an inch, the Pope has graduated to the four-horsepower class, and hereafter will rank with the "big singles." Its taking on of more power naturally renders it a more attractive "buy," the while divesting it of the more or less desirable distinction of being the lowest powered machine on the market. The revised cylinder dimensions are 3 x 3 11-16. Price revision downward also has been effected, the reduction amounting to $10, and recasting the list figures to $165, making the machine the lowest priced "four" single in the field. While a Breeze carbureter is standard, the Schebler will be offered on option. The Eclipse clutch remains in the category of extra equipment.

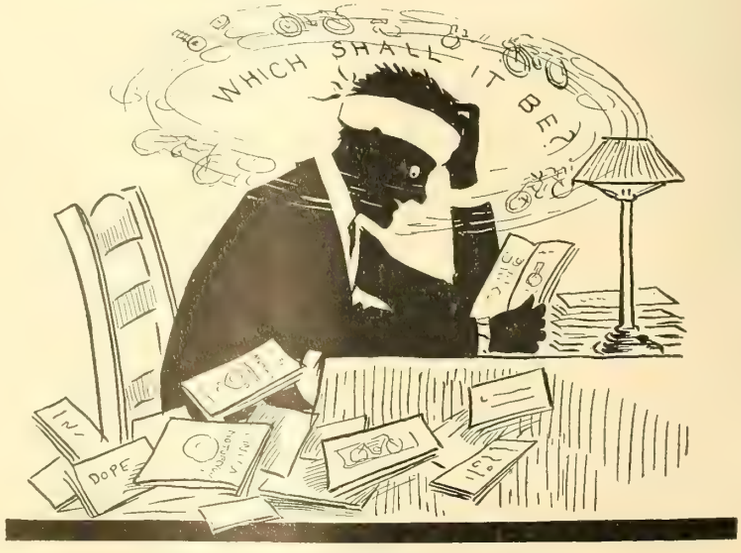
Some Features of Which the Makers Are Proud—In these days of catchy selling slogans, the Pope is the one motorcycle which is entitled to be called "the dollar a pound motorcycle, with 16 ounces of value to the pound." With tanks loaded it tips the scales at 165 pounds, and tips the checkbook for $165. The ratio of power to weight being higher than in any other machaine, the cost of maintenance should be unusually low, a factor which cannot well fail to appeal strongly to the purchaser who considers upkeep cost.

As a runabout for city use, the simplicity, lightness and sprightly appearance of the Pope, together with its economy of operation, makes its candidacy for this service unusually strong, although it by no means is unequal to the more strenuous demands of cross country work. In design it is remarkably simple and compact, traits which are apparent at first glance. The liberal use of forgings, and these always imply strength, naturally conduct to extended durability of the whole structure, when employed in a light weight vehicle, where racking and other accompanying stresses are inflicted to a lesser degree than in a heavier machine.

FLANDERS.

Flanders Mfg. Co., Pontiac, Mich.—Three machines; all singles.

Representing the Factory—H. Van Deusen, G. H. Squier, P. C. Bowmen, B. C. Bradford.



Changes or New Features Since Last New York Show—Eclipse clutch new standard equipment at list price.

Some Features of Which the Makers Are Proud—Despite the low price of the Flanders the makers call attention to their equipment as being standard, and on a par with that of higher-priced machines. This statement is made in support of the contention that the quality of the machine throughout is of the same high standard. The Flanders people take particular pride in having caused the wholesale and unprecedented reduction in motorcycle prices, which followed the offering of the Flanders at $175. Rumors of contemplated further reductions are vigorously denied.

In the mechanical realm, simplicity is a cardinal virtue, as exemplified by the use of an automatic carbureter, claimed to be fool-proof, the synchronization of the throttle and oil feed, to furnish ample lubrication in proportion to the motor speed automatically, and the "clean" appearance of the power plant, as regards promiscuity of nuts, screws and rods. Each motor is given a block test, where it must show a brake rating of 4¼-horsepower before being passed. Each machine also undergoes a road test in fully assembled form, when all final adjustments are made, in order that unskilled experiment may be avoided.

THE CATALOGUE FIEND

THE MOTORCYCLIST

SHOWLETS THAT FLUTTERED ALONG THE AISLES

Exclusive representation for Excelsior motorcycles in Fort Wayne, Ind., has been placed with the Fort Wayne Machine Company by the Oberwegner Motor Company, Toledo, O., who are general distributors for that territory. The contract specifies an initial shipment of 25 machines.

W. H. Whitesell, of Los Angeles, who deals out Excelsiors to Angelenos from carload shipments, was to be found at the Excelsior booth. There are whispers that he will take on another leading line soon.

Indianapolis was represented by Gus. Habich and A. C. Byerly. Habich sells Thors, and is the father of the Gus. Habich annual Thor joy ride, which includes a rendezvous to the banks of a quiet stream in the suburbs, where Time is turned backward several years temporarily, and the penalty for not enjoying oneself to the limit is a stiff one. Byerly is ready to sell an Excelsior at any hour of the day or night, every day in the year, and the number which circulate in the Speedway City indicates the success of this "never closed" policy.

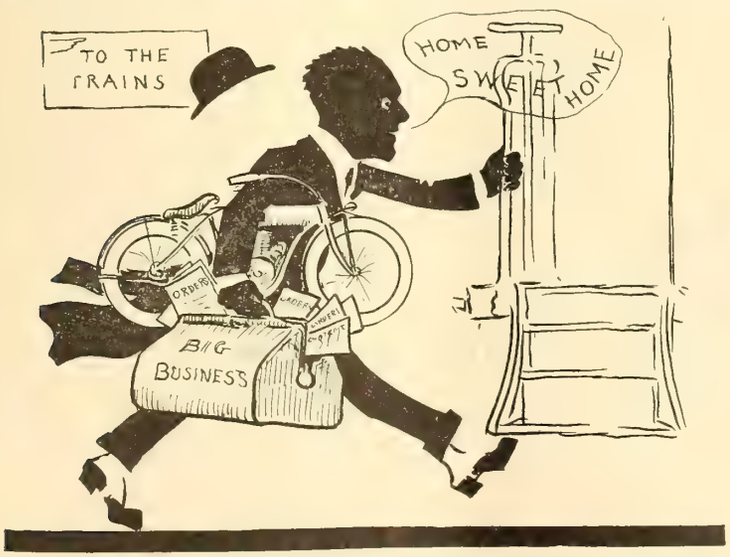
A. G. Chapple, ex-racing man and traveler for the Merkel interests, has joined the Flanders forces. At present he is at the factory in Pontiac, Mich., "brushing up" on how a Flanders is built, and when he completes his education he will again take up selling.

The big banquet which the North Shore Motorcycling Club proposed to give to the trade and out of town riders, during show week, was abandoned. The cost was found to be greater than at first supposed, and financial support was not forthcoming to the extent expected.

It was a dealer's show as usual. They flocked in droves from all points in the Middle and Far West. The confirmation is to be found in the makeup of the Thor junketing party.

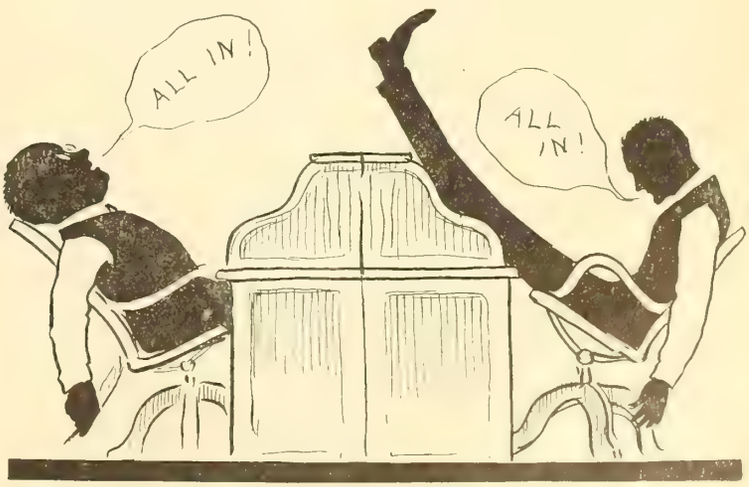
From Cleveland came John Zucker, who is on the staff of the Casino Cycle & Supply Co., agents for the Thor and Excelsior. He had with him a little book of Cleveland motorcycle registrations, which he said showed that the Casino line of machines enjoyed a larger sale than any other dealer's assortment. He said further that his house had contracted for 500 machines for this season, and that orders already were placed for 75. His observations show that as far as his house is concerned the amount of business already closed and in sight at the present time, far exceeds that of any previous year.

The Humboldt Motorcycle Club, of Chicago, will hold its first informal social and terpischorean party at Occidental Hall, Madison street and Sacramento boulevard, Saturday night, February 24. A mysterious "Motorcycle Mike" is billed as the headliner of the evening, although his specialty is carefully concealed. The club has a membership of 50, practically all of whom are F. A. M. members.



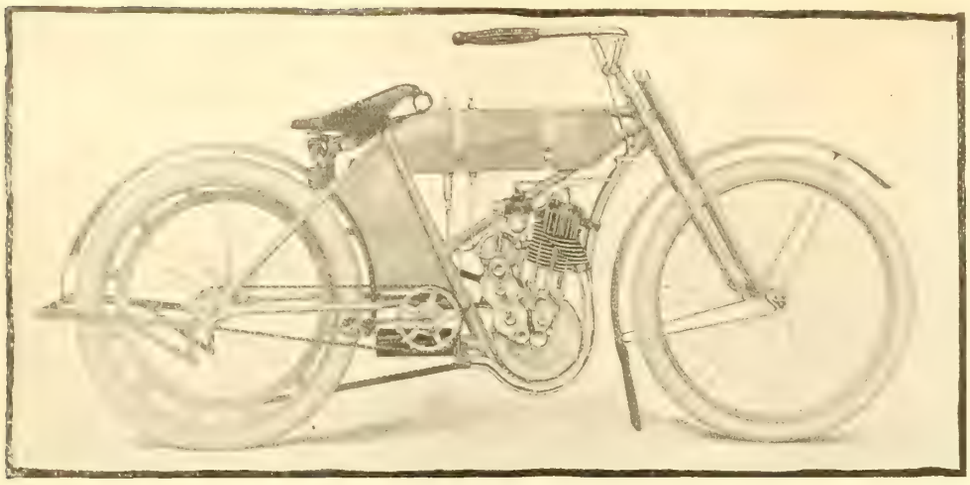
John Sink, formerly of Indianapolis, who is well-known as a promoter, racing man, dealer and club organizer, is at it again. Sink breezed into the show for a couple of days, and incidentally let it be known that henceforth his address is Evansville, Ind. He is going to talk Thor and Harley-Davidson for G. A. Beard & Co., local agents, and incidentally plans to keep his versatility running smoothly by organizing a club, affiliating it and promoting a few race meets now and then. And by the way, he has a few road race ambitions which he plans to realize on when the market is right.

C. H. Shwab & Co., Cedar Rapids, Ia., have been appointed distributors of Pierce motorcycles and bicycles for the eastern half of the State.



Short show visits are one of Walter Davidson's specialties. He came in from Milwaukee Monday, feasted on the show for a few hours and then scurried back to the factory. Incidentally, Walter never cared much about a New York show anyway.

Sales Manager W. A. Johnson, of the Pierce Cycle Co., stated that this show was the best the company ever has experienced from a business standpoint. Dealers have flocked in from as far South as New Orleans, as far West as Montana, and hundreds of towns between. More dealers attended the show last week than in any previous year.



That independent show ghost was stalking again during the week. There was a great deal of dissatisfaction under the surface apparently, because of the treatment accorded the motorcycle exhibitors in regard to space arrangement and decorations. Will they stand for it another year?

THE MANUFACTURER

YE EDITORS

1912 WAGNER, FIRST EXHIBITED AT CHICAGO SHOW

Although Wednesday was "sassiety" day, and it cost a dollar to get in, the attendance was fair in the motorcycle section. However, no struggling hordes exchanged more or less hard dollars, to gaze at trucks.

One wag remarked that the Coliseum decorations reminded him of a Chinese joss house, minus the odor of incense. The aroma of fresh paint on the cars was a strong substitute.

Think of a motorcycle salesman spending Sunday with a dealer friend, who handled a line which that salesman used to represent, and finding two prospects nibbling at the dealers bait, pitching in and making two sales of a rival machine for that dealer. That is brotherly trade love in its sublimest form. The dealer hasn't recovered from the shock yet, for he had been trying to land the fish himself for weeks.

C. A. Leander, the well-known endurance rider, will manage Branch No. 5, which the Edwards-Crist Mfg. Co., local agents for the Indian, will establish. It will be located at 4350 Evanston avenue, at the corner of Sheridan road, and will commence business February 12.

There was a big ripple when the new Minneapolis twin was announced, for the secret had been well kept, and few looked for an addition in this family. The power plant will be the Spacke 10-horsepower engine, making the newcomer the highest rated twin in this country. The drive will be by flat belt.

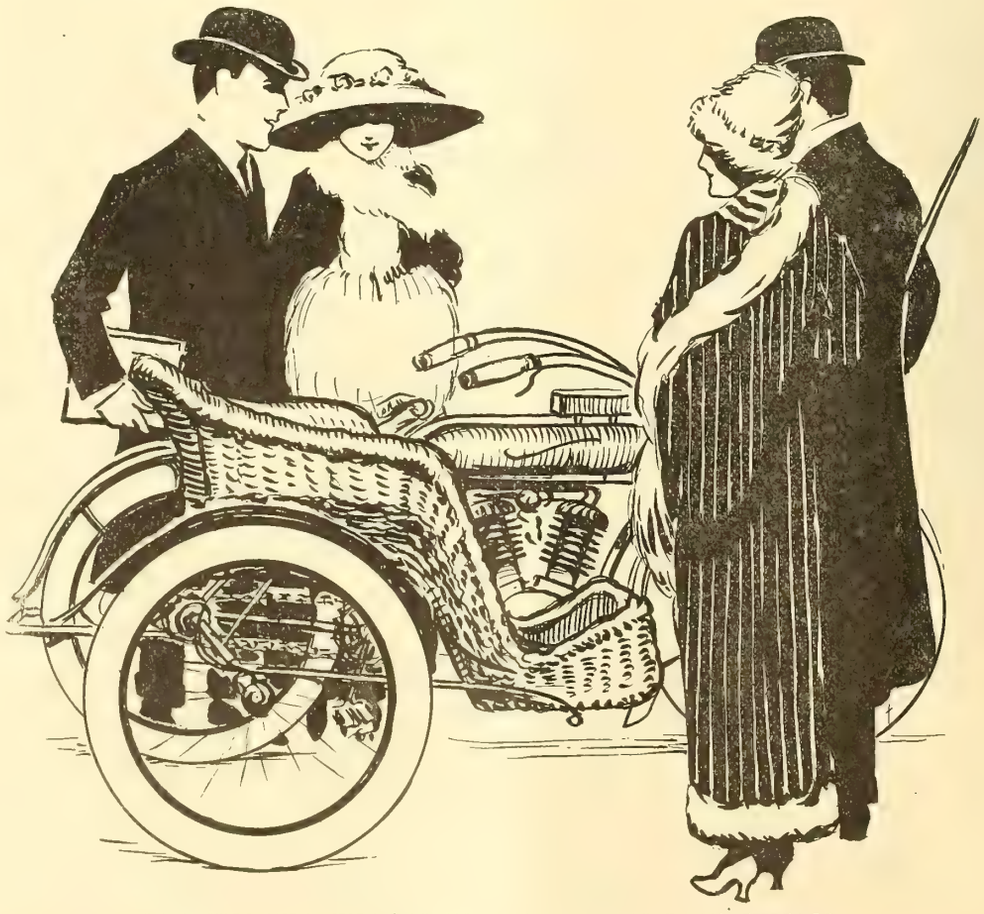
TO OUR READERS.

Owing to a miscarriage of mail, a number of the descriptions of exhibits at the Chicago Show will have to be omitted from this issue. These missing descriptions, if not found, will be duplicated, and published next week. In the meantime, the indulgence of our readers is asked for the omission, which at present writing is unavoidable.

Successful Indoor Races at Buffalo.

Buffalo, Feb. 5.—Last evening the monthly games of the 65th Infantry Athletic Association drew a big house despite the fact that a young blizzard precipitated itself upon this devoted city in the afternoon and did not let up till after nightfall. About a dozen amateur bicycle riders came over from Toronto to represent Canada, and they made a fine showing, considering the fact that their flat-floor experience was practically nil. There was a large entry of Buffalonians despite the fact that a few disgruntled "stars" wanted to dictate terms to the promoters, which were turned down.

In the one mile handicap, Walter Andrews, the Canadian champion, rode his heat in 2:19, within one second of the indoor track record for the distance. In the two-mile handicap Andrews was riding in winning form when his chain broke. Summaries:



One mile open—Final heat, won by H. M. Gastle, Royal Flyers; second, J. A. Kraus, St. Michael's A. C.; third, U. W. Gerrie, Royal Fliers; time, 3:03⅘.

Two mile handicap—Final heat, won by F. B. Scott, 65th Inf. A. A.; second, W. C. Penseyres, unattached; third, A. L. Bolbre, North Oaks; fourth, J. Muchibauer, Milton A. C.; time, 4:57.

One mile handicap—Final heat, won by W. C. Penseyres, unattached; second, Walter Andrews, Toronto, scratch; third, A. L. Bolbre, North Oaks; time, 2:16⅖.

Sweden Now Has a Board Cycle Track.

Cycling as a sport and pastime now appears to have obtained a firm hold on public favor in that far north country, Sweden, on which all eyes of the sporting world will be focused for some time to come, due to the location there of the Fifth Olympiad; the particular interest in cycling is evidenced by the enthusiastic capacity crowds attending each meet of the recently completed indoor bicycle track at Helsingborg, the first track of the sort to be erected in Sweden, and so far as known the first north of Germany.

WESTERNERS RECEIVE CERTIFICATES

Seventy Contestants in Run to Buffalo Assembly Sent Honorariums—Excels Eastern Contingent in Numbers.

Tourmaster P. B. Whitney, of Chicago, who had charge of the Western Tour to Buffalo, at the time of the 1911 F. A. M. National Assembly, has reported to Secretary Gibson, the names and addresses of those participants who are entitled to receive F. A. M. certificates. The list totals 70 and is as follows:

S. T. Barlass, Chicago.
Henry Jacobs, Chicago.
S. W. Nicholson, Chicago.
C. S. Hinckley, Aurora, Ill.
Paul E. Kottowlski, Indianapolis, Ind.
Edward Schadde, Chicago.
P. A. Heierman, South Bend, Ind.
Lynn Jordan, Wilmette, Ill.
Emil Perkowitz, Evanston, Ill.
R. T. Lantz, La Grange, Ill.
Sam Brown, Chicago.
M. A. Held, Chicago.
C. J. King, Lewiston, Ill.
H. Bernard, Oak Park, Ill.
J. R. Kief, Chicago.
H. Dimke, Toledo, O.
A. Weitzman, Detroit, Mich.
E. L. Russell, Detroit, Mich.
A. F. Gregor, Detroit, Mich.
A. R. Oberwegner, Toledo, O.
S. J. Chubbuck, Toledo, O.
E. H. Tracey, Cleveland, O.
D. E. Miller, Detroit, Mich.
J. J. Blank, Akron, O.
B. A. Waltz, Akron, O.
G. W. Williams, Lorain, O.
R. Bouton, Lakewood, O.
A. J. Lewis, Alliance, O.
R. T. Phillips, Conneaut, O.
R. E. Underhill, Glendora, Cal.
J. C. Hosman, Chicago.
W. W. Ingram, Rutland, Ill.
Alfred Born, Chicago.
W. G. Lauterbach, Mendota, Ill.
N. T. Back, Chicago.
F. M. Reder, Chicago.
J. Sperepoulos, Pullman, Ill.
George Kohlhardt, Cudahy, Wis.
E. L. Drummond, Chicago.
P. E. Haller, Chicago.
H. P. Reynolds, Chicago.
A. H. Crocker, Chicago.
F. A. Wilhelm, Chicago.
Frank Ollerman, Milwaukee, Wis.
George Puls, Milwaukee, Wis.
O. Persons, Chicago.
Roy Bowser, Chicago.
J. R. Purdy, Chicago.
R. A. Croon, Rockford, Ill.
A. L. Johnson, Rockford, Ill.
Axel King, Rockford, Ill.
Alvy Anderson, Rockford, Ill.
Walter Davidson, Milwaukee, Wis.
P. B. Whitney, Chicago.
W. C. Beaman, San Francisco, Cal.
R. W. DuSell, Aurora, Ill.
Edward Harmer, Kenosha, Wis.
R. D. Wickwire, Chicago.
E. C. Marquard, Burlington, Ia.
H. H. Huntsbery, Cleveland, O.
H. W. Cuddington, Peru, Ind.
Albert Hanson, Kansas City, Mo.
Thomas Monroe, Chicago.
C. A. Carpenter, Milwaukee, Wis.
George Hedges, Chicago.
H. R. Hedges, Chicago.
G. H. Crocker, Chicago.
Charles A. Wellman, Chicago.
J. H. Posson, Grand Rapids, Mich.
Roy O. Chipman, Grand Rapids, Mich.

Annual Ball of the Rochester Club.

Rochester, N. Y., Feb. 5.—At a meeting of the Rochester Motorcycle Club, held January 31, Dr. Clint W. La Salle, vice-president of the Atlantic District, F. A. M., was elected to honorary membership. The annual ball was held the Tuesday evening previous at Valmont Hall. The hall was beautifully decorated, and the dance card was in the shape of a motorcycle wheel with a club monogram as a hub. Over 100 couples enjoyed the occasion. President Jos. A. Ochs, George J. Wagner and Frank E. Dublin constituted the committee in charge.

Motorcyclist Recovers Damages.

Toronto, Feb. 5.—Seriously burned by a deadly fluid which had spilled from a wagon preceding him up the street, when his machine skidded, throwing him into the acid, Alex McLean, of the Toronto Motorcycle Club, was, last week, awarded $900 damages by the Jury Assize Court against the Taylor Soap Company, whose wagon was responsible for the accident. The defence was that McLean had fallen because of traveling at too high a speed, but this was not proved.

NEW MEMBERSHIP NUMBERS 2,351

Semi-Annual Summary of Chairman Estabrook Shows Net Gains of 891—Something About Dr. B. J. Patterson.

Membership gains for six months of the F. A. M. fiscal year, as tabulated by Chairman Estabrook of the membership committee, are compared with the corresponding months of 1910, which was then the biggest thing in the organization's history. The comparison, under the general head of new members follows:

1910.		1911.
August	328	592
September	242	557
October	193	332
November	217	235
December	249	233
January (1911)	231	(1912) 402
	1,460	2,351

Chairman Estabrook, in his weekly bulletin, further says that the F. A. M. is indeed fortunate in having at the head of the Central District, a man like Dr. B. J. Patterson. The doctor's executive "bump" along several well defined lines must be pretty well developed, as his organization work along several lines would seem to prove. In addition to carrying on the district organization work in a successful manner, the doctor actually goes out after individual members—and gets them—while he follows up all requests from his district which come to him through the chairman of membership committee.

Then there is the detail work in connection with the great Short Grass Tour which will eclipse anything ever attempted in tours as confined to motorcycles, and the plans and actual arrangements are now in a very advanced state—in fact, complete with the exception of two or three details. Members of this tour will have the honor of being addressed by at least the governors of two States, while in others, it is probable that they will participate in some State good roads conventions, which will be addressed by the Governor and other leading men.

The doctor puts in two nights per week in training his band of 50 men and they are now frequently giving fine concerts in Pratt and vicinity. Being a fine musician,

the doctor also plays in the church choir twice weekly, in addition to practice, while his duties as railway surgeon for the Rock Island R. R. also take up some of his time in connection with his professional practice. There are a few other minor things which take up a little of our friend's time such as conducting an agency for three of the leading motorcycles.

And now, finding time hanging a little heavy on his hands, he has organized the Pratt Motor Club, or rather the Pratt division of the Short Grass Club, and this will have about 30 members in the course of a month or two.

Frequently, some of the chairman's good friends and correspondents change their base of operations and this is always a signal for renewed activity. This time, it is E. Frank Winfield, recently located in Grand Junction, Colo., and he positively cannot be happy unless he is well mussed up with local motorcycle affairs, and doing work in the interest of his favorite sport and the F. A. M. May the fates elect that he shift often and always be the gainer thereby.

Millstone, N. J., is still grinding out prospects for a new 100 per cent. F. A. M. club, and B. M. Dooley is duly on the job as head miller.

Time is advancing and Secretary Gibson wants the list of names and addresses of repair men to be complete for publication in his booklet as soon as possible. Such new or old shops as take out certificates in the meantime, will be added to the list up to the last minute before going to press, but no new list will be published until another year.

There are now approximately four weeks in which repairmen can take advantage of their opportunities and list their shops, and it is earnestly desired that they do so at once.

Registrations of repairmen for the week ending February 2 are as follows: Julian Mfg. Co., Troy, O.; Joseph Kegal & Co., 445 Galena avenue, Freeport, Ill.; Powell Bros., 67 North Market street, San Jose, Cal.; Polier & Walby, 214 Jefferson street, Portland, Ore.; T. T. Hause, Excelsior Garage, 1022 Oak street, Napa, Cal.; L. E. Stair, 113 South Main street, Mitchell, S. D.; F. U. Buchanan, 229 Bedford street, Johnstown, Pa.; A. W. Erpenstein, 120 N. Hamilton street, Saginaw, W. S., Mich.; W. S. Gibson, 4239 Frankford avenue, Frankford (Philadelphia); C. U. Fisher, 403 Broadway, Louisville, Ky.; Angus M. McMaster, Main street, Sleepy Eye, Minn.; L. C. Notbohm, Rome, Wis.; Hagedorn & Webster, 206 East Jefferson boulevard, South Bend, Ind.; Higginbotham & Douglass, 132 Genesee street, Waukeegan, Ill.; C. H. Becker, 210 Eighth street, Haquiam, Wash.; Howard D. Ingalls, Scottsville, N. Y.

Oaklanders' Transfer Membership Plan.

Oakland, Cal., Feb. 3.—With the view of obtaining their opinions on a transfer card system, whereby a member of a club changing his residence from one town to another, may still be a member of a club, the Oakland Motorcycle Club is corresponding with the other motorcycle clubs of the State. The object is to formulate a plan whereby any member in good standing, whose dues are paid up to date, can be transferred from one club to another without paying another entrance fee. One of the provisions is that the party applying for transfer is a member of the F. A. M. and of good moral character.

The plan appears to be meeting with favor, the San Francisco Motorcycle Club having started the ball rolling by giving its assent through a special committee, which had a conference with the Oakland club officials.

Tandems are popular in the club runs, as will be seen by referring to the photograph on this page of a recent run of the Oakland Motorcycle Club. The run was to Mission San Jose, 30 miles away, where dinner was eaten, after which a number of side runs among the hills was enjoyed before the return trip.

START OF RECENT RUN OF THE OAKLAND (CAL.) MOTORCYCLE CLUB TO SAN JOSE

Marylanders Feast and Enjoy Themselves.

Baltimore, Feb. 6.—The unkind attitude of Jupiter Pluvius since the first of the year was entirely forgotten by the members of the Maryland M. C., when they gathered around the festal board at their annual banquet at the New Howard Hotel, last Wednesday evening. Forty of the riders sat down to enjoy the delectable feast provided by Epicurus, while during the time they took in consuming the delicacies placed before them, Bacchus, in the form of Samuel H. Congdon, had procured a list of revelers, who assisted nobly in making the occasion a lively one and long to be remembered.

The paucity of speakers was noteworthy. Toastmaster Frank O'Boyd, president of the club, had absolutely nothing to do but grace the head of the table. No opportunity was provided for a burst of oratory. Local talent furnished the entertainment feature, and there was singing, dancing, juggling and whistling. The most remarkable part of the affair is that it was over before midnight.

The first big event on the program of the Maryland M. C. is an endurance contest for Baltimore and Washington riders, plans for which are already under way. The route will be from this city to Westminster, Hagerstown, Frederick, Ridgeville, Washington and back here. The going will be stiff at some places and the entrants will be kept on their mettle. The date has not been set but the race will come off during the early part of the spring. There will be some handsome prizes.

Tandem Law Unaltered in Washington.

Washington, D. C., Feb. 5.—Whether motorcyclists in Washington may ride tandem or not is a question that has been provocative of lengthy discussion in the press, action in the police courts, and also of several serious accidents leading up to this state of affairs, and the outcome was that a short time ago a regulation was passed by the commissioners to the effect that two persons must not ride on a motorcycle built to carry but one. Strong pressure has been brought to bear to have this regulation rescinded or at least materially modified, but during the past week, and after a hearing had been given to representatives of the National Capital Motorcycle Club, it has been decided that the regulations will remain as they are.

These regulations permit two persons to ride at the same time on a motorcycle, provided the machine is built and equipped for that purpose, and is of the proper tandem construction. All persons desiring to ride such machines, however, must submit them to an inspection board of the Police Department, and if it is found that they come

up to the requirements, permits will be granted to the applicants. However, since that board was formed only four such permits have been granted. The requirements call for an extra seat on the motorcycle, at the rear of the rider, to be equipped with a spring and handlebars, also a footrest, the appliances to be of rigid construction.

Chesapeakes Plan 250-Mile Run.

Baltimore, Feb. 6.—Unable to get out on the road the members of the Chesapeake M. C., the newest organization in this city, are laying plans for the coming season. Weekly meetings are held at the recently acquired club house. The first event on the program for the season will be a run to Annapolis over the new boulevard some time in March. An endurance contest of 250 miles is down for July. A time limit of 12 hours has been set, but the course has not been decided upon. The club figures on having not less than 50 contestants in the race. Other runs and races will be planned as the season advances. Regular Sunday runs will be called as soon as the weather permits.

As an incentive to interest the men in the club a silver loving cup has been offered to the member who regularly attends the meetings of the organization; a gold medal will be given to the one attending the most called runs, while a $5 gold piece will be presented to the member who brings in the largest number of applications for membership during 1912.

Toronto Motorcyclists Have Rousing Time.

Toronto, Feb. 5.—Despite stringent boxing laws, recently adopted, the Toronto Motorcycle Club was able to stage a rousing smoking concert on Wednesday evening, January 31, when riders and their friends to the number of 300 hit the pipe for a peaceful(?) three hours. A lengthy program of boxing, wrestling and music was put on, the best artists in the city being engaged for the occasion. A dozen mitt mixers hooked up for the bouts, while a wrestling match at catch weights lasted 13 minutes. Musical numbers were provided by high-class talent. Refreshments in the form of crackers, cheese and "gasoline" were served. At the conclusion of the evening, a dozen riders came forward with applications to join the club.

The side-cars will be in demand on Wednesday evening, February 21, the occasion being the annual "skirt" night of the club. Special ladies' talent is being engaged for this evening.

Georgian's Hold First Club Run of Year.

Augusta, Ga., Feb. 1.—The first club run of the recently organized Augusta Motorcycle Club was held January 28. Although the day was cloudy and threatened rain, 15 of the 50 members of the club reported. The run was held to no special objective point, but a very pleasant ride lasting for half the day was had over the perfect network of good roads of which Augusta is the center. A ride was taken along the historic Sand Bar Ferry road, the motorcyclists making a short stop at the United States Army aviation camp which the War Department is maintaining here. All the boys took a close view of the four governors of that make of machine, the necessity was felt for reorganization, and a consolidation was effected when the new and suitable quarters were secured.

Quaker Citys' First Annual Dance.

Philadelphia, Feb. 5.—Wagner's dancing academy was the scene of the first annual ball of the Quaker City Motorcycle Club, last week. The occasion was a great one for renewing acquaintances with the lady riders, many of whom had not been since the touring season. This is a great tandem town, fully 90 per cent. of the riders using the double-seated machine during the entire summer season.

STATUARY OF THE FUTURE
"Leading the Charge"
From the Newark Evening News.

New Officers Chosen by the Elmirans.

Elmira, N. Y., Feb. 5.—Officers have been elected by the Elmira Motorcycle Club for the ensuing year, as follows: President, Burton Forsythe; vice-president, Robert Weaver; corresponding secretary, Theo. Sayles; financial secretary, Henry Rhoves; treasurer, Arthur Holley; captain, Waldo Allen; first lieutenant, Robert Butts; second lieutenant, Victor Campbell; directors, P. B. Rutan, Dr. W. C. Byrne.

A new pool table was placed in the club rooms a few days ago, and is being well patronized. The club will be represented at the banquet of the Rochester Motorcycle Club on February 22.

New Home for the Terre Hauters.

Terre Haute, Ind., Feb. 5.—Club house plans are completed for the reorganized Terre Haute Motorcycle Club, the committee in charge having reported favorably on leasing a modern home at Thirteenth and One-Half street and Wabash avenue. The club was organized in 1910, and two small rooms on Ohio street were rented. When the lease expired interest waned, and another, the Indian Club, was organized. As this club's members were restricted to rid-

Wandamere Co. Sues Pye and Ling.

Salt Lake City, Utah, Feb. 5.—Alleging breach of contract, the Wandamere Motordrome Company, which owns the motorcycle track in this city, has filed suit in the District Court against Gus Ling and Ernest A. Pye, managers and lessees during 1911, of the Salt Palace bicycle track, to recover damages of $1,700.

It is alleged by plaintiffs that the defendants agreed to hold races at the Salt Palace only on Tuesday and Friday evenings and holidays and that the plaintiff agreed to furnish certain riders. These were furnished, but, it is alleged, the defendants failed to pay for them and failed to live up to the terms of their contract, as a result of which plaintiff lost money.

Montana Motorcyclists Elect Officers.

Butte, Mont., Feb. 3.—Officers were elected by the Butte Motorcycle Club for the ensuing year as follows: President, Leo Benz; vice-president, Michael Cunrow; secretary-treasurer, Joseph Seaker; captain, E. H. O'Brien. Following the election an enjoyable social session and smoker was participated in. The entertainment included several boxing bouts by local amateurs.

Recent Motorcycles Club Elections.

Evanston, Ill., Feb. 5.—At the annual meeting of the Evanston Motorcycle Club the following board of officers was elected for the ensuing year: President, John Jennings; vice-president, Lynn Jordan; secretary, John F. Murray; treasurer, John Leyner.

Richmond, Ill., Feb. 5.—Officers for 1912 have been elected by the Richmond Motorcycle Club as follows: President, Charles A. Tangeman; vice-president, Roy Harvey; secretary, Alva Alexander; treasurer, Elmer Smith; captain, Charles Meyers; first lieutenant, Paul McBride; second lieutenant, Earl Wright; directors, Walter Shute and Frank Oelklaus.

Salina, Kans., Feb. 5.—The annual election of the Salina Motorcycle Club resulted in the election of the following officers: President, Russell Craven; vice-president, Howard Burke; secretary-treasurer, Edward Anderson; captain, Percy Guiler.

Piqua, O., Feb. 5.—Officials of the Piqua Motorcycle Club for the ensuing year, elected at the recent annual meeting are: President, E. E. Huntzinger; vice-president, I. S. Boyer; secretary, Samuel Cain; treasurer, Frank Hemm; captain, E. L. Moore.

Mansfield, O., Feb. 5.—At the annual meeting of the Mansfield Motorcycle Club held last week, officers were elected as follows: President, F. R. Dippman; vice-president, C. F. Williams; secretary-treasurer, C. O. Sister; captain, John Meyers.

STADIUM COMPLETE FOR RACING

New Saucer at Los Angeles Ready For Opening, February 11—Heavy Entry List—Asparagus Gardeners Sue.

Los Angeles, Feb. 3. — Arrangements have been completed for the formal opening of the Los Angeles stadium, just finished by Jack Prince, on February 11, when some of the fastest men in the motorcycle racing game, including Jake DeRosier, will participate. It is expected that the meet will be the most exciting ever held on the Pacific Slope.

Twenty-four men have signed entry blanks for the opening meet, and some new records are looked for, as the new track is said by Jack Prince to be the fastest in the country. Here, for the first time, will be tried out the relative possibilities of the new Indian and Excelsior machines, as 1912 models of both makes are on the ground, in the possession of Seymour and Wolters, the respective factory representatives.

The two machines were brought together at the San Francisco meet, a month ago, but both proved too fast for the track there, and the performances of the two riders were limited largely to their manner of getting away at the start and their skill at jockeying while the race was under way.

Here are the riders who have entered for the opening races:

Joe Wolters, Chicago, star of the Excelsior factory team; Jake de Rosier, world-famous professional, now riding an Excelsior; Earl Armstrong, Denver, Excelsior; Ray Peck, San Dimas, Excelsior; Will T. Samuelson, Salt Lake, privately owned Indian; Theodore M. Samuelson, Salt Lake, Indian; F. Flickenstein, Denver, Indian; Ed. Hasha, Dallas, Indian; John Albright, Denver, Indian; F. E. Whittler, Salt Lake, Merkel; Robert Stubbs, Birmingham, Indian; Arthur Mitchell, New York, Thor; Edward Schwartz, Denver, Indian.

Of Los Angeles riders there are: Bubert Kittle, privately owned Indian; M. J. Graves, factory owned Indian; J. McNeil, privately owned N. S. U. (German), a machine on which Eddie Lingenfelder established many records and crowded the famous de Rosier; Don Johns, 18 years old, recently turned professional, privately owned Indian; David Kinney, privately owned Indian; George Sawaya, privately owned Indian; L. I. Humiston, privately owned Indian; G. A. Jacoby, privately owned Indian; Charles ("Fearless") Balke, Excelsior; Albert Ward, Indian, and Raymond Seymour, members of the Indian factory team.

The builders of the new Stadium and owners of the real estate on which it is situated have been made defendants in a suit brought by three Chinese gardeners, who claim that by the erection of the track a valuable asparagus bed has been ruined. They are seeking damages in the sum of $50,000, and are asking that Jack Prince, Huntley L. Gordon, W. W. Gordon and Mary L. Brassey be enjoined from their project to keep the racing track on the land.

The plaintiffs claim to have leased the land from the Gordons and Mrs. Brassey for a truck garden, which was dug up when Jack Prince began work on the motordrome. The case is to be heard in Superior Court.

Big Meet at Springfield, May 30.

Springfield, Mass., Feb. 4.—Never in the history of the Springfield Motorcycle Club, and it is no spring chicken in years, was there such a large turnout of members as responded to the assembly call at the club rooms Saturday night, February 3, to discuss the proposed New England Quarterly Trials for the coming summer. Local riders are the fathers of the project, and even those members who are not seen at a club meeting from one year's end to another, were on hand to condemn, approve, criticize and suggest.

After prolonged discussion over the rules for the proposed trials, no agreement was reached and the matter has been put in storage temporarily. Some members wanted individual prizes, others single trophies to be competed for, and on classification also there were deadlocks. It seemed as if everyone present had a pet plan as to the way the trials should be held. Finally the discussion changed suddenly when it was suggested that the club substitute for the trials a big race meet on the Stadium on Decoration Day, May 30. This proposition won instant favor and it was taken up and plans tentatively outlined. It is proposed to put on two professional events, the total cash purses for both to total $500. No distance or other details were settled.

Another competitive event which also will have a place on the card is an intercity team race, which was one of the features of the Decoration Day meet last year. However, many new plans have been suggested in connection with improving the conduct of this event, and it is promised that the forthcoming one will far excel its predecessor from a sporting or racing standpoint.

Because of the impending adoption of new competition rules, and the probability that professional riders will be asked by promoters to sign season contracts which will prevent them taking excursions to other meets, the club has left matters open for the present. At the next meeting matters probably will take definite shape, and all pending matters decided so that the work of promoting can go forward. W. A. Kothe was elected to become his successor to the secretarial duties.

TRACK PROGRESS AT INDIANAPOLIS

Plans For a Four-Lap Affair Now Favored by Committee—Another Meeting at Hotel Dennison February 18.

Indianapolis, Feb. 5.—When Jack Prince goes to Indianapolis on February 20 to see about contracting for the building of the board racetrack in the Hoosier city, he will find the motorcyclists ready to talk to him, for a meeting has been called for February 18, at the Dennison Hotel. This meeting will be preceded by a banquet, and all of the Indianapolis dealers and manufacturers, and live motorcyclists who are interested are expected to be present.

The board race track question, which arose at a recent meeting of the Indiana Motorcycle Club, has been the sole topic of conversation for some time here, and now the committee appointed at the first meeting at the Dennison is ready to report. A four-lap track will be erected instead of three laps. This decision was reached by the board track committee, headed by John Merz, for, it is claimed a great deal of money can be saved by building a four-lap circle. Since it has been decided to build a smaller circle, the question of Wonderland Park which was first considered is up again. Wonderland can hold the smaller track, and it is very likely that the old amusement resort location will be given the most serious consideration.

The site near the water works is still in view, and it is also an ideal location for a race track. The Indiana Motorcycle Club has gone on record as saying it will build a club house on the grounds near the track, if the race course proposition proves to be a paying one.

At the Dennison banquet to be held on February 18, the question of reorganizing the Indiana Motorcycle Club will be brought up. At the club's annual meeting held last Saturday, Harry Graff was re-elected president, John Hole was elected vice-president, Bob Sturm was re-elected treasurer, and G. C. Ford was chosen secretary. The board of directors consists of W. Grimes, G. Hurt and E. G. Baker.

The board track proposition will not be taken up by the Indiana Motorcycle Club, but will be engineered by a board track company formed principally of members of the club. Stock is to be sold at $25 a share.

The 200-mile international motorcycle race, it is reported, is to be dropped altogether and all the efforts of the Indiana Motorcycle Club are to be centered upon getting a board track in Indianapolis. If the track is built, motorcyclists want it finished by Decoration Day, the date of the big automobile sweepstakes on the Speedway. It would be a capital idea to give the first race meet the night before, when all the motoring visitors are in the city.

NATIONAL CYCLING ASSOCIATION CONVENES IN FORCE

Fourteenth Annual Gathering Proves to be Largest in Years—World's Championships Here Next Summer Awaken Great Interest—Registrations of Riders Increase Heavily —A Fine Outlook for the Coming Season.

In reality the largest gathering in years in point of personal attendance, and in interest one of the most important ever held, the fourteenth annual meeting of the National Cycling Association, held Tuesday evening, February 6, at the Hotel Bartholdi, New York City, marked off another yearly milestone in the history of bicycle racing in America.

When the veteran president, D. M. Adee called the meeting to order the representatives of the following tracks, and racing associations answered Secretary Van Dyke's roll call: Cycle Racing Association, Inc., operating the Newark, N. J., New Haven, Conn., and Providence, R. I., franchises, Revere Cycle Track Association ,Revere, Mass.; Salt Palace Bicycle Track, Salt Lake City, Utah; Baltimore Coliseum, Baltimore, Md.; 65th Infantry Athletic Association, 74th Infantry Athletic Association, Buffalo, N. Y.; Century Road Club Association, and the Amateur Athletic Union.

Officers for the ensuing year were elected as follows: President, D. M. Adee, New York; first vice-president, Frank B. Mihlon, Newark, N. J.; second vice-president, P. T. Powers, Jersey City, N. J.; secretary, R. A. Van Dyke, New York; board of control, R. F. Kelsey, New York, chairman; district A, Howard G. Reynolds, Boston; district B, Louis Debo, Buffalo, N. Y.; district C, C. R. Klosterman, Baltimore; district D, Charles L. Berry, Salt Lake City, Utah; district E, O. F. Hassemer, St. Louis; American Racing Cyclists' Union, Jos. A. Fogler, Brooklyn, N. Y.; board of appeals, N. E. Turgeon, chairman, Buffalo, N. Y.; C. B. Bloemecke, Newark, N. J.; R. G. Betts, New York; A. G. Batchelder, New York; S. A. Miles, Chicago; Dr. C. G. Plummer, Salt Lake City.

Board of Control Makes Annual Report.

In presenting the report of the work of the Board of Control for the year just closed, Chairman Kelsey submitted the following:

"What must be given precedence ahead of all other subjects, is the matter of the World's Championships, which were assigned to the United States for 1912, at the annual meeting of Union Cycliste Internationale, held at Paris, last February, immediately after the annual meeting of the N. C. A. The championships were applied for by the N. C. A., upon the instance of Messrs. Mihlon and Chapman, of the Newark Velodrome, and they will be run on that track, August 25 and 28, and September 1, of the present year. Mr. Chapman is now in Europe arranging for the entries of foreign contestants, and will be present at the annual meeting of the U. C. I. at Paris, February 10, at that time submitting the program of events that he has arranged for final approval by that body.

"Touching upon the matter of tracks, it is with pleasure that the board records the construction of the new six-lap track at Newark, operating under the Vailsburg franchise, and located immediately opposite the old site of the track, across the street therefrom. The track was opened early in April, and has had a very successful season. It is constructed in the most approved manner, is a model of comfort and elegance considered from the spectators' standpoint, and the board desires to congratulate the owners upon their enterprise and well merited success.

Increased Registration and Olympic Race.

"One of the most hopeful signs of the times is the increase in the number of registered riders in all classes. A total of 85 professionals took out riding licenses, an increase of 21 over the preceding year. Amateurs registering for both track and road numbered 273, a net gain of 39 over 1910, and the increase in road riders was the greatest of all. These riders are registered for road racing only. Last year they footed a total of 382 men, a gain of 107 over the previous year's figures.

"A well defined volunteer movement is on foot to raise funds to send a team of amateur road riders to compete in the 200-mile road races around Lake Malar, at Stockholm, Sweden, July 7, the occasion being the quadrennial Olympic games. A committee has the matter in charge, and the Amateur Athletic Union, with whom the N. C. A. has a formal alliance, will arrange with the American Olympic Committee for the details for transportation, etc. Your chairman of the board has been appointed a member of the American Olympic Committee, and has been designated team selection committeeman on cycling, as well as acting as treasurer for the holding of funds for the proposed team.

"Considerable interest is being awakened in cycling in the Mississippi Valley territory, and its pivotal point seems to be St. Louis. For three years the board has had a special representative there, O. F. Hassemer, who has served faithfully. If it is the meeting's pleasure, the board advocates the creation of a new district, with St. Louis as its center, the territorial limits to be designated by the board of control. The board also respectfully suggests the name of Mr. Hassemer for board member.

"In conclusion, the board wishes to express the most hopeful views for the future of the sport. The coming season certainly gives every indication of great promise. There are a number of incomplete subjects that the board has on hand, some of which it is hoped to straighten out at this meeting, and the chairman will call your attention to same in the regular course of business.

"A strong fight has been made the past season to eliminate teaming in races, and a large measure of success has been attained, thanks to the efforts of some of the promoters, who have stood faithfully by the board in its fight for cleaner sport.

"The thanks of the board are due to the executive officers of the Association for their unfailing courtesy and patience, and valuable assistance in helping the board settle complex questions, and these thanks are gratefully extended."

Other Details of Interest to Sport.

After remaining under investigation and in a state of probation for practically two years, the following riders were restored to amateur standing: John B. Hawkins, Edwin Lowe, New York City; Thomas Connolly, Everett, Mass. The applications of Archie La Montague, Boston, and Percy Cutter, Wakefield, Mass., for reinstatement to the amateur class were laid upon the table pending further investigation.

A vast amount of routine business pertaining to the various N. C. A. districts the country over was transacted, instructions being delegated to the various board of control members for the proper settlement of questions under consideration.

Bicycle Division for Eaton A. A.

Toronto, Feb. 5.—The Eaton Athletic Association, one of the strongest athletic organizations of Canada, has announced its intention of organizing a bicycle section, and has approached several of the best riders of the city with a view to securing their allegiance. Harry Young, who was a member of the Canadian Olympic team of 1908, has already joined, as have several of the young riders.

With the approach of the riding season and the yearly elections of officers and committees completed, clubs everywhere are awakening to the necessity of getting their riders in condition for the Olympic tryouts, and with that in mind are planning their riding seasons to open at least a month earlier than usual with the short distance events. As to the undoubted influence this campaign is having on cycling matters, a glance at the coming events as scheduled on another page of this issue is ample proof.

Elimination Race Plans Near Completion.

Inquiries are being received daily at headquarters as to the dates and other details concerning the tryouts and elimination races. Regarding these, the plans now are under consideration by those members of the American Olympic Committee who are empowered to act officially; full details of the arrangements for the trials will appear in the two succeeding issues of the Bicycling World as the voting contest will have shown by the close of the coming week where would be the most advantageous locations at which to hold the trials—one of the principal objects for promulgating the popularity ballot.

Clubs Continuously Joining Everywhere.

Providence again has been heard from, this time to the effect that the Little Rhody Cycle Club is preparing at least two candidates for the team. Baltimore, the city famed alike for its monuments and bicycle clubs, has taken up the work actively, the Crescent Bicycle Club being the one to blaze the trail, which it does in no uncertain manner, as the following letter testifies:

"The Bicycling World Co.:

Enclosed please find money-order for $5 as our contribution to the American Olympic Bicycle Team Fund which you are making such commendable efforts to raise. We feel that no cause should bring forth a more hearty response from those interested in cycling, and we trust your efforts will meet with the success they merit. You may call upon us at any time that we may be of service in any way, and, again wishing you the greatest of success, we are,

Crescent Bicycle Club.
(Signed) Thomas W. Baker, Secretary."

Candidates, Send in Your Histories.

The voting contest continues to increase in volume, showing the widespread interest of all followers of the pastime in their favorite riders. Those who previously have had at the most but passing interest in the progress of racing matters and the careers of prominent riders also have been drawn into the discussion in the campaign being waged by the candidates and their constituents, and thus has been created one of the most prolific of publicity mediums for the sport and industry.

The request for photographs of balloting and team candidates met with a very gratifying response, but there are yet a few of the more prominent and popular candidates who have not sent in their photographs and histories. To these we wish to repeat our request that they comply as soon as possible, for in so doing they will aid materially in the campaign for funds.

This week's picture and history are those of Carl E. F. Ericson. A Brooklynite by birth, 28 years old, he began riding in competition in 1905 by winning his novice race. He is a charter member of the Empire City Wheelmen, won the club championship for 1908, 1909 and 1910; finished fifth in the 1911 National Cycling Association amateur championship, and at present holds the title of five mile amateur champion. In road riding he has ridden in a number of races of various distances from 25 to 50 miles; notable among them being five performances in which he finished with one first time prize; one, first place; two, second time; one, second place; one, third time, and one, third place.

Another very popular rider of the metropolitan district who now looms large as a candidate for the team, is John B. Hawkins, formerly a crack member of the Century Road Club Association, and the New England Wheelmen racing teams. While riding during July, 1910, he felt the hand of the National Cycling Association for alleged transgression of the amateur rules regarding prizes, for which he was disciplined. At the meeting of the N. C. A., held February 6, the ban was removed and Hawkins was restored to his amateur standing. As a rider Hawkins proved himself as one of the leaders in both road and track races, and

CARL E. F. ERICSON
One of Brooklyn's Favorites, of Championship Calibre, a Consistent Track and Road Performer.

Strongly Guaranteed

Practically Perfect

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

THE NEW DEPARTURE MANUFACTURING CO., Bristol, Conn.

Coaster Brake Licensors

since the Olympic Bicycle Team has been under consideration he has resumed training, in the hope that his application for reinstatement would be granted.

Voting blanks are to be had any time for the asking. All who are interested in the cycling industry and sport are invited to submit the names and addresses of those to whom it is desired to have voting blanks sent—make your list as large as you like—self-explanatory blanks will be sent promptly and with absolutely no obligation incurred by the recipients. Send your list at once the the bicycle editor, The Bicycling World Co., Box 649, New York City.

Goodwin Disqualified But Breaks Record.

There was some great bicycle racing at the armory of the 22d Regiment, New York City, Saturday evening, February 3. It was lamentable that Edw. H. Goodwin, of the Irish American A. C. who finished first in the two-mile handicap from scratch, in flat floor record time of 5 minutes flat, should elbow Harold Lightfine, of the Glencoe A. C., his closest competitor a few laps from home when trying to get by. For this offence Goodwin was disqualified by the officials, and lost the prize, although his record achievement stands as an actual performance.

The games were under the auspices of Company K, and the Morningside A. C. Two trial heats were necessary to eliminate the field for the final, Goodwin (scratch), Hausenbrauer (40 yds.) and Brandes (90 yds.) qualifying in the first heat, and Lightfine (140 yds.) Gutoff (110 yds.) and Dean (135 yds.) getting position honors in the second. The final heat, after the disqualification of Goodwin, showed Lightfine in first place, Hausenbauer, second, and Brandes, third.

Canadians Preparing For Olympic Race.

Toronto, Jan. 30.—Although little has been said lately respecting the sending of a team of Canadian riders to the Sweden Olympic games next July, the riders are busily engaged in preparing for the trial races in the spring. Joe Golden's club has installed three home trainers in the quarters of the organization, upon which the members are regularly riding.

Tom Ford of the Queen City Club, and one of Canada's oldest wheelmen, is bent upon making the trip, and is sparing no means for getting himself into shape.

Alabama Cyclists Ride Through Mud.

Bessemer, Ala., Feb. 5.—This enterprising south city has a very live wheeling organization — the Bessemer Bicycling Club. The first run of the season was made January 28 to Tuscaloosa, a distance of about 50 miles. The rain caught the tourists about 15 miles out of Tuscaloosa, but six of the party of ten stuck it out and finished in 4 hours and 20 minutes. Jasper W. Bryant, of Bryant Bros., the well-known dealers, is the club's president.

RUTT-STOL WIN AT BERLIN

Famous German-Dutch Team Secure Another Victory—American Invaders Finish Two, Three, Four.

Berlin, Germany, Feb. 9.—Records continued to fall throughout the fourth, fifth and last days of the six-day race here in the Sports Palace, with practically no change in the leading teams. The score on the fourth day was 1,718 4/10 miles, over 30 miles ahead of the German record.

No change in the leaders marked the fifth day's riding, which ended with a score of 2,070 miles. Hoffman, one of the best of the Germans, was seriously injured.

For interfering with Rottnick, Comes was fined, refused to pay, and was penalized one lap; he and Walthour then would not ride in the final. Rutt, Root, Fogler and Drobach lined up and finished in that order, Rutt setting the pace for the entire mile.

Berlin, Germany, Feb. 4.—With 15 teams representing America, Germany, France, Holland, and Italy, the fourth annual Berlin Six-Day race got under way at midnight, Saturday, at the Hohenzollern Sports Palace.

Four complete American teams started, they being: Fogler-Moran, Root-Hill, Halstead-Drobach, and Collins-Wiley; "Bobby" Walthour also started, although not teamed with a fellow countryman, his mate being Comes, a Frenchman.

During the early stages of the day the riding was fast and the sprints were sharp and frequent, resulting in new German records being set up. While sprinting around one of the turns, George Wiley, the popular Syracuse "Messenger Boy," fell his head strking a beam in the fall. Wiley was removed to the hospital where it was found he had sustained a fractured skull and was suffering from concussion of the brain. Up to a late hour to-night he had not recovered consciousness and it is feared his injuries may result fatally.

Collins was then teamed with Muenzener, the latter's partner having withdrawn after the team had lost three laps which, with the customary penalized lap on the reconstructed team, places them four laps in the rear.

The score at the end of the first 24 hours follows: Fogler-Moran, Root-Hill, Halstead-Drobach, Walthour-Comes, Rutt-Stol, and Jacquelin-Brocco tied with 509¾ miles. The remaining teams in the following order: Hoffmann-Ehlert, Suter-Suter, Nowack-Rottnick, Collins-Muenzener, Zander-Esser, Wegener-Kudela, and Georget-Polledri.

Berlin, Germany, Feb. 5.—Furious sprinting throughout the day marked the second day's riding in the six-day race at the Sport Palace. The frequent "jams" invariably resulted in laps being lost by the trailers, new German records continued to be established.

The day ended with six teams tied in the lead with 955 miles, a new German record to their credit, the teams being: Fogler-Moran, Root-Hill, Halstead-Drobach, Walthour-Comes, Rutt-Stol, and Jacquelin-Brocco. The Hoffmann-Ehlert team is three laps behind; Suter-Suter, four laps; Nowack-Rottnick, and Collins-Muenzener, five laps; Zander-Esser, Wegener-Kudela, and Georget-Polledri, six laps.

Berlin, Germany, Feb. 6.—Beyond the formation of a reconstructed team from the remaining halves of two pairs of which each lost a half by withdrawals and the serious injury of Brocco and the withdrawal of his partner Jacquelin, there was practically no change in the relative positions of the team in the six-day bicycle race.

Polledri decided that he had enough just before the 50th hour was scored, leaving Georget stranded until within the time limit Muenzener also discontinued, with the result that Elmer Collins acquired his third mate in as many days when he teamed up with Georget. Brocco's injuries were received in a fall shortly before 8 o'clock, and was quickly followed by the decision of his partner Jacquelin to give up entirely.

The score for 72 hours, 1,350 4-10 miles, is three miles ahead of the previous German record. The leaders are: Fogler-Moran, Root-Hill, Halstead-Drobach, Walthour-Comes, and Rutt-Stol. The remaining teams, from three to six laps in the rear, are in the following order: Hoffman-Ehlert, Suter-Suter, Nowack-Rottnick, Wegener-Kudela, Collins-Georget, and Zander-Esser.

Dealers—Get the Excelsior If You Can

You will want the Excelsior when you know its mechanical superiority. Our sales co-operation plans will interest you. Our advertising to the consumer will be forceful, convincing and impelling. Here's one of our newspaper announcements:

In Every Essential and Detail the Excelsior Makes Good

For Work and Pleasure, an Auto-Cycle

An auto-cycle increases your time, purse, comfort and health. Think about it a minute. It annihilates distance—whisks you down town in no time—at less expense, and with more comfort than a crowded, stuffy street car. Breaks up your daily routine with a snappy, pleasant trip through the crisp morning air. You can make going to work a pleasure. Sundays and Holidays mean something when you can hop on your Excelsior and ride with your friends into the country.

Four Points to Consider in Buying a Motorcycle

SIMPLICITY OF OPERATION—The best motorcycle should be simple and easy to operate. A complicated machine is a nuisance. The Excelsior Auto-Cycle is made of fewer parts than any other. You can learn the mechanism in 15 minutes.

COMFORT—A motorcycle that jumps and vibrates bumps the life out of the rider. Our perfected cradled spring fork and comfort-cushioned spring seat-post absorb all bumps—and give a smooth, easy-riding machine. All roads are smooth to the Excelsior rider. Our low saddle position, a feature we originated—lower than any other machine—makes it possible to ride the Excelsior in a natural sitting position. If you skid you can slow down quickly on the Excelsior—because your feet come flat on the ground. This is absolutely necessary in the city where traffic conditions call for frequent stopping.

SPEED—You want a machine to respond to your speed demands. The Excelsior is a record smasher—it has run 1-2-3 in race after race at Riverview, Savannah and elsewhere.

LIFE OF MACHINE—How long is your machine going to last? Drop forged fittings, Shelby steel tubing, few parts, master construction—all make for a long-lifed machine. The wear and tear and up-keep cost of the Excelsior are reduced to a minimum. That's why the Excelsior—under all conditions—always makes good.

Write us for our free booklet—it will tell you all about motorcycles.
We have some choice sales territory still open.

The best bearing ever put in a Gas Motor

The M·M Four-fifty Long Stroke Motor and Schebler Carburetor

Agents! Here's Some Good News

The popular M·M Four-fifty model will hereafter be fitted with the Eclipse Free Engine Clutch and an option of 28″ wheels for $200 list. This is the very best proposition for a single cylinder motorcycle offered this year. A powerful hill climber, speedy, and very smooth running. With its three roller bearings in the motor, it will withstand more hard punishment than any other motor built. One new rider rode constantly for three hundred miles without putting any oil in the crank case, and did not harm the bearings. This model will be a big seller. Other models at $140, $160 and $225. *write today for Catalog and agents' proposition*

American Motor Co., 718 Centre St., Brockton, Mass.

Pacific Coast Depot, 424 South Broadway, Los Angeles, Cal.

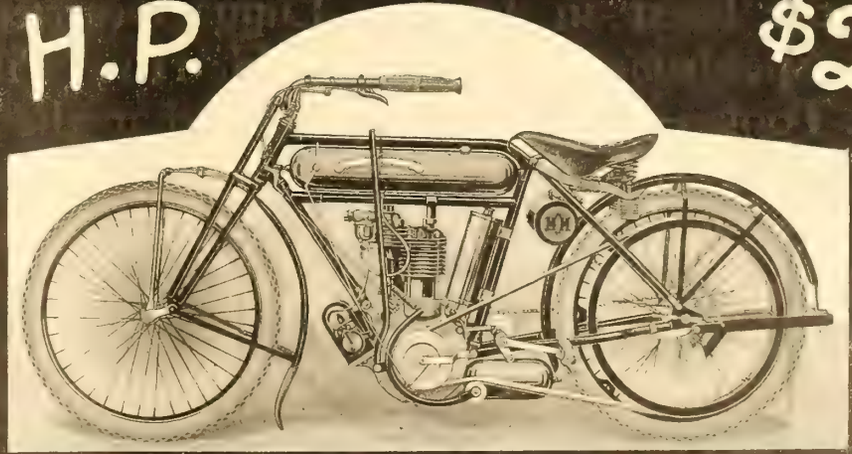
The American Motor Co.

Gentlemen:

I recently purchased an M·M motorcycle that had been run several thousand miles. Not being a mechanic, I ran the machine over 300 miles through New Hampshire on my first trip without lubrication.

I expected to have to replace the bearings of the motor, but when it was taken down and inspected, the only apparent damage was the slight wearing down of the piston rings.

I mention this to you to show you my gratification at being the possessor of a motorcycle that will run under such adverse conditions without causing serious damage that would usually follow such neglect in the operation of any ordinary machine.



Having familarized myself with the machine in a recent 1,000 mile business trip I have just completed, I find after applying proper lubrication that the engine shows no signs of wear whatever and is equal to any test in climbing the steepest hills I encounter. Yours very truly,

W. M. KENDALL,
Insurance Adjuster.

ONLY THE GOOD ENDURES!

THE YEAR 1912 IS OUR 20th ANNIVERSARY IN THE SADDLE BUSINESS
AND THIS IS OUR LATEST PRODUCT

We lived through the storm of the so-called "bicycle slump," in fact, we are the only Saddle manufacturers in existence today who can claim twenty years of genuine practical experience in saddle making. During all that time our product has been recognized as the highest standard of quality. Others have imitated and tried to follow, but there has been—and still is—ONLY ONE PERSONS.

Without Front Spring for Low Position

We hold the original patents on compound springs for saddles. These were first used by us in bicycle seats of the suspension type of which we are the originators, as the trade well knows. When the motorcycle came we built the first motorcycle saddle in this country, employing our patented compound spring construction, which is THE ONLY CORRECT AND POPULAR DESIGN IN USE TODAY.

THE ONLY MOTOR SEAT WITH COMPOUND SPRINGS

Other makers have repeatedly changed their spring construction in their endeavor to work out something "just as good" as Persons patent until this, our twentieth anniversary, finds us still building the only genuine compound spring saddle free from all impediments and obstructions that destroy perfect spring action.

THESE ARE ONLY A FEW OF THE SOUND REASONS WHY YOU SHOULD CHOOSE A SADDLE OF RECOGNIZED STANDARD QUALITY INSTEAD OF A CHEAP SUBSTITUTE BUILT BY INEXPERIENCED PEOPLE.

ENGLAND ENDORSES THE PIERCE

Stoke Holy Cross,
Norfolk, England,
Jan. 22, 1912.

THE PIERCE CYCLE CO.,
Buffalo, N. Y.

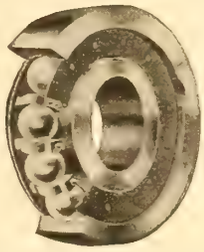
Gentlemen: I feel that it is due you that I should express the perfect satisfaction I have received from one of your four cylinder machines which I have been riding for several months.

The even running, absence of vibration and noise and the cleanliness of your machine is especially noticeable as a prominent feature when compared with our English machines. The accessibility and ease of taking down and reassembling are quite extraordinary. When riding out with my friends a Pierce is constantly proving its superiority when we come to a stiff hill with a bad approach. Other standard machines fail to pick up and make the ascent, but there is no trouble with the Pierce.

On many occasions the transmission has been in evidence as satisfactory, where belts on my friends' machines have slipped in the snow. No amount of tightening can then make them drive. I am now sure I shall stick by your machine instead of investing in a car, as I had intended doing, failing to find a satisfactory motorcycle in England although I tried practically every make.

I am recommending your machines to all my friends and several of them are going in for Pierces the coming season.

Faithfully yours,



DONALD B. LARKE.

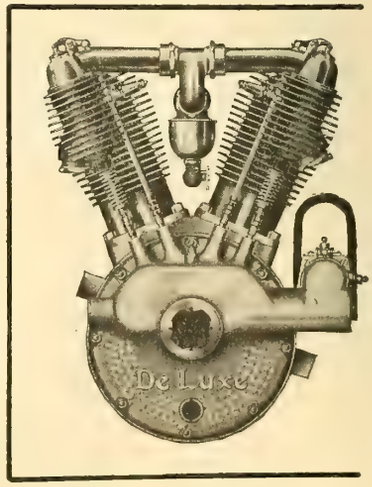
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

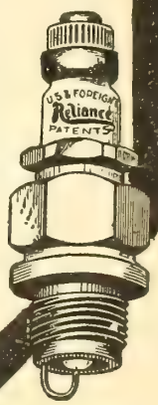
Reliance
(REG. U. S. PAT. OFF.)

SPARK PLUGS
Sparks in Water

Take less battery power than any other plug.

Are absolutely proof against soot in any form. Dirty motors won't affect them. Patented electrical action destroys soot fast as deposited.

Carbon does not affect them. No cylinder knock means longer life to your motor.



Gives HOT concentrated spark. Means more power—greater fuel economy.

Reliance porcelain stands fifty to ONE HUNDRED per cent. greater voltage than any other.

Reliance plugs are positively and unconditionally guaranteed to satisfy.

Try Reliance plugs. Regular type, $1.00; Magneto type, $1.25. Sent prepaid on receipt of price if dealer can't supply. Write for our great book, "Ignition and Spark Plug Talk"—tells all ignition secrets; makes you master of your ignition system. Pocket size—convenient to carry. Sent free.

Regular Type $1.00

KOKOMO TIRES

Building Motorcycle Tires and a Reputation

Sixteen years ago we began the manufacture of tires. During those sixteen years we spent a lot of time experimenting, making improvements and studying to produce a more efficient tire than competitive manufacturers. WE MADE GOOD.

KOKOMO Motorcycle Tires

embody four-ply construction from the finest fabrics known to the industry. They have demonstrated their superiority in every detail over the regular three-ply tire manufactured by others. It's the experience, facilities, materials and organization that have produced the Perfect Motorcycle Tire—The KOKOMO, and won for us a world-wide reputation. You are taking no chances in using KOKOMO MOTORCYCLE TIRES, instead, you feel confident you are getting your money's worth of tire efficiency.

Kokomo Rubber Co.

Kokomo, Indiana, U. S. A.

PITTSFIELD

Motorcycle Spark Coils

Have Distinctive Features

THE verdict of motorcyclists in favor of the Pittsfield Spark Coils for motorcycle ignition is due to the superior manner in which the coils are wound and insulated.

We employ methods distinctly our own, and all who use these coils pronounce them absolutely weather proof under the severest conditions, and unaffected by vibration.

Are You Equipped?

EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

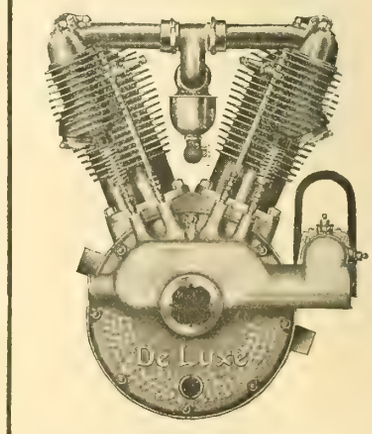
THE STANDARD COMPANY
TORRINGTON CONN.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Pope Motorcycles

With Imported Magneto

$165

"In a Class by Themselves"

The appeal of QUALITY and the appeal of PRICE, as exemplified in the Pope Motorcycle, are found in no other machine on the market. That is why in the estimation of dealers and riders alike, none could stand comparison with the Pope at the Chicago or New York shows. It is in a class by itself as a light, compact, reliable, sturdily built machine of fine appearance. The large number of contracts and orders brought back from Chicago by our representatives at the Show is convincing evidence of this.

The Pope Motorcycle on the Road

To see the Pope Motorcycle at the show, however, is one thing and to see it in action on the road is another. To fully appreciate the mechanical beauty of the Pope, it must be ridden or seen in actual service. The following letter gives a good idea of how the Pope shows up on the road:

Millers Falls, Mass., Feb. 4, 1912.

THE POPE MFG. CO., Hartford, Conn.

Gentlemen: Thought you would be interested in knowing that my Pope Motorcycle which I purchased from your agent in Greenfield, is doing just as good work on snow as on state roads. I have ridden it about ten miles today in about thirty-four minutes round trip. As I live in a country town you may realize that the roads are not cleaned and are piled high with snow. Goes up hills as well too, with nothing like chains or rope on rear wheel at all, and it did not slip once. All the fellows here are surprised that it should make twenty per cent. grade hills, and not have any chains on. Some have tried to ride theirs too and they have to have their wheel chained.

ALAN H. SAWYER.

Send for Our New Motorcycle Catalog. Let Us Give You Details of Terms, Territory and 1912 Eclipse Free Engine Pulley.

C. L. Smith, Los Angeles, Southern California.

An Experienced Rider

who has ridden nearly every motorcycle manufactured, relates

a few of his experiences, on countless rides, with the various types of machines that are widely known and for which claims for superiority and reliability are made. He states: "Believe me, the Emblem was made for long, hard riding—I know. When I'm riding an Emblem I put the utmost confidence in it; I know I'll arrive at my journey's end without any trouble showing up and I won't have to walk home—or take the train. Its simple construction, speed and features that make for a bunch of comfort, look good to every man who enjoys motorcycling."

The Emblem is ridden by men who know. It's built for service and comfort.

From the $175 single to the $250 twin, Emblem Motorcycles are built to withstand hard knocks, and they have made good. "Motorcycle Satisfaction"—which means Speed-Power-Economy—is the lot of the Emblem Rider. Have we an agent in your town?

If the leading manufacturers of motorcycles have decided that

Continental-Erie Motorcycle Tires

are good enough for them, they ought to be good enough for YOU.

It was after critical tests of every make of motorcycle tire that the manufacturers of the Emblem, Excelsior, Harley-Davidson, Flying Merkel and Yale machines used Continental-Erie Motorcycle Tires as standard equipment. It's a simple matter of Good, Better, Best—Continental-Erie Tires are BEST.

FISK

MOTORCYCLE

TIRES

FISK Motorcycle Tires, under intelligent usage, will not blow out, rim-cut nor will the tread become loose from the fabric. It is not unusual for them to run 5,000 miles and still be in perfect condition.

They are of the regular automobile type construction and furnished with the Fisk Superior Pure Para Inner Tube.

The GRIPFAST MOTORCYCLE TREAD positively prevents skidding. It grips the muddy road and holds fast. Spills are of rare occurrence. This tire will carry you through heavy going where machines equipped with other types would stall.

The BAILEY TREAD has all of the advantages demonstrated by this reliable construction in automobile use and our CORRUGATED TREAD is unexcelled for all-around conditions.

Motorcyclists who have used and experimented with many makes pronounce Fisk THE BEST.

BAILEY TREAD

DEALERS who are seeking a Motorcycle Tire that will stand up to heavy work can rely upon the Fisk to meet the severest test, and will find it to their advantage to have a complete stock always on hand.

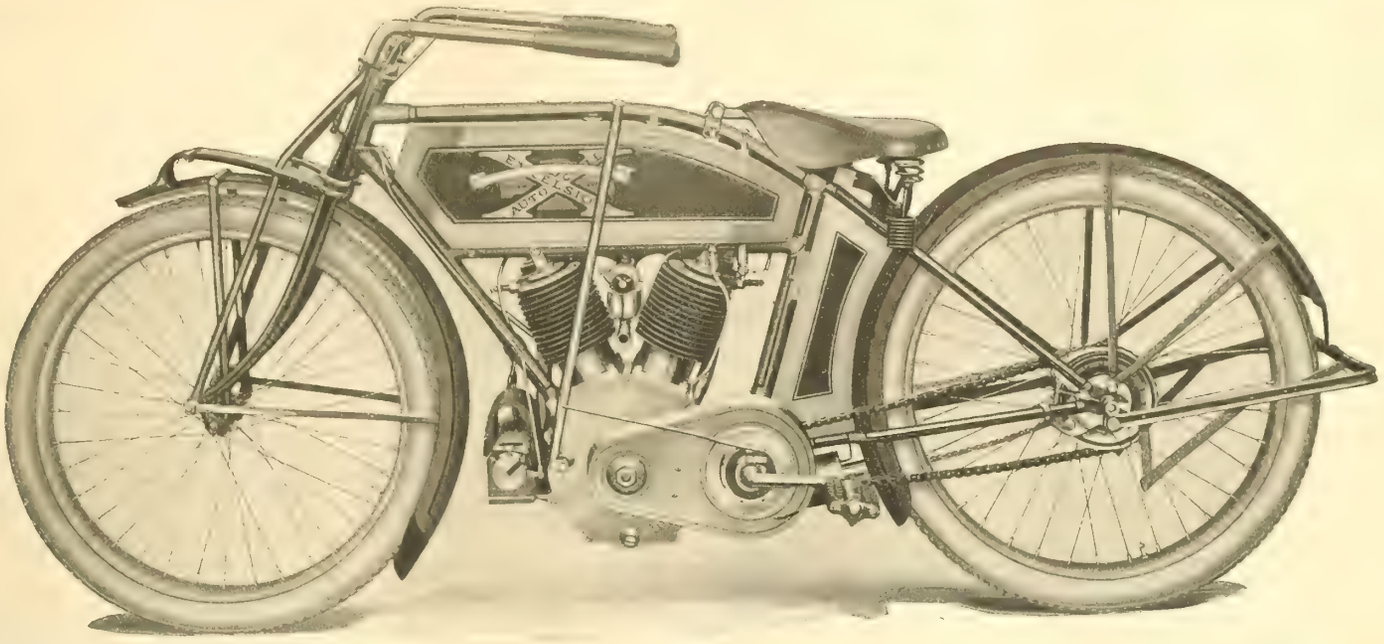
TWO SINGLES
Belt or Chain.
ONE 7 H. P. TWIN
Direct Chain Drive, Undergeared Transmission.



R-S SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of many other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16″ steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive assurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

A POWERFUL LONG STROKE MOTOR with Imported Ball Bearings, Mechanical Valves and Integral Cams and Gears.

You Can Ride an Excelsior Auto-Cycle in Your Business Clothes

The EXCELSIOR AUTO-CYCLE is practically an auto on two wheels. You can ride the EXCELSIOR in your business clothes — and be as clean and neat as after an auto ride. Save money; no need to buy a motorcycling outfit — coat, trousers, leggings, cap, goggles, gloves, etc. — just ride an EXCELSIOR. We have constructed the EXCELSIOR AUTO-CYCLE so that it is

The One Machine That Keeps You Clean

To the man on an **EXCELSIOR AUTO-CYCLE** there is no such thing as dirt, or spattered grease and oil. This is because our **covered chain guard** keeps oil and grease on the chain—off of you; our **aspirator** throws all superfluous oil far behind the machine; our **oil-proof bearings** retain all the oil used for lubrication; our **auto-type mud guards** are wide and useful; our **oil-retaining joint** on the pulley side of the Auto-Cycle prevents splashing.

The Excelsior Is Simple and Comfortable

Cleanliness is not the only feature of the **EXCELSIOR.** The **EXCELSIOR** is made of fewer parts than any other machine. Any child can learn to ride it in 15 minutes. It has the lowest saddle position ever attained—you sit in a natural position, and can put your feet flat on the ground when you stop. Our **Komfort-Kushioned spring seat post** and **perfected spring fork** absorb all possible bumps. Read about the machine that **always makes good** in our **Free Illustrated Booklet**—we'll send it gladly; **write us now.**

Tires That Endure
Every Third Motorcycle with Goodyear Tires

Goodyear Motorcycle Tires are the leading motorcycle tires of today. They are built on the Goodyear Tire Machines.

Countless tests have proved these the world's most enduring motorcycle tires. They practically end tire trouble. They reduce tire expense.

These famous tires hold every world's amateur and professional speed record.

They are the tires that the 13 best known motorcycle builders have contracted for this year. Every third new motorcycle you see this year will be equipped with Goodyear Motorcycle Tires.

Every rider should insist upon them because they mean economy. Read below of a recent achievement of these premier motorcycle tires.

1145 Miles in 76 Hours—Same Air in Both Tires

Goodyear **endurance** is proved not only in our **factory** but in the **field.** Read this letter. It is another telling link in the endless chain of **performances** that have marked the superiority of Goodyear Motorcycle Tires.

"Goodyear Tire & Rubber Co.,
Akron, Ohio.

Gentlemen: I have just returned from an extended motorcycle trip thru the Southwest covering **1145 miles in 76 hours**; over the worst roads imaginable.

I rode the Goodyear studded tread tires and finished with the same air in both of them, also they **show no signs of wear.**

A good part of the road was rocky and for several miles jagged pieces of iron ore projected from the ground.

Respectfully,
M. L. HUNT,
Marion, Ind."

Made on Tire Machine

The foundation for Goodyear Endurance has been laid by over 13 years auto tire building experience.

Our motorcycle tires are constructed on the same tire building **machines** on which we make the famous No-Rim-Cut Auto Tires. This tire machine is the only method by which the mistakes and irregularities that you buy with ordinary tires can be **done away with.** And we control this method.

How a Tire is Built

A motorcycle tire is built up of successive plies of fabric stretched one at a time over an **iron core.** If these plies are not stretched on at exactly the same **tightness** the strength is **not uniform.** The **tight** ply gets more than its share of the strain and quickly breaks down under it. Then—**blow-outs.**

No human hand and arm and back working 8 hours a day can stretch these plies on at **exactly the same tension.** There must be some variation.

But a machine **CAN.** The Goodyear Tire Machine, the only one of its kind—builds the tire layer upon layer with unfailing exactness. Every **ply** in every layer, and every **inch** in every ply goes on at the same unvarying tension. Every thread bears an equal share of the strain. Every tire is exactly alike. Every tire renders **service** equaled by no other tire.

Thus have these tires won recognition through merit alone. Thus are they saving motorcyclists a vast amount of tire trouble and tire expense. Thus will every motorcyclist demand them eventually. For the **price** is the same as for common tires.

Send for Our New Book

This booklet gives other reasons for the endurance of our Motorcycle Tires. It describes the entire line—5 big successful tires—"a tire for every road condition."

Every motorcyclist or prospective buyer of a motorcycle should read it. It not only paves the way to a great tire economy, but it shows you how you can obtain the maximum of pleasure and service from your motorcycle.

Write for it today.

MOTORCYCLE MAKERS' MEETING

Business Sessions Every Two Months in the Future—Matter of National Tour Refeired to a Special Committee.

Definite cognizance of the abuse of the muffler cut-out, and official condemnation of the practice, was taken by the Motorcycle Manufacturers' Association at its regular meeting at the New Southern Hotel, Chicago, Wednesday, February 7. President A. B. Coffman called the meeting to order, at 10 a. m., and in the absence of Secretary J. F. Cox, F. W. Starr was delegated as secretary pro tem. The following members were present: A. B. Coffman (Consolidated Mfg. Co.); George M. Hendee, F. J. Weschler (Hendee Mfg. Co.); Arthur Davidson (Harley-Davidson Motor co.); W. A. Johnson (Pierce Cycle Co.); E. J. Knight (Aurora Automatic Machinery Co.); George H. Meiser, R. W. Gould, A. W. Mitchell (Black Hawk Motor Co.); L. J Carling (Schickel Motor Co.); W. G. Schack (Emblem Mfg. Co.); K. R. Jacoby, J. F. Merkel (Miami Cycle & Mfg. Co.); C. W. Mason (New Era Auto-Cycle Co.); T. W. Henderson (Henderson Motorcycle Co.); C. P. Knudson (Minneapolis Motorcycle Co.); W. F. Remppis (Reading Standard Co.); F. W. Starr (Pope Mfg. Co.); Ignatz Schwinn, Fred Whitfield (Excelsior Motor Mfg. & Supply Co.).

Reports of the previous meeting were read and accepted. Discussion of the injudicious use of the cut-out in cities, and its injurious effect on the sale of machines, then was precipitated, and resulted in the secretary being instructed to draft resolutions condemning the indiscriminate use of muffler cut-outs in corporate limits of cities and towns, requesting the passage of ordinances regulating their use. Copies of these resolutions will be sent to the mayors of principal cities, so that municipal authorities will be aware of the stand taken.

Believing that the interests of the association will be better served by more frequent gatherings, it was voted to hold meetings every two months in future. The next meeting will be held at the Hotel Statler, Buffalo, April 10.

Alleged excessive freight rates west of the Mississippi came in for attention and suggestions for securing lower rates were brought out. The matter will come up again later.

Proposed plans for an enlargement of the selling field, brought forth vigorous discussion, and a committee consisting of Messrs. Coffman, Meiser and Davidson were appointed to look into the matter and devise ways and means of stimulating the demand in heretofore untried channels.

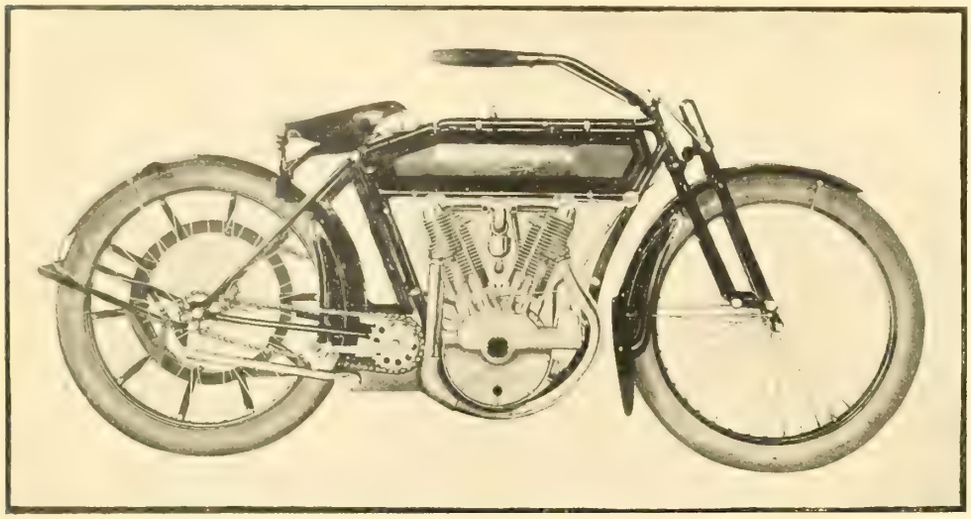
Apropos of the desirability of a national motorcycle tour, which has been proposed by President Coffman, it was the sentiment of the meeting that such a contest would be highly beneficial to the sport and trade if it were held under conditions that would permit all of the manufacturers to support it heartily, and have the F. A. M. take full charge of its conduct. As a result of the discussion a committee composed of Messrs. Coffman, Davidson and Merkel were appointed to investigate the feasibility of such a tour on the lines suggested.

Following adjournment a delightful luncheon was served. President Coffman was unable to attend the latter, being called to New York on urgent business.

Prices for Minneapolis De Luxe Twin.

Minneapolis, Minn, Feb. 15—The Minneapolis Motorcycle Company has announced the price of the new Minneapolis De Luxe twin to be $275, with rigid frame, and $290, fitted with spring frame. The light delivery car shown at Chicago was sold to the Peerless Motor Car Company, of Illinois, a branch of the Peerless Motor Car Company, of Cleveland.

POPE EMPLOYEES' CELEBRATION



Unique Features at the Annual Merry-making at Hartford—Company Officials Participate in the Festivities.

Employees of the Pope Manufacturing Company, and their friends crowded Foot Guard Hall, Hartford, February 9, on the occasion of the 15th annual concert and dance given by the Pope Company Mutual Benefit Association. In conducting the grand march, M. F. Conway, who for 15 years, has taken charge of this feature, introduced two novelties. Those in line were so led that the men formed the stem of the initial letter of the corporation while the ladies formed its loop. In another figure the men, forming about a circular hub, radiated from the center in lines forming the spokes to a wheel, while the ladies, forming an outer circle, made a complete rim to the wheel.

The honorary reception committee consisted of Captain A. L. Pope, Colonel Geo. Pope, C. E. Walker, E. M. Cutting, H. L. Pope, W. C. Walker, A. W. Pope, Ned Lawrence, M. Suisman. The committee of arrangements was: J. J. Ducey, chairman; A. G. Hedstrom, secretary and treasurer; A. Harrington. Those in charge of the floor arrangements were: James J. Ducey, director; John Bublitz, assistant; W. Saunders, C. Culver, J. Waxman, W. F. Porter, J. L. Kennedy, F. J. Farrell, H. Munsman.

Pittsfield Spark Coil Co. Squelch Rumor.

The Pittsfield Spark Coil Company, of Dalton, Mass., emphatically denies the rumor that gained currency during the late Chicago show that it was in financial difficulty and was in the hands or about to go into the hands of a receiver. It is possible that those who printed the story in some

NEW MINNEAPOLIS DE LUXE TWIN, SHOWN FOR FIRST TIME AT CHICAGO SHOW

way managed to confuse the Pittsfield company with the Jacobson & Brandow Company, of Pittsfield, Mass., who made a magneto, and now are in a receiver's hands. The latter concern, however, has no connection whatever with the Pittsfield Spark Coil Company, of Dalton, Mass.

"Saws Wood" and Says Nothing.

"Saw a cord of wood for something to eat," that ancient proposition of the housewife to tramps, no longer will strike terror to the hearts of the unbarbered and unbathed knights of the road. In fact, if such a solution of the wood cutting task is widely adopted, the "boes" are likely to tender the motorcycle a vote of thanks as the emancipator of their greatest horror—work. W. S. Williams, Stockton, Cal., is the hero of the picture, and when he found wood that required slicing, instead of inviting a backache, he jogged his brain department a bit, and then decided to let his Harley-Davidson do the work. The machine is doing great service, and Mr. Williams will probably put in a claim for record.

Weed to Make Motorcycle Tire Chain.

W. F. Walker, who for some time past has been connected with the sales force of F. A. Baker & Co., New York City, and who designed the chain for motorcycle tires, first illustrated and described in the columns of this paper, on December 16, 1911, has accepted an offer from the Weed Chain Tire Grip Company, of Bridgeport, Conn., to introduce the chain to the motorcycle trade. The Weed people will manufacture and push the chain with all the ample facilities at their command.

Mr. Walker will make his headquarters at Bridgeport, and will be the general traveling representative for the motorcycle chain department.

Pascal to Sell Reading Standards.

Ray Pascal, the well known racing man and motorcycle salesman, has taken the management of the central western district sales department of the Reading Standard Company and will travel through Illinois, Indiana and Michigan in the interest of the R-S.

HOW A CALIFORNIAN UTILIZES HIS HARLEY-DAVIDSON TO AUGMENT WOOD PILE

Goodyear Catalog a Fine Production

Nowhere is better evidenced the growing relative importance of the motorcycle business than in the quality of the literature produced by manufacturers of motorcycles and their accessories. An unusually fine and instructive booklet is that issued for 1912 by the Goodyear Tire & Rubber Co., makers of the famous Blue Streaks and other motorcycle tires.

The Goodyear company does not merely present pictures of tires with prices attached. The company's motorcycle offering this year is an exceedingly practical and artistic booklet and is in demand as much for the "reason why" talk with which it is filled as for its typographical quality, which is excellent.

The outside cover, spread open, presents a section of the track where the speed kings strove for mastery in the F. A. M. meet at Buffalo last summer. On the front half of the cover are Balke and Hasha, neck and neck and side by side, only a few feet from the fence—snapped when they were doing five miles in four minutes—on Goodyear Blue Streak tires.

There is a little story in connection with this picture. It was snapped by a son of James Hare, famous war correspondent and photographer. When the photo was first shown, Hasha was taken "on the carpet" and sternly questioned as to whether he had tried to foul Balke. The picture shows Hasha's elbow in such a position that it might easily interfere with the other rider, but Hasha maintains that he had no intention of fouling and the appearance was caused merely by the fact that the machines were "hugging" at the time the camera snapped.

The booklet contains a clear exposition of the Goodyear motorcycle tire proposition and shows why there has been such an avalanche of business in Goodyear tires. Illustrations show the main processes of the factory in making motorcycle tires and the finished product is also given due prominence. This year's Goodyear motorcycle tire catalogue is a notable contribution to the literature of the motorcycle business.

Indian Business Good at Chicago Show.

Besides a very large number of small orders taken at the recent Chicago show, Sales Manager Weschler, of the Hendee Mfg. Co., reports that he closed orders for three full carloads of Indians for immediate shipment.

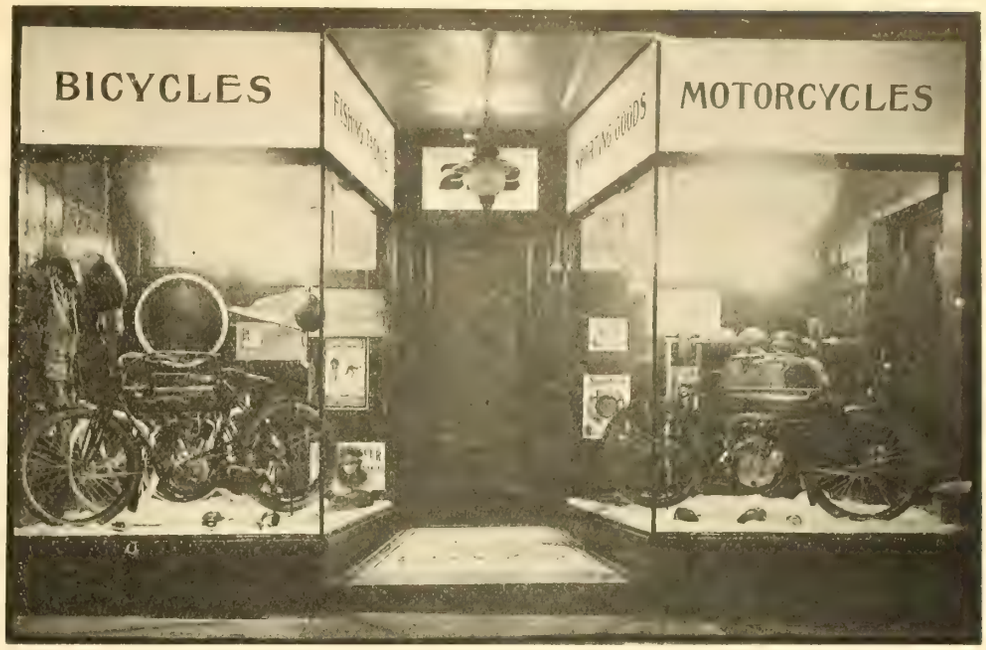
The addition of another large factory building, together with a number of smaller detached buildings to the already extensive Hendee plant has not relieved the pressure resulting from the tremendous demand. The force now employed in the Indian factory now amounts to 1,000 men, and even with this large number of hands, and the increased facilities, it has been found necessary to run overtime four nights each week.

Eclipse Co. Working Double Shifts.

Sales Manager Ferguson, of the Eclipse Machine Co., Elmira, N. Y., which makes Eclipse clutches, and brakes, says that his plant is enjoying the greatest business in its history. Day and night shifts are being run to meet the demand, which is indicated by the receipt on Tuesday of show week of an order for 1,000 clutches. He was astonished by the large orders for clutches placed by dealers who attended the show. In brakes and hubs, the output this year will break all records. The clutch now is made in three models, for flat, V belt or chain drive, and with either grip or hand lever control.

Holmes Will Represent H-D in San Diego.

San Diego, Cal., Feb. 10.—R. K. Holmes, who has been connected with the bicycle and motorcycle business for the past 15 years in Los Angeles, recently sold his interest in the firm of Holmes & Kittle, to Mr. Kittle, and took a trip east—the first in 25 years—visiting New York, Boston, Buffalo, St. Paul and a number of other cities.



Mr. Holmes served as F. A. M. vice-president for the Pacific Coast District. He could not refrain from taking an active interest in the game, and has taken the agency for the Harley-Davidson at San Diego. He has retained the services of James Urquhart as right hand man.

Hasha's Records Were Bosch Assisted.

The Bosch Magneto Company is feeling pretty good over the slaughter of records by Hasha at Los Angeles, on February 11, as Hasha's new Indian racer was equipped with a Bosch ignition system. As one mile was covered at the rate of 92.78 miles per hour, the Bosch certainly showed great efficiency and reliability at tremendously high speed.

Birkenbach Will Handle Thor in Columbus.

Columbus, O., Feb. 12.—L. P. Birkenbach & Co., local agents for the Yale, announce that they have taken the agency for the Thor, formerly held by the Franklin Cycle and Supply Company.

NEW STORE FRONT OF JAMES MAYO, A READING, PA., DEALER
The store is located at 222 Penn street, and is also headquarters for Columbia and Iver Johnson bicycles in that vicinity

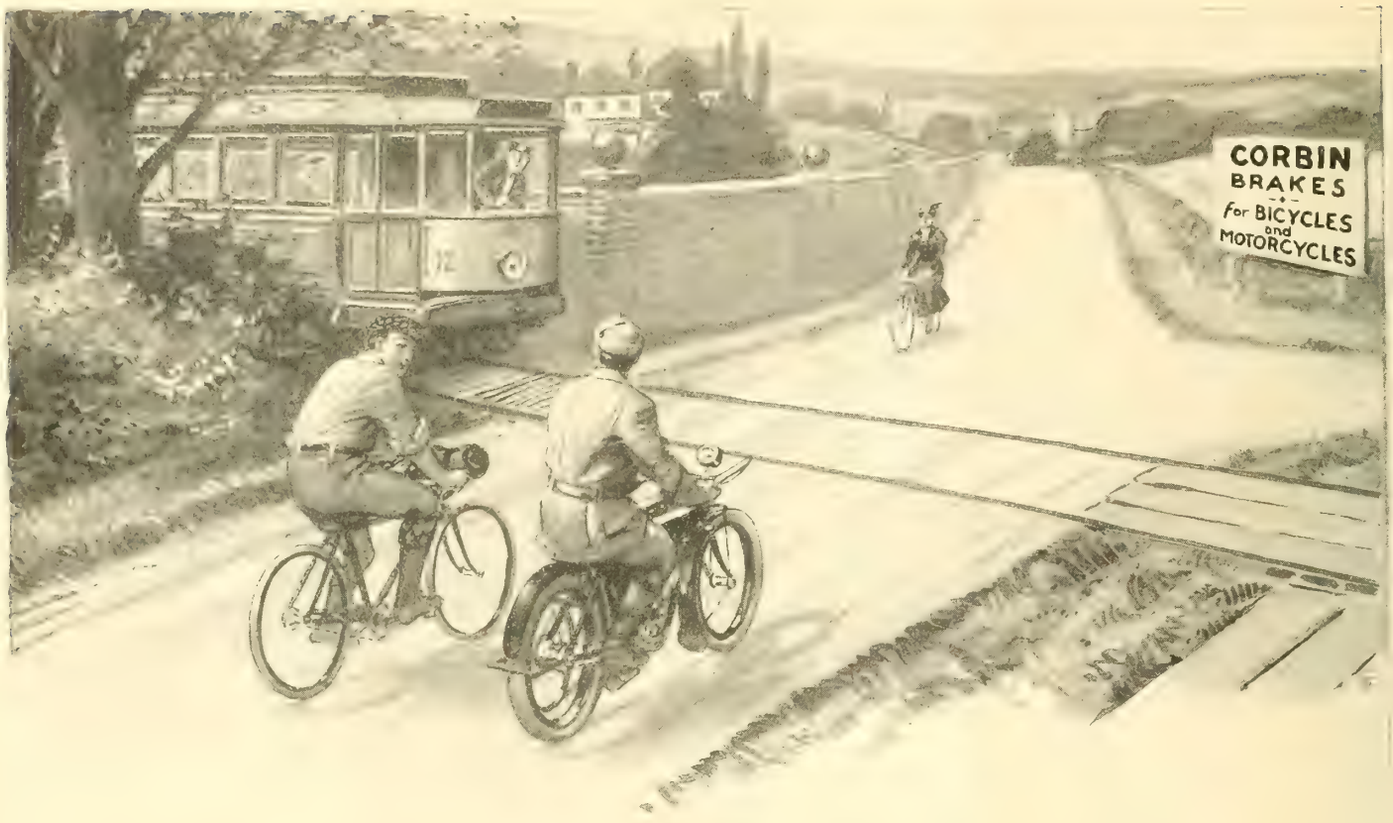
Late News About the Emblem.

Emblem motorcycles will be well represented at the automobile show which starts at Baltimore, February 20. These machines will be shown by F. W. Sandruck, who has just been apointed city agent in Baltimore by Henry Keidel & Co., Emblem distributors for the South. One of the features of the exhibit will be the racing machine which George Evans rode last summer when he broke the world's record (unofficial) for 100 miles on a dirt track.

Fred P. Ames, who has done much to popularize the Emblem in Kansas City, Mo., has moved from 1835 Benton boulevard, to commodious quarters at 2112 East 15th street. The move is coincident with his renewing for the Emblem agency this season, his old quarters having proved too small to adequately handle his growing business.

J. W. Kidd and his wife, who are well known as long distance tandem tourists, have moved from Oklahoma to Illinois, where Kidd has opened a garage at Fisher. He will handle the Emblem exclusively in his new location.

One of the new wideawake agents at Tacoma, Wash., is B. Paulson, who was recently appointed a sub-agent for F. M. Spinning, Seattle. Paulson last week made several deliveries of Emblems, and the initial shipment of 1912 models caught on so quickly that Paulson now has a standing order at the Emblem factory.



Fred T. Kerr has taken the agency for the Emblem in London, Ontario.

Thors and Excelsiors at Cleveland Show.

Cleveland, O., Feb. 14.—John Zucker, local representative for the Thor and Excelsior lines, will have the largest exhibit of motorcycles at the coming automobile show, which opens here on Saturday evening. Zucker has reserved 330 square feet and will display 10 machines. He will give as souvenirs small flags with the names of the machines on them.

EXTERIOR AND INTERIOR OF THE STORE OF A. H. PATTERSON, ONE OF THE LEADING DEALERS OF BROOKLYN, N. Y.

Ensure Safety and Absolute Control by equipping your machine with a

CORBIN BRAKE

¶ You then have the double satisfaction of knowing you have considered the safety and comfort of others as well as yourself. The Corbin Brake means Confidence, Reliability and Control. Accidents and collisions are prevented and the pleasures of the road are enormously increased.

¶ The Corbin Brake is located in the rear wheel hub and is operated by a slight back pedaling pressure. Your machine can be stopped instantly or slowed down gradually, according to desire or the need of the moment. Can be fitted to either belt or chain drive motorcycles.

¶ The Corbin Two-Speed Coaster Brake and Duplex Brake for bicycles are universally recognized as the standard. No cyclist can afford to ignore the Corbin.

¶ Corbin Brakes are sold by the leading hardware and sporting goods dealers everywhere. Specify CORBIN and insist on it. Any bicycle dealer or repair shop can fit it to the rear hub of your machine.

Olympic Fund Will Be Properly Spent.

When the plan for raising a fund for sending a team of bicycle riders to compete in the 200-mile road race, which is a part of the program of the Olympic games to be held at Stockholm, Sweden, next July, was first announced in these columns last October, it was the intent and purpose of the projectors of the plan to act in the capacity of a volunteer committee, working in perfect harmony with the American Olympic Committee, which is doing such creditable work in raising funds to pay the expenses of the American athletes who will compete in the events scheduled for other forms of sport.

For a time the real purposes of the projectors went astray for the reason that a mushroom organization, apparently without plans other than self-perpetuation, assumed to take charge of affairs, with the natural result—dissension and a tendency to work at cross purposes.

In another column the policy of this journal in regard to the Olympic Fund is stated at length. The fund must be under the control of the American Olympic Committee, and the "Bicycling World and Motorcycle Review" has been duly authorized by the representative of that committee to accept all contributions to the bicycle team fund, and acknowledge the receipt of same through its columns.

The National Cycling Association, which is the only cycle sport-controlling body recognized by the Union Cycliste Internationale, which in turn is recognized as the world power in cycling by the International Olympic Committee, will have charge of the preliminary tryouts of candidates for Olympic cycling honors.

The control of the fund and the final selection of candidates, however, rests with the team selection committee of the American Olympic Committee, and with the last named committee the manner in which the moneys shall be expended.

Live Opportunities in Foreign Fields.

By referring to this week's letter from our London correspondent as published in the news columns of this issue, corroboration will be found for the optimistic statements concerning general trade conditions as recently uttered herein. Further evidence along this line is the report of Germany's export business, which, in bicycles, motorcycles and components, in the year just closed, reached the grand total value of eighteen and a quarter million dollars.

Our own exports in the same period showed a gain of 29 per cent.—highly encouraging when is recalled to mind the far from flattering conditions which prevailed in our foreign trade two or three years ago.

The fields are there, and growing; our ability and capacity for production is established, and admitted, even by our strongest competitors. Therefore, let all, the manufacturer of bicycles, of accessories and motorcycles, join with the Motorcycle Manufacturers' Association in its expressed purpose of exploiting and developing other markets as well as the business at home.

Urgent Need of the Franchise Rule.

Just now the most important subject being considered by Federation of American Motorcyclists' officials is the racing track franchise problem. The demand by promotors for protection from encroachments on territory which they have developed as racing centers by the investment of their capital and otherwise, has resulted in the framing of a franchise rule by the F. A. M. which is a step in the right direction, but which falls short of the mark as it does not guarantee permanent rights.

Another cause for complaint against the measure as at present drafted, is that the franchise fee is altogether too high. The F. A. M. can set the fee at what it choose, without much well grounded criticism, as the official sanction is an asset the organization possesses which is marketable at whatever price it may elect.

The permanency of the franchise is, however, a matter of equity, to be governed by rules protecting both parties to the contract, and in exchange for the capital invested the promoter has a right to expect substantial guarantees of permanency of privilege as long as he fulfills the laws of the F. A. M. and his financial obligations.

Necessity for a franchise rule is evidenced almost daily, now that new tracks are being projected in almost every city of consequence in the country. At the present time there is in the hands of the competition committee a total of three applications for a franchise in a prominent motorcycling center in the East. All cannot secure the privilege, and were there no franchise regulations, and all should build tracks, all would also stand an excellent chance of bankruptcy through divided patronage and the higher cost of attractions.

Permanent franchises have worked well with organizations, notably the base ball leagues, and the National Cycling Association has a franchise law that is a model for brevity and clearness, and one that has worked well for ten years. It is to be hoped that the F. A. M. will soon reach a satisfactory conclusion on the matter, as there is a crying need for a broad and liberal franchise law at once.

A locomotive is driven 100 miles or so and is laid aside, a groaning mass of metal, for a relay to take its place. But your motorcycle plugs on hour after hour, day after day, without proper care and attention, and the average rider wonders why it should require adjustments and repairs. Learn the construction of your motorcycle, study its mechanism, acquaint yourself with the duties of its parts and know the "whyfor" of everything about it. Then your motor troubles will cease.

MOTORCYCLE DOINGS "ACROSS THE POND"

Unparalleled Prosperity of the Motorcycle Trade in the British Isles – Tourist Trophy Races June 27 and July 1—Board Track Fever Reaches England —Collier May Visit America—More About the Popular Side Car.

London, Feb. 9.—Things here are in a more healthy state than the most sanguine of us had ever hoped for. The latest returns show the number of machines actually on the road to be something like 90,000, an increase of about 20,000 over the corresponding figures last year. Included in this total, of course, are an enormous quantity of sidecar machines, sociables and three-wheeled runabouts, which are registered as motor-bicycles. The leading manufacturers are absolutely filled up with orders and delivery cannot be given in a number of cases until the spring of 1913. The average date for delivery, however, is about August or September. In fact, everything points to a repetition of the great push cycle boom and the next few years should be an absolute heyday for the motorbicycle business here. Added to this, a strong colonial and continental business has sprung up, and there is no means of meeting the demand of this new life which has been infused into continental motorcycling, which has been dormant for some years.

Tourist Trophy and Other Races.

The number of clubs throughout the country is being augmented very quickly and the consequent increased activity on the road is very marked. The program of competitions, which have already been notified to the Auto-Cycle Union, the governing body, is prodigious. The principal events, of course, are the Tourist Trophy races and the Six Days Trial, of which the Auto-Cycle Union is the organizer. The dates for the Tourist Trophy races have now been definitely announced, as follows: Junior Race, June 28, and Senior Race (which was won last year by O. C. Godfrey, riding an Indian, which machines were also second and third), July 1. The A. C. U. has fixed the engine capacity limits for the Junior race at 350 c.c. and the Senior race at 500 c.c., in both cases for any type of engine. Permission has been granted by the Tyndwald Court for the race to be held in the Isle of Man, over the same course as last year, viz: Start at Woodlands, Quarter Bridge, Ballacraine, Kirkmichael, Ramsey, Smallfell mountain, to the start, a circuit of about 34 miles. The actual distance of the races has not yet been fixed. Practising will probably take place for ten days prior to the first race, each morning up to 7 A. M., as hitherto. It may be mentioned, however, that three Matchless, three Blumfield and about four others have already been entered and lively contests are promised. It is a generally expressed hope here that some American riders will come over for the race, and the motorcycling public would be delighted if Jake DeRosier honored them with a return visit.

Further to accentuate evidences of increased activity on the road, it is really remarkable the number of all-the-year-round riders there are here. Out on the Great North Road last week end, there were never seen more awheel, even on the finest summer days than were out on this occasion, notwithstanding the fact that in many districts snow was inches deep and the day was bitterly cold. Many clubs have also held 24-hour reliability trials recently, and the entry list has been very heavy in each case. The reliability of the machines under these exacting circumstances is also an eye opener.

And Now Comes the Saucer Track.

There are several proposals afloat to construct saucer tracks, similar to those in vogue in America, which, no doubt, to a large degree have been prompted by the glowing tales of the enormous crowds which frequent the saucer tracks on your side. The promoters here have visions of crowds somewhat resembling those to be seen at our football matches, but the public will take some little time to educate up to this. At the moment negotiations are proceeding for a track in the Midlands, probably in the Birmingham district, where a good track exists on the Aston Villa Football Club ground, and which could be rebuilt to suit high speeds, and another in the Manchester district, either or both of which may or may not fall through.

Talk of Collier Racing in America.

In this connection I may as well mention that the English champion, C. R. Collier, has been seriously considering an alluring offer to pay a visit to the States, and race on your saucers. Collier, however, is anxious to make amends for his misfortunes in the Senior Tourist Trophy Race last year, when he ran second, and was afterwards disqualified. In view of the close proximity of the races he will probably postpone his visits until the autumn. At any rate, American sportsmen may rest assured that Collier will show himself to be a man of mettle, and his position as English champion is undisputed. De Rosier is the only rider who has seriously extended him and the series of three matches which were held at Brooklands last year were somewhat unsatisfactory, in view of the fact that in two of the races both riders experienced machine troubles in turn, but I do not doubt that Jake would have won the rubber. As you probably know, however, Collier, immediately after Jake's departure, made an attempt on the records he set up here and shattered them to a lively tune. Collier should prove an immense draw and be value for money. At any rate, if Charlie does not go to the States this year, Jake or any other rider would be only too welcome here, and I think Jake can testify to the good time he had at our hands. By the way, we are anxiously watching to see of young Carville, who is now in the States, acquits himself well. Carville was the first single cylinder private owner to finish in the Senior T. T.

Strong Agitation Against Noise Demon.

We are informed by Billy Wells, the popular manager of the Indian depot here, that in future his company will only sell machines on the English market which are fitted with silencers, minus a cut-out. This is very gratifying news, because a strong agitation against the noise demon has been going on recently and the local Government Board has now come on the scene and drastic regulations may result. In the meantime, many riders are quaking in their boots. However, I am pleased to see the lead taken by the Hendee Mfg. Company, because cut-outs have become universal and are a standard fitment of all the big makers. In the hands of the unscrupulous few, the nuisance has caused a lot of heartburning to the general public, and to thoroughly popularize the sport and kill prejudice, things must alter.

Export of Sidecars to United States.

An order for a large consignment of sidecars has been placed with an English manufacturer for shipment to America. This appears rather odd, especially in view of the tariff on your side, but there can be no doubt that American manufacturers have not given a thought to sidecars, which have been in vogue here many years, and are swarming upon our roads. Neither have I heard or seen anything emanating from the States resembling our A. C. sociables, Morgan runabouts, and our various makes of four wheel monocars and autocars. Hordes of motorcyclists have, for the past few days, obtained access to the various skating centers in the country, and especially within riding distance of the metropolis, on their machines, and your correspondent is just off himself, after catching the mail, for a ride and a Lokall. The ice is in good condition everywhere and this will be a regular skaters' "week end."

Bakersfield, Cal., Feb. 12.—Officers for the Bakersfield Motorcycle Club, for the present year, elected at the recent annual meeting are: President, C. P. Clark; vice-president, J. F. Dunlopp; recording secretary, P. C. Taylor; treasurer, D. F. Lightner; captain, L. C. Dunn.

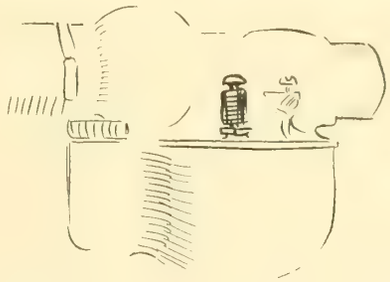
Interesting Features of the Chicago Show Exhibits

As was announced in these columns last week a large portion of the descriptions of the motorcycle and sundries exhibits at the Chicago show went astray in the mails, necessitating their publication in the present issue. They will be found to be of more than passing interest to the buying and riding public and are earnestly commended to the reader's careful attention.

WAGNER.

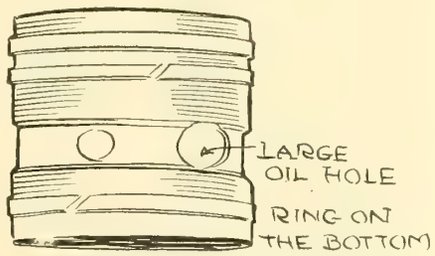
Wagner Motorcycle Co., St. Paul, Minn.—Two machines; both singles.

Representing the Factory — Edward Worthington, Frank R. Campbell.



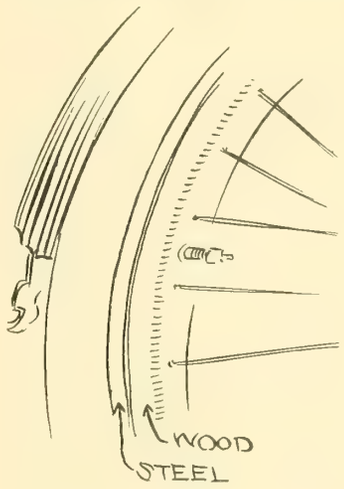
Exhibited at a 1912 Show for the First Time; Changes Since First Announcement For This Season—Double independent control of the clutch and belt idler has been adopted, permitting a free engine without disturbing the belt tension.

Some Features of Which the Makers Are Proud—Wagner always has been an advocate, and a strong one, too, of the diamond loop frame, and the twin fork. The latter now has been increased to a triple construction, being exclusive in this respect. Stress is laid on the low and well forward motor position, giving an even weight distribution on both wheels, and low gravity center, with ability to "hug the road."

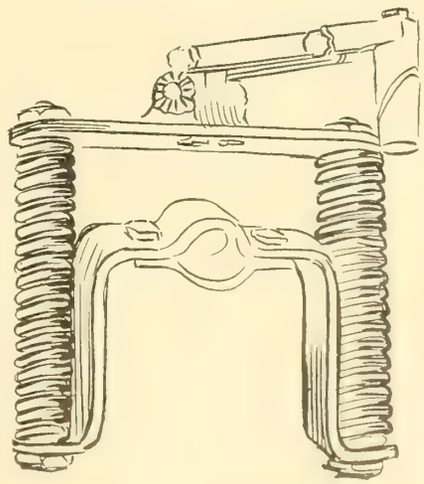


Although the magneto is of the protected type, its mounting back of the cylinder renders it doubly immune from derangement by mud and water. On no other machine is the front guard extended so far forward, its midway point being at the fork crown. It is supported by double braces. Wagner continues to build his fuel tanks of copper. No simpler hanger adjustment seems possible than the sliding bracket which carries the cranks and rides on the stays.

No separate lugs are used in the rear pulley assembly, both pulley and lugs being an integral stamping. No flanges are used, the outer face being crowned in the center to hold the belt, and is faced with endless lagging. Although many other machines employ a Schebler carbureter, only on the Wagner it is found with a priming "tickler" on the float chamber. Generous wearing surface in the ball and socket joints of the grip control obviate the necessity for frequent "take-up" of play.



This machine is one of the few which has an extra ring at the bottom of the piston, to hold the oil on the piston walls after it has been splashed up. The piston walls are drilled to allow the oil to find easy access to the cylinder bore. Another advantage of the lower ring is that it furnishes a bearing on the cylinder for the bottom of the piston, eliminating any "slapping" tendency ,and also forming a generous pocket for an oil film on the piston wall.



Wagner Had the Only Schebler Carbureter With a "Tickler"

Wagner Piston With Lower Oil Ring

Yale Double Rim—Wood and Steel

Yale Spring Seat Device

Separate magneto control by frame lever leaves the valve lift grip free for that function, so that the motor may be cut out temporarily by lifting the valve, without changing the spark timing, and necessitating constant acceleration. The throttle is controlled by the other grip. While the 4-horsepower model will be the leader, it differs from the 3½-horsepower member of the family, only in the motor. The latter machine, which was the standard model for three years, remains unchanged from last season, and is fitted with either flat or V belt. One of the sure to be appreciated refinements is the metal toolbox equipment of shelves and lock.

YALE.

Consolidated Mfg. Co., Toledo, O.—Four machines; two twins, two singles.

Representing the Factory—A. B. Coffman, H. M. Baird, D. J. Welch, A. S Clausen, Robert Hines.

Changes or New Features Since Last New York Show—Yale machines now are more comfortable riding than ever before, through the adoption of the Y-A spring seat device which will be standard equipment on all models. This is the Adams shock absorber formerly manufactured by O. L. Adams, Denver, Colo. The manufacturing and selling rights have been acquired by the Consolidated Mfg. Co., and when the demands of regular models are filled, the device will be retailed at $5. It may be applied to any make machine. Increased wheel rigidity and freedom from dented rims is obtained by splitting a steel rim, slipping it over a wooden one of suitable size and building the wheel with double rims. This equipment will be on the twins only.

Some Features of Which the Makers Are Proud—Long stroke motors, and horizontal cylinder flanges are Yale earmarks. This machine is one of the few which does not employ the camel back sloping frame, but nevertheless the desired low riding position is obtained in another way. Further liberality in equipment is to be had in the fitting of Eclipse clutch and 2¾-inch [illegible] as standard on all models. The clutch and idler control are by separate [illegible]. This year mechanical pump lubrication [illegible] adopted on the twins. [illegible] duced by the fitting of priming cups on the cylinders. Safer [illegible] the extension of the [illegible] dlebar, giving a three stem fastening. The

mud guards are unusually wide, four inches. Changes in the grip control now permit the grip to be set to hold the valves open without continuous hand pressure.

HARLEY-DAVIDSON.

Harley-Davidson Motor Co., Milwaukee, Wis.—Four machines; two twins; two singles.

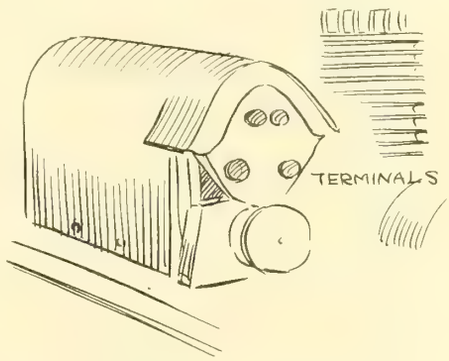
Representing the Factory—Walter Davidson, Arthur Davidson, William Davidson, William S. Harley, S. L. Crolius, H. S. McCusker, Arthur Johnson, H. W. Haskell, W. F. Kleimanghagen, George Puls, Albert Stansbury, R. H. Evans.

Changes and New Features Since Last New York Show—None.

Some Features of Which the Makers Are Proud—Foremost in the batch of improved features embodied in the new Harley-Davidson is the "ful-floteing" seat. Its function is to segregate the rider from the road shocks transmitted to the machine, and that it attacks the vibration bugaboo from a vulnerable point, is indicated by its influencing several other makers to offer closely similar devices. While the Harley-Davidson free wheel is but a distinctive term for a clutch, it is the only component of this sort which is mounted on the rear hub. Furthermore, it is the largest motorcycle clutch used, which is not wholly surprising, for its location permits of the use of larger construction than would be possible on a motor shaft or jackshaft.

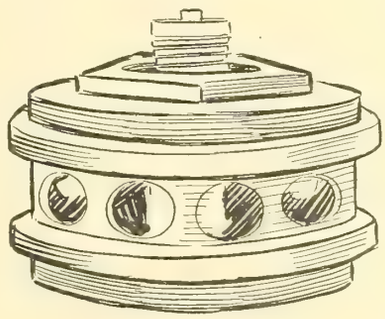
Cleanliness is another of the desirable features, particular pains being taken to enclose all moving parts which are lubricated, and also to retain the oil where it belongs. Front and rear guards also are extra long, and are fitted with side fenders to arrest the portions of mud and water which usually escape past the ordinary guard. Silence has been obtained to an unusual and gratifying extent by the use of large exhaust pipes and muffler. The twins will carry 2¾-inch tires all around as standard equipment. The chain drive twin, which still is very young, of course, has lost none of the unusual interest engendered in it by reason of it being the first member of the family to use other than belt transmission.

HENDERSON.



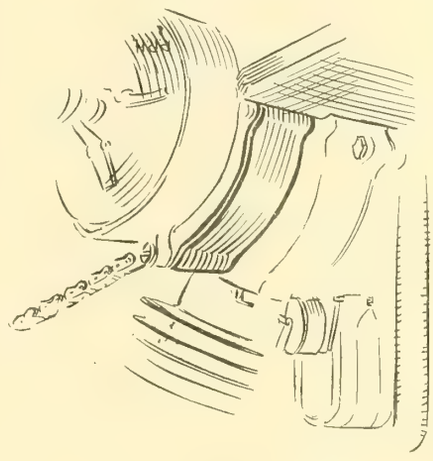
Henderson Motorcycle Co., Detroit, Mich.—One machine; four cylinder.

Representing the Factory—T. W. Henderson, H. K. Davis.



Changes or New Features Since the Last New York Show—Metal housing attached to magneto.

Some Features of Which the Makers Are Proud—Automobile engineering practice has been adopted lavishly in the Henderson. The motor is distinctly of the car type, and embraces mechanical valves, auto magneto with maximum retarded spark, and large flywheel. An Eclipse clutch permits the motor to be started by a crank, which folds when not in use. The final drive from the jackshaft is by direct roller chain, enclosed entirely.



By the use of an underslung frame construction a low center of gravity, and low riding position are obtained. No pedal cranks are fitted, the brake control being versed in a pair of push pedals on the footboard, either working independently of the other. The control is standard save that

Henderson Housed Magneto

New Emblem Inlet Cage

New Era Chain Guard

the grips are ratchet retained wherever set, an original feature.

Among other things the machine is the longest on the market, having a 65-inch wheelbase. Silence and flexibility are claimed to be obtained in a rare degree from the motor. One of the most interesting features is the double seating accommodations, a detachable saddle being mounted on the top frame bar in front of the operator. A cross truss in the handlebar and footrests on the forks, are provided for the use of the front passenger.

IVER-JOHNSON.

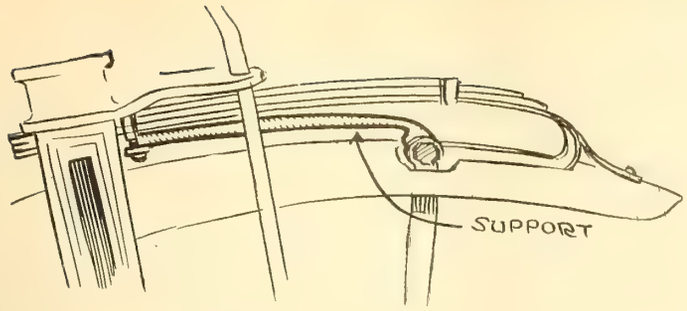
Iver-Johnson Arms & Cycle Works, Fitchburg, Mass.—One single cylinder machine.

Representing the Factory—T. L. Bird.

Some Features of Which the Makers Are Proud—Although this machine participated in the Buffalo tour last July, it made its first formal appearance at the Chicago show, coming in late on the opening day. It was an eleventh hour exhibitor, not having been booked in the official list of motorcycle exhibitors. Made in a single cylinder, 4½-horsepower model, only, the Iver-Johnson is built on distinctly original ideas. In the motor, naturally the most novelty is to be found. The valves are mechanical, set side by side and interchangeable.

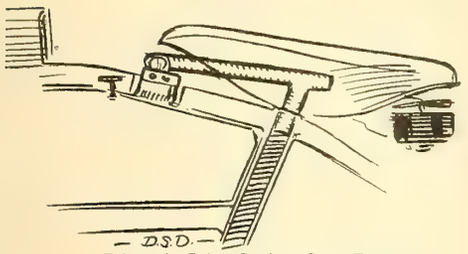
The valve stems are encased in sliding sleeves so that the exhaust flame does not touch the stems themselves, a feature to be found on no other motor. It should make burnt-out valves unknown. There are but two gears used in the motor, and both are of the worm type. The camshaft also drives the magneto, running fore and aft in a housing on the right side of the motor. The cams are forged integral, and this shaft carries a worm meshing with that on the crankshaft. The magneto coupling is a slotted dog, and there is a clever micrometer sleeve adjustment for setting the magneto at any point desired. The standard setting is marked prominently on a graduated scale. The timing may be changed by removing one screw and loosening another.

Very large crankshaft bearings are used. The shaft wearing surfaces are hardened sleeves pressed on machined steel bosses which are not hardened. This construction is claimed to make for very long lived bearings. Handlebars are built of four-ply tubing at the center, tapering to two-ply at the grips. They are locked by clamp and expander. Other interesting points are the automatic stand, T thumbscrew belt adjusters, drilled belt unit disks for quick repair, and an ingenious clutch without screws, and entirely demountable by hand.



MINNEAPOLIS.

Minneapolis Motorcycle Co., Minneapolis, Minn.—Four machines; three pleasure models, one delivery van. All singles.



Representing the Factory—J. M. Michaelson, C. B. Knudson, J. B. Ralph.

Changes or New Features Since the Last New York Show—The Minneapolis Company sprang a big surprise by announcing its intention to return to the twin cylinder field with a machine carrying a Spacke motor. The latest member of the family was not ready to make its bow at the show. It will carry a 10-horsepower rating, higher than any other twin, and will be driven by a flat belt, and will be built in two types, a rigid frame model, listing at $275, and with a spring frame, at $290.

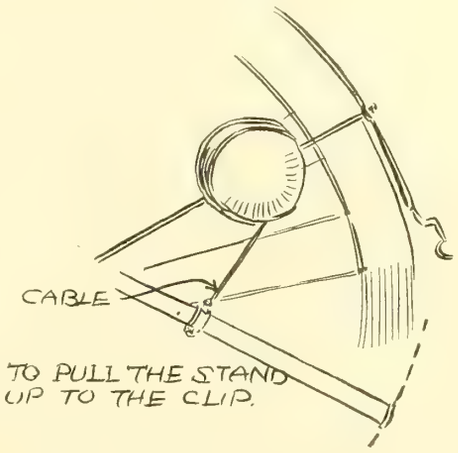
Some Mechanical Features Revealed at the Recent Chicago Show

Proud—For the coming season the spring frame pleasure model, and the delivery van will be the leaders of the Minneapolis line. Discovering that the buying trend was running strongly toward twins, the company prepared to meet it by deciding on the production of a high-powered two-cylinder machine. Interest already shown in the delivery van is so great that the company will concentrate to a considerable extent on turning out this model. It is fitted with the regular Minneapolis 5-horsepower single cylinder unit power plant. The carrying capacity is 300 pounds exclusive of the operator, and the maximum speed rating is 30 miles.

To the Minneapolis people belongs the credit for being first to offer a belt drive model with two-speed gear. Of course, the use of the reducing gears implies that the driving pulley is mounted on the countershaft, permitting the use of unusually large front and rear pulleys, a combination conducive to low belt speed and large contact surface. This year the Minneapolis joned the spring frame colony. The mechanism is contained in a large spring cartridge hinged to the rear stays and hanger bracket. The distinctive feature of the device is that but one spring is employed, it being fastened at both ends with a plunger centrally located in the coils so that both a compression and tension action is secured.

INDIAN.

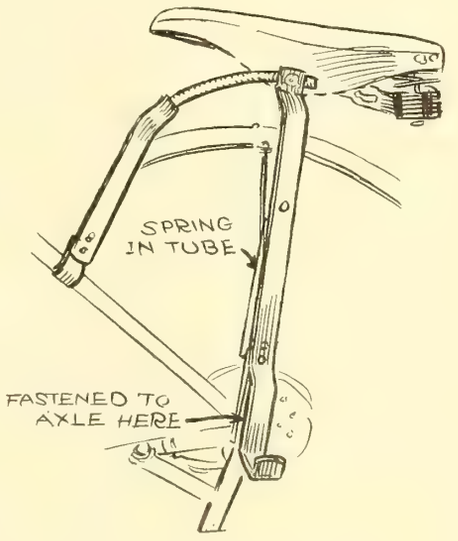
Hendee Mfg. Co., Springfield, Mass.—Six machines; three singles, two solo twins, one twin with sidecar.



Representing the Factory—George M. Hendee, Oscar Hedstrom, F. J. Weschler, R. W. Ellingham, Charles Gustafson, Sr., P. B. Whitney, Roy Bowser, P. S. Newell.

Changes or New Features Since Last New York Show—None.

Some Features of Which the Makers Are Proud—There are, among the 32 new improvements in the 1912 Indians, several advanced features to be found or no other machine. Among these may be mentioned the foot starter, and tank priming gun for easy starting, both of which have a close relation. It may safely be said that the foot starter is entitled to share honors with any other contending improvement as the greatest motorcycle development of the year just passed. Although it has no other advocates at present, the time is coming when it will receive hearty recognition, just as the automobile self-starter has this year at last come into its own.



None seriously will contend that the new T. T. models are other than the last word in present day motorcycles. They bear the same relation of the ordinary machine, as does the luxurious six-cylinder motor car to the four. No such advanced type ever before has been built, and the rider who wants style, speed, and all the fitments which go to make touring more enjoyable will find in the T. T. Indian perhaps the highest expression of the motorcycle art.

While many features common to the Indian have been adopted on other machines, the makers of the Indian modestly lay claim to having originated such features as the multiple jet carburetter, foot-starter, grip control, overhead valves, muffler tail pipe and scroll leaf fork. The Indian always has been a handsome machine, and although the additional mechanism adopted in recent years, has been considerable, the engineering staff has been successful in retaining the "classy" lines which ever have made the machine much admired in any company.

Edwards-Crist Automatic Stand Lift

From the inception of the industry, the Hendee Mfg. Co. has been a stanch supporter of the chain drive, even when the belt was on the top crest of its popularity, and now when other leading belt advocates are adopting the chain, its most loyal supporter extracts considerable gratification from the trend. The Indian mechanical oil pump is one of the few that survived, and on this make also, was the clutch first offered as standard equipment. Knockout axles, front and rear, roller bearing hubs, double brakes, protected magneto, ball bearing transmission and wonderful flexibility are other prominent specifications which mark the path to Indian perfection. The Indian output for the coming season will be 15,000 machines, of which 10,000 will be twins, and the balance singles.

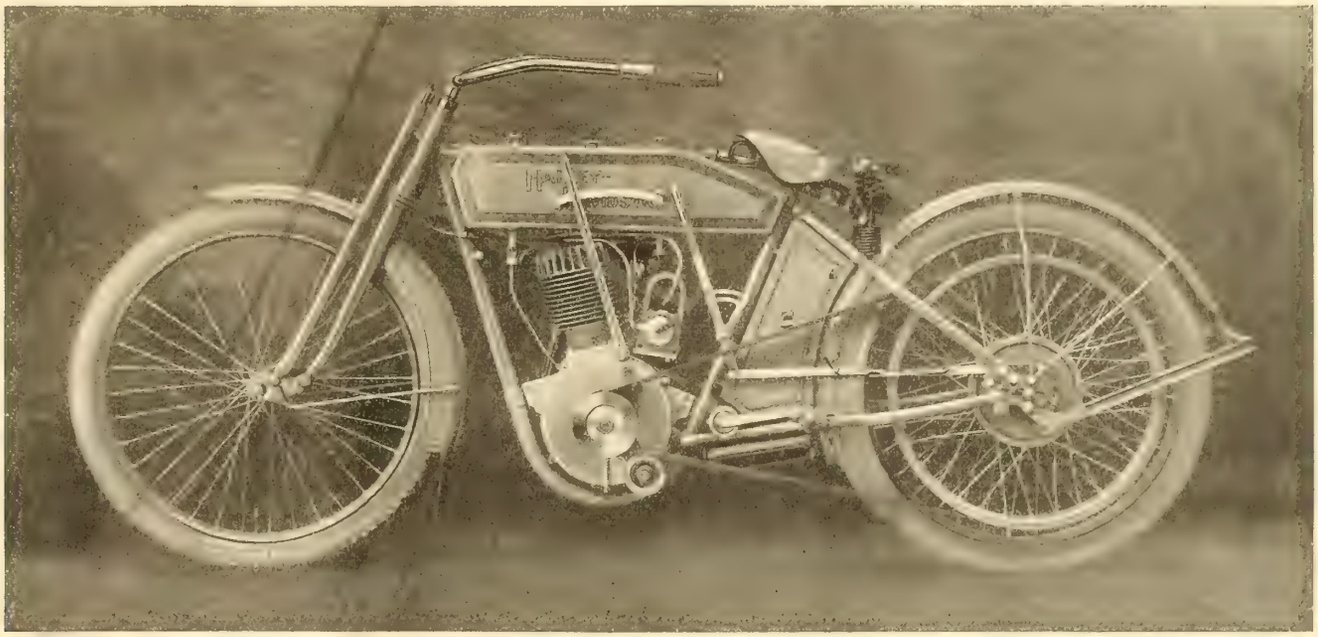
Edwards-Crist Tandem Attachment

Edwards-Crist Mfg. Co., Chicago, Ill.—Sixten machines; nine twins, seven singles

Representing the Company—Jesse Edwards, R. C. Crist, C. A. Leander, G. A. Wiswall, Charles Anderson.

Features of the Exhibit—This concern, who are Chicago retail distributers for the Indian, and the largest motorcycle dealers in the city, maintaining six branches, was the only exhibitor showing motorcycles in the Armory. It was prominently located in the gallery, and had the largest space and the largest display of motorcycles in the show, an unprecedented thing for a local agency. Sixteen machines were staged, including every Indian model, in all catalogued colors, and with numerous accessory attachments which the concern handles.

EXCELSIOR.



Excelsior Motor Mfg. & Supply Co., Chicago.—Six machines; three singles, three twins.

Representing the Factory—H. N. Kirk, A. G. Lyon, G. Haines, A. H. Davis.

Changes or New Features Since the Last New York Show—Several alterations and additions were made in the Excelsior line in the interval between the New York and Chicago shows. On the twins an auxiliary hand oil pump was added. On all models, both the gasoline and oil needle shutoff valves, heretofore located on top of the tank, were removed to the under sides just adjacent to the fuel outlets, leaving the top of the tank free from mechanism. An important change in the cradle fork is the introduction of an emergency safety link extending beneath the scroll leaves from the fork crown to the forward upright leaf support. Its function is to prevent the forward upright dropping forward should the mainspring break. On the cradlespring fork models, the front guard now is made in one piece with flared sides to more fully protect the rider from mud and dust. The new tank monogram also is used, and the Bosch enclosed magneto will be regular equipment. A roller pedaling chain, interchangeable with the long motor drive chain also has been adopted.

Some Features of Which the Makers Are Proud—Excelsiors now may be had either with chain or belt drive. The chain models are brand new, and use the double drive system with countershaft reduction. A multiple disc clutch is mounted on the countershaft, and also serves to compensate for jerks in the power stream. A cradle spring fork is another construction heretofore foreign to this make, as also is the cushion spring seat post. On the belt models the clutch and idler control is ingeniously centralized in one lever.

Another Big Day

ON February 2d we reached the high water mark for the number of orders and contracts received in one day.

Following perhaps as a natural and logical sequence to such a big day for our Sales Department, Wednesday, February 7th, proved to be the largest day we ever enjoyed in the production end of our business.

On that day we shipped just 91 machines, more than we ever shipped in one day in our whole history before. Enough said—you see we are still growing.

Harley-Davidson Motor Co.

Milwaukee **Wisconsin**

Forgings are used extensively, and copper tanks have the call, also. Excelsior motors have an enviable reputation for silence, balance, and smoothness of running. The connecting rod carries roller bearings on the big end. Another innovation exclusive on this machine is the trussed handlebar, forming a convenient mounting for a watch holder, lamp or speedometer, as well.

THOR.

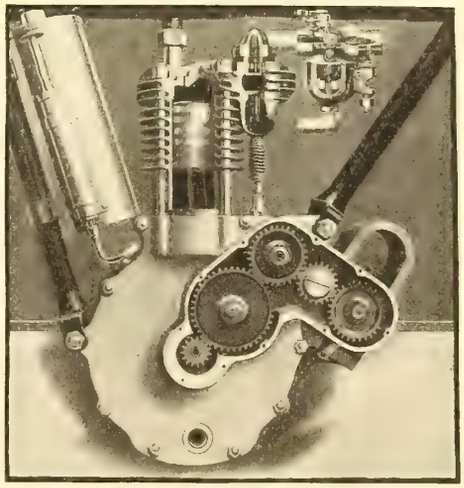
Aurora Automatic Machinery Co., Chicago, Ill.—Four machines; three singles, one twin.

Representing the Factory—E. J. Knight, F. D. Freeman, E. W. Matthews, J. McKenna, M. J. Graves, D. J. Korp, assisted by 10 Chicago sub-agents.

Changes or New Features Since Last New York Show—None mechanically. The 4-horsepower magneto single has been reduced $25, now listing at $200. A similar reduction has been made on the twin, which now is in the $275 class.

Some Features of Which the Makers Are Proud—Thor was the first American machine to use the undergeared roller transmission, which later gained other advocates. The makers also have recognized the call for comfort and respond with a spring seat post, of the hinged link type. In no other make using a clutch and two-speed will be found centralization of their control in a single lever. Not only does this system eliminate an extra lever from the control group, but it also possesses the great advantage of "thinking" automatically and surely at all times, and preventing the ruining of the change gearset by attempting a speed change with the clutch in engagement. The clutch is first released before a gear ratio is changed, and engages again when the new ratio is connected.

Another method of wooing riding comfort is tried by the fitting of 2¾-inch tires all around on the "five" and "seven." Furthermore these models are built to take three-inch tires, and still have one inch frame clearance. The top frame bar is dropped sharply at the seat cluster, giving a very low riding position; in fact, the Thor folks claims the lowest saddle position.



Wide guards to keep the mud and water off that handsome white finish, are very appropriate, and ample clearance space between tires and guards eliminates clogging of mud on bad roads, and possible injury to the tread. Thor riders will loll on the new Troxel saddle this year. It has spiral telescoping springs, which will not bottom, and consequently should give a Pullman car riding sensation.

EAGLE.

Eagle Motor Co., Chicago, Ill.—One single cylinder machine.

Specifiations—At the local branch of the American Motor Co., one model of the Eagle was displayed. It may be said to be a composite machine incorporating the most prominent features of two well-known makes. The Eagle is rated at 5-horsepower and lists at $225. It mounts a double truss keystone frame with sloping top bar. The fork is of the leaf spring type. Motor is set upright, the dimensions being 3 5-16 x 4, and the inlet valve is automatic. Bosch ignition is used, and a Schebler carbureter furnishes mixture.

Lubrication is by hand pump, from a 1½ quart tank The gasoline tank holds two gallons. Transmission is by a 1¾-inch flat bolt, with an idler for obtaining a free engine. The rear guard is detachable, and an automatic stand is fitted. Other equipment items include Mesinger saddle, Standard pedals, Eclipse brake. The finish is French gray with deep blue panels. The weight is given as 185 pounds. A 9-horsepower twin using a Spacke motor, shortly will be offered.

M-M MOTOR, SHOWING MAGNETO GEAR

M-M.

American Motor Co., Chicago Branch, 2724 Michigan Ave.—Three machines; two singles, one twin.

New Features or Changes Since the Last New York Show—None.

Some Features of Which the Makers Are Proud—At his handsome store on Michigan avenue, Manager Guy M. Greene, of the local branch, held a private show of the M-M models. Ninety degree twin cylinders always have been an exclusive earmark of this make, as also is the eccentric magneto drive. The motor has a three-point support, and is quickly demountable. Spark control is by a separate lever, which is not distributed when the sequence of explosions temporarily is cut out by raising the hand compression release. The automatic stand originated with the M-M folks, and they also were first to adopt the leaf spring fork. No other gasoline tank has a floating suspension on central points as has the M-M reservoir, which incidentally is a seamless brass tube with cast brass headers brazed in. Chains on the filler caps prevent their becoming lost if unscrewed. The muffler is unusually large, and is fitted with a cut-out. Quick and simple pedal chain adjustment is provided by a sliding hanger.

A Few Faint Echoes of the Show.

The lobby of the New Southern was a pretty dull place Sunday afternoon, the day after the show closed. That is it was until a party of live spirits composed of Squier and Bradford (Flanders) Newell (Indian) and Krackowizer (Schickel) wandered in Krackowizer, (Little Nemo of the Eastern Tour, by the way) sat down to write some postals, and the others ensconced themselves in a settee near the door. Finally, one of the party—it wouldn't be fair to say who, for the victim is bigger than any of the conspirators—motioned to a bellboy and instructed him to page "Mr. Jug O. Whiskey." With solemn face the page received his orders, but could not fathom the name until it was written on paper for him. Then with the apparent innocence of a babe he paraded around the lobby calling "Mr. Jug O. Whiskey." On the second announcement of the name the clerk, 'phone operator and others of the staff, as well as the guests went into esctacies of hilarity, ditto the conspirators. Finally the victim put a stop to the fun by flagging the page, and then resumed his post-carding more vigorously than ever. It was great while it lasted.

Squier is some recitationist of the classics, as a very select audience who were admitted to his room Sunday afternoon, discovered Krackowizer was the only one who did not appear to appreciate the entertainment, and annoyed others by turning out the lights, telephoning for the firemen and police, and finally ordering several feet of Blue Ribbon.

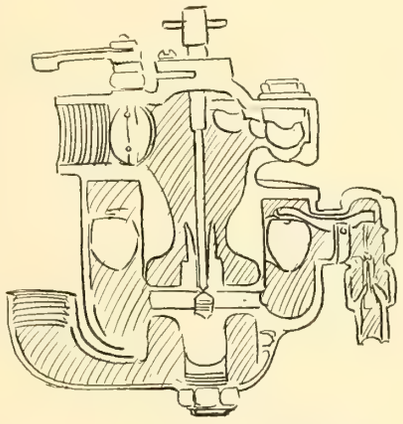
Spotswood, of Mobile, Ala., is some snoozer. He found the New Southern full one night, and was too tired to go elsewhere, when a certain scribe came along and invited him to occupy his (the scribe's) bunk as he was going to play the Underwood march all night. Spotswood accepted, saying he did'nt care if someone played a dynamite reel, and promptly slid into Dreamland with the bright lights shining on him, and the music of the Underwood typiola ringing in his ears. He came to at 8 A. M., perfectly rational.

Those who tried to obtain a few passes, will admit that a feat performed by "Thor" Freeman, Thursday, was nothing short of a modern miracle. Using nothing but his silvery tongued oratory he persuaded the ticket taker to pass a delegation of 53 employes from the Thor plant who came up to look over the show.

The Indian factory delegation arrived Monday. It was composed of George M. Hendee, the "Big Chief," Oscar Hedstrom, F. J. Weschler, R. W. Ellingham, and Charles Gustafson, Sr. Weschler was the only member of the party who stayed to the finish.

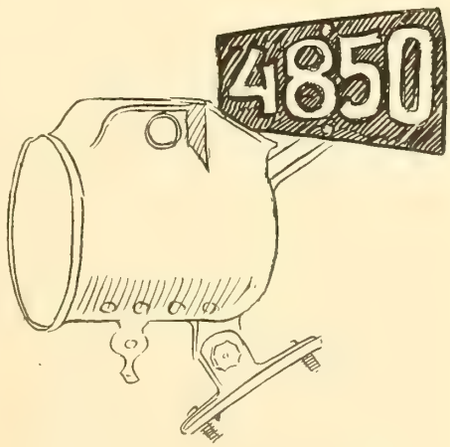
Motorcycle Sundries That Were Shown at Chicago

Chicago ,Feb. 12.—Comparatively few new things in the motorcycle sundry line were uncovered at the Colisem show. Practically all of the well-known makers of standard goods had their wares on display, and were reinforced by newcomers who showed accessories recently developed. Among the devices which were on show for the first time may be mentioned a spring seat post, applicable to any make of motorcycle using a "camel back" frame, an automatic stand pickup of the spring barrel type, enameled lamps matching the finish of the machine, several styles of acetylene tail lamps with number brackets, standard rims taking three sizes of tire, and an exhaust whistle operated by cable from the grip.



Accessory makers were divided into three camps, in the Coliseum proper, the Coliseum Annex and the Armory, respectively. Those in the Annex were chiefly manufacturers who concentrate on motorcycle sundries. At many of the stands the usual demonstrations of the operation of various devices were given, such as speedometers, magnetos, lamps and shock absorbing devices. These working models always are a valuable educational feature of the show, and make clear to the motorcyclist, the construction and operating principle of the numerous articles offered to make riding more enjoyable. At other stands, where, for divers reasons, it was not practical to show the product in actual operation, sectioned models told their silent story. The exhibitors of motorcycle accessories during the second week, and the nature of their products were as follows:

Atlas Specialty Mfg. Co., Chicago (Motorcycle Clothing and Sundries)—Knee and hip leggings, puttees, motorcycle covers, tool rolls, skirt protectors, lamp covers, hand shields, magneto covers, inner tube bags, luggage bags, tandem attachments, acetylene tail lights and automatic stand clips are some of the numerous products of this concern. The stand clip is universal and is operated by light foot pressure, eliminating bending, also soiling the hands. The tail lamp has a white front lens, so placed at the top as to illuminate the number bracket.



Auto Parts Co., Chicago, Ill. (Accessories)—In addition to a standard line of sundries applicable to motorcycles, this firm showed something out of the ordinary in exhaust chimes. The tubes are square and are banked in four units. Another novelty exhibited was a piston ring in two sections, with two slots which are overlapped, a construction claimed to prevent scored cylinders and carbonization and to retain compression indefinitely.

Ajax-Grieb Rubber Co., Trenton, N. J. (Ajax Tires)—Ajax motorcycle tires are distinguished by the diamond anti-skid tread, and are made in 28 inch diameters, in quarter sizes up to and including three inches. In selecting a tread, the object sought was to prevent skidding in any direction, which resulted in the development of the diamond blocks, and crossing the corrugations, to give full road suction.

American Bronze Co., Berwyn, Pa. (Bearing Bronze)—Adulteration of lubricating oils by the disintegration of bearing metals in fine particles, and their abrasive action on reciprocating surfaces, is claimed to be the chief cause for wear in motors, and the more or less frequent seizing and grinding out of bearings. Non-Gran bronze is offered as a high grade alloy that will not disintegrate, and affording maximum bearing service. It comes in convenient cored bars for use in repair work, also.

Kingston Carbureter with Ball Air Valves

Atlas Tail Lamp and Number Bracket

Badger Brass Mfg. Co., New York City (Solar Lamps)—Electric, acetylene and oil lamps, in many styles, and accompanied by an extensive line of brackets, for attachment to most leading makes of motorcycles, comprise the Solar offerings for this season. Three types of barrel lamp, without generator, are built, with end or side bracket lugs, cowl, and red rear signal. The electric lamp also is of the barrel type, with a silver plated parabolic reflector, and is designed to draw on a jelly type battery of 9 ampere hour capacity. In the self-contained generator type a big brother of the universally known Solar bicycle lamp, has been reared. The same well known Solar water feed system is retained, but the control has been improved by the adoption of a needle valve. Tail lamps in electric and acetylene types also were shown. They practically are duplicates save for the ventilating hood on the gas lamp. The self-contained generator bicycle gas lamp is continued, of course, together with the oil lamp.

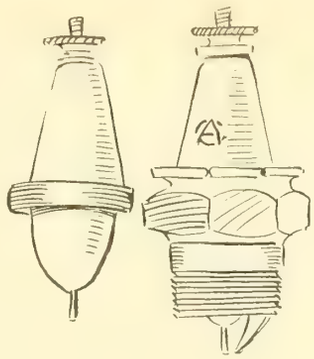
Byrne, Kingston & Co., Kokomo, Ind. (Carbureters and Spark Plugs)—Floating brass balls governing the auxiliary air supply are the dominant feature of Kingston carbureters. The device is devoid of springs and has an adjustable gasoline needle. The bowl is concentric, and is occupied by a cork float. The lift of the balls is adjustable. In the ignition line, Kingston motorcycle products are spark coils with three and four terminals, and mica plugs in standard threads.

Champion Ignition Co., Flint, Mich. ("AC")—One of the smallest plugs produced for motorcycles has been designed for the coming season by this concern. It employs a multiple poreclain insulation, which is so mounted in a bushing, as to be practically immune from breakage, either from heat, moisture or vibration, it is claimed.

Wm. Cramp & Sons Co., Philadelphia, Pa. (Bearing Metals)—Parsons white brass for bearings and Parsons manganese bronze for castings are two leading metals manufactured by this old line firm. One of the apparent attractive properties of the white brass, which by the way is not a babbitt metal, is that after it has been "run in," it acquires a glaze that is practically indestructible and requires less lubrication than any other bearing metal. The manganese bronze is claimed to be the strongest bronze made.

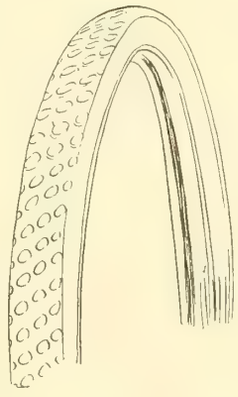
Continental Rubber Works, Erie, Pa. (Continental-Erie Tires)—These tires are

built for motorcycles in one type of tread only, studded. They are distinguished by a white tread, and are fitted with inner flaps to prevent pinching of the tube. The tubes are made specially heavy, being built of automobile material, in layers of seamless rubber, reinforced at the valve base. Both endless and butt-end tubes are produced. A full line of sundries, including both inner and outer patch assortments, pedal rubbers, and rough rider grips, were shown. Bicycle tires were to be seen, in various treads.



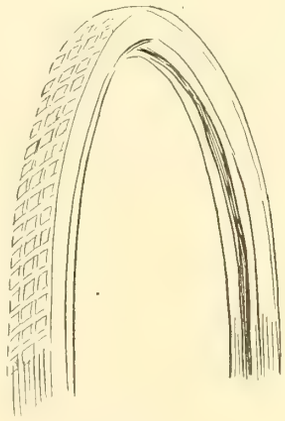
Connecticut Telephone & Electric Co., Meriden, Conn. (Spark Coils and Magneto Switches)—One of the brand new things of the season in the ignition field is a magneto switch, with lock and detachable key, by which the unauthorized use of a machine so equipped, can be prevented. The Connecticut switch is of extremely neat and compact appearance, and is designed for attachment close to the grip. It comes with a cable lead to the magneto. A quarter turn of the switch button permits its removal, which leaves the circuit locked closed.

Diamond Chain & Mfg. Co., Indianapolis, Ind. (Diamond Chains)—Diamond chains are made in sizes from one-eighth to one inch in width, the standard motorcycle type being one-quarter inch roller. Block chains for bicycles also are made in a variety of widths. The entire line was displayed on a sample board.

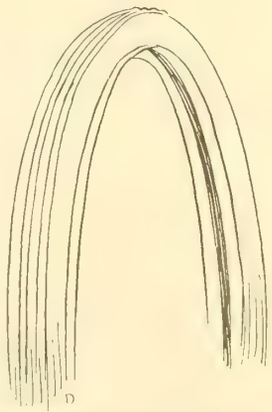


Diamond Rubber Co., Akron, O. (Diamond Tires)—Although there will be but two Diamond tire treads offered this season, the corrugated and studded, respectively, an unusually complete line of sizes will be made. The latest jewel in the family is the 29 x 3 inch heavy service tire. It is interchangeable on the standard 28 x 2½ inch rim, which also takes a 2¾ inch casing. Among the Diamond accessories are the usual repair outfits, the handlebar grips, but there also is something which surely will make a hit with the experienced rider, at least. That is the tire sleeve, which aptly is termed "the motorcyclist's spare tire." It is intended to be applied over an external cut or blowout, and its bead fits under the rim clinch, so that it is a remedy for rim cuts also. It is claimed not to creep.

Dolly Electric Specialty Co., Chicago (Electric Lighting Systems)—High capacity is the predominant feature of the storage cell used in the Dolly lighting outfit for motorcycles. It is credited with 30 hours on one charge output, when coupled to both head and tail lights. The lights are 2 volt high power Mazda, and are wired in series. Both lamps have silver reflectors, the diameter of the headlight being 3½ inches and that of the tail lamp two inches



Edwards-Crist Mfg. Co., Chicago, Ill. (Accessories)—This unusually progressive



A-C Spark Plug

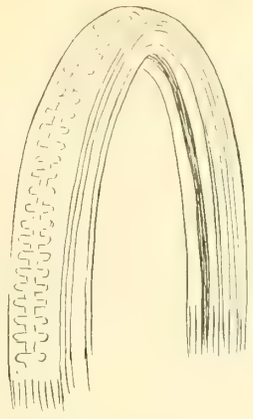
Diamond Studded Tread

Empire Checkered Tread

Federal Corrugated Tread

firm displayed the most complete line of motorcycle accessories at the show. Among the original offerings were enameled lamps to match the color of a machine, a spring seat post of the horizontal hinge type, applicable to any drop frame motorcycle, an automatic stand lift of the spring barrel and cable type, and the Purdy exhaust whistle with grip control of the valve through a cable. The standard sundries stocked include a variety of luggage carriers, tandem attachments, tail lamps and clothing.

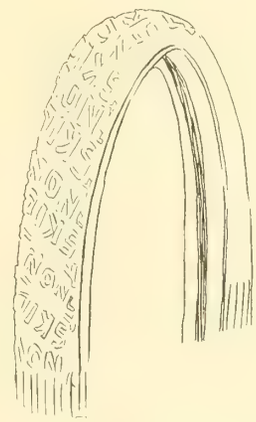
Eclipse Machine Co., Elmira, N. Y. (Eclipse Clutches and Brakes) — While Eclipse clutches were designed with a large factor of safety and overload capacity for motorcycle use, it was not expected nor intended that they should be called on to perform seemingly impossible feats. It was with no little astonishment therefore, that the makers learned recently of a terrific test to which one of their stock chain clutches was subjected by railroad men. It was applied to a 1,200 pound gasoline handcar, and for three days the car carried five men, in an effort to bring out weakness in the clutch, but it met all tests successfully. Further evidence of Eclipse durability is cited in the case of a Michigan motorcyclist, who claims to have driven his clutch equipped machine, 17,600 miles without any replacement of parts. The output for the coming season will be between 25,000 and 30,000 clutches, about equally divided between chain and belt types.



Eisemann Magneto Co., New York City (Eisemann Magnetos)—By the use of tapered pole pieces, a maximum spark at full retard is claimed for this instrument. This arrangement also is said to so energize the armature field, that a spark is obtained at very slow speed, in fact, just by twirling the armature shaft with the hand.

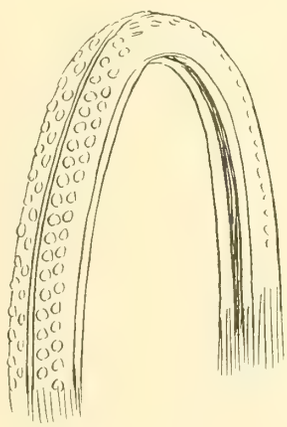
Empire Tire Co., Trenton, N. J. (Empire Tires)—In its quest for a distinctive type of non-skid tread for a motorcycle tire, the Empire Company borrowed the checkerboard design. It also builds the conventional corrugated tread, and specalizes on an inner tube which is unusually heavy, and has made for itself an enviable reputation among motorcyclists. Tubes are made both in endless and butt-end styles, and come either in red or gray color. Other motorcycle products of the house are blow-out patches, rubber V belts, belt drills, inner tube patches and ignition cable for both magneto and battery current.

Federal Rubber Mfg. Co., Milwaukee, Wis. (Federal Tires)—In choosing the types of treads for Federal tires, the youngest motorcycle tires, although made by the oldest hands in this branch of the business, those time tried and popular corrugated and studded styles, were given preference. These two types are made in the standard sizes, and in either single or double clinch. Federal tubes in butt-end and endless



styles comprise the other leading members of the family. In the sundry line, patches, pedal rubbers and rough rider grips, are among the Federal products.

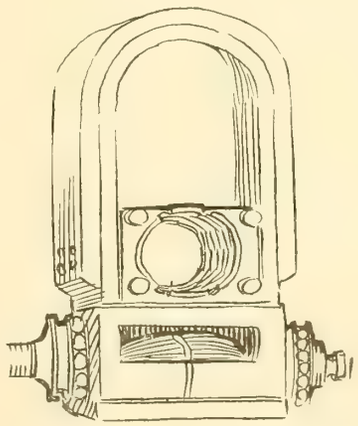
Fisk Rubber Co., Chicopee Falls, Mass. (Fisk Tires)—Three styles of Fisk motorcycle tires were shown—gripfast, corrugated and bailey treads. The first named is a distinctive Fisk origination, designed to meet all requirements of an anti-skid tire. Like several other makers, the Fisk people are offering a 29x3-inch tire. It is built to fit the new standard rim which also accommodates the 2½ and 2¾ sizes. The display was completed by an extensive show of sundries and bicycle tires.



Fisk Gripfast Tread

Firestone Tire & Rubber Co., Akron, O. (Firestone Tires)—While not cataloging it as such, the Firestone people make an anti-skid tire, 28 x 3, which is admirably suited for sidecar or tandem service. However, it cannot be applied to the regular rim, and a special wheel with smaller and wider rim and shorter spokes must be built to take it. It is the only tire of this make, which is suitable for motorcycle service.

Firestone Non-Skid Tread



B. F. Goodrich Co., Akron, O. (Goodrich Tires)—To meet the need of larger tires to take care of the heavier machines and loads now prevalent in motorcycling, this firm has brought out two special oversize type, viz.: 28x2¾ and 29x3 inches, respectively. Either of these sizes can be fitted to the new standard motorcycle rim now being manufactured for the trade. In addition to the corrugated tread, the Goodrich people have devised one of their own, styled the studded-ribbed white tread. The usual studded construction is used, save that the studs are further apart than usual, which minimizes clogging with mud. In the center of the tread is a raised rib, which takes the wear in ordinary straight-away riding, minimizes side-slipping, and conserving the life of the studs to meet the more necessary demand of corner work and muddy roads.

Goodrich Studded Tread

Goodyear Tire & Rubber Co., Akron, O. (Goodyear Tires)—In keeping with the close attention which the Goodyear folks have paid to motorcycle tires of late, it is scarcely surprising that they should have had the largest and most representative display of these goods. All of the Goodyear line was exhibited, including the new 29x3 inch heavy duty tire. This will fit the new standard rim, which also accommodate the 2¾ and 2½ inch sizes. The treads, which will be manufactured are corrugated, studded and ribbed-studded blue streak, for racing. Single and doube clinch beads will be built. The new Goodyear repair kit appeals strongly to the experienced rider because of its compactnes. It comes in a metal screw top tube, which can be carried in the toolbox without damage.

A. W. Harris Oil Co., Providence, R. I. (Lubricants)—Like most oil firms, the Harris people have recognized the increasing volume of motorcycle oil trade which is going to those who cater to this class, and have prepared to bid for their share, with a special motorcycle oil designated as "heavy" grade. As its name indicates, it is a heavy bodied oil of exceptionally high flash test, and while slightly more viscuous than the "medium" grade, yet feeds readily. For motors with loose fitting pistons or worn bearings it is recommended, as working wonders.

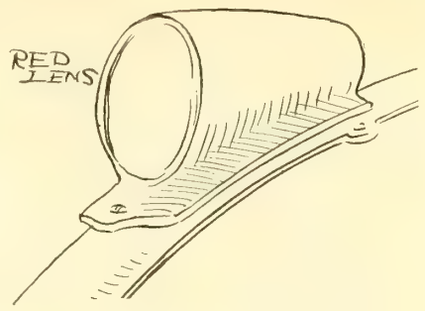
Herz Magneto With Double Magnet Shoes

C. T. Ham Mfg. Co., Rochester, N. Y. (Lamps)—Five different finishes are offered with the new Ham-Roc motorcycle lamp. Standard colors are gray, blue, red and black, and also brass finish. Primarily an oil lamp, the Ham-Roc may be converted to burn gas by the insertion of an auxiliary burner, thus providing a strong and powerful light for country riding, and a subdued warning for city motoring. The most novel and distinctive feature of the Ham-Roc is the extension rear red signal, which is quick detachable. It is an elbow tube with a red jewel facing rearward, and snaps on the side of the lamp barrel, fitting over a side jewel from which the light is drawn and reflected.

R. E. Hardy Co., Chicago, Ill. (Sta-Rite Spark Plugs)—Sta-Rite plugs are among the oldest on the market and are built on distinctive and original lines. Two motorcycle types, a porcelain insulator with open end and a mica insulator with closed end, are manufactured. In the porcelain type double insulators and spring washers are employed at the point of greatest vibration to prevent cracking. On the mica plug the shell is copper plated on the entire surface, a treatment which is claimed to reduce sticking in the cylinders. The gasket is spun on the shell of the mica plug, nut floats fre on the porcelain model.

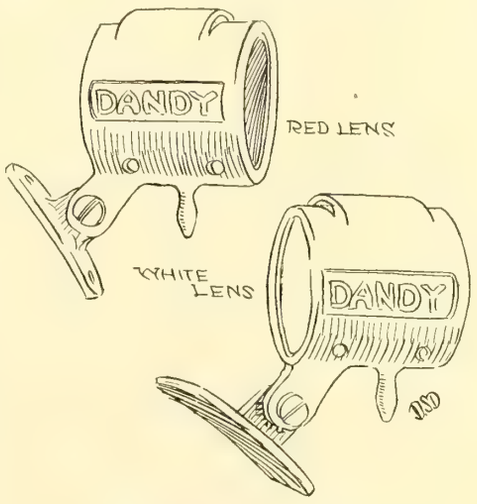
Herz & Co., New York City (Herz Magnetos and Ignition Specialties)—For 1912, Herz motorcycle magnetos have been redesigned throughout, although retaining their distinctive appearance in general. Double "U" magnets, inverted and overlapped, are used. A close fitting armature is claimed to produce high electrical efficiency, and flashing at the contacts has been obviated, by refinements in the armature and condenser. Dust proof covers are fitted to the pole pieces. An oil deflector disc on the armature shaft, near the secondary contact ring, together with a drain in the magneto base, prevents moisture or lubricants seeping into the contact box. Larger platinum points are used in the contact breaker, adjustable parts are more accessible and minor refinements otherwise have been accomplished. Two types are listed, a single cylinder instrument, built to run either at half or full crankshaft speed, and a twin magneto, revolving at half motor speed only. Other Herz products suitable for motorcycles, include a spark plug with stone insulation, claimed to be indestructible, a spark gap, for intensifying

the spark before it reaches the plug, battery terminals and plug connections, gaskets, a timing rod for setting the valves, ignition cable and a gasoline economizer.



Havoline Oil Co., New York City (Havoline Lubricants)—Freedom from carbon, by reason of repeated filtration, and still leaving unaffected the lubricating properties, are the basis on which Havoline oils are offered. Although successive filtering is said to be expensive, it is claimed to be warranted by the thorough removal of carbon, and leaving a residue of free burning oil, that will not leave a deposit in the cylinders. A special brand of motorcycle oil of medium consistency is refined. Other kindred products of this firm are greases for wheels, universal joints, compression cups and two speed gears, and also hand soaps and metal polishes.

Hawthorne Mfg. Co., Bridgeport, Conn. (Old Sol Lamps)—Seven types of lamps for motorcycles, both with separate and self-contained generators, and bracket combinations to fit every machine made in this country, leave little to be desired in the Old Sol line. Specially ground Mangin mirrors and adjustable focusing burners are the principal features which have to do with the obtainment of the high illuminating power claimed. One model rated at 1,500 candle power, is stated to be the most powerful motorcycle lamp built. A tail lamp with rear light and red side jewels, is furnished with mudguard attaching bracket. Embodying many of the features of the motorcycle lamps, a bicycle model of self-contained generator type recently has been brought out. All Old Sol lamps are of the acetylene type.



S. Hoffnung & Co., New York City (Chains)—English Coventry roller chains for motorcycles and bicycles are one of the leading lines handled by this firm. A new chain of the silent type is the most recent addition to the family and is intended for motorcycle short drive service.

Imperial Brass Mfg. Co., Chicago, Ill. (Tail Lamps)—A very neat acetylene tail lamp for motorcycles was on view at this space. The lamp body was of aluminum, with white front light to illuminate the number plate, and red rear signal. The lenses were beveled. A rocking bracket was fitted, permitting the lamp to be tilted to any position.

International Acheson Graphite Co., Niagara Falls, N. Y. (Oildag and Gredag)—Oildag is the trade name for a lubricant having a graphite body diffused in oil, and subjected to atomization to an almost incomprehensible degree. It is intended to be mixed with lubricating oil in proportions determined by the sizes of the various cartons in which it is put up; and is claimed to reduce friction and wear to a minimum, decrease carbonization, lessen oil consumption, promote smoother running of the motor and assist in sustaining compression

Star Tail Lamp Banked on Guard

Imperial Acetylene Tail Lamp

for a long period. Gredag is a soft, fine, gritless graphite preparation, designed for use elsewhere than in the motor.

Jones Speedometer Co., New Rochelle, N. Y. (Jones Speedometers)—All three types of Jones instruments are of the centrifugal type, and are fitted with 80 mile dials, to accommodate the present speeds of high powered machines. A watch combination, and a maximum hand, are special features. The latter device is an extra hand, which is carried up to the highest speed attained by the regular needle, the auxiliary needle remaining, when the regular one drops back. The auxiliary hand is released by a thumb spring. Front and rear drive systems are furnished.

Kinsey Mfg. Co., Toledo, O. (Gaskets)—Parts making is the specialty of this company. Among its products shown were brass and copper gaskets in a wide assortment of shapes and sizes.

Michelin Tire Co., Milltown, N. J. (Michelin Tires)—This famous foreign brand, now built in America also, is offered to motorcyclists in one size, 28 x 3, with either corrugated or bailey treads. Michelin red inner tubes have been compared with casings of some other makes for durability and strength. For filling cuts in the tread and preventing rot and sand blisters by the entrance of moisture, Michelin mastic has been compounded. It is a plastic cement, which hardens when exposed to the air.

Leather Tire Goods Co., Niagara Falls, N. Y. (Woodworth Non-Skid Tire Treads)—Although it may not be generally known to the riding fraternity, these steel and leather tire treads now are made for motorcycles. They come in sizes for 26, 28 and 30-inch wheels, in all the standard tire diameters up to 3 inches, but are recommended for use only where there is one-half inch frame clearance, on each side of the tire. The principle of the device is a cowhide leather envelope studded with steel buttons, some hardened, some soft, which is intended to be appled over the tire casing to prevent skidding. It is retained by side springs, and is claimed to be very efficient, both on pavement and macadam, owing to the varying hardness of the rivets.

A. R. Mosler & Co., New York City (Mosler Spark Plugs)—Mosler motorcycle plugs are built in three types—with solid mica core; mica core covered by a porcelain shell, and porcelain only. The two first named are recommended as most suitable for motorcycle engines. They are unusually short, eliminating possibility of short circuiting through contact with some adjacent conductor. Standard half inch or metric threads are furnished.

Nathan Novelty Mfg. Co., New York City (Motorcycle Clothing and Sundries)—Koveraul is the suggestive name of the latest development in motorcycle clothing by the Nathan people. It is designed to slip over a street suit, and is a two-piece outfit, combining the leggings in the trousers. The fabric is waterproof mackintosh and is claimed to be water and dust proof, and not to disarrange ordinary clothing over which it may be worn. While this garment is the leader of the Nathan line, there are numerous other articles of riding apparel, such as knee and hip leggings, puttees, skirt protectors, hand wind shields, machine covers, lamp covers, magneto covers, luggage carriers, inner tube bags, tool rolls and outer repair sleeves.

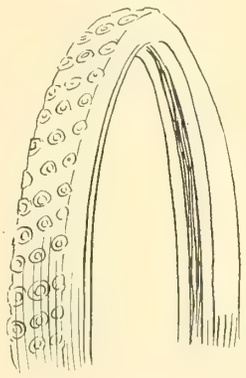
New York & New Jersey Lubricant Co., New York City (Lubricants)—Motorol is the trade name of this company's cylinder oil, and for motorcycle use Grade "D" an extra heavy fluid, is recommended. For hubs, two-speeds, grease cups and ball cups a non-fluid oil is offered. Its name indicates that it does not run or drip, and yet does not have to be thinned to perform its work.

Pyrene Mfg. Co., New York City (Fire Extinguishers)—While the average motorcycle rarely catches fire, and the rider therefore very naturally gives little or no thought to such a possibility, the danger is magnified in garages or stores where a number of machines are kept. Pyrene is a liquid solution, discharged under pressure from a special form of container, and is claimed to be highly efficient in instantly smothering gasoline, oil and acetylene flames.

Pittsfield Spark Coil Co., Dalton, Mass. (Pittsfield Coils and Plugs)—These well-

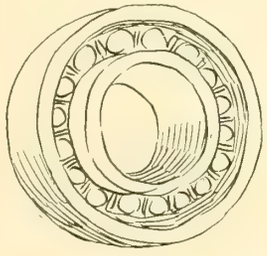
known products long ago became standardized. Two sizes of coils, for single and twin motors, with four and five cables, and flat and torpedo heads, are manufactured. Jewel mica plugs also are listed, the Type A, having one pair of points, and intended for battery service chiefly, while the Type B, or magneto plug has two pairs of firing points. All standard and metric threads will be furnished.

Pennsylvania Rubber Co., Jeannette, Pa. (Pennsylvania Tires)—For the coming season, the Pennsylvania vacuum cup tread will be the leader of the motorcycle products manufactured by this company. Changes over last year are, increased size, number of layers of fabric and thickness of tread, all of which combine to give greater mileage. The advantages claimed for the vacuum cup tread are that it retains its non-skip properties longest, that the thick cups give increased mileage, punctures are minimized, the vacuum helps keep the tire cool and traction is increased. Pennsylvania bicycle tires are built with the same tread, and also in corrugated style.



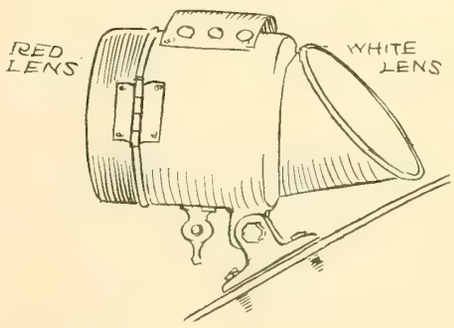
Royal Equipment Co., Bridgeport, Conn. (Raybestos Brake and Clutch Friction Fabric)—Wherever friction material is used on motorcycle clutches or brakes, Raybestos usually will be found, for it is widely employed for this purpose. It is a fabric having an asbestos foundation, and is specially woven and treated to adapt it for the severe service to which it is subjected.

Rhineland Machine Works Co., New York City (Ball Bearings)—Single and double row bearings are the offerings of this house, and they are assembled in rigid and self-aligning races. The distinctive feature of the spring steel separator is its elasticity, permitting it to be made in one piece and eliminating screws, rivets and other independent fastenings.



Stewart & Clark Mfg. Co., Chicago, Ill. (Stewart Speedometers)—There is something "magnetic" about a lighted frame of speedometers in operation, which invariably attracts and holds the attention of the show-goer. The instruments on the Stewart demonstrating board were representative of practically all models of the line, and were driven in the usual manner viz.: by concealed motors. The speeds were constant, and it was interesting to watch curious ones stand before the motors, and after contemplating the almost imperceptible fluctuation of the indicating needle, some times make impromptu tests of their own, by pounding on the frame to try to vibrate the needle. Indeed one show-goer was overheard to ask a booth attendant: "Say, Mister, is them hands painted on? I can't catch 'em moving." There are three motorcycle models with 60, 75 and 90-mile dials, respectively.

Star Electric Co., Chicago, Ill. (Accessories)—Tail lamps, luggage carriers, tandem attachments, exhaust whistles, tool boxes, and oversize gasoline tank caps are the offerings of this house. The tail lamp is made in two types, one for rear use only, and the other with adjustable bracket, permitting its use in front or rear. Both are designed to fasten to the guards, and use acetylene gas. Supplied in gray, blue or black enamel, or nickel, the luggage carrier is applicable to a machine, without necessitating changes in either, it is claimed. Tandem attachments are stocked, both in rigid and spring types. The gasoline caps are designed to be attached to machines already having small filler openings, which will not accommodate standard garage measuring devices.



F. W. Spacke Machine Co., Indianapolis, Ind. (Cycle Motors and Transmissions)—Many advanced features of motor design are incorporated in the Spacke motors, which are built in single and twin form, in four powers. The magneto drive is particularly interesting. The main shaft carries a spiral worm which meshes with another worm on a cross shaft, running horizontally parallel with the right wall of the motor base, across the shaft center line. The valve cams are forged integral with this shaft, which thus performs two functions. At the forward end the shaft has a dog coupling with the armature, and this coupling has two serrated faces which permit of regulating timing to a fine point. While consisting of two parts, the motor base is not split centrally, but the ends are cast integral with the left side, making a pan shaped casting, over which the right plate fits as a cover. This construction is claimed to give maximum strength to the base, as well as to contribute toward keeping oil inside the engine. The one-piece crankshaft, for which great rigidity is claimed, rides on big annular ball bearings. Single lever control is the feature of the clutch and gearset, the former being disengaged before the speed dogs are shifted. The clutch is of the multiple disc type with friction facing, and the discs are locked to their respective shafts by gear teeth instead of the usual dogs, a construction claimed to distribute the strain over a wider area of metal.

Pennsylvania Vacuum Cup Tread

"Open" Side of U. S. Bearing

Ecco Tail Lamp and Number Bracket

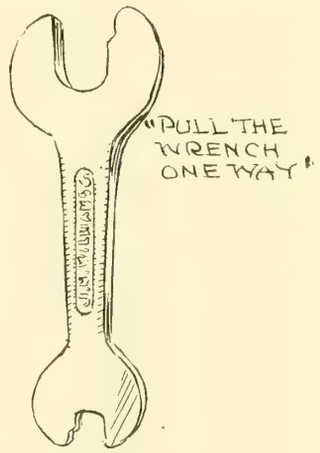
C. F. Splitdorf, Inc., New York City (Splitdorf Magnetos and Plugs)—These well known products were shown both "alive" and "dead." Easy starting, one of the advantages claimed for the magneto, was demonstrated by an instrument fitted with hand wheel, which produced a spark at low speed.

Standard Welding Co., Cleveland, O. (Electric Welded Tubing)—One of the most interesting accessory exhibits at the show, was the display board of tubing and rims delineating a motorcycle skeletonized from Standard products. Almost the only components necessary to complete the ensemble, were power plant, transmission tanks and tires. Another attraction at this space was the new standard single clinch rim, which has been accepted by the tire manufacturers, and will take 28 v 2½, 2¾ and 29 x 3-inch tires. All rims now are inspected by a representative of the tire companies, who stamps those which come up to specifictions.

Standard Roller Bearing Co., Philadelphia, Pa. (Ball and Roller Bearings)—These bearings are made in sizes suitable for crankshaft, connecting rod and wheel loads. The balls are assembled in a two-piece bronze separator, which is loaded before insertion in the raceway, the union of the separator halves being brought about by riveting.

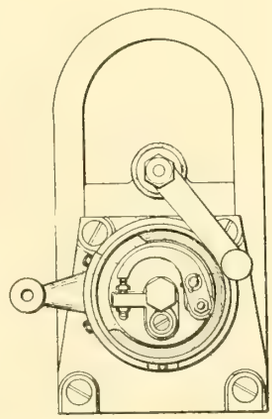
The Texas Co., New York City (Texaco Oils)—Lubricating oil and gasoline marketed under this brand, are offered as quality products. Clean burning, zero cold test, and lasting body, are properties attributed to the oil, while from 10 to 15 per cent. mileage increase per gallon is said to accompany the use of the gasoline.

Timken Roller Bearing Co., Canton, O. (Timken Roller Bearings)—Enjoying a wide and well deserved popularity in the automobile industry, these bearings now are gradually forcing recognition from mo-

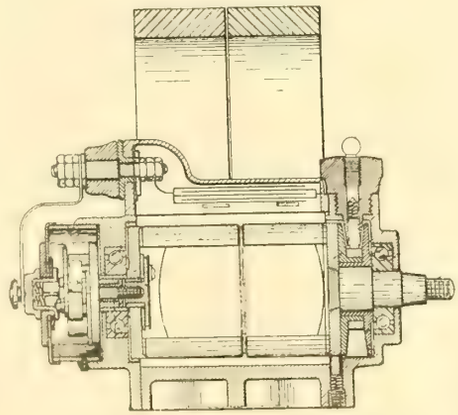


torcycle designers for heavy duty work. They already are being employed in rear axle work.

United States Tire Co., New York City (United States Tires)—With the birth of the new United States studded tread, there now are five different types in this family of old-time tires. The new studded tread is not to be confused with a bailey, although there is a general resemblance. The studs are large and firmly imbedded in the tread, a manufacturing method which is claimed to produce a long lived tire. It is made in single and double clinch types, in standard sizes. For tandem or sidecar work there also is a new special tire called the "Tandem Weight." It is a combination corrugated-studded tread, the central rib protecting the studs from wearing down quickly. In this tire there are four plies of fabric, one more than usual, and like the studded type, it will be built in 2¾-inch diameter. It is recommended strongly for heavy duty work on twins and tandem riding. The old familiar corrugated, nobby, and bailey tread tires, will be continued, under their original brand names of G & J and Morgan & Wright, respectively, but the new studded treads will be designated as United States tires.



U. S. Ball Bearing Co., Oak Park, Ill. (Ball Bearings)—This bearing is of the annular type with one-piece separator, and is loaded individually from a side slot in the raceway. A double row type, thrust bearings, and a special magneto bearing also are manufactured.



Van Cleef Bros., Chicago, Ill. (Rubber Cements)—Under the style of "Dutch Brand," this firm exhibited a complete line of rubber cements, and also lubricants and carbon removers. It was the only exclusive exhibit of the products mentioned. Those riders, and they are legion, who have experienced punctures, only to find their cement container crushed by tools and the contents either long dried or otherwise useless, will appreciate the new motorcycle cement container which this house is offering. It is a metal tube, of suitable length to fit the average toolbox, and the contents are ready for use upon removing the top. For gashes and bruises in tire casings, "Mold-It" is manufactured. It is a plastic cement which is kneaded into the wound and allowed to harden, and is claimed to prolong considerably the life of a tire. In addition to making a cement for every motorcycle and bicycle need, a line of specialties consisting of graphite, oils, ball bearing compounds and carbon solvents are produced.

Vesta Accumulator Co., Chicago, Ill. (Electric Lighting Systems)—An exceptionally neat electric lighting system for motorcycles was shown at this stand. The outfit consisted of a bullet type headlight with silver mirror lens, a tail lamp with ruby lens, and a jelly type storage cell, of convenient size to fit the standard tool case. The battery is encased in a hard rubber jar, and takes its name from the consistency of its ingredients, which are not unlike table jelly. The life of the battery is said to be three years, and that there is no acid to splash and eat adjacent metal. While the lighting capacity is stated to be 18 ampere hours on one charge, a recharge after 15 hours is advised, to allow for temperature changes, and also because it is not advisable to completely discharge the battery, continuously. The cost of recharging ordinarily is very low, but a direct current must be used, and the rate of charge slow. The battery can be carried horizontal if necessary, without detriment. The headlight has a four-inch reflector, and an adjustable Tungsten bulb for long or short focus to obtain a beam or fan light. The tail lamp is mounted on the rear guard. The entire outfit weights six pounds.

Williams Ratcho Wrench

Circuit Breaker End of Splitdorf Magneto

Cross Section Splitdorf Magneto

Veeder Mfg. Co., Hartford, Conn. (Veeder Cyclometers)—With the advent of cradle and caster spring forks on motorcycles, new fittings had to be devised to permit of the safe mounting of any accessory operating mechanism on the front wheel. The Veeder cyclometer bracket is of the universal type, to accommodate its attachment to any front fork without interference with the wheel, or fork mechanism. Performing many of the functions of the speedometer, the cyclometer appeals strongly to many because of its comparative economy, both in first cost and upkeep.

Warner Instrument Co., Beloit, Wis. (Warner Cycle Meters)—Of the magnetic type, and distinctive appearance, the Warner cycle meter is of the same pattern and construction as one of its popular motor car models, although listing for less. It now is equipped with a small electric bulb to permit of the dial being read at night. The Warner is built for front drive only, through a snail gear, this system being advocated as most satisfactory for all around service. The odometer mechanism has a double reset, which permits of touring by roadbook, and resetting mileage to correspond, should the right road be departed from temporarily for any reason.

J. H. Williams & Co., Brooklyn, N. Y. (Drop Forgings)—In addition to its sets of standard, open end wrenches, this old established firm also is offering a complete line of "Ratcho" wrenches, which, as the name implies, affords an automatic ratchet action without any additional mechanism, reducing wrench operation to a minimum effort. A special line of spark plug box wrenches also is listed.

Wheeler & Schebler, Indianapolis, Ind. (Schebler Carbureters)—Although employing a single jet, the Schebler is credited with enjoying some of the advantages of a multiple jet carbureter. The throttle actuating arm carries a cam, which, when the throttle is opened, acts on the spring controlled gasoline needle, raising it from its seat in proportion to the degree of throttle opening, and admitting more gasoline. Extra air demands are taken care of by the auxiliary valve. The principal feature of the device are concentric float chamber, cork float and independent high and low speed adjustments.

Chicago and Columbus both flooded the show with campaign matter, in their scramble for the F. A. M. meet this year. The Chicago Motorcycle Club got out flaming red booster badges which were pinned on all who could be enlisted to root for "Chi." Columbus had agents on the spot, too.

Latest F.A.M and Club News.

MEMBERSHIP COMMITTEE BULLETIN

Chairman Estabrook Announces 50 Motorcycle Lamps for Membership Prizes—Contest to Last from March 1 to June 30—More Repair Shops.

Several weeks since it was intimated that the chairman of the membership committee might possibly have some sort of a proposition to offer affiliated clubs and prospective F. A. M. clubs whereby they might obtain one or more fine motorcycle headlights without price. It will be remembered that a similar proposition was in force during the month of May, 1911, when 15 "Old Sol" headlights were offered as prizes to competing clubs. The competition resulted in a gain of 30 new F. A. M. clubs with a total of 1,043 affiliated members for the month. The result of this competition was entirely satisfactory to the Hawthorne Mfg. Co., of Bridgeport, Conn., the donors of the lamps, and to the officers of the F. A. M. and to many clubs, but it was found that the time limit was such that clubs in the embryo stage did not have time to build up their membership and organize, and come in within the limit, thereby depriving them of a chance to secure one of the prizes offered for their benefit.

Chairman Estabrook is now cogitating on a scheme which will remedy this and other minor defects in the plan, and purposes to have the proposition in force during four months, beginning with March, and to increase the number of headlights to 25. The proposition for F. A. M. clubs will likely extend over the whole four months, being decided on June 30.

As an inducement to club organizers and clubs outside of the F. A. M. to build up their membership and affiliate with the national body, the chairman will likely put up four lamps monthly during the continuance of the contest, retaining three with which to satisfy ties.

A circular explainng the proposition will be mailed to all F. A. M. clubs and to all club prospects as noted on the chairman's card index; likewise all registered F. A. M. repair shops, district and State officers will receive the circular and as many local commissioners as the chairman is cognizant of.

Under date of Feb. 1 the Hawthorne Mfg. Co. made the following unconditional offer to Chairman Estabrook:

"Answering further your letter of January 22, particularly that part with reference to "Old Sol" lamps to be given to the F. A. M., to be distributed as prizes, we wish to donate and hereby offer you as chairman of the membership committee of the F. A. M., to be distributed by you as outlined in your letter of January 22, 50 'Old Sol' No. 8 lamps complete with pair of 'A' brackets, or any other pair of brackets made by us, that the winner of the prize may select. Our offer is for 25 lamps to be taken by you at any time between this date and July 1 next, and 25 to be taken at any time between July 1 and the end of the year.

"The lamp we offer is our largest and best motorcycle lamp. It is the one we feature prominently in our chart, and it is receiving the most favorable notice from riders all over the country. This lamp gives a light of about 1,500 candle power, is furnished with a Mangin mirror lens 6" in diameter, ground for us to our own dioptic specifications, and will give more light than the average automobile lamp. In fact, such is the excellency of its lenses that it gives more light than some lamps having a lens from 1 inch to 2 inches larger in diameter. The retail price of this lamp with pair of brackets is $7.50, and we believe that it is the richest prize that any manufacturer could offer in so large a quantity.

"We wish you and the F. A. M. the greatest of success for 1912 and hope that this offer of lamps will prove of great value to your Federation."

The recently organized Flower City Motorcycle Club, William Krieg, secretary, Lincoln Park, N. Y., has a goodly sprinkling of F. A. M. men among its members, and is considering affiliation on a 100 per cent. basis.

Proprietors of registered F. A. M. repair shops are evincing much interest in local recruiting work, all of which is cheerful news to the officers who have had to go out into the field and dig for F. A. M. members. Many of the shops are now using on their stationery and other printed matter, the little special electro of the F. A. M. sign, designed by the chairman for this purpose. The week ending February 9 was responsible for a gain of 14 newly registered shops, as follows:

W. H. Knight, 219 Fourth street, Sioux City, Ia.; Aichele & Son, 68 Portage avenue, Fort Wayne, Ind.; Cummings & Martin, 105 East Greene street, Ithaca, N. Y.; Paul Hanke, 3545 West North avenue, Chicago; R. E. Day, 944 South D street, Tacoma, Wash.; F. E. Best, North avenue and Temple street, Owego, N. Y.; Charles Petmecky, 203 West Sixth street, Austin, Tex.; P. E. Reichel, 14 East Charles street, Massillon, O.; Arey Hardware Company, 123 South Main street, Salisbury, N. C.; P. E. Marlott, 501 Fifth street, Santa Rosa, Cal.; William Ruel, 841 Washington street, Reading, Pa.; Harry L. Neff, 106 Federal street, Pittsburgh, Pa.; S. V. Doherty, 41 Buffalo street, Lockport, N. Y.; C. S. Hinckley, 47 La Salle street, Aurora, Ill.

Wanted, New Track at Portland, Ore.

Portland, Ore., Feb. 9.—January's feature in the way of entertainment by the Portland Motorcycle Club was the smoker given on the 15th of that month. Invitations were liberally distributed to motorcyclists of the city and, well, the club rooms would not hold the throng.

Prospects are good for a third-mile saucer track for Portland the coming summer. Prominent club members are endeavoring to interest the street railway company in the project so that it may be included as one of the Oaks Park attractions. The club is also in correspondence with Jack Prince, with the view of having him erect a record-breaking speed bowl that will be a credit to the Great Northwest Country.

At the last business meeting of the club 14 new members were admitted.

Jerseymen Will Have Another 24-Hour.

Newark, N. J., Feb. 14.—It was settled at last Tuesday's meeting of the club that the annual endurance run of Memorial Day would be a 24-hour contest, and it was also urged that the conditions be made more difficult than was the run held last year. It was argued by Road Captain Stevens that a trip of at least 300 miles be mapped out. He suggested a route from Newark across to Trenton, then south to Camden and further followed by a dip down to Cape May. The return route would be by way of Atlantic City. This, Stevens said, would furnish the desired mileage and it would also cut out the hills experienced in North Jersey. The New Jersey club had the distinction a year ago of conducting the first

24-hour contest ever held by motorcyclists, and while old-timers in the game were skeptical of the success of the event they afterwards praised the local club for its enterprise and efficiency in handling the affair. This year, judging from the amount of interest so far displayed, the entry will be heavy.

Members of the New Jersey Motorcycle Club blossomed forth in a social way Friday night at their annual reception in Oraton Hall. The affair proved quite successful, as a good-sized crowd was present. There was a dancing program of 24 numbers and the motorcyclists were tripping the light fantastic until the small hours of the morning. Herman C. Page was floor manager and P. W. Stevens, assistant.

Oscar Smith, former financial secretary of the club, is now at Savannah, Ga., where he will enter the lumber business.

Invincibles Announce Century Runs.

First of the season to be announced in the metropolitan district, is the combined single and double century over Long Island's famous highways, of the Invincible Motorcycle Club of Brooklyn. The event is scheduled for Sunday, May 5. Start will be made at Bedford Rest, Eastern Parkway and Bedford avenue, thence to Merrick Road, to Patchogue where will be the turning point of the single and the checking station of the double, the latter to turn at Southampton, L. I.

Three classes will be open, private owner, trade rider, and professional. To all finishers within the time limit, will be awarded gold pins in the double and silver pins in the single.

Entry blanks will be obtainable within a few days and the best route by which the New York riders may reach the starting point will appear in these columns in the next issue.

Successful House Warming at Washington.

Washington, D. C., Feb. 12.—"Open house" was in order on the evening of February 8 at the headquarters of the National Capital Motorcycle Club, 906 Pennsylvania avenue, which were handsomely decorated with the club colors, maroon and blue. The program as ably prepared by Messrs. Cohan, Throod and Boyle, the entertainment committee, consisted of a smoker, followed by a buffet lunch. Entertainment was afforded by musical talent from the club.

An address was made by President Yowell, setting forth the work and objects of the club, which was aptly illustrated by a bulletin board containing press accounts of the active work of the club during the past month. He was followed by Sergeant Headley, of the local police department, who attended as a representative of the District commissioners, in a felicitous address, in which he expressed a desire for co-operation between the authorities and motorcyclists.

At the last regular meeting it was decided that an endurance run be given by the club in the near future, and a committee was appointed to arrange the details. This run will be held under F. A. M. sanction, and riders from all over the country will be invited to attend. Thos. R. Dodge, a member of the club, is promoting a meet at Berks Station, Va., on Memorial Day, May 30, and has invited all club members to participate.

Show Visitors Entertained by Chicagoans.

Chicago, Feb. 10.—Visitors and tradesmen attending the show were given a great time at the smoker of the Chicago Motorcycle Club, Thursday evening, February 8. The large ballroom of the club was crowded with 150 guests and club members and refreshments were served at the conclusion of the evening's program. Addresses were made by S. A. Miles, general manager of the National Association of Automobile Manufacturers, under whose auspices the show is held; P. B. Whitney, representing the F. A. M., and A. Eugene Bolles, of New York.

The Chicago Motorcycle Club has started out with excellent prospects of building up one of the strongest organizations in the country.

Sydneyites Have an Interesting Meeting.

Sydney, O., Feb. 12.—At the regular meeting of the Sydney Motorcycle Club, held last Friday evening, the certificate of club membership from the F. A. M. was hung up in the meeting room and admiringly inspected. The number of the certificate is 210. Mayor Duncan, of Sydney, was elected to honorary membership—an evidence that the club is in harmony with the municipal authorities.

Alfred Yarber read a very entertaining paper on ignition and electrical appliances in their relation and use on motorcycles.

Motorcycle Doings in the Far Southwest.

San Diego, Cal., Feb. 12.—Organized three years ago, the Motorcycle Club of San Diego now has a membership of 125 in good standing, and the club house at 1400 Twenty-ninth street is always open to members and visitors. The affairs of the organization are transacted through a board of directors, consisting of the following: President, Chas. E. Osborne; vice-president and treasurer, C. A. Shepard; secretary, Frank E. Copley; J. E. Dobson and J. G. Rorai. The other officers are: Sergeant-at-arms, W. O. Borden; captain, Walter House.

Club runs are held every other Sunday, and the average attendance at these is 50. The club is preparing for its annual May

SMOKER TENDERED VISITORS TO THE RECENT CHICAGO SHOW BY THE CHICAGO MOTORCYCLE CLUB, FEBRUARY 8

endurance run, which will take the form of an 18-hour contest for which valuable prizes will be offered. A record breaking entry list is expected.

Los Angelans Remodeling Club House.

Los Angeles, Cal., Feb. 10.—Forty members and visitors participated in the semi-monthly run to Pomona, February 3. The day was perfect and the roads in magnificent condition, and everybody enjoyed themselves to the limit. After the run a reception was held at the club house in the evening, refreshments were served, and an orchestra enlivened the occasion with selections from the latest popular airs.

The club is remodeling the quarters at 449 West Jefferson street, and within a week or two expect to have one of the most comfortable and best equipped club houses in the city.

Concourse Motorcycle Club Elects Officers.

New York City, Feb. 14.—At the annual election of the Concourse Motorcycle Club held February 13, the following officers were elected for the ensuing year: President, W. A. McClellan; vice-president, George Heinig; recording secretary, V. T. Nydrle; financial secretary, L. Herberger; corresponding secretary, C. L. Forbisher; captain, M. P. Sullivan; directors, J. J. McNally, D. McGregor, J. C. Foley; trustees, A. T. Merrick, L. Restrepo, George Heinig, A. Smith C. L. Forbisher.

Turkey Banquet Enjoyed by Readingites.

Reading, Pa., Feb. 12.—Last Thursday the Reading Motorcycle Club celebrated its first annual banquet at the Spring Valley Hotel. Thirty-two members gathered at the banquet table and enjoyed an excellent turkey supper. Addresses were delivered by President John F. Hartmon, William Schaeffer, James Mayo, A. E. Keyport and John G. Nuebling. Carl Tobias entertained at the piano. Five new names were submitted for membership.

Iowa's Capital City Motorcyclists Elect.

Dubuque, Ia., Feb. 10.—Officers for the current year elected last month by the Dubuque Motorcycle Club are as follows: President, Dwight Curtiss; vice-president, William C. Imhoff; secretary-treasurer, Hermann E. Eschen, Jr.

Plans for securing a cottage to be used as a sumer club house have been completed, and the annual banquet of the club comes off February 14.

Midwinter Dance of the Worcester Club.

Worcester, Mass., Feb. 12.—There was a very large attendance at the midwinter dance of the Worcester Motorcycle Club, held at the club house on Tuesday evening last. The winter dances given by the club are very popular with the fair sex here, most of whom are great motorcycle enthusiasts and ride tandem during the summer months.

RECORDS SMASHED AT LOS ANGELES

Hasha, On Indian, Sets New Marks at Two, Three and Four Miles—8,000 People Witness Opening of New Track.

Los Angeles, Feb. 12.—Three new world's records stand as a fitting memorial of the opening motorcycle racing card at the Los Angeles Stadium, Sunday afternoon. Fully 8,000 people witnessed the eight event matinee and not an accident or unpleasant feature occurred to mar the afternoon's sport.

W. E. Hasha, a 20-year-old lad from Waco, Tex., made his first appearance in Los Angeles, and acquired a firm grip on the championship robe that Jake DeRosier has been wearing. The "Texas Cyclone" was the feature of the matinee—he was the "whole show."

Riding against such men as De Rozier, Joe Wolters and Raymond Seymour, the Texan entered the two, three and four-mile events for class A professionals, and came away with three firsts and three world's records. Jack Prince's latest race track venture was "built for speed," with a 50 per cent. grade, and Hasha got the speed out of it.

Beautiful sunny weather favored the opening of the new speed bowl, and veteran Charles Fuller Gates officiated as referee. Class B professional racing was successfully inaugurated, and the dove-tailing of Class A and B events produced a program that went through in 90 minutes without a hitch, greatly pleasing the vast crowd. Altogether the management was perfect. Wolters protested Hasha's Indian racer, but the measurement was found to be all right officially.

The third race of the day offered the first distinct thrill. Jake De Rozier got away with a flying start and led for the first mile of the two-mile race. Then Joe Wolters nosed ahead of the flying Jake and the two retained their positions until the last lap, when Hasha let out an extra kink and forged to the front for his first record of the day—two miles in 1 minute, 19⅗ seconds. The former record was 1 minute 23⅘ seconds.

The three-mile race between the class A professionals was practically a repetition of the story of the two-mile event, De Rozier led for a time, only to lose his advantage to Wolters, and Hasha again nosed in with a victory in the last lap, taking his second win and second world's record—three miles in 2:01⅗ seconds; previous record, 2:05.

In the final heat, four class A professionals, Joe Wolters, Raymond Seymour, Charles Balke, and Hasha, faced the starter's gun. Hasha took the lead in the second lap, with Balke, Seymour and Wolters strung out behind him, and they crossed the finish line in the same order. Hasha made the four miles in 2:40⅕, the former record being 2:47.

In the second race Al Ward outgeneraled the Samuelson brothers for class B professionals. Ward again won his race in the four-mile handicap, the concluding event on the program, although Hasha, Wolters and Balke steadily climbed up to him.

First race—Two mile amateur, for stripped stock machines of 30.50 cubic inches piston displacement, won by Montgomery (Excelsior); second, Don Johns, (Indian). Time, 1:58.

Second race—Two miles, first heat, class B professionals, won by Al Ward,(Indian); second, Will Samuelson, (Indian); third, T. M. Samuelson, (Excelsior). Time, 1:30.

Third race—Two miles, first heat, class A professionals, won by W. E. Hasha, (Indian); second, Joe Wolters, (Excelsior); third, Charles Balke, (Exceusior); fourth, Jake De Rozier, (Excelsior). Time, 1:19⅗. (World's record.)

Fourth race—Two miles; second heat, class B professionals, won by Hubert Kittle, (Merkel); second, John Albright, (Indian), third. Time, 1:31.

Fifth race—Three miles; second heat, class A professionals, won by W. E. Hasha, (Indian); second, Charles Balke, (Excelsior); third, Joe Wolters, (Excelsior); fourth, Jake De Rozier, (Excelsior). Time, 2:01⅗. (World's record).

Sixth race—Five miles, final heat; class B professionals, won by Al Ward, (Indian), second, John Albright, (Indian); third, W. Samuelson, (Indian); fourth, Hubert Kittle, (Merkel.) Time, 3:53.

Seventh race—Four miles, final heat; class A professionals, won by W. E. Hasha, (Indian); second, Charles Balke, (Excelsior); third, Raymond Seymour, (Indian); fourth, Joe Wolters, (Excelsior). Time, 2:40⅗. (World's record).

Eighth race—Four mile handicap; class A and B professionals, class B men receiving half lap handicap, won by Al Ward, (Indian); second, W. E. Hasha, (Indian); third, Joe Wolters, (Excelsior); fourth, Charles Balke (Excelsior). Time, 2:38⅕.

Washington's Birthday Races at Savannah.

Savannah, Ga., Feb. 12.—Washington's birthday will be celebrated here by the Savannah Motorcycle Club who will hold a race meet February 22, on the half-mile dirt track here. This will be the first event held by the club under F. A. M. sanction, all previous races held here having been road events. There will be about ten races on the program.

The city authorities here are about to draft an ordinance preventing a motorcycle carrying two persons thereon. The Savannah Motorcycle Club has appeared in protest before the city fathers to prevent such an ordinance being adopted, but there is small chance that the protest will be heeded. Several of the dealers are preparing to put in lines of sidecars.

OLYMPIC CAMPAIGN REVERTS TO ORIGINATOR

Degenerating Into Cliques, United Cyclists' Presumed Control Becomes Inoperative—Under Proper Authority, With Country-Wide Committee, This Publication Will Continue on Broad Policy.

Conforming to original plans formulated by the "Bicycling World and Motorcycle Review" and advocated in its issue of October 14, 1911, this paper will in the future work in direct relation with the American Olympic Committee, the honorary president of which is President Taft, and the active president, Col. Robert M. Thompson, of New York. James E. Sullivan, secretary of the A. A. U., is the comittee's secretary

In a volunteer effort to raise funds for the purpose of sending a team of bicycle riders to represent America in the 200-mile road race to be run in connection with the Olympic games, there is but one committee that can act with authority in the matter. Therefore, the feeble efforts of the United Cyclists, a heterogeneous organization a few months old, that plays fast and loose with its committees, and which appears to have gradually relapsed into a state of "inocuous desuetude," will no longer be featured in these columns—the work belongs to other and abler hands.

The subscriptions listed on this page are in the charge of R. F. Kelsey, the editor of this paper, who is also a member of the American Olympic Committee, and a member of the sub-committee on team selection in special charge of the cycling feature of the program. Both the Amateur Athletic Union and the National Cycling Association are working in perfect harmony with the American Olympic Committee, which is largely made up of representative men from the first-named organization.

As the funds subscribed are the properties of the subscribers and subject to their disposal, it is fitting and proper that they should be asked to express their wishes as to the disposal of the monies already on hand. The editor will continue to act as custodian for this special fund if the subscribers so desire, and the columns of this paper will continue to be freely devoted to further increasing the amount, and disseminating all possible information about the movement.

Furthermore, to broaden the movement, the "Bicycling World" will ask a number of prominent cyclists the country over to form an honorary voluntary committee to assist in raising the fund to a proper igure.

First Try-Out Race Announcement.

In making arrangements for official try-outs for candidates for the Olympic bicycle team, the great civic centers that are easiest of access by railway and other means of transportation have been chosen. A few pertinent features governing the preliminaries have been decided on and are as follows:

Locations for Try-Outs—New York City, Chicago, St. Louis, Buffalo.

Management — National Cycling Association Board of Control and members thereof, or the association's special representatives (All try-outs must have official sanction.)

Dates—Contingent upon local weather and road conditions; to be determined by those in charge at the various localities and to conform with the date of the final elimination trial in New York City in such a manner as to allow of at least two weeks intervening before that event which will occur not earlier than May 10, nor later than May 19; same will be definitely announced in the issue of this journal of February 24.

Distance of Try Outs—150 miles.

Distance of Final Elimination Race—200 miles.

No entry fees or prize list in try outs or elimination race.

Each section sending candidates to the elimination race in New York will be required to provide them maintainance while there and transportation to and from New York City, which is the point of embarkation and from and to which all expenses of the accepted candidates of the team will be defrayed by the American Olympic Committee.

Subscription List Steadily Increasing.

Contributions to the "Bicycling World's" fund for the Olympic team continue to be added from time to time. The manufacturers now are joining with the clubs and individuals in assisting to provide the all important funds to defray the expenses of the bicycle team, of which, despite the impression that has gained considerable ground to the contrary, a very small portion ultimately will be borne by the American Olympic Committee, as it now finds that most active measures are necessary to provide for the expenses of the general athletic teams.

The latest manufacturer to lend a helping hand is the firm of J. W. Grady & Co., Worcester, Mass., who in addition to making the famous "New England Racer" bicycle, is one of the largest jobbers in the entire trade, and is known throughout the whole Atlantic seaboard. The contribution is $25.

Of the clubs, the Little Rhody Club, Providence, R. I., is the most recent to give the cause financial support, sending in this week, through Fred Perreault, $10.

The fund of the American Olympic Committee was added to materially on February 13 by the receipt of a donation from Andrew Carnegie to the amount of $500. The following are some of the contributions to the general fund to date:. Col. Robert M. Thompson, $1,000; Allison A. Armour, $1,000; Amateur Athletic Union, $1,000; Chicago Athletic Association, $1,000; Andrew Carnegie, $500; J. P.Morgan, $500; Metropolitan Association, A. A. U., $500; New England Association, A. A. U., $500; Military Athletic League, $250; Huckleberry Indians, N. Y. A. C., $100.

Balloting Develops Remarkable Features.

A steady stream of ballots in the popularity contest continues to pour into headquarters in every mail and in almost every instance they are accompanied by lists of names to whom it is requested that voting blanks be sent. Two interesting ballots received this week, which we publish as instances of the interest created, and, in this case as in hundreds of others support the oft repeated assertion that it requires but an opportunity of this sort to demonstrate the deep foundation of that interest and its scope in cycling affairs. The ballots are submitted by Winfield F. Plumb, Kalamazoo, Mich., one of which reads as follows: "My choice for the American Olympic Team is: William Blum, E. R. Harlow, Herman Hultgren, Chicago; Carl Schutte, Kansas City; Fred Gilmer, Al. Miller, Grand Rapids, Mich.; William Clark, Detroit; Joseph Scheider, Buffalo; H. E. Blue, J. B. Freeman, St. Louis Cycling Club; Franklin Fisher and Emil Fraysse, New York City." Those named on the other ballot are: "Carl Schutte, Kansas City; Alvin Loftes, Providence; Jesse Pike, Hoboken, N. J.; Emil Blum, Nick Kockler, Chicago; Fred Perreault, Boston; Carl Ericson, Brooklyn; Raymond Nelson, Atlantic City; Isadore Taub, Hoboken; D. W. Moore, Bayonne, N. J.; John Mitchell, Greenwich, Conn.; and Jerome Steinert, Hicksville, L. I." The list of names to which to send voting blanks accompanying these ballots includes residents of a dozen towns from New York State to Oregon.

Cleveland, Ohio, cyclists have entered the contest and in addition to many candidates already well known to the voters, submit the following names on their ballots: F. Brakevelt, Jamestown, N. Y; G. Norgauer and E. Norgauer, of Cleveland; G. Fritz, Toledo, O.; and Chester Smith, Baldwin, L. I.

Alvin Loftes, popular candidate and prime favorite for Olympic honors should he make the team, of which there is little doubt, judging by past performances, is now a member of the New York Athletic Club's athletic team, declaration to that effect having been made by the team manager this week, consequently he will ride under the colors of that organization

Histories of Two Eastern Road Veterans.

The portraits and histories published this week are those of D. J. McIntyre, and Jerome Steinert; the latter is being held in the photograph by Charles Hausenbauer, a fellow member of the Atlas Bicycle Club of Brooklyn, and a candidate for the team.

McIntyre is a member of the New England Wheelmen of New York City; he began riding in competition in 1896, winning his novice that year. Continued on the track for the next five seasons, and in the fall of 1901, won his first road race, a 25-mile handicap. Started long-distance road riding in 1902, and in the fall of the same year, he rode three 100-mile races on three consecutive Sundays, in which he finished third, fourth and seventh respectively, having in the last-named race only 15 minutes handicap; the limit man having 2 hours 30 minutes. The following Sunday he rode a 50-mile handicap and secured second place. He has ridden at least two 100-mile and 50 mile races every year since 1902 until 1910, inclusive, and finished in the prize list in every race, in spite of the fact that in several races he was delayed by accidents.

Jerome Steinert, of Hicksville, L. I., has been competing in all-around athletics, including bicycle racing, for 12 years, but for the past four years has confined his athletic activities to cycling alone. He was one of the few road riders that "made good" on the track, as he had been a regular and consistent performer at the Newark Velodrome, and in 1910 won the quarter-mile amateur championship and finished third in the point series for that year. Due to three accidents in as many years, he has retired from track competition, but continued riding road races. Steinert is the present holder of the one-quarter mile, two-mile, three-mile and 20-mile American road records, the last being held jointly with F. W. Eifler; won second time prize in the last Irvington-Millburn race; won second time prize in the Roy Wheelmen's Marathon, and won the Campbell Trophy of the Century Road Club of America by riding 10 miles unpaced in 26 minutes and 47 seconds.

Voting blanks are to be had any time for the asking. All who are interested in the cycling industry and sport are invited to submit the names and addresses of those to whom it is desired to have voting blanks sent—make your list as large as you like—self-explanatory blanks will be sent promptly and with absolutely no obligation incurred by the recipients. Send your list at once to the Bicycle Editor, The Bicycling World Co., Box 649, New York City.

Olympic "Workouts" in Atlas Century Run.

In addition to having the opportunity to qualify for one of the handsome silver medals, enameled in the club colors, participants in the first annual spring century run of the Atlas Bicycle Club, Brooklyn, will find ample provision for all who desire to test their endurance and speed over the century distance, as there will be one, and if necessary, two fast divisions in that event on Sunday, April 14. A photograph of the entrants in the run will be taken at the start at Prospect Park Plaza. The medals now are about completed and will be displayed at the respective shops of A. G. Spalding & Bros., 126 Nassau street, Manhattan, and V. J. Lind, 600 President street, Brooklyn.

Yale Perfection

The Yale motorcycle is one of power, endurance and positive dependability. Mechanically it is absolutely perfect, and for quality its equal cannot be found.

There's a reason for the high standard of the Yale. Every part of the machine is made in our own factory, by the most skilful workmen, under the most modern conditions and under the supervision of men who know how to build motorcycles that are of the highest possible quality, and absolute mechanical perfection.

While some manufacturers are forced to have their parts built as cheaply as possible, often at the sacrifice of quality, the Yale is built in its own factory, regardless of cost—quality being the first consideration.

Model 27, 7 H. P., $285

Y-A Shock Absorber Free to 1912 Yale Buyers

Every person buying a 1912 Yale will have the machine equipped with one of these Shock Absorbers. Riders who have already purchased a 1912 Yale will, as soon as we have a sufficient number of Shock Absorbers on hand, receive one of these absolutely free of charge.

It's part of the Yale policy—every Yale rider will at all times get the highest quality machine and all the desirable features.

Just remember this—it's a big feature—write for the Yale booklet; or, if there is no dealer in your territory, write for our agency proposition.

2 3-4 inch studded tires, Eclipse free engine clutch, 57 1-2 inch wheel base, low saddle position, Y-A Shock Absorber, "That Absorbs the Shock," regular on all models.

BASSETT BOUNTIFULLY HONORED

Quarter-Century as L. A. W. Secretary Fittingly Recognized by League, Newton, and Boston Bicycle Clubs.

With many words of good cheer and well deserved praise for the rounding out of his 25 years of service as secretary of the League of American Wheelmen, the Newton Bicycle Club, Newton, Mass., on the occasion of the club's annual dinner, given January 18 at Dupont's Restaurant, Boston, tendered to the guest of honor of the evening and its Secretary-Treasurer, Abbot Bassett, a substantial token of the regard of his fellow league members in the shape of a massive silver fruit bowl, fittingly inscribed and containing a large number of coins of the realm, double eagles, eagles, fivers and silver, the whole aggregating a quite magnificent sum. The gift was fittingly presented on behalf of the donors by Arthur P. Benson.

Short speeches by President Sterling Elliott, Captain Frank S. Wison and W. W. Stall, preceded the presentation which was followed by another when George L. Cooke took the floor on behalf of the wheelmen of Rhode Island—the State in which the L. A. W. was born—a little State one-half of which is water, and the other half land, with an occasional rock—presented a prettily incased double eagle to represent the land and another to represent the water.

Further honors and recognition of his quarter-century of service to the cause of cycling were accorded Abbot Bassett on February 10, when the Boston Bicycle Club, the oldest in this country, and the second oldest of the kind in the world, celebrated its thirty-fourth anniversary with a banquet at the Copley Square Hotel in Boston, which was attended by some 70 members and guests.

Greetings were read from the oldest club—the Pickwick Bicycle Club of London.

Another feature was the presentation of a purse of gold to the guest of the evening, Abbott Bassett, for 25 years secretary of the League of American Wheelmen.

A pleasing aftermath of the presentation at the Newton Bicycle Club's function was consummated when Arthur P. Benson of that club, a guest of the Boston Bicycle Club, handed Mr. Bassett what he termed a fountain pen, which proved, upon the box being opened by the recipient, to be a hundred dollar bill.

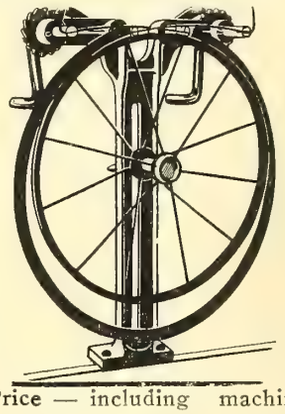
Then prior to the dinner, medals commemorative of attendance upon the "Wheel about the Hub" were presented to those members who were eligible for the distinction. Practically all were recipients of the honor.

As the members and their guests filed into the dining room their eyes rested on a picture of the start of the first bicycle run in the United States. It represented the charter members of the club about to leave Boston from the front of Trinity Church for Sharon.

The idea of having the picture shown at the dinner was conceived by the committee in charge, consisting of Frederick Whitney, C. C. Ryder and J. Rush Green.

The dinner was purely informal and the few impromptu speeches afterward were confined to reminiscences. President John B. Kelley presided, and the other officers present were Secretary Augustus Nickerson and Capt. Walter S. Kendall.

Bay View Wheelmen's Home Trainer Race



Newark, N. J., Feb. 14.—Plenty of excitement was furnished last evening at the home trainer races under the auspices of the Bay View Wheelmen at the South Sixth Street club house. Frank Mihlon, of the Newark Velodrome, officiated as starter. The contests resulted as follows: One mile match, won by Henry Faiss; second, Alfred Andrus; time, 1:05⅗. Half mile, won by Aug. Rupple; second, John Dreher, :50. Two miles, won by Fred Weber; second, Louis Cone; 3:21⅗. Three miles, won by Ernest Pofah; second, Walter Pofah; time, 4:00⅗. Pursuit race, won by Frank Harenburg; second, Thomas Grimm; distance, three miles, one lap; time, 3:24⅗. Five mile exhibtiion by Paul Heidrich; time, 6:02⅗. One mile professional, won by Tommie Smith; second, Frank Cavanagh; time, :56⅗. Cavanagh later rode an exhibition mile in :54.

Bowling Tournament Awards of Atlas B. C.

As the result of the Atlas Bicycle Club's bowling tournament just closed, the team composed of the following winners are out with a challenge to any bicycle club team of three in the metropolitan district; Paul Smith, high average; Victor J. Lind, second high average; J. Mangels, third high average.

Practically Perfect

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

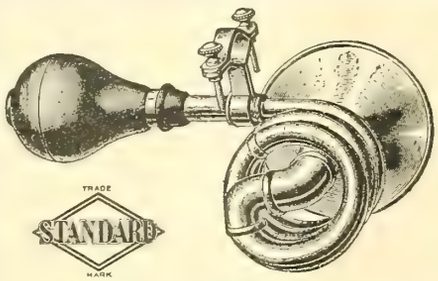
FAMOUS FOR THEIR DURABILITY

are the most suitable bearings for motorcycles; they withstand vibrations, due to the strong cage and large number of balls.



Schafer Ball Bearings are used exclusively on high grade products such as the renowned Minneapolis Motorcycles and two speed gears, De Luxe Motors and two speed gears.

Do you ever have trouble of any kind with your motorcycle?

¶ If you do you ought to have this book. In its 80 pages are more sound suggestions and practical advice than have ever been put between any two covers.

¶ It is not a technical book—it is written in plain every day language, the sort that any one can understand.

¶ Its contents include chapters on General Instructions, Motors, Valves, Lubrication, Ignition, Carburetters, Two Speed Gears, and Fuel.

25 Cents per Copy, Postpaid

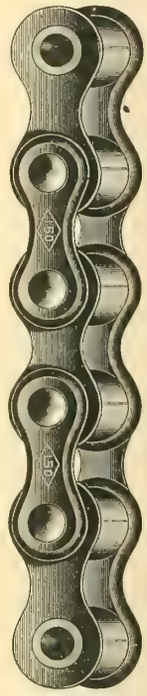
LET

HAM

Light
Your Way

Lamp with Acetylene Burner

Here is a Motorcycle Lamp positively trouble proof. Doesn't that sound good? No amount of jarring will affect the steady stream of light which is generated from the HAM-LIGHT. Actual speed tests of 50 miles per hour have failed to blow or jar out the flame. Simply attached to motorcycle. Can be furnished either as an oil lamp, burning kerosene, or with acetylene burner in addition, using acetylene gas, making it a combination oil and gas lamp, a combination of great value on country roads or poorly lighted streets. Send for new circular containing full line. Do you want our Agency Proposition?



MANUFACTURED BY

C. T. Ham Manufacturing Co.
ROCHESTER, N. Y.

These Two Diamond Chains

can't be beat for motorcycle work. They are right for strength, right for wear, right for satisfactory service in any weather and on any roads. Besides, as any dealer will tell you, the Diamond connecting link, with which they may be lengthened or repaired is the simplest thing of the kind ever invented.

Reliance

(REG. U.S. PAT. OFF.)

Sparks in Water

Special Motorcycle Types

The fact that the "Reliance" plug "Sparks in Water" proves that it can't be short circuited.

As an automobile, motorcycle or motor boat owner, you will instantly appreciate the overwhelming importance of this one great point. Beside it other claims sink into insignificance.

Soot, carbon, and other fouling influences, have no effect on Reliance Plugs. They do affect all other plugs—put them out of business.

Regular Type $1.00

Other Reliance advantages are, lower current consumption, concentrated spark, heat-proof porcelains.

Reliance Magneto Plugs are especially recommended for oily engines. Satisfaction guaranteed or your money back. Sold by dealers everywhere, or sent prepaid on receipt of price. Get "Ignition and Spark Plug Talk"—a valuable pocket reference book—will make you master of your ignition system.

NEVERLEAK TIRE FLUID

Makes Tires Puncture Proof

There's money in selling Neverleak, because Neverleak is not only a big favorite among bicycle riders, but it is also the only legalized tire fluid sold today.

You get fine premiums with Neverleak—premiums that are really worth having—not a poor one in the lot.

Now is the time to renew your stock of Neverleak. Bicycle time isn't so very far away. See your jobber about it or write us today for prices and premium offer.

BUFFALO SPECIALTY COMPANY
Buffalo, N. Y.

$25.00 for information about any dealer or repairman using or handling any Compound, Powder, Fluid, or Semi-Liquid for the purpose of sealing punctures or leaks in pneumatic tires, in violation of our Neverleak Patents. Write for conditions under which the above reward will be paid.

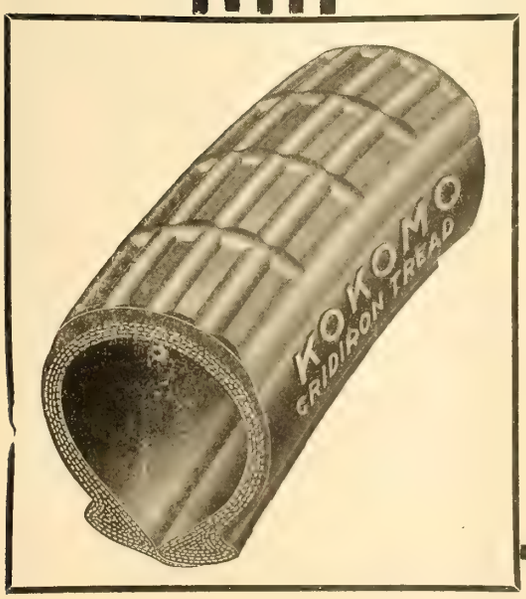
The Assurance of Safety

That's what you have when your bicycle is equipped with SOLAR LAMPS. You can ride at night with perfect confidence—and that means with the utmost possible enjoyment.

Why take ordinary lamps, when you can have Solars?

BADGER BRASS MANUFACTURING CO.
Kenosha, Wis. (39) New York City



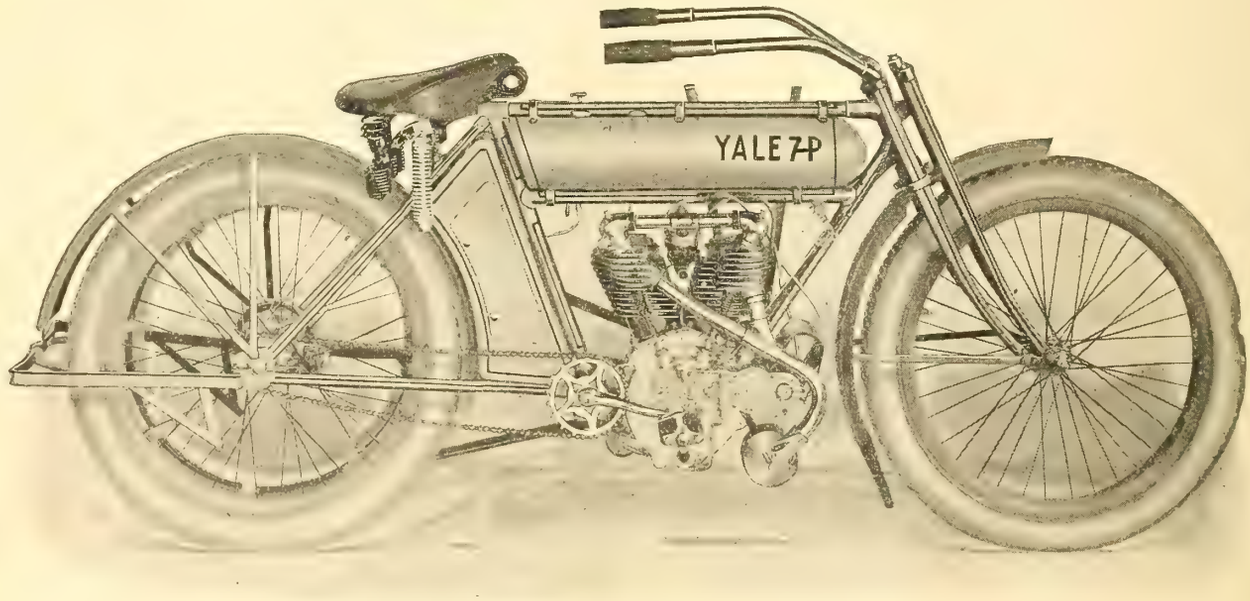
Tire Efficiency

depends entirely upon the materials and constructive methods used by the manufacturer.

Kokomo Tires

have won endurance records because of their extreme high quality. They are built by experts who possess knowledge of rubber, its handling and the buying of crude materials that go with the rubber to make up the finished product. No tire manufacturer can claim any better facilities or more expert knowledge than ours. We've been in the business too long.

"If It's Kokomo That's All You Need to Know"



Kokomo Rubber Company

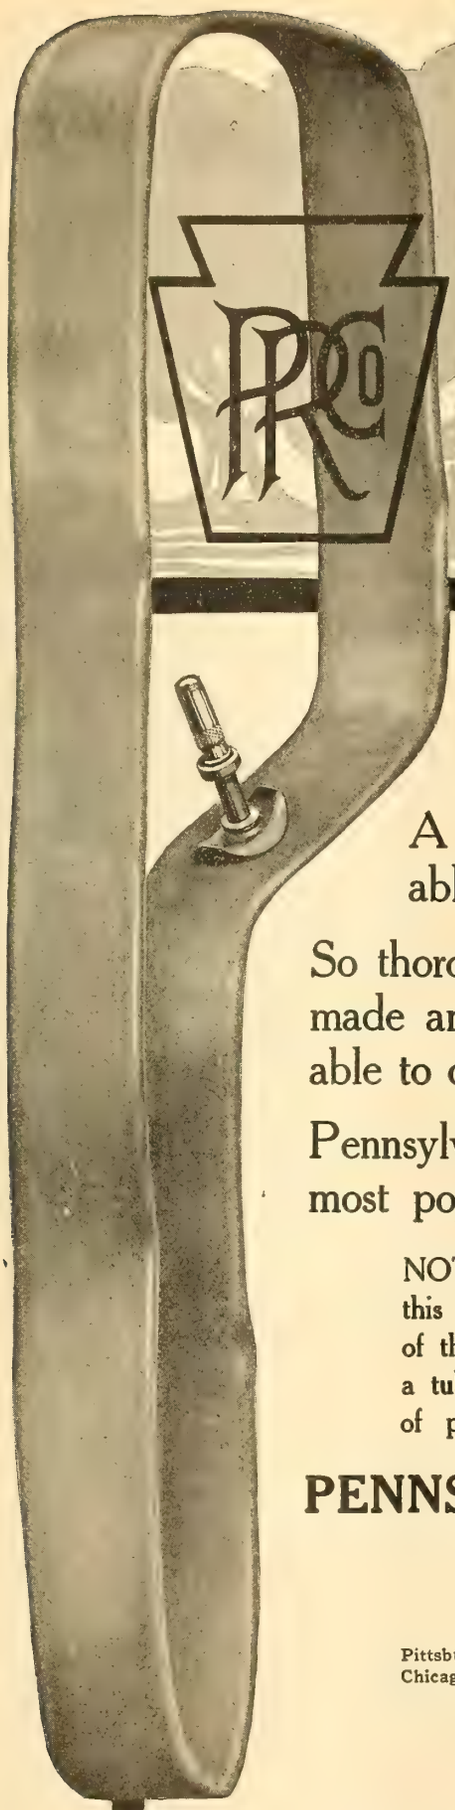
KOKOMO, IND., U. S. A.

Yale Dependability

If it's something good, the Yale is sure to have it. Right now we are equipping all 1912 Yale machines with the Y-A Absorber—the one that absorbs all the shocks. It is better and gives more comfort than any spring seat post could possibly give. That is why you find it on the Yale. It's a part of the Yale policy and Yale quality.

This is the most effective Shock Absorber to be found anywhere. The steel bolts inside the springs keep the saddle from tilting and side-swaying. When in action, the hanger attached to the rear stays works up and down on the bolts, according to the irregularities of the road, while the rider maintains an even position. It is made throughout of the best material, nickel plated and highly finished. It is guaranteed in every respect.

Model 27, 7 H. P., $285



Y-A Shock Absorber Free to 1912 Yale Buyers

Every person buying a 1912 Yale will have the machine equipped with one of these Shock Absorbers. Riders who have already purchased a 1912 Yale will, as soon as we have a sufficient number of Shock Absorbers on hand, receive one of these absolutely free of charge.

It's part of the Yale policy—every Yale rider will at all times get the highest quality machine and all the desirable features.

Just remember this—it's a big feature—write for the Yale booklet; or, if there is no dealer in your territory, write for our agency proposition.

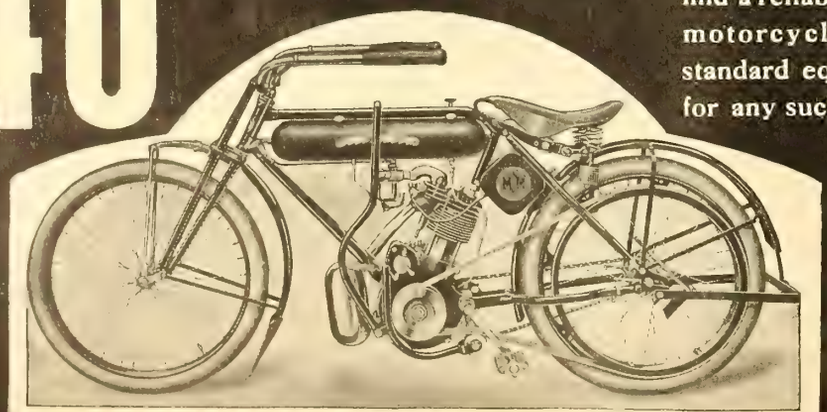
Agents—Listen!

Here's a winner—A sales winner. The low price will catch the eye, and the high quality will clinch the sale.

The M·M "Special" line appeals to more possible buyers than any other to be had. This is the theory:—If you could sell motorcycles at the cost of bicycles, you would sell one to every fellow in town. If they cost $500 each, you wouldn't sell one, but the nearer to the bicycle price you get (with a good motorcycle) the more machines you will sell—Just think that over.

The M·M agency is a big opportunity for you. Don't lose it. The M·M line is complete—Our commission to the agent allows him to sell on time which is the way 90% of all motorcycles are sold to-day.



Write now for literature and agents proposition.

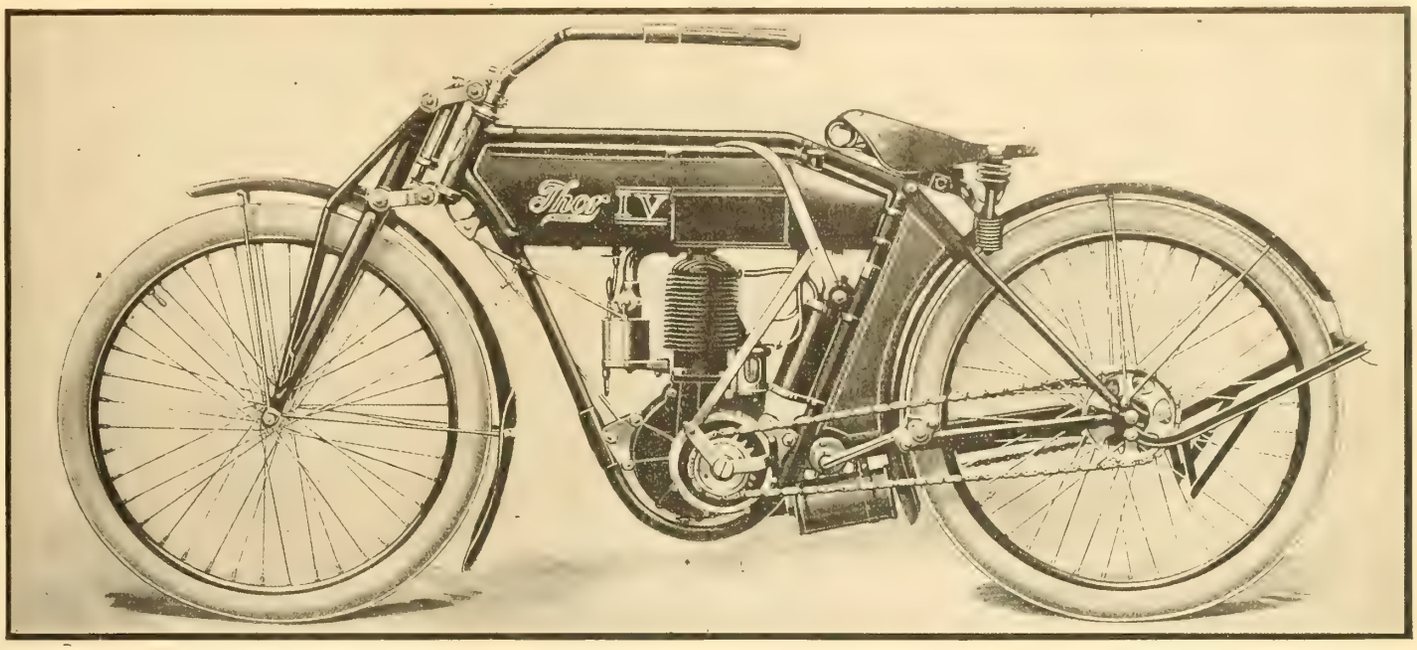
The fact that Continental-Erie Motorcycle Tires have been adopted by the leading manufacturers of motorcycles is proof conclusive that they are the best in the world.



Continental-Erie Motorcycle Tires

stand the tests that tell. No tire that embodies inferior quality of material or workmanship can withstand the hard knocks that go with road tests. Continental-Erie Motorcycle Tires are made for service. They have been adopted as standard equipment by the manufacturers of the Emblem, Excelsior, Merkel, Harley-Davidson and Yale machines.

TWO SINGLES
Belt or Chain.
ONE 7 H. P. TWIN
Direct Chain Drive, Undergeared Transmission.

R-S SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of many other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16" steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive assurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

Pope Motorcycle

With Imported Magneto, $165

RELIABILITY

As Demonstrated by Four Consecutive Endurance Runs

Four consecutive victories in recent California endurance contests run under the most varied and adverse road conditions and conducted under the strictest supervision go to show the absolute reliability of the Pope Motorcycle.

FIRST RUN—18 hour 336 mile Endurance Contest, held under auspices of the San Francisco Motorcycle Club at Oakland, October 29, 1911—

Frank Murray, of Sacramento, Cal., and His Pope Motorcycle

greatest event of its kind on Pacific Coast—E. N. Moore, an amateur, riding Pope, made *perfect score* over the hardest kinds of roads—equalling best previous performances of higher priced and higher powered machines.

SECOND RUN—Held under auspices of Sacramento Motorcycle Club, November 19, 1911. Frank Murray, riding the same Pope machine over heavy roads and up steep grades from Sacramento to Colfax and return, made a *perfect score* and beat out a 7 h. p. machine on an even start up 5 mile grade into Auburn.

THIRD RUN—Conducted by Sacramento Motorcycle Club, December 10, 1911.—Again Frank Murray rode the same Pope Motorcycle and again made a *perfect score* over bad roads and through deep mud. This contest alone did more than anything else to establish the Pope's reputation on the Pacific Coast.

FOURTH RUN—Conducted by Sacramento Motorcycle Club, January 14, 1912, when another *perfect score,* the fourth in succession, was awarded to the same machine. The route covered a distance of 144 miles. Secret controls necessitated the most consistent operation on the part of the machine in order that a uniform speed might be maintained at all times.

WHAT MORE COULD BE SAID IN PROOF OF THE POPE'S RELIABILITY

A. D. MEISELBACH BICYCLE CO., North Milwaukee, Wis.

Strength, Speed, Simplicity, Symmetry

The Life of a Motorcycle Is in Its Frame and Engine

The PIERCE frame is constructed of steel tubing 3 1-2 inches in diameter, it will not break or buckle and is built to stand all kinds of rough roads and hard use. Broken frames, the cause of frequent complaint in other motorcycles, are unknown in the Pierce.

The Pierce single has a 5 h. p. four cycle engine, fitted with roller bearings, mechanical valves, magneto ignition and free engine clutch. *This is also made to last*, not being of the excessively high speed type. Although not intended for racing, it has a speed of 55 miles an hour and power to climb hills that other singles cannot. The Pierce Single is a motorcycle with the power and road strength of a twin cylinder and the serviceability and simplicity of a single. A maximum of efficiency and a minimum of trouble and expense for repairs.

This company also manufactures the famous Pierce Four Cylinder, the most complete motorcycle made. Also Pierce Bicycles, famous for over 20 years, and ridden by all the well-known racing men.

The Excelsior Auto-Cycle Is Built—Not Made

Piece by piece, part by part, the Excelsior Auto-Cycle is **built.** The frame is of Shelby steel tubing—is reinforced—the fittings throughout are drop forged—all to give strength and durability. The cylinders and bearings are ground to size and absolute roundness with proper allowance for running fits, to an accuracy of 1/4000 of an inch. The engine is hung low to give steadiness. Autotype mud guards, chain guard, aspirator and oil-proof bearings give cleanliness. The Kumfort-Kushion spring seat post and cradle spring fork give comfort—the small number of parts, the ease of operation, give simplicity. There is nothing wanting in the Excelsior—that's why it **always makes good.**

The Excelsior Auto-Cycle Is a Masterpiece of Construction

The new 1912 models of the Excelsior Auto-Cycle are constructed by experienced machinists who have made a thorough study of every essential and detail of the motorcycle since its earliest production. The 1912 Excelsior represents a culmination of the best thought and effort in motorcycle building—and sets a standard toward which others are striving. It is clean, comfortable, strong and simple—these factors combined give it a long life.

Our Men Work With Us—Not For Us

Our men work in a modern, sunlit factory—under the best of conditions. They work **with** us, not **for** us—they cooperate in every way. Their interest is our interest, and our interest is theirs. The result is that every man puts all of his years of experience, all of his craft and pride into the Excelsior—and the Excelsior **always makes good.**

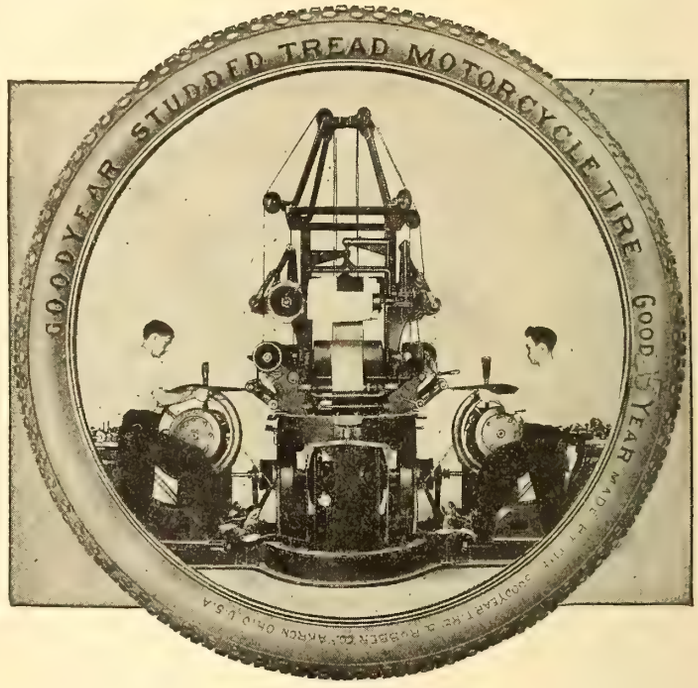
Leading Motorcycle Tires
Endurance Built in by Goodyear Tire Machine

We do not exaggerate when we say that Goodyear Motorcycle Tires lead.

They lead in endurance and in performance.

They hold every world's amateur and professional speed record; hundreds of tests in factory and field have proved them the most durable tires in existence.



The 13 largest motorcycle manufacturers have contracted for Goodyear Motorcycle Tires for their this year's output. Every third new machine this year will be tired with Goodyears.

Made on the Goodyear Tire Machines, these "little brothers" to No-Rim-Cuts offer tire buyers an unusual service.

We wish you could go through other motorcycle tire factories—and then go through **ours.**

We would like you to compare our policy and our methods with those commonly used.

We would like you to watch step by step, the fascinating process by which from a wealth of tire building experience the world's master auto tire builders perfect these tires for **motorcycles.**

Our Tire Machine

You would see the most perfectly equipped factory in the world—and on all sides you would see signs of growth—development—improvement.

For instance, you would see among other special machinery a new patented device for stripping the feather edge off the semi-cured tire beads before they are built into the tire.

And you would see the Goodyear Tire Machine—the only machine that eliminates human error in tire construction.

Tires of Uniform Strength

In building a tire, a number of plies of fabric are stretched one at a time over an iron core. To secure uniform strength and endurance every successive ply must be stretched on at **uniform tension.** If one ply is loose and the next one tight, the tight ply gets all the strain—eventually gives way, and the tire is soon ruined.

Our tire machine builds **perfection** into the tire.

Hour after hour, day after day this machine with unfailing accuracy stretches on ply after ply without slightest variation in the tension. No hidden loose plies to shirk their duties. No over strained plies to give way. Nothing but supreme uniformity; and as a result a proved **durability** equalled by no other tire in the world.

GOODYEAR
Motorcycle Tires

BULLETIN

At Los Angeles, Feb. 11, Goodyears make clean sweep, lowering 2 World's Records: 2-mile, 1:19⅗; 4-mile, 2:40⅘. Hasha wins both on Goodyear Tires.

You Pay Nothing Extra

Goodyear Motorcycle Tires are built for standard rims and are supplied by all first class dealers at the same price you would pay for any standard tire.

You pay nothing extra for the painstaking workmanship—nothing extra for the years of successful auto tire building experience—nothing extra for the tire perfection and greater endurance rendered by the tire machine which was made and is controlled exclusively by us.

All this you get for the mere price of the tires alone—tires that are past the **experimental stage**—saving tires that reduce to the very minimum punctures and all other tire troubles.

With such tires as these at your command it is folly to chance lesser tires.

Ask for Our Book on Motorcycle Tires

This book tells all about the Goodyear Quintette of Motorcycle Tires—"one for every road condition."

It will also safeguard your pocket book against tire wastes that mean not only financial loss but a loss of pleasure and service not to be measured in dollars and cents. Send today for the book.

Vol. LXIV. New York, U. S. A., Saturday, February 24, 1912. No. 23

FORMER CYCLE MAKER RESUMES

Meiselbach Finds Encouraging Field in Manufacture of Bicycles—Demand for Cycles of Quality Ever Prevalent.

North Milwaukee, Wis., Feb. 17.—Directly in the shadow of the great plant where he once built 1,000 bicycles a day and became one of the pioneers of the industry in its palmy days, A. D. Meiselbach, after unsuccessful ventures in the typewriter and motor truck field, again is building bicycles—building them on a comparatively small scale at present, but with big plans for the future.

Situated on a four acre tract, on the lines of the C., M. & St. P. R. R., the factory occupies an acre of ground. All the buildings are one story, and in the systematic and economical routing of the work through the shop, Meiselbach has applied that productive ability that brought him prosperity in former days and which appears to have lost none of its old time capacity for accomplishment.

Quality is the business creed of Meiselbach, and he says that his prices are made last. First come the best materials obtainable, the best workmanship and the best equipment. He believes firmly that there a great many people who want and will pay for a quality bicycle.

The present daily output is given as between 75 and 100, and the season's production is estimated at 15,000 machines. Meiselbach says he has enough orders on the books now to take all the machines he can build this year.

His three leaders are the White Flyer, Wisconsin Regular and Wisconsin Roadster. Finished in pure white with gold and nickel trimming, the Flyer is a handsome machine. He is building bicycles only and building them the best he knows how.

Although it is a year since the plant started making bicycles, the organization has only just been completed, and now the shop is running to capacity. Meiselbach, being a mechanical man primarily, is on the job from early morning until late at night and keeps a watchful eye over all that goes on.

Breed Motorcycle Co. Secures Plant.

Bay City, Mich., Feb. 20.—Machinery will be installed at the old Episcopal mission on Taylor street, at once by the Broad Motorcycle Company, and work on the construction of machines will begin immediately. The building, which is to be used only for temporary quarters, has been remodeled. Parts for the machines have been constructed at the old factory in Detroit, and these will be assembled as soon as the temporary factory is in readiness. About 25 men will be employed at the start, under the supervision of George Breed, who will have complete charge of mechanical construction.

DeSalvo Becomes Excelsior Agent.

Chicago, Feb. 20.—Joseph DeSalvo, the Chicago motorcycle racer, is going to enter the selling field for himself. He already has secured the agencies for Excelsior motorcycles, and Excelsior bicycles, which, despite the similarity in name, are made by independent concerns. The store will be located on West Jackson Boulevard, but the exact spot has not yet been definitely settled, as several sites are under consideration. A first-class service department will be mainetined. DeSalvo also plans to continue in the racing ranks, and will pilot an Excelsior, as usual.

Kinney to Establish Jobbing House.

Indianapolis, Ind., Feb. 20.—John H. Kinney, formerly buyer for the Hearsey-Willis Company, of this city, will open a new jobbing house in Indianapolis in the near future.

TRADE IN THE MIDDLE WEST

Arthur Davidson Says This Year's Motorcycle Sales Will Equal All Previous Years Combined—Rational Market.

No better barometer of the prospects for the motorcycle industry for the coming year, is available for consultation, than the conditions present and potential in the great Middle West, the most fertile selling section in the country. More motorcycles already are in use in this territory, and more ripe prospects are waiting to be gathered, than in any other district, a fact well recognized by the sales staffs of the wide-awake manufacturers who are planning to work this rich field the coming season, as it never before has been worked.

Discussing conditions in this territory, and the outlook which they reflect, Arthur Davidson, of the Harley-Davidson Motor Company, Milwaukee, who through long familiarity with the sales problems of the Middle West, is unusually well qualified to analyze their future growth, says:

"Speaking for ourselves, but also with the strong belief that it represents the situation as it confronts all the makers, I have been traveling this territory to a considerable extent for the past five years, and as the motorcycle business improved, each year excelled its predecessor in volume of sales, but I believe that in 1912 the business done will equal that of all previous years combined. Not only are new people taking up the motorcycle in earnest, but the old dealers are doubling and tripling their sales, and some of them even show a higher percentage of increase.

"Bear in mind that December, January and the expired portion of February just passed, have been the coldest months in this section in 30 years. Another factor that seems to be contributing largely to

the general popularity which motorcycles are enjoying at present, and citing our own experience, it is amazing to note the number of people who are manifesting deep interest in the very general trend toward comfortable riding machines, as exemplified in spring seats.

"The introduction of the spring seat seemed to be the very thing needed to effectively combat the popular prejudice against motorcycles, because of their alleged excessive vibration qualities. Then again, all machines are better mechanically, cleaner, and appeal more strongly to a higher class of citizens who are prospective buyers.

"It is a very noticeable fact that each year the motorcycle is attaining a higher standard of riders in the Middle West, and, while we regret to say that the open muffler pest still is in our midst, the manufacturers, dealers and the F. A. M. are doing everything in their power to elevate the standard of motorcycling, and they seem to be succeeding admirably well.

"As to the dealers, the Chicago show probably was the best indication of their enthusiasm. They came in great numbers, and all seemed very enthusiastic and optimistic over the outlook. By no means insignificant is the fact that dealers are placing orders and contracts early, and while we have preached this advice incessantly in the past, this year the dealers have responded more strongly than ever.

"This is a good thing, because it lengthens the selling season and gives the manufacturer a chance to get out his demonstrating models, and take care of the initial rush of orders which always follow the announcement of a new model. It also gives him half a chance to prepare for the annual spring rush.

"Dealers will sell machines now, because they have an early start, and will not wait until fine weather begins before going after business. While rumors have been afloat that deliveries would be late this spring, I do not believe this to be a fact, as yet. We have been storing machines for some time past in the Milwaukee Auditorium, in anticipation of the spring rush, and unless something unforseen turns up, Harley-Davidson dealers have nothing to fear on this score, but as for others, I, of course, do not pretend to prophesy the outcome.

"General business conditions are not above normal, although they do seem to be improving slowly. The increased demand for motorcycles this year is not due to unusual prosperity, but to a rational market for transportation facilities that are better, quicker and more economical. The motorcycle alone meets those requirements. A great number of sales in the Middle West have been for commercial purposes, such as to telephone companies, solicitors, collectors, R. F. D. carriers, travelers, contractors, and municipal departments, and innumerable lines which require transportation facilities, and are willing to have the capability of the motorcycle demonstrated to them.

"While the racing game has fascinated the younger generation, and also those who are keen on sport, we still are of the opinion that the greatest future of the motorcycle lies in its commercial end. I recall one case in particular, where one of our dealers made a personal canvass of the retail merchants in his city, and by showing them just what results could be obtained with a motorcycle, three sales were made—two to retail grocers and one to a butcher. The strange part of it was, that none of the three purchasers ever had manifested any interest in the possibilities which the motorcycle held for their business, previous to the call of the wideawake agent.

"Live dealers are waking up to the possibilities of the motorcycle industry, and are going after it scientifically in their territories, particularly through the agencies of general publicity, demonstrating and personal solicitation, and this year it is gratifying indeed to note the unprecedented activity among agents in these respects. Summing up the situation in this rich territory, I will say 'Just watch the Middle West absorb motorcycles in 1912.'"

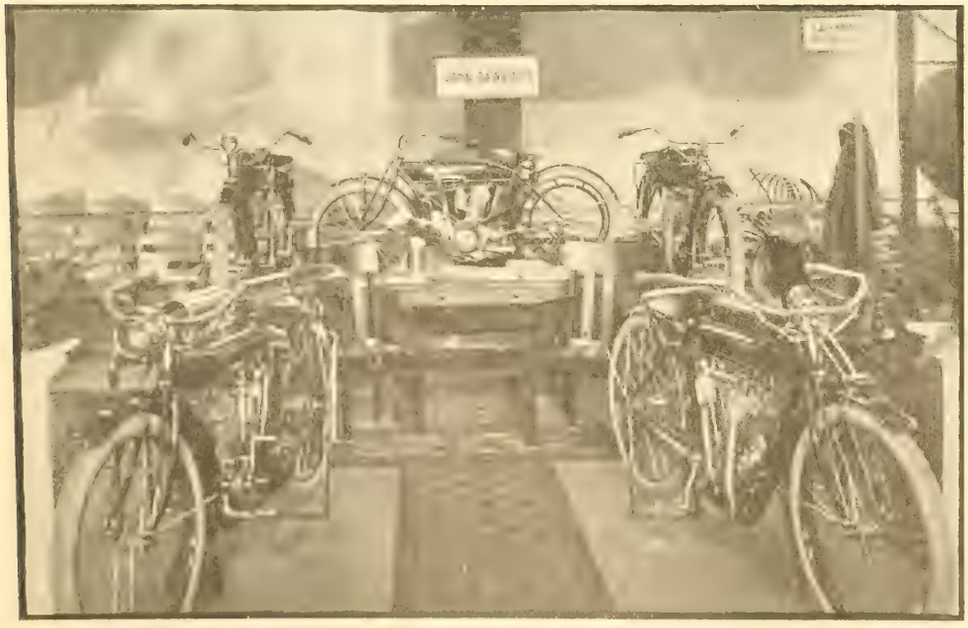

EXHIBIT OF JOHN RAWLING, A LEADING DEALER, AT SCRANTON, PA., SHOW

Fine New Home For Jenkins & Co.

Des Moines, Ia., Feb. 19.—Work on a two-story brick building at the southwest corner of Twelfth and Locust street, has been begun by Jenkins & Co., agents for the Indian and Excelsior in this territory. The new building will not be a store, neither will it be simply a garage, but a happy combination of both, having an up-to-date corner show room, and the rest of the lower floor, with the exception of two small stores, which will be rented, will be an open garage with lockers for rent, rest room, etc. There will be 8,500 square feet of floor space.

A part of the upper floor will be devoted to the shop, there being simply a shop door on the lower floor. The rest of the upper floor will be devoted to the company's accessory business, which is large, it being reported that the house did the largest accessory trade in Iowa last year, and 20,000 catalogues will be issued this spring. Preparations are being made to sell 500 motorcycles this year, which will more than double last year's sales. All indications point to a like increase in the accessory department also.

F. R. Jenkins, of the company, is State commissioner of the F. A. M., and would like to get into communication with enthusiastic motorcyclists throughout the State who may desire to become local commissioners.

U. S. Tire Co. Will Sell Wholesale Only.

A radical change in selling policy which is of great importance to tire dealers throughout the country, just has been announced by the United States Tire Company. Formal notice has been given that in future no tires of any kind will be sold at retail by this concern. Signs announcing this fact already have been posted in all of the company's 26 branches located in various cities from New York to San Francisco, and the new order becomes effective immediately.

Pacific Cycle & Arms Co. Succeed Putzman.

Alameda, Cal., Feb. 17.—E. O. Putzman has sold out his business to the Pacific Cycle & Arms Co., composed of Alameda parties, with I. J. Durand as manager. Putzman is going into business with A. W. Castner, of San Francisco, a well-known repair man, and they will open a motorcycle repair and supply depot at 1623 Market street, in that city.

THE "UNDERSLUNG MILITAIRE"

Remarkable for New Features and Departure from Practice—Low Center of Gravity—Multiple Speeds—Reverse.

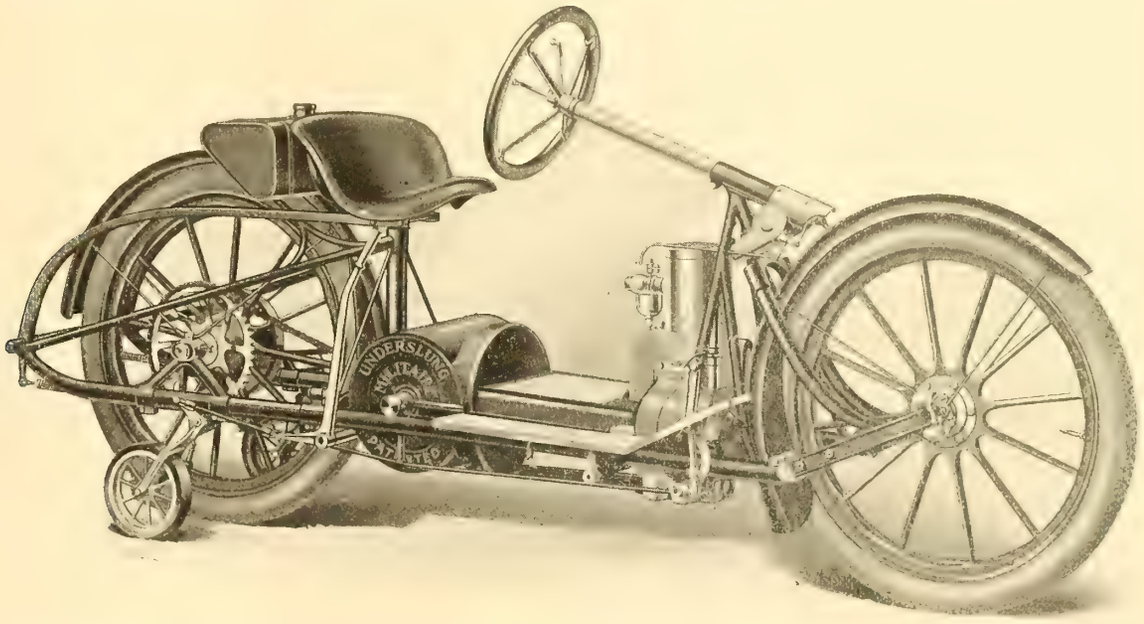
Showing individuality in every line of design and detail of construction, the machine illustrated herewith, known as the "Underslung Militaire," the product of the Militaire Auto Company, of Cleveland, O., is the latest entrant to the large and rapidly growing family of two-wheeled auto vehicles. Radical to a degree, it might well stand as the last word in an industry of remarkable development, as also a fitting testimonial to the expressed determination of the makers to offer a machine of a type designed to give only the maximum of comfort, service and efficiency.

In the endeavor to combine the advantages of the four-wheeled and two-wheeled types and dispense with the objectionable features of both, there are offered: Non-skid construction principles as embodied in the underslung frame, giving the lowest possible center of gravity; idler wheels that may be lowered or raised at will, to preserve equilibrium while standing or running at slow speed and to prevent side-slip in heavy or sandy roads; and tires of generous size, 28 in. x 2¾ in. or 3 in., with ample clearance for non-skid chains.

Further details are: Artillery wood wheels; long wheel base—64 inches; cantilever suspension spring with bucket seat, eliminating vibration; variable riding position—22 ins. to 28 ins. from the ground and fore and aft movement of 4½ ins.; steering wheel identical with standard automobile practice, with spark and gas control levers on steering post; foot-controlled clutch, speed change, and brake; dust and water-proofed friction drive; and speed changes from 30 to 1 on low, to 3 to 1 on high, and 10 to 1 on reverse.

If possible, the most radical evolution is seen in the front hub and axle, which are extremely novel. This construction provides for the entire load of the forward half of the machine coming directly on the axle, removing this burden completely from the forks. The forks operate to guide front wheel only and have no other load whatever. The rear wheel is provided with knock-out axle, permitting of its being dismounted without disturbing adjustments.

The idler wheels attached to each side of frame are lowered by a convenient shifting lever at the right of seat, and are raised by pressing the button shown on footboard. These small rubber-tired idler wheels and the very low center of gravity undoubtedly increase the factor of safety considerably.



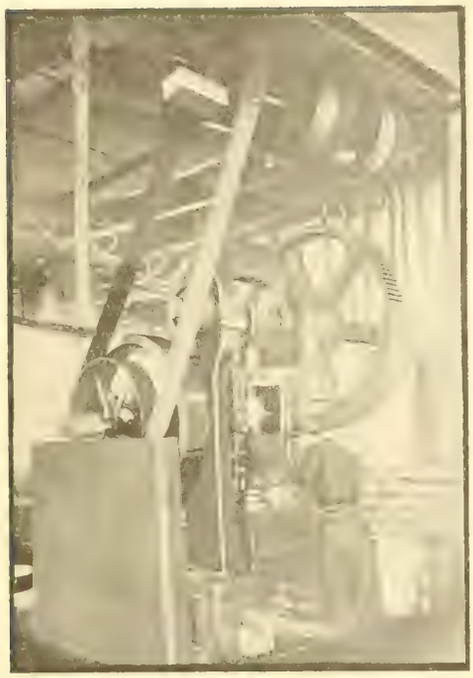
The engine is a vertical cylinder, air-cooled, with vertical fins, enclosed by polished casing, open at top. The air is drawn down by a highly developed sirocco blower in flywheel and discharged downward and away from the rider. This is a most effective cooling system and is equally efficient with the machine standing or traveling.

The 3½ in. x 3 43/64 in. engine is consistent with the best engine practice, embracing perfect combustion, highest type of magneto ignition, ball bearings and remarkably efficient eccentric counterbalanced flywheel, with a perfectly developed oiling scheme.

The multi-variable friction drive should prove a particularly valuable equipment, as all experienced riders know, and is designed to eliminate entirely any fear of steep grades or sandy stretches. The control of this feature is particularly convenient. The lever on the right operates forward to throw out the clutch, when speed may be changed by lever on the left footboard. Or, the right lever may be moved still further forward and operate the band brake. This band brake and the reverse drive as an emergency brake give absolute safety and control.

The reverse appeals strongly to the city riders and will prove invaluable where the rider finds himself in an awkward position in congested traffic.

The bucket seat, wide footboards and perfect housing of the operating parts make it possible for anyone to ride without soiling or injuring good clothes, and a lady may ride it without embarrassment. From every standpoint, it is clear that the manufacturers have gone far toward anticipating the ever-increasing demands in the two-wheel auto world.



UNDERSLUNG MILITAIRE, 5-HORSEPOWER SINGLE CYLINDER (INTERCHANGEABLE FOR TWIN). PRICE, $300

Meiser Is New Black Hawk Manager.

Rock Island, Ill., Feb. 19.—Arrangements have been concluded whereby G. H. Meiser will be one of and financially interested in the Black Hawk Motorcycle Company of this city. He has assumed the duties of general manager and will supervise the designing and manufacture of Black Hawk motorcycles. President R. W. Gould, of the company, states that the company is bending every energy to produce a strong array of machines for the opening of the spring season, and with Mr. Meiser at the head of the construction department every demand of the trade will be met as promptly as is consistent with capable and efficient workmanship.

Price Purchases University Cycle Co.

Gainesville, Fla., Feb. 19.—C. A. Price, who for some time has conducted a bicycle agency and repair shop on West Mechanic street, has purchased the business of the University Cycle Company, East Main street, South, from C. W. Chesser, and will consolidate the two stocks at the latter location.

HARLEY-DAVIDSON'S 200,000 LB. PRESS

Presses That Stamp Free Wheel Clutches.

Milwaukee, Wis., Feb. 19.—In the plant of the Harley-Davidson Motor Company, in this city, are two 200,000-pound presses, an illustration of one of which is shown on this page. These presses, it is claimed, are the largest ones used in the motorcycle industry, and they are used in doing the heavy stamping work so essential to the company's product. Without these presses, the Harley-Davidson people say, it would be absolutely impossible for any manufacturer to build a clutch like the free wheel control on their machines, and build it cheap enough to sell it at a price within the reach of the average motorcycle buyer. It is the equipment of the plant that makes this possible.

It is necessary to keep these two presses working day and night six nights a week, to make enough clutches to take care of the factory's demand for them.

Changes in Merkel Selling Force.

Middletown, O., Feb. 19.—President K. R. Jacoby, of the Miami Cycle and Mfg. Co., makes official announcement that E. M. Jackson, who has been sales manager of the agency division of the company, has tendered his resignation, and will be sales manager for the Elyea-Austell Company, of Atlanta, Ga., distributor for the Southern States for the Merkel and other Miami products.

Edward Buffum, who has been connected with the company in the position of sales manager of the motorcycle department, is to take over the distribution of Merkel motorcycles in one of the important eastern centers. The growth of the Merkel motorcycle has been so pronounced that it has been found necessary to have an eastern distributing point for the proper handling of the business in that section, and Mr. Buffum's long association with the motorcycle business and his knowledge of conditions in that territory assures the agents in that district the best of service in having this distribution in the hands of Mr. Buffum.

Motor Car Equipment Co.'s Uptown Branch

The Motor Car Equipment Company, 55 Warren street, New York City, which is probably the largest exclusively wholesale automobile and motorcycle supply concern in the country, has opened an uptown branch at 238-240 West Fifty-sixth street, near Broadway, where an extensive stock of the best imported and domestic accessories will be carried for the convenience of its uptown trade, and the neighboring localities in New York State, New Jersey and Connecticut. The rapid growth of the company's business has necessitated this additional branch, covering 10,000 square feet of space. H. H. Seabrook will be the branch manager.

Spingler & Gosnay, New Philadelphia Firm.

Philadelphia, Feb. 21.—L. J. Spingler, local F. A. M. commissioner, has arranged a business partnership with Sylvester A. Gosnay, under the firm name of Spingler & Gosnay, who have opened up another store at 2003 Market street, within the great business centre of the Quaker City, and on the coming automobile row. They have the exclusive agency for the Thor and Excelsior lines for southern and western Philadelphia, and will carry a full line of parts and accessories. In addition they will conduct a first class repair shop, suitable for repairing all makes of motorcycles, Mr. Spingler being known as one of the best motorcycle mechanicians in this section.

Lang Increases Harley-Davidson Order.

Chicago, Feb. 20.—C. H. Lang, agent for the Harley-Davidson, expects to open his fine new store at 1704 Michigan avenue, on March 1. In connection with the new headquarters, there is being installed an efficient service department. Mr. Lang has increased his orders with the Harley-Davidson to supply him 1,200 machines for 1912. His original contract called for 1,000, but as he has already sold nearly 300 he did not want to take the risk of another famine such as he experienced two years ago, and when he received assurances from the factory that his quota would be 1,200 he was greatly relieved. The increasing of orders by agents at the Chicago show determined the matter to Mr. Lang's satisfaction that he would want more machines.

Transue-Williams Co. Has Fire Loss.

Alliance, O., Feb. 19.—A fire that completely gutted the main building of the Tramsue-Williams Company, manufacturers of bicycle and automobile forgings, caused $50,000 loss. The fire started in the boiler room about daybreak from an explosion of some kind, and the fire department succeeded in confining the flames to one building. Treasurer F. E. Russell, of the company, states that the building will be rebuilt at once. The fire threw 350 men out of employment temporarily.

New H-D Agency at Two Rivers, Wis.

Two Rivers, Wis., Feb. 19.—Joseph Peterik, the well-known cycle man of Manitowoc, and county agent for the Harley-Davidson, has opened a branch in this city under the name of the Western Supply Company, with Walter Watzl in charge. Mr. Peterik has been contemplating the establishment of an agency here for some time, as the territory is an excellent one.

NEW STORE OF HARRY L. NEFF, 106-108 FEDERAL STREET, PITTSBURGH, PA.
The street has been raised 11 feet, and this store is the first to be painted white to comply with Business Men's Association, that Federal street be made Pittsburgh's "Great White Way."

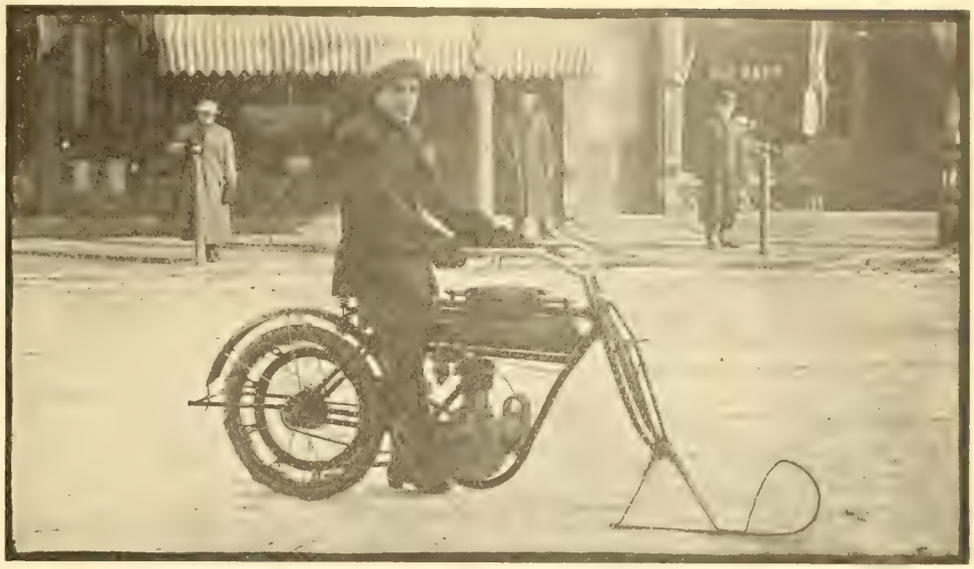
MOTORCYCLES IN EAST INDIA

Consular Representative Makes Good Report on Trade Prospects from Madras —Fine Roadways Prevail There.

India, according to the report of Jose de Olivares, U. S. Consul at Madras, presents an attractive export field for American makers of bicycles and motorcycles. His report in part says:

"The expansive area of the city of Madras and the inadequacy of its inter-urban trolley system necessitate the use of an unusually large number of private conveyances of every description. The city is 36 miles long by three miles wide, and the chief commercial district is separated from the residential section by a system of esplandes and military reservations 2½ miles in width. Added to this, Madras has 300 miles of macadamized streets and roadways, the excellence of which is surpassed nowhere.

"A natural outcome of the foregoing conditions is a large demand for rapid-transit power vehicles, among which the motorcycle is extremely popular.



"The number and value of motorcycles imported into Madras from all countries, during the year 1910-11, was as follows: From the United Kingdom, 96 machines, valued at $19,429; Belgium, 33 at $4,879; Germany, 21 at $3,299; Straits Settlements, 1 at $81; total, 161 machines valued at $27,688.

"During the present year other countries, in addition to those mentioned in the foregoing table, have entered this market, so that at the present time the machines chiefly handled by the dealers of Madras are as follows: British, Triumph, Bradbury, Douglas, Lloyd, Rover, Singer, B. S. A., Minerva, Humber, Rex, Roe, Vindic, Premier, and Matchless; American, Indian; Belgian, F. N. and N. S. U.; German, Durkopp; Swiss, Motosacoche; French, Motoreve. Motorcycles are retailed here at $145 to $300.

"The one American motorcycle handled in Madras is a high-grade machine and is steadily growing in local favor. There is, however, undoubtedly room for other Amercan makes, and more especially for a motorcycle that can compete favorably with the lower priced European machines, such as retail here at $145.

"The fuel universally used hereabouts for motorcycles is gasoline, which is imported into this district from Burma, Sumatra, and the United States, and retails locally at $0.32½ per gallon.

"The same conditions which make for trade in motorcycles in Madras likewise result in a large local business in bicycles and their accessories. The bicycle is in use by all classes, embracing Europeans, Eurasians, and Indians.

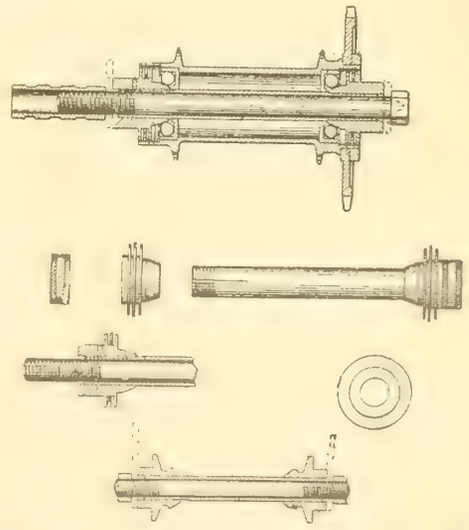
FORD SANFORD, MIDDLETOWN, O., WITH MERKEL RIGGED WITH SLEIGH RUNNER

"Among the numerous makes of bicycles in use hereabouts, the majority of which are English, the following machines figure prominently: Singer, Rover, Gladiator, B. S. A., Humber, Triumph, Swift, Milford, James, Raleigh, Rudge-Whitworth, Starley, Minoru, and Component.

"The importation of cycle materials into Madras during the year 1910-11, was as follows: From the United Kingdom, 2,416 bicycles valued at $56,554; bicycles with accessories, 828 at $25,337; accessories, $29,-089; from Germany, 5 at $105, 6 with accessories at $267, accessories, $616; from Holland, 4 at $97, with accessories, 4 at $146, accessories, $9; from the United States, 2 at $58, none with accessories, accessories, $276; from all other countries, 4 at $117, none with accessories, and accessories valued at $3. Totals: 2,431 bicycles valued at $56,931; 838 bicycles with accessories at $25,750, and accessories valued at $29,992.

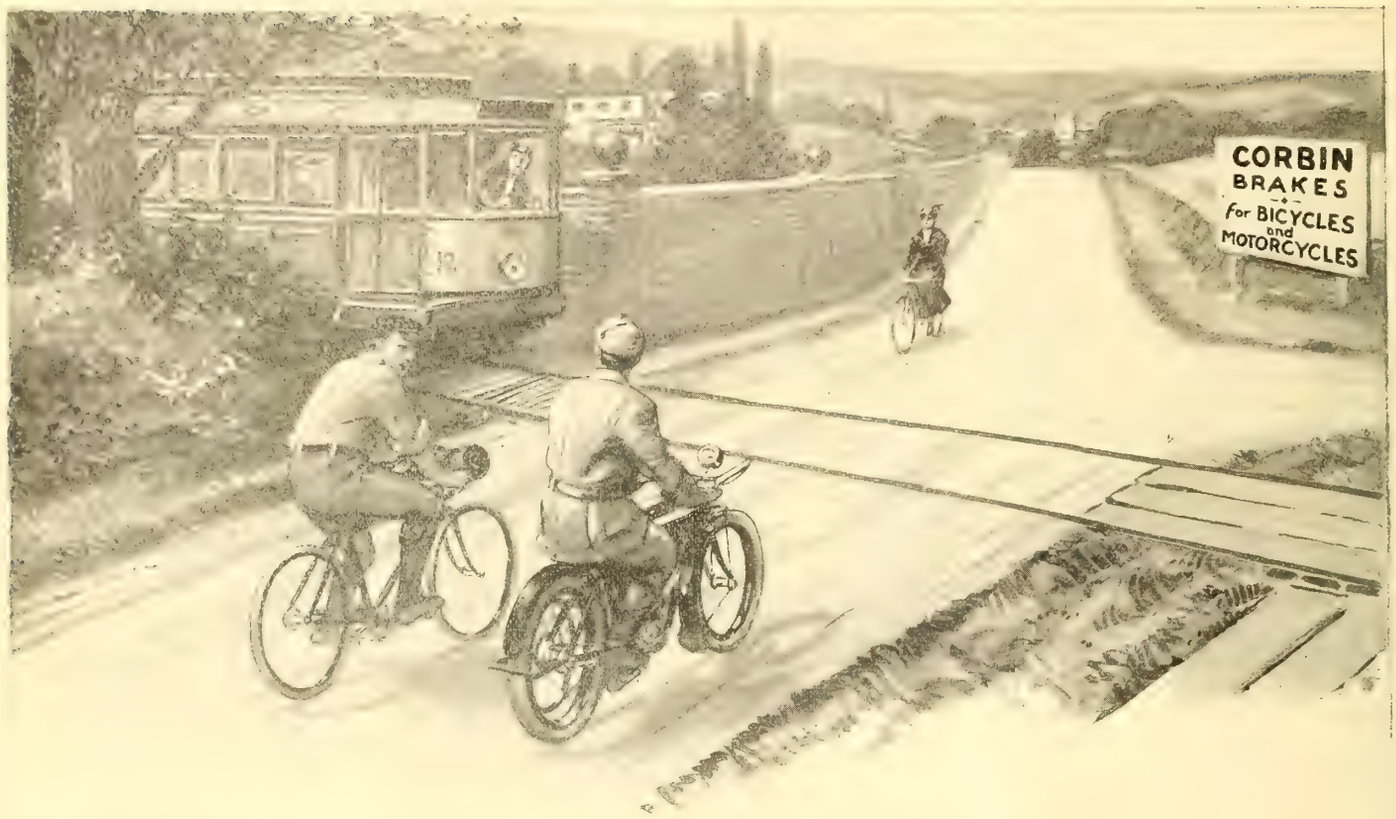
"The prevailing retail price of bicycles in this market range from $18 to $81, the most popular type being among the cheaper and intermediate grades. A large amount of the local retail business in bicycles is on the easy payment system.

"It is believed that serviceable American-made bicycles which could be retailed here at $20 to $50 would find a good market in this district.



"List of importers and dealers in motorcycles and bicycles in Madras will be found in the World Trade Directory issued by the Bureau of Manufactures."

Combining Motorcycle With Sleigh Runner.



Not often is one fortunate enough to be able to experience the combined joys of winter motoring and sleighing simultaneously. With a keen appreciation of the pleasures which both hold, Ford Sanford, of the Miami Cycle & Mfg. Co., Middletown, O., resolved to spread eagle the field and share them, and he succeeded by applying a runner to the front fork of his Merkel in lieu of the usual wheel. The accompanying illustration shows how the unique plan was worked out, the runner being mounted on a regulation ball bearing hub. A chain on the rear tire provided traction. Ford's novel "motor-sleigh" caused not a little rubbing of eyes and ejaculations of astonishment among the citizens when it appeared on the streets, the more so because of the continuous satisfactory service which it is giving. When Sanford first appeared on the streets he created a sensation.

Eclipse Now a Blodgett Patent Licensee.

A. J. Musselman, of Chicago, has closed a license arrangement with the Eclipse Machine Company, of Elmira, N. Y., to produce knockout front hubs under what is known as the Blodgett patent, No. 710,241, dated September 30, 1902. Mr. Musselman now controls this patent, and as this type of hub is being largely used on motorcycles, and also on aeroplanes and similar vehicles, he states that he will institute proceedings against all whose use of this type of hub is unauthorized under the patent.

DETAILS OF BLODGETT KNOCKOUT HUB

Ensure Safety and Absolute Control by equipping your machine with a

CORBIN BRAKE

¶ You then have the double satisfaction of knowing you have considered the safety and comfort of others as well as yourself. The Corbin Brake means Confidence, Reliability and Control. Accidents and collisions are prevented and the pleasures of the road are enormously increased.

¶ The Corbin Brake is located in the rear wheel hub and is operated by a slight back pedaling pressure. Your machine can be stopped instantly or slowed down gradually, according to desire or the need of the moment. Can be fitted to either belt or chain drive motorcycles.

¶ The Corbin Two-Speed Coaster Brake and Duplex Brake for bicycles are universally recognized as the standard. No cyclist can afford to ignore the Corbin.

¶ Corbin Brakes are sold by the leading hardware and bicycle dealers everywhere. Specify CORBIN and insist on it. Any bicycle dealer or repair shop can fit it to the rear hub of your machine.

NEW YORK, FEBRUARY 24, 1912

National Tour Should Be Successful.

Ambitious in its purpose, the project to hold a 2,000-mile motorcycle tour, ending at the place where the National Assembly of the Federation of American Motorcyclists will be held during the approaching summer, does not present the difficulties that at first glance seemed to beset it. A few years ago the lack of route information, the uncertainties of mechanical construction, the lack of suitable accommodations en route, and many other discouraging aspects would have put a damper on the whole proceeding, and in all probability caused its abandonment.

Today the situation is different. Vast progress has been made in mapping out the country by the motorcyclists' big brothers, the automobilists, and today there is practically no part of this vast land that is unknown to both classes of motorists. The development of route information also makes it possible for private parties of tourists, or single individuals, to traverse the country from ocean to ocean on motorcycles, without suffering the inconveniences once attendant upon such an experiment. A glance at the map printed on the center pages of this book will at once enable the reader to grasp the vastness of the work which has been accomplished.

Motorcyclists have proven by the numerous endurance tours of the past few years, that they are capable of traveling in large bodies long distances with a very small percentage of delay or accident, and the chances of carrying a big number of starters through a 2,000-mile tour are exceptionally good. Mechanical refinement of the past two or three years has so altered the conditions of active motorcycling that a trip of that duration is now being looked forward to with great eagerness, so that a sufficient number of entrants to make the proposed tour a success is practically assured in advance.

A capable committee of the Motorcycle Manufacturers' Association is considering the tour from the standpoint of the trade. The outcome of the deliberations of this committee is awaited with interest, as the support of the manufacturers is necessary for the tour's successful culmination.

The Question of Sport Jurisdiction.

A sharp reminder of the power of organization was given this week at Buffalo when the Amateur Athletic Union, with which the National Cycling Association is affiliated by articles of alliance, promptly refused to allow its athletes to compete at a set of games where there was to be run a series of bicycle races in which 31 suspended riders were entered.

In consequence it was necessary for the promoters to omit the bicycle races from its program. So determined were the riders in their defiance of authority that they attempted to secure an injunction from the courts, restraining the N. C. A. from enforcing its suspension. This, too, failed of its purpose as the court denied the application.

The Buffalo suspensions matter clearly shows the results of riders accepting bad advice from alleged friends. A voluntary act on the part of the rider in riding under the rules of an organization obligates him to obey those rules. It is within the province of the governing body to inflict punishment by suspension, and folly for the suspended rider to seek redress in the courts. Every decision so far rendered in cases of this kind has been against the plaintiffs, and has sustained sport governing bodies in their right to inflict the punishment of suspension.

The question actually rests upon the proprietorship of the rules. These rules are the property of the sport governing body that formulates them. The act of a rider in registering under these rules is voluntary on his part—there is nothing compulsory about the matter—and a violation of the rules make him amenable to punishment under them.

That is the whole gist of the subject in a nutshell, and the same question of self-imposed obligation applies equally to competitors in all branches and grades of sport, both amateur and professional.

Some Spring Suggestions on Advertising.

With the opening of the season, again arises the question of advertising, to which it is timely that some thought should be given. Advertising can be made one of the most remunerative departments of any business, wholesale or retail, or it can become most expensive and unproductive.

To the manufacturers of bicycles and motorcycles appealing to the dealer, the proposition is one dealing principally with quality and price; but when the appeal is made to the buying public, by either manufacturer or dealer, the problem then becomes one of the most subtle and complex with which the modern man of business must deal.

Then, the mere statement of so much quality or of so attractively small a price, is of secondary importance. Such statement of mere facts is of interest only to those who already are users. In the vast field of the unconverted it is seed sown on barren or at best, ill-prepared ground.

Here enters the subtlety and complexity of the question: To first create in the mind of the reader, of your prospect, a desire for your article; an understanding of the uses to which it may be put, of the benefits of such use to him and the pleasure and enjoyment to be derived. If possible, be acquainted intimately with your product, be an enthusiast, cultivate enthusiasm in others, have at your command the knowledge of the benefits and pleasures yourself and others have derived from the respective machines—pedal or motor propelled. Write and talk accordingly, make your point—then talk quality or price.

February 24-March 2, Brooklyn, N. Y.—Annual automobile and motorcycle show in Twenty-third Regiment Armory.

February 24, New York City—Century Road Club Association annual dinner at the Broadway Central Hotel, Broadway and Third street.

February 26-March 3, Quincy, Ill.—Second Annual Mississippi Valley Automobile Show, under the patronage of Quincy Auto Club, at Highland Park Pavilion.

February 29, New York City—United Spanish War Veterans, two miles handicap flat-floor bicycle race and general athletic games, open, at the 22nd Regiment Armory.

March 1, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

March 1, Brooklyn, N. Y.—Atlas Bicycle Club first annual theater party and banquet at the Orpheum Theater and the Brooklyn Hof-Brau.

March 2, New York City—Dominican Lyceum two miles handicap flat-floor bicycle race and general athletic games, open, at the 71st Regiment Armory.

March 4-11, Denver, Colo.—Motorcycle, motorcycle accessories and automobile show in Auditorium.

March 16, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 5, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 13, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 14, Brooklyn, N. Y.—Atlas Bicycle Club first annual spring century run, open, Start from Prospect Park Plaza.

April 21, New York City—New England Wheelmen 15 miles handicap road race, Floral Park, L. I., open. Rain date, April 28.

April 26, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 28, New York City—Eastern Division, Century Road Club Association annual spring century run, open. Start from Columbus Circle.

May 5, Brooklyn, N. Y.—Invincible Motorcycle Club annual combined single and double century run—three classes, private Southampton and return. Rain date, May Start from Bedford Rest, to Patchogue and owner, trade rider, and professional, open. 12th.

May 5, New York City—Atlas Bicycle Club 15 mile handicap road race, Floral Park, L. I., open . Rain date, one week later, May 12.

May 30, Asbury Park, N. J.—25-mile annual handicap road race, Monmouth Cycle Club.

May 30, Celtic Park, Long Island City—Start and finish of 200-mile elimination for qualified candidates for final team selection for 200-mile Olympic Bicycle Race, under auspices of Irish American Athletic Club.

June 16, New York City—Century Road Club of America, New York State Dicision, 50 miles handicap road race, Floral Park, L. I. Rain date, June 23.

July 7, Stockholm , Sweden—Olympic games under the auspices of the Swedish Olympic Committee and with the patronage of the King of Sweden; bicycle road race, 200 miles round Lake Malar, sanctioned and under the rules of the Union Cycliste Internationale, open only to amateur riders registered with affiliated National sports governing organizations: For the United States, the National Cycling Association; Chairman, Board of Control, R. F. Kelsey, Room 914 Tribune Bldg., New York City. United States entries close May 20 with the American Olympic Bicycle Team Committee, same address.

August 11, New York City—New England Wheelmen second annual bicycle marathon, Floral Park, L. I., open. Rain date, August 18.

August 25-28-September 1, Newark, N. J.—World's Bicycle Championships, Newark Velodrome.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I. Rain date, September 29.

Canadians Enjoy Side Car Winter Rides.

Toronto, Feb. 20.—The few sidecar owners of this corner of the continent are becoming the envy of the many solo riders hereabouts on account of their ability to keep on the move in all sorts of weather. Wintry conditions are proving no obstacle to the "sociable" mounts, and every bright day finds several outfits on the road. The highways are found to be in excellent condition, being, in many cases, in better shape than during the "open" season, as the packed snow helps to eliminate the holes and ruts. A journey of 56 miles into the country was recently accomplished by Bert Webb, one of Toronto's first side-car enthusiasts, who sports a 7-horsepower Indian, while Percy Barnes, Triumph, has also made several trips. W. H. Dunn, Thor agent, and W. E. Amoss, Flanders, have been enjoying considerable riding as well.

Club Doings in California's Capital.

Sacramento, Cal., Feb. 17.—A very successful masked ball was given last week by the Sacramento Motorcycle Club, which was participated in by almost 100 couples. The members of the club were all dressed in "Yama Yama" suits made of tan and green, the club colors.

Listen to this for speed. On Monday evening W. F. Barber's motorcycle was stolen, and within 20 minutes the thief was inside the city jail. On Wednesday he was arraigned before the city magistrate, and the following Friday was sentenced to three years in the penitentiary by the Superior Court justice.

Captain Gault Gets a Monument Order.

Baltimore, Feb. 19.—Former Capt. H. Matthew Gault, of the Maryland Motorcycle Club, when not racing or touring, occupies his leisure time in designing and building monuments. Since the bad weather has been with us he has kept his machine in his cellar, and has confined himself strictly to business. The result has been that a few days ago his firm captured the contract to erect a memorial in this city to John E. Burbage, founder of the Knights of the Golden Eagle. The design submitted by his firm in competition with many others was accepted by the design committee of the order at a meeting in Philadelphia a short time ago.

Traymores Having a Dart Tournament.

Philadelphia, Feb. 19.—A dart tournament is in progress among the members of the Traymore Motorcycle Club, and is now at its height. Eight teams competing show the following scores:

	Won	Lost	P. C.
Stohner and Hill.....	6	0	1.000
Warker and Weidinger...	10	2	.831
Schickling and Hoer.....	7	2	.778
Germann and Gerlach....	3	3	.500
Chilp and Durr.....	2	4	.333
Germann and Clarke.....	1	5	.166
Barth and Elkers.....	1	5	.166
Fairfield and Thompson.	0	0	.000

SOMETHING ABOUT TRANSCONTINENTAL ROADWAYS

By ROBERT BRUCE, Manager A. A. A. Touring Bureau

In the pioneer days of the ox-team and prairie schooner, the trails were selected across plains and mountains by following the line of least resistance, having at the same time due regard for keeping as close as possible to bases of supplies and water.

While the first transcontinental expedition of which a clear record is had, is that of Lewis and Clark, who between 1804 and 1806 followed up the Missouri River to its source, portaged across the Bitter Root Range and then traced the Snake and Columbia River to their mouths, this was of course mostly a boat expedition. No doubt the early Spanish padres crossed the continent from the Gulf of Mexico to the Pacific Ocean, a hundred or more years earlier; but the first transcontinentalists whose trail, made for trade or colonization, left permanent marks which are fast taking shape as highways, were the pioneers over what were later called the Sante Fe Trail and the Oregon Trail.

Travel over the former began about 1822, starting from Little Rock, Ark., and followed the Arkansas and Canadian Rivers west. A few years later this route was practically superseded by the route beginning at Independence, Mo., connecting there with the old Boon Lick Trail from St. Louis, and going via Kansas City (then Westport) and Great Bend, followed the Arkansas River west, crossed the Rocky mountains at Trinidad and then on Spanish soil reached Santa Fe, via either of two routes. Over this route an important trade with the Spanish population of the southwest was early developed and reached its zenith in the sixties. The route is being marked by some monuments erected by the society of the Dames of the American Revolution.

The Oregon Trail also began near Kansas City and in fact for a few miles coincided with the Santa Fe Trail, but soon veered slightly northwestwardly and followed the valley of the Platte River west, then across lower Wyoming and northern Utah, down the Snake River in Idaho and across Oregon. The great colonizing movement gained strength about 1852, and this trail was much traveled. The story of the Oregon Trail has been told by Ezra Meeker, one of the early pioneers, who in 1906 retraced his journey of almost half a century before, and inspired many of the towns along the route to erect memorials.

During the California gold rush about 1849 travelers reached the Golden State both via the Santa Fe Trail, and via a branch extending from the Oregon Trail in Utah and crossing Nevada into California. The early travelers over either of these routes underwent numerous hardships and frequent attacks by hostile Indians made the trip one of real danger.

When the first railroads were built across the plains, they for the most part followed the old trails; thus the Atchison, Topeka & Santa Fe Railroad follows closely the old Santa Fe Trail, and the Union Pacific the Oregon Trail. While those who first dared to undertake a transcontinental trip in an automobile felt bound to follow closely a line of railroad, by reason of the necessity of keeping close to bases of supplies, it is an unmistakable testimonial to the excellency of the modern motor car that the fast developing automobile routes are frequently cutting corners, making short-cuts or detours, which frequently lead away from the railroad for a hundred or more miles, in order to visit sections offering unusual scenic attractions, or places of historic interest even if these places are in desert regions.

There will eventually be developed four distinct routes of travel across the North American continent, two of which may even now be said to be standard routes, carrying practically all of the fast increasing traffic. Each route will have its distinct advantages, depending on the time of the year.

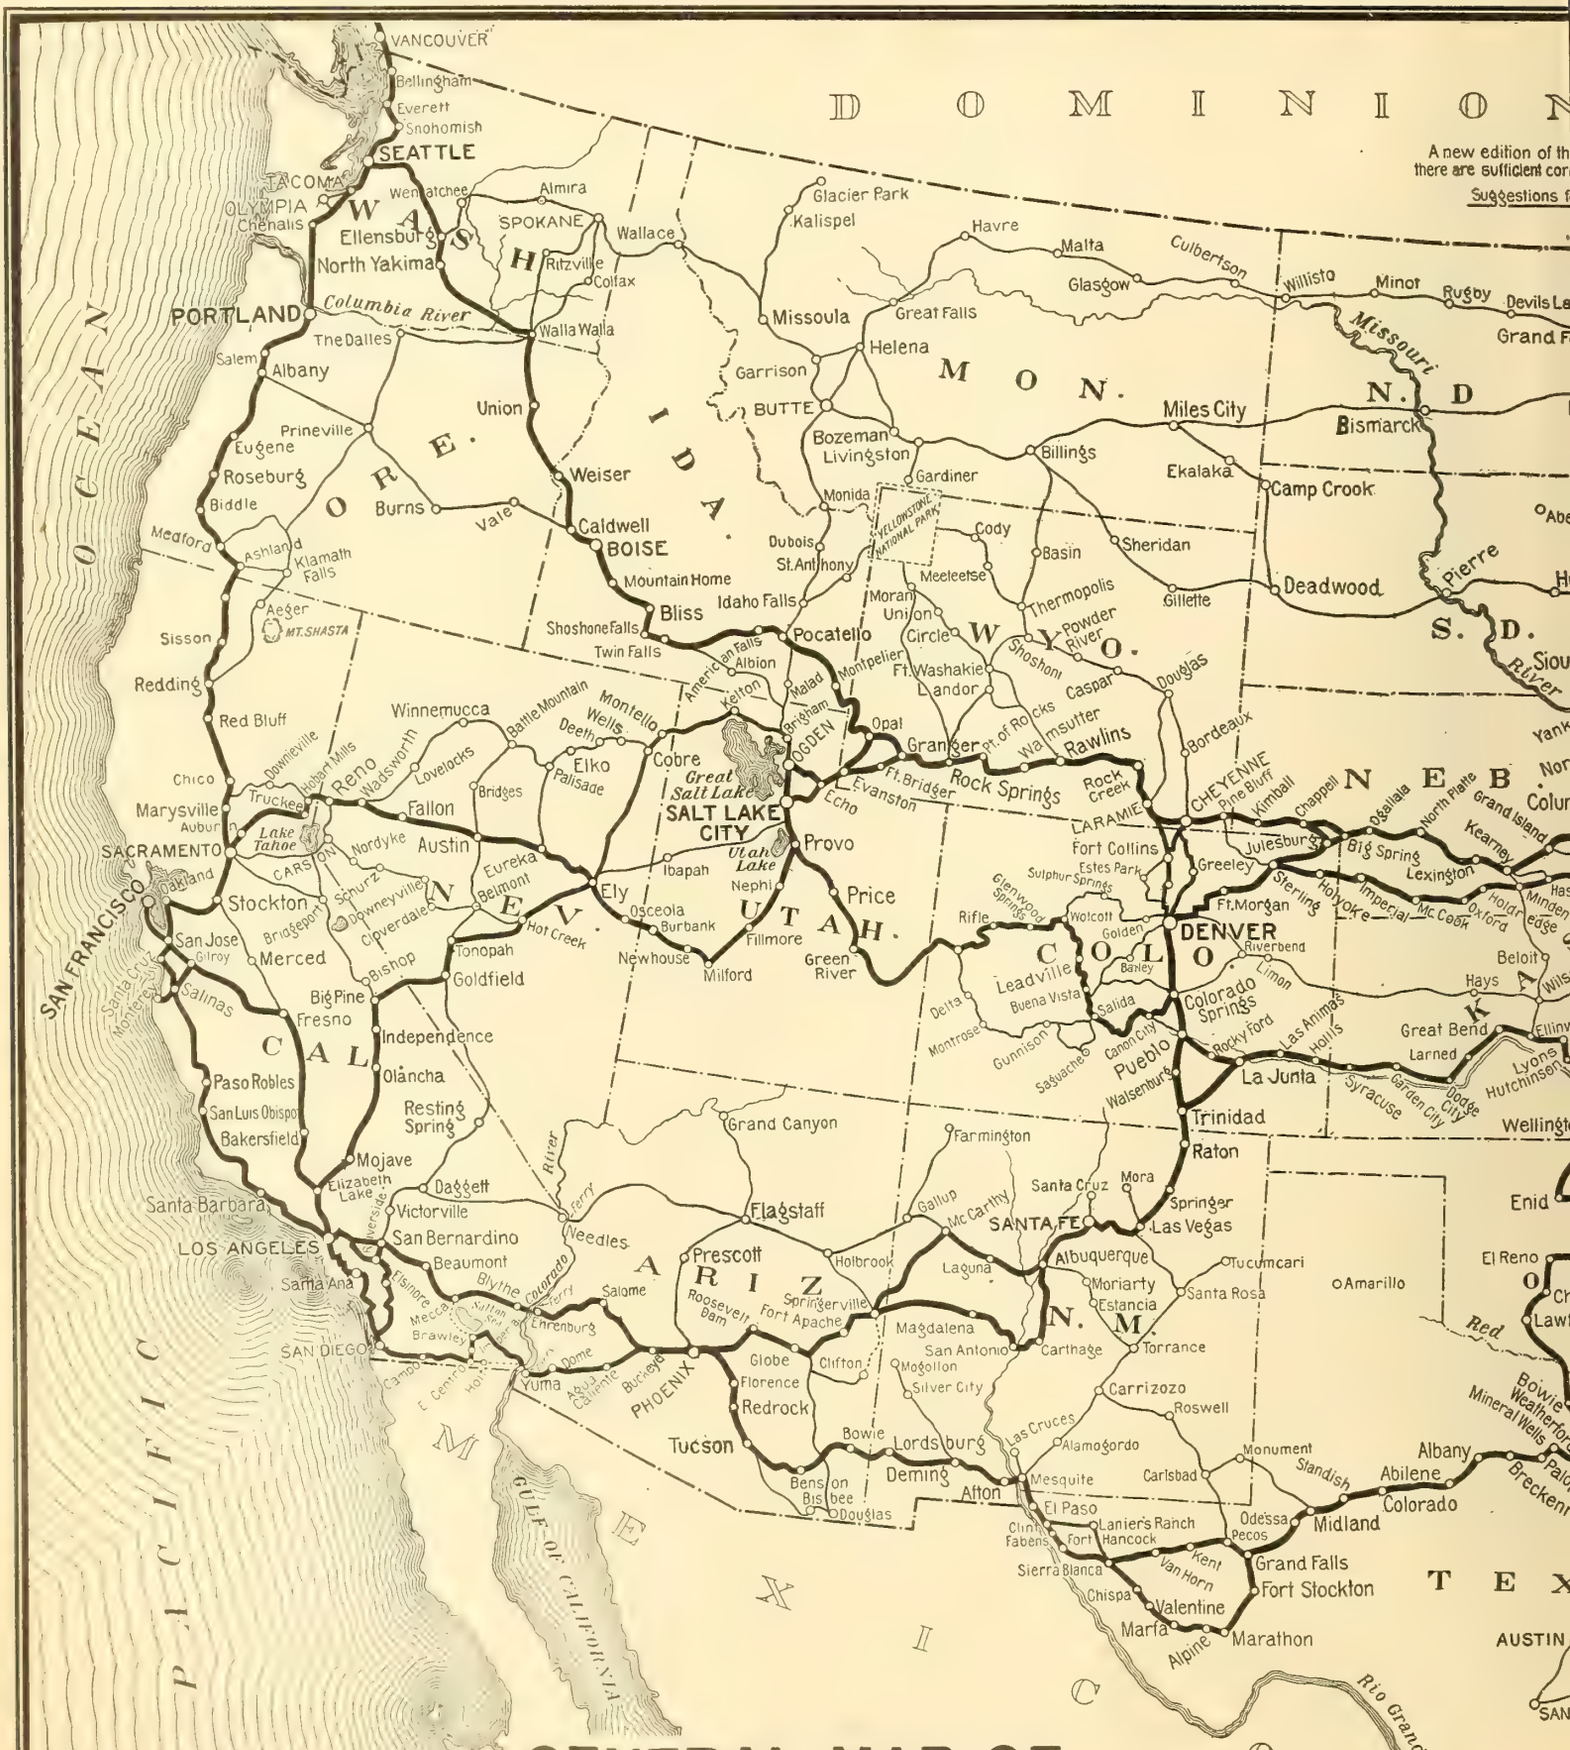
1. The "Trail to Sunset" runs from the East to Los Angeles, following the Santa Fe Trail and cutting across New Mexico and Arizona through a section offering magnificent mountain scenery and splendid attractions, prehistoric ruins, Mexican habitations, giant desert cactus and tropical vegetation in irrigated regions. This route is being fast improved, though it has still a few miles of very rough stretches and lacks hotel accommodations at certain points, necessitating camping out a couple of nights in New Mexico and Arizona. It is the best route to follow in the fall of the year.

2. The Central Route runs from the East to San Francisco or Los Angeles through Illinois, Iowa, Nebraska, northern Colorado, Wyoming, Utah and Nevada, following portions of the Old Oregon Trail. While this route offers some stretches of rough going in Wyoming, Utah and Nevada, it may be said to offer uniformly good traveling conditions and also hotel accommodations throughout its length. This is the best route between June and September, and with route 1, which is too hot in the middle of the summer, carries most of the present traffic. It is safe to say that during 1911, over one hundred cars made transcontinental trips over these two routes.

3. The northern route from the East through Wisconsin, Minnesota, North or South Dakota, Montana, Idaho and Washington, is yet to be developed. This will be a July and August route, and when the definite path is eventually fixed it will open up a splendid country to through motoring traffic. It is replete with interesting scenery, and is inhabited by a progressive class of citizens, which will insure rapid improvement of the roads.

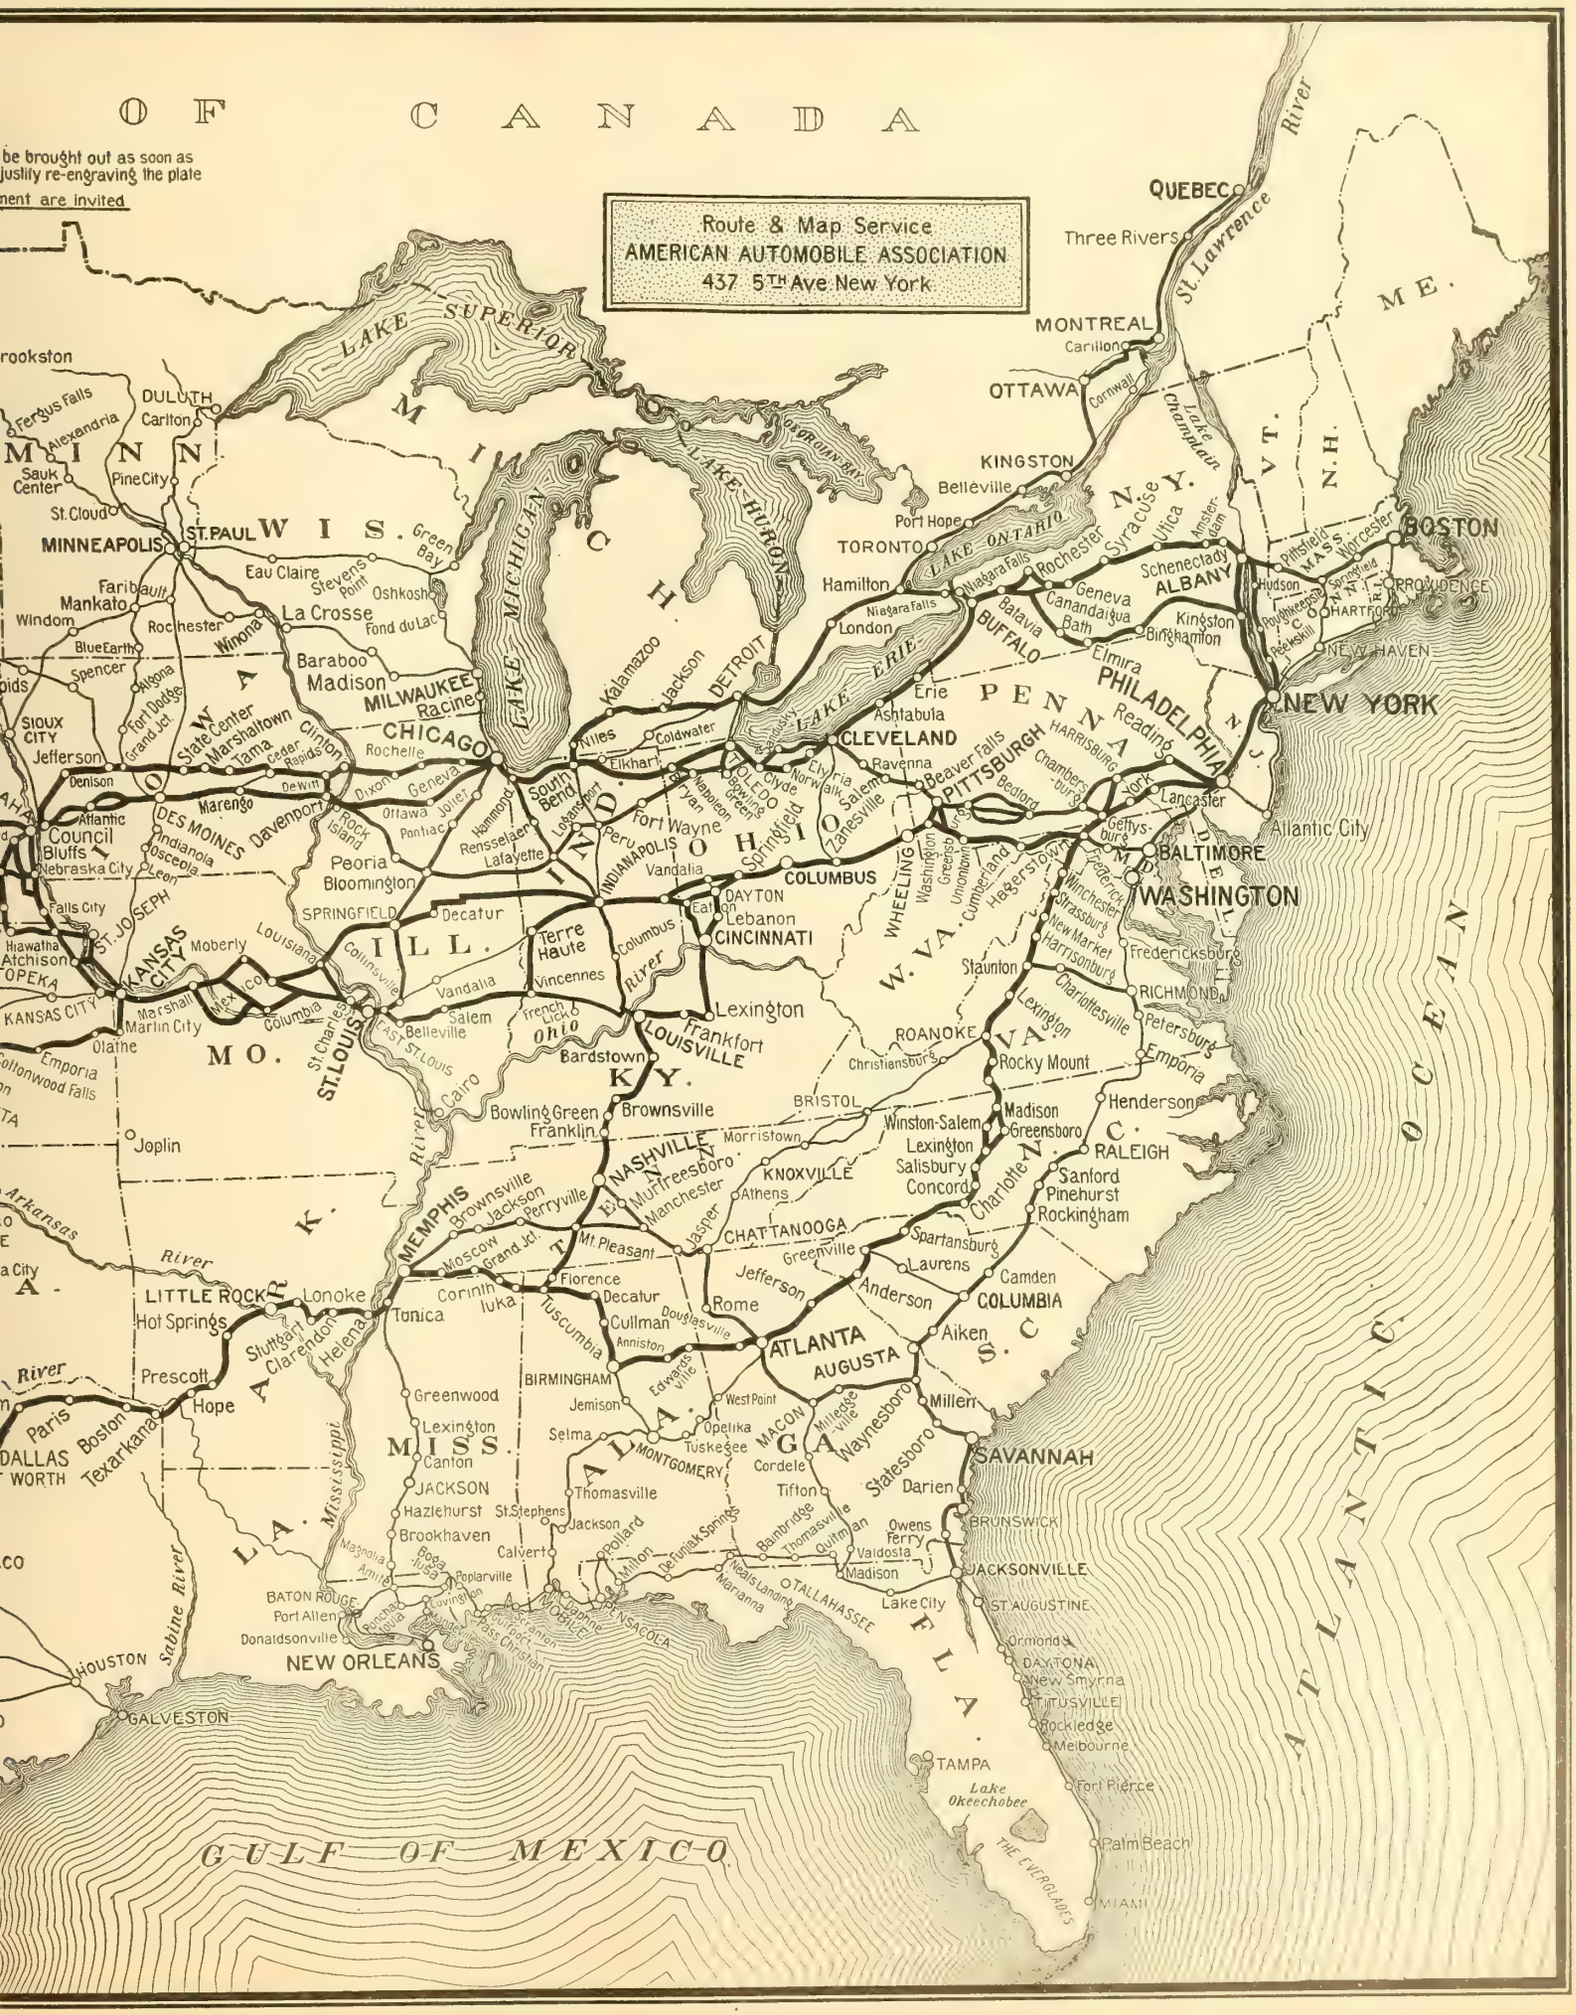
4. The Southern route from the Atlantic seaboard through Alabama, Mississipp, Arkansas or Louisiana, Texas, and New Mexco, will join route 1 in Arizona. This is a fall and early winter route, and is capable of development into a standard trunk line offering many attractions both from scenic and climatic standpoints.

The final improvement of these four routes will enable tourists to make round-trip transcontinental trips during all but two or three months in the year. It will draw an ever-increasing number of motorists to that mecca of winter touring, Lower California, and beyond everything else, will be the most potent means of showing Americans their own glorious America, and thus keep at home millions of dollars which now go to enrich foreign conutries through Americans traveling abroad.



An Accurate Transcontinental Map.

Now that there is a 2,000 mile tour in prospect under F. A. M. auspices, the new transcontinental route map shown on the pages which follow, will be of particular interest, as large portions of the routes shown will undoubtedly be selected by the committee which routes the tour, which will be so timed that it will end in the city where the annual F. A. M. meet is held—this city having not yet been chosen. An expensive trophy will be offered.



The map shows the very latest rideable routes across the country, and was compiled under the direction of Robert Bruce, manager of the Touring Bureau of the American Automobile Association. About April 1 it will be published in larger size on paper suitable for handling, and may be had at 25 cents a copy from the A. A. A. Touring Bureau, 437 Fifth avenue, New York City.

Borgers Succeeds Small & Stevens Co.

Madison, Wis., Feb. 19.—A. L. Borgers, who for years has conducted a bicycle repair shop at 1320 West Johnson street, has purchased the business of the Small & Stevens Company, at 113 State street, another veteran concern that has been in the bicycle and motorcycle business for years.

GENERAL MAP OF TRANSCONTINENTAL ROUTES WITH PRINCIPAL CONNECTIONS

LAST year there were more Harley-Davidsons sold in Akron, Ohio, than any other three makes combined. In spite of this, six times as many 1912 Harley-Davidsons have been sold and delivered there in the last four months, as were 1911 models in the same time a year ago.

This early start would not have been posiible if the factory organization back of the Harley-Davidson was not on the job.

CANADA'S BIG SHOW IS NOW ON

Seven American Makes in the Dozen Lines Exhibited at the Toronto Armory —Side Cars a Great Feature of the Display—Predictions of Heavy Business Are Plenty.

Toronto, Ont., Feb. 22.—Beneath a flood of electric lights, radiating down upon glamorous exhibits, Toronto's annual motorcycle exposition, held in connection with the yearly motor car show in the capacious Armory buildings, was inaugurated on Wednesday evening, February 21, and will continue until February 28. The greatest of displays in Canada, this yearly exhibition of motorcycles now ranks among the most important on the continent, giving as it does, the first opportunity of the season for the manufacturers and dealers to show the glistening new models to the Canadian trade and permitting of a reunion of veterans and stalwarts of both motorcycle and bicycle circles. Myriads of incandescents and pleasant scenic effects have transformed the old stately "warshed" at Toronto into a huge palace, the crowning feature of the whole decorative scheme being an immense Union Jack which hides the entire ceiling with its folds.

A dozen different makes of machines are displayed, and the fact that the very finest that three countries can turn out is on view, gives the show an international aspect. Besides the motorcycle booths, the exhibits of interest to riders include tire, magneto and accessory displays to the number of ten. The array of machines includes seven American lines, three British products, and two Canadian models. Three of these exhibits were situated on the ground floor, while the remainder were accommodated in the gallery immediately overhead.

A busy center was the Indian booth where the Canadian chiefs of the Hendee tribe chanted the praises of the Springfield flyer. A full line of models was on display, and although the Tourist Trophy, which was shown in New York and Chicago, was a lacking quantity, the machines formed sufficient attraction in themselves. Several British-made sidecars, a cutaway seven-twin engine and a section of an Indian clutch were also on view. The sales force included H. M. Kipp, Herb W. Kipp, Canadian representative of the Hendee company, Alex McLean, H. S. Hodgkinson, Bert Webb, Thos. Webber and Jack Scott.

Visitors also crowded around to get their first glimpse of the Excelsior autocycle. Percy A. McBride, the Ontario distributor for the Chicago product, had trotted out three brand new models besides a Canadian Motosacoche and a side-car. McBride never tired, on opening night, of pointing out the many new features of his brand. Ernie McIntosh is McBride's right-hand man, and he never let an opportunity slip to second McBride's arguments.

The Motorcycle and Equipment Company, Toronto, had a variety of machines to show, including a big black Flanders, a T. T. model of the Rudge-Whitworth line. M. E. Amoss, the proprietor and the man in charge, worked overtime telling the crowds all about the multi-speed gear device on the Rudge machine. The Flanders was also a magnet. Harold Pratt assisted Amoss.

Four different sizes of the Merkel were on view of the Humphrey Bicycle and Motor Company, Toronto. President A. E. Humphrey made the announcement that his firm would handle only the chain drive models for the Canadian trade. Mr. Humphrey, who is the Merkel agent for the Province of Ontario, was supported on each side by Harold Cole, the race track champion, and George Sheppard, salesman.

The Triumph stall was occupied by a couple of the English machines, and the Greenwood brothers, the local representatives of the British makers. The chief regret of these hustlers is that they cannot get enough wheels to keep up with the demand.

Walter Andrews who finds time between bicycle races to sell more than a few Pierce and Indian buzz carts, made use of no less than two spaces in which to display the four standard Pierce models and three of the regular Indian mounts. Andrews' display looked as pretty as a picture. A. W. Hampson talked when Andrews got tired.

Steve License, the local agent for the Harley-Davidson, was as noisy as his battery of gray fellows were silent, although the latter spoke for themselves at that. License had everyone "floteing" from the start, although much interest was also taken in the new H-D free wheel device.

The T. Eaton Company exhibit included two 1912 Reading Standard models, a seven and a four, chain driven, which had been rushed to Toronto ahead of a large consignment, and a 2¾-horsepower Douglas lightweight twin cylinder, which is a British manufacture.

Passenger cars were featured in several of the displays, the Indian exhibit showing several styles of the Mills-Fulford, Coventry, car and delivery van. McBride had a "chair" fitted to one of his Excelsior models. Slightly over 30 machines, all told, were shown.

Minneapolis Show Is City's "Best Ever."

Minneapolis, Minn., Feb. 19.—This evening the automobile and motorcycle show was opened in the big auditorium, and continues throughout the week. Decorations, the consumation of six weeks' work on the part of the scenic artists, have turned the interior of the building into a palace of beauty. Tall Grecian columns surmounted by clusters of palms and flags and shields of national design support streamers running from the rails of the balconies on either side, while many yards of bunting and cheese cloth, and thousands of electric lights go to render the walls and the ceiling attractive, and the displays bright and pleasing to look at.

Naturally the exhibit of the Minneapolis Motorcycle Company, and that of the Wagner Motorcycle Company, of St. Paul, both being home products, come in for a great share of the crowd's attention. Both companies make effective displays. Other motorcycle displays include the Harley-Davidson, Indian, Merkel, Excelsior, Reading Standard, Yale and Thor, which are shown by their respective representatives in the Twin Cities.

ARMORY AT TORONTO, ONT., WHERE CANADIAN SHOW IS IN PROGRESS

MOTORCYCLES AT CLEVELAND SHOW

Fine Display of the Two-Wheelers in the Central Armory—Elaborate Decorations Make Bower of Beauty.

Cleveland, O., Feb. 20.—When Mayor Baker on Saturday evening, pressed the button that flooded Central Armory with light, the band up under the roof struck up "Onward, Cleveland," and the tenth annual automobile and motorcycle show was in full swing. Fully 10,000 interested spectators crowded the building.

Large columns of imitation marble formed the base for decorative effects, and the ceiling was entirely covered with Oriental red. The walls were also covered with paintings of automobiles on the country road, two large paintings of this sort hung across the ends of the Armory. The value of the show and exhibitions was put at a million dollars, and many who attended the New York and Chicago shows, expressed their opinion that the Cleveland show made more of a marked impression as to beauty than either of the other big exhibitions.

The motorcycles occupied one half of the balcony space, where the crowds lingered. Mostly twins predominated and one side car was shown which attracted considerable comment. A very neat design of wicker basket on a red "7 Twin" with three-inch tires, especially attracted the ladies, and many tugged at "poor father's" arm and took just one more look. The motorcycle exhibitors are as follows:

L. J. Mueller, Indian, showing five models, one 4-horsepower and five 7-horsepower, including model of side car. Mr. Mueller is assisted at the booth by E. L. Tracy, H. J. Tucker and Don Klark, the well-known racing man.

Casino Cycle & Supply Company, Thor, Excelsior and New Era, showing three Thors in 4, 5 and 7-horsepower; five Excelsiors, three 4-horsepower, one 6-horsepower; one New Era, 4-horsepower. Manager John Zucker is in charge, assisted by E. J. and H. Hawkins, and Ed Richel.

Lister Motorcycle Company, Harley-Davidson and Merkel, showing four H-D, two 4-horsepower, one 6 and one 7-horsepower; two Merkels, one 6 and one 7-horsepower. In attendance is Manager William Lister, Albert and Charles Lister, and George Puls, of the Harley-Davidson traveling force.

Kumler Zrothers, Reading Standard and Flanders, showing three R-S's, two 4-horsepower and one twin; one Flanders, 4-horsepower. E. F. Kumler and H. H. Kumler are in attendance at the exhibit.

Yale Cycle & Supply Co., Yales, showing four models, two 4-horsepower, one 5 and one 7-horsepower. W. H. Ferguson, who manages the selling end of the company's business, is in attendance.

The Standard Welding Company showed the tubing, rims and other specialties for the motorcycles along with the automobile products.

O'Neill Tire Protector Company show a tire protector adapted for the motorcycle and the line of talk was interesting.

Casino Supply Company handed the ladies a pennant of red with white with "Excelsior." A very neat souvenir and they wore 'em too.

"Take a Joy Ride on a Flying-Merkel" buttons were seen on almost every one, and even Looie Mueller had one on his coat, too.

The Standard Oil Company exhibited an oil designed for the use of motorcyclists. The Monogram Oil Company also made a display of oils for the same purpose.

Motorcycles at the Baltimore Show.

Baltimore, Feb. 20.—Allotment of space for motorcycle exhibits at the automobile show, which opened at the Fifth Regiment Armory this evening, were liberal, and the following representatives of the trade made displays: Howard A. French & Co. (Indian); Randall Manufacturing Company, (Reading-Standard and Pope); Chase Motor Company, (Harley-Davidson); F. W. Sandruck, (Excelsior, Merkel and Emblem); Little Joe Wiesenfeld Company, (Yale and Thor). The Randall Manufacuring Company has just taken hold of the Reading-Standard agency in this city, the former distributor being B. W. Logue.

Show at Binghamton Opens Auspiciously.

Binghamton, N. Y., Feb. 21.—Last evening the automobile and motorcycle show opened with great eclat at the State Armory in this city. Motorcycles formed a prominent part of the exhibits, W. H. Wolfe of Turner's Bicycle Store exhibiting a line of Harley-Davidson, Pierce and Emblem motorcycles, and in addition thereto a line of Pierce, Yale, Day, Wolfe and Emblem bicycles. B. E. Jewell, agent for the Excelsior shows a sample machine, and E. C. Campbell, agent for the Flanders is showing three machines. The show continues all of the present week.

Progress of Small Engine Development.

Says an English correspondent, who has given some study to the classification of records on the other side:

From the list of British records published in your issue of January 6 (to date of December 22) your readers will see that small engines have received considerable attention over here. There are separate class records for machines of 275 c. c., 350 c. c., 500 c. c., 750 c. c., and 100 c. c., and it has recently been decided to recognize sidecar records on these same lines. There can be no doubt that these classes up to 500 c. c., have done an immense amount in the development of the small engine and the times and distances up to about one hour are certainly rather warm. Of course the 500 c. c. single is the predominating type, but there has recently sprung up a number of really fine 350 c. c. twins, which even ber of really fine 350 c. c. twins, which even single. These small types, however, are so efficient that quite 70 per cent. of the machines on the road are of 500 c. c. downwards, and in conjunction with a variable gear will go anywhere. I really thing the F. A. M. would do well to institute classes on similar lines, for there can be no doubt that the scope of the 1,000 c. c. twin is distinctly limited, and apparently very little is being done for the improvement of the lightweight.

ONE OF THE LEADING MOTORCYCLE EXHIBITS AT THE CLEVELAND SHOW

Latest F.A.M and Club News.

CHAIRMAN ESTABROOK'S BULLETIN

Clubs Continue Steadily to Enroll for Membership—Sixteen New Repair Shops Added Last Week.

Two clubs were added to the official list of the F. A. M. during the week that closed February 17, according to the bulletin of Chairman Estabrook. They are:

No. 220—Hercules Motorcycle Club, Chicago, A. J. Foote, secretary, 4101 West Adams street; 16 members.

No. 221—Newark Motorcycle Club, Newark, N. J., Edward Friedman, secretary, 40 Newton street; 12 members.

Prespective organizers of clubs are: A. E. Bakeman, 103 Fifth avenue, St. Cloud, Minn.; W. I. Freeman, Argonia, Kans.; W. H. Haelig, Bound Brook, N. J.; William Lauth, Maywood, Ill.; E. D. Smith, Box 945, Victoria, B. C.

Sixteen more repair shops were added during the week, bringing the total number up to 552. They are as follows:

Joseph Kapp, 56 Westchester avenue, Port Chester, N. Y.; Lee McKinsey, Frankfort, Ind.: Spingler & Gosnay, 2003 Market street, Philadelphia; T. B. Anderson, 546 West 18th street, Erie, Pa.; Deadwood Motor Co., Deadwood, S. Dak.; New York Motorcycle Co., 318 West 48th street, New York City; Stamford Motorcycle Co., 41 Main street, Stamford, Conn.; A. L. Hall, 1021 First avenue, Seattle, Wash.; Amana Society (William Toerstner), High, Ia.; Wauchope Bros., 11 North Sacramento street, Lodi, Cal.; Harry F. Schnell, 345 Broad street, Newark, N. J.; Coe F. Dix, Stockton, N. J.; G. R. Walter & Co., 303 South Main street, Butler, Pa.; George S. Naslen, 1242 Main street, Hartford, Conn.; Ben Ruderman, 1041 Bedford avenue, Brooklyn, N. Y.; C. W. Pearson, 623 Landis avenue, Vineland, N. J.

Colorado and New Mexico Commissioners.

A. W. Green, vice-president of the Southwestern District of the F. A. M., has appointed two new State commisisoners, G. Eugene Lain, who is one of the leading dealers at Agricultural College, N. M., has been designated State commissioner for New Mexico. He is a wide awake worker and ought to make a fine record.

George P. Bartlett is the new appointee for State commissioner of Colorado, succeeding G. H. Toncray, resigned. The latter could not spare the time necessary for the office from his business. Mr. Toncray in his letter of resignation to Vice-President Green states that the Denver Motorcycle Club, of which he was president, has disbanded on account of internal dissensions caused by local trade jealousies. Mr. Bartlett is a leading dealer of Colorado Springs, and secretary of the motorcycle club in his city.

Dr. Thornley Takes Brief Vacation.

To be assured of complete freedom from business and official cares, the better to enjoy a well earned vacation, Dr. J. P. Thornley, Chairman of the Competition Comittee, F. A. M., left New York City, Wednesday, February 21, on a travel jaunt of unknown destination and indefinite duration, to be away for from two to three weeks. In addition to his extensive professional practice the duties of the chairman's office have grown to such a degree, approaching in volume those of the L. A. W. Racing Board in the height of its career, that an absolute rest was found necessary.

To the rapidly extending routine work, has been added an enormous correspondence concerning the franchise proposition now so prominent in racing affairs of the Federation. Applications are pouring in from every quarter together with considerable discussion anent excessive cost of the franchises in some localities.

During Dr. Thornley's absence, he has delegated to discharge the duties of the chairman's office, a veteran of cycling, one of the founders of the New York State Racing Board of the L. A. W., and of the F. A. M.—Will R. ("Happy Days") Pitman.

Restrictive Legislation With a Vengeance.

Toronto, Feb. 19.—Riders of Toronto have once more become embroiled in a legal fight for their rights. Hon. W. J. Hanna, the Provincial Secretary, has just introduced a bill in the Legislature requiring that all motor vehicles must not pass a stationary street car upon the city's thoroughfares. The riders consider this to be one of the most headless bits of legislation ever proposed, and are hoping and praying that the worst will not come to the worst. Practically all of Toronto's streets are covered by the street railway system, and the boys are of the opinion that it would be well nigh impossible and far from enjoyable to ride within the city's limits at all, should the law be adopted.

Rockford (Ill.) Club Has Reorganized.

Rockford, Ill., will again have a live motorcycle club, if the good work begun on February 3, endures. Reorganization of the Rockford Motorcycle Club, which had falled into a state of inocuous desuetude, was effected at an enthusiastic meeting. It was voted to affiliate with the F. A. M., 20 members signing the charter application, and a similar number agreeing to do so soon. Officers will be chosen at the next meeting. The club will be able to obtain a good half mile dirt track for the racemeets which it proposes to hold, and it also will put on road events. Clarence Carrett and A. L. Johnson are the leaders of the "wake-up" movement. They were at the recent Chicago show consulting with F. A. M. officials.

Winter Social Season at San Francisco.

San Francisco, Feb. 17.—At the monthly social gathering of the San Francisco Motorcycle Club held February 7, there was an attendance of over 150. The program included vocal and instrumental music, recitations, dancing, and plenty of good refreshments, the last mentioned being served by the lady members.

February 13 a large number of San Franciscans attended a similar gathering given by the Oakland Motorcycle Club, across the bay, at Oakland; a number will also attend the first annual banquet of the Oakland club, which will be held at the Key Route Inn, on the evening of March 2.

Toronto's Big Club Wants a "Home."

Toronto, Feb. 19.—At the regular February business meeting of the Toronto Motorcycle Club, a scheme was launched for the establishment of permanent club quarters. A special committee was appointed to select furnishings for the "home" and to find a suitable site. The local organizations can now boast of a membership of 190, but has never yet had quarters, the meetings being held in lodge rooms.

A resolution was also introduced favoring the creation of a life membership class, for which any member would be eligible after serving a certain number of years as an active worker.

THREE MORE NEW RECORDS

They Slaughter Time Marks in Trios at Los Angeles Nowadays—Hasha, Wolters and Ward Set New Figures.

Los Angeles, Cal., Feb. 19.—Three more new world's records were made at the new Stadium yesterday, and 7,500 motor-mad fans cheered the new racing stars to victory. Eddie Hasha, who last week opened the new track with a marking up of three new world's records on his Indian, added another to his score yesterday in the third heat of the five-mile Class A professional contest by clipping 5⅗ seconds from existing record, placing new figrues at 3:23⅗.

The first record smashing of the afternoon was done by Joe Wolters with his Excelsior, when he rode three miles in the first heat of the Class A professional in 2:00⅗, just 1⅗ seconds better than Hasha's record of 2:01⅗, made a week ago.

Al Ward made his debut into the Class A professional class and sprung the surprise of the afternoon when he smashed the ten mile record in the free-for-all, by driving his Indian a leader over the tape in 6:53, cliping 8⅕ seconds from best previous figures. The records broken by Hasha and Ward were held by De Rosier, and were made on the old track here February 7, 1911, on an Indian.

The most spectacular feature of the afternoon was a near accident to Hasha, who while traveling at 88 miles an hour in the free-for-all, blew a tire. Though the riders were bunched closely, he kept his head and steered his motor to the ground from off the 50 per cent. incline in safety, and was loudly applauded. Jake De Rosier displayed excellent judgment in all his races, but was hampered by unforseen battery trouble.

The second event on the card, the first heat for Class B professionals, was a nip and tuck affair, and Will Samuelson did not nose through till the last lap. The second half was a hard tussle between T. M. Samuelson and Hubert Kittle, with Samuelson scoring by a slight margin. In the final Theodore Samuelson cut his forehead on the handlebars when going over a rough spot and was forced into third position.

The Class A races were all of the spectacular order. In the first heat Hasha was pocketed and could not beat Wolters, Balke and De Rosier to the finish. The second heat was desperately fought out by Hasha and Wolters, with the former leading his opponent at the finish.

The third heat was nip and tuck in every one of the 15 laps. Hasha forged to the front and kept there up to the end, but Ward, Wolters and "Fearless" Balke were right behind him. The four went flying around the track in a bunch and it seemed to be anybody's race, but the "Texas Cyclone" retained his slight lead.

The ten-mile free-for-all, with six men entered, was the feature of the meet. Hasha again took the lead and stuck there until the eighth mile, when his tire blew and only his wonderfully quick action in getting his Indian under control prevented a serious accident. Al Ward spurted out in front then and finished first, with Balke second, T. M. Samuelson, although lapped twice, ranking third, and De Rosier, after a delay for repairs, secured fourth money. The summaries:

Class A professionals—First heat, three miles, won by Joe Wolters, (Excelsior); second, Charles Balke, (Excelsior); third, Jake De Rosier (Excelsior); fourth, W. E. Hasha, (Indian). Time, 2:00⅗. (World's record.)

Second heat, four miles, won by W. E. Hasha, (Indian); second, Joe Wolters, (Excelsior). Time, 2:42⅖.

Third heat, five miles, won by W. E. Hasha, (Indian); second, Al Ward, (Indian); third, Charles Balke, (Excelsior); fourth, Joe Wolters, (Excelsior). Time, 3:23⅘. (World's record.)

Class B professional, five miles; final heat—Won by Hubert Kittle, (Merkel); second, Will Samuelson, (Indian); third, T. M. Samuelson, (Excelsior); fourth, John Albright, (Indian). Time, 3:43⅗.

Ten mile, free-for-all, won by Al Ward, (Indian); second, Charles Balke, (Excelsior); third, Hubert Kittle, (Merkel); fourth, Jake De Rosier (Excelsior). Time, 6:53. (World's record.)

Three miles, free-for-all, amateurs, won by F. Montgomery, (Excelsior); second, Irwin Knappe, (Indian.) Time, 2:55.

Two miles, non-winners, won by Ray Peck. Time, 1:28⅕.

"EDDIE" HASHA, THE "TEXAS CYCLONE," AND HIS INDIAN RACER
The 20-year-old wonder from the Lone Star State, broke three world's records February 11 at the Los Angeles Stadium opening, and February 18 annexed another, all in separate races.

Hasha's Indian Measures 60.16 Inches.

Los Angeles, Cal., Feb. 17.—The protest of the Excelsior people against the eight-valve Indian motorcycle with which W. Eddie Hasha, the Texas rider, broke three world's records at the opening of the new Los Angeles Stadium on February 11, has been overruled by Charles Fuller Gates, referee for the F. A. M., and Hasha's achievement is therefore made official as far as local conditions are concerned.

It was claimed that the piston displacement of the Indian machine driven by Hasha was more than 61 cubic inches. Referee Gates put the machine in charge of three watchers—one from the Indian camp, one from the Excelsior camp, and one representing himself. F. S. Sibley, of the White garage, took the cylinder heads off in the presence of these representatives. After calipering the bore of the cylinders and measuring the stroke of the piston, Mr. Sibley calculated the displacement of the two "barrels," and the combined displacement was found to be, according to his computations, 60.16 cubic inches, therefore within the 61-inch limit.

To make sure of the records, the five timers who snapped the stop watches on the track performance have made affidavits to the correctness of the time for three races in which records were broken. These affidavits, with the sworn measurements made by Sibley, are being forwarded to Dr. Thornley, chairman of the F. A. M. competition committee, at New York, and after the figures have been checked by him, they will, if found correct, be declared official.

John S. Prince, who has built several notable tracks on the Pacific slope, including the new Stadium here, expects to leave for the East in a few days, to begin work on a series of new motordromes. One of them will be at Baltimore. It has not been decided where the others will be.

EUROPEAN TOPICS OF PERTINENT INTEREST

Collier Will Compete for the Tourist Trophy—A. C. U.'s Forthcoming Trials — Rumors of American Trade Invasion — Competition on the Continent, and Need of International Control of Sport.

London, Feb. 16.—Since writing last week it has become probable that C. R. Collier will not find an opportunity of visiting the States, at any rate for the present. The dates of the Tourist Trophy Races, which will be held on June 28 and July 1, would not allow him sufficient time to do himself justice in America, and in addition he has many other important engagements to fulfill here. He has stated, however, that if he has half a chance, he will make the trip in the autumn, but this is indefinite. At any rate, for the present, both he and his brother, H. A. Collier, will be busy preparing their mounts for the Junior and Senior Tourist Trophy races, for which they have entered. Up to the time of writing, 14 machines had already been entered for the races.

Practising For the Tourist Trophy Races.

While speaking of the T. T. Races, practising in all probability will only be permitted on ten week days prior to the date of the first race, from 5 to 7 each morning. This is all the locals in the Isle of Man are likely to agree to. Furthermore, each machine will have to be fitted with an efficient silencer prior to the race. This is certainly desirable and in agreement with the desires of the Governor of the Island, who said that the noise last year "was sufficient to blew the top off Douglas' head." There can be no doubt that these races are the finest sporting contests of their kind which have ever been held, and it is the generally expressed wish on all sides that the events will be even more of an international character than was the case last year. Everyone is especially anxious to see some typical American riders and machines in the fray.

The A. C. U.'s Forthcoming Trials.

Although the Auto-Cycle Union is not this year running so many competitions as hitherto, they are nevertheless not lacking in importance. In lieu of the Quarterly Trials, which have been left off the bill this year, a One-Day Trial will be held in the spring and autumn, and are known by this name. They are pretty well of the same nature as the Quarterlies, and the first will take place on March 2, over a second course, starting from the south of London. In order to qualify for premier awards, a machine must come through absolutely intact and clean, and make a non-stop. Sounds easy, but the regulations are so severe that only about 20 per cent. succeed, as a rule. The tenth annual Six-Days Trial will be held from August 12 to 17 next. The West Country has this time selected and Taunton, Som., will be the center from which the trial will be held. The six daily runs will approximate about 170 miles each, and will cover the roughest roads to be found in the district, not to mention some of the steepest hills to be found in England. There A. C. U. trials are the best means of gaining prominence for an unknown machine which disports itself well —in fact, their awards are like the hallmark on a piece of silver, and the buying public are greatly influenced by them.

Opening of the Brooklands Season.

The British Motor Cycle Racing Club will open its season at Brooklands on Saturday, March 23. These meetings are always well supported and some startling performances are usually put up. Every racing man on this side worthy of his salt is a member and ample opportunity will be given them during 1912 to give of their best. The B. E. C. R. C., which promoted the Collier-DeRosier matches last year, has nine Saturday meetings booked this season.

Continental Revival of the Sport.

From recent happenings there can be little doubt that the next year or so will see a great change take place so far as motorcycling on the continent is concerned. The sport and industry have been in a more or less moribund state for some time past but this year the A. C. O. de France is to carry out a strenuous program. They have already held one open hill climb, when a party of English riders captured every class for which they entered. The German Union is now also coming out of its shell, and is drawing up a list of events for 1912. Austria and Holland are also sharing in this renewed activity and the British manufacturers are alive to its possibilities. By entering these foreign events, they hope to gain a foothold from which it will be difficult for others to displace them. The English press is pushing the international campaigning question for all it is worth, and the makers should greatly benefit.

An International Federation Is Needed.

While speaking of this renewed state of activity on the Continent, I understand a suggestion is in the air to reform the Federation Internationale des Clubs Motorcyclists. As its name implies, this was a Federation of all the governing motorcycling bodies in their various countries, and up to the time of its disbandment some four years ago, through lack of enthusiasm on the Continent, consisted of the French, German, Austrian and English unions. However, in view of recent activities abroad, and the possibilities of international competition, it is quite on the cards that the English Auto-Cycle Union, which came in to the balance of the Federation's funds, as the sole surviving member, will take steps for the re-institution of the federation. It is quite obvious that in order to promote international sport on clean and friendly lines, such a federation is absolutely necessary. Its members all agree to accept each others suspensions, disqualifications, etc., and to accept the ruling of the central body which used to meet in Paris, on all matters brought before its notice. It is suggested, however, that the reins should be held for the present in London, and the support of the F. A. M. would doubtless be invited. Although America was not represented in the Federation, hitherto motorcycling has made such progress in the States that she will be ill advised to stand out. The annual subscription is or was only small, roughly twenty pounds, and as America is now well represented here, there should be no difficulties in the way, and the benefits easily outweigh this small amount. For the present, nothing is definite, but an effort is to be made to induce the Auto-Cycle Union to take up the cudgel and out of funds in hand, set the F. I. C. M. on its legs again, as soon as it is assured of sufficient support. At any rate, until it is reformed, international campaigning to any extent will practically be a hopeless proposition.

Persistent Rumors of "American Invasion."

A rumor has been afloat recently that some more American manufacturers intended following the lead of the Indian and trying their luck over here, but so far we are without further particulars. At any rate, those who may have such ideas should have their machines thoroughly "Europeanized" before making the attempt. The Englishman is accustomed to finding certains fads and fitments practically in the same place on every machine, and won't look at anything on original lines, although it may be good. Chatting to O. C. Godfrey a day or two back, he informed your correspondent that he had sold more Indians up to the present in 1912 than he did in the whole of last year.

Albert Klapmust, of Passaic, N. J., has'nt any more use for horse transportation since he discovered the capability of the motorcycle. Klapmust had a 30-mile route which he covers once a day, approximating 900 miles a month. He says it costs only $4 a month to operate the machine, a Harley-Davidson, and not only is it cheaper than horses, but it is making more money for him than the ponies did. Therefore exit the "hoss" from Klapmust's business.

BICYCLE JOBBING TRADE AIDS OLYMPIC FUND

President of Prominent Supply House Gives Far-Reaching Assistance by His Endorsement to Fellow Tradesmen of Campaign as Outlined by the "Bicycling World"—Volunteer Committee Chosen.

Probably at no time since the launching of the campaign to provide for and finance a bicycle team to compete in the games of the Fifth Olympiad, has the project had as bright a future or received more support of a substantial nature than during the week just closed; there being one exception to the latter—and more important—phase of the proposition, in that during the week ending January 13 was received the subscription of $100 from Frank B. Mihlon, and which yet heads the list.

Almost simultaneously has come the application of one of New York's most progressive athletic organizations, the Irish American Athletic Club, to handle the elimination race, all the necessary details of which it is willing to assume, and the unqualified support to the financial details of the campaign by one branch of the industry, the bicycle jobbers, as recommended to all in that line in a personal letter by the president of one of the country's leading supply houses, the New York Sporting Goods Company, of which Powhatan B. Robinson is the president. He also held the same office for some years until the dissolution of the Jobbers' Association.

The letter, sent this week to all jobbers in the United States, is as follows:

"Gentlemen—There is a well defined project on foot to send a bicycle team to represent the United States at the Olympic games, to be held in Stockholm, Sweden, next July, the details of which have been published from time to time in the Bicycling World and Motorcycle Review, and covered more completely in the current issue of Saturday, February 17th.

"After careful consideration, I have come to the conclusion that this project is worthy of the support of the jobbing trade and those interested in cycling, and, therefore, as president of the New York Sporting Goods Company, have announced a contribution of $20 toward this fund. The idea is to send, if possible, the complete team —12 men—and in order to select those best qualified, elimination trials will be held in different sections of the country, each one of which will mean a vast amount of newspaper publicity and a general boost for cycling all over the United States. The final try-outs will be held in New York City over the full distance—200 miles.

"The newspapers have already taken up the proposition and have proved their interest in the matter by at least a half dozen requesting photographs and short histories, etc., on possibilities of riders to make this team.

"You can understand that in order to send over this bicycle team, it will be necessary to raise a considerable amount, and those having the project in view are depending, to a great extent, upon the manufacturing and jobbing trade to aid them in this respect.

"In conclusion, I might say, should the American Olympic Committee be unable to secure sufficient funds to send over a team, that cycling will be the only branch of sport on the Olympic program not represented by a team from the United States, and I believe, both as a matter of sentiment and patriotism, as well as good business judgment, this should not be, and, therefore, earnestly request the support of the jobbing trade.

"I am enclosing return stamped envelope so that your contributions may be mailed to me and turned over by me to Mr. R. F. Kelsey, who is acting as the bicycling representative of the American Olympic Committee in the matter, acknowledgment to be made in the columns of the Bicycling World, of which Mr. Kelsey is editor.

Yours faithfully,

(Signed) Powhatan R. Robinson."

Perreault Producing Results in Boston.

In addition to the subscription of the New York Sporting Goods Company, as noted in the foregoing letter, Fred I. Perreault, an enthusiastic worker for the cause, and a long distance cyclist well known to all followers of the game, writes that he has collected so far by popular subscription the amount of $25, and is continuing with the hope to raise it to a much larger figure. Perreault also is contemplating running the Boston try-out race, and signifies his application for that privilege, along with others from there and other localities, decisions concerning which will be anounced in due time.

Representative Working Committee Named

As stated in these columns in the issue of February 17, the "Bicycling World" has invited to serve with it on a volunteer committee, to assist in carrying on the work of raising the necessary funds, and to be known as the "American Olympic Bicycle Team Fund Committee," the following:

New York City—Harold J. Diblee, Will R. Pitman, P. R. Robinson, D. M. Adee, Fred E. Mommer, Richard F. Kelsey, W. R. Stroud, R. A. Van Dyke.

Chicago—Hans P. Hansen.

St. Louis—Charles L. Barr, O. F. Hassemer.

Subscriptions Pledged to the American Olympic Bicycle Team Fund.

C. R. C. of A.'s 1912 Season Schedule.

Preparations for the annual re-union dinner of the Century Road Club of America are nearing completion, the date having been announced as March 23 by Julius G. Schmidt, chairman of that committee. Full particulars and location, which will be one of Brooklyn's well appointed hostleries, will be announced later. The schedule of cycling activities for the coming season has been completed by the race and century run committees, H. C. Sommers and Herman Hintze being the respective chairmen, and is as follows:

Dates.	Rain Date.
April 7—Informal Century Run.	April 21
May 19—Trip to Coney Island.	May 26
June 2—Spring Century Run.	June 9
June 9—Photograph Run.	June 30
June 16—50-Mile Handicap Race.	June 23
July 7—Run to Orangeburg, N. Y.	July 21
July 13—Annual Picnic.	
Aug. 11—Club Run.	Aug. 18
Aug. 24-25—Moonlight and Double Century Run.	
Sept. 8—Club Run.	Sept. 15
Sept. 22—100-Mile Record Run.	Sept. 29
Oct. 6—Fall Century Run.	Oct. 13
Oct. 20—Club Run.	Oct. 27
Nov. 3—Annual Hill Climb.	Nov. 10
Nov. 17—Hare and Hounds Chase.	Nov. 24

Atlas Prize List Assumes Form.

Reporting the receipt of one bicycle and several other prizes of considerable value, Chairman Victor Lind of the prize committee for the Atlas Bicycle Club's 15 miles handicap road race on May 5, predicts a bumper list of awards. He also states that entries now are being received by Race Committee Chairman, Charles Hausenbauer, 162 Jefferson avenue, Brooklyn.

The Monmouth Cycle Club of Asbury Park, N. J., will hold its second annual twenty-five miles bicycle race on Decoration Day, May 30.

COURT SUSTAINS N. C. A. RULING

Suspended Riders' Appeal for Injunction Denied by Justice Marcus at Buffalo—31 Amateurs Disciplined.

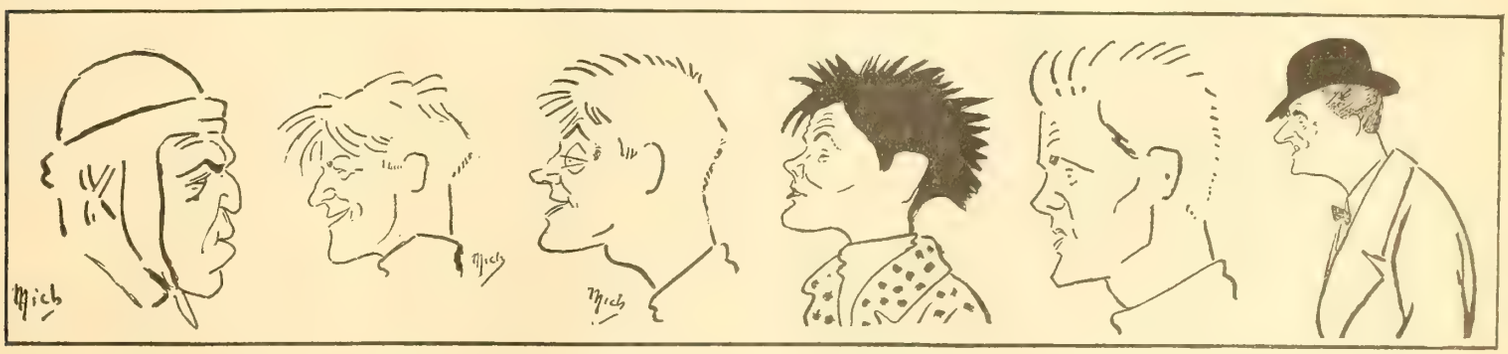
Buffalo, N. Y., Feb. 22.—In an endeavor to set aside the ruling of Louis Debo, member of the Board of Control of the National Cycling Association, for this district, the 31 amateur bicycle racing men who were indefinitely suspended for attempting to influence other riders from competing in the races of the 65th Infantry Athletic Association, on February 2, attempted to obtain an injunction from Justice Marcus compelling the N. C. A. to lift the suspension so that they could ride at the games scheduled for tonight at the armory of the 74th Infantry.

Justice Marcus ruled that the case was not properly in court, that the petitioners' papers were insufficient, and he denied the injunction requested yesterday afternoon.

At this point the Amateur Athletic Union, which has articles of alliance with the N. C. A., stepped into the breach through Edward Reinecke, its Buffalo commissioner, who issued warning against athletes competing at games where suspended men of an allied body competed, and the 74th Infantry Athletic Association canceled the cycling part of its program for tonight's meet. The suspended riders state they will now carry their case to the N. C. A. board of appeals.

The acute stage of the trouble came when at a meeting of the "riders' union," to which all of the suspended men belong, and which, by the way, seems to be a rather strange kind of organization for "real amateur" riders to belong to, held about the middle of January, it was decided not to enter the 65th Infantry races of February 2, unless the training quarters were remodeled to suit the convenience of a few of the leading lights, and various other trifling changes, such as altering the shape of the track, etc., to conform to the comforts of "high class amateurism." Apparently the matter of prizes did not enter into the controversy to any appreciable extent.

This might have passed without much comment, but when the management of the 65th Infantry A. A. sent to Toronto for riders, the Buffalo malcontents wrote to Canada endeavoring to induce the Canadians not to enter, and threatening dire vengeance if they did so. The Canadians rode in the February 2 events, as did also a number of Buffalo riders, and the races were a success despite the boycott.



Since that time Louis Debo, member of the N. C. A. board of control for Buffalo, has been quietly conducting an investigation, the outcome of which was the suspension of 31 riders early this week. The suspension was made indefinite pending a further investigation. The men affected by the ruling are: Elmer F. Bundt, E. C. Arenz, Al Krushel, Robert Striegel, H. Krigbaum, Charles C. Troidl, E. C. Frank, John Ritchel, Howard J. Young, I. Serius, F. M. Franklemont, Ray W. Cole, Lloyd Safford, H. C. Howe, Charles Soeusa, Edward P. Young, Tony F. Burke, William J. Anthony, H. G. Becker, Francis L. Delaney, Fred Schudt, Charley V. Kohlmeyer, Fred C. Flach, R. J. Hoover, Joe Tanner, J. M. Tanner, Fred Schell, Robert J. Smith, Joseph Schieder, Leslie Wilcox and John Ricotta.

Little Rhody C. C. Christens Rollers.

Through the good offices of 21 subscribers, members and friends of the Little Rhody Cycle Club and tradesmen of Providence, R. I., that organization received substantial aid towards the purchase of a set of roller trainers costing $80; the contributions totaling $62.

The first event to be held on the new machine was a match race between two prominent local aspirants for the Olympic Team, Alvin Loftes and Henry E. Johnson, one mile was the distance, the race resulting in a tie; time, 1:23. It was the feature event of the evening at the club's recent annual ball and was run off during the intermission.

All of the active riding members of the club are anxiously awaiting opportunity to commence training on the road in preparation for the coming propitious season considering the many road races contemplated, the Olympic games race, and the assured re-opening of the Melrose eight-lap coliseum track in that city, after having been closed practically all of last season, there having been but one meet held there.

AS "L'AUTO" SEES THE AMERICAN RACING CYCLISTS WHO ARE NOW THE PARISIAN SENSATION

HOW GOULLET WON SYDNEY RACE

Showed Wonderful Form in the Sydney Six-Day Grind and Easily Outclassed Field—Immense Crowd at Finish.

First mail from Australia since the running in Sydney of the first six-day race in the Antipodes during the week of January 1-6, brings some very interesting side lights on the big initial grind which was run on the combination grass and cement third-mile track at the Sydney Cricket Grounds and which was won, as announced in the Bicycling World of January 13, by Alfred Goullet and Paddy O'Sullivan Hehir.

Goullet, by all reports, was the "bear cat" of the race, being among the leaders whenever the sprinting started, and was himself responsible for a big "jam" when the race had been in progress five and a half days, which resulted in the ten teams being split into two divisions, the leaders finally overtaking the second division for a gain of a lap, due principally to the wonderful pacing of Goullet. Hehir, Gordon Walker, and McNamara, also are spoken of highly in the reports of the big ride which lasted over seven miles before the gain of a lap on the other five teams could be accomplished.

At the start of the race a special prize of $125 had been offered by the management to the team first gaining a lap, and this throughout the week was the incentive for numerous attempts. During the progress of the successful attempt by Goullet the promoter evidently became imbued with the excitement indulged in by the more than 55,000 spectators, and raised the amount to $250.

Fred Keefe, another Australian popular with followers of the pastime in America, and the present holder of the professional 100 miles road record, was the cause of much concern to the other riders in the race, he keeping them in a state of constant worry by continual jumping, although his team was a mile behind.

Goullet put the ball in motion shortly after the score had been announced for 1,910 miles. At 1,995 miles announcement was made than $25 would be given to the leader at 2,000 miles, and the pace slowed to allow the men to freshen for the sprint. At five laps to go, jockeying for position started. McNamara, Grenda and Hehir were in that position at two laps and again at the bell. The two former had a desperate race for the tape, almost riding a dead heat with the judges' verdict going to Grenda; Hehir, third.

As the hour of finish aproached the excitement was intense. The riders had been carefully watching each other during the last few hours. Five teams were still a lap ahead. The cry of "One minute to go" did not spur them on. Five overlapped teams drew on to the grass track. The crowd, hemmed in like bees, suddenly roared "Lawson's away!" They were then half a mile from home. Goullett was after him like a flash, with Grenda and McNamara in close attendance. Goullett soon got Lawson's wheel. He shook Grenda off and won by three lengths. Grenda was a length ahead of McNamara, with Lawson fourth, and Kirkman fifth. The teams had covered 2,086 miles, 1,680 yards.

The first seven teams in order of finish were: Goullet-Hehir, Walker-Grenda, McNamara-Corry, Lawson-Mitten, Kirkham-Colvin, Henry-Crook, and Foxover-Yeend.

From the riders' point of view, the race was replete with interesting features as is graphically given in a letter from the popular little Iowan, Worth L. Mitten to the bicycle editor. Mitten seems relieved that the contest is over, but is full as ever with enthusiasm. He says:

"Another six-day race out of my system and a great one it was. The hardest part of the race was the weather conditions. We had several heavy rain storms in off the ocean with cold winds. Many rode in rubber coats, some carrying umbrellas. But we rolled along just as happy as ever. We also had some of the hottest weather of the season, we used ice cold cabbage leaves on our heads. Sun was so hot as to burn right through our racing suits. In fact, I have peeled off all over. Would be a fine specimen for a zoo at home. We found the Australian boys much stronger than we expected. Most all were long distance road riders which put them just right for such a contest. That crowd of 55,000 on the last night was worth a trip over here to see. All was excitement, and what a noise they made! The League of Wheelmen had full charge of the race and handled it very well for their first six-day affair. Lawson looked like a sure winner but tried to "go" too far from home, and was defeated. We will ride three more six-day races: One continuous, at Melbourne; eight hours per day at Adelaide and six hours per day at Brisbane. The race was not nearly so hard as the Garden race. Being outdoors and the fresh air seemed to keep us in much better condition."

START OF THE RECENT SIX-DAY RACE AT BERLIN, GERMANY
Walter Rutt, of the Rutt-Stol team, that won the race, is high on the banked track next to the railing. Leon Georget, well known to Americans, is next to him.

Will Return For Velodrome Opening.

In order to be on hand for the first crack of the starter's pistol at the Newark Velodrome, on the opening day, April 7, Goullet and Hehir will take up the journey halfway round the earth immediately after the close of the six-day race now in progress in Melbourne, Australia. There may accompany them another Australian star to augment the already large galaxy that has graced American tracks in recent years, in the person of Grenda, at present champion of Australia. Grenda, in the Sydney six-day race and in competition in sprint events has shown that he ranks well with Goullet and Hehir.

Another Australian who will be seen regularly at the Velodrome and who has established himself well in the popularity of the followers of the sport in America is Ernie A. Pye. During the past week, Mrs. Pye and her two-year-old daughter arrived in Newark from Salt Lake City.

First Club Run In New York City.

Holding its first club run of the season, the Iver Johnson Wheelmen of New York City journeyed to Pelham Parkway on Sunday, February 18, in company with several visiting members of the Acme Wheelmen and held several impromptu brushes—just to work out the winter's kinks. The clear, bracing weather and excellent condition of the road surface was a source of keen pleasure to all who participated.

MARCEL PLANES STARTING UPON THE LAST LAP OR HIS WORLD'S LONG DISTANCE RECORD

Planes is the second cyclist from the left of the picture. The final run that completed the 34,366 miles in 365 days, was made December 31, 1911, starting from Girtford Bridge, about 50 miles from London.

Goodwin Wins Close Pursuit Race.

Riding in excellent form, Eddie Goodwin, I. A. A. C., again clearly demonstrated his ability, on Wednesday evening, February 21, when, at the general athletic meet under the apspices of the Pastime Athletic Club, held in the 68th Regiment Armory, New York City, he conclusively defeated the acknowledged best of the Greater City's performers in flat-floor bicycle racing, albeit he was forced to extend himself to the limit to win the final of the four-man invitation mile pursuit race, a number which proved to be one of the most interesting on the lengthy program.

Two riders were allotted for each of the two preliminary heats, the winners to ride the final. Due to the illness of W. Van Den Dries, the N. Y. A. C. crack, H. Lightfine, a comer in the game and a member of the Glencoe A. C., was chosen as substitute. In the draw for heats, Lightfine was matched against Goodwin and the latter won by one-quarter lap. The second heat between J. Townsend, riding under the colors of the Dominican Lyceum, and Walter Raleigh, N. Y. A. C., resulted in the former's favor by a very close margin.

At the start of the final, Townsend at once set out to defend his reputation as a pursuit rider to the immense delight of the crowd, which of late has seen Goodwin score some unusually easy victories. In this case his work was cut out for him and it was anybody's race, first one and then the other leading over the center line, until within the last lap Goodwin managed to forge ahead for a gain of ten yards, winning by that much.

Scheider Makes New Flat Floor Record.

Buffalo, Feb. 17.—Tonight's bicycle races held in connection with the games of the 74th Infantry Athletic Association, at the armory, proved unusually attractive. The five mile "derby" was run in six trial heats at two miles each, and a final. Eighteen men qualified and the final was won by Jos. Scheider, in 12:31, a new record for flat floor competition. Tony Burke was second, E. Arenz, third, and Al Krushel, fourth. Prizes were given for the leaders at the miles, and Scheider captured all these except the first.

There was a one mile consolation which went to Jos. Tanner; second, E. P. Young; third, H. J. Becker; time, 2:40⅘.

Atlas B. C. to Hold Theatre Party.

Not to be outdone by larger and older cycling organizations in anything pertaining to club life, the Atlas Bicycle Club, one of Brooklyn's youngest and most active of the kind, will, on March 1, hold its first annual theater party. The Orpheum Theater of Brooklyn will furnish the entertainment feature of the evening while the festive board will be spread at the Brooklyn Hof-Brau.

THE SECRET OF TRUE SUCCESS

Hundreds of dealers are now on the road which leads to success. This year will be a BANNER YEAR. The secret of true success is not in selling cheap and inferior goods but in holding the trade and customers you make by giving them honest and reliable merchandise. This is the only kind we manufacture and our reputation insures you a square deal.

Send for new 1912 catalog which contains description and prices of all styles of LEGGINS, the well known KOVER-AUL Motorcycle Garment and many other specialties. It's free. Ask us for prices, but you will learn more about quality if you send us a sample order.

BALTIMORE CYCLISTS ARE ACTIVE

Crescents Plan Lively Season Replete With Road Races—One Already Held —Lafayettes' Spring Race.

Baltimore, Feb. 19.—The local bicycle contingent is busy planning for the coming season. The Crescent B. C. expects this year to be the most active in its history. The recent bad weather has prevented the members from getting out on the road and they are now hoping for good weather. The big events of the season will be pulled off as soon as spring sets in. Many attractive features have been outlined and considerable enthusiasm has been manifested by the members. The century mileage contest, which started on the first day of the year, will, of course, be continued until the end of 1912. The run attendance will be opened as soon as the first club run is made possible by weather conditions.

The annual spring road race of the club will be held on May 5 over the Shell road loop and will be a handicap affair of 12 miles. The annual spring half-century run will be held on June 2. Widespread attention has been caused by the announcement that the club will hold a series of closed "cork" races during the year. The program calls for the hardest races ever held in this vicinity. The contests will be held at different periods and will consist of ten events, all from scratch. The winners will be awarded points and the member having the largest number at the end of the races will be presented with a gold medal, which will carry with it the championship of the club. The events will be as follows: Quarter-mile track, half-mile track, mile track, five mile road, 10-mile road, 25-mile road, 50-mile road, 100-mile road, Baltimore to Washington and return, and a hill climb. It has been a long time since bicycle races at 25, 50 and 100 miles have been promoted south of New York, and these long distance events may produce some new stars.

Taking advantage of the favorable weather conditions the Crescents opened their season yesterday, Sunday, with a run to Pikesville in conjunction with which was run three races over the Park Heights avenue course. The first race, at four-fifths mile, was productive of a sensational sprint between the Leimbach brothers, William and August, the former eventually winning by a very small margin. The veteran Tommy Baker showed his mettle by leading home the pack in the long event of the day, the five and one-quarter miles open. No time was taken; the first three to finish in the respective events were in the following order: Four-fifths mile—W. Leimbach, A. Leimbach, C. H. Thoms; one mile —A. Leimbach, T. W. Baker, C. H. Thoms; five and one-quarter miles—T. W. Baker, C. H. Thoms, C. Keller.

The Lafayette Wheelmen are also busy planning for the coming season. The club's first event will be the annual spring road race on May 12. The proposed 12-hour track race is attracting attention and a hearty response has been made by riders who are anxious to manifest their stamina and capture the event. The date for the race has not been set, but it will be pulled off early in the season.

Goodwin Wins Hollow Victory at 47th.

Winning by more than a third of a lap, Eddie Goodwin, I. A. A. C., on February 12 added another to his long string of victories garnered during the present flat-floor season, this last being the five miles open bicycle race under the auspices of the Knights of St. Anthony in the 47th Regimen Armory, Brooklyn.

Nine riders faced the starter, but owing to the glassy condition of the floor, frequent spills soon reduced the field to four; three going down in one heap before the first lap was completed.

Goodwin and H. J. Murphy of the Atlas Bicycle Club were the only two who did not attempt to slide home, and although Murphy put up a gallant battle to overcome the lead gained by Goodwin when Murphy was interfered with by the spills, he was forced by reason of the track's condition to accept second place, while Goodwin romped in with a disinteresting win from the spectators' point of view. Nat Gutoff, N. A. C., was awarded third.

This No. 150

Diamond Roller Chain

makes the best chain drive for motorcycles that money can buy—stands a pull of 3000 pounds, so you know you're safe. The roller construction keeps friction down and the specially hardened nickel steel rivet makes the wear next to nothing. We've other types for starting chains.

Don't let any one change your mind. Stick to DIAMOND and you'll never be sorry.

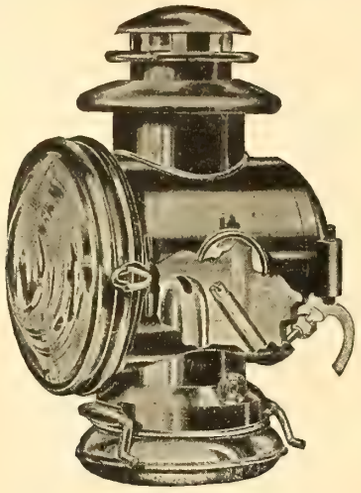
NEVERLEAK TIRE FLUID

Makes Tires Puncture Proof

There's money in selling Neverleak, because Neverleak is not only a big favorite among bicycle riders, but it is also the only legalized tire fluid sold today.



You get fine premiums with Neverleak—premiums that are really worth having—not a poor one in the lot.

Now is the time to renew your stock of Neverleak. Bicycle time isn't so very far away. See your jobber about it or write us today for prices and premium offer.

BUFFALO SPECIALTY COMPANY
Buffalo, N. Y.

$25.00 for information about any dealer or repairman using or handling any Compound, Powder, Fluid, or Semi-Liquid for the purpose of sealing punctures or leaks in pneumatic tires, in violation of our Neverleak Patents. Write for conditions under which the above reward will be paid.

Lamp with Acetylene Burner

LET

HAM

Light Your Way

Here is a Motorcycle Lamp positively trouble proof. Doesn't that sound good? No amount of jarring will affect the steady stream of light which is generated from the HAM-LIGHT. Actual speed tests of 50 miles per hour have failed to blow or jar out the flame. Simply attached to motorcycle. Can be furnished either as an oil lamp, burning kerosene, or with acetylene burner in addition, using acetylene gas, making it a combination oil and gas lamp, a combination of great value on country roads or poorly lighted streets. Send for new circular containing full line. Do you want our Agency Proposition?

MANUFACTURED BY

C. T. Ham Manufacturing Co.
ROCHESTER, N. Y.

SCHAFER Ball Bearings

FAMOUS FOR THEIR DURABILITY

are the most suitable bearings for motorcycles; they withstand vibrations, due to the strong cage and large number of balls.

Schafer Ball Bearings are used exclusively on high grade products such as the renowned **Minneapolis Motorcycles** and two speed gears, **De Luxe Motors** and two speed gears.

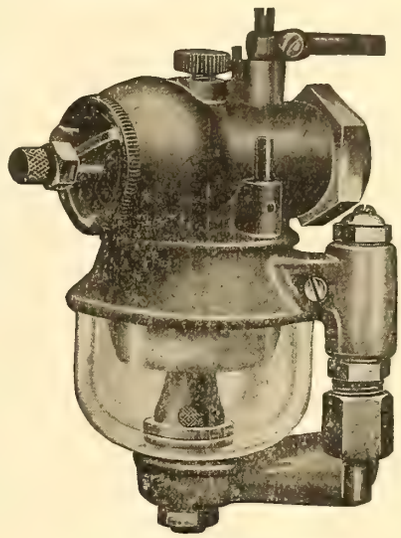
Reliance
(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that **ninety per cent. of all plug troubles are caused by carbon and soot you begin** to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.



Regular Type $1.00
Magneto Type $1.25

Model H is the new one, the acme of simplicity. Has but ONE gasoline adjustment, but has TWO feeds, one for High speed, one for Low, that give maximum results at all speeds. Once adjusted, stays adjusted. Easily adjusted and understood by the novice. Gives satisfaction where others fail. Threads and fittings for any machine. Our model G-D is of the double gasoline adjustment type or mechanical needle, having separate adjustments for low and high, used by manufacturers and thousands of riders the past season. Either type makes a motor run faster and smoother and use less gasoline. Both guaranteed to give satisfaction. 1912 catalog now ready.

Motorcycling in the White Mountains of New Hampshire

Going up

steep hills and mountains is no trouble at all for the 8 H. P. M·M Twin — just like riding on level roads.

Read what the man in the picture says

American Motor Company, Brockton, Mass.

Gentlemen:

I have just completed a motorcycle trip through the mountains of New Hampshire. I am so bubbling over with joy, that I must write you how well satisfied I feel with my M·M Twin. The power it showed in tearing up those steep inclines was simply marvelous. Not once did I get stuck on a hill, and believe me there were some corkers, and as for smooth running qualities and speed, I never saw anything like it. With the muffler closed, she would slide through the towns as still as a bird, throttling down to a walk when required. You have never hollered half enough about this wonderful model. If people knew what they could do, you would be swamped with orders.

Yours truly,

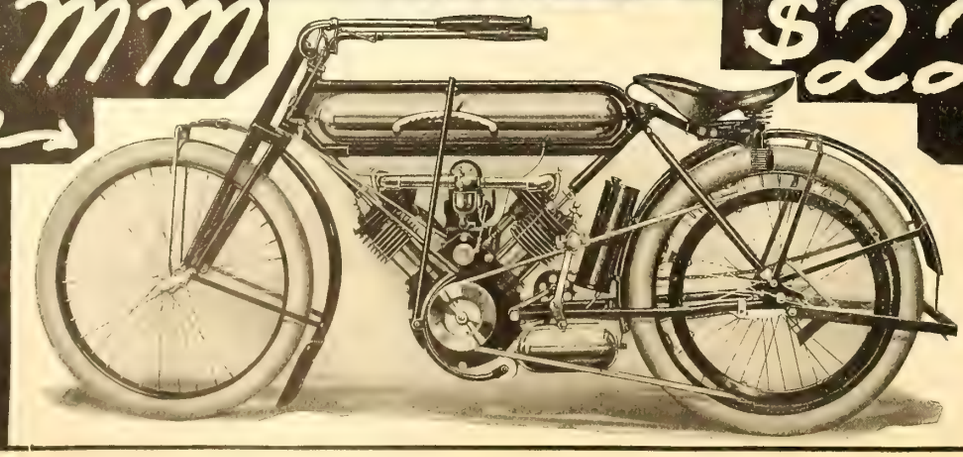
Albion St., Somerville, Mass.

Geo. B. Graves

Announcement to Agents!

Here is the greatest seller ever offered to the trade in the Twin Line. The big powerful M·M Twin at $225 was the sensation at the New York Show. Of the many lines offered to Agents for 1912, there are only a few twins, although there is a big demand for this type. No agent can satisfy all his trade without a good powerful twin, especially in sections where the roads are hilly or rough.

The M·M Twin is positively without an equal, regardless of price or claims. It is the only Twin having cylinders set at a 90 degree angle giving perfect balance, doing away with all vibration and many other tremendous advantages over the ordinary type.



With our large facilities and 13 years' experience, we are able now to put the twin price down where it is bound to multiply sales. The complete M·M line at $140, $160, $200, and $225, is the best agent's proposition to be had this year.

Get in touch at once — Territory is going fast.

AMERICAN MOTOR CO., 718 Centre St., Brockton, Mass.

PENNSYLVANIA "Guaranteed" INNER TUBES "No. 503"

For Motorcycles

A good, guaranteed tube selling at a reasonable figure.

So thoroughly tested is our "No. 503" tube, so well made and of such high quality material, that we are able to offer it with a season's guarantee.

Pennsylvania "No. 503" tubes are made in the most popular selling sizes.

NOTE: Pursuant to our accustomed policy we have placed this tube on the market with special regard for the interests of the Jobber and Dealer. Those desiring, therefore, to sell a tube which satisfies the customer and ensures a fair margin of profit should write for our attractive 1912 proposition.

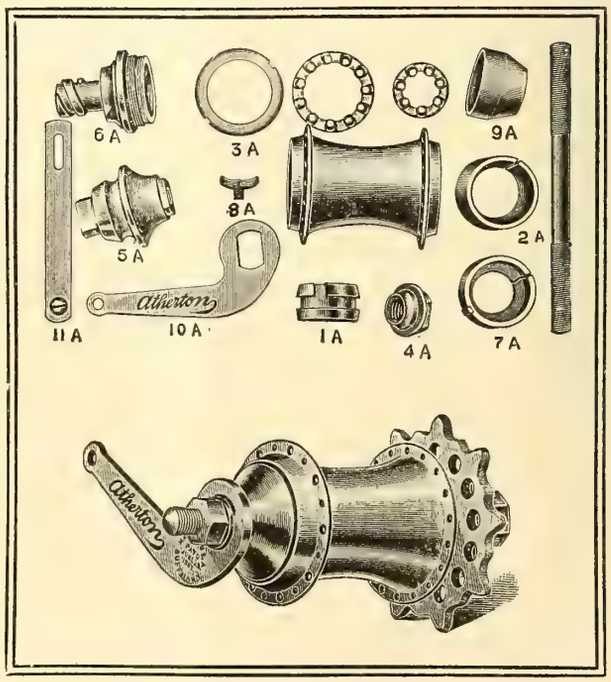
No slip in braking or in forward driving in the

ATHERTON
Coaster Brake

FOR BICYCLES



In the 1912 model there are three braking surfaces, giving as much or as little braking effect as the rider chooses.

Two driving points of contact make certain that there is no possibility of slip in the forward drive.

In every Atherton coaster brake there is satisfaction for both the rider and the dealer. It is the brake that affords absolutely free coasting and perfect braking.

Get the up-to-date coaster brake while you are about it.

It stays right!

QUOTATIONS AND DESCRIPTIVE MATTER ON REQUEST

D. P. HARRIS HARDWARE CO., Distributors

48 Warren Street, New York

Licensed Coaster Brake Manufacturers

Thinking of Your Mileage as Well as Their Profit

Thirteen motorcycle manufacturers are willing to give you the utmost tire quality—

Diamond
TIRES

Their machines are: Excelsior, Eagle, Emblem, Harley-Davidson, Kokomo, Marvel, Merkel, Minneapolis, M-M, New Era, Reading-Standard, Thor, Yale.

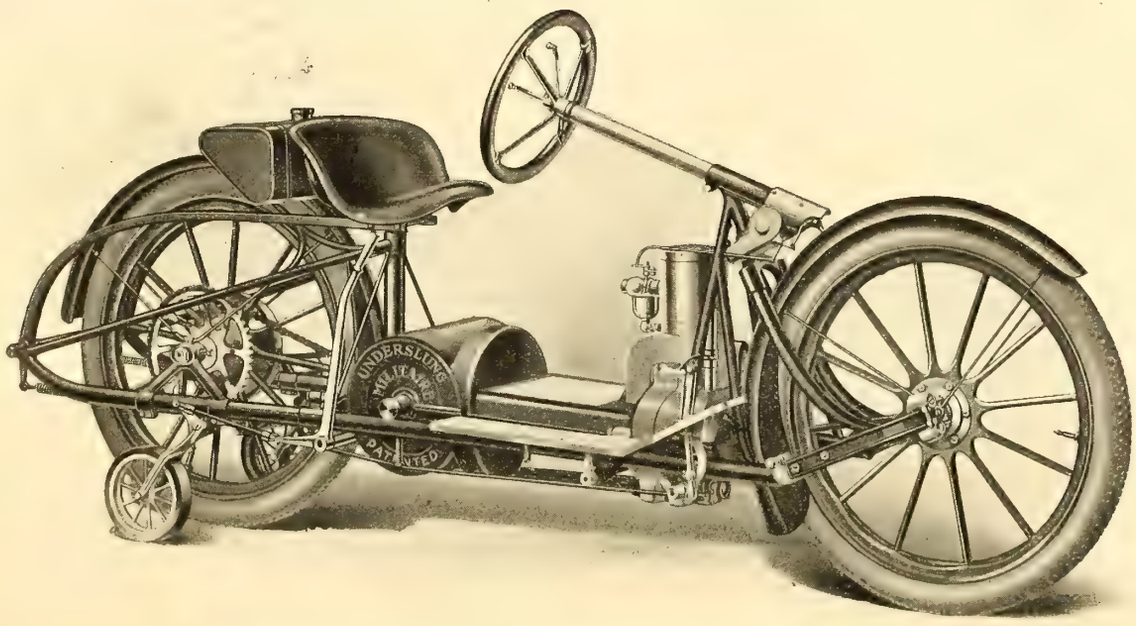
Diamond Motorcycle Tires cost the motorcycle manufacturer a little more than other tires—that's because of their higher quality. The makers of the machines named above are willing to pay this extra cost and give you the benefit of these higher quality tires at no extra cost to you. But you must tell them that you want Diamond Tires. Have your dealer order Diamond Tires for your new machine and you will get them.

Tire expense is the largest single item in the cost of running your machine—just as important when you get your machine as after you have had it a year.

There is only one way to put tire expense on a minimum basis at the start—specify Diamond Tires. And if you're not getting a new machine this year cut down your tire bills by buying Diamond Tires from your dealer.

Studded Tread Diamond Motorcycle Tire.
Costs no more than Diamond Corrugated Tread.

Our illustrated catalogue tells you why Diamond Motorcycle Tires are the longest wearing, easiest riding motorcycle tires ever built. Send for it today.



THE DIAMOND RUBBER COMPANY, Akron, Ohio

Fifty-four Diamond Service Stations do more than sell tires—they take care of Diamond Tire users.

The Underslung Militaire

FIVE YEARS AHEAD OF THE MOTORCYCLE WORLD

(Patents Pending in United States and Foreign Countries.)

The Logical Evolution of the Two-Wheeler

true and straight, without kink or wobble.

WITH AUTOMOBILE TYPE OF STEERING WHEEL, with spark and gas control on inside of steering post.

WITH BUCKET SEAT WITH A BACK, and a rear seat to be attached of the same type.

WITH FRICTION DRIVE, completely housed from dust and water.

WITH NO GEARS OF ANY KIND, from front to rear, which means simplicity itself, the thing for those far from repair shops.

WITH ALL SPEED CHANGES, from 30 to 1 on low, to 3 to 1 on high, and 10 to 1 on reverse.

WITH FOOT CONTROLS, for brake and speed on running-boards, the lever on right operating clutch and brake independently, while on the left the speed changes are operated.

WITH IDLER WHEELS on either side to preserve equilibrium while the machine is either standing, or running at low speed.

WITH SUCTION FAN, which absolutely prevents the engine from overheating while the machine is either standing or running.

WITH REVERSE MECHANISM, which permits the rider to withdraw from awkward positions in congested traffic without dismounting or turning around.

WITH UNDERSLUNG FRAME, which gives a much lower center of gravity and very much increases the factor of safety.

for same under mudguards.

WITH RIMS ON ARTILLERY WOOD WHEELS that will take 28 in. x 2 3-4 in. or 3 in. tires.

WITH ARC-SHAPED AXLE which carries direct the entire load of the front half of the machine, thereby leaving the forks free to be used for steering purposes only.

WITH IDLER WHEELS that may be raised or lowered at will, which absolutely prevent skidding on heavy sandy roads or in climbing sand hills.

WITH KNOCK-OUT TYPE AXLE in rear wheel which provides for it being taken off by removing two nuts on either end and not disturbing the general assembly.

WITH GENERAL NON-SKID CONSTRUCTION PRINCIPLES through use of idler wheels, lowest possible center of gravity, and tire chains.

WITH VERTICLE FINS ON ENGINE CYLINDER encased by steel sleeve through which the air is drawn by suction fan, thereby preventing overheating of engine either while the machine is running or standing.

WITH CANTILEVER SPRING SUSPENSION which eliminates shocks on rough roads by having long spring motion between the front and rear wheels and directly under the rider.

WITH NOISELESS EXHAUST.

WITH VARIABLE RIDING POSITION of from 22 ins. to 28 ins. from the ground, and forward and backward movement of 4 1-2 ins.

WITH INTERCHANGEABLE ENGINE PROVISIONS. Our single cylinder may be replaced by our twin cylinder in three hours without any alteration of the connections.

ENGINE: Free—5 H. P.—Vertical—Bore, $3\frac{1}{2}$, Stroke, $3\frac{43}{64}$. MAGNETO: Bosch. CARBURETER: Schebler. SPEED: 2,400 r. p. m., 65 Miles Per Hour. WHEEL-BASE: 64 Inches.

Price: $300 F. O. B. Cleveland

WITH RIMS ON ARTILLERY WOOD WHEELS that will take 28 in. x 2 3-4 in. or 3 in. tires.

WITH ARC-SHAPED AXLE which carries direct the entire load of the front half of the machine, thereby leaving the forks free to be used for steering purposes only.

WITH IDLER WHEELS that may be raised or lowered at will, which absolutely prevent skidding on heavy sandy roads or in climbing sand hills.

WITH KNOCK-OUT TYPE AXLE in rear wheel which provides for it being taken off by removing two nuts on either end and not disturbing the general assembly.

WITH GENERAL NON-SKID CONSTRUCTION PRINCIPLES through use of idler wheels, lowest possible center of gravity, and tire chains.

WITH VERTICLE FINS ON ENGINE CYLINDER encased by steel sleeve through which the air is drawn by suction fan, thereby preventing overheating of engine either while the machine is running or standing.

WITH CANTILEVER SPRING SUSPENSION which eliminates shocks on rough roads by having long spring motion between the front and rear wheels and directly under the rider.

WITH NOISELESS EXHAUST.

WITH VARIABLE RIDING POSITION of from 22 ins. to 28 ins. from the ground, and forward and backward movement of 4 1-2 ins.

WITH INTERCHANGEABLE ENGINE PROVISIONS. Our single cylinder may be replaced by our twin cylinder in three hours without any alteration of the connections.

ENGINE: Free—5 H. P.—Vertical—Bore, $3\frac{1}{2}$, Stroke, $3\frac{43}{64}$. MAGNETO: Bosch. CARBURETER: Schebler.
SPEED: 2,400 r. p. m., 65 Miles Per Hour. WHEEL-BASE: 64 Inches.

Price: $300 F. O. B. Cleveland

FISK BICYCLE TIRES

Fisk Quality Guarantees Positive Satisfaction

We unhesitatingly refer you to any user of Fisk Bicycle Tires for verification of this fact.

Thousands of riders throughout the country will use nothing but Fisk Bicycle Tires, having found them most durable and economical.

Fisk Bicycle Tires are made on the highest quality standards to meet the demands of the most critical experts, consequently they are being used by the following representative manufacturers of high-grade wheels:

Pope **Pierce** **Snell**
Iver Johnson **Emblem** **Yale**
Racycle, Etc.

This means that these makers have satisfied themselves that Fisk Tires are the best and that they so recommend them to every purchaser of their wheels.

Fisk Bicycle Tires are made in more than a dozen styles, each guaranteed to be the best of its kind for the purpose and price.

Illustrated booklet sent on request.

TO DEALERS:

1912 is going to be a record breaker for Fisk dealers. It will pay to make arrangements now rather than wait until the busy Spring season.

The 1912 Fisk Catalogue and proposition will be mailed promptly on request.

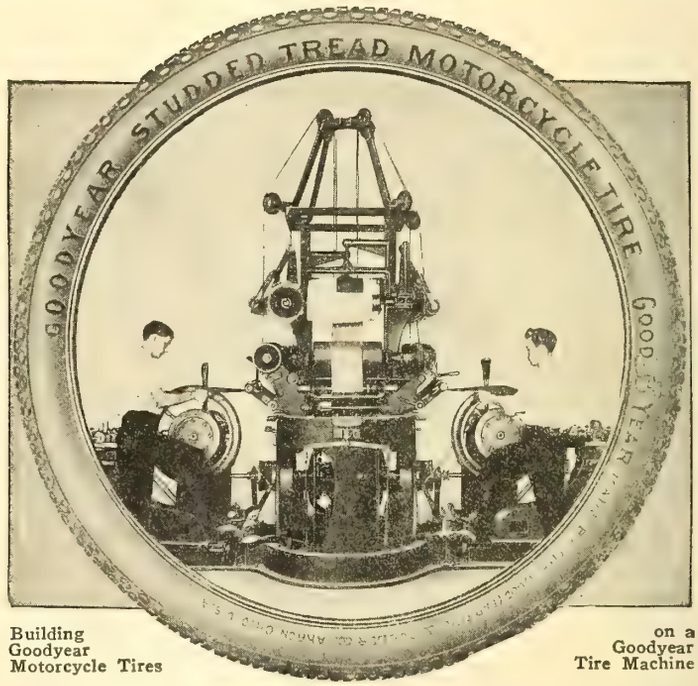
Enduring Motorcycle Tires
Goodyear Tires Outlast All Others



Hundreds of tests in field and factory have proved the unequalled endurance of Goodyear Tires.

They are today's most popular motorcycle tires.

"Little Brothers" of Goodyear No-Rim-Cut Auto Tires, these motorcycle tires because of their endurance and superiority will tire one out of every three new machines this year.

The 14 leading motorcycle manufacturers have made contracts with us to tire their 1912 output.

These motorcycle tires both last and are fast. They hold every world's amateur and professional speed record.

Building Goodyear Motorcycle Tires on a Goodyear Tire Machine

Ask for Our Motorcycle Tire Book

Every motorcyclist should read our book on motorcycle tires whether in immediate need of tires or not.

The book is a guide to right tire buying. Its message has saved motorcyclists many thousands of dollars which otherwise would have been spent repairing punctures and blowouts. It will open your eyes, Mr. Motorcyclist, to some pitfalls that you can just as well avoid.

The Goodyear Tire Machine

The Goodyear Tire machine—the only scientific method by which a tire can be made—is described in our book. This machine builds into the tires **efficiency**—not **faults.** It is the result of over 13 years auto tire building experience—the final achievement of the world's greatest tire experts. We, alone, control this machine.

GOODYEAR
Motorcycle Tires

Flawless Tires

Our motorcycle tires are built to fit the standard rim. The beads are moulded, semi-cured, to exact duplicates of your rim. So they **fit absolutely.** And all are built on the Goodyear Tire Machines.

In building a tire, a number of plies of fabric are stretched, one at a time, over an iron core. If one ply is stretched tighter than another, the tight ply gets undue strain, when in service, breaks down and the tire is quickly ruined. For a tire to **last,** each and every ply must be stretched on at the same **tension.**

The usual way is to stretch these plies by hand. Uniform tension, so vitally important to the life of the tire, is thus sacrificed.

No human being working hour after hour can always pull the fabric the same.

But the Goodyear Tire Machine can—and does.

This machine stretches on every inch of every ply with mechanical exactness—with absolute uniformity of tension. There can be no tight plies **tighter than the one underneath.**

All plies share alike the strain. And the **tire lasts.**

Can't you see why such tires as these are bound to give most service and most satisfaction?

Most Economical

As a result of the masterful way in which built, Goodyears will save you a **raft** of tire trouble and tire expense. These premier tires cost you no more than any standard tire. **Remember that.**

Goodyear service at all the leading dealers.

MORE ABOUT THE HUB PATENT

Musselman Says He Simply Desires to Protect His Rights as Owner of Patent—Test With Semi-Friendly Suits.

Chicago, Feb. 26.—As soon as the bills of particulars can be drafted suits are to be instituted against manufacturers, jobbers, dealers and users of knock-out front axle hubs by A. J. Musselman, under the Blodgett patent No. 710,241. [This patent was noted and illustrated in our issue of February 24.—Ed.] Musselman, who long has held an interest in this patent, finally acquired control of it about six months ago, after exhaustive negotiations. The American Motorcycle Co., of which he is president, has no interest in the patent, and in nowise is involved in the forthcoming litigation.

One of the signficant phases of the situation is that the Eclipse Machine Company, Elmira, N. Y., which is said to manufacture 75 per cent. of the knock-out front axle motorcycle hubs used in this country, has acknowledged the validity of the Blodgett patent and accepted a royalty license to continue the manufacture of this hub. This action, of course, renders all handlers and users of Eclipse hubs immune from litigation for infringement.

Other manufacturers of knock-out front axle hubs are Corbin Screw Corporation, New Britain, Conn.; New Departure Mfg. Co., Bristol, Conn., and the Aurora Automatic Machinery Co., Aurora, Ill. According to Musselman, these makers are liable under the Blodgett patent, and as yet they have not applied for a license to operate under it. Handlers and users of infringing hubs are equally liable, he asserts. Some manufacturers who are believed to manufacture their own knock-out axle front hubs also come within the scope.

In order to test completely the validity of the patent, suits of a semi-friendly nature will be filed against selected jobbers, dealers and riders, but it is not Musselman's intention to institute wholesale litigation in an attempt to reap big damages for infringement.

Musselman states that while there are knock-out front axle hubs which do not infringe the Blodgett patent, the cost of manufacture of these non-infringing types is considerably greater than the cost of making the Blodgett type hub and paying royalty on it. The Blodgett patent embraces knock-out front axle hubs for motorcycles only, and has no bearing on rear hubs with knock-out axles.

Lists of those against whom suits will be instituted now are in course of preparation. In discussing his policy in the matter, Musselman says: "It should be understood that these contemplated suits in no wise are to be construed as an attempt to intimidate the trade, but simply to ascertain the value of the patent. I believe the patent is valid and that I am entitled to legitimate royalties as the controller of it. Therefore I am taking the matter to court to find out exactly where I stand, and what my rights as patent holder are.

"If the patent is upheld I shall proceed to collect royalties, and if it is declared invalid I shall abide by the court's decision. However, the action of the Eclipse Company, the largest maker of knock-out front axle hubs, in acknowledging the validity of the patent, is filled with deep significance, for it would not be apt to take out a license if it did not feel forced to do so.

"Some time ago I called the attention of the trade to the fact that the Blodgett patent was being infringed, and I gave those offending manufacturers ample time to investigate the patent and state what action they would take. A majority replied that they felt that they were not infringing, and I am now going to proceed to show them that they are."

COFFMAN ON TRADE CONDITIONS

President of M. M. A. Talks on Agents, Independent Shows, Freight Rates, and Proposed 2,000-Mile Tour.

Toledo, O., Feb. 27.—In discussing the last meeting of the Motorcycle Manufacturers' Association, in Chicago, during show week, President A. B. Coffman, in the course of conversation with a Motorcycle Review representative, had the following to say:

"At the last meeting of the association, all present expressed themselves in very optimistic manner over the bright prospects for this year. One manufacturer of a leading machine reported that 60 per cent. of his output was contracted for. The manufacturers also reported the recruiting of a better class of dealers. The bicycle dealer fell heir to the motorcycle when it came in, but it proved a bigger proposition than he ever before had handled, and it has taken a lot of time and patience on the part of the manufacturers to educate him to handle motorcycles as they should be handled.

"The manufacturers have taken unusual pains to coach bicycle dealers to the higher responsibilities and methods which the selling of motorcycles requires, because the development of a better class of dealers redounds in direct benefit to the makers, and gives them a better outlet for their product. A great deal of good has been accomplished by the educational campaign conducted by the F. A. M. publicity bureau, and the manufacturers have co-operated heartily with this department by furnishing valuable statistics.

"While show time is a long way off, it appears that a majority of the makers are in favor of independent shows, and I believe that with the support of the acces-

A GLIMPSE AT THE EXTENSIVE LINE OF THE EDWARDS-CRIST CO., CHICAGO
Just now the company's main store at 1404-6 Michigan avenue is crowded with Indians ready for delivery when the spring season opens

sory people, a big independent show can be held successfully. The chief requisite in connection with such an enterprise seems to be in getting a capable manager. Business men are using motorcycles more every day, and would attend an independent motorcycle show in larger numbers, than when the machines are tucked away in some corner of an automobile exhibition.

"Business conditions in some sections of the country are not favorable, but I do not look for any serious effect of this depression on the demand for motorcycles, for when a man makes up his mind to get a machine he usually accomplishes his desire. No matter what the general conditions may be, when the people want motorcycles they will, if need be, deny themselves other things in order to get them, as witness the phenomenal prosperity of the automobile industry during the panic period.

"Freight rates are receiving the attention of the association, too. A petition will be filed with the Interstate Commerce Commission very shortly praying for lower rates east of the Mississippi River, and Pacific Coast reductions also will be applied for as soon as the necessary statistics can be tabulated for presentment to the commission. However, I believe that coast rates will adjust themselves to a reasonable basis when the Panama Canal is opened to traffic.

"Our committee, consisting of Arthur Davidson, Joseph Merkel and myself, which is co-operating with the F. A. M. committee of three on the promotion of the proposed 2,000-mile National Tour, is outlining the undertaking in tangible form. The present intention is to hold the tour over a circuitous route, and have it terminate in the city where the meet is to be held, but little more of a definite sort can be done until the meet city is selected. Progress is being made in the matter of selecting a suitable F. A. M. official riding uniform, and samples will be submitted for approval shortly. I believe that the F. A. M. directors should arrange to attend the meeting of the M. M. A., at the Hotel Statler, Buffalo, on April 10, and decide on a uniform. I will have samples and prices ready to submit there, and earnestly request that all directors who can do so make it a point to attend, in order that this important matter may be disposed of as early as possible."

Changes in U. S. Tire District Managers.

T. R. Burton, manager of the Pittsburgh branch of the United States Tire Company, has been appointed assistant to O. S. Tweedy, eastern district manager of this concern. Mr. Burton will move to New York. His successor in Pittsburgh will be C. C. Gehring, who during the past year has been connected with the United States Tire Company's Philadelphia branch. J. C. Weston, western district manager, has moved from San Francisco to Chicago to assume charge of the central district, and C. A. Gilbert has gone from New York to San Francisco to take Mr. Weston's place.

Whipple & Forman Increase Facilities.

Auburn, N. Y., Feb. 26.—Whipple & Forman will enlarge their repair shop in the basement of their store in order to provide larger accommodations for increasing business. They have recently installed electric power lathes, grinders, and air compressor suitable for inflating all types of tires, the latter service being free. Entrance from North street and through the store will make it the most central in Auburn.

The firm has secured the agency for the Flanders for Cayuga county. They are also agents for the Reading Standard line.

HIGH PRESSURE AT H-D FACTORY

All Day and All Night in Most Departments—Some of the Processes That Make the Product Famous.

Milwaukee, Wis., Feb. 24.—Production is progressing under high pressure at the Harley-Davidson plant these days. Some departments are running 24 hours a day, where double shifts can be operated economically and without affecting the standard of workmanship. The entire operating staff now numbers 625 persons, of whom about 560 ore employed in the shops.

Since the beginning of the 1912 season over 1900 machines have been shipped, and at the present time over 50 machines a day are being finished and shipped.

Some cost items in connection with the operation of the plant are highly interesting, particularly to the rider who has little or no conception of the capital required to manufacture motorcycles on a large scale. The present weekly payroll amounts to $8,700. Six hundred dollars per month is the amount required to liquidate the gas bill, and in addition to the output of its own power plant the company is taking $600 worth of electric current monthly to operate its machinery.

Since October 1, 1911, over $18,000 has been expended for new tools and equipment, installed where opportunity presented itself for improving the quality of workmanship. This expenditure represents simply a replacement of old machinery, which was unequal to meeting the higher production and workmanship standards imposed.

On February 26 excavation for the new addition will be started. When this new building is finished it will more than double the capacity of the plant. The new structure will be six stories in height, and, like the last buildings built by the company, will be of absolutely fireproof construction—reinforced concrete and brick. The new structure will have 130 feet frontage on Chestnut street and will extend back 180 feet on 36th street, with a width of 60 feet at all points. New and larger offices, equipped with modern devices, will be located in the new plant. The new building will cost $100,000, exclusive of land and equipment.

Prominent among the new departments installed to facilitate the production of the 1912 models is an extensive pressed steel equipment. The company has adopted pressed steel extensively for making many parts, and now is operating eight presses, the largest of which weighs 16,000 pounds and has a shearing pressure of 100 tons. It will bite through a piece of steel 12 inches in diameter and one inch thick without hesitating. The company heads are very enthusiastic over the manifold advantages

of pressed steel, and voice the opinion that the motorcycle of the future largely will be built of pressed steel parts, which, according to the Harley-Davidson folks, are far stronger and otherwise superior to steel castings or forgings ,because of the absolutely uniform strength of the wall. The metal is cleaner to work, any grade of raw stock can be used with equal facility in handling, and, as all stock is worked cold, the ductility of the metal never changes.

In defense of the seeming over-enthusiasm for pressed steel, it is pointed out that the development of the automobile to its present state, and its economical production on a large scale, chiefly are due to the use of pressed steel extensively in its construction. It is asserted that automobile builders are using it wherever possible because of its advantages over castings and forgings.

However, the use of pressed steel is practicable only in large quantities, it is stated, because of the excessive cost of tools and machines, which must be spread over large production to be a profitable investment. Citing an illustration on this point, the tooling up for the production of the "Free Wheel" control necessitated the making of no less than 52 sets of punches and dies.

Perhaps the chief reason for the enthusiasm of the Harley-Davidson people for pressed steel lies in the fact that both Walter and William Davidson were tool makers before commencing the manufacture of motorcycles, and therefore appreciate the superior qualities of pressed steel work.

Oxy-acetylene welding is another advanced manufacturing art which plays an important part in the building of Harley-Davidson motorcycles. A flame of 6,000 degrees Fahrenheit is used, the acetylene flame being intensified by the forcing into it of an oxygen blast. A short blue flame of about pencil diameter issues from the blowpipe, but its intensity is so great that the operators wear blue goggles to protect the eyes. Incidentally, comparatively few men capable of handling the apparatus are available, and when the equipment was installed it was necessary for the mechanical heads themselves to take charge of the work for some time, until employees could be educated in handling it.

An idea of the terrific heat of the flame may be gained from the statement that it will melt a piece of steel an inch thick like butter on a hot stove. This may seem incredible, but a demonstration is ample proof. One of the most interesting operations performed with the oxy-acetylene flame is in welding seams in pressed steel work. The work is brought to a white heat and then a strip of the purest Swedish steel is fused into the seam just as solder is run. The filling steel runs like water under the terrific heat, and finds its way into every pore of the heated walls of the work, uniting so thoroughly that the joint is entirely eradicated and becomes one mass.

One of the purposes for which acetylene welding is widely used in this plant is for "spotting" work to be brazed. Heretofore brazed work was located by riveting, but with the acetylene flame it is possible to fuse the parts to be united much more quickly and accurately than was possible in the old way. The acetylene process is also used extensively for repairing broken parts of shop tools, where a great saving in time often is possible.

Heat treatment of steel is one of the processes which makes one motorcycle better than another, although the same quality of metal may be used in both. This process is used extensively in the making of the Harley-Davidson. Parts under strain which require to be tough but not brittle, such as cam shafts, pedal cranks and such parts, are heat treated. Heat treating of steel raises its elastic limit or strength enormously.

Some parts, after being heated, are cooled either in oil or water, according to the work which they are to perform. Quenching in water produces a glass-hard surface, but where the work has to have a comparatively hard surface, together with a great toughness, quenching in oil is superior, it leaving the metal so tough as to be almost unbreakable.

In the heat treating department there are 10 electrically controlled furnaces for heating parts. The heat is regulated by pyrometers, so that any desired temperature can be obtained and the oven held at that heat by automatic regulation. Another interesting branch of this is the molten lead bath, in which parts to be heat treated or annealed are immersed until sufficiently hot. With the lead bath, one end of a piece of steel can be heated red hot very quickly, leaving the rest of the piece cold, thus working to great advantage on certain operations.

Throughout the plant are numerous other operations equally interesting. In fact, a trip through a motorcycle factory is a most interesting education in the accurate and scientific handling of metals on a large scale.

H-D New England Branch Entertains.

Danvers, Mass., Feb. 26.—Signalizing the opening of the New England headquarters of the Harley-Davidson Motor Company, of Milwaukee, Wis., Manager W. J. Walker gave an evening of entertainment and a dinner to the city officials and representative business men of the town at the Danvers Club a few evenings ago. E. J. Mueller- general sales agent for the H-D people, was a visitor in town, and was introduced to the assembled guests.

Among the city officials present were the chief of police and the road commissioner, the latter making quite an address on the subject of good roads. It was pleasing to notice the interest taken in the motorcycle by the business men in attendance. Every one of them wore a "booster" tag, and the gathering showed the value of interesting the older heads in the business, for through such men the general cause of motorcycling can be advanced materially.

Manager Walker, who has returned from a trip through Nova Scotia and New Brunswick, says the outlook for trade is very bright in these provinces.

Rick Entertains Buffalo Tradesmen.

Buffalo, N. Y., Feb. 27.—Last evening the Buffalo Cycle Trade Association held its spring meeting at the store of F. F. Rick & Co., 635 Main street, where matters of importace to the trade were discussed. One of these was the "coming back" of the bicycle. After the meeting the members, 42 strong, were the guests of F. F. Rick & Co. at a luncheon at the Cafe Metropole.

BUSINESS MEN OF DANVERS, MASS., GUESTS OF HARLEY-DAVIDSON BRANCH

BUSY TIMES AT THOR FACTORY

Shop Orders Now on Hand Aggregate 5,000 Machines — Automatic Processes That Betray Real Genius.

Aurora, Ill., Feb. 26.—This is the home of the Thor plant, which has played a prominent part in the motorcycle industry since its beginning. To-day the factory buildings cover a city block, and another addition is contemplated. Never in the history of the plant has the demand for Thor motorcycles been so great, and a night shift is being run. At present the working force consists of 1,800 persons, which will be increased as the spring rush becomes more severe.

Shop orders already are on file for 2,500 of the new "5" single and "7" twin, collectively, and for 2,000 of the "4" single. This contemplated output for the season, of course, is quite likely to be revised upward. The present daily production is said to be 20 machines, and it is planned to turn out 50 machines daily after March 1.

Light and roomy quarters for the factory office staff just have been fitted up on the fourth floor of one wing, and the occupants are installing their equipment. The new offices are unusually well favored with light, and are well adapted for clerical work.

Axel Levedahl and William Ottoway are the designers responsible for the Thor machines. Levedahl is the father of practically all of the previous models, but Ottoway designed the new single and twin motors throughout.

New features receive a rigid road test for weakness before they are accepted. As an example of this, the original two-speed hub, which was put on a machine with no housing and sent over thousands of miles of bad roads during the fall and winter, still is doing its work unfailingly.

Oxy-acetylene welding is one of the newer manufacturing methods which has found favor with the Thor engineers. In the past, wherever stampings were used they have been supplanted by stampings, which are welded. This method is in keeping with the aim of the builders to produce a practically indestructible machine, and the unusual longevity of Thor products already is conceded.

It is the boast of the makers that the loop tube of the frame is heavier than that used in any other machine, the answer being that it is not stock tubing, but an extra heavy grade. Naturally, automatic machinery is plentiful, and to watch the intricate mechanisms turning out parts with more than human intelligence is most interesting. Parts are "bit off" the bar stock and finished quickly and methodically, with no attention from an operator. One of the largest operations is the turning of the Thor motorcycle brake hub from a steel bar over three inches thick. The cutting of the teeth on the internal gear disk is another magnetic process.

Through the production of so many parts on automatic machinery—which, by the way, is implied by the corporate name—a fine degree of accuracy is maintained, and assembling is conducted with a minimum discard of non-fitting parts. Probably in no other motorcycle plant is such a quantity of automatic machinery used. Great quantities of stock passing through the shop in various stages of completion indicates that the daily output will take a big jump shortly, provided there are no unforeseen interruptions of schedule to interfere with the plans of the factory management.

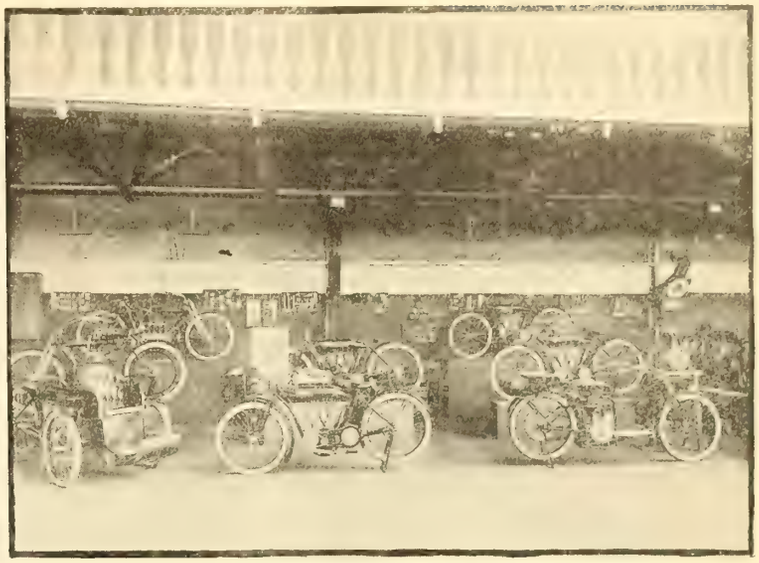
RAYMOND SNYDER'S MOTORCYCLE SLED THAT ASTONISHED COLUMBUS CITIZENS

Freeman Doing Great Thor Business.

Chicago, Feb. 26.—This is the way they are selling motorcycles in this city. Last Saturday Ira H. Whipple, the west side agent for Thors, placed deposits with Manager Freeman, of the Michigan avenue Thor branch, for $1,500 worth of machines. Freeman reported 21 sales for the day in his territory, Cook County, and nine applications for machines on partial payments. All applications for time sales are investigated before acceptance.

F. D. Freeman, manager of the Thor branch, claims the honor of inaugurating the first "live" window display on motorcycle row. He has installed a pair of small electric motors against the front and rear tires of a white Thor single, the drive being by friction from the motor pulleys. The object of the demonstration is to show the freedom of the clutch in the "out" position, and this information is conveyed to passers-by by a large cardboard sign. The clutch really is free, too, for after running for hours it shows not the slightest heat to the touch of the hand. The driving side being next the street, the rapidly whirling chain, sprockets and wheels proves a fine magnet for attracting pedestrians.

A Motor Sled of Original Design.



Columbus, Ohio, Feb. 26.—That it does not require good roads and warm weather to enjoy motorcycling has been conclusively proved by Raymond Snyder, the 15-year-old son of W. H. Snyder, proprietor of the American Machine Company, of Columbus, Ohio. During the winter months, when the snow made it impossible to ride his motorcycle, young Snyder conceived the idea of building a motor sled, and that he succeeded is proved by the accompanying illustration.

Taking the motor, the tank and rear wheel from his four horsepower Emblem motorcycle, young Snyder mounted it on a double-sled body of his own design, and the result proved all that the young inventor hoped for, as the sled proved an entirely practicable vehicle and has attained speeds of between 40 and 45 miles an hour on roads around Columbus.

Raymond Snyder, besides being of a practical turn of mind, is a road rider who has attained some distinction despite his tender age. Last summer, in company with three other Columbus riders of twice his age, he started for a tour of the Eastern States. Snyder rode a four horsepower single cylinder Emblem motorcycle, and successfully accomplished a tour embracing some 2,400 miles. Some bad weather was encountered, and although he could barely reach the pedals of his mount it is a matter of record that Snyder finished the long trip with a great many less falls than any of his companions. He has also ridden in races on the track, and is now coaxing his father to allow him to start in the proposed 2,000 miles National Tour next summer, if that project materializes.

PATTERSON'S EXHIBIT AT BROOKLYN AUTOMOBILE SHOW

How a live motorcycle dealer took advantage of the Brooklyn show to boom his business and boom things in cycling generally

Norma Co. Sues Bretz for Infringement.

Suit has been instituted by the Norma Company of America in the United States Court for the Southern District of New York against the J. S. Bretz Company for alleged infringement of patent of certain ball bearings invented by one Ernst Gustav Hoffman, of Germany. The patents in dispute are Nos. 744,427, issued to Ernst G. Hoffman on November 8, 1904, and 796,648, issued to Carl A. Hirth on August 8, 1905, and the trademark No. 43,038, issued to Hoffman on July 19, 1904.

Hirth subsequently transferred his patent to Hoffman, and shortly after the assignment Hoffman died. His heirs transferred the patent rights to the Norma Compagnie, a limited corporation of Canstatt, Wurttemburg, especially organized for exploiting the Norma ball bearings covered by the patents above mentioned.

In due time the German company opened an American branch under the name of the Norma Company of America, but this company found the field here occupied by the ball bearings manufactured by Fichtel & Sachs of Schweinfurt, Germany, and by the Merkur Mfg. Co., which manufactures, it is alleged, are "substantial copies" of the ball bearings invented by Hoffman and patented by him. It also found, or claims to have found that the word Norma, as applied to "ball bearings, balls and machine parts in which they are used," and as such protected by German and American trademarks, is "illegally used by the defendant company."

On these grounds, the Norma Company of America asks damages and an accounting of the profits made by the J. S. Bretz Company, through the sale of the alleged infringing ball bearings; it furthermore asks for an injunction and for the turning over of all alleged infringing ball bearings in possession of the agents, employees, etc., of the Bretz company, to the complainant, or for their destruction by order of the court. The complaint is signed by W. M. Nones, as secretary and treasurer of the Norma Company of America.

The Bretz company has not yet filed its answer, but it is known that it will enter a vigorous denial and defense and fight the case to the limit.

Patterson Believes in Letting People Know.

Occupying one of the two largest spaces in the Brooklyn automobile show, held during the week just closed, the exhibit of A. H. Patterson, a progressive dealer of that city, added materially to the prestige established by him last year when, as in the present instance, his was the exclusive motorcycle display at the show.

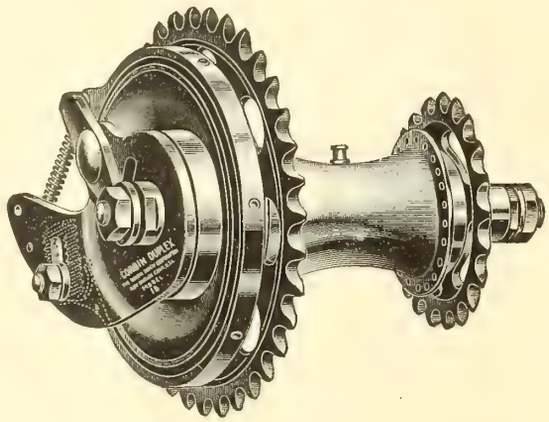
In addition to full lines, including every 1912 model of the Indian, the Pierce and New Era motorcycles, Patterson showed a comprehensive variety of motorcycle supplies and accessories. Although, strictly speaking, not motorcycle exhibits, two trade publications, The Bicycling World and Motorcycling Review and "Motorcycle Illustrated," occupied booths in Patterson's stand.

Indian Testers Have a Dinner.

With the object of making it an annual affair, the testing department of the Hendee Mfg. Co., of Springfield, Mass., held its first dinner February 17 at the Highland Hotel, in that city. Charles H. Arens acted as toastmaster, and others in attendance were E. B. Mayforth, Robert Johnson, Robert Kibbe, Joseph Doyton, Jean Iverson, John McNeil and James Carrie. Joseph Baribeau, of Toronto, who was present, gave a short talk on motorcycling in Canada. He is the holder of the 100-mile record for a dirt track, his time of 1:40:14⅗ having been made on a one-mile course. The story of the motorcycle in England and Scotland was told by Mr. McNeil, who also gave some piano and song selections.

Surre Says Business Was Never Better.

W. J. Surre, sales manager for the Continental Rubber Works, Erie, Pa., was in New York on Wednesday of this week on his way to the Boston automobile show, which opens on March 2 at the Mechanics' Building, in that city. He says that the Continental-Erie motorcycle tires are meeting with great favor among tradesmen and riders, and that the output of bicycle tires by his company is above the average for this season of the year.



Mr. Surre is treasurer of the Cycle Parts and Accessories Association, and heads the committee of arrangements, with President L. M. Wainwright, of the Diamond Chain Company, of Indianapolis, and Vice-President David S. Smith, of the Standard Company, Torrington, Conn., that is making preparations for the annual summer convention of the association at Detroit, August 6 to 9. The committee is actively engaged in securing headquarters and arranging hotel accommodations for members, and will soon submit its programme for their consideration.

Progress of the Coaster Brake Case.

Judge Hazel, in the United States Court at Buffalo, reserved decision after hearing arguments in the coaster brake indictments, on February 19, in which attorneys for the defence made a strong plea in abatement, urging that the grand jury that formulated the indictments was without jurisdiction, its term of service having expired with the year, when the U. S. Circuit Court was merged with the U. S. District Court at the end of the year.

Following a decision by Judge Hazel, demurrers to the indictment will be filed. Judge Hazel will be in New York City during the time set for the March term, and has asked Judge Haugh to preside. This fact will preclude the case coming to trial in March, it is said.

40% of all motorcycles in use in this country are equipped with the

Corbin Duplex Motorcycle Brake

Its use increases the safety and pleasure of motorcycling.

Confidence, Reliability and Control are the chief advantages of being Corbin-equipped.

The most careful and expert rider cannot afford to ignore this thoroughly efficient braking device.

NEW YORK, MARCH 2, 1912.

Olympic Fund Rises Phoenix-Like.

The fund to provide for the expenses of a team of representative American bicycle riders to compete in the games of the Fifth Olympiad, in Sweden, in July, now appears to have become established on a firm foundation. During the week just closed, under the new regime, there has been subscribed a larger amount than in four months previous.

The jobbers are responding nobly to the call—the direct result of having had the proposition put before them in a brief, business-like manner, explaining concisely the benefits to be derived by the trade.

The appeal to the jobbers was published in full in the news columns of this publication in the issue of February 24. Extracts from the replies of some of them as published elsewhere in this issue, point conclusively to the verdict of that department of the wholesale side of the industry which is nearest the consumer.

Some of the bicycle and tire manufacturers also have taken up the question, a maker of tires having world-wide reputation, enters the list this week with a subscription of $100—the second of that amount received to date. Those of the others who have responded are more modest; but all in the same spirit—for the mutual good of the industry and sport.

But there still are missing from the list many names that should be there. The riders, all of whom, if the team is financed, will have the opportunity to participate in an event for which other athletes strive for years, are, with very few exceptions, woefully lacking on the subscription list.

Let every one show his loyalty to his sport, his patriotism to his country, it matters not if the contribution be small, all in the aggregate will assist greatly in the sending of the team. Furthermore, the encouragement and assurance to those of the trade that their efforts are not in vain—that the rider will recognize his opportunity, is not the least of the direct beneficial results that surely will redound credit to the rider as a class.

Clubs have responded, it is true, to a considerable extent, but there yet are many of these who possibly have not fully realized the fruitful field this proposition offers them. Their allegiance to the sport and duties as oarganizations, having the welfare of that sport for their prime object, are, if possible, more apparent than those of the rider.

There is yet another class, the dealers, among whom there are hundreds who, after considering the matter from a business point of view, as presented in the replies of the jobbers, well can deny the commercial advantages within their grasp. A number of the jobbers, through their salesmen, are talking Olympic Bicycle Team to their trade. Will these opportunities for the further advancement of an undoubtedly reviving business be allowed to lapse? Let all give their support according to his means.

Good Chance to Boom the Sport.

There will be an opportunity to demonstrate to the assembled trade at Detroit, in August, the fact that the sport of racing—on bicycles as well as motorcycles—has a strong hold on public favor.

The annual summer convention of the Cycle Parts and Accessories Association will be held at the City of the Straits, August 6-9, and the bi-monthly meeting of the Motorcycle Manufacturers' Association will, in all probability, be held at the same time and place. What would be more fitting to grace the occasion, as one of the forms of entertainment offered, than a first-class program of competitive events, in which all of the crack riders of the country would find it to their advantage to compete?

There should certainly be enough local enthusiasm in Detroit to inaugurate the movement. Some years ago, bicycle racing had a hold in that city that gave it a reputation far and wide, and of later years motorcycle contests have been held with frequency. The city is the great center of the automobile industry, but it has never been noted for manifesting the racing spirit on its home tracks.

Motorcycle and bicycle racing presents an exciting form of sport far less dangerous to life and limb than automobile contests, and interests more people. The best of the motorcycle racing contingent could undoubtedly be secured for an August meeting, and the crack bicycle riders will be mostly in the East at that season of the year, following the National Circuit.

The dates will also be opportune for securing the talent, as they will shortly follow those of the National Assembly of the F. A. M., and will uprecede the running of the World's Bicycle Chimpionships, at Newark, N. J., August 25-28 and September 1. There would also be a strong likelihood of securing for the races the best of the foreign racing cyclists, who are coming for the championships, and the whole program could be made thoroughly representative in character.

There is no question but that a joint program of motorcycle and bicycle racing such as is outlined above would be stimulating to public interest in the products of the industry, and receive wide and marked attention by the press. At the present time Detroit has no modern track upon which to run events of this character, but a well known track builder has the projection of a motorcycle track in mind for that city, and the proposed meet may be the means of bringing about the desired end.

At any rate the suggestion for a race meet is worth the consideration of the live men interested in booming their business, and will round out a program of entertainment with a function that will be appreciated by all.

March 4-11, Denver, Colo.—Motorcycle, motorcycle accessories and automobile show in Auditorium.

March 16, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 5, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

August 6 to 9, Detroit, Mich.—Annual summer convention of the Cycle Parts and Accessories Association. Committee of Arrangements: W. J. Surre, chairman; David S. Smith, L. M. Wainwright.

April 10, Buffalo, N. Y.—Spring meeting of the Motorcycle Manufacturers' Association, Hotel Statler.

April 13, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 14, Brooklyn, N. Y.—Atlas Bicycle Club first annual spring century run, open, Start from Prospect Park Plaza.

April 21, New York City—New England Wheelmen 15 miles handicap road race, Floral Park, L. I., open. Rain date, April 28.

April 26, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 28, New York City—Eastern Division, Century Road Club Association annual spring century run, open. Start from Columbus Circle.

May 5, Brooklyn, N. Y.—Invincible Motorcycle Club annual combined single and double century run—three classes, private Southampton and return. Rain date, May Start from Bedford Rest, to Patchogue and owner, trade rider, and professional, open. 12th.

May 5, New York City—Atlas Bicycle Club 15 mile handicap road race, Floral Park, L. I., open . Rain date, one week later, May 12.

May 30, Long Branch, N. J.—Annual race meet of the Long Branch Cycle Club. Francis E. Miller, secretary, 554 Broadway, Long Branch, N. J.

May 30, Asbury Park, N. J.—25-mile annual handicap road race, Monmouth Cycle Club.

May 30, Celtic Park, Long Island City—Start and finish of 200-mile elimination for qualified candidates for final team selection for 200-mile Olympic Bicycle Race, under auspices of Irish American Athletic Club.

June 16, New York City—Century Road Club of America, New York State Dicision, 50 miles handicap road race, Floral Park, L. I. Rain date, June 23.

July 4, New York City—15-mile handicap road race, Pelham Parkway, open, Eastern Division, Century Road Club Association. Rain date, July 7.

July 7, Stockholm , Sweden—Olympic games under the auspices of the Swedish Olympic Committee and with the patronage of the King of Sweden; bicycle road race, 200 miles round Lake Malar, sanctioned and under the rules of the Union Cycliste Internationale, open only to amateur riders registered with affiliated National sports governing organizations: For the United States, the National Cycling Association; Chairman, Board of Control, R. F. Kelsey, Room 914 Tribune Bldg., New York City. United States entries close May 20 with the American Olympic Bicycle Team Committee, same address.

August 11, New York City—New England Wheelmen second annual bicycle marathon, Floral Park, L. I., open. Rain date, August 18.

August 25-28-September 1, Newark, N. J.—World's Bicycle Championships, Newark Velodrome.

September 8, New York City—100-mile record run; start and finish, Floral Park, L. I.; Eastern Division Century Road Club. Rain date, September 15.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I. Rain date, September 29.

Tough Winter Riding in Illinois.

Five members of the club took a winter ride to Elgin last Sunday. One of the riders, who did not fancy the snowdrifts which were encountered, made a detour through cornfields and ploughed ground. He broke a pedal, bent an exhaust pipe and lost seven spokes.—Joliet (Ill.) News.

Tacoma Has a New Speed Ordinance.

Tacoma, Wash., Feb. 24.—After considerable discussion and worry upon the part of Tacoma's city officiels, they have issued a new motor vehicle ordinance. Local motorcyclists are therefore putting in all their leisure time in studying the speed laws and other features. They are now prohibited from riding faster than 20 miles an hour, and the chief of police has issued instructions to his motorcycle police to hereafter keep a close tab on motorcyclists in the "City of Destiny."

Any person violating any provision of the ordinance shall be deemed guilty of a misdemeanor and, upon conviction thereof, will be fined in any sum not exceeding $100 or be imprisoned in the city jail for a period not exceeding 30 days.

The State Highways of Colorado.

There has just been issued by the good roads department of the Chamber of Commerce of Denver a map showing the State highways of Colorado. This great commonwealth of the Rocky Mountain section is doing wonderful work in road building, and the new map, which is of convenient size and folded in proper form for carrying, has the latest improvements properly classified. There is also a fund of information valuable to tourists printed on the reverse side of the map, and it is well illustrated with photographs of the State's splendid scenery. These maps can be secured by sending 10 cents to Dr. F. L. Bartlett, commissioner of good roads department, Chamber of Commerce, Denver, Colo.

Roberts Presented With a Thor "Twin."

Chicago, Feb. 26.—H. "Troxel" Roberts, familiarly known as "Heinie," has been signally honored by his former employer, the Aurora Automatic Machinery Company, the recognition taking the form of a presentation of a handsome white Thor seven horsepower twin, as an appreciation of his work as sales manager, and also of the numerous features of the new model which were suggested by him during his connection with the company. Director Simon Florsheim made the presentation in behalf of the company. Roberts is now sales manager of the Troxel Mfg. Co., Elyria, Ohio, maker of Troxel saddles.

Bremer Now Traveling for Yale Factory.

Milwaukee, Wis., Feb. 26.—F. E. Bremer, agent for Merkel and Yale motorcycles, has disposed of his business and joined the Yale factory staff as a traveler in the Southern territory. The Milwaukee Cycle Supply and Sales Company, a new concern in the local trade, took over the Bremer store, at Seventh street and North avenue, together with the direct local representation for the Merkel. C. D. Bremer, a brother of F. E., who has operated a sub-agency at 538 Muskegon avenue, now handles the Yale direct and contiuues as a sub-agent for the Merkel.

TRADE AT BALTIMORE SHOW

Exhibitors Report Excellent Business—Motorcyclists Have Special Night—Talk of Separate Show Next Year.

Baltimore, Feb. 26.—The success of the motorcycle show here proved extremely gratifying to the five dealers who had exhibits. Greatly encouraged over the reception accorded them they are already talking of a show all to themselves next year. There is a rumor that there will be an aeroplane show here some time during 1913, and the motorcycle men believe that they would accomplish more by joining the craft of the air than by being aligned with automobiles.

One bad feature of the show was the arrangement by which the dealers were separated. This tended to mar their showing somewhat, but even with that against them they put up a fine front and their booths were a constant center of attraction.

The five dealers reported sales of over 50 machines during the show and double that amount of promises. The Milford sidecar, exhibited by Howard A. French & Co., created a good deal of attention. French also displayed an Iver Johnson, the first seen in this section. He did this as a courtesy to the traveling representative, there being no agent for the machine in this city. French's display of Indians brought forth a great deal of praise. Little Joe Wiesenfeld did well with the Yale and could have sold a number of Thors had the factory sent him the latest model. F. W. Sandruck made a fine showing with the Excelsior, Emblem and Merkel and was kept constantly busy giving demonstrations. The Randall Manufacturing Company, with the Reading-Standard and the Pope, had a fine week and its exhibit drew quite a crowd of visitors. The Chase Motor Company was kept busy showing the Harley-Davidson, and during the show three machines were sold to the Park Board.

Friday night was turned over to the motorcyclists and they took complete possession of the big armory. There were visitors from all over the State and nothing was discussed but motorcycles and touring. A circular tag, made of yellow cardboard and bearing on one side the emblem of the Maryland Motorcycle Club and on the other an inscription booming motorcycling, the club and the F. A. M., was found on the lapels of every man in the place. This unique advertising scheme was conceived by William Wood, the Maryland F. A. M. commissioner, and treasurer of the club.

Real Motorcycle Show at Columbus.

Columbus, Ohio, Feb. 27.—The show committee of the Columbus Motorcycle Club has certainly "put one over" on the Columbus Automobile Club. A few weeks ago the automobile people assigned the second floor of the old government building for the show quarters of the motorcycle dealers. Almost immediately the offer was withdrawn, as more space was taken by the auto dealers than had been though possible. Nothing daunted by the announcement, the motorcycle committee burned up several gallons of "midnight oil" and decided to hold a show of their own next to that of the automobile club. The new show will last from March 2 to 9, at 37 and 39 East Chestnut street. The interior of the building will be handsomely decorated, and the committee promises a surprise for local motorcycle fans. Six local dealers have already reserved a large amount of space, and the show's success is assured.

An Exceptional Window Disylay.

Toledo, Feb. 27.—Probably one of the most striking educational window displays ever attempted by a motorcycle dealer now is on show at the store of the Oberwegner Motor Company, of this city, which is the distributor for the Excelsior in 20 counties. The scheme has been used effectively in the automobile industry, but so far as known this is its first application to motorcycle selling. It is what is known as the "ribbon system" of parts indication, and consists in running ribbons from the various components of a machine to signs giving the names of the respective units. The Oberwegners, however, have elaborated on and added a bit of originality to the plan by arranging on a glass tray large cardboard letters spelling the word "Excelsior," writing on each letter the names of certain parts, and leading a ribbon from the part to its monicker. The effect is distinctly novel, and as an eye-catcher it is most certainly a winner.

TORONTO'S BEST SHOW CLOSES

Emblem a Late Arrival, But Makes Sensation — Haverford and Russell-Hewlett Bring Total Exhibits to 14.

Toronto, Feb. 29.—The unexpected arrival of three makes of motorcycles swelled the list of motorcycle exhibits at the Toronto motor show, which closed last evening, to 14, the late comers being the Emblem, which is a new line for this city; the Haverford and the Russell-Hulett, the latter being the very latest thing on the market in Canada.

With the arrival of four big handsome Emblem mounts, the announcement was made that Hyslop Bros., Ltd., the Cadillac motor car agents here, would handle the Emblem, and the combination of events occasion quite a stir in local trade circles. President W. G. Schack, of the Emblem Mfg. Co., of Angola, N. Y., was in attendance at the exhibit, accompanied by L. S. Taylor, the Emblem racing man, who went from the factory to demonstrate the new models.

Alex McLean, the Haverford agent, was in charge of the Philadelphia flyer. The Russell-Hulett model was the only one of its kind in existence, but the makers, who are local men, are undertaking to establish a plant for the manufacture of the new machine. Naturally, every rider in the city went carefully over the machine, and much favorable comment was heard.

Five dealers displayed cut-away engines or parts, the quintet being the Indian, Harley-Davidson, Pierce, Flanders and Rudge-Whitworth. M. E. Amos, the Flanders agent, claimed the first sale at the show.

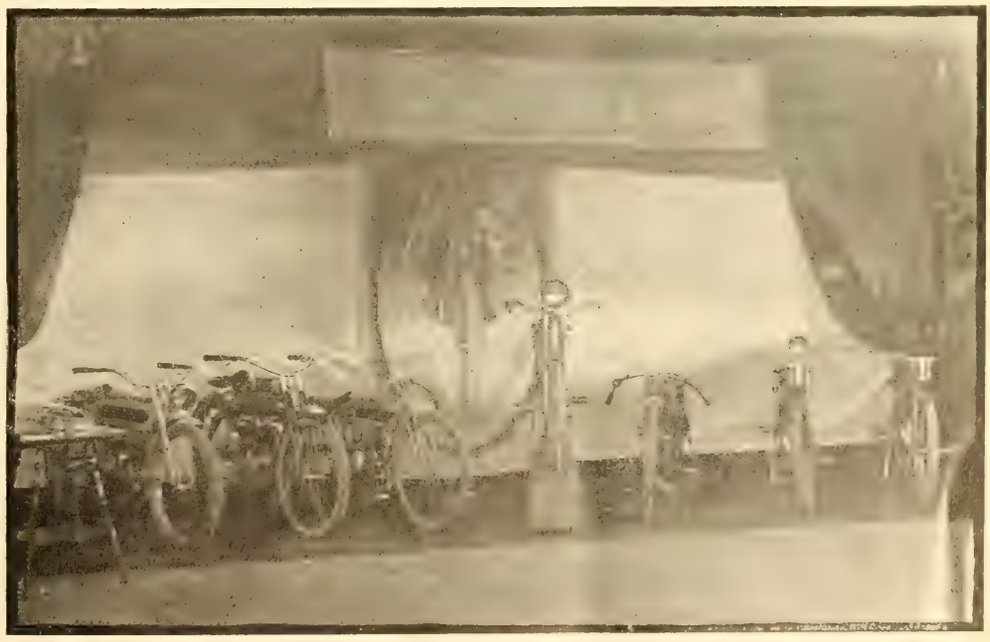

EXHIBIT OF F. W. SANDRUCK AT THE BALTIMORE MOTORCYCLE SHOW
This was claimed to be the largest display made, and embraced the Excelsior, Merkel and Emblem lines. Eight models in all were shown

NEWS FROM THE WORLD'S METROPOLIS

Motorcyclists for the English Army — Classifying Monocars and Duocars for Competition — Interest Strong for Tourist Trophy — Rough Actions of Racing Motorcyclists Are Severely Condemned by Public.

London, Feb. 23.—For some considerable time the War Office has had a scheme under consideration for the formation of a body of about 2,000 motorcyclists to be attached to the different military units at home for the purposes of despatch carrying, etc., but the official details have not yet made their appearance. For the past three or four years the War Office has engaged small numbers of motorcyclists for service at the annual manuevers, and this scheme is apparently prompted by the excellent service these fellows have rendered.

Monocars and Duocars in Competition.

A type of vehicle coming half way between a motorcycle and a motor car, monocars and duocars have not up to the present been admitted to either car or motorcycle competitions. As this type of vehicle is considerably on the increase, pressure has been brought to bear on the A. C. U. to take the matter up. Consequently it has been decided to ask the R. A. C., under whose control they really come, as these machines are legally cars, to allow the A. C. U. to take over the control of this type of machine, and I understand this consent will in all probability be forthcoming. I believe there is a good future for these machines, which are inexpensive, fast, and appeal to a class of motorcyclists who requires a little more comfort and stability.

The A. C. U. Spring Trial in March.

As one of the few events to which the trade has promised its support, great interest attaches to this event to be held on March 2. All the crack riders will be seen on the road, and a very large entry is assured. Two 7-horsepower Indians with sidecars are already entered, and will be piloted by O. C. Godfrey and B. Alan Hill, respectively, and has left the Rudge-Whitworth company to take up a position as sales manager to "Billy" Wells, of the Hendee Mfg. Co.

Interest Rampant in T. T. Races.

Entries for the Tourist Trophy Races are coming in at a very satisfactory rate, and at the moment 20 machines have been entered for the Senior Race and 10 for the Junior Race. It really seems that these contests will be supported better than ever before, although most of the British manufacturers have signed a bond not to compete on account of the expense. However, plenty of amateur support is promised, and the success of the races is assured. In addition, the races should this year be of a more international character than hitherto, it is understood that Germany, France, Austria, Switzerland and America will all have representative machines competing, besides the leading English makes. Why is it always left to the Indian to keep the Stars and Stripes flying?

As an example of the keenness of the average rider here, I may mention that the Sutton Coldfield A. C. (Birmingham) is running an open one-day reliability trial on Saturday, and no fewer than 115 riders have entered.

French Hill Climb for Motorcyclists.

The A. C. C. de France is promoting another open hill climb on February 25, at Coulimmiers, near Paris, over a two-mile course. The gradient is not more than 1 in 10 at the worst point, so that the event will practically resolve itself into a speed contest on the flat. Encouraged by their success eight weeks ago, a large number of the English cracks intend making the trip, including Arthur Moorhouse and Godfrey, and I sincerely hope they will even better their previous performances at Gometz-la Chapelle, when they swept the board.

DeRosier to Pay Another Visit.

Charlie Collier says that there is every possibility of Jake DeRosier coming over for the Tourist Trophy Race. He will, moreover, ride a Matchless. It only remains for the details of the trip to be arranged. As regards Collier's visit to America, he says he has every intention of going some time in August, provided satisfactory terms can be arranged.

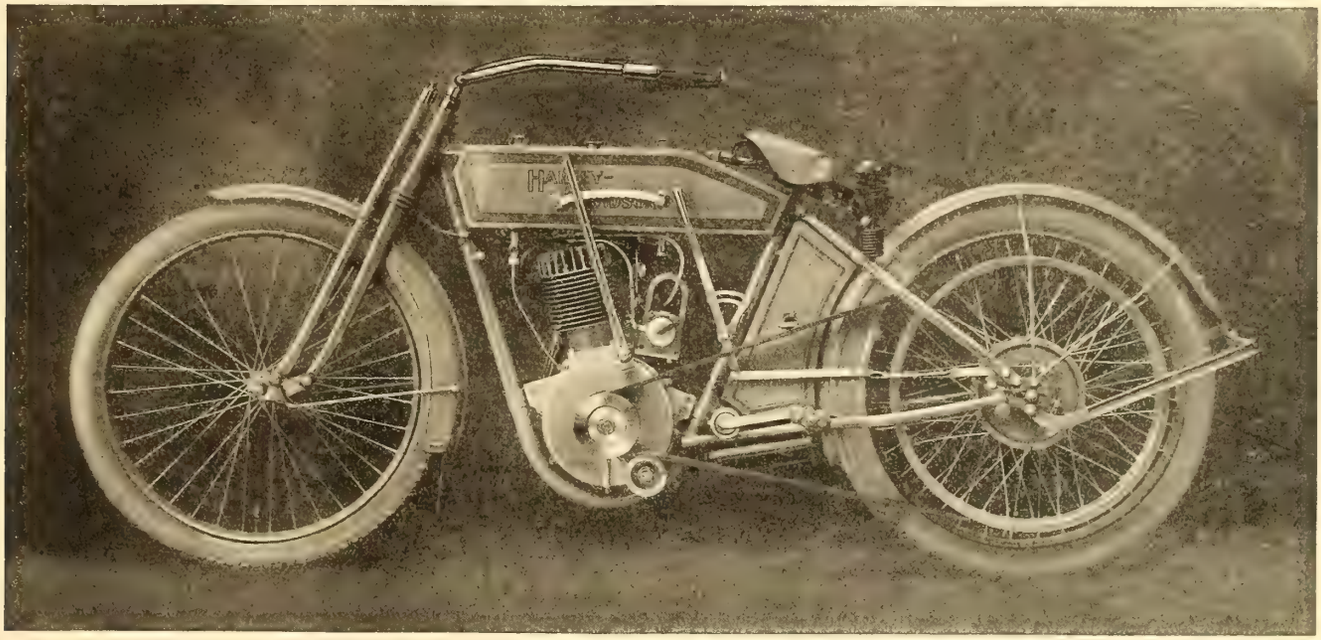
"Hooliganism" of Racing Motorcyclists.

There is a certain set of motorcyclists going about here who seem to make themselves as objectionable as it is possible to imagine, not, of course, without reflecting much discredit upon the sport and pastime generally. It is to be hoped a similar class does not assemble at American gatherings, and when the rowdy element makes its appearance, that the F. A. M. will nip matters in the bud. For the past two or three seasons a certain section of those who habitually take part in competitions have made themselves most pronounced, and so wild have the ringleaders become that all attempts on the part of the A. C. U. to check their misdoings have so far been without result. Tearing up furniture, breaking all portable fittings and bar smashing is their main objective, and these wild doings are bringing motorcycling clubs here and our sport into general disrepute. As a matter of fact, the A. C. U. only obtained permission for its races in the I. O. M. this year "by the skin of its teeth," owing to the general disturbances which were created by a section of the riders last year, and there was a good deal of opposition put forward when the question of the race came forward for consideration in the House of Keys. Although several of the riders have already been "on the carpet" before the A. C. U., things are worse than ever, and the latest I hear of is the "turning up," as the "knuts" call it, of a country hotel near the metropolis. The proprietor is to take criminal proceedings.

Thorns of Winter Motorcycling.

Speaking of the average keenness of motorcyclists here, who use their machines all the year round, the remarks of a certain rider who essayed a ride during a snowstorm, are interesting. He says: "As I proceeded, icicles began to form on my clothing and the machine and I had in several places to negotiate patches covered to a considerable depth in snow. I found a tree blown down right across the road and the trees were swaying dreadfully in the howling wind. Suddenly the engine started to race, due to ice having formed in the belt rim, and which had to be removed with a screw driver. By the time this was accomplished the carbureter had frozen, and I could not restart and finished up with a push of two miles. In addition both tires were punctured by thorns from the hedgerows." "Poor feller."

The Prohibited Cut-out.



The Local Government Board has issued its edict against the cut-out, and motorcyclists are congratulating themselves that it does not extend to them. The order, referring to the user of a motor vehicle, reads as follows: "He shall not use any cut-out, fitting, or other apparatus or device, which will allow the exhaust gases from the engine of the motor car to escape into the atmosphere without first passing through a silencer, expansion chamber or other contrivance, suitable and sufficient for reducing as far as may reasonably be practicable the noise which would otherwise be caused by the escape of gases.

"Provided, that this regulation shall apply only to a motor car propelled by an internal combustion engine, and shall not extend to motorcycles."

Good for Hamilton's Progressive Chief.

Hamilton, Ont., Feb. 26.—If the recommendation of Fire Chief Ten Eyck, of the Hamilton Fire Department, goes through, that city will be the first place in Canada to adopt the motorcycle as an equipment for a brigade. The machines are being put to a test before their final acceptance. They will be used by special men to reach the scene of a conflagration quickly.

269 Per Cent. Increase

FROM the standpoint of orders, the week ending February 17th was the largest we ever had. Compared with the same week last year the orders showed an increase of 269 per cent.

Nothing slow about that, is there?

At all times our order files and shipping records are open to interested dealers for inspection.

Harley-Davidson Motor Co.

Milwaukee **Wisconsin**

Latest F.A.M and Club News.

ESTABROOK'S WEEKLY BULLETIN

Activity in Club Organization Work Strong in Evidence—New Publicity Plan is Being Formulated.

Three new clubs have joined the F. A. M. since the last bulletin of the membership committee was issued, a week ago. They are:

No. 222—Enid (Oklahoma) Motorcycle Club; J. A. Olinger, secretary, 209 West Rand street; 26 members—100 per cent.

No. 223—Boise (Idaho) Motorcyvle Club; G. A. Hill, secretary, box 593; 20 members.

No. 224—Butte (Montana) Motorcycle Club; J. E. Seaker, secretary, 610 East Platinum street; 17 members—100 per cent.

Prospective club organizers report clubs in process of formation as follows: Roy Hanson, 37 Pennsylvania avenue, Warren Pa.; H. B. Child, 214 Stewart street, Reno, Nev.; Earl J. Roberts, box 518, Lawton, Okla.; Frank A. Wahl, Spring and Summit avenues, Summit, N. J.

Reaffiliation—No. 55—Rockford (Illinois) Motorcycle Club; Clarence Carratt, secretary, 2107 Sixteenth street; 34 members—100 per cent.

It is an encouraging sign of the times to note that the old Queen City Motorcycle Club, of Cincinnati, F. A. M. No. 13, recently held a rousing reorganization meeting at which enthusiasm run high, being described as the liveliest meeting in which the members had ever participated. Fifty members signed the club roster at this meeting, and there are good prospects for increasing this number presently. The club will shortly vote on reaffiliation on the 100 per cent. basis.

Attleboro, Mass., has organized the Attleboro Motorcycle Club, with the following officers: President, Herbert James; vicedent, Ira Cook; secretary, Charles H. Christ. The charter will be held open until March 8, at which time F. A. M. affiliation will be considered.

Hart A. Dickason, proprietor of F. A. M. registered shop No. 459, is one of the active workers responsible for a new motorcycle club just organized in Elvira, Ohio. The club starts in with 17 members, all of whom are boosting for a membership of 50 before joining the F. A. M. on the 100 per cent. basis. It looks as though a couple of the chairman's prize headlights might as well be tagged for this club.

The chairman of the membership committee is preparing personal letters to the secretaries of all F. A. M. clubs in the interest of an F. A. M. publicity scheme which should interest all club members, as well as other members and riders generally. The chairman hopes the contribution of the matter requested may be forthcoming in due course of time, and realizes that in some cases there will necessarily be a delay of several weeks. This will be all right—one week or four months, so long as it eventually comes to hand.

Registered shop certificates total 561, ten new ones having been added last week, as follows:

Michael Curnow, 205 South Montana street, Butte, Montana; G. H. Tompkins, 327 North Broad street, Richmond, Va.; Victor R. Stenger, 111 South Tenth street, Nebraska City, Neb.; Jacob Petska, 2514 West Jackson Boulevard, Chicago; P. M. Bailey, 919 Tacoma avenue, Tacoma, Wash.; Progress Auto Co., 1736 Richmond Terrace, West New Brighton, N. Y.; A. C. Shaw, 414 Commercial street, Emporia, Kan.; Gene Johnson, 469 North Beach street, Daytona, Fla.; J. E. Sayre & Co., 331 Ohio street, Terre Haute, Ind.; E. F. Horn, Sixth avenue and Superior street, Antigo, Wis.

Club Activity in Oregon's Metropolis.

Portland, Ore., Feb. 24.—At the monthly meeting of the Portland Motorcycle Club, held last week, is was decided to move on March 1 to larger quarters. Dean & Abbott, State agents for the Merkel, tendered with their compliments the use of the basement of their new and commodious store at Fourth and Salmon streets. The club has doubled in membership in the last four weeks and a larger meeting place became necessary.

In view of the great saving in rent, the club will reduce the dues from $1 per month, the present rate, to 50 cents, and will plan to have a dinner at the end of the Sunday and holiday runs during the summer season.

The project of building a motordrome in Portland was also discussed at the meeting, and estimates of costs were submitted. The movement seems to have taken a deep hold on the members.

WHAT IS A COMMISSIONER?

Chairman Estabrook, of the Membership Committee, Explains Duties in a Comprehensive Manner.

During the past three years numerous requests have received at the office of Chairman Estabrook, of the membership committee, requesting an official expression on the duties of a commissioner. The chairman has felt that he should give these requests the attention they deserve, and in the absence of more authoritative ruling has usually submitted something like the following:

"A commissioner is our official local representative, having charge of membership and other local F. A. M. interests in his territory, excepting control over competitive events. These are directly under the competition committee or such officer or member as may be delegated to act for the committee. In the interest of local members and the Federation, the commissioner should endeavor to prevent irregularities in local competitive events and to report all such to the State Commissioner."

"The duties of the commissioner consist in part as follows:

"(a) Assisting the State Commissioner in increasing the membership.

"(b) Developing ways and means of increasing the popularity of the sport and pastime locally.

"(c) Organizing local motorcyclists into fraternal clubs to the end that local motorcycling interests can be the more intelligently and efficiently conserved or advanced.

"(d) Further advancing the work of the organization in cities through appointing and training ward assistants or commissioners.

"(e) Assisting the State Commissioner in further carrying out his State or local policy.

"(f) Doing anything further in the interests of the F. A. M. and the local membership of which is the official head which his judgment may dictate, so long as it does not conflict with established F. A. M. rules."

The F. A. M. by-laws state that the vice-presidents shall appoint in each State

represented by their membership a State official, who shall be termed State Commissioner.

Such district by-laws as the at hand read thus: "The State commissioners shall have general oversight of affairs in their respective States, and to assist them may appoint a State secretary and also local commissioners, wherever it may be deemed advisable."

Now this is, in reality, what we have to work on, and it reasons out to Chairman Estabrook in this wise: Matters of State policy are left entirely to the State commissioners to think out and carry out according to their views or inclination, so long as they do not conflict with the district or National by-laws.

With this much settled, and with a copy of the by-laws referred to, the State Commissioner should feel at liberty to go ahead and make his own policy, and carry it out according to his own ideas. Of course, the newly appointed commissioner can further avail himself of the advantages to be gained through correspondence with the vice-president, National secretary, chairmen of the several committees and other State commissioners.

It is hoped that the above definition will be clear to all who have been in doubt about a commissioner's functions.

Information relative to stationery, printing or other expenses should be obtained through the vice-president or National secretary. The chairman of the membership committee is mailing to commissioners a circular covering suggestions relative to local F. A. M. work.

The Motorcycle for Traveling Salesmen.

Secretary M. M. Huyett, of the Central District of the F. A. M., who is located at Salina, Kan., has something of more than passing interest to say of the use of the motorcycle for commercial travelers. Here it is, in his own words, in a letter to this journal:

"Having been a traveling man for the past 21 years, I have always had the pleasure (?) until three years ago of riding on the "cushions" in making my trips. Since then it has been my real pleasure to ride on a motorcycle instead. I ride my "motored bike" some 1,500 miles per month in making my territory, and annually get in about nine months of steady riding, both for profit as well as for the pleasure I derive from same. I am very much pleased with my mode of transportation, and fully anticipate continuing this method as long as I remain on the road.

"To those who have thought of this method of traveling, I will say if they are at all enthusiasts of the sport, just try it and you will likely continue, as I have done. I cover a great deal of Kansas, and while the roads are not always as good as I would like to see them, I note a vast improvement over what they were three years ago, and give credit to the general 'good roads movement' for this improvement, and hope it will continue.

"In my travels I meet a great many riders, and I always talk F. A. M. to them and advocate the formation of local clubs. You may note that the advancement in this respect has been very gratifying in this section and I think 1912 will be much greater.

"Everywhere I go I hear of new riders, and look for this to be the greatest year we have ever had in the point of new machines, which, of course, means new riders.

"We all anticipate a grand time in making the Kansas Short-Grass tour to Colorado this year, and while the tours of 1910 and 1911 were of no small magnitude, this year will be much longer in mileage, as well as a great many more riders."

Hardy Springfielders Enjoy Winter Run.

Springfield, Mass., Feb. 26.—Some enthusiastic riders of the Springfield Motorcycle Club indulged in a country run on February 17. The route taken was the Boston road to Brookfield, where dinner was eaten. The midday sun thawed the road surface so that the return trip was a continuous splash for 32 miles.

At one place a smoothly coated pond offered a temptation and Charlie Spooner, the Indian tester, went out on the ice for a trial. There was enough snow to give the wheels a good hold, and, finding a smooth ridge where the ice had pinched, Spencer tried some motorcycle jumping. Rushing the ridge at a speed of about 30 miles an hour, his wheel was shot between two and three feet into the air, but he always succeeded in landing straight on his wheels without accident.

Among the riders were Sales Manager F. J. Weschler, of the Hendee Mfg. Co.; Superintendent Ellingham, Messrs. Cross, McNaugton and O'Brien, of the office force, and Dr. Brackett, Messrs. Kothe, Mason and Caroll. Notwithstanding the moist experience of the afternoon, the run was voted an entire success.

Big Racing Season Planned for Dubuque.

Dubuque, Iowa, Feb. 26.—Plans were formulated at the annual meeting of the Motorcycle Club of Dubuque, held February 22, for an extensive race meet schedule for 1912. Great interest in motorcycling was aroused in Dubuque by the series of successful races held here last year, and the outlook is excellent for even greater interest this season. The first races of the year will be held at Nutwood Park on Memorial Day. The club is in correspondence with a number of the best professional riders in the East, and is expecting to secure some of them for that day, and also for the other meets which will be held later on in the summer.

Following the business meeting of the club on February 22, an elaborate banquet was served and several enthusiastic speeches were made by officers and members.

Motorcyclists Elect at Colorado Springs.

Colorado Springs, Col., Feb. 24.—At the annual election of the Colorado Springs Motorcycle Club, held February 13, most of the old officials retired and their places were filled by the following: President, Orin C. Lewis; vice-president, U. S. Emmick, treasurer; M. G. Schif (re-elected); secretary, U. S. Johnson; captain, H. W. Clark; lieutenant, Freeman W. Weatherby; directors, C. A. Penny and Matthew Kraus

A new rate schedule was adopted, dues being payable semi-annually, and each member getting five new members is allowed the last half-year's dues free. The meeting place heretofore has been in a motorcycle shop, but meetings and runs will be conducted in the future from the rear of 1013 North Wahsatch avenue, where an appropriate building has been fitted up. The club has had three very enjoyable and well attended runs since the first of the year, and is planning another to Palmer Lake for an early date, to be followed by others to various points.

COLORADO SPRINGS MOTORCYCLE CLUB ON A PICTURESQUE RUN

New Headquarters of H-D Motorcycle Club.

Philadelphia, Feb. 28.—A big success in every way is the way to express the result of the benefit arranged by the Harley-Davidson Motorcycle Club, as it netted the club a nice nest-egg, and more than enough to furnish the club house at 1308 Cumberland street. Extensive alterations are being completed in the building so as to thoroughly modernize it, and these alterations will include an asphalted runway to the cellar for motorcycles. Several rooms will be fitted up for the use of traveling tourists who pass through the city. The improvements include hot and cold baths.

In Alex Klein, the popular captain of the club, the organization has a hustler of the first order. He is the Harley-Davidson agent for Philadelphia, and one of the best known men in motorcycle circles. He was one of the perfect score runners in the 24-hour endurance run of the New Jersey Motor Cycle Club, of 310 miles, May 30, 1911. In 1907 he won the 25-mile race at Point Breeze, and was a winner in the 50-mile economy race at 1908 F. A. M. meet.

Successful Ladies' Night at Toronto Club.

Toronto, Feb. 26.—The attendance of the fair sex at the second annual ladies' night given by the Toronto Motorcycle Club on Wednesday evening, February 21, in the assembly hall of the club's quarters, went far to indicate that the ladies of the future will take a far more active interest in motorcycling affairs than formerly. The first "skirt" event put on by the local club, one year ago, was a failure, but on this occasion more than 100 couples were present and thoroughly enjoyed a mixed programme. Naturally, proposals for side-car jaunts this coming season were rife, and suggestions for the holding of an annual club dance were also made.

Metropolitans Elect New Officers.

At the annual meeting of the Metropolitan Motorcycle Club, held February 26, at the club headquarters, 256 West 56th street, New York City, the following officers were chosen: President, George P. Jenkins; vice-president, E. L. Parris; captain, A. P. Lane. The office of secretary-treasurer was left open until the next meeting of the club. The watchwords of the club and the objects for which it will bend its energies to achieve during the present year are: Closed mufflers, no smoke and no high speed through towns or villages.

Club Rooms Opened by York Motorcyclists.

York, Pa., Feb. 27.—Organized January 17 of the present year with 11 charter members, the York Motorcycle club has up to date a total membership of 18. February 21 the club held its first meeting in its newly furnished room on the second floor of 16 Beaver street, one block west of Center Square. Motorcyclists coming to York will be made welcome at the club headquarters at all times.

DE ROSIER REGAINS HIS FORM

Annexes Six Mile Record and Defeats Wolters in Match—Wolters and Balke Also Make New Time Marks.

Los Angeles, Cal., Feb. 26.—There was a further onslaught on records made at yesterday's meet at the Stadium, and the crowd of 6,000 yelled itself hoarse over the soul-stirring finishes put up by the crack professionals now sojourning on the Southern California slope.

Jake De Rosier certainly made a "come back" that was spectacular. He won a two mile match race from Joe Wolters, and snatched the six mile professional event in world's record time of 4:08⅗, beating his own record by six seconds. This was the only open race in which De Rosier rode. Wolters and Hasha did not compete, the former being excused, and the latter was retired for the day by engine trouble in the four mile event.

In the three mile race Wolters, on his Excelsior, made the astounding time of 1:59⅗, four-fifths of a second under the best previous mark. This record has been broken at every one of the three meets so far held on the Stadium track.

Another record went in the four mile, when Charlie Balke won in 2:40⅖, two-fifths of a second under Hasha's time, made at the meet of February 11. In this race "Fearless" Balke did some scientific "skidding" that will bring an ambulance call some day unless it is checked. It threw the whole field wide until Wolters was reached. He was riding high on the bank and promised to go over it. The sepctators gasped, but in the fraction of a second Wolters was back in his stride and a calamity was averted.

It was surely a great day for the Excelsior, as it captured all three of the records mentioned above. The summaries of the events are as follows:

Two miles, match race—Won by Jake De Rosier (Excelsior). Time, 1:25.

Four miles, professional, Class B—First heat, won by John Albright (Indian); second, Will Samuelson (Indian). Time, 3:02⅕. Second heat, won by T. M. Samuelson (Indian); second, W. P. Humiston (Indian). Time, 3:09⅗.

Three miles, professional, Class A—Won by Joe Wolters (Excelsior); second, Charles Balke (Excelsior). Time, 1:59⅗. (World's record.)

Four miles, professional, Class A—Won by Charles Balke (Excelsior); second, Joe Wolters (Excelsior). Time, 2:40⅖. World's record.)

Five miles, professional, Class B—Won by Will Samuelson (Indian); second, John Albright (Indian). Time, 3:52⅗.

Five miles, professional, Class A—Won by Al. Ward (Indian); second, Joe Wolters (Excelsior). Time, 3:23⅘.

Six miles, professional, free-for-all—Won by Jake De Rosier (Excelsior); second, Al Ward (Indian); third, Raymond Seymour (Indian). Time, 4:08⅗. (World's record.) Balke led till 17th lap, then went out of race.

How the Machines Were Measured.

Anent the recent acrimonious discussion concerning the measurement of Hasha's and Ward's Indian racers, and the Excelsior ridden by Wolters, "Pacific Motoring," which is published at Los Angeles and edited by Charles Fuller Gates, the official representative of the F. A. M. and referee,

SOME RECORD BREAKERS WHO HAVE MADE THE LOS ANGELES STADIUM FAMOUS
Reading left to right, riders shown are Charley Balke, Joe Wolters, Eddie Hasha, Ray Seymour; standing, Hubert Kittle and Bob Kittle.

has the following to say in its issue of February 24:

"Mr. Gates took charge of the racing machines ridden by Wolters, Hasha and Ward after the races of February 18, as each had broken a world's record, and must be within the 61 inches of piston displacement to get the records, that being the limit on American tracks.

"The Excelsior ridden by Joe Wolters was protested by the Indian camp, the same as the Excelsior camp had protested Hasha's Indian the week before.

"The two Indians and one Excelsior were taken to the White Garage machine shop, on Auto Row, where as careful and scientific machine work is done as anywhere on earth, and after the machines had cooled all night, the riders of each machine and their respective mechanics were allowed to take down each engine and turn each over in turn to F. Fay Sibley, who first measured the stroke of the piston and then, by micrometer, got the bore of each cylinder to the exactness of a microscopical speck. A Brown & Sharp new micrometer belonging to the F. A. M. representative was used officially, and also micrometers made by Starrett, supplied by both Excelsior and Indian camps, and these were all tested by large outside micrometers, and each cylinder was measured by Joe Wolters, Fred Hofer, the head mechanic of the Excelsior team; another mechanic, and E. W. Hoag, head mechanic of the Indian team, as well as by Mr. Sibley, who represented Referee Charles Fuller Gates.

"The figuring was done for the F. A. M. representative by T. M. Poland and Mac Purcell, mechanics of the White Garage machine shops, from the measurements made by F. Fay Sibley, their associate, who at one time was employed in the Brown & Sharp works, where micrometers of the world's highest standard are made. Mr. Purcell was for years the mechanical expert for the Schebler carburetor factory at all the great race meets, fitting Schebler's to the winning cars of every big automobile race of the past five years. Probably no more expert trio could be obtained for this delicate mechanical work, and yet their work of the week before on the Hasha machine was questioned by the Excelsior team, although the measurements made at that time, like those of last Monday, were sworn to by all three gentlemen before a notary and all parties interested were supplied with copies of the figures and sworn statements

"The cubic volume of the two cylinders of Eddie Hasha's Indian machine, micrometered by F. Fay Sibley on February 12 with the new Starrett instrument, under liberal measurements, allowing for slight oval in one cylinder, was 60.9768. When measured again two days later the measurement was the same, but after use last Sunday the cubic inches piston displacement last Monday was 60.9517. This difference of 0.251 of one cubic inch represents the care in remeasuring and the difference of the shrinkage of the the cast iron from week to week, yet in the eyes of a rival factory it is as big as a mountain.

"The Excelsior ridden by Joe Wolters, the Denver man, who broke the three mile record, measured as follows: One cylinder, 30.4512225; the other, 30.454795; total, 60.90602 cubic inches, piston displacement.

"Al Ward's Indian engine measured very similar, as follows: One cylinder, 30.4510667, and the other, 30.4547386; total volume, 60.9058053.

"This seems like splitting hairs to most people. But similar close results are seen in automobile racing, where one class limit is 300 cubic inches piston displacement, and one factory comes so close to that limit that a new set of cyliners is used for every race, or else the engine would soon be oversize."

Traymores Entertain Neighbors at Feast.

Philadelphia, Feb. 28.—At the first annual banquet of the Traymore Motorcycle Club, President Baeuerle and Secretary Stark, of the Quaker City Motorcycle Club, and President Sellers and Secretary Shenk, of the Harley-Davidson Motorcycle Club, were the invited guests. It gave the officers of the three clubs a chance to have a friendly exchange of views, and the good feeling engendered is sure to produce lasting results in Philadelphia motorcycledom.

Houff Elected Terre Haute President.

Terra Haute, Ind., Feb. 26.—At the last meeting of the Terre Haute Motorcycle Club, E. H. Baldwin tendered his resignation as president owing to his removal from the city, and Frank A. Houff, who was recently elected secretary, was chosen to fill the vacancy. Jefferson Forbeck was then chosen secretary to fill the vacancy caused by the elevation of Mr. Houff to the presidency.

Will Countys Dance in Gray Jerseys.

Joliet, Ill., Feb. 24.—The dance of the Will County Motorcycle Club February 20 was a great success from every point of view. The members of the club were dressed in new and neat gray jerseys with "W. C. M. C." worked in navy blue across the breast. Over 100 couples participated in the festivities.

OLYMPIC TEAM FUND TAKES IMMENSE FORWARD STRIDE

Results of Week Compare Favorably With Those of Previous Four Months—Manufacturers and Jobbers Now Thoroughly Interested—The Project as Promoted by This Publication Receives Unqualified Support.

The movement to finance an Olympic bicycle team received this week the most substantial support since the inception of the campaign by The Bicycling World. As a result of the letter sent to all of the bicycle jobbers by P. R. Robinson, of the New York Sporting Company, a copy of which was published in the issue of February 24, there has been received to date $85.

Working along the same lines among the bicycle and tire manufacturers, the Pope Mfg. Co., Hartford, Conn., during the week was the recipient of a letter from the United States Tire Co., the maker of Hartford, G. & J. and Morgan & Wright tires, in which was subscribed the second of the two largest amounts to date, in the following expressive words: "We will be glad to contribute $100 toward the fund." The Pope Mfg. Co. also contributed $25 to the fund.

Further subscriptions to the fund by manufacturers are as follows: Fisk Rubber Co., Chicopee Falls, Mass., makers of Fisk tires, $25.00. Continental Rubber Co., Erie, Pa., Continental tire manufacturers, $25.00. Davis Sewing Machine Co., Dayton, O., Dayton bicycles, $25.00. Consolidated Manufacturing Co., Toledo, O., Yale and Snell bicycles, $25.00.

Not to be outdone by other organizations in the country, the Wheelmen's Protective Association, an organization of Salt Lake City, Utah, formed, as the name expresses, for the local protection of wheelmen's rights, held a meeting February 23 and subscribed $25. The officers of the association are: President, C. L. Berry; vice-presidents, C. H. Dowse and E. P. Scoville; secretary, W. T. Bennett; treasurer, Fred Bennett.

Thus it will be seen that the total received during the week, together with $2 from the Bicycling World Co. through the special subscription offer, and the contribution of $2 by Carl Schutte, of Kansas City, Mo., and of $1 from John H. Rust, Hammond, Ind., amounts to $340.

Supply Houses Commend Project.

With the subscriptions in reply to Mr. Robinson's letter came many endorsements of the campaign.

The Utica Cycle Co., one of the largest jobbers in central New York, and the maker of Oneita bicycles, writes:

"We are herewith enclosing our check for $20. We feel as you do in this matter, that a lot of good can be done by this kind of advertising."

Brief and to the point is the letter of the Wilson Trading Co., New York City, which is distributor for the Racycle in Greater New York and Long Island, also being an extensive wholesale and retail dealer in bicycles and supplies, having the well known Sovereign, Peerless and Majestic bicycles and Hy-Grade tires. The reply follows:

"We herewith enclose check for $10 as a contribution, about which you wrote us in your letter of 26th inst."

Keystone State Jobbers Doing Good Work.

Max M. Sladkin, proprietor of the Haverford Cycle Co., Philadelphia, extensive jobber of supplies and distributor of Hudson, Dayton and Haverford bicycles, with branches in Washington, Buffalo, Atlantic City and Newark, N. J., says, in part: . . . "would say that this a very good idea, and the publicity we will get from this will be worth more than any jobber will contribute. . . . Enclosed find my check for $15."

Another Pennsylvania jobber to take up the Olympic proposition—not only financially, but energetically with the trade throughout his territory—is Keyser Fry, of Reading, Pa. He writes that on his recent trip to the dealers in that section he has impressed upon each of them the importance of the scheduled try-outs and the great amount of publicity that would be given to bicycling when the finals are run. Mr. Fry's letter continues:

"Am enclosing my check for $5 to Mr. R. F. Kelsey, or the American Olympic Committee, to help along the good work in the effort to send a team of bicycle riders to the Olympic Games at Stockholm, Sweden."

From the summit of the Alleghenies in the Keystone State comes an enthusiastic reply, as expressed by W. H. Wolfe, of W. H. & L. C. Wolfe, Altoona, general sporting and athletic goods manufacturers and dealers, to wit:

"We enclose herewith our check for $10 to this fund, and wish you abundant success in your undertaking; also wish to advise you that we will do all we can to make this a howling success, and if we can do anything more to boost the same command us."

The honor of submitting the first subscription from the jobbers of Chicago goes to the Motor Car Supply Co., which, in addition to carrying a full line of automobile supplies, is a wholesaler of everything for the bicycle. The letter of the secretary of the company says:

"We are pleased to acknowledge the receipt of your favor of the 23d inst., and by way of co-operation we are enclosing our check for $20, payable to R. F. Kelsey, to aid in sending over a bicycle team to the Olympic meet."

Simultaneously with the above was received the contribution of $5 from Van Cleef Bros., Chicago, manufacturers of "Dutch Brand" rubber cements and plastic cement for the closing of gashes and large cuts in tires. Their unmistakable sentiments concerning the Olympic proposition are expressed as follows:

"We are in hearty accord with this movement and are pleased to contribute $5 toward the cause. If we can co-operate with you further in this connection do not hesitate to call on us."

Positive Replies to Important Letter.

As announced in these columns of February 17 issue, letters asking subscribers to the fund previous to that date, if each was in accord with the control of the Olympic Bicycle Team Fund campaign by this publication, and if it was the desire of the respective subscribers that their subscriptions remain in the hands of R. F. Kelsey as custodian until turned over to the American Olympic Committee, have been sent to all, the replies now are being received, some of which follow:

From Charles Hansen, Jersey City, N. J., who raised $18.24 by popular cash box subscriptions—"The Bicycling World Company: I hereby authorize you to take the popular cash box contribution of $18.24 and spend it as you see fit."

C. T. Kilborne, Newark, N. J., one of the first to contribute to the fund—"Yes, indeed!"

R. G. Betts, editor of "Motor World," New York City—"Dare you to guess the answer."

A. G. Batchelder, chairman of the executive committee of the American Automobile Association and former president of the National Cycling Association—"Sure! O. K."

B. A. Swenson, Providence, R. I., the first to subscribe to the cause in response to the announcement in these columns, issue of October 14, replying to the letter, states that it is in accord with his intentions when

he made the subscription, and further says: "I hope you will be able to get together a fund large enough to accomplish the purpose, and I wish to state that, if necessary, I will make an additional subscription."

Team to Sail for Sweden June 14.

It was announced February 23 by James E. Sullivan, secretary of the Olympic Committee, that the American Olympic team will leave New York on June 14 for Stockholm, Sweden, where the games are to be held, arriving there on June 29. The team will leave Sweden on July 17 and return to New York on July 29. The athletes will travel on the steamship "Finland," which also will be used as a hotel for the team. In addition to the American Olympic team, accommodations will be reserved for 250 other passengers: Sullivan said:

"The committee plans to take at least 100 athletes, keep them aboard the steamship in the harbor and give the regular training table diet. In chartering the vessel the committee found that 250 passengers could be taken care of in addition to the team, and the committee will give preference to members of the athletic clubs in the A. A. U."

The sub-committee for the Olympic road race around Lake Malar has issued the following supplementary rules:

(1) The different nations will be brought together in groups of 12 riders, in order to avoid riders from the same nation appearing in more than one group.

(2) The starting order of the groups and the riders in each group will be decided by lot, and no second rider from any group will be allowed to start before one rider has started from each group.

CARL SCHUTTE,
A Kansas City candidate for Olympic road race honors.

Interest among the riders continues to grow with the approach of the riding season, and among the clubs the cause has been given valuable assistance by the assignment of special divisions in their century runs, with pacemakers of exceptional ability to make them practically training "work-outs" for Olympic Team aspirants.

In his letter contributing $2 to the fund, Carl Schutte, of Kansas City, Mo., announces his candidacy for the team, stating that he will ride in the try-out at St. Louis. He also offers a valuable suggestion for dates for the progressive try-outs, which in all probability will be adopted to be announced later.

More Voters' Popularity Candidates.

The riders' popularity voting contest also continues to increase daily, until at the present time ballots are being received from every section of the country.

The portraits shown this week are those of Carl Schutte and Joseph Orlando. A short sketch of the riding history of each, and C. Hausenbauer, follows.

Carl Schutte started riding in competition in the season of 1907. During 1908 and 1909 he won six races in his home town; won first time and first place in 21 mile handicap road race in St. Louis, August 14, 1909; was the star amateur at both meets, held, respectively, in February and September, 1909, on the saucer track in Convention Hall, Kansas City, Mo.; won first time and fifth place in Kansas City 20 mile handicap road race of 1910; rode 25 mile handicap road race at Toledo, Ohio, 1911, in 1:04, 50 seconds slower than record held by "Farmer" Blum, of Chicago, and took first time and third place in that event.

Joseph Orlando first came into cycling

JOSEPH ORLANDO,
A strong rider from the ranks of the Empire City Wheelmen of New York.

fame as the winner of the great Roy Wheelmen Marathon, in which were entered 154 riders, held at Valley Stream, L. I., June 13, 1909; since then he has rapidly improved, until at the present time he is one of the strongest performers on the road in and around Greater New York; he is a member of the Empire City Wheelmen, and has figured prominently as a club champion of that organization.

Another history is that of Charles Hausenbauer, whose picture was shown in the issue of February 17 with that of Jerome Steinert. Hausenbauer is a member of the Atlas Bicycle Club of Brooklyn. His principal performances to date on the road are: First—100 miles, time trial, 1909; time, 5:47:17⅕. Second time—100 miles, record run, 1909; time, 5:23. First time—100 miles, record run, 1910; time, 5:34. Second time—100 miles, record run, same year; time, 5:19. Record, from Brooklyn to Sag Harbor and return, 225 miles; time, 16:34. Brooklyn to Sag Harbor, unpaced, 6:55.

Concerning Combination Subscriptions.

H. A. Gliesman, who has for some time past been serving in the capacity as a special committtee of the United Cyclists for the purpose of handling the $2 subscriptions advertised by arrangement with The Bicycling World and Motorcycle Review, $1 of which is to go to the Olympic Fund and $1 for subscription to The Bicycling World, announces his resignation, and that all further subscriptions of this character should be sent direct to the Bicycling World Company, Room 914, Tribune Building, New York City.

U. C. I. IN ANNUAL CONCLAVE

German Organizations Again Admitted to Membership—World's Championship Plans Are Approved.

At the twenty-fifth congress of the Union Cycliste Internationale, held at Paris, February 10, ten nations were represented by delegates, as follows: France, Belgium, Switzerland, Italy, Holland United States, Spain, Sweden, Luxembourg and the Argentine Republic. President Emile de Beukelaer, of Belgium, occupied the chair.

After a lengthy debate, it was decided unanimously to re-affiliate the Verband Deutscher Radrennbahnen and the Deutscher Radfahrer Bund, the sport-governing bodies of Germany, who for the past 18 months have been acting independently of the U. C. I.

Manager John M. Chapman, of the Newark (N. J.) Velodrome, who attended the congress, presented through the National Cycling Association delegate, Victor Breyer, his plans for the running of the world's championships at Newark August 25 to 28 and September 1, of the present year, which were accepted and made official by the congress. Pacemakers and motors will be furnished by the track management at Newark for the paced championship events.

The proposition of the French organization, the Union Velocipedique de France, to eliminate amateur championships from the annual world's series was transformed prior to adjournment into a proposal to circularize the various federations as to the advisability of taking up the question at the next annual congress.

Applications for the championships of 1912 by England and Holland were received, but no decision was given on the allotment. In all probability, action will be taken at the Easter meeting.

Election of officers for the ensuing year resulted as follows: President, Emile de Beukelaer (Belgium); vice-presidents, Leon Breton (France), M. Houtschka; secretary, Paul Rousseau, 24 Boulevard Poissonniere, Paris, France; treasurer, Ferdinand Colignon (Belgium).

Chapman Returns from European Trip.

Full of enthusiasm for the coming world's championship meet, and looking hale and hearty after his six weeks' sojourn in Europe, Manager John M. Chapman, of the Newark Veledrome, returned home early this week. He attended the annual meeting of the U. C. I., in Paris, February 10, and states that at this meeting eight of the foreign countries agreed to send one or more riders here for the world's title races.

Belgium and Germany will each send a professional sprinter and pace follower, Denmark will send one professional sprinter, Italy will send one amateur and one professional sprinter; England, Holland and Sweden will each send an amateur sprinter, and France will send a "pro" sprinter, "pro" pace follower and an amateur sprinter.

Manager Chapman hase secured Carlo Messori, an Italian, and Dupuy, a Frenchman, to ride here next season. Both of these men are sprinters. Messori is rated as the best sprinter in Italy. Dupuy is a good handicap rider. He is only 21 years old and is looked upon as one of the coming riders of Europe. He has been a consistent winner for the past three years, and has scored victories over Friol, Ellegaard, Hourlier and Poulain.

Bailey, the English amateur, who will arrive here late in July, won the world's amateur championship at Brussels in 1910, and last year he again won the world's title at Rome. Bailey is said to be wonderfully fast.

United Spanish War Veterans' Games.

Races run by the United Spanish War Veterans' Association of New York City, are always popular, one reason being the abundance of prizes. A two mile bicycle handicap was included on the card presented at the fifth annual games held at the 22d Regiment Armory, February 29, and 18 of the leading metropolitan flat floor riders were entered. Two trial heats resulted in Goodwin (scratch), Thorakos (130 yds.), Murphy (90 yds.), Townsend (25 yds), Lightfine (110 yds.), and Dean (130 yds.), qualifying for the final. Van den Dries (scratch), went out with a puncture.

The final heat, for the five prizes offered, resulted as follows: Won by Edw. H. Goodwin, Irish Am. A. C. (scratch); second, Harold Lightfine, Glencoe A. C. (110 yds.); third, H. J. Murphy, Atlas B. C. (90 yds.); fourth, M. J. Dean, Glencoe A. C. (130 yds.); fifth, Jack Townsend, Dominican Lyceum (25 yds.); time, 5:03⅗.

Although he qualified for the final, Townsend fell through tacking too close to Lightfine's rear wheel.

Lapize Wins a Decisive Victory.

Joe Fogler and Jimmie Moran again were forced to admit defeat as administered by the Frenchmen, Lapize and Emile Georget, on Sunday, February 18, when, at the Palais des Sports, in Paris, was run off the special tandem-paced race in which the Americans were the challengers.

The challenge grew out of a sensational six-hour race, one of a series held recently in Paris, and in which the Frenchmen showed a clean pair of heels to the Yankees, to the surprise of everyone and very much to the dissatisfaction of the latter.

The match race was at 50 kilometers, resulting in a win for Lapize by 2 laps; second, Emile Georget; third, Jimmie Moran (2½ laps); fourth, Joe Fogler (13 laps). Time, 1:00:27⅕.

C. R. C. ASSOCIATION'S 12th ANNUAL

Diners, Almost 100 in Number, Partake of "Charter Day" Feast in New York—Ex-President Adee Gets Testimonial.

Beautifully decorated with national and club colors and a plentiful supply of flowers, the spacious banquet hall of the Broadway Central Hotel, New York City, was the scene on Saturday, February 24, of the twelfth annual dinner and celebration of "Charter Day" of the Century Road Club Association.

With 96 reservations the affair proved to be, from every point of view, one of the most successful of the sort ever promoted under the auspices of this enthusiastic cycling organization.

In addition to a large representation of the membership in the Greater City, there were delegations from Long Island points and New Jersey. From Baltimore came T. W. ("Tommy") Baker, an inveterate cyclist of the Monumental City and secretary of the Crescent Bicycle Club. Tarrytown, N. Y., also was represented by the newly installed president of the association and wife, in the persons of Mr. and Mrs. Paul Thomas.

Immediately after the guests were seated the photographer indulged in his usual flashlight pleasantry, then the discussion of the menu provided for by the committee was taken up and concluded.

President Thomas, as master of ceremonies, introduced in turn the various winners of the club's competitions during the year 1911, and presented each with his award.

Duane W. Moore, a resident of Bayonne, N. J., and a member of the New Jersey Division, carried off the lion's share of the medals that were awarded. Moore is practically a novice in bicycle competition, although an athlete of considerable prominence in other lines. His first year in mileage and century riding netted him three first medals—the National mileage and century, the Eastern Division mileage and century, and the membership competition.

Others receiving premier honors were Sylvain Segal, the club championship; H. Baum, the club run attendance, and Joseph Kopsky, the Bieregal trophy for the best ten miles in the road, unpaced, for the year 1911; time, 26:27⅗ (N. C. A. record).

Medals for second and third, respectively, in the National mileage and century competition were presented to Isadore Taub, Hoboken, N. J., and J. M. Mitchell, Greenwich, Conn.; second, third and fourth, club championship, I. Taub, H. Terhune and J. O'Connor; second and third, club runs, A. Kaiser and George Bieregal; second, membership competition, J. W. Clement.

A handsomely mounted and fittingly engraved silver plaque, commemorative of his seven years' services as president of the organization, was then presented to the retiring president, D. M. Adee, who eloquently expressed his appreciation of the honor conferred upon him.

An innovation which evidently met with general approval was the elimination of the usual elaborate card of after-dinner speeches. The tables were quicly cleared, the floor prepared for dancing, the orchestra, which had been in attendance throughout the banquet, was again pressed into service, and a pleasant two hours were spent in tripping the light fantastic.

Plans for N. E. Wheelmen's Road Races.

Entry blanks have been issued for the 15-mile handicap road race under the auspices of the New England Wheelmen of New York City, to be held April 21, with start and finish at Floral Park, L. I. The course will be due east over the Jericho Turnpike, 7½ miles and return. The time scheduled for the start is 10 A. M. Fifteen place prizes, headed by a New England racer bicycle, have been posted, together with four time prizes, of which a solid gold Waltham watch is the premier award. N. C. A. sanction No. 120 has been issued for the event. Entry blanks may be obtained and entries made with H. W. Zarr, secretary of the race committee, 2150 Seventh avenue, New York City.

Atlas Cyclists Hold Club Run.

Sunday, February 25, saw Brooklyn, N. Y., wheelmen out in force, and the Atlas Bicycle Club, with practically full membership awheel, took advantage of the excellent weather and held its first club race of the season. In an "inches" finish Henry Murphy captured the "cork"; second, A. D. Dawson; third, Paul Smith.

TWELFTH ANNUAL BANQUET OF THE CENTURY ROAD CLUB ASSOCIATION, BROADWAY CENTRAL HOTEL, NEW YORK CITY

GOULETT-HEHIR WIN AGAIN

Score Second Victory in Australia by Finishing First in Six-Day Race at Melbourne Last Saturday.

Alfred Goullet, of the Goullet-Hehir team, won the sprint in the Melbourne, Australia, six-day race which finished last Saturday night, February 24. The second man was Iver Lawson, who was teamed with Worth Mitten, and third went to the Jackie Clark-Gordon Walker team, according to brief cablegrams to the Newark (N. J.) "Evening News."

Goullet's victory is his second triumph in Australian six-day races, he having won, with the same partner, the Sydney race held during the first week in January. Considerable interest was attached to the Melbourne race because of the participation in it of Clark, he having just arrived in his native land after three years of brilliant performance in this country, on which he placed a fitting climax by winning the last New York six-day race, in which he was teamed with Joe Fogler.

ALFRED GOULLET

PADDY O'SULLIVAN HEHIR

Century Road Club Association's Plans.

Announcing four bicycle walks—scheduled for consecutive Sundays, March 3 to 24, inclusive—of varying distances from five miles to one extending over two days, for which the round trip from New York City to Bridgeport, Conn., a distance approximating 110 miles, will be the itinerary, Captain Segal, who also is chairman of the Century Road Club Association, states that an extensive programme is outlined for the coming season, for which the foregoing will be the opening.

Other events will be runs held in conjunction with the New Jersey Division to Delaware Water Gap, Baltimore, Washington, Boston and Buffalo, and other points.

Entry blanks for the fifteenth annual spring century of the Eastern Division, to be held April 28, now can be obtained from H. W. Zarr, 2202 Seventh avenue, New York City. The route for the run is as follows: Start at Columbus Circle, New York City; to Jamaica, L. I., via Queensboro Bridge, to Floral Park, Hicksville, Amityville; return to Hicksville for dinner, thence via Freeport, Hempstead, Valley Stream, Jamaica, to starting point. The slow division will leave at 7 A. M. The fast division, known this year as the Olympic Division, as special provision will be made to accommodate candidates for the Olympic try-outs, will leave at 8.30 A. M. Joseph G. Kopsky, unpaced record holder for 10 and 100 miles, will be chief pacemaker of this division.

The committees to serve for the ensuing year are as follows: Race, chairman, Sylvain Segal, George Bieregal, J. W. Clement and Henry Kest; century run, chairman, George Bieregal; membership, chairman, H. W. Zarr; press, chairman, Henry Kest; secretary, J. Boyce.

Iver Johnson Wheelmen's Average.

The scores in the 1911 club championship competition of the Iver Johnson Wheelmen, New York City, have just been announced, the delay being due principally to the fact that a tie existed for third position. It had been contemplated to run off this tie with a special match race, but weather conditions prevented this and the club finally decided to give a third prize medal to each of the two parties to the tie, William Muller and Fred Woisin.

In all, fifteen races, varying in distance from one-quarter mile to 25 miles, were run in the series. Hal Kaiser demonstrated his class by clinching the championship with points won in but six of the series, although his margin over the second wan, Charles Erwin, was but two points. The competition for second also was very close, all tending to keep the interest very keen throughout.

The encouraging gains in membership due to the interest aroused in cycling by the championship series has determined the club to offer not only more handsome medals for the series of the coming season but it also will post a number of special prizes.

Lafayette Wheelmen After Championships.

Baltimore, Feb. 26.—Speed artists of the Lafayette Wheelmen are faithfully training for the many events to be pulled off during the season. The first road race, to be held in May, will materially aid them, for it is the intention of the local organization to enter its best talent in the races at the Newark board track this summer for the world's amateur championships. This will be the first time in a number of years that Baltimore has been represented, and the sprinters of the Lafayette Wheelmen intend to faithfully keep to their training and endeavor to come away with some of the titles. There are some excellent local men, and judging from their past performances they ought to make a good account of themselves. April 1 the annual competitive run contest will be inaugurated.

Tiger Wheelmen Soon to Reorganize.

Another indication of the increasing strength of the revival of cycling is noted in the fact that a committee of three have been appointed and now practically has completed plans for the reconstruction of the Tiger Wheelmen of New York City, an organization which at one time, under the leadership of the organizer, Harry Gliesman, took a prominent part in cycling affairs in the metropolitan district. The well-defined movement on foot to provide and send a bicycle team to the Olympic Games is assigned as one of the reasons for the renewed activity of the Tigers, and it is stated in all probability that the club will be equipped in the near future to prepare its candidates for the Olympic tryouts.

Crescents Active With Their Class Races.

Baltimore, Feb. 26.—The Crescent Bicycle Club went out in force to Towson yesterday on its regular Sunday run, and on the way back the second series of class races were held. The weather was very warm, and it tended to bring out a good attendance. The races were held on Charles avenue and were for two distances. The events were warmly contested, and in the last race—a Class D event for three miles—a beautiful finish was marred by the Leimbach brothers colliding in the sprint, Gus falling heavily while Will won the race. No time was taken and the course was over a starightaway. C. H. Thomas won the first one-mile Class E race, and J. F. Huber the second event, of same distance in same class.

Strongly Guaranteed

Practically Perfect

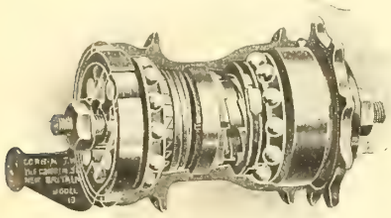
The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.



THE NEW DEPARTURE MANUFACTURING CO., Bristol, Conn.

Coaster Brake Licensors

The New Corbin Bicycle Brake.

"A bicycle brake that means greater safety and pleasure" is the way the maker of the Corbin two-speed coster brake, the Corbin Screw Corporation, of New Britain, Conn., describes its latest refinement for foot-power bicycle, and which is the company's exclusive production.

It is designed to be for the bicycle what the air brake is to the railway train and variable transmission is to the automobile. It removes the only valid objection ever

CORBIN TWO-SPEED COASTER BRAKE

urged against the use of the bicycle by elderly men—namely, the increased labor of riding up steep hills and against strong head winds.

No levers are required to change the gearing, all parts of which are continued within the hub, the action being automatic and always under instant control. Forward pressure produces propelling power; stopping the motion of the feet gives the free-running wheel; a touch backward followed by a continued forward pressure effects the gear change, while backward pressure operates the brake, mildly or vigorously as the pressure is light or heavy. There can be no failure of action, no difficulty in use. All movements required are the natural ones to make under the circumstances, and are performed automatically, without mental effort. A wide choice of gear combinations is available, making it possible to meet exactly the desires of every rider as to what low gear he wishes for hill climbing or against head winds, and what high gear he prefers for smooth and level roads when he encounters them.

Siam Presents Good Bicycle Market.

Expert activities of bicycle manufacturers probably could find no more productive field for operation than that of Siam as noted in the report of the Vice-Consul General, Carl C. Hansen, at Bankok.

There has been a steady increase in the imports of bicycles into Siam for the last three years, and this increase is consequent upon the continuous improvement and extension of roads in this country. As road making appears to be a permanent policy of the Siamese Government, an increased demand for bicycles may be expected for the future. Siamese customs statistics of the imports of bicycles for the last three fiscal years show that 468 machines were imported for the 12 months ended March 31, 1909, 708 for 1910, and 874 for 1911, in values amounting to $13,620, $18,613, and $20,235, respectively. The principal countries sharing in these imports for the last fiscal year were: United Kingdom and dependencies, 680 bicycles, valued at $15,409; Germany, 169, valued at $3,572; Denmark, 13, valued at $664; United States, 7, valued at $240. Bicycle parts to the value of $5,925 were also imported for the above period, the bulk of which came from the United Kingdom and dependencies.

According to the reports furnished by the customs, no bicycles were imported from the United States during the fiscal year 1908-9, but for the two following years the imports were three and seven machines, respectively. From information obtained in the local market and from other sources it appears that while American machines are appreciated for their strength, durability, and easy running, objection is made to their heaviness, fixed wheel, and lack of finish and "trimmings" as compared with English and German makes. The roads in and about Bangkok are level and smooth and the average weight of the Siamese and Chinese buyers is about 125 pounds, so that only a light machine is needed for this market.

Joe Wolters

Riding an Excelsior Auto-Cycle

Captured another World's Record and made his competitors bite his dust. The battle ground was the Los Angeles Stadium—3 mile race, February 25th.

DE ROSIER won the 6 mile and 2 mile events—of course on an Excelsior.

BALKE, also on an Excelsior, won the four mile race.

Again the Excelsior has proved it is

The Fastest Thing on Two Wheels

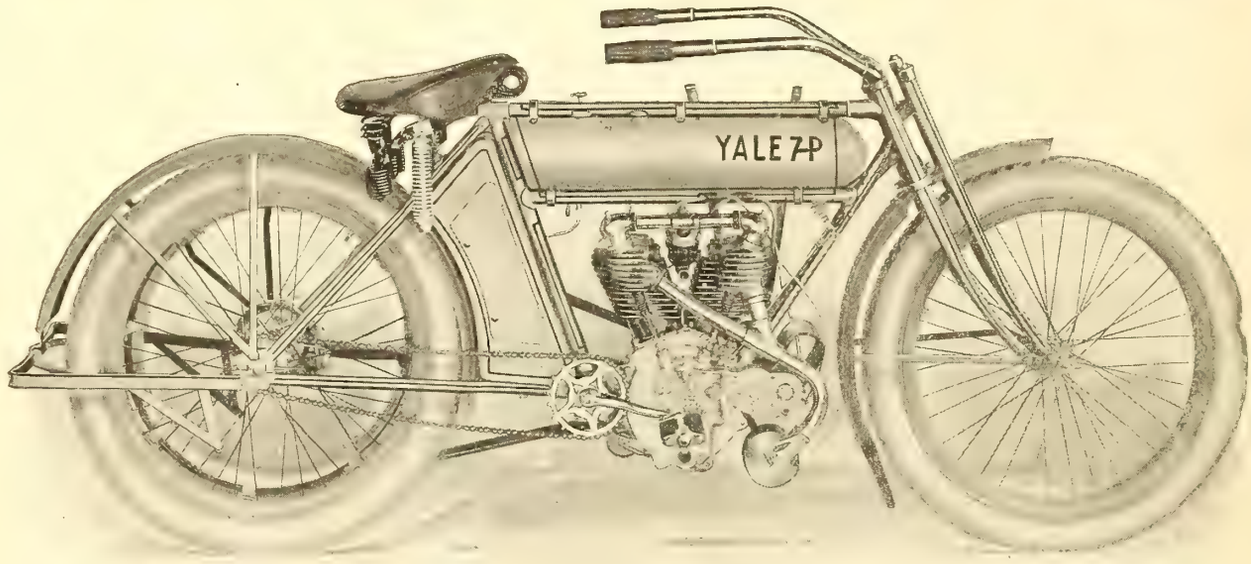
The machines of Wolters, DeRosier, and Balke have not been overhauled since last August—though they have raced almost daily for the past seven months. They smashed records at Riverview, Birmingham, Denver, Oakland and Los Angeles. Such remarkable efficiency is the usual, unsurpassed record of Excelsior roadsters.

All of our races are won with engines of exactly the same design as that of the Excelsior Twin roadster. Except that the engines are open-ported, and the pistons and a few other parts lighter, these motors are absolutely identical with our regular 1912 Twins.

We're Not Only Breaking Records, We're Also Making Standards.

THE EXCELSIOR makes every road a bouleuard—with its Kumfort Kushion seat post and perfected cradle spring fork.

THE EXCELSIOR is the one machine that keeps you clean—with its chain guard, auto-type mud guards, oil-proof bearings, and aspirator.



THE EXCELSIOR is the Samson of the Road—reinforced frame, three point suspension handle bars with brace bar.

THE EXCELSIOR is simple—anyone can learn to run it in 15 minutes.

WHY THE YALE

Model 27, 7 H. P., $285.00

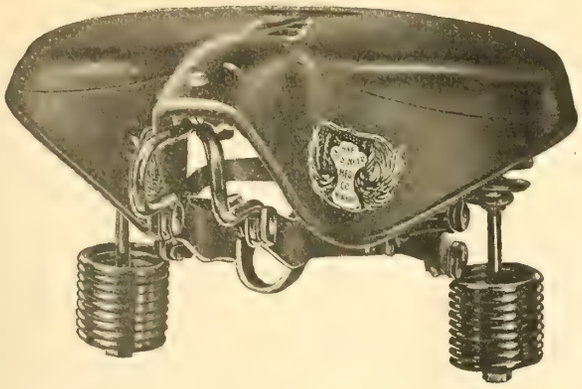
A YALE Motorcycle costs more than some others for the same reason that a full jeweled Elgin costs more than an Ingersoll. Mechanical perfection costs money and the buyer must pay for it, but the investment pays big dividends in SATISFACTION, SERVICE, and ECONOMY of up-keep.

Right Here Is Where Yale Quality Counts

We use no castings or stampings, but every part is drop forged in our own foundry and we know that every piece is right in material, workmanship and finish.

YALE equipment is in keeping with YALE Quality and comprises such items as Bosch Magneto, Eclipse Free Motor Clutch, 2 3-4 inch studded tires and the Y-A Shock Absorber, that relieves both rider and machine of all the jolts, jars and road vibration.

LOOK OVER THE MARKET, FIND THE BEST OF EVERYTHING, AND YOU WILL FIND IT ON THE YALE.



If you don't know the nearest YALE agent, write for catalogue of four models, single and twin—4, 5 and 7 horsepower, price $210.00 to $285.00.

R-S SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of many other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16″ steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive assurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

Single Pointed $1.00 Double Pointed $1.10

We do not believe in skimping on quality to supply quantity, but we do believe that we make the best bicycle the world ever knew—it is known as the

WHITE WING

It isn't altogether what we believe—but what the multitude of users of the White Wing Bicycle believe. It's the confidence we have in our facilities, in our workmen and coworkers that has resulted in the one perfect bicycle—perfect in lines, material and service—the White Wing.

If there isn't a dealer in your locality there should be. If you are a dealer and do not handle the White Wing you are standing in the way of your own progressiveness. Our product ranks highest—our proposition is liberal and the price of the White Wing is within the reach of every possible buyer. Send now for facts.

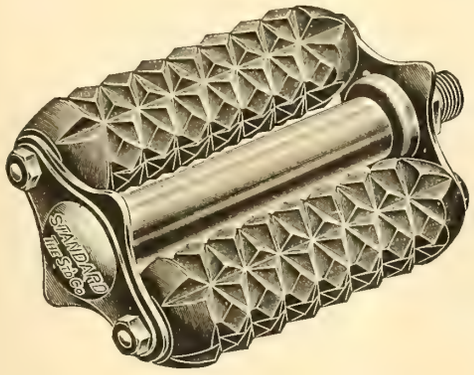
SCHAFER Ball Bearings

FAMOUS FOR THEIR DURABILITY

are the most suitable bearings for motorcycles; they withstand vibrations, due to the strong cage and large number of balls.



Schafer Ball Bearings are used exclusively on high grade products such as the renowned Minneapolis Motorcycles and two speed gears, De Luxe Motors and two speed gears.

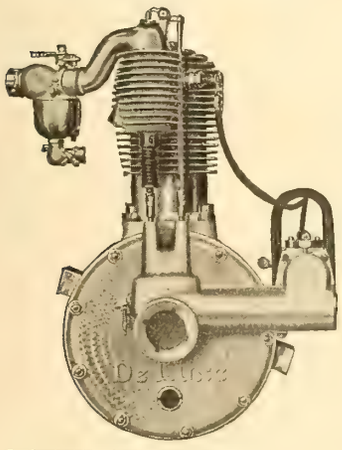
BARTHEL, DALY & MILLER, 42 Broadway, New York

WANT to sell your Motorcycle? Or buy one second hand? If you want to sell or buy anything used in connection with motorcycles or bicycles, you ought to use the "Want and For Sale" columns of THE BICYCLING WORLD AND MOTORCYCLE REVIEW. It costs 10 cents per line (7 words). A discount allowed on 6 or more insertions.. Address, Tribune Building, New York.

Insuring Comfort to the Motorcyclist

and Adding Pleasure to the Day's Ride

by equipping the motorcycle with



No. 3 STANDARD MOTORCYCLE PEDALS

They are generously proportioned and made with big, soft, easy rubber cushions that minimize the jars and bumps. The deep corrugations insure positive grip that makes the foot stay on. You know what that means.

Our Products for the Cycle Trade Include:
EMERGENCY AXLES, SAGER MOTORCYCLE TOE CLIPS, DIAMOND E SPOKES, BRIDGEPORT AND STANDARD PEDALS, SAGER AND STANDARD TOE CLIPS.

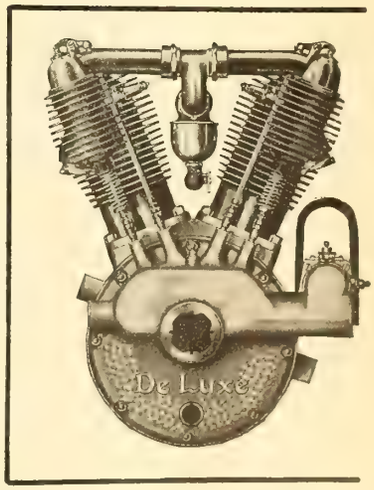
THE STANDARD COMPANY
TORRINGTON CONN.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

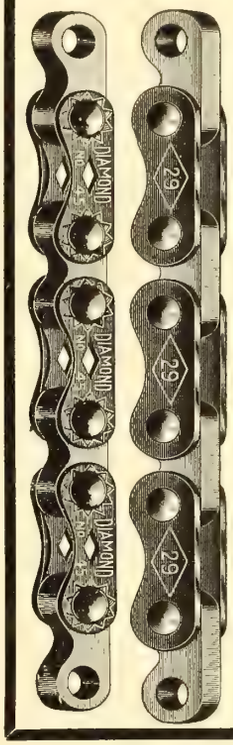
The F. W. Spacke Machine Co.
INDIANAPOLIS, IND., U. S. A.

Q. WHY has the Yale, the motorcycle that uses the BEST of everything adopted the Adams Shock Absorber as regular equipment?

A. BECAUSE after exhaustive tests of all forms of auxiliary saddle springing, the Consolidated Mfg. Co. found the A. S. A. to be the BEST in construction, durability and action.

If you are riding an old style rigid seat post, substitute an A. S. A. and notice the difference.

If you are a dealer our proposition "listens" good to you.



Models ready for Excelsior, Harley-Davidson, Pierce, Indian, Yale, Thor, Wagner, Pope, Flanders, Minneapolis, and others.

State make, model and opproximate weight of rider when ordering.

Send for folders, anyway.

O. L. ADAMS, 2538 Vine St., Denver, Colo.

"When we put out a Diamond Chain, we never hear of it afterwards."

Years ago the Davis Sewing Machine Co. decided upon Diamond Chains. They have had no regrets since, as evidenced by their testimony above.

It's the high grade material, accurate workmanship and our pioneer experience in chain making that make such lasting friends for Diamond Chains, and have made these the standard equipment for the past 21 years. When buying a new chain, know what you are getting. Look for the Diamond trademark on the connecting link.

Reliance

(REG. U. S. PAT. OFF.)

SPARK PLUGS

Sparks in Water

Take less battery power than any other plug.

Are absolutely proof against soot in any form. Dirty motors won't affect them. Patented electrical action destroys soot fast as deposited.

Carbon does not affect them. No cylinder knock means longer life to your motor.

Gives HOT concentrated spark. Means more power—greater fuel economy.

Reliance porcelain stands fifty to ONE HUNDRED per cent. greater voltage than any other.

Regular Type $1.00

Reliance plugs are positively and unconditionally guaranteed to satisfy.

Try Reliance plugs. Regular type, $1.00; Magneto type, $1.25. Sent prepaid on receipt of price if dealer can't supply. Write for our great book, "Ignition and Spark Plug Talk"—tells all ignition secrets; makes you master of your ignition system. Pocket size—convenient to carry. Sent free.

KOKOMO TIRES

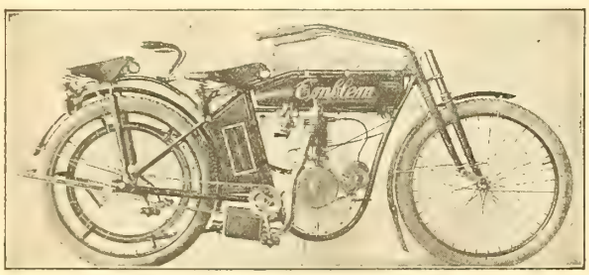
¶ Take up a catalog issued by the manufacturers of high-grade bicycles or motorcycles and read the specifications. You will note this: TIRES—High Grade KOKOMO.

¶ KOKOMO TIRES are good enough to be listed as standard equipment on high class machines—they must be good enough for you.

¶ There is no make-believe construction in KOKOMO TIRES. Conscientious effort to build the best tire the world ever knew has resulted in the specification of KOKOMO TIRES by prominent builders of machines, after exhaustive tests of every other tire made. KOKOMO TIRES embody 4-ply construction. The materials are the best obtainable; the workmanship can not be bettered.

"If It's Kokomo That's All You Need to Know"

Kokomo Rubber Company



KOKOMO, INDIANA, U. S. A.

THE POWER
To Take You There And Bring You Back

is an attribute not possessed by every motorcycle. A great many motors are like sensitive race horses—they will show a wonderful burst of speed for a short time and then require a week to rest up. With the Emblem, however, it is different. "Power" is the unfailing keystone in Emblem construction and its husky, enduring qualities are features that have given

EMBLEM Motorcycles

the pre-eminence they deserve.

Riders and Dealers who have been through the mill are now realizing exactly what *Dependable Service* means to them. Are you one of these? If so, write today.

Eclipse Free Engine Clutch with Handle bar Control

INTERIOR OF BASE, SHOWING FLY-WHEELS, ROLLER BEARINGS, AND OIL RING.

The best bearing ever put in a Gas Motor

The M·M Four-fifty Long Stroke Motor and Schebler Carburetor

Agents! Here's Some Good News

The popular M·M Four-fifty model will hereafter be fitted with the Eclipse Free Engine Clutch and an option of 28″ wheels for $200 list. This is the very best proposition for a single cylinder motorcycle offered this year. A powerful hill climber, speedy, and very smooth running. With its three roller bearings in the motor, it will withstand more hard punishment than any other motor built. One new rider rode constantly for three hundred miles without putting any oil in the crank case, and did not harm the bearings. This model will be a big seller. Other models at $140, $160 and $225. write today for Catalog and agents' proposition

American Motor Co., 718 Centre St., Brockton, Mass.

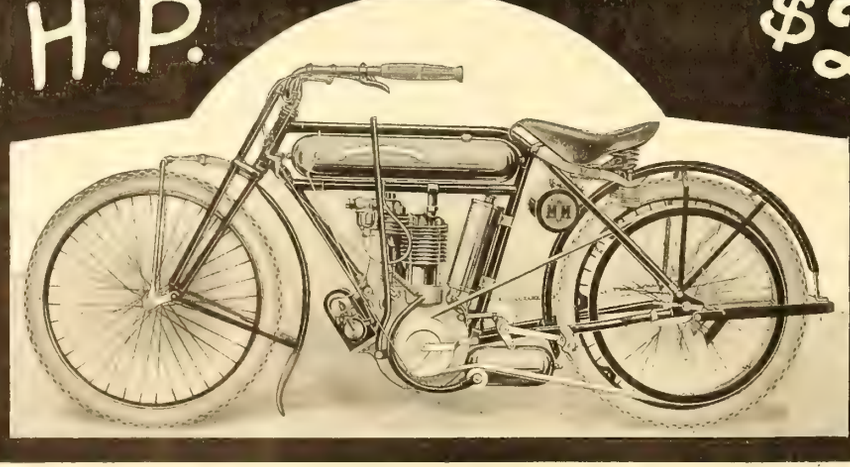
Pacific Coast Depot, 424 South Broadway, Los Angeles, Cal.

The American Motor Co.
Gentlemen:

I recently purchased an M·M motorcycle that had been run several thousand miles. Not being a mechanic, I ran the machine over 300 miles through New Hampshire on my first trip without lubrication.

I expected to have to replace the bearings of the motor, but when it was taken down and inspected, the only apparent damage was the slight wearing down of the piston rings.

I mention this to you to show you my gratification at being the possessor of a motorcycle that will run under such adverse conditions without causing serious damage that would usually follow such neglect in the operation of any ordinary machine.



Having familarized myself with the machine in a recent 1,000 mile business trip I have just completed, I find after applying proper lubrication that the engine shows no signs of wear whatever and is equal to any test in climbing the steepest hills I encounter. Yours very truly,

W. M. KENDALL,
Insurance Adjuster.

Boston, Oct. 17, 1911.

WHY THE YALE

Model 27, 7 H. P., $285.00

A YALE Motorcycle costs more than some others for the same reason that a full jeweled Elgin costs more than an Ingersoll. Mechanical perfection costs money and the buyer must pay for it, but the investment pays big dividends in SATISFACTION, SERVICE, and ECONOMY of up-keep.

Right Here Is Where Yale Quality Counts

We use no castings or stampings, but every part is drop forged in our own factory and we know that every piece is right in material, workmanship and finish.

YALE equipment is in keeping with YALE Quality and comprises such items as Bosch Magneto, Eclipse Free Motor Clutch, 2 3-4 inch studded tires and the Y-A Shock Absorber, that relieves both rider and machine of all the jolts, jars and road vibration.

LOOK OVER THE MARKET, FIND THE BEST OF EVERYTHING. AND YOU WILL FIND IT ON THE YALE.

If you don't know the nearest YALE agent, write for catalogue of four models, single and twin—4, 5 and 7 horsepower, price $210.00 to $285.00.

PIERCE

SINGLE CYLINDER Outclasses All Others

READ THIS AS PROOF:

THE PIERCE CYCLE CO., Buffalo, N. Y. February 26, 1912.

Gentlemen: I have been riding a Pierce 5 H.P. single for the season of 1911 and have traveled long distances accompanied by other well known makes and I could go over hills where they pedaled up. As for speed I have trimmed a high grade twin of a well known make and as for repairs I have had none. My machine runs better the longer I use it and as for power, I have taken a friend passenger on hills that other singles could not make single passengered. As far as easy running and comfort goes they all must bow to the Pierce.

Sincerely yours,
ALBERT C. SALENSKE,

Belt or Chain.
ONE 7 H. P. TWIN
Direct Chain Drive, Undergeared Transmission.

R-S SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of many other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16" steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive assurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

A POWERFUL LONG STROKE MOTOR with Imported Ball Bearings, Mechanical Valves and Integral Cams and Gears.

Pope Spring Fork

A Spring Fork That Does What Other Spring Forks Are Designed to Do

The smooth riding qualities of the Pope Motorcycle make it a most comfortable machine in action. It glides along almost without vibration or jolting due to inequalities in the road. The shocks which would ordinarily result from the concussion of the front wheel are taken up by a particularly effective spring fork.

This Spring Fork Is Distinctly a Pope Feature

As the illustrations show, it is of the leaf spring type. The road shocks are transferred through the rocker plates and connecting rods to a resilient four leaf high grade steel spring, where they are completely absorbed in the same direction from which they came, instead of against the rider and the machine itself. This type of spring fork has proved superior to other devices of similar design in that it actually does what other spring forks are designed to do. The Pope Spring Fork is strongly constructed and handsome as well as correct in design.

CONTINENTAL-ERIE MOTORCYCLE TIRES

THIS tire is built in *one style* tread only. It combines the expert knowledge of our years of tire manufacturing experience with only the best materials that money can buy.

The fact that such machines as the EMBLEM, EXCELSIOR, MERKEL, HARLEY-DAVIDSON and YALE use Continental-Erie Tires as regular equipment is proof conclusive that they are absolutely the best. Discriminating manufacturers now-a-days do not guess at the quality of their equipment, but make critical tests before acceptance. They tested Continental-Erie Tires with other makes and judged correctly—they are, without doubt, the best in the world.

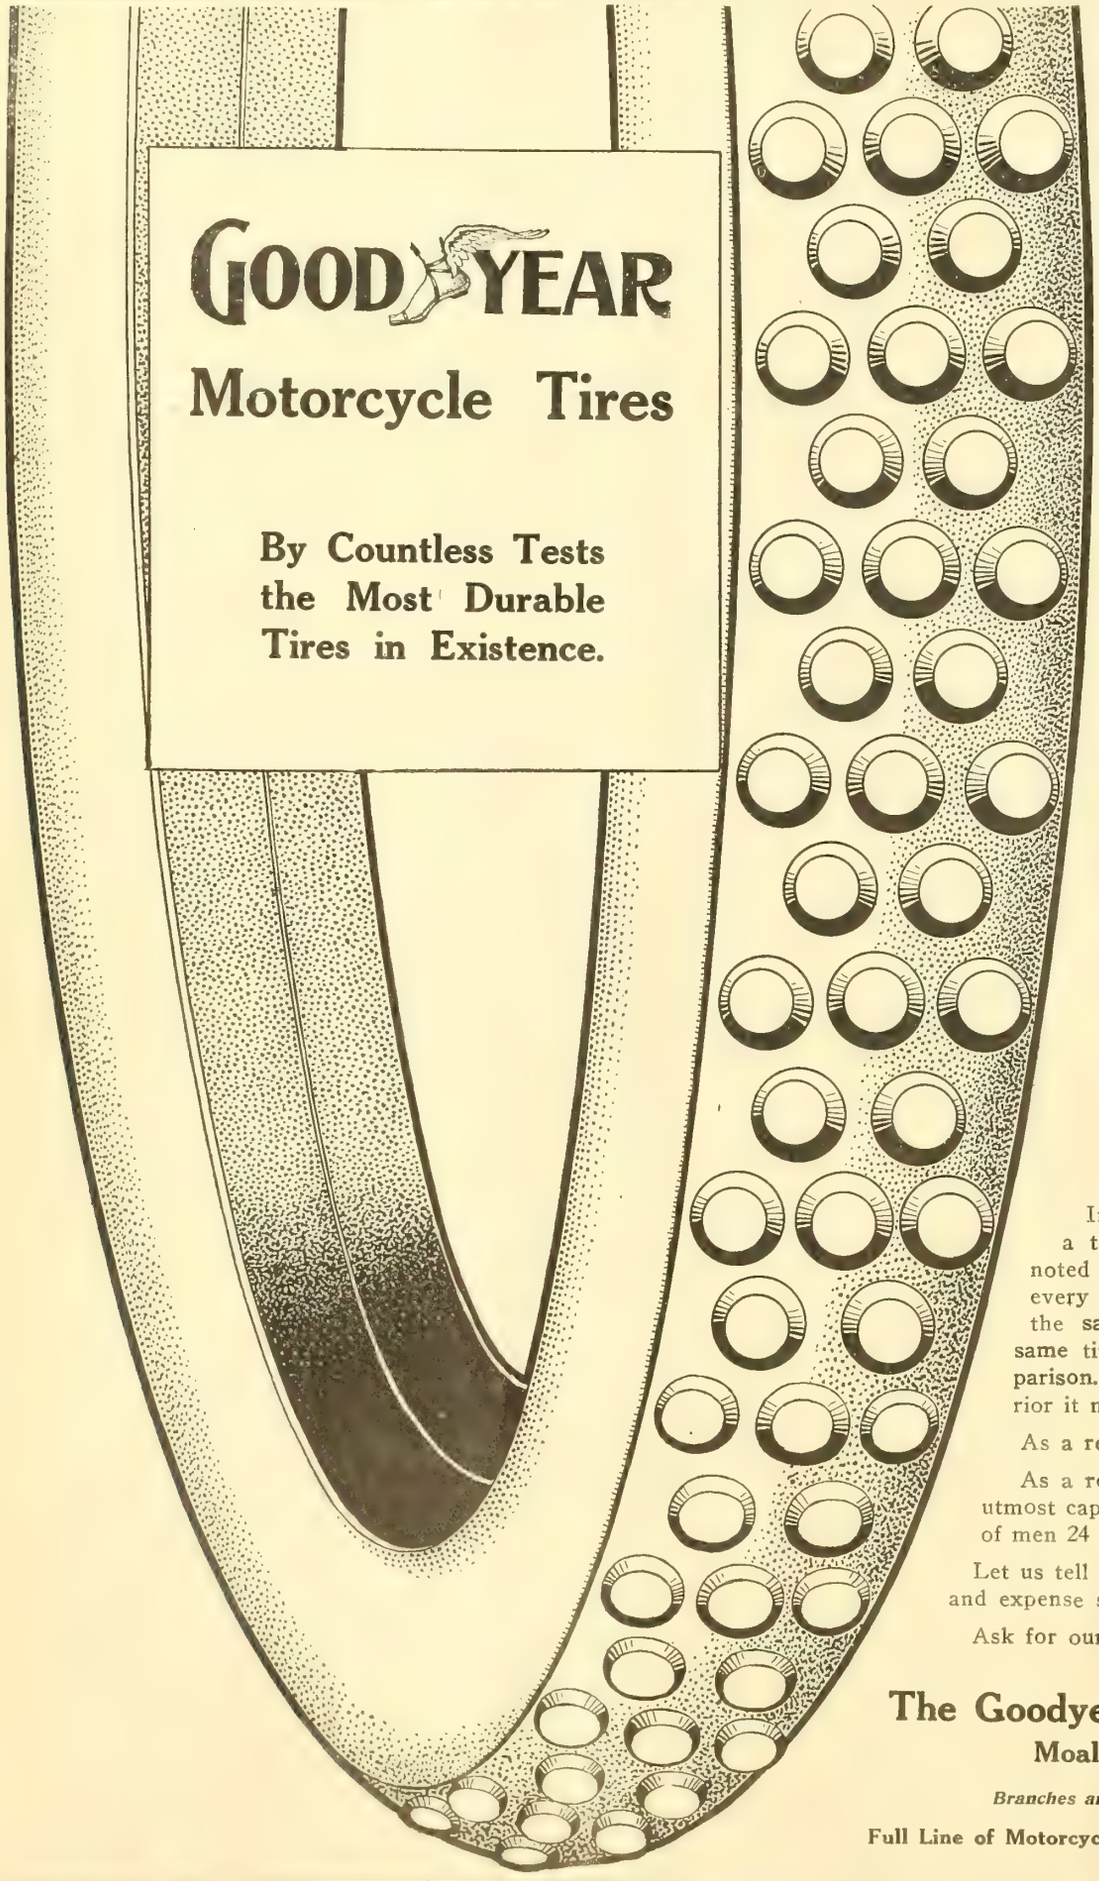
Your Excelsior Engine Made Good Before It Ever Went to You

The engine on every Excelsior Auto-Cycle is put through a grueling test for hours. On our testing blocks even the minutest defect cannot escape our careful inspectors. Reliability is the natural result of such methods of manufacture.

Re-orders tell most forcefully the story of Excelsior reliability. The Detroit Police Department just purchased 10 more Excelsior Auto-Cycles. Police service demands reliability and dependability—that's why Detroit chose the Excelsior. In the test of every sort of hard service the Excelsior Auto-Cycle always makes good.



Our free illustrated catalog will give you more facts about the Excelsior.

"Brothers" to No-Rim-Cut Auto Tires

Perfect motorcycle tires based on 13 years' tire building experience and built by the makers of No-Rim-Cut tires—

—Tires that the 16 greatest motorcycle makers have contracted for, for 1912—

—Tires that in strength and endurance are supreme; and that in speed

Holds Every World's Record

—both Amateur and Professional.

Such are Goodyear Motorcycle Tires—tires with real records of achievement back of them.

These **proven** tires, built on unfailing Goodyear **Tire machines** don't cost you a penny extra for the trouble and expense they **save.**

How We Prove Goodyear Durability

Our endurance claim **is supported** by a comparative **test.** No room is left for doubts.

In this test we **wear down** our tire on a tire-testing machine. After we have noted the "mileage" rendered, we subject every other make tire to the same test—to the **same** number of revolutions on **the same** tire testing machine. **Then the comparison.** If our tire isn't shown to be superior it never reaches the market.

As a result we KNOW our tires.

As a result the demand for them taxes the utmost capacity of our factory, working 3 shifts of men 24 hours a day.

Let us tell you more about these trouble, worry and expense saving motorcycle tires.

THE BICYCLING WORLD (FOUNDED 1877) and MOTORCYCLE REVIEW

Vol. LXIV. New York, U. S. A., Saturday, March 9, 1912. No. 25

MOTORCYCLE RIMS STANDARDIZED

Important Action by Clincher Tire Association—Definite Sizes Adopted—Rims to Be Officially Stamped Hereafter.

Cleveland, March 4.—Definite standards for motorcycle rims were adopted at a meeting of the Clincher Tire Association here to-day. The size of hook used at present will be retained, and the rim-sections standardized accordingly. The clincher section of motorcycle rims will be the same as automobile rims in general contour, but the dimensions between clinches will be different, of course. All rims hereafter made will be inspected by representatives of the tire association, and those approved will be stamped with the official brand. There will be three sizes of rims, designated as follows:

Double A—For 1½ and 2 inch tires.
Double B—For 2¼ and 2½ inch tires.
Double C—For 2¾ and 3 inch tires.

The width between clinches on respective rims, will be as follows:

Double A—1.012 inches.
Double B—1.042 inches.
Double C—1.076 inches.

All rims are to be of stock not less than ⅛ inch at the clinches, but may be less at other points. It also was decided that the cross section of the largest tire applicable to any rim, multiplied by two, and the result subtracted from the tire diameter, will be the tire seat diameter.

Dealers of Detroit Form Organization.

Detroit, Mich., March 5.—To further the interests of both motorcycling and bicycling is the avowed object of the Detroit Motorcycle Dealers' Association, just organized in this city. Seven firms have become identified with the movement, viz.: Economy Cycle Supply Co., Wm. E. Metzger Co., Excelsior Auto-Cycle Co., W. E. Wandersee, J. B. Trossel, West Side Motor Co. and L. F. Stecher.

The plan of activity mapped out is to promote races and other contests, regulate sales and generally improve the condition of the business. A banner year is anticipated, and every tradesman reports an active demand.

Another Motorcycle Factory for Detroit.

Lansing, Mich., March 5.—With the expressed object of engaging in the business of manufacturing and selling motorcycles, the Triumph Manufacturing Co. has filed articles of incorporation for the sum of $75,000 with the Secretary of State of Michigan. Detroit is given as the contemplated location of the factory and general offices.

Prominent Detroiters are rumored to be backing the new venture. It also is known that Robert M. Brownson and George W. Sherman, who formerly were connected with the Flanders Mfg. Co., Pontiac, will be identified with the new company and that an organization of designers and builders having long experience in the motorcycle industry already has been secured.

Fafnir Bearing Co.'s Annual Meeting.

At the annual meeting of the stockholders of the Fafnir Bearing Co., New Britain, Conn., the following officers were chosen: Howard S. Hart, president; E. C. Goodwin, vice-president; E. H. Cooper, secretary-treasurer; directors, the above, and N. P. Cooley, J. E. Cooper, E. A. Moore, F. G. Vibberts. The company manufactures ball bearings.

Richel Joins New Era Selling Force.

Cleveland, O., March 6.—Edward Richel, of this city, has joined the traveling staff of the New Era Auto-Cycle Co., of Dayton, O. He was formerly of the selling staff of the Casino Cycle and Supply Co., being Manager John Zucker's leading Thor salesman.

TORONTO AS A TRADE CENTER

Heavy Increase in Number of Agencies—British Side Cars for Americans—A Tradesman's Yarn.

Toronto March 5.—From a trade standpoint, Toronto should soon be a leading motorcycle center. During the past few weeks no less than six new agencies or branch stores have been opened up in that city, so that now the city is well "covered." The Indian is thoroughly represented by four branches, three of which have just been established, as follows: H. S. Hodgkinson, 295 Broadview avenue; Licence's, 1752 Dundas street, West Toronto, and Walter Andrews, Yonge street. A new Flanders sub-agency has been placed with the Toronto Motorcycle Supply Co., 269 College street, which has also secured the underslung Militaire selling rights, while the Emblem has also gained a foothold, Hyslop Bros., Shuter street, having been appointed representatives for that make. W. H. Dunne, the Thor agent, with headquarters at 1492 Queen Street West, has opened a second emporium at 368 Yonge street, almost directly opposite two other motorcycle stores. There are now about 18 motorcycle dealers in the Canadian metropolis.

Toronto dealers are finding a market for British side cars in cities of the United States located near the border. A. F. Humphrey, the agent for the Flying Merkel in the Ontario capital, recently shipped a consignment of six Gloria baskets to H. L. Peters, the Harley-Davidson agent at Buffalo, and transactions with other dealers are pending.

Ken McColl, the Harley-Davidson agent at London, Ont., has a thrilling story to tell to his many friends. He claims to have been chased by a train for five miles while

out riding on the tracks one day last week on a H-D machine near London. He declares that he happened to be standing between the rails with his mount when he heard the engine's whistle. He had only a second in which to start, but he was away like a flash, with the flier in pursuit. The London station was five miles away, but he saw the depot before the locomotive engineer did, he asserts. McColl does not explain why he did not simply get off the tracks when he heard the train, or how he was able to ride over the cattle guards at the road intersections. The Londoner was the hero, however, during the Toronto show, which he constantly attended.

Fred T. Kerr, of London, has taken over the Emblem agency for that city, making the second distributing point in Ontario for that make.

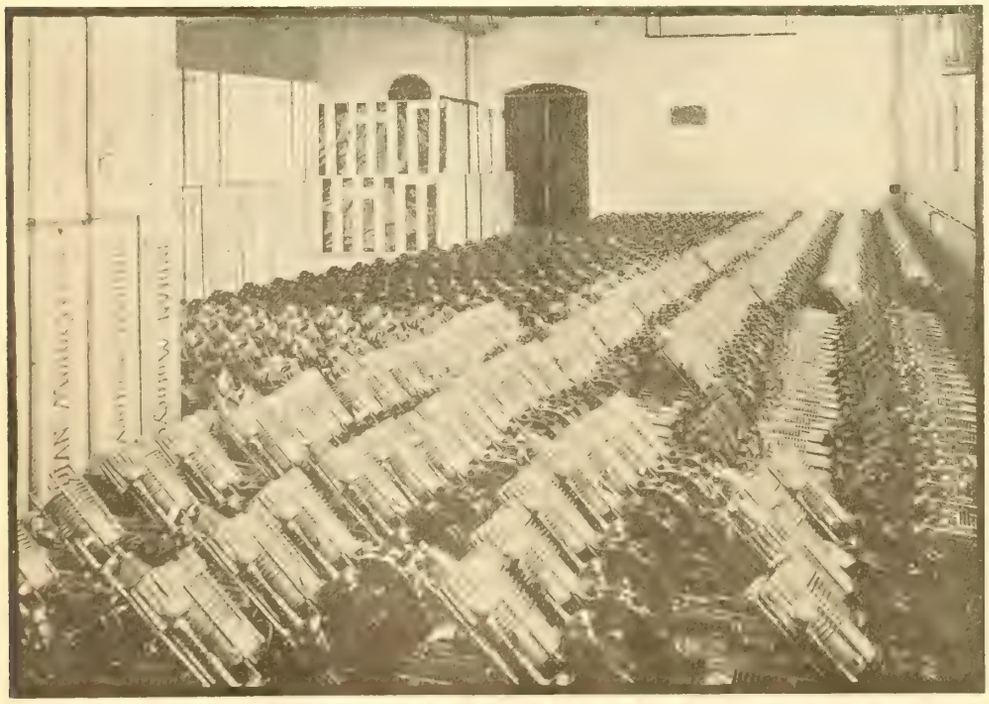
Sun Motor & Supply Co.'s New Location.

After April 1 the Sun Motor and Supply Co., New York City, will be located at 307 Amsterdam avenue, between 74th and 75th streets. The company, which handles the Excelsior, N. S. U. and Flanders lines, now is quartered at 206 West 76th street, a location it has occupied for years. The new store is located on a more traveled thoroughfare, and the entire establishment will be situated on one floor. It has been the experience of the company that a side-street location is not conducive to the stimulation of retail business, because of the limited traffic. The new location is very convenient to the 72d street subway station, and but one block away from Broadway. While the new quarters will be smaller, the decreased space will be compensated for by greater suitability for the business.

HUB A BUSY CYCLE MART

Merkel Looking for Branch Site on Columbus Avenue — Grady Buys Bicycle Business of Bi-Motor Equipment.

Boston, March 7.—Edward Buffum has been in this city looking over sites to open a distributing branch for Merkel motorcycles and Racycle bicycles. It is believed that a site on Columbus avenue is being considered, and if such is the case it will add considerably to Boston's "Motorcycle Row," as it will mean that the Excelsior, Harley-Davidson, Yale, M-M, Pope and Merkel will all be located within one block of each other.



The Hub Motorcycle Co. is holding a motorcycle show of its own this week, during the progress of the automobile show at Mechanics' Building. A full line of Excelsiors is on display.

Wilson Bros., one of the largest jewelry concerns in Boston, have announced that they have taken the agency for the Pierce motorcycles, and will also take on some other machine.

The business of the New England Motorcycle and Bicycle Company has grown to such an extent that it has been found necessary to enlarge its store, more than 50 per cent. having been added in floor space.

Samuel Meyerow has opened a motorcycle store at 17 Cooper street. It is understood that he will carry a full line of Eagle motorcycles and supplies.

J. W. Grady & Co., of Worcester, Mass., have purchased the entire stock and good will of the bicycle business of the Bi-Motor Equipment Company, Boston, Mass. The latter concern will hereafter devote its entire attention to automobile and motorcycle supplies.

A CORNER OF THE INDIAN FACTORY SHOWING MOTORS READY TO INSTALL.

No Delay in Delivering Indians.

As long ago as last summer the Hendee Mfg. Co. was convinced that the season of 1912 would be the greatest one yet seen in motorcycling, and that the difficulty would not lie in the direction of selling machines but in filling orders. To anticipate as far as possible any delay of this sort, and to insure all Indian agents and intending purchasers of prompt delivery, preparations were commenced early in the manufacturing season, and the entire big factory was put under high pressure months earlier than has been customary. Provision was made for all of the changes in the 1912 models, and the component parts were piled up as rapidly as possible.

One of the results of this policy can be seen in the accompanying photograph, which shows a corner of one of the stock rooms at the Indian factory. There are between 1,200 and 1,500 motors in the regiment on the floor. At the right hand and in the foreground are seen the 7 horsepower twins, while at the left side of the picture, in the distance, is a fine assembly of the big 4 horsepower single-cylinder motors. Everyone of these motors is absolutely new, and a 1912 model throughout, and there is not a single "warmed over" 1911 motor in the whole lot.

In addition to these motors there was another similar regiment along the opposite wall of this floor, while the end of the room not shown and all of the middle portion is piled up with crates containing complete machines ready for shipment. A view taken from the door shown in this picture and looking down the room would show 700 or 800 machines in crates.

This is merely a reserve stock, for the entire factory has been running overtime for three months.

Baker Adds a Mezzanine Floor.

Although F. A. Baker & Co., 10 Warren street, New York City, are the largest motorcycle and bicycle concern in the city, they are expanding again. The offices have been located on a mezzanine platform at the rear of the store, releasing the entire street floor for the sales and stock departments. Additional warehouse facilities on Warren street also have been secured, and coincident increases in the staff of employees have raised the force to 25 persons. Several new motorcycle accessories will be introduced soon.

Hub Cycle Offers Novel Tire.

Boston, March 7.—The Hub Cycle Co., 40 Portland street, is offering a new single tube bicycle tire of unusual type. It is claimed that the construction is such as to render the rubber impervious to injury by oiled roads.

TRADE BRISK IN GEORGIA

Dealers Prosperous at Augusta — Local Authorities Adopt Motorcycle for Many Uses—Race Meet April 26.

Augusta, Ga., March 5.—With the coming of that good kind of sunshiny, bracing weather, motorcycle dealers in Augusta now report more inquiries and a larger number of prospects than at any time previous. With deliveries already made and the orders booked for immediate delivery dealers have sold something over 20 1912 models within the past ten das. The machines mostly in demand are twins.

That the county authorities and the city of Augusta recognize the adaptability of the motorcycle to their needs is indicated by the fact that they now have in use six machines. A single-cylinder machine is used by one of the county police. The city of Augusta has five machines, four singles and one twin, and has recently placed an order with a local dealer for two 1912 twins to be delivered at once. Three of the city machines are used by the police department, one by the superintendent of street cleaning and one by the mayor's messenger. The new twins are ordered for the police department, and it is generally supposed they are getting them with an idea of having something fast enough to chase down the speed fiends and bring them into court.

A match race right on one of the main streets during the busiest part of the day recently created somewhat of a sensation in Augusta. Mounted on fast twins and racing wide open across town and some 10 miles of country road and then back to the starting point was the novel "stunt pulled off" between a local dealer and one of the boys to stop an argument and settle a bet. For obvious reasons, the names of the riders cannot be mentioned. At the conclusion of the affair both participants expressed themselves as satisfied. Even the dealer, who lost the race and, incidentally, the bet, said he had had his money's worth.

The Augusta Motorcycle Club is making good headway with plans for the race meet to be held on April 26. They now have promises of entries from more than a dozen riders from near-by towns.

Trade Prospects in Southern States.

Returning from a six weeks' Southern trip in the interests of the Consolidated Mfg. Co., Toledo, Ohio, F. E. Bremer says: "The outlook for a big motorcycle business in this territory this year is very bright indeed, judging from local conditions. Take Galvestor, Texas, as an illustration. This is one of the livest motorcycle cities in the South. The people there are prosperous, have elegant roads and are disposed to buy motorcycles. Many machines are ridden in that section. John Christiansen & Co., Yale agents for that city, just have broken ground for a three-story brick building which will cost $30,000. It will be located on Fremont street, one of the main thoroughfares of the city, and will accommodate a large number of motorcycles, and also offer first-class facilities. Motorcycles are used largely for commercial purposes in the South. As an example, the post office special delivery messengers in Galveston own their machines, and there are other enterprising local youngsters with a knack for business who have bought motorcycles and are clearing from $5 to $6 a day, delivering merchandise for druggists."

STORE OF W. E. STRONG, HARLEY-DAVISON AGENT, AT OWEGO, N. Y.

Emblem's Agency List Rapidly Increases.

The W. A. Doubleday Co., 517 South Salina street, Syracuse, N. Y., has taken the Emblem agency in that city.

C .Otis McCarty will be one of the few motorcycle exhibitors at the automobile show to be held in Watertown, N. Y., the last week of March. McCarty has just taken the Emblem agency and will start his campaign for spring business with a timely display of 1912 models, in both single and twin types.

Browning Bros., well and favorably known in Utah, have signed up for a quantity of Emblem motorcycles. They will handle the retail end in Ogden, and will appoint sub-agents in various parts of Utah.

The Wichita Bicycle Shop, of Wichita, Kan., has changed its title, and will hereafter be known as the Dickson Cycle Co. The firm last week signed for a goodly quantity of Emblem motorcycles, and will represent this make exclusively.

Some of the new Emblem agencies appointed last week were: Taylor Bros., Oklahoma City, Okla.; A. F. Mueller, Evansville, Ind.; Moultrie & Maginni, Yonkers, N. Y.; J. C. Stafford, Fort Wayne, Ind.; Clinton E. Carpenter, Grand Rapids, Mich.; E. E. Fenn, Bloomington, Ill.; Smith & Wolfe, Denver, Colo.; H. J. Kingsbury, Kalamazoo, Mich., and William Lintener, South Bend, Ind.

For New Eigland: Groise Bros., Holyoke, Mass.; United Cycle Co., Hartford, Conn.; L. P. Elliott, Attleboro, Mass.; R. G. Davis Automobile Co., Providence, R. I.

The Wagner in Five Kansas Counties.

The Hagstrom Bros. Mfg. Co., of Lindsborg, Kan., maker of the motorcycle plug of that name, has taken the agency for Rice, Reno, Harvey, Marion and McPherson counties for the Wagner motorcycle, and that branch of their business will be conducted under the personal supervision of P. E. Zimmerman, known as "Zim," and who works at the game of advertising manager when not engaged in motorcycling.

Zimmerman is the district F. A. M. commissioner, and will be captain in charge of a division on the big central district tour through Kansas, Colorado, Wyoming and Nebraska next August.

New Britain Machine Co. Elects Officers.

At the annual meeting of the stockholders of the New Britain (Conn.) Machine Co., the following officers were chosen: Frederick G. Platt, president; Robert S. Brown, secretary; H. E. Irwin, assistant secretary; H. H. Pease, treasurer; H. Buol, assistant treasurer and superintendent; directors, Frederick G. Platt, Robert S. Brown, A. Buol, H. H. Pease, C. J. Parker, A. H. Abbe, M. C. Swift, C. M. Jarvis, A. J. Sloper. The company is developing a motorcycle.

Krackowiser Leaves Schickel Motor Co.

H. J. Krackowizer, New York City, has resigned his connection with the Schickel Motor Co., Stamford, Conn. He has several offers under consideration.

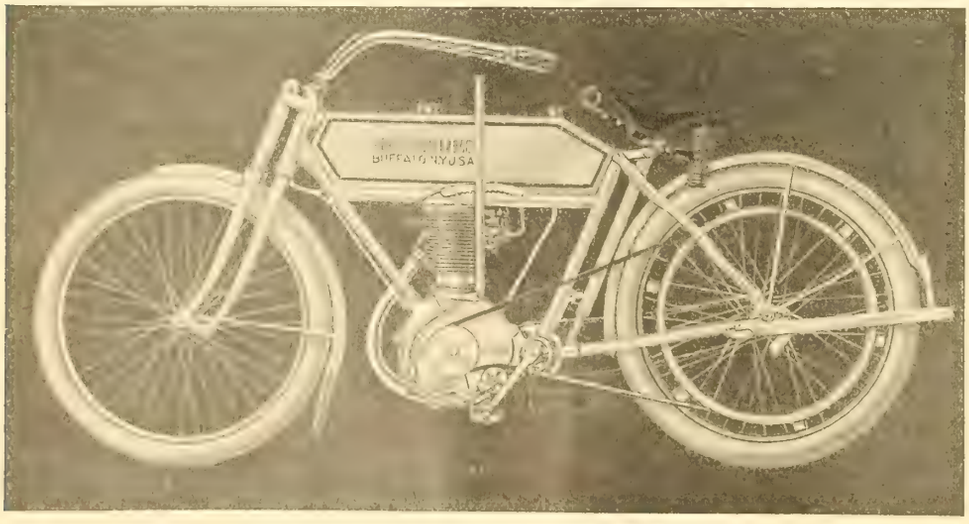
UNLEASHING THE NEW GREYHOUND

Youngest Member of Old Family Perpetuates Features of Breed—To Issue in One Model Only.

Tracing its ancestry back to the first Thomas Auto-bi, which appeared in 1900, the Greyhound of ,912 is presented by the Greyhound Motor Co., Buffalo, N. Y., without radical change over the 1911 model. Of course, the distinctive Greyhound characteristics of the shock absorbing seat post, cushion fork and simple motor are retained. In general, the machine follows standard practice throughout. It is made in one model only—a 4½ horsepower single, with flat belt drive, and lists at $175.

Cylinder and head are an integral casting, the cylinder dimensions being 3¼x 3 11/16 inches, which is said to be just inside the 30½-inch limit. The cylinder is offset forward of the main bearing, a practice which is claimed to reduce the wear on the cylinder wall and the rod thrust on the bearings. The inlet valve is automatic, and both valve and valve ports are unusually large. Twenty-four-pound fly-wheels are used, the employment of which are said to afford easy starting and smooth running. In the flywheel and crankshaft group, unit construction is used, the whole being a forging, and eliminating the use of bolts and nuts.

Battery and coil ignition is standard equipment. The gas plant is either Heitger or Breeze carbureters. Gravity feed lubrication is used, the oil flowing through a sight feed glass below the tank, to the right crank bearing, from which it drains to a well beneath, and thence is carried to other bearings through a combination centrifugal and direct splash oiling system. Of the keystone type, withthree-point motor suspension, the frame incorporates the sloping top bar to afford a low riding position. It is reinforced at all connections, and is 21 inches high. The fork is of the cartridge plunger type, the main fork being suspended on links at the lower end, and on a telescoping spring barrel at the top of the stem. Heavy construction is used in making the fork, and the suspension is said to be worked out in such manner as to give instant response to road obstructions, together with equal division of the strain and load among the members.



Three-in-one combination tanks are fitted with separate compartments for gasoline, oil, batteries and coil. The capacity is six quarts of gasoline and two quarts of oil. Needle fuel shut-off valves are provided, and also large filler caps. Handlebars are long, and are so fastened to prevent turning under sudden strain. Double-grip motor controls of the Bowden cable system are used.

Belt tension is regulated by a hand operated idler, which affords a free engine within limits. An eccentric hanger permits of independent chain adjustment. The wheel base is 56 inches, and the finish French gray, with blue striping.

Standard equipment includes a 1¾-inch Spartan belt, 28 inch wheels with single clinch rims, Eclipse hubs, 2½-inch standard tires, 3½-inch rolled steel fenders, with forward extension and lower front splasher; rubber motorcycle pedals, Mesinger cavalry saddle, Persons tool kit and tools. coaster brake and rear stand.

Stewart & Clark Minnesota Branch Moves.

Minneapolis, Minn., March 5—The Stewart & Clark Mfg. Co. has removed its branch in this city from 45 South Tenth street, to 1202 Hennepin avenue, where much larger quarters have been secured. The new store is more conveniently located and has facilities for installing speedometers. T. J. Snelling will be in charge, and A. H. Champlin, formerly the manager of the branch, will call on the Minnesota trade outside of this city and St. Paul, and his territory will also include Iowa.

GREYHOUND KENNELS OFFER 1912 4½ H. P. SINGLE AT $175

NEW DEPARTURE PATENT VALID

U. S. District Court Sustains Coaster Brake Patent—His Important Bearing on Anti-Trust Case.

Judge John R. Hazel, of the United States District Court at Buffalo, has issued a decree sustaining the coaster brake patents held by the New Departure Mfg. Co., of Bristol, Conn. On November 30, 1910, this company complained that the Forsyth Mfg. Co., of Buffalo, was manufacturing a coaster brake which infringed on their patents.

The decision of the court allows every claim made by the New Departure Mfg. Co. and ordered that a perpetual injunction be issued restraining the Forsyth Mfg. Co. from making, using or selling the coaster brake of their manufacture. The decision holds that the New Departure patents are good and valid, and cover the "original, first and true invention" of the coaster brake. By this decision the New Departure Mfg. Co. recovers all the profits, gains and advantages which the Forsyth Co. has received by reason of the infringement, together with damages and all costs of the case.

The court has appointed Harris S. Williams, of Buffalo, special master to go over the books of the Forsyth Mfg. Co. and determine the amount to be paid by that company to the New Departure people.

The New Departure Mfg. Co. was one of the six companies and eighteen individuals indicted by the last Federal grand jury at Buffalo on a charge of violating the Sherman anti-trust law. A petition to have the indictments quashed is now pending before Judge Hazel. The companies indicted are the New Departure Mfg. Co., Bristol, Conn., licensor, and the Corbin Screw Corporation, New Britain, Conn.; the Aurora Automatic Machinery Co., Aurora, Ill.; the Eclipse Machine Co., Elmira, N. Y.; The Miami Cycle & Mfg. Co., Middletown, Ohio, and the Buffalo Metal Goods Co., Buffalo, N. Y. The last five companies named are licensed to manufacture under the New Departure patents.

The Federal authorities admit that these indictments grew out of the action against the Forsyth Mfg. Co.

The importance of this decision, which so thoroughly maintains the validity and value of the New Departure patents, is emphasized, because the Government has insinuated all through the indictment proceedings that the New Departure patents are not of value, and are simply being used as a cloak for restraining trade in violation of the Sherman anti-trust law.

William F. Hanavan, Buffalo, N. Y., has secured the local representation for Excelsior Motorcycles.

G. H. SQUIER, the "Fat Spark" A. B. COFFMAN, the "Human Dynamo"

Coffman Adds Squier to Sales Force.

Throughout Indiana, Ohio, West Virginia and Western Pennsylvania the motorcycle trade will from now on feel the full effect of a "human dynamo," backed by a "fat spark." A. B. Coffman, sales manager for the Consolidated Mfg. Co., manufacturer of the Yale motorcycle, is the "human dynamo," and he has been pushing sales in the territory mentioned for a long time. He has just added a "fat spark" to the Yale sales department in the person of G. H. Squier, who went to work for the Yale on March 4. He was formerly with the Flanders Mfg. Co., but severed his connection with that concern on February 29.

More Indians for Motorcycle Cops.

Orders for 18 new 7 horsepower twin-cylinder Indians of the 1912 variety have been placed with the Hendee Mfg. Co. by the Hudson County (N. J.) boulevard commissioners, for the equipment of motorcycle policemen for that famous thoroughfare.

The W. E. Metzger Co., Indian agent at Detroit, Mich., also report the sale of six new 1912 twin-cylinder, 7 horsepower Indians to the Detroit police department, to augment the force of 12 Indians which the department already has in use.

Jottings from the Chicago Trade News.

Chicago, March 7.—Fred Huyck, ex-racing man, and local distributor for the Merkel, has taken on the Henderson four-cylinder, of Detroit. His territory consists of Cook, Will, DuPage and Kane counties. The Merkel will be continued, of course.

Harvey Bernard, also of the speed camps, is going to sell motorcycles, too. He has the Merkel agency for Oak Park, a Chicago suburb.

Harley-Davidsons for Baltimore Police.

Baltimore, March 1.—The Chase Motor Co., representatives for the Harley-Davidson, report the sale of three more machines to the police department. This makes nine machines of this make now in use in the department. The Chase firm reports many sales to business houses. Inasmuch as the Monumental City has been rather backward in cultivating the motorcycle, the awakening of business interests to the advantages of the machine are not without significance.

Wants All Tourists to Call on Him.

Ironton, Ohio, March 4.—R. D. Washington has established himself in business at 145 South Third street, this city, as agent for the Indian, and will also sell a line of bicycles. He is fitted up to do all kinds of general repair work. Being an active rider himself, he extends a welcome to all touring motorcyclists to visit his headquarters when in town, and has provided special accommodations.

Waverley Changes Name to "P. E. M."

Jefferson, Wis., March 6.—Paying a delicate compliment to their designer, Perry E. Mack, the directors of the Waverley Mfg. Co., maker of Waverley motorcycles, at a meeting held a few days ago, decided to change the name of the machine to P. E. M., the initials being those of Mack, it hardly is necessary to point out. The change in name was decided on, owing to the fact that as Waverley motors are being sold to the trade, it was deemed advisable to give the machine a distinctive individuality and exclusiveness, not possible where the name was linked with that of other motorcycles, through the use of the same motor.

In casting about for a new title, the directors decided that Mack's efforts were deserving of recognition, hence the adoption of his initials. Mack is a veteran of the bicycle era, having both built bicycles and raced them. His first motorcycle was put on the road in 1905, and three years later he began the development of the Waverley engine.

Result of Not Locking "Stable Door."

Omaha, Neb., March 2.—Victor H. Roos, agent for the Harley-Davidson and Yale, is mourning the loss of a brand new 1912 H-D battery single, No. 1432B, which he kept in his shed. On February 25 he neglected to lock the shed door and that night the machine was stolen while a heavy snowstorm was raging. Mr. Roos has offered a reward of $25 for information that will lead to the arrest and conviction of the thief and the recovery of the machine.

Gloversville, N. Y., March 4.—William H. Loft has opened a fully equipped motor and bicycle repair shop at 5 Prospect street.

NEW YORK, MARCH 9, 1912.

Value of the Attractive Show Window.

With the view of stimulating interest in dealers that will redound to their own financial benefit as well as help educate the public to the delights of cycling of all kinds, this journal on another page makes an announcement of a prize competition for best decorated show windows.

Nothing so exemplifies the business acuteness of the merchant as the manner in which he displays his wares to attract the attention of the public. Many a man owes his success to his ability to display his goods attractively, and every dealer has enough at stake to make some effort, be it ever so small, to gain public favor by making a presentable showing of what he has to sell.

As an instance of what an attractive window will do, may be cited the case of a dealer in a Pennsylvania city, who started in business about a year ago, and through attractive window displays and judicious advertising has gained a place among the local leaders in the motorcycle and bicycle lines. Once a week or oftener the whole color scheme in his show windows was changed, and although the store was not on the main thoroughfare, people were attracted by the bright lights and artistic arrangements to go out of their way to view the exhibits made.

All of this has had a telling effect on trade, so much so that the dealer in question has sold forty of one make of motorcycle so far this season and an even hundred bicycles. The possibility of duplicating this record lies with the man in command of the business, and it is with the object of focusing attention on this possibility that this journal has established this photographic competition for window displays.

The publication of the photographs in these columns will be the medium for an exchange of ideas, the composite effect of which cannot help but have a stimulating effect on business in addition to materially improving the aspect of salesrooms. It will at least bring the subject directly before the one who should, for the sake of his own pocket, be the one most interested—the enterprising dealer.

Every business man likes the appellation of being a man of enterprise. This desirable characteristic does not consist merely in being a shouter. One can talk all day long about the virtues of an article of manufacture, but must show something as well to prove that he is in business, and in showing this "something" you must show it well if it is desired to impress the person who is the prospective purchaser.

For every man, woman or child who passes the door of your place of business is a possible purchaser. The result of an inspection of your show window on their part may not be an immediate purchase, but in many cases it is. If it is not, the seed has been planted for future business, and no one forgets a beautiful window display. It leaves a lasting impression on the observer and inspires him with a confidence in the man with whom he may do business—that the merchant's methods are progressive and up-to-date, and if his methods embody those principles, his goods must also partake of the same much desired characteristics.

Why Was Rule Revision Postponed?

At the F. A. M. Assembly at Buffalo last July a committee of 10 persons was appointed to revise the competition rules. A majority of the committee wrestled with the task at the Atlantic City trade convention in August, and, after several hours of fruitless discussion, selected three of their number as a sub-committee to redraft the rules and submit them to the committee of the whole for approval. This draft was sent out to the members not of the sub-committee February 1, with the request that it be returned as soon as possible, together with any suggestions or criticisms. Shortly after the redraft was sent out President Hamilton stated to a member of the committee that he desired the proposed new rules to receive the approval of the committee and become effective as soon as possible.

Now comes the decision to let the matter rest until the middle of the summer, and administer racing under the present rules, which are notoriously lax and as porous as a sieve. This action, in defense of which a thin and vague explanation is offered, is nothing short of a grevious error of policy, which appears to have no justification whatsoever. The sub-committee performed its duty, and the rules committee should have been allowed to complete the work and provide the competition department with a set of up-to-date regulations for the control of contests the coming season.

The F. A. M. officials well are aware of the numerous scandals and wrangles which arose at race meets and other events, both large and small, last year, particularly owing to the antiquity of the rules, the numerous loopholes in them, and the general disposition of contestants to "beat them" at every opportunity. This year there will be more contests than ever before, the present inefficient rules will govern, the old-time riders are well aware of the shortcomings and opportunities for sharp practice, and it will be nothing short of a miracle if more rowdyism, baiting of the referee and general disorder does not develop in track and road events the coming season than in all the years combined since the institution of motorcycle contests. Whatever disorder may occur largely can be laid at the door of those who sidetracked the proposed new rules for motives as yet unapparent. It is not too late to undo the harm.

March 16, New York City—New York Evening Journal annual athletic meet and two mile bicycle race, open, for the gratuitious entertainment of the newsboys of New York City, at the 22d Regiment Armory.

March 16, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 5, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 10, Buffalo, N. Y.—Motorcycle Manufacturers' Association spring meeting, at Hotel Statler.

April 13, Buffalo, N. Y.—Seventy-fourth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 74th Regiment Armory.

April 14, Great Neck, L. I.—Second annual 17 mile motorcycle handicap road race on Long Island Motor Parkway.

April 14, Brooklyn, N. Y.—Atlas Bicycle Club first annual spring century run, open, Start from Prospect Park Plaza.

April 21, New York City—New England Wheelmen 15 miles handicap road race, Floral Park, L. I., open. Rain date, April 28.

April 26, Augusta, Ga.—Augusta Motorcycle Club, spring race meet.

April 26, Buffalo, N. Y.—Sixty-fifth Infantry A. A. flat-floor bicycle races and general athletic games, open, at the 65th Regiment Armory.

April 28, New York City—Eastern Division, Century Road Club Association annual spring century run, open. Start from Columbus Circle.

May 5, Brooklyn, N. Y.—Invincible Motorcycle Club annual combined single and double century run—three classes, private owner, trade rider, and professional, open. Start from Bedford Rest, to Patchogue and Southampton and return. Rain date, May 12th.

May 5, New York City—Atlas Bicycle Club 15 mile handicap road race, Floral Park, L. I., open . Rain date, one week later, May 12.

May 30, Newport News, Va.—Peninsula Motorcycle Club's 88 mile road race for Virginia State championship.

May 30, Lancaster, Pa.—Lancaster Motorcycle Club race meet.

May 30, Washington, D. C.—Washington Motor Cycle Club's race meet at Bennings.

May 30, Long Branch, N. J.—Long Branch Cycle Club annual race meet; open Francis E. Miller, secretary, 554 Broadway, Long Branch, N. J.

May 30, Asbury Park, N. J.—Monmouth Cycle Club 25 mile handicap road race; open.

May 30, Long Island City, N. Y.—American Olympic Bicycle Team Committee 200 mile elimination race for qualified candidates for the American Olympic Bicycle Team, under the auspices of the Irish-American Athletic Club. Start and finish at Celtic Park, Long Island City.

June 16, New York City—Century Road Club of America, New York State Division, 50 miles handicap road race, Floral Park, L. I. Rain date, June 23.

July 4, New York City—Century Road Club Association, Eastern Division, 15 mile handicap road race, Pelham Parkway; open. Rain date, July 7.

July 7, Stockholm , Sweden—Olympic games under the auspices of the Swedish Olympic Committee and with the patronage of the King of Sweden; bicycle road race, 200 miles round Lake Malar, sanctioned and under the rules of the Union Cycliste Internationale, open only to amateur riders registered with affiliated National sports governing organizations: For the United States, the National Cycling Association; Chairman, Board of Control, R. F. Kelsey, Room 914 Tribune Bldg., New York City. United States entries close May 20 with the American Olympic Bicycle Team Committee, same address.

August 6-9, Detroit, Mich.—Cycle Parts and Accessories Association annual summer convention. Committee of Arrangements, W. J. Surre, chairman; David Smith, L. M. Wainwright.

August 11, New York City—New England Wheelmen second annual bicycle marathon, Floral Park, L. I., open. Rain date, August 18.

August 25-28-September 1, Newark, N. J.—World's Bicycle Championships, Newark Velodrome.

September 8, New York City—100-mile record run; start and finish, Floral Park, L. I.; Eastern Division Century Road Club. Rain date, September 15.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I. Rain date, September 29.

This Day in Cycling History.

Saturday, March 9, 1878.—First meet and run of the Boston Bicycle Club, the first bicycle club formed in America, and which is still a very live organization. There were 14 bicycles of the high-wheel type and one tricycle in the run, and the start and finish of the run was at Trinity Square (now known as Copley Square), Boston. All the wheels used were of English manufacture, the Duplex Excelsior, made by Bayliss & Thomas, predominating. There were several Special Challengers, made by Singer Mfg. Co., another English firm. The tricycle was a Premier, made by Hillman & Herbert. There were no American-built bicycles at that date, except one or two of private manufacture.

Duties of Canada's Motorcycle Soldiers.

Toronto, Ont., March 5.—Plans have been perfected for the organization of the motorcycle scout corps at Toronto, which successfully passed through the experimental stage last season. The full strength of the "fleet," which will be attached to the signal department of the Canadian militia, will be 16 men, who will be divided into two companies of two sections each, making four mounts in each section. The officers will include a captain, two lieutenants and a corporal in each section, with a sergeant-mechanic. A full complement of clothing, arms and other supplies will be served out to each member of the rank and file. Camp duty will be necessary, but the government will pay a rental for the machines while in service, as well as supply gasoline and oil.

Wants Riding Partner for Long Trip.

Early plans for a motorcycle trip to California from Indiana on his Harley-Davidson are being made by Chauncey Ewing, an operator and gauger for the Ohio Oil Company at its big station south of Bluffton, Ind. With the aid of the Evening News and the Evening Banner, of that city, Mr. Ewing hopes to find a suitable partner for his long trip, although he intends to locate in California permanently, that being the home of his mother, of his sisters and of his brother, Prof. Will Ewing, a professor at Leland-Stanford University.

New Connecticut Licenses Are Now Due.

All motorcycle operators' licenses issued by the Connecticut authorities expired February 29, and the taking out of new permits for the coming year is at flood tide. The recently enacted motorcycle regulations are more onerous and the fees are higher.

PRIZES IN GOLD FOR LIVE DEALERS

To Encourage the More General and More Effective Use of the Show Window by Dealers, This Paper Presents in the Following a Liberal Offer of Prizes.

Commencing immediately, and closing August 1, 1912, The Bicycling World and Motorcycle Review has arranged a Window Display Competition open to all dealers in motorcycles, bicycles, or both.

The obvious purpose of this contest is to encourage the more general use of attractive, business compelling window displays.

Conditions governing the contest may be tersely expressed in the following eight rules controlling the competition:

1. Each photograph must be plainly marked on the back with the name and address of the dealer sending same, together with the date on which the picture was taken. Competitors may submit as many views as desired; no restrictions on numbers.

2. All photographs become the property of the Bicycling World Company, and must not be published in any other paper until after announcement of prize winners is made. Such premature publication of the photographs will bar the offending competitor from any rights to prize moneys.

3. Prize winners to be announced only in The Bicycling World and Motorcycle Review.

4. Photographs may show either motorcycles or bicycles, or both.

5. Publication of photographs will be made as they come into this office—or as soon thereafter as is posible.

6. Prizes will be awarded by a committee of men competent to judge in such matters, and who are not in any way associated in this field of business. Their names will be announced when prizes are awarded—not before.

7. Prizes for the competition will be awarded as follows:

First, $25.00 in gold.
Second, $15.00 in gold.
Third, $10.00 in gold.
Fourth, $5.00 in gold.
Next Five, 2 years' subscription to The Bicycling World and Motorcycle Review.
Next Ten, 1 year's subscription to The Bicycling World and Motorcycle Review.

8. Competition closes August 1, 1912.

Varied Uses for the Motorcycle.

With three departments of the National government adopting the motorcycle to facilitate their work and with motorcyclemen in practically every branch of municipal government, the leading public service corporations, business houses and small merchants are now adding the two-wheeler to their business "machinery." And the economy of the motorcycle is appealing to them as strongly as its efficiency.

The manager of a southern telephone company finds that the net earnings of the company have been increased nearly $200 a year by the saving of one motorcycle in the "trouble repair" department. One month a repair man rode 378 miles on the machine at a cost of $1.30, and the previous month 358 miles had been covered with a horse and buggy and the bill amounted to $17.05.

While the motorcycle is being used by the National government in the navy yard at Philadelphia, in the reclamation service in Boise City, Idaho, and the forestry reservations in Oregon, its most extensive use is in the post office department. In all the larger cities of the country the motorcycle is used genrally for messenger service, and in many places the machines are used to collect mail in outlying districts of the cities.

The rural carriers, however, were the first to see advantages of the motorcycle for collecting mail. Many of these men are now both mail carriers and farmers, as the saving in time each day permits them to do their regular farm chores. Where the rural mail carriers formerly spent an entire day delivering mail, the motorcycle enables them to cover the route in just a few hours. And many of them estimate that there is at least $25 a month saved by the difference in up-keep between horse and buggy and motorcycle.

For commercial uses the motorcycle is very popular. In addition to the telephone companies, the telegraph companies, leading business houses, drug stores, dairy establishments and many other kinds of businesses are requiring the motorcycle for quick service. And the motorcycle is "filling the bill" by meeting the requirements for stability and economy.

Frese Plans Trip Across Continent.

Spokane, Wish, Feb. 10.—Not content with several track and cross country championships which he has won on his motorcycle in the last few seasons, Motorcycle Officer John Frese, of the Spokane police department, is now planning the biggest thing he has yet attempted in the form of a motorcycle trip across the continent, a distance by the road he estimates at 3,500 miles.

He expects to fit up a Merkel machine with a sidecar attachment, and will be accompanied by his wife and fire-year-old daughter. Mr. Frese has been motorcycle officer on the police department since September, 1910, and in company with two other motorcycle officers has been kept fairly busy. Citizens are learning to call directly to the station where the motorcycle men are located and the machines have proven efficient in getting the officers where they are wanted in unusually short time.

John Frese took up motorcycle racing in the summer of 1909, entering his first race on the Spokane Interstate fair ground. He has been a regular competitor in every motorcycle race in Spokane since that time, and is now recognized as a professional racer.

His greatest achievement in road racing was in hanging out a record of 71:20 minutes for the round trip from Spokane to Cour d'Alene city, a distance of 70 miles. He turned that trick one Sunday in 1911, and the record is officianlly recognized by the F. A. M. With his wife sitting on the tank of the machine, Frese almost equaled that stunt last summer, when he rode the 35 miles to Spokane in exactly 40 minutes.

Frese claims to have won more races than any other Northwest rider, and at his home are five big sterling silver cups he has won as trophies in various events. In 1910, on a tandem machine, Frese and his brother, E. C. Frese, traveled from Spokane to Los Angeles, 1,749 miles, in 13 days. As an introduction to California racedom, Frese won a 20-mile amateur event on the Los Angeles saûces track during his sojourn in the southern city.

Motorcycles Create a Congressional Row.

Heated discussion over an appropriation for motorcycle maintenance in the House of Representatives recently resulted in one member challenging another to step outside, presumably to fan each other's chin, and over three columns of the Congressional Record were monopolized by the report of the bickering. Two motorcycles are used by the Washington (D. C.) elevator inspectors in making their rounds, and it generally is conceded that they do the work of three men without machines. The appropriation called for $360 for the maintenance of the machines, an average of $15 a month, but the oratorical storm broke when a legislator, with an eye to the treasury, voiced the objection that the inspectors would "wear out the tires and other parts of the machines on Sundays and holidays, when not engaged in public business." Some of our eminent "states men" from the rural districts display wondetrful sagacity in legislating for the capital of the nation.

If You Really Invented It, Speak Up.

Wonder who really originated that Indian priming gun, anyway. Half a dozen riders and dealers in various sections are claiming the inventive honors and the lists are not closed, so get your entry in.

MOTORCYCLES RE-ENTER HUB SHOW

Local Dealers Exhibit at Tenth Annual Function—Strong Showing of Accessories—Handsome Decorative Effects.

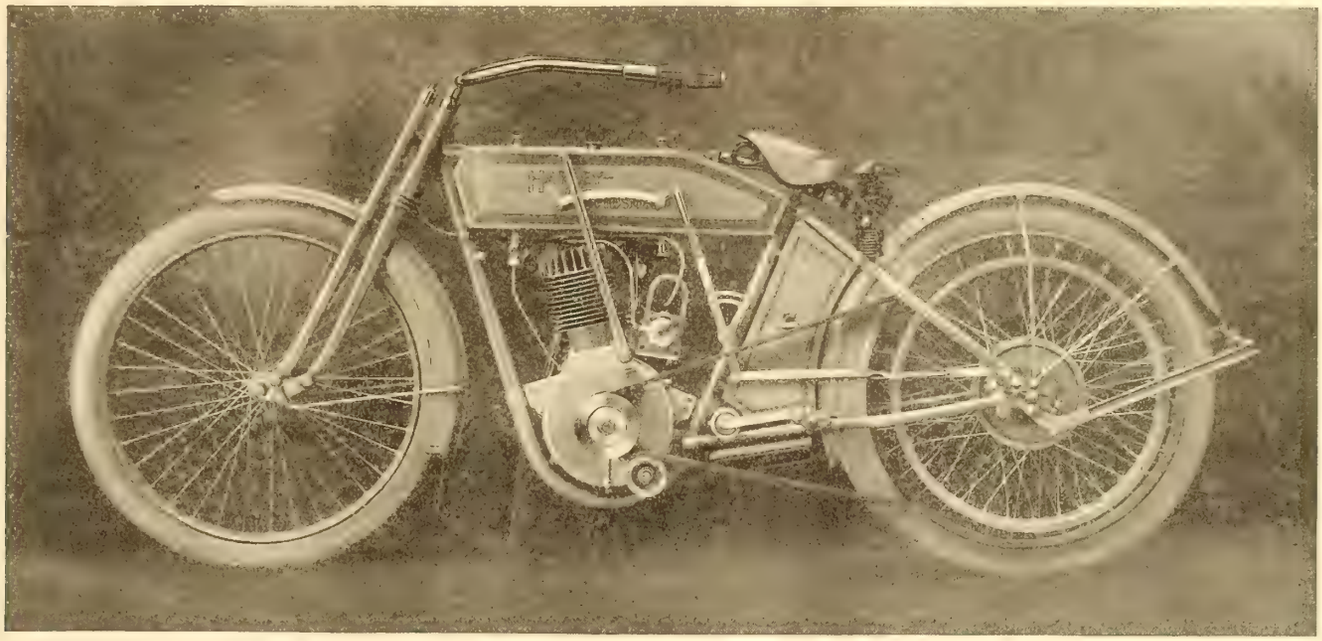
Boston, March 3.—In the handsomest setting ever devised for a local motor exhibition, the tenth annual Boston automobile show opened last night in Mechanics' Hall, for a week's run, with three motorcycle exhibits, and many accessory firms also "among those present." All of the motorcycle displays are fathered by local dealers, the trade having withdrawn its support of this show some years ago.

The show is divided into two sections, Exhibition Hall and Grand Hall, with distinctive decorative settings. In Exhibition Hall, the English rose garden setting is used, and in Grand Hall, Spanish mission embellishment predominates. It is conceded that the show management have outdone themselves in the superbness of the decorations.

Exhibiting motorcycles are the following: Boyd Motor Co., Emblem, M-M and Minneapolis motorcycle; Majestic sidecars. George N. Holden, Indian motorcycles and sidecars. New England Motorcycle Co., Harley-Davidson and Pope motorcycles.

Motorcycle accessory exhibitors include the following: Ajax-Grieb Rubber Co., Acheson Graphite Co., Boston Tire & Rubber Co., Bi-Motor Equipment Co., Coes Wrench Co., Connecticut Telephone & Electric Co., Diamond Rubber Co., Dover Stamping & Mfg. Co., Dixon Crucible Co., Endurance Tire & Rubber Co., Empire Tire Co., Harry Eisner & Co., Firestone Tire & Rubber Co., Fisk Rubber Co., Federal Rubber Mfg. Co., B. F. Goodrich Co., Goodyear Tire & Rubber Co., James L. Gibney & Bro., Hub Cycle Co., George A. Haws, A. W. Harris Oil Co., Havoline Oil Co., International Metal Polish Co., Jones Speedometer Co., Charles F. Kellom & Co., Keystone Lubricating Co., Lee Tire & Rubber Co., Frank Mossberg Co., Michelin Tire Co., A. R. Mosler & Co., Charles E. Miller, Marburg Bros., Morrison-Ricker Mfg. Co., National Rubber Co., N. Y. & N. J. Lubricant Co., Pittsfield Spark Coil Co., Post & Lester Co., Wm. Robinson & Son Co., T. F. Russell & Co., Standard Oil Co., Standard Tire Protector Co., Standard Tire & Rubber Co., T. R. Shannon, Stromberg Motor Devices Co., Shawmut Tire Co., C. A. Shaler & Co., C. F. Splitdorf, S. K. F. Ball Bearing Co., Standard Wrench & Tool Co., Stewart & Clark Mfg. Co., Standard Thermometer Co., The Texas Co., C. O. Tingley Co., Underhay Oil Co., United States Tire Co., Valvoline Oil Co., Voorhees Rubber Mfg. Co., Vacuum Oil Co., Veeder Mfg. Co., Vesta Accumulator Co., Warner Instrument Co., Wolverine Lubricants Co., Weed Chain Tire Grip Co., White & Bagley Co., Walpole Rubber Co.

DISPLAY OF THE NEW ENGLAND MOTORCYCLE CO. AT THE BOSTON SHOW



Motorcycle Show at Columbus.

Columbus, O., March 3.—Taking a bold step never before attempted east of the Mississippi River, the Columbus Motorcycle Club launched its first annual independent show last night, and the occasion

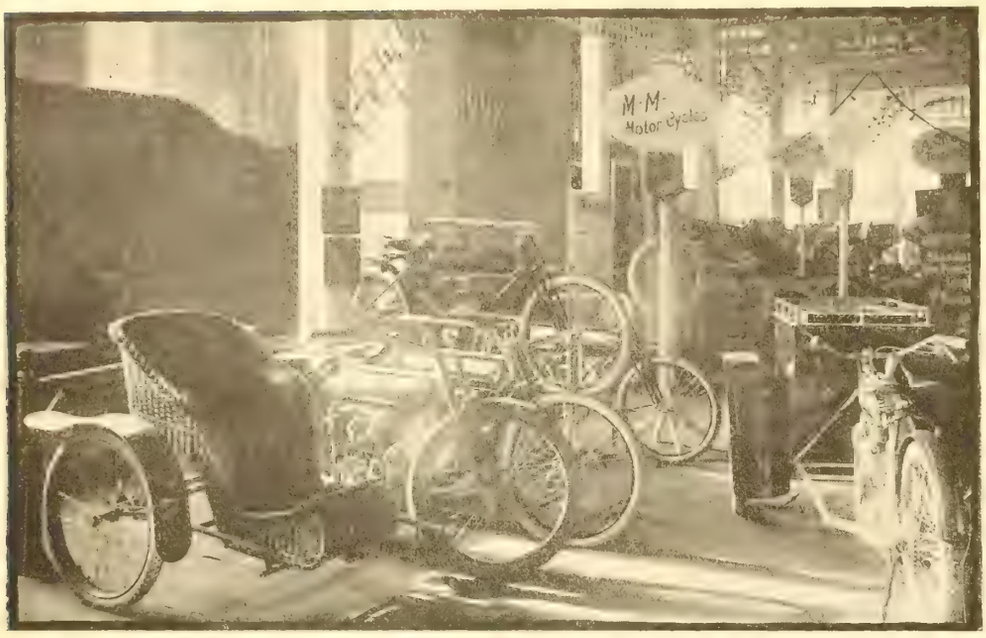
GEORGE N. HOLDEN MADE AN EXTENSIVE DISPLAY OF THE INDIAN LINE, FOR WHICH HE IS BOSTON AGENT

Three Carload Orders in Three Days

FEBRUARY 26, 27 and 28 each brought us a carload order — one from the Appeal Company, Los Angeles; one from Weaver-Ebling, New York City; and one from our New England branch in Boston.

The Los Angeles and Boston cars HAVE BEEN SHIPPED. The New York car will go on the very day promised — POSITIVELY.

Is the organization back of the machine you handle in a position to make eight day shipments on carload orders for genuine 1912 models?



Are you protecting yourself on this delivery question?

Are you receiving the same service as Harley-Davidson dealers?

Our new plant is under way. When this is completed it will just double our present capacity.

Harley-Davidson Motor Company

179 C Street **Milwaukee, Wisconsin**

BOYD MOTOR CO. SHOWED M-MS, EMBLEMS AND THE MINNEAPOLIS AT BOSTON

was crowned with success. Staged in a large building on East Chestnut street, in a setting of ferns, carnations and roses, the show drew a big crowd of enthusiasts and prospects on the opening night. The exhibition will run for a week. Not to be outdone by the competing outomobile show, which is running, the club provides a band to contribute to the entertainment of the visitors.

Forty machines, including some sidecars, and representing eight makes, are displayed. The exhibits are distinctive and pleasingly arranged, and the booth attendants are kept busy explaining to visitors the new features of the various models. Many of the machines exhibited at the New York and Chicago shows are on view. Numerous accessories also are shown at the different stands, many of them being fitted to machines. Many girls attended and displayed deep interest in the sidecars.

Popular prices are the rule, the admission being set at the insignificant sum of a dime, perhaps the lowest fee ever charged to a motorcycle exhibition. The show is well advertised, too, the club and exhibitors taking a half page in the local papers.

The exhibitors and their wares are as follows: American Machine Co. (Emblem); Barr Motorcycle Co. (Indian); L. P. Birkenbach Co. (Thor and Yale); A. C. Edwards (Merkel); Franklin Cycle & Supply Co. (Excelsior and R-S)) P. I. Haynes & Co. (Harley-Davidson).

Swenson Discourses on Winter Riding.

"Through what I considered at first merely a scheme to increase business during the so-called dull season, I find I have been doing missionary work of a high order," said B. A. Swenson, the Providence (R. I.) dealer, a few days ago. "I refer to the proposition of winter motoring There is not a motorcycle manufacturer in the country who has not desired to awaken the public to the healthful delights of winter motoring. Very few have had any success, for the reason that they have only suggested it from time to time, and have gone no further.

"When the first snow came this winter I discovered that while I had nearly as many callers as in the busy season, a majority of them evinced a disinclination to face the cold weather for demonstrations. The solution of the problem was easy. I laid in a few heavy leather coats and fur gloves as desirable adjuncts for demonstrating machines to prospective buyers.

"Now, when a man tells me the weather is too cold for a demonstration and that he does not expect to buy a machine for two or three months, I bring out one of the leather coats and a pair of gloves. That changes the situation immediately. Bundled up comfortably, a ride of five or ten miles, with a fast run up hill to display the hill climbing qualities of a machine, is a delight instead of a hardship.

"That is what I call missionary work. Frequently a prospect become a customer on the spot; but at any rate he tells his friends about his experience and they begin to think of buying at once instead of waiting. To the winter demonstrating togs I attribute my great increase in sales over all previous winters. As a matter of fact there are pleasures attendant on winter motoring that the summer traveler never knows of. The country is beautiful in its white mantle on a bright day, and a run through the crisp air sets the blood tingling. Fresh air is the greatest tonic in the world, and it can be enjoyed as well in the winter as in the summer, if only a person dresses properly."

Swenson is an authority on winter riding through long experience.

ERIE'S ATTRACTIVE SHOW

Seven Exhibitors of Cycles Lend Variety to the Automobile Exhibits—Trade's Showing a Pleasant Surprise.

Erie, Pa., March 1.—Booked for a three-day run, Erie's first automobile and motorcycle show opened in Arbuckle's garage last night, and large crowds poured in for the curtain raising. Motorcycles, bicycles and accessories practically monopolized the second floor of the building, and from a decorative standpoint, the motorcycle exhibits easily were the most attractive in the show. Each exhibit had an individuality, and bunting, flags, palms and electric lights were drafted in profusion to secure a pleasing effect.

Practically all of the leading motorcycle dealers were represented, and in many cases complete lines were shown. Seventeen motorcycles and one sidecar were on exhibition, as well as several bicycles. Although the motorcycle scection was located on the second floor of the building, the crowds seemed to have no objection to climbing stairs, judging from the number of people who went "higher up." It was a buying crowd, too, and orders commenced to be filed immediately after the opening.

Six makes of motorcycle were exhibited. The largest exhibit was that of the LeJeal Cycle Works, agent for the Indian, while the honors for the best decorated booth went to M. A. Reinholtz, the Thor agent, who used electric chandeliers extensively and secured striking lighting effects.

One of the noticeable incidents, and rarely seen at a motorcycle show, was the genuine friendliness among the dealers, as indicated by their constant fraternizing at the various booths during lulls. At the Thor exhibit carnations were distributed to visitors.

All of the dealers reported sales and a good list of prospects. The Harley-Davidson agent claimed the first sale of the show. Local riders all were there, and many brought friends along to do some missionary work on them. The sidecar at the Indian booth instantly became a favorite wiah the ladies, and when conditions permitted they were given short "demonstrations" down one aisle. The exhibitors were as follows:

M. A. Reinholtz — Thor motorcycles; Cleveland and Vim bicycles. Represented by M. A. and H. H. Reinholtz, C. A. Kent.

One 5-h.p. two-speed single; two bicycles.

Penn Sales Co.—Pierce motorcycles. Represented by M. M. Gillespie, H. G. Pohl.—One 7-h.p. four-cylinder; two 5-h.p. singles, flat and V belt.

Coleman Bros.—Excelsior and Flanders motorcycles; Rambler and Pierce bicycles;

Continental-Erie tires. Represented by George W. Coleman.—One 4-h.p. Flanders; two bicycles; tires.

Anderson Cycle Works—Harley-Davidson motorcycles. Represented by C. Brown, John Wills, T. R. Anderson.—Five 4-h.p. singles, variously equipped with battery and magneto, clutch and rigid drive.

Miller Hardware Co.—Iver-Johnson motorcycles.—One 4½-h.p. single.

John P. Arbuckle—Bicycles. Cleveland and Vim lines.

LeJeal Cycle Works—Indian motorcycles; Pope bicycles. Represented by C. H. LeJeal, George Fry, Claude Torrance.—One 4-h.p. belt single; one 5-h.p. chain twin racer; two 7-h.p. standard chain twins, one with tandem; one 7-h.p. Tourist Trophy chain twin; one 4-h.p. chain single with sidecar; bicycles.

Accessories—Atlantic Refining Co., oils: Downing & Flickinger, motorcycle insurance; Bayerson Oil Works, oils; Erie Oil Co., oils; Keystone Rubber Mfg. Co., tires; City Tire Repair Co., tires; Erie Welding Co., autogenous welding.

MOTORCYCLING FROM THE BRITISH VIEWPOINT

Running Expenses on the Other Side of the Pond — Speed Possibilities of English Tracks — Women Riders Increasing in Numbers — Trade Will Support Tourist Trophy.

London, March 1.—It is with great regret that it becomes necessary to record the death of D. Graham Gilmore, who was killed by a fall from an aeroplane in Richmond Park. Gilmore as far back as 1905 was one of the keenest amateur riders in England, although the only competition of any note in which he took part was the Six Days' Trial of 1907, when he rode a 9 horsepower twin Bat, at that time an object of curiosity. He, however, showed remarkable daring and endurance in all his exploits, and his loss will be keenly felt by all his motorcycling and flying friends.

A Craze for Naming Motorcycles.

A habit which has caught on to some considerable extent among the ultra sporting element is the nick-naming of the machines they ride. The names given are painted in prominent letters on the sides of the tanks, and many machines which have become prominent by successes on the road or path may be distinguished by such phrases as "Puffing Billy," "Gray Demon" or "Ots-tuf I."

Running Expenses of Motorcycling.

It has often been speculated as to how the approximate cost of motorcycling in the States compares with expenses over here, as it is easily seen that we are favored with much better facilities. Tires are, of course, the chief item, and taking the average life of a pair as 3,000 miles, this accounts for about £4. Taking 6,000 miles as a fair season's riding, this item will total £8 and depreciation and other running expenses (petrol, 1/1 gallons, and renewals) may be put down at £7. The total expenditure is thus £25, which works out at exactly one penny per mile, which is, I think, so far as my own experience goes, a very fair specimen of the average running cost for a 3½ horse power machine. Twins up to 7 horsepower probably cost 50 per cent. more in upkeep.

Saucer Tracks and Speed Possibilities.

Illustrations have appeared in the press here of the new saucer track at Los Angeles which Jack Prince has built. To say the least of it, the angle of the banking looks perfectly alarming, and is an eye-opener to even the small track habitues here. The nearest approach to a saucer which we have here are the three-lap tracks at Canning Town, Stadium and Crystal Palace, but even at the turns the banking is nothing to be compared to the new Los Angeles track. In fact, the best speed ever accomplished on one of these tracks was five miles in 4:58⅗, by George Garnes, three or four years back, and this was a hair-raising performance for Canning Town. None of our three-lappers are suitable for speeds over 55 miles per hour, and consequently they have fallen into disuse, all the speed merchants congregating at Brooklands. As a matter of fact, while in course of conversation with Harry Martin, he expressed the opinion that there are not at the present time more than half a dozen riders in this country who could safely negotiate the best saucer at over 60 miles an hour, and if we get a track of this sort, which has been mooted for some time, it will be necessary for the speed brigade to pass through their novitiate stages.

The Annual Six Days' Trial.

Last summer we had the pleasure of greeting several American riders who brought their machines with them to spend a holiday in Europe. We would like to see two or three of those gentlemen competing in the annual Six Days' Reliability Trial, organized by the Auto-Cycle Union, which will be held from August 12 to 17. The route of the trials will pass through the most picturesque portions of Cornwall, Somerset and Devon, with Taunton as headquarters, and a most unique opportunity is provided for seeing things. Any who may be in doubt should ask T. K. Hastings, of New York, his opinion of the sport provided. By the way, when is Mr. Hastings going to pay us another visit? I believe it was in 1907 when I last saw his cheery smile over the dinner table, after a long and dusty ride.

Gee Whiz! This Is Some Yarn.

There is something of a tall story going about here, and this is how it was told—it would do one of Uncle Sam's boys credit: A certain well-known racing crack had been tinkering with his bike for several days and amongst other fakements he had three inlet valves on his single-cylinder engine (this is a fact). However, he started the machine up on the stand after considerable trouble and his hopes were immediately realized by the engine gathering what he found to be about 5,000 revolutions per minute. Suddenly, however, he found trouble in an entirely unlooked for direction. He noticed that the speed of the back wheel was so terrific that the tire was lifting from the rim (due to centrifugal force, of course) and he could see daylight between the rim and the tire. Nothing daunted, he found that the tire lifted still further as the speed increased (naturally.) The racing crack now estimates his engine revolutions when the bike is on the stand (be it understood that the ear is insufficiently sensitive) by watching the rise and fall of the tire—thermometer fashion. Hurrah!

Increase of Woman Motorists.

It is really remarkable how the number of lady riders has increased of late. Whereas only a year or so ago it was possible to count the number of lady riders on the fingers of one hand, we now find them lining up in their twos and threes at various provincial meetings, and competing in reliability trials and open hill climbs. Last year Miss Muriel Hurd, riding a 5 horsepower Rex, was competing in a 150 miles trial, in which were two timed test hills, and she made the fastest time of the day on both, beating all trade cracks, soaring over both hills at over 50 miles per hour. Nearly all the lady riders have machines specially built with open frames, but several of the leading makers now market a lady's model. Some, however, ride the men's model, but I do not think this mode will gain much headway.

Trade Support of T. T. Probable.

It is somewhat a pity that the dates of the T. T. races, which will be held on June 28 and July 1, are so far distant from the date of the Six Days' Trial—August 12 to 17—as otherwise it would have been possible for any of our friends across the water to "do" the two at one and the same time. It would really appear that, after all, the motorcycle manufacturers, who have entered into a bond to abstain from competing for the T. T., will give the race their support. At any rate, they have a meeting at Coventry to consider the advisability of breaking the bond, and it is reported from very good sources that, as a result of the meeting, we shall see all the old trade revivals in the Isle of Man next June, which, of course, will lend considerable interest and excitement to the contests.

The Indian Likes the Arctic.

Herb Kipp, the well-known Canadian rider, who travels Canadian territory in the interests of the Indian, recently found one of the new 1912 models at the agency in Calgary, Alberta Territory, and, although the thermometer was 46 below zero, he took it out for a trial spin.

The excessive cold had no effect whatever on the Indian, which traveled as well as on a summer day, but it was far different with the rider. Before he had gone a great distance a stranger stopped him and told him his face was frozen, and an investigation showed that his cheeks and the end of his nose were badly touched. A prompt application of snow proved effective, and Kipp suffered no particular inconvenience from his experience.

Latest F.A.M and Club News.

MEMBERSHIP COMMITTEE'S WORK

Chairman Estabrook Reports New Clubs and Lauds the Registered Repair Shop—The Lamp Contest.

Last week's affiliations number four new F. A. M. clubs, viz:

No. 225—Flower City Motorcycle Club, Rochester, N. Y.; W. Krieg, secretary, Lincoln Park; 14 members.

No. 226—Aberdeen (Wash.) Motorcycle Club; Leon McNeal, secretary, Box 542; 15 members—100 per cent.

No. 227—Batavia (N. Y.) Motorcycle Club; S. F. Houseknecht, secretary; 23 members—100 per cent.

No. 228—Lawndale Motorcycle Club and Benevolent Association; Walter Henry, secretary, 1657 South 40th avenue; 21 members.

Many riders of Berkeley, Cal., are members of the Oakland Motorcycle Club, only five miles distant. Of course, five miles cuts little figure with motorcyclists, especially in fair weather, but there are rainy evenings and Sundays when it is another story, in which cosy club rooms nearer to hand figure prominently. John A. Wilson has offered to F. A. M. Commissioner E. B. Ellis suitable accommodations for a local club, and in view of this a movement is on foot to organize one.

New clubs are in process of formation by George W. Cooper, Grand Forks, B. C.; Alfred C. Hackbarth, Murray street, Meriden, Conn; Barter & Co., 55 Public Square, Watertown, N. Y.

The contest between the affiliated F. A. M. clubs and that of the club organizers, or prospective F. A. M. clubs, is now on and will continue for four months. Several inquiries to hand indicate that a further general beating of the tom-tom would be advisable, in order that all prospects might be better advised and have a chance to obtain the necessary information with which to intelligently enter the competition.

Briefly, the situation is this:

The Hawthorne Mfg. Co., of Bridgeport, Conn., has donated 50 of its very best motorcycle lamps to the motorcycle clubs embraced in the territory covered b ythe several districts of the F. A. M., which includes Canada and Mexico and our insular possessions. These headlights are know as "Old Sol," No. 8, and are to be competed for by the several clubs under rules formulated by the chairman of the membership committee, which can be obtained by addressing E. M. Estabrook, Bangor, Maine.

Chairman Estabrook pays a deserved tribute to registered repair shops in this wise:

"Already is the registered repair shop demonstrating its possibilities and worth as a successful recruiting station for the F. A. M., and, more than this, it is contributing largely to the general popularity of the motorcycle and the sport and pastime through its ability to create and maintain local interest.

"According to the information and experience of the writer, it is taking a rather narrow view of the matter to say that all of this activity of the dealer or repairer is accountable for in only a mercenary way.

"First and last, I don't believe it; I have never been able to prove a case of this kind, but, on the contrary, could always disprove it. Before a man goes into the trade as a repairer he is usually a genuine enthusiast as regards the motorcycle and the sport—that is what brings him into it—and it is not a gilt-edged vision of 'easy money' which induces him to work his head off year in and year out, without being able to 'dig up' much at that. Think it over."

Seven new repair shops were registered last week, as follows: John M. Ellsworth, 233 Main street, Watsonville, Cal.; Barnes & Hansen, 404 East Wishkah street, Aberdeen, Wash.; Oakdale Cyclery, West Railroad avenue and G street, Oakdale, Cal.; Clifford Cyclery Co., Leemore, Cal.; Clarence O. Sibley, 636 Jefferson street, Joliet, Ill.; Motorcycle Supply Co., 412 East 15th street, Kansas City, Mo.; P. S. Coulter, 132 16th avenue, Homstead, Pa.

Revision of Competition Rules Postponed.

There will be no revision of the F. A. M. competition rules before the next national meet, as a result of a joint discussion of the matter of President Hamilton and Chairman Thornley, of the competition committee. The reason given for delaying action is that the changes contemplated are so vital that it was considered advisable to postpone action until the annual convention. In the meantime the present rules will be effective and additional copies will be printed for distribution.

FEBRUARY ADDS 440 MEMBERS

Secretary Gibson's Monthly Statement Shows Net Increase of 38 Oven January Figures—Renewals Are 137.

For the month ending February 29, 1912, there were 440 new members admitted to the Federation of American Motorcyclists, hailing from the various States, as follows: Massachusetts, 12; Connecticut, 2; Rhode Island, 2; New York, 55; New Jersey, 18; Pennsylvania, 14; Maryland, 3; Ohio, 41; Illinois, 18; Indiana, 9; Wisconsin, 2; Missouri, 7; Minnesota, 5; Kansas, 17; Iowa, 2; Michigan, 2; Nebraska, 3; South Dakota, 3; Tennessee, 1; Florida, 9; Alabama, 5; Georgia, 13; North Carolina, 1; Oklahoma, 27; Utah, 1; Idaho, 22; Montana, 13; Arizona, 2; California, 28; Washington, 36; Oregon, 3; British Columbia, 9.

By F. A. M. districts, the division of the new members for February, is as follows: New England, 16; Atlantic, 90; Lake, 129; Peninsular, 28; Gulf, 28; Central, 30; Southwestern, 31; Pacific, 79; Canadian, 9.

Renewals to the number of 137 were made in the various districts, viz: New England, 20; Atlantic, 42; Lake, 53; Peninsular, 2; Gulf, 1; Central, 9; Southwestern, 8; Pacific, 2.

Dr. Patterson Wants Live Commissioners.

Quite one of the breeziest and straight-from-the-shoulder statements that has come from an F. A. M. official in many moons, has emanated from the office of Dr. B. J. Patterson, vice-president of the F. A. M. Central District, with headquarters in Pratt, Kan. In pointing out some reasons for alleged backwardness of the F. A. M. growth, the vice-president makes a scathing arraignment of some of his State and local commissioners for their laziness and neglect, and warns them that continued negligence will result in their being ousted from office. Interrogating himself as to "why the F. A. M. does not grow faster," the vice-president answers the query in this wise:

"There are in the United States a lot of people of the 'easy going' class, who want something for nothing at all times, and are absolutely unwilling to do anything in return. On the other hand, there are many

people who are willing and anxious to work for a cause if they are started right. Now I want to confine myself to the Central District in discussing this matter, as this is the territory wherein my criticism will fall.

"Last year I was elected vice-president of the Central District of the F. A. M., comprising the States of North and South Dakota, Kansas, Nebraska, Minnesota and Iowa. At that time there were some 150 members in this territory. I retained most of the old State commissioners, and up the present time have changed but few of them. In the Dakotas I have failed to receive a single reply to the many letters which I have written to the State commissioners. In Minnesota the State commissioner is a busy man, but I receive a letter from him occasionally, and I believe that he attends to his work satisfactorily. In Iowa I have received two letters in reply to at least ten which I have written. I have always received prompt replies from State Commissioners Gabus of Nebraska and Harding of Kansas. It seemed to make no difference how busy they were, they managed to find time to reply to my letters.

"I have sent names of prospects to some of my commissioners and told them to follow them up, and, later, in writing to the inquirer, I found that, with very, very few exceptions, neither the state or local commissioner had written the party at all. Now this is a state of affairs that should not exist. If we have F. A. M. officials who will not reply to letters, we soon will have no F. A. M. What we want is men who at least will have enough ambition and enthusiasm to reply to a letter from their chief.

"Now I have sent instructions to my State commissioners that from this time on, when they make appointments, it shall be with the distinct understanding that the appointee will reply promptly to every letter, and if he cannot agree to this condition the appointment is to be placed elsewhere. There is neither sense nor reason in having a man who is too coundounded lazy to reply to letters on official matters. The F. A. M. pays the postage and stationery bills for the State commissioners, and they do not require local commissioners to conduct any voluminous correspondence.

"I have a dozen local commissioners in Kansas who always attend to their F. A. M. correspondence promptly, and it seems to me that all commissioners should do likewise. Wake up, gentlemen. We want to hear from you; and, failing to do so soon, there will be a lot of commissionerships open for men who will pay attention to their mail. I want two good men as State commissioners for North and South Dakota, and I will have other openings soon unless there is a mighty change in the business methods of some of my lieutenants. I am deeply interested in the welfare of the F. A. M., and I want to see good, capable representatives of the cause everywhere, but there is no place for the 'danged motionless' sort which I have referred to. They are a brake on the organization and the quicker they are released, the better."

Tacoma Entertains Its Seattle Neighbors.

Tacoma, Wash., March 2.—Seventy-one motorcyclists, members of the Seattle Motorcycle Club and of the Tacoma Motorcycle Club, were the guests of the latter club at a banquet the past week, which marked the entrance of the Tacoma Motorcycle Club into the national organization of the Federation of American Motorcyclists.

The following officers were elected to head the Tacoma Motorcycle Club: President, Clinton C. Hull; vice-president, Lloyd Freeman; secretary-treasurer, A. F. Hoska, Jr.; captain, Ray Packard; lieutenants, A. A. Richardson and B. Oxley; trustee, Jack Lilenthal.

Vice-President E. L. Moore, of the Federation, who is the chief executive for the northwest territory, and State Oragnizer J. F. Gorman, both of Seattle, were also guests of the Tacoma Club.

The new officers and 45 of the 60 active members of the Tacoma Motorcycle Club held a meeting on February 26 and elected two new members to the "Run Committee" —Rolla Hathaway and Arthur Whisner. Five deputies were also appointed, who will be given police stars by the police department, and will see that motorcyclists do not break the laws enacted by the city governing the operation of motorcycles. The new deputies are: Edward Shaper, captain; Dr. Button, Jack Lilenthal, Henry Edmondson and Joe Duncan.

The run committee is busily engaged preparing a schedule of runs and endurance contests for the coming summer. It has already been decided to give a series of moonlight runs in conjunction with the members of the Seattle Motorcycle Club.

Improving California's Touring Conditions

Oakland, Cal., March 2.—In formulating a plan whereby its members touring about the State will receive better accommodations, the Oakland Motorcycle Club is doing commendable work. The committee in charge is gathering data and much valuable information from all parts of California. The object is locate the good hotels that will give a motorcyclist a real bed instead of a couch, and that will supply him with a real chicken dinner, and not one of sea gulls or other "just as good" bipeds. The question of reliable garages in which a machine may be stored over night is an important one, and it is thought to be only fair for tourists to buy their supplies of gasoline, oil, etc., from such garages, when they are properly listed by the touring committee.

The committee is also busy arranging side trips to different parts of the State over good roads, and members touring are cautioned to conduct themselves like gentlemen when out of town, and not like "open muffler pests."

Californians Indulge in Sports at Picnic.

Bakersfield, Cal., March 1.—Twenty-eight Bakersfield Motorcycle Club riders participated in the first annual picnic, held at Edison Canyon, 16 miles from here, Sunday, February 25. There were good things to eat and drink in abundance, and then the boys turned their attention to the sports program for the day. Following the boxing and wrestling bouts and foot runs came the hill climb, which proved highly interesting and was keenly fought. The winners were as folows: Twin class—Joe Dixon (Indian). Four horsepower single, two-speed class—C. P. Clark (Indian). Four horsepower single, one-speed class—P. C. Taylor (Harley-Davidson). The boys enjoyed themselves hugely on the outing, and are eager for more of the sort.

BANQUET OF THE TACOMA (WASH.) MOTORCYCLE CLUB

LOS ANGELES MOTORCYCLE CLUB ON A MIDWINTER RUN

Club Improvements of the Los Angelans.

Los Angeles, Cal., Mar. 2.—For the race meets now running every Sunday at the Stadium, the Los Angeles Motorcycle Club has a reserved section which the members have decorated with a fine blue and gold sign and hung with large and small pennants. The entire section is painted blue.

The club is contemplating the flooring of a portion of the gymnasium of the clubhouse with cement and partitioning it off for a machine and work shop for members' use. The club is also figuring on putting a shooting gallery in the basement of the clubhouse, and a tennis court and archery range on a large vacant lot next door.

A large screen porch at the back of the clubhouse is being enclosed and fitted up for a banquet room. Secretary McCullough says that when all contemplated improvements are completed Los Angeles will have a motorcycle club of which any one may well be proud to be a member.

Rhode Islanders Prepare for Busy Summer.

Providence, R. I., March 6.—Motorcycling in this city is beginning to take on life again, and Old Sol is crowding out Snow, Ice & Co. The past week a number of riders motored to the Indian wigwam, and Chief Swenson is wearing the big Indian smile, synonymous of orders a-plenty. The Providence Motorcycle Club is getting busy, and at the next meeting important propositions will come up for action. The club has a hustling set of officers who will leave no stone unturned to make the organization the leading club in the country. Members are awakening to the fact that the officers alone cannot bring the club to the high standard to which it aspires, and they are putting their shoulders to the wheel and pulling together.

Secretary Edwards is busy arranging the details of furnishing the new club rooms, which will be ready soon, and plans to have one of the best fitted quarters in the country. He invites suggestions from club secretaries on furnishing quarters. The club membership is increasing steadily, and new applications are pouring in.

At the last meeting a yarn spinning hour was indulged in, which brought out the following prize story of the evening: One of the members, who is a great lover of peanuts and always has a few, at least, concealed about his person, had occasion to leave his machine standing in the cold for several hours while visiting his sweetheart. When he came out he found starting impossible, and also found that his trusty priming gun, which he usually carried in his pocket, had been forgotten on this occasion. In deep despair he cudgeled his brain for a receptacle with which to introduce gasoline into the cylinder priming cups. Involuntarily one of his hands found its way to a pocket and touched a peanut. Instantly the long sought inspiration arrived, and withdrawing a peanut he broke the end, withdrew the kernels, and, loading the shell with gasoline, poured a charge into each cylinder. The machine started on the first turn, and with a smile on his face he glided homeward.

Another Club in the Nation's Capital.

Washington, D. C., March 4.—Declaring unanimously for a 100 per cent. F. A. M. organization, the Washington Motorcycle Club has been launched, with the following officers: George Cackran, president; Edward Mangold, vice-president; G. C. Billard, secretary; C. F. French, treasurer; Edward Mangold, captain; Thomas R. Dedge, press agent. Among the committees appointed was one to investigate possible sites for a clubhouse, it being the intention of the club to have its own home eventually. The membership will be limited to 50. Details of the club's first race meet, to occur at Bennings, May 30, are being completed, and an endurance run also is under consideration.

BALTIMOREANS AWAIT SPRING

Prospect of Hill Climb Contest Between Local Clubs—Another Motorcycle Club Organized.

Baltimore, March 4.—Local motorcyclists are longing for warm weather. They would give anything to wake up at once and find summer here, in all its glory. There are some who have found winter riding to their liking, but the vast majority have held aloof from taking spins during the severely cold weather that has held this section in its grip for several months.

A joint run of the Maryland and the Chesapeake Motorcycle clubs was to have been held to Ridgeville yesterday, but it was called off owing to the cold. A number of the boys, however, braved the weather and went out on the road, but most of them returned home partly frozen, even though they were wrapped up in all kinds of warm garments.

There is a possibility in the near future of a hill-climbing contest between the Maryland and Chesapeake clubs. The members are disputing their ability to take all kinds of hills, and Director Kuhl, of the Chesapeakes, and Treasurer William Wood, of the Maryland boys, plan to get together and see who is right. Claim has been made that there is a hill in this section that only one man has been able to pull so far, but those who have not seen it say that they are from Missouri.

The appearance of Jack Prince is being awaited with considerable anxiety. He is expected some time this month, when preparations will be begun for a board track in this city. Enthusiasm is growing daily, and there would be a great bunch of disappointed fans if Prince failed to come here. Howard A. French has his promise and he feels that the noted bowl builder will not violate it. The plans are at such a stage that nothing more can be done until Prince reaches this city.

A new motorcycle club was born in this city to-day. It saw light of day in the University of Maryland, and it will be quite an exclusive organization, as its members will be only students in the various departments at the university. It started off with a good pair of lungs and seven members. The leading spirit is James M. Hepbron, captain of the R.-S. Motorcycle Club, who is a law student at the school. He organized the motorcycle riders there, and was unanimously chosen captain. Hepbron is well known in motorcycle circles here, and has some fame as a racer.

Lancaster M. C.'s Decoration Day Meet.

Emulating the early bird, the Lancaster (Pa.) Motorcycle Club has thrown its hat into the contest ring for the coming season. It will open the ball with May 30 meet.

Recent Motorcycle Club Elections.

York, Pa., March 6.—At the recent election of the York Motorcycle Club the following officers were chosen: President, F. H. Reiff; vice-president, George Rudy, Jr.; secretary-treasurer, Curs. L. Rinehart; trustees, George Rudy, Jr.; Harrison D. Heindel, Luther Stough.

Lima, Ohio, March 5.—On March 1, at the annual meeting of the Lima Motorcycle Club, the following officers were elected for the ensuing year: President, E. E. Edmiston; vice-president, Wm. Hawkins; secretary, Wm. M. Thomas; treasurer, T. E. Johnson; road captain, William Rumsey; second road captain, Clarence Eberle.

Auburn, N. Y., March 4.—Officers for the ensuing year, commencing March 1, were elected by the Auburn Motorcycle Club, as follows: President, Edwin A. Spooner; vice-president, H. F. Meyers; secretary, C. Earle Henry; treasurer, Earl Mott; captain, Louis Defendorf.

Canton, Ohio, March 4.—Officers chosen at the recent annual election of the Canton Motorcycle Club are as follows: President, Nelson Rushong; vice-president, Enos Snyder; secretary, Harry T. George; treasurer, H. A. Taubensee; captain, William Patterson.

Sidney, Ohio, March 4.—Election for officers, recently held by the Sidney Motorcycle Club, resulted as follows: President, F. X. Lauterbur; vice president, Kenneth Hutchison; secretary-treasurer, Paul Monroe; captain, Samuel Knupp.

Fresno, Cal., March 4.—The recent annual election of the Fresno Motorcycle Club resulted in the choice of the following: President, Paul Waltman; vice-president, Theodore Johansen; recording secretary, Arthur Tateosian; financial secretary, Harry Erickson; treasurer, George Machen; captain, Martin Lauer.

Butler, Pa., March 4.—Officers chosen at the annual meeting of the Butler Motorcycle Club were as follows: President, W. G. McCafferty; secretary, A. A. Finlay; treasurer, W. H. Sleppy; captain, Clarence Walter.

London Ont., March 4.—At the annual meeting of the London Motorcycle Club officers were chosen, as follows: President, W. J. Cunningham; vice-president, W. Tite; secretary-treasurer, F. Benson.

Owego, N. Y., March 2.—At the recent election of the Owego Motorcycle Club, held in connection with the annual meeting, officers for the current year were chosen, viz.: President, W. E. Halstead; vice-president; F. H. Walling; recording secretary, H. G. Steele; financial secretary, A. L. Franz; treasurer, C. F. Martin; captain, J. J. Rickey; lieutenants, Judson Spencer, A. L. Franz.

New Yorkers Will Go to Peekskill April 7.

Members of the Motorcycle Touring Club, of New York (affiliated), will turn out for their first club run of the season Sunday, April 7, to Peekskill.

CLEVELAND WILL HAVE A TRACK

Luna Park Chosen as Site and George Kreamer to Do Construction Work —To Be Ready in May.

Cleveland, Ohio, March 2.—Motorcyclists of this city will have one of the fastest motordromes in the world when the middle of May rolls around.

Manager Bramley, of Luna Park, where the track is to be built, has announced that the course will rival the Playa del Rey track at Los Angeles for speed, and will be a four-lap track. A speed of 100 miles per hour can be attained, it is claimed. Accommodations will be made for fans in the grand stand, and it estimated that it will take approximately six weeks to construct the track.

The Cleveland Motorcycle Club has been called upon to furnish riders, and will have some of the best riders in the country on hand for the opening card. "Shorty" Matthews, of Chicago, is expected, with his record-breaking Thor. He will go against Don Klark, of Detroit, and Frank Hart, of New York. Huntsbery, of Cleveland, who is to ride the Indian this year, and Kissig, also Indian, are matched. Huntsbery has won the C. M. C. trophy for two years in succession, while Kissig holds the best time for speed. Wednesday and Saturday evening and Sunday afternoon meets will be held. Arc lamps will be strung around the track in order that the riders will be in full view of the spectators at all times.

Dr. A. M. Webster, of Lorain, Ohio, has been mentioned for manager, and will probably be selected.

Progress of Indianapolis Track Movement.

Indianapolis, Ind., March 5.—Whether or not a stock company is to be organized to construct the proposed motorcycle track in this city will be decided early next week. A meeting was held this week which all of the dealers attended, and new estimates and bids were received. It was originally thought that the board track could be built and maintained upon $10,000, but at the last meeting the dealers re-estimated the cost at from $18,000 to $20,000.

In all probability it will be decided at the next meeting to permit any reliable man who has the cash to back the whole venture. It is understood that there are three such men who want to take over the venture. The Indianapolis dealers hold the restrictive sanction from the F. A. M. competition committee, and it will be up to them to decide to whom they wish to turn over the sanction.

The proposition was referred to the executive committee, which was elected, and is composed of the following representative manufacturers, dealers and riders: W. K. Harding, Fred W. Spacke, John Kinney, John E. Merz, Gus Habich, L. L. Goodman, Harry Glaff, A. E. Okey, E. G. Baker, C. E. Weir, A. C. Beyerly, P. C. Hudson, G. H. Westing and H. W. Waite.

Practically all of the Indianapolis dealers have rented display space for the first Indianapolis motorcycle show, in connection with the Indianapolis automobile show, which will be held on the downtown streets, under a huge canvas, March 23-30

Motorcycle Road Races at Bakersfield.

Bakersfield, Cal., March 1.—Two days of road racing on February 17 and 18, under the auspices of the Bakersfield Motorcycle Club, provided a large crowd of spectators with several hours of exciting entertainment, while practically every rider in the vicinity became a rabid speed fiend while the carnival lasted. Five events were run, one of them professional, and the flag dropped on a different winner each time. The course was 3.1 miles, and the number of laps varied, according to the event. In the long distance events, Stoecki (Indian) and Bush (Thor) were the stars, each winning in a twin class, but Bush made the fastest time. In the "pro" race the "dope" was off form, Thoenson, on a "5,' beating Hartwell, on a "7." Results:

Three laps, 9.3 miles, singles—Won by R. Van Sant (Merkel); second, P. C. Taylor (Harley-Davidson); third, J. A. Berges (Thor). Time, 14:41.

Six laps, 18.6 miles, twins—Won by F. Y. Bush (Thor); second, C. P. Clark (Indian); third, J. F. Dunlapp (Indian); fourth, L. A. Fray (Thor). Time, 28:23⅗.

Three laps, 9.3 miles, singles—Won by C. P. Clark (Indian); second, Ray Cole (Merkel); third, D. D. Stoeckl (Harley-Davidson; fourth, L. A. Fray (Thor). Time, 14:32.

Six laps, 18.6 miles, twins—Won by D. D. Stoeckl (Indian); second, R. Van Sant (Merkel); third, A. C. Bush (Thor). Time, 28:46.

Two laps, 6.2 miles, twins; professional—Won by A. Thoenson (Indian); second, H. Hartwell (Indian). Time, 9:02.

Medals for Western Endurance Run.

Twenty-one men who won medals in the last Western endurance run, in September, 1911, have received their awards from P. B. Whitney, vice-president of the Lake District of the F. A. M. Eleven of the riders, who earned perfect scores, were presented with gold medals, and those who were penalized, but finished with 900-point scores or better, received bronze medals. The honor men and their scores follow: A. T. Barlass, A. R. Oberwegner, S. J. Chubbuck, A. H. Crocker, S. W. Nicholson, R. W. Du Sell, R. H. Firkins, George Puls, M. N. Graves, H. Bernard, J. S. Tormey, all perfect; D. Popini, 999; W. W. Ingram, 995; W. T. Graves, 980; C. B. Hull, 978; E. Becker, 975; F. Zons, 972; J. A. Truner, 972; H. G. Pohl, 946; C. McCabe, 929; W. J. Mensch, 928.

NEWARK'S MOTORCYCLE TRACK

To Be Built on Site of Old Bicycle Course at Electric Park—F. A. M. Franchise for a Third-Mile Circle.

Reducing the proposition to construct a motorcycle track in Newark, N. J., to bedrock statistics, it appears that Electric Park is the favored site, and the Eastern Racing Association, composed of George Hamilton, Edward MacDougall and A. C. Dunlap, is the organization that has the inside track on the franchise.

President George Hamilton has deposited with Chairman Thornley, of the F. A. M. competition committee, the required $350 fee and obtained the exclusive franchise for motorcycle racing in Newark. The new oval will three laps to the mile and will be located on the site of the old Vailsburgh bicycle track, opposite the present velodrome. The plans have been prepared and it is figured that the track can be built inside of six weeks. Racing is intended to start by the middle of April. It also appears that residents of the district will oppose Sunday racing on the ground of the noise from the motors constituting a nuisance.

Work Begun on Philadelphia Motordrome.

Philadelphia, March 5.—With the completion last week of negotiations between the projectors of a board motordrome and Point Breeze track interests, this city became assured of a speed saucer for the coming season. The Point Breeze Motordrome Association, which will build and operate the track, is composed of Rudolph Baeuerle, president; Walter G. Sykes, secretary and treasurer, and Daniel Kane. Baeuerle is president of the Quaker City Motorcycle Club.

Work on the track commenced this week and application already has been made for a sanction for a meet on May 30. The track will be a three lap structure and will be banked, it is said, for a speed of 100 miles an hour. The estimated cost is $12,000. It is stated that no expense will be spared to secure the best amateur and professional riders in the country.

While the Quaker City Motorcycle Club is not financially interested in the track, it, of course, will lend its hearty support to the project. At the last meeting, a vote of thanks was tendered to the track fathers for their efforts to give the city a modern speedway and encourage motorcycle racing here. It is the opinion of the local trade that the opening of the track will result in a large increase in sales to newly created enthusiasts, who will acquire the riding fever at the races.

Among the plans of the promoters are the bringing over of top notch foreign riders, and conducting international races.

Goerke's Injured Leg Heals Slowly.

Walter Goerke, the ex-racing man of Brooklyn, N. Y., who now has the Indian agency for Newark, N. J., is confined to his home by the development of complications in his left leg, which was badly injured in a road race accident last year. The knitting of the bone was interfered with by a tissue growth, and while the surgeon states that this foreign matter will yield to treatment, it will be some time before Goerke is able to be around. His host of friends are keeping him well supplied with flowers and other material expressions of their good wishes.

Second L. I. Motor Parkway Handicap.

Eastern speed merchants will have their first opportunity to don their war togs and try out their new fliers on Sunday, April 14, when the second annual handicap road race over the famous Long Island Motor Parkway will be held. The distance will be 17 miles, and the race will be held under the same conditions as last year. Three prizes will be offered, viz.: Gold-plated watch, silver watch and gold medal, respectively. Entry blanks will be ready soon. H. F. Bidwell, 2142 Broadway, New York City, the founder of the race, again is fathering it.

Big Virginia Road Race for May 30.

Newport News, Va., March 5.—On a course of 88 miles, from this city to Richmond, will be run on May 30, under F. A. M. sanction, a road race for the Virginia State championship, under the auspices of the Peninsula Motorcycle Club. Handsome gold medals and cups will be the awards. Only stock machines will be allowed to participate and an entry list from all over the State is anticipated.

During the coming summer a number of race meets will be held on the State Fair Grounds track at Richmond, under the joint auspices of Richmond and Peninsula clubs.

Thor Going Out for "Twin" Laurels.

Chicago, March 5.—Having cleaned up all the singles at the Riverview motordrome last season with their lightning single, the Thor folks are going after twin laurels this season. Three new 7 horsepower racers just have been completed, and there is much expectancy among the local fans as to what they will do when turned loose. "Shorty" Matthews will introduce the new fliers, and, of course, will trot out that invincible single whenever other aspirants for one-lung honors appear.

And Brooklyn May Get It, Too.

Brooklyn, N. Y., has the motordrome "bug" again. Charles Earl, an ex-bicycle rider; O. P. Warlick, president of the Invincible Motorcycle Club, and some cronies who are keeping in the background, are reported to have designs on the old Aqueduct race track as a site for the "proposed" speed saucer.

Indian Racers for New Baltimore Track.

Two Indian racers, a "four" and a "seven," just purchased, will form the nucleus of the speed stable for the new Baltimore (Md.) track.

Rain Spoils Racing at Los Angeles.

Los Angeles, March 4.—Rain caused a postponement of the motorcycle races at the Stadium yesterday.

LOS ANGELES STADIUM, SHOWING A CLASS A RACE IN PROGRESS

SECOND WEEK OF BIG RESULTS IN OLYMPIC CAMPAIGN

Broad Policy of Management Unequivocally Assured — Jobbers, Far and Wide, Rally to the Cause — Manufacturers, Salesmen, Clubs and Individuals Contribute Moral and Financial Support.

In response to several inquiries, all of which appear to have arisen from an erroneous impression created shortly after the origination of the bicycle team fund campaign. another statement supplementing that published in The Bicycling World of February 17 is advisable, to make clear the manner in which the subscribed funds will be handled by this publication.

These inquiries come from prospective subscribers relative to the payment of expenses of carrying on this campaign. To them and all others the Bicycling World Company announces that all of the subscriptions to the fund positively will remain intact as subscribed and published in these columns, to be applied in their entirety to the cause for which they are subscribed—the financing of an American Olympic Bicycle Team.

None of the subscribed funds shall be used for campaign expenses in any way. A full accounting of the project will be given in these columns at the completion of the games and the return of the team.

The expenses to date, including salaries of employees, stenographers' services, advertising space, printed matter, postage, etc., with the exception of a relatively small amount for stationery—all approximating over $500—have been paid for gratuitiously by the Bicycling World Company.

Under the regime of the United Cyclists, and by order of its committee, there was ordered paid out of the subscribed funds the amount of $18.30. Even this amount has been reimbursed to the fund by this publication, so that the moneys now are intact as subscribed, and as published in these columns.

Jobbers Lead Subscriptions This Week.

The forward march of the fund continues with unabated energy. Replies of the substantial sort are being recived in every mail and are accompanied in practically every instance with unqualified endorsements of the campaign.

The jobbers from every section of the country are responding liberally to the letter from P. R. Robinson asking for their support. Extracts from some of their replies follow:

The Post & Lester Co., Hartford, Conn., one of the oldest established manufacturers and importers of bicycle parts and accessories, writes: "We are quite willing to contribute $20, as you suggest, to the fund of which you speak. Anything we can do to help along the game we are only to glad to do."

One of the largest wholesale bicycle and supply firms in the South, Walthour & Hood, sends in this week its contribution, $10.

From Toledo, Ohio, comes this week the first contribution from the Buckeye State, made by the Union Supply Co., extensive wholesale and retail dealers in bicycles and motorcycles, amounting to $10.

Another from the South is that of the Nelms-Wiesenfeld Co., jobbers, in Jacksonville, Fla., which contributes $5 to the fund.

New York State again is heard from this week in the contribution of the Sidney B. Roby Co., Rochester; this check also is for $5.

The first reply from the Far West was received early this week in the contribution of $10 by Ballou & Wright, wholesale dealers in bicycle and motorcycle sundries in Portland, Ore.

The manufacturers also are supporting the proposition loyally through the efforts of the Pope Mfg. Co. One very encouraging letter from a prominent firm in this branch of the industry is that from the Pennsylvania Rubber Co., Jeannette, Pa., manufacturer of the famous Pennsylvania vacuum cup tires, in which is states, when sending in its remittance of $25 to the fund, that if, after canvass has been made, the funds paid do not materialize to the necessary extent, it is willing to go further and do its proportionate share.

H. J. MURPHY and GEORGE HAUSENBAUER
Two energetic road riders of Brooklyn, who are in active training for Olympic Try-Outs.

Another department of the manufacturing side to take up the work is the traveling salesmen, as mentioned in these columns recently. The first of these to give the matter financial support is the crew of the Pope Mfg. Co., which submits as follows in a letter from one of them, Ralph H. Smith:

"The Bicycling World Co.: Please find enclosed check for $25, representing the donation of the traveling salesmen of the Pope Mfg. Co. toward sending the team of bicycle riders to Stockholm.

"Our only regret is that the size of it is so small, but we trust it will be accepted in the spirit in which it was given and that the whole scheme will prove the big success it deserves."

C. L. Berry, president of the Salt Lake City Wheelmen's Protective Association, in sending in the check for $25 from that organization, contingent upon the subscription as noted last week, says further: "Salt Lake has been known as one of the leading cities to keep the bicycle before the public. This club is composed of business and professional men who desire to do their portion to assist in annexing the world's championship for the American Boy."

Endorsement of Control Still Growing.

The popular subscription being run in Boston under the management of Fred I. Perreault continues to increase steadily. Writing under the date of March 2, Perreault says that the fund now amounts to $32, contributed in sums from 10 cents up. He also endorses unqualifiedly this publication's control of the fund.

The Little Rhody Cycle Club, Providence, R. I., by the secretary, Henry E. Johnson, says: "Please keep the Little Rhody Cycle Club on the list. We are all pleased with the big gain in the 'Bi-World' of March 2, and think it will be a big boom for the cycling game."

Another, from Donald J. MacIntire, financial secretary of the New England Wheelmen, is as follows:

"The Bicycling World Co.: We are very glad to learn that you are now the official custodian for the moneys donated toward

the Olympic Fund in the Bicycle Division, and we hereby authorize you to keep the donation from us in your possession for such fund."

H. A. Gliesman, New York City, says: . . . "relative to my subscription to the Olympic Fund, I wish to state that the change which has taken place is fully in accordance with my views. Accordingly, you may continue my name on the list."

Tigers Preparing Vigorous Reorganization.

Well appointed club rooms a restricted and selected membership of two classes, riding and social, and a policy to cater equally to each, a closed club race for one and a social function for the other each month, are some of the inducements offered by the committee on reorganization of the Tiger Wheelmen, of New York City. The committee, composed of J. G. Kopsky, chairman; O. Brandes, F. MacMillan and C. P. Soulier, every one of the "old guard," reports as having received very encouraging results for the week's activities, a sufficient number having pledged themselves to support the movement and insure its success.

Goodwin Wins at Dominican Games.

Last Saturday evening at the annual games of the Dominican Lyceum, held at the 71st Regiment Armory, New York City, there was an interesting two-mile handicap bicycle race, run in two heats and final, all hotly contested throughout.

In the final the result was a win by E. H. Goodwin, Irish-American A. C. (scratch); H. J. Murphy, Atlas B. C. (100 yds.), second; Harold Lightfine, Glencoe A. C. (100 yds.), third. Time, 5:01.

R. G. WESTERVELT and A. D. DAWSON, Training Over Long Island's Famous Highways for Olympic Try-Outs.

CANADA IN OLYMPIC RACE

Our Northern Neighbors Arranging for Representation—Petersboro Wants Provincial Championships.

Toronto, March 5.—At a special session of the Canadian Wheelmen's Association held here on Friday evening, March 1, further arrangements for a strong representation of Canadian riders in the 200 mile road race at the Swedish Olympic festival next July were formulated. Steps were taken to put on several elimination road trials in different parts of the country in the spring, the distances of the preliminary events to vary from 25 to 100 miles.

The intention is to make the team as representative as possible, and with this end in view the committee in charge is working up an enthusiasm in all parts of the Dominion. It is probable that Prouse, of Charlottetown, on the Atlantic Coast, will join the team at Quebec on the way over, while a mile-eater of far-off Medicine Hat, "where the weather comes from," whose prowess has come to the attention of the committee, will be invited to take part in the trials.

The Canadian association hopes to send at least seven riders. "Canada is strong

for the bicycle game, and it is believed that our riders will not prove the least noticeable of the different aggregations which will be wearing the Maple Leaf," declared President Falconer, in discussing the situation.

Frank McPherson, of Petersboro, Ont., was present at the meeting to press the awarding of the Provincial championships to that city next August. Peterboro has not seen a bicycle race for ten years, and the application for the title contests was evidence that the bicycle game is surely spreading. The matter will be definitely taken up at the annual meeting of the association, to be held in Toronto April 6 next.

Fine Races at 65th Infantry Games.

Buffalo, N. Y., March 2.—Keen competition and close finishes were in order in every event of the bicycle races at the games held on the evening of March 1 under the auspices of the 65th Infantry A. A., despite the fact that 31 of the city's amateur stars are still under suspension.

Some of the best talent in Canada paid a visit across the border, and these, especially Andrews and McMillan, of Toronto, with Scott and Penseyres, of the Bison City, furnished the principal fireworks of the meet, with honors fairly evenly divided.

The two mile lap race preliminary heats and final all were hotly contested from start to finish, the final narrowing down to an inter-city duel with Scott, Penseyres and Kraus, of Buffalo, versus Andrews; Scott won by a very narrow margin over Andrews, with Penseyres and Kraus close up for third and fourth, in what was conceded to be the best race seen so far in the new armory.

Andrews made a gallant effort to qualify in his heat in the two mile handicap, but could not get up, the heat going to Muehlbauer (95 yds.) in 4:30. Summary:

One mile, novice—Won by J. L. Stoll, 65th Inf.; second, L. F. Scenck, unattached; third, P. J. Bowers, Colonial A. C. Time, 3:02⅖.

Two mile, lap race—Won by F. P. Scott, 65th Inf., 61 points; second, Walter Andrews, Toronto B. C., 53 points; third, W. C. Penseyres, Colonial A. C., 40 points. Time, 4:51⅕.

Two mile, handicap—Won by George McMillan, Indian B. C. (135 yds.); second, A. L. Bochre, North Oaks (115 yds.); third, Ed. Schellermann, Cornell A. C. (115 yds.); fourth, John Kraus, St. Michael's Club (50 yds). Time, 4:49⅗.

St. Louisians Annual Meeting Next Week.

The regular annual business meeting of the St. Louis Cycling Club will be held March 14, in accordance with the decision of the executive committee of that organization at its meeting of February 24. The reports of officer elections, distribution of membership buttons, the payment of dues and two amendments to the by-laws will be up for action at the annual meeting.

SALT PALACE TRACK LEASED

Ten Year Lease Negotiated by Langford and Nelson, Well Known Salt Lake City Promoters.

Salt Lake City, March 2.—Yesterday negotiations were concluded whereby the Salt Palace amusement park, with all its appurtenances, which includes the historic bicycle track, was leased by the proprietor, Frederick Heath, for a term of ten years to J. E. Langford and Joseph Nelson, the well known proprietors of Salt Air amusement enterprises located on Great Salt Lake, about 20 miles from this city.

It is the intention of the lessees to remodel the grounds and make vast improvements, which will include improved facilities for the bicycle track, and as the new proprietors are men of wealth and prominence, a great boost for cycle racing is anticipated.

Floyd Macfarland, the well known racing man, now in Europe, had a contract with the old lessee to manage the track the coming season, and Messrs. Langford and Nelson have expressed their willingness to make a new agreement with Macfarland, on his return from abroad, and it is quite probable the business relations already entered into with the former lessee will be continued in the main. Messrs. Langford and Nelson built a cycle track at Salt Air a few years ago.

Bicycle Exports to South America.

An exceptional opportunity to put their goods into South American countries appears to be within reach of the manufacturers of bicycles in the United States in a proposition, evidently being promulgated by the hardware trade, as published in a recent issue of the "Hardware Reporter," according to which the plan has been worked out by Philadelphia business men who have organized a selling corporation which expects to be ready for business in the immediate future. The project is to drive American goods into South American markets though the agency of 100 salesmen specially trained in North America, all speaking Spanish.

The active factors in the enterprise are Rolin W. Van Horn, William H. Cummings, John C. Wisener and George F. Brendlinger, all of whom are familiar with local conditions in the republics of South America and all of whom claim to be expert sales managers. The general plan is to have a central office in Philadelphia and branch depots in Rio de Janeiro, Buenos Ayres, La Paz, Santiago, Bogota, Quito, Asuncion, Lima, Montevideo, and Caracas, each in charge of an American sales manager, and from these local stations the salesmen trained in the United States will canvass the local trade and serve as the direct representatives of the American exporter. This comprehensive move is in anticipation of the Panama Canal completion. It is one of the practical projects resulting from the recent export congress held at the Commercial Museums.

High School of Commerce Cycle Race.

Varying the preliminary heats by running them at one mile distances, while the final was run at two miles, the High School of Commerce of New York departed from the usual order of things in conducting its handicap bicycle race held in connection with its annual games at the 71st Infantry armory, on the evening of March 1. This method is hardly a fair way to qualify riders for a two-mile race, although the marks were altered for the heats to correspond to the one mile distance.

It proved the undoing of Van den Dries, who is best at a two mile distance, and he failed to qualify, Raleigh (40 yds.) and Murphy (70 yds.), securing the coveted positions, in 2:26. The second heat went to Goodwin (scratch), Townsend (15 yards), second, and Waeldner (60 yds.), third; time, 2:25⅘. Lightfine (55 yds.) and Gutoff (90 yds.), led in the third heat, in 2:29⅘.

In the final seven men answered the starter's gun, the winners proving to be: First, E. H. Goodwin, Irish Am. A. C. (scratch); second, Jack Townsend, Dominican Lyceum (25 yds.); third, Walter Raleigh, N. Y. A. C. (70 yds.); time, 4:57⅗.

Early Entries for C. R. C. A. Century.

With entry blanks out less that a week, entries already are coming in for the fifteenth annual spring century run of the New York Division, Century Road Club Association. The committee is desirous of securing the most experienced pacemakers for the fast division, which will be known as the Olympic "work-out" division. Joseph G. Kopsky will be chief pacemaker. Volunteers to assist in this capacity are requested to communicate with the chairman of the committee, George Bieregal, 309 West 111th street, New York City.

Cycle Exports for January Show Gain.

Bicycle and motorcycle exports for the month of January, 1912, show an encouraging gain over the same month in 1911, being valued, respectively, at $95,379 and $83,843. The exports for seven months ending January, 1911, amounted to $449,359; for the same period ending January, 1912, $539,267. The import business during seven months ending January amounted to $83,037; for January, $20,570.

Atlas Bicycle Club's Weekly Run.

The second club race of the season of the Atlas Bicycle Club, Brooklyn, resulted in a sensational sprint at the finish of the 14-mile course between A. D. Dawson and H. J. Murphy, in which the former relieved Murphy of the ownership of the "cork." "Pop" Rhodes finished a close third.

Strongly Guaranteed

Practically Perfect

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

THE NEW DEPARTURE MANUFACTURING CO., Bristol, Conn.

EXHIBIT OF THE INDIAN REPRESENTATIVE AT THE RECENT BALTIMORE SHOW

The How and Why of Federal Tires.

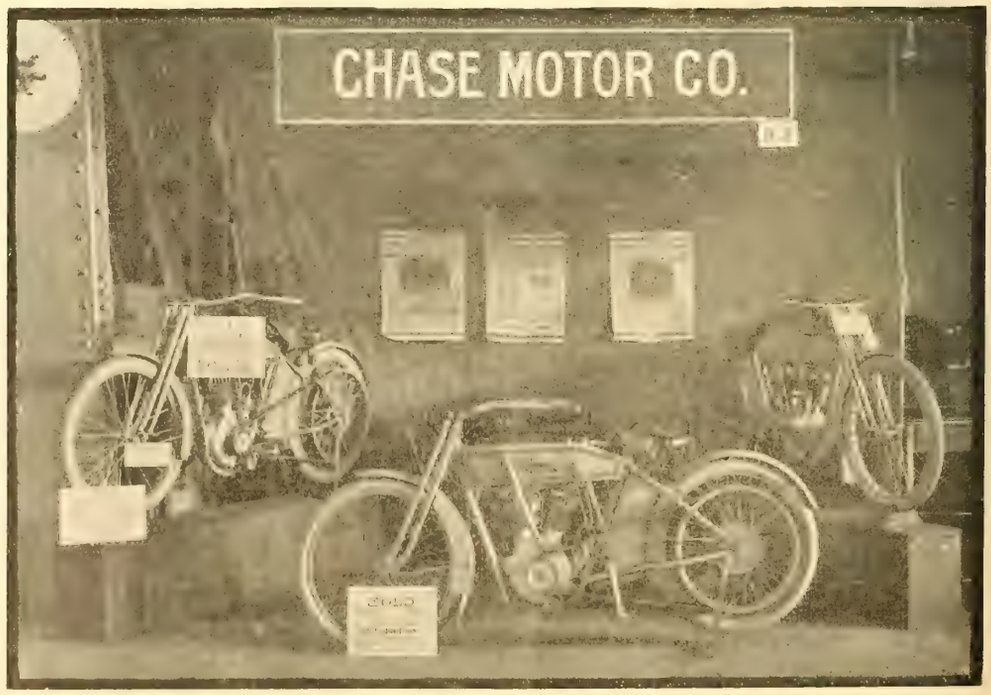
Cudahy, Wis., March 2.—Looking back to last July, when the wand of activity was first waved over the old Federal "rubber plant" by the new owners, the amount of work accomplished to the present time reads like a tale from the Arabian Nights. In the comparatively short space of seven months a debilitated factory has been taken over, rebuilt and modernized by the introduction of carloads of new machinery; a tire was designed and tested until it was brought to a high state of service efficiency; one of the strongest selling organizations in the industry, composed largely of tire veterans, has been built up, and an extensive advertising campaign mapped out.

The expenditure on buildings and equipment alone wes $250,000. This is the measure of executive ability displayed by the administrative trio composed of President B. C. Dowse, Vice-President H. A. Githens and Secretary-Treasurer Richard Ward, who won their "treads" under the banners of other leading tire plants, and now have gathered around them many of their old associates of known ability. For the present season it is planned to produce 500,000 motorcycle tires, in addition to automobile and bicycle tires, sundries and mechanical rubber goods. The plant is located eight miles from Milwaukee on the main lines of the C. & N. W. and C., M. & St. P. railroads.

When the plant was acquired it was rebuilt by a New York engineering firm to permit of 100 per cent. increased capacity without serious interference with manufacturing routine. So great is the demand for Federal products that the present facilities are inadequate to take care of them, and a one-story addition, 450 x 75, is now being planned.

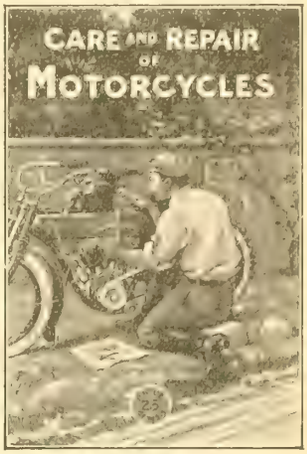
Realizing that pleasant environment and minor luxuries for employees are an investment that pays large returns in better work and more of it, the company shortly will begin the erection of a recreation building for the use of the operatives. The building will accommodate over 500 persons, and will include a dining hall, reading room and other appealing attractions for employees.

Possession of a new office building just has been obtained, which wil l give a large increase of much needed space, and more congenial facilities all around for the administration of affairs. The plant now is being operated 24 hours a day, the operating force numbering over 500.



Although it never has been exploited, there is a 2¾-inch Federal tire, too, which will fit the new standard rim. The company heartily supports the adoption of a standard rim, voicing the opinion that it will prove one of the greatest benefits ever conferred, both on the tire manufacturer and the rider.

One of the features of the factory organization which is a considerable factor in the prosperity of the company is the daily staff luncheon, at which business policies are discussed and new ideas developed. These gatherings are strictly free from all formality and restraint, and suggestions are freely exchanged and analyzed for worth. In the opinion of the officers, these daily gatherings are of inestimable value in laying sales and manufacturing policies and devising methods of improving the product. Once a month the department heads also gather at a banquet at the Hotel Pfister, where factory methods are discussed and suggestions for betterments are engendered.



While the entire equipment now is modernized, and there is lots of it, too, perhaps the one department of which the company is most proud is the drying room, where the rubber is graded and hung in great sheets on racks to dry thoroughly. While practically all drying rooms in rubber factories are operated with steam heat, the Federal "sweat box" uses the hot air system. Cold air is sucked in and filtered to remove all impurities, and then is passed among hot steam pipes until it becomes well heated. It then is forced into the drying room by powerful fans, and is kept in constant circulation by another elaborate exhaust system, so that fresh air constantly is introduced.

It is the belief of the Federal officials that it is the most modern and only drying room of its kind in the tire industry to-day, and considerable emphasis is laid on the advantages of circulating hot air over steam for drying rubber.

During the Chicago show the field salesmen assembled at the factory, and, after inspecting the plant, were guests of the company in the red room of the Hotel Pfister, Milwaukee. President Dowse selected a few of the party to entertain with informal talks, and a most enjoyable gathering ensued.

THE HARLEY-DAVIDSON AGENTS MADE AN EFFECTIVE DISPLAY AT BALTIMORE

Do you ever have trouble of any kind with your motorcycle?

¶If you do you ought to have this book. In its 80 pages are more sound suggestions and practical advice than have ever been put between any two covers.

¶It is not a technical book—it is written in plain every day language, the sort that any one can understand.

¶Its contents include chapters on General Instructions, Motors, Valves, Lubrication, Ignition, Carburetters, Two Speed Gears, and Fuel.

BICYCLING WORLD CO.

TRIBUNE BUILDING NEW YORK

HOW EXCELSIORS ARE BUILT

Big Equipment of Modern Tools—Stock Bins Filling Rapidly—Exacting Standards Maintained.

Chicago, March 4.—Immense quantities of raw stock in the storerooms and large lots of parts going through the machine shop forecast the production of Excelsior motorcycles on a big scale this year. In fact, it is stated that the output has been set at no specific number, but that the plant will be run to capacity all season, and that orders now are in sight for all the machines that can be built. The present shop staff numbers about 350 men, but this will be increased steadily from now on, according to the management. Many of the finished stock bins are filled, and it is planned to commence assembling on a large scale as soon as certain parts come through the shop, which will be very soon, if the schedule is maintained.

Concerning the adoption of the mechanical inlet valve on the single, it is stated that over ¼ horsepower was gained by fitting it, and this without any other changes in the engine. The company now is a strong advocate of the mechanical inlet valve for all types of motors. In explaining its taking up the chain drive, the company states that it is fitted to the single in response to a demand for this type of machine, and to the "7" twin because of the impracticability of using the abnormal sized belt necessary to transmit a reasonable percentage of power from a big engine. The development of the multiple disk clutch also made feasible the adoption of the chain drive at this time, it is said.

It is the proud boast of the Excelsior Motor Mfg. & Supply Co. that it possesses one of the best equipped plants in the country for the production of motorcycles on a large scale, and a trip through the factory gives confirmation to the claim. Expensive tools of all kinds are numerous in machinery hall, and here specialization in production is carried to the point where high-priced machines are kept producing one part, or doing one operation, only.

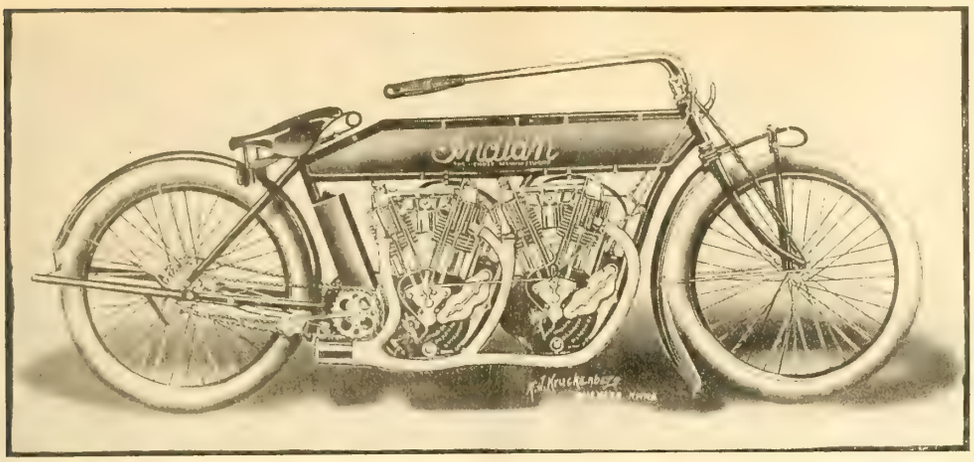
It is doubtful if any other motorcycle factory in the country can boast of a grinding equipment equal to that of the Excelsior, which was installed at a cost of $50,000. It comprises over 20 machines of the latest types, and is capable of turning out immense quantities of work. While considerable of the machinery in the plant has been used in the production of automobile motors heretofore, their manufacture has been abandoned, and it is stated that the full facilities will be utilized on motorcycle production for the coming season.

Few motorcycles contain as many forgings as the Excelsior, the use of forged parts being a hobby with these makers, who consider that this construction is unequalled where strength is desired. Very few stampings are used. In addition to the installation of a large amount of new machinery, the company now possesses facilities for doing its own enameling and nickeling.

To the rider interested in seeing how a motorcycle is built the machine shop is a never-ending fountain of knowledge. For instance, the cutting of a timing gear in seven minutes, on imported machinery that almost "thinks"; the finishing of a cam in jig time, and the turning of a piston on which 11 tools are working at one time, are but a few of the hundreds of operations which fascinate the visitor who possesses the slightest interest in mechanics. It is only by the use of modern automatic machinery that the motorcycle of to-day has become possible, both in price and quality, and even the very latest machine tools rapidly become obsolete and are discarded for something better, so swift is the march of progress in tool development these days.

There is no department of the Excedsior plant in which a standard is set and exacted so mercilessly as in the test room, where 20 test blocks and their individual equipments of ignition, gasoline and oil systems, receive the motors as they come from the assembling shop. This is "the seat of judgment" of the factory, and the motor that does not develop its required power is sent back for overhauling until it "makes good." When first placed on the block, a motor is "run in" in oil off a belt to "limber it," and then is run under its own power on moderate load until it develops the power required for its class. The dynamometer test, with lamp resistance, is used, and the average testing period is three hours.. While under test a motor is cooled by two powerful streams of air fed by an immense blower and flowing on the cylinder. After the machine is assembled it is given a final shop test before crating.

The plant is located on the line of the C., B. & Q. R. R., and has an area of nearly 200,000 square feet. Visitors always are welcome.



W. J. Lister, of Cleveland, O., has leased a large brick building in the rear of his store on East 55th street, for a repair shop.

MODEL OF FOUR-CYLINDER INDIAN SUGGESTED BY A KANSAS MAN

Have Suggested a Four-Cylinder Indian.

Figuring that if two cylinders are fast, four ought to be considerably faster, Paul Garst and Ray Weishaar, Indian speedsters, of Wichita Kan., have submitted the accompanying design to the factory, as a suggestion for a 1915 model. Such goals of the space annihilators as two miles a minute and a century an hour would certainly be realized with this Juggernaut. Won't someone now step forward with a "six."

Baker's New Motorcycle Speedometer.

So many speedometers play tag with the truth that many people have become skeptical of the advantages which an accurate instrument possesses. It therefore is not without unusual significance that F. A. Baker & Co., New York City, have selected the title "Infallible" with which to designate the new line of motorcycle speedometers which they just have brought out. The instruments are of the centrifugal type, and are built in three models, with

BAKER'S "INFALLIBLE" SPEEDOMETER

60 and 80 mile dials, respectively. The leader of the line, the 80-mile model, with trip and season odometers, is shown in the accompanying illustration. While rear drive is standard, front drive fittings are provided for machines carrying the front wheel on the main fork. The drive is through a silent running flexible shaft and worm gears, and by means of an ingenious arrangement the driving gears may be disconnected when the motor is raced on the stand. This is an exclusive feature. Not the least attractive features of the instruments are the popular prices.

Echo of a Famous Endurance Run.

Editor Bicycling World and Motorcycle Review:

What machine won the 365 mile endurance race from Chicago to Indianapolis in 1910? CHARLES MITCHELL,

Pearl City, Ill.

[There were two classes in this contest. The Thor team won the trade trophy, and a Merkel rider, the private owner's cup.]

Repair Hangers

to fit all makes and styles of wheels. Carry in stock one of our A. & J. Adjustable Hangers, with an extra set of our Adjustable Cups with Cones, and you can fit all widths of bracket up to 3½" and all diameters up to 2". This range covers practically all sizes. You can fit a new hanger into a wheel without delay and please your customer.

"THE MASTER MOTORCYCLE"

SPLITDORF

PLUGS

"Always There"

Hasha, riding an Indian, SPLITDORF equipped, smashed four world's motorcycle records at Los Angeles on February 12, when he rode one mile in 39⅗ seconds; two miles in 1:19⅘; three miles in 2:01⅗, and four miles in 2:40⅘. It proves SPLITDORF SUPERIORITY when a rider smashed one of the existing world's records—it is a result of a combination of the machine and equipment. Hasha uses SPLITDORF plugs because he knows them to be best. For his work he cannot afford to trifle with a spark plug that is not the best on the market.

The riders who know the difference in quality—the riders who are particular, who want the best, always use SPLITDORF spark plugs and magnetos. They stand for superiority.

Detroit, Michigan, Police Department Motorcycle Squad

Marvelous Record of Economical Operation

On May 12th, 1911, Wm. E. Metzger Co., Detroit Agents for the INDIAN MOTOCYCLE, delivered to the Detroit Police Department 6 Twin-Cylinder INDIANS. Official records show that the total cost of upkeep for the six machines to January 1st, 1912, was $13.13. The total mileage exceeded 30,000. Average upkeep cost per machine, $2.18.

These machines have proved so thoroughly efficient and so economical to maintain that the Detroit Police Department has placed an order for 6 additional INDIANS, 1912 model.

THE PRICE OF A YALE

Model 25, 5 H. P., $260.00

There are two ways of building for the market; one to set an arbitrary selling price and hold the productive cost, otherwise the quality, within the limits of that price.

The other is the YALE WAY.

That is, build a mechanically perfect motorcycle and when completed, set the price as low as possible commensurate with the quality and cost.

We have consistentiy followed that policy in the production of the YALE and the result is shown in daily service and official tests.

EVERY ENDURANCE CONTEST AND RELIABILITY RUN, WORTHY OF CONSIDERATION, HELD IN THE UNITED STATES DURING THE PAST YEAR WAS

WON ON A YALE

Thousands of YALE motorcycles are in daily use, for both pastime and business, and every one upholds the YALE reputation of Absolute Dependability.

REAL QUALITY—YALE QUALITY

is possible only when every effort is directed to its attainment, unhampered by a predetermined selling price.

It may cost a little more to produce but the saving in running expense and the absolute certainty of unbroken service enjoyed by YALE riders are the greatest possible returns from their investments.

The YALE line for 1912 is complete in style, power and price. Our catalogue fully describes two singles, 4 horse power, battery and magneto ignition, and two twins, 5 and 7 horse power, prices $210.00 to $285.00, freely mailed upon request. Write for it today.

¶ There is no test like the grinding road test to determine the efficiency of a motorcycle tire. It is just such a test that has proved the wear-resisting quality of

KOKOMO
Motorcycle Tires

¶ They are made of the best materials, built up in four plies (the majority of competitive makes use only three ply construction). Four plies of fabrics that will stand an unusual amount of strain and hard service.

¶ Either tread illustrated on this page will fill every demand for a wear-resisting, non-slipping, non-skidding motorcycle tire. Note the improved flap construction. This improved method eliminates every possibility of pinching inner tube. Investigate other features.

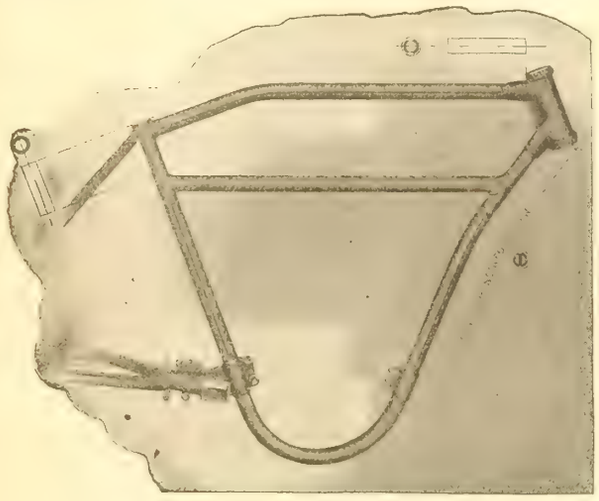
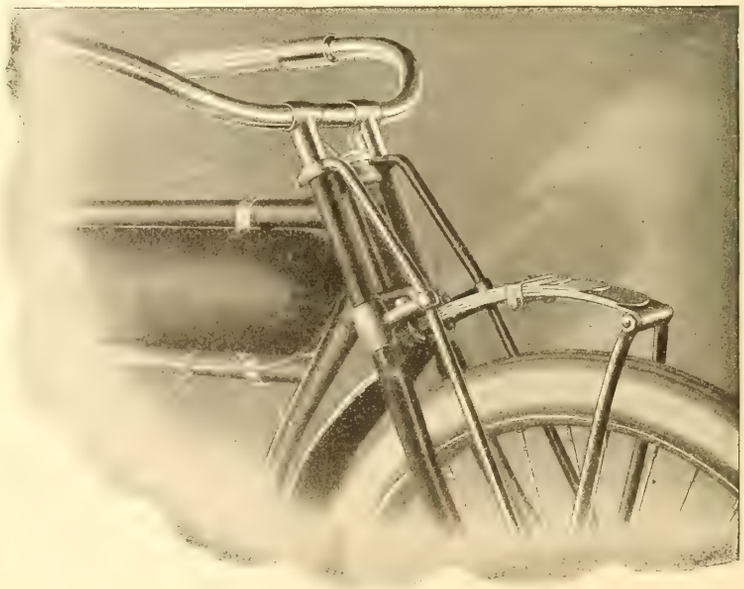
A Machine That Is Made Right



POPE
Motorcycle

WITH IMPORTED MAGNETO

$165



Two Important Features of Pope Construction

THE POPE FRAME

THE POPE FRAME is light, strong and rigid. It is of the double-tube-loop type, made of the finest heavy gauge seamless steel tubing. All connections are **drop forgings** and all joints are strengthened by long fish-tail reinforcements. The loop is reinforced from the frame head to the motor connection by two "D" shaped tubes set back to back and driven into place so as to form a girder plate construction of great strength.

THE POPE SPRING FORK is of the leaf spring type. Road shocks are transferred through rocker plates and connecting rods to a resilient four leaf high grade steel spring, where they are completely absorbed. Efficient spring fork action helps to make the Pope a most comfortable and smooth riding motorcycle.

FEDERAL TIRES

THESE "Extra Service" tires constantly gain in popularity. Pronounced favoritism is shown for them among motorcyclists who understand the true meaning of ***mileage.*** In point of tire upkeep Federal Tires afford a decided saving. ***They endure.*** But they also have other distinctive advantages that appeal strongly to motorcycle riders.

Federal Tires are comfortable because of their wonderful elasticity and their exceptional ability in absorbing road irregularities. They are speedy, safe and easy riding.

The main reason for this big preference for Federal Tires is summed up in one word—***Quality***—simon-pure—unadulterated "all-wool-yard-wide" quality.

Federal Motorcycle Tires are supplied through leading dealers everywhere. Interesting tire book mailed on request

R-S SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of many other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16″ steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive assurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

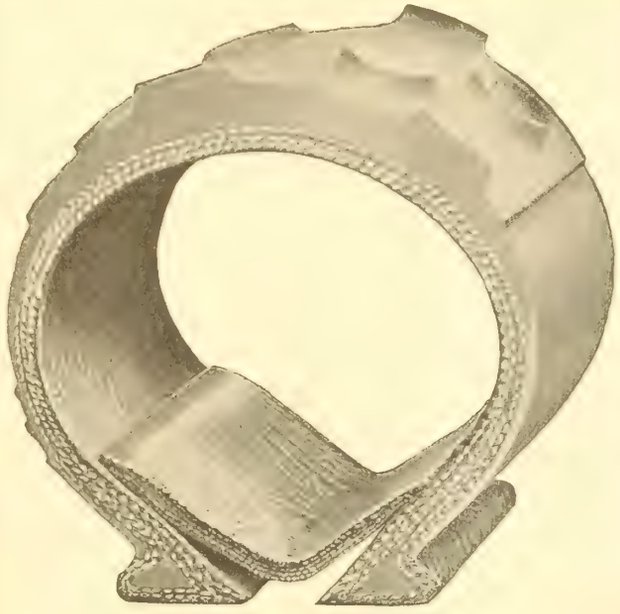
THE HENDERSON

4 Cylinder **$325.00**



THE HENDERSON has high power—flexible power. It will throttle down and then "pick up" and get away on sandy hills with astonishing ease. It is quiet and vibrationless. The center of gravity is low. Sitting between the wheels—with the feet on roomy footboards—the road shocks are minimized, and the rider has the acme of motorcycle comfort.

DEALERS: Complete your line by adding the **HENDERSON**

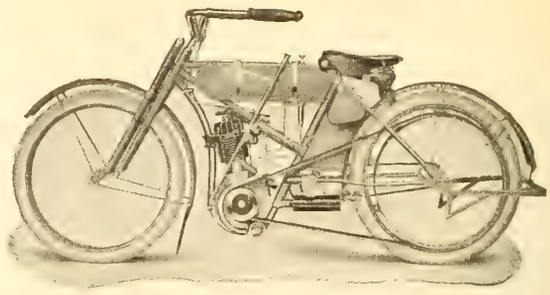
Henderson Motorcycle Company

268 Jefferson Ave. **DETROIT, MICH.**

When purchasing a motorcycle tire, how much thought do you give the name or mark it bears?

Today the name CONTINENTAL-ERIE on a motorcycle tire means everything. Greater efficiency, more mileage, less tire troubles. These are reasons why

Continental-Erie Motorcycle Tires



are used by the manufacturers of the Emblem, Excelsior, Merkel, Harley-Davidson and Yale machines as standard equipment, because they realize that a high quality tire tends toward greater efficiency of their machines. CONTINENTAL-ERIE TIRES are made in one style tread as shown above.

MOTORCYCLE TALKS

No. 1 (Note: This is the first instalment of the series of talks to appear in this paper dealing with those practical features that you should look for in the machine that you require for everyday service.)

The Motor

The motorcycle, like its big brother, the automobile, has its heart in the motor. It is then highly important that you insist that your new mount has a stout heart and carries a motor that best satisfies all requirements. The engine in the motor car is well protected. It is under the hood and therefore out of sight. In face of this we find the designers of automobiles laboring harder than ever before to build a motor with as few working parts as possible.

It is their aim to completely enclose these few parts to secure silent running. By placing these moving parts within the engine, the chance for wear is minimized as dust and grime from the road is kept from the small working surfaces. With the exterior of the engine free of all mechanism and the surface left smooth, these eminent designers, who have been laboring for years and years hope to produce an engine in which there will be but little chance for wear; which will be nearly silent; be free from accumulation of oil and grit; and be neat and graceful but business like in appearance. Remember that this engine is even now completely covered, protected and out of sight. The average passerby never sees this engine and the owner himself sees it only when doing work on it. For one moment guess what one of these hard working, energy multiplied, brainy engineers would say if you showed him the average motorcycle engine. Do you suppose that after all his vast experience in designing and building motor units for general utility he would overlook the following points: The motorcycle engine is necessarily exposed to every contingency and is at all times exposed to the gaze of every passerby—the owner rides immediately over it and comes in direct contact with it frequently—one must not expect the average rider to be an engineer or even of a mechanical turn of mind. This will undoubtedly be your opinion and this eminent designer would agree with you heartily—First, the motorcycle engine should be built as ruggedly as possible. The fewer the moving parts the better. These few should have large wearing surfaces, well oiled and completely enclosed. The exterior surface should be free from oil and made easy to keep clean—Second, the motor should be neat in appearance and have graceful lines.

The Schickel Motor Company has made an engine to order for you and we submit the cut shown above for your consideration. In the March 30th issue of this paper we will take the motor apart. We will carefully consider the make-up of the three moving parts constituting the entire mechanism of this engine. In the meantime should you desire to know all about our motorcycle, just write us and you will receive the information in the next mail.

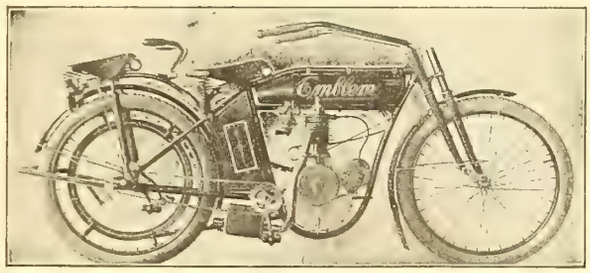
Gentlemen: I'm a busy man and can't wait until the end of your motorcycle talks for the whole story. Therefore rush complete information on receipt of this clipping to above address.

In haste.

Yours truly,

.....



Bi-World.

Out in Gaylord, Kansas

there is a young man less fortunate than his fellows in that he has but one arm. However, this young man—Mr. Ernest Sonnenberg—is better off than many because he knows how to enjoy life. Mr. Sonnenberg rides a motorcycle and spends most of his time in the saddle—good weather and bad—often covering roads that his two-armed brethren fight shy of.

Yes, friends, Mr. Sonnenberg rides a

Sturdy Emblem Motorcycle

and there is a mighty good reason for his choice. Physically handicapped he must have a machine that always can be relied on to do its full work and more. Not only this but the machine must be mechanically perfect and easy to handle in all conditions of traffic. The EMBLEM certainly fills the bill, as witness this entirely unsolicited letter from Mr. Sonnenberg. In fact we were not acquainted with Mr Sonnenberg until we received his letter. He says:

> " . . . As regards the Emblem Motorcycle with special control purchased from your dealers, Stephenson & Campbell, of Gaylord, Kan., will say that I have owned three different motorcycles and I find the Emblem to be the most powerful, speediest, and moreover, the easiest to handle on the road, as it never skids on the sharpest turns."
>
> (Signed) ERNEST R. SONNENBERG.

THERE'S A REASON FOR EMBLEM POPULARITY:
"They Are Different Because They Are Better"

The Annual Spring Number

OF

THE BICYCLING WORLD (FOUNDED 1877) and MOTORCYCLE REVIEW

(April 27th, 1912)

will contain information that will make it

A Complete Handbook of the Industry

Among the Leading Features Will Be:

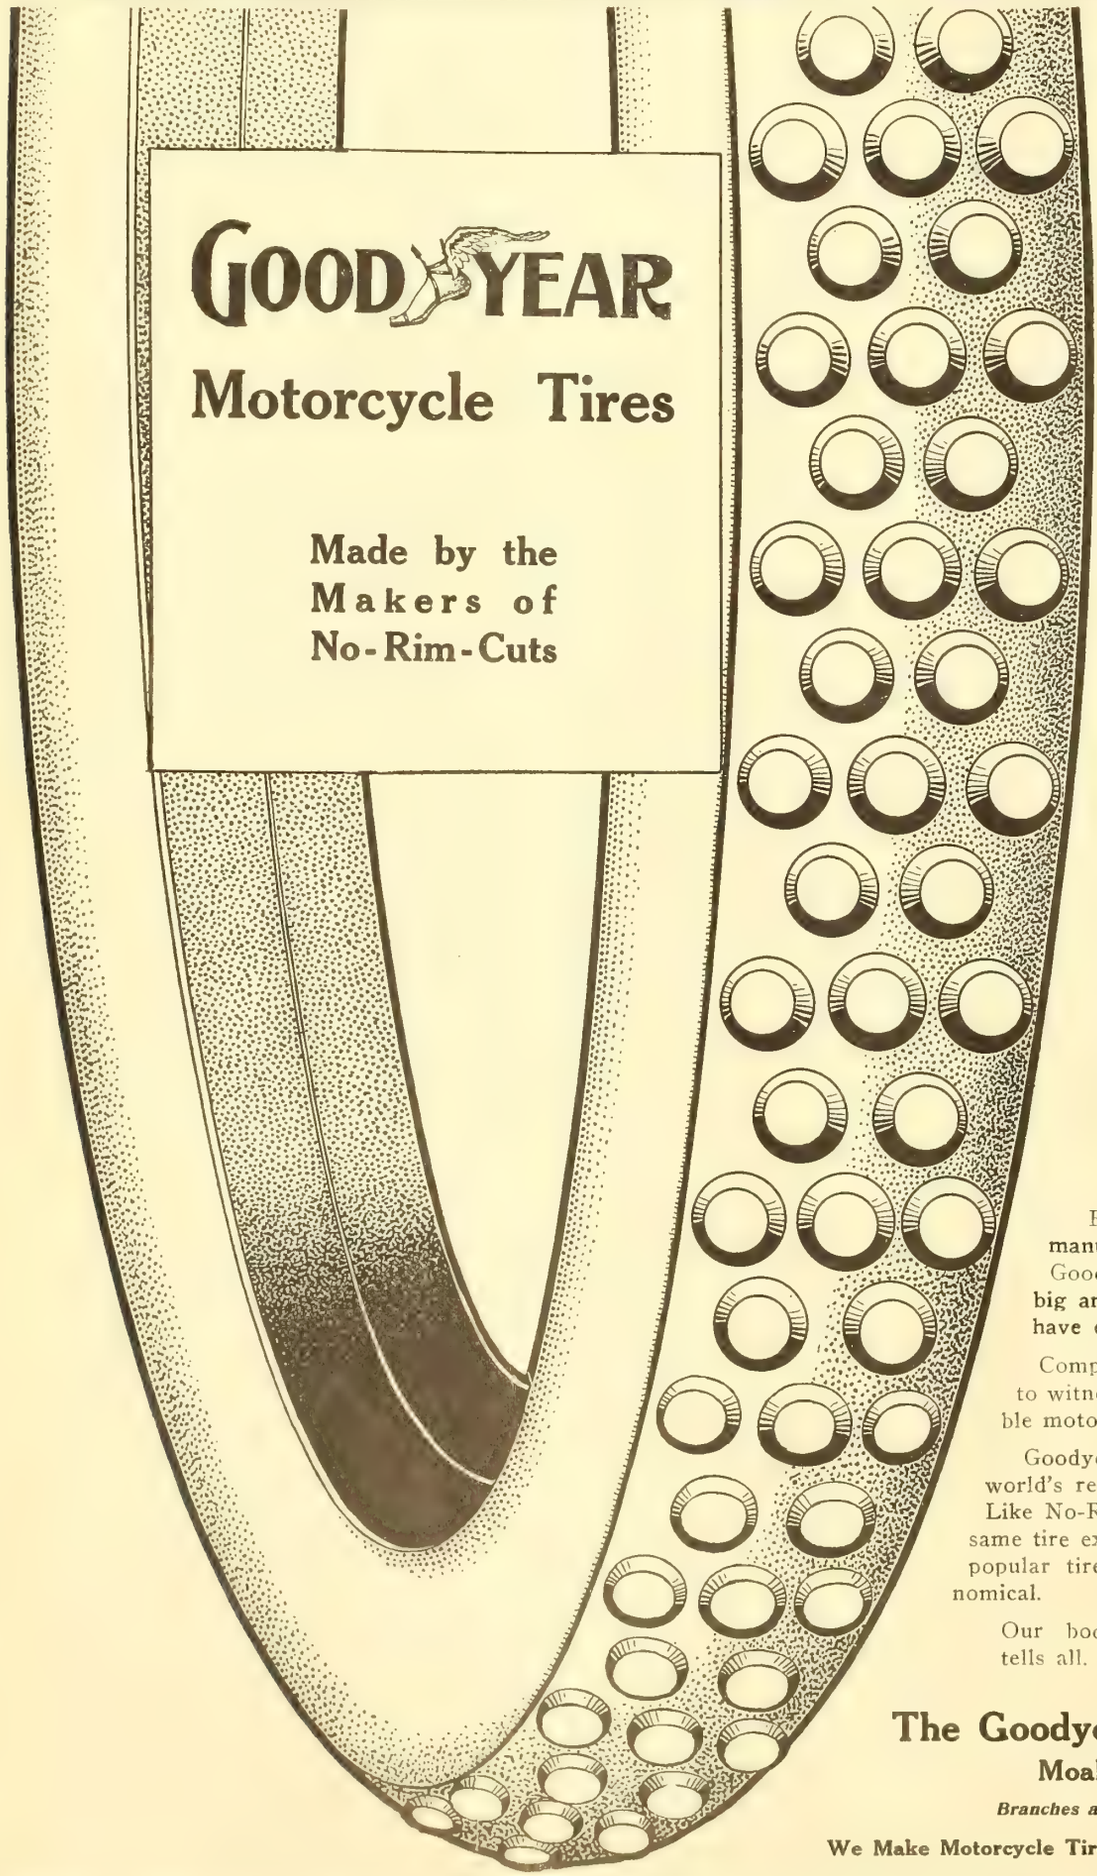
1—A halftone and editorial description of every 1912 model of motorcycles and bicycles made in America.

2—A halftone of the president and sales manager of every American firm making motorcycles or bicycles.

3—A brief story of the condition and plans of the really live clubs.

4—Cycling track records up to date, conveniently arranged for reference.

5—Several pages of historical matter covering the story of the "two wheeler" from the beginning.



Present indications are that the Spring Number will contain over 200 pages, and will be illustrated by between 200 and 300 halftones and line cuts.

Nothing to compare with it has ever been published concerning motorcycles and bicycles.

Price 25 Cents Per Copy

All subscribers will, of course, receive a copy. Orders for extra copies must reach us by April 22nd.

THE BICYCLING WORLD CO., Tribune Building, New York

Motorcyclists Find Money in These Tire Facts

The Tire Machine affords the only infallible means by which uniform strength and endurance can be built into a pneumatic tire. It is the only method by which all chances of human error can be eliminated.

In building a tire, plies of fabric are stretched on one over the other. The tire machine stretches these plies on exactly at the same tension. Hence the **strength** is uniform throughout. No **weak spots** are unconsciously built into the tire.

America's only Motorcycle Tires built on such a machine are Goodyears.

As a result, Goodyear Tire-resistance against punctures and road-wear is saving motorcyclists thousands of dollars in tire repairs; furthermore, has brought riders into a more perfect realization of the maximum possibilities of pleasure and profit afforded by the motorcycle equipped with proper tires.

For this reason every motorcyclist is looking forward to these tires.

For this reason, every motorcycle **manufacturer** will eventually contract for Goodyear Motorcycle Tires—**just as 16 big and well known manufacturers already have done.**

Comparative tests, which you are invited to witness, prove these to be the most durable motorcycle tires in the world.

Goodyear Motorcycle Tires hold every world's record for speed as well as endurance. Like No-Rim-Cut Auto Tires—built by the self same tire experts—they are by all odds the most popular tires you can buy; and the most economical.

Our book on Motorcycle Tires tells all. Ask us to send it to you.

Vol. LXIV. New York, U. S. A., Saturday, March 16, 1912. No. 26

IMPORTANT PATENT DECISION

U. S. Supreme Court Decides Patentees May Dictate Conditions of Sale—Chief Justice and Two Others Dissent.

Washington, March 12.—Far reaching in its importance was the decision yesterday by the United States Supreme Court upholding the right of patentees to dictate absolutely how their patented articles may be sold by retailers, and declaring legal the inventor's "monopoly" in his selling contracts. The decision was by a divided court, for, against this majority view, announced by Justice Lurton, three members of the bench—Chief Justice White and Justices Hughes and Lamar—dissented.

The case involved alleged infringement in selling supplies for use on a patented rotary mimeograph. A notice on the machine set forth that it was sold on the restriction that it was to be used only with supplies made by the patenting company.

In announcing the opinion, Justice Lurton said this conclusion resulted from the proper construction of the patent statutes. The very object of this statute, he said, was to give a monopoly to the inventor, and the fact that he continues that monopoly in his contracts disposing of his articles by charging such price as he pleases was not illegal. If such conditions interfered with public policy, he said, Congress alone must change the patent law.

Chief Justice White declared that Congress should act to head off "untold evils" that would follow to-day's construction of the patent laws. He said that under the majority's ruling the patent laws could be stretched so as to include in a patent every conceivable thing used in every American household. The chief justice arraigned the majority opinion as breaking all precedents, the court in its past history never having failed to do its duty to the people and to stand as the protector of every household.

Department of Justice officials regarded the patent decision as extremely important in the administration of the Sherman anti-trust law, which is being invoked in a number of cases where it is alleged that the patent rights are being overstepped to restrain trade.

Bearing on Coaster Brake Case.

Buffalo, N. Y., March 12.—That the Supreme Court's decision on the rights of patentees completely upsets the government's case against the so-called coaster brake trust is maintained in a statement made by the corporation's lawyers here today. A different view is taken by the Federal authorities, who stated that the case would be continued.

Tullis Becomes Continental N. Y. Manager.

Erie, Pa., March 13.—The Continental Rubber Works announces, through W. J. Surre, tire sales manager, that Walter S. Tullis, who has been making his headquarters in Erie and covering the middle west territory, has been appointed manager of the company's New York branch. The territory included in the New York branch embraces New England, eastern New York State and Pennsylvania, and south as far as Jacksonville, Fla. Mr. Tullis has had considerable experience in the tire business and is thoroughly posted on the Continental-Erie products.

The company has just added to its sales force E. H. Strickland, who will succeed Mr. Tullis in the middle west territory. Mr. Strickland was formerly connected with the Overland Rubber Company, of Denver, and the Goodyear Tire and Rubber Company's Denver branch. The above noted changes will become effective April 1.

Allen & Best, Owego, N. Y., have taken on the Merkel. They already handle the Monarch and Reliance.

RAPID STRIDE OF TRIUMPH

New Detroit Company Secures Plant and Installs Machinery—Promises Surprise in Model and Sales Policy.

Detroit, Mich., March 14.—Following up the announcement made in last week's issue of the Bicycling World and Motorcycle Review of the incorporation of the Triumph Manufacturing Co., to make motorcycles, reports of the activities of the new corporation come thick and fast. Some of Detroit's prominent business men are actively interested in the concern, and officers chosen as the executive force are: President, Robert M. Brownson; treasurer, George W. Sherman; secretary, Muir B. Duffield. Both Messrs. Brownson and Sherman were formerly connected with the Flanders interests and are men of experience, well versed in the business details and manufacture of the two-wheelers.

The company has secured the five-story building at 51-55 East Woodbridge street, this city (an illustration of which in printed on page 1256), taking immediate possession. The building contains 25,000 square feet of floor space, all of which is already being rapidly filled with new special machinery. All tools, patterns, jigs and other essentials are completed, and orders for material for construction have been placed.

Officers of the company say they have quite a few surprises in store in the new Triumph, when deliveries are made in May. The new model has been thoroughly tested out and its special features are a well kept secret by its producers.

In the matter of a sales policy the company also promises something new and novel, and an announcement will be made in due season of the details of same.

A capable engineering and practical working force has been engaged and with

ample resources at its command the new company has expressed its determination to make the Triumph just such a production as the name implies.

How Buckingham Pursued the "Villian."

New York, March 14.—Motorcycles have broken into the "flicker circuit" (moving picture plays) now. Joseph Buckingham, of the local Harley-Davidson agency, played a leading role a few days ago in a thrilling photo play that was staged on the Hudson County Boulevard, and will be shown in houses throughout this country and Europe. Joe's part was in overhauling a motor car carrying the villian and hero, and on the first attempt he skidded in the snow and the machine went under the wheels, but Joe came through unscathed. Procuring another machine he played pursuer again, and this time caught his quarry in dashing style while the films coined the doings.

Business is booming with the Weaver-Ebling Co., local distributors for the Harley-Davidson, and Manager Joseph Buckingham is sprouting wrinkles in his brow trying to figure how he will fill orders. He already has filed specifications for 152 machines, of which 32 are for the new chain twin. Fifty-three orders were placed in nine days. Of course, this business is both wholesale and retail, but it is triple that done last year, when the firm sold 58 machines. The firm's first carload of machines is enroute. The territory is Greater New York, Staten Island and Long Island, and up-State as far as White Plains. Keenly alive to the value of advertising, the firm is planning a large publicity campaign, and will use newspaper and subway car space liberally, as well as moving picture screens.

Monarch Sales Force Grows Larger.

H. J. Krackowizer, a well-known motorcyclist of New York City, has joined the sales staff of the Ives Motorcycle Corporation, Owego, N. Y., maker of Monarch motorcycles. He formerly was connected with the Schickel and N. S. U.

Harold F. Turner, Syracuse, N. Y., who operated a motorcycle legging business as the Alco Mfg. Co., has disposed of the enterprise, and become associated with the Ives Motorcycle Corporation, Owego, N. Y. He will travel the western territory.

FACTORY OF TRIUMPH MFG. CO., 31-37 EAST WOODBRIDGE STREET, DETROIT

MONARCH PLANT UP AND DOING

20,000 Square Feet of Factory Space, and 50 Employees Busy—An 8 Horsepower Twin Coming Next.

Owego, N. Y., March 11.—Rising from the ashes of the defunct Reliance organization, the Ives Motorcycle Corporation, one of the chief industries of this thriving little town, is occupying the Reliance plant and manufacturing the Monarch, a 5 horspower single. The company is composed of W. H. Ives, president; Frank C. Carroll, vice-president; H. Tatem Patten, secretary and treasurer, and this trio, together with the Hon. Frank M. Baker, Owego, and Charles B. Swartwood, Elmira, hold all the stock. No others are interested financially. The company is capitalized at $60,000. Located on the line of the Erie Railroad, the plant consists of a one-story concrete structure, containing 20,000 square feet, and a two-story frame building, embodying 5,000 square feet. One of the unusual facilities of the plant is the foundry, where all aluminum castings are poured, the cylinders being the only castings obtained outside. The working force at present is approximately 50 men, which will be increased as occasion requires.

While at present but one model, a single, is being built, early in May the company will commence the manufacture of an 8 horsepower twin, which will be substantially a replica of the single in general construction. The season's output is estimated at 500 machines. The company also is developing a carbureter of its own.

All frames and motors are built complete from raw stock at the plant, and forgings are used throughout the frame. The plant also embraces pattern-making and nickel-plating facilities. When the company acquired the Reliance assets, among them was an excellent machine shop equipped with modern tools. Cylinders, pistons, rings and all steel bearing surfaces are ground. The facilities afford an output of from 8 to 10 machines per day, and assembling is scheduled to commence shortly, parts now being run through.

It is the present intention of the company to campaign the machine in important road events the coming season. Plans also are being laid for the creating of an aggressive sales and manufacturing organization.

Inquiries Plenty in Spite of Rain.

New York, March 12.—Although it rained cats and dogs all day, nine people called on T. J. Sixsmith, local agent for the Indian, R-S and Excelsior, to-day to talk motorcycles. Sixsmith reports this as an unprecedented occurrence in his business career. Orders are piling up, and the question of deliveries is causing concern.

W. E. DEWEY PLOUGHING SNOW
The machine is a 1912 Reading Standard, running on the streets of Omaha, Neb. Although packed with snow six different times the engine started the first time over. Mr. Dewey, who is the Omaha agent, made the experiment.

The Reading Standard in Canada.

Through an error in omission the name of the Canadian representatives of the Reading Standard motorcycle was not included in the list published last week in the article "Toronto as a Trade Center." As near as can be verified, the Reading Standard was the second of the American makes to invade Canadian territory, and it is handled by one of the biggest concerns in the trade there, the T. Eaton Co., of Toronto. This company has largely advertised the R-S, and last season employed a rider to represent the machine on the tracks.

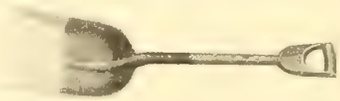
Denver Becoming a Motorcycle Center.

Additional confirmation of the glowing business prospects for the coming year is brought by W. B. Glasser, of the sales department of the Reading Standard Co., Reading, Pa., who has returned from a Western trip. "From the Chicago show I went direct to Denver, and found things very much alive there in motorcycle circlues," remarked Glasser. "As far as I could ascertain, about 150 1912 machines had been delivered there at that time, and the largest dealer in the city stated that he was confident that 1,000 motorcycles would be placed in Denver and vicinity this season. It is an ideal motorcycle center, on account of the climate. In St. Louis, Indianapolis, Louisville, Cincinnati and Columbus I found conditions exceptionally healthy, and every indication points to a banner year in the motorcycle industry throughout the entire country."

SMOKE FROM INDIAN WIGWAM

Buffum Joins Selling Force of Hendee Mfg. Co.—Teubner Retires from Racing—Pipe of Peace for Tourists.

Springfield, Mass., March 13.—Edward Buffum, formerly sales manager for the Miami Cycle & Mfg. Co., Middletown, Ohio, has entered the service of the Hendee Mfg. Co. His duties will have to do with the sales department, as one of Sales Manager Weschler's lieutenants. Buffum is one of the veterans of the trade, and was on the firing line of the Consolidated Mfg. Co., Toledo, Ohio, before entering the Merkel organization. That he is well qualified for his new berth by reason of his long experience in sales work goes without saying.



W. J. Teubner, the well-known racing man, who entered the Indian wigwam last fall, has retired from the track. In announcing his withdrawal "Bill" states that he felt that he would "get his" if he tempted fate much longer, and he decided to quit while he was ahead of the game. In his retirement the sport loses one of the cleanest, gamest and most popular riders that ever plowed a dirt track. "Bill" will remain in the Indian factory.

When the price of ice and the thermometer indulge in their annual altitude contest this summer, it will cause no concern at the Indian factory. In fact, the plant should be the coolest place in the city, for one of the small outbuildings on the company's property has been converted into an icehouse and stocked to make the plant independent of outside sources of supply this summer.

During the touring season the Indian factory has as many visitors as any motorcycle plant in the country, some of them coming long distances on their machines, and, naturally, being generously enameled with dust. That tourists may be quickly, thoroughly and painlessly divorced from their accumulations of Mother Earth, Publicity Director Hapgood is considering having an Indian cleanser parlor fitted up, with a connection from the vacuum cleaning apparatus of the plant, and "chasing the dirt" out of visitors by suction when they arrive by road.

Here Is Coffman's Yale Snow Shovel.

Motorcyclists who are brave and enthusiastic enough to ride all winter enjoy a side of the sport unknown to their fair weather brethren, but sometimes, when big snowdrifts are encountered, the going becomes pretty strenuous. In order that snow-going riders may the better be equipped to com-

bat "the beautiful" when it piles breast high in the road, A. B. Coffman, 1709 Fernwood avenue, Toledo, Ohio, is offering the Yale snow shovel. Its generous capacity is conveyed by the accompanying illustration, and it is intended to be carried on a motorcycle wherever suitable space offers, and use for breaking a path through drifts. Of course, it is equally useful for clearing sand and mud.

Gliesman Plans Uptown Branch.

The New York Motorcycle Co., 318 West 48th street, will handle the Thor line exclusively for the coming season. An uptown store will be opened as soon as a suitable location can be found.

YOUTHFUL JOY-RIDING ASPIRANT WITH AUNTIE IN THE SIDECAR
Son and sister-in-law of H. S. Rothers, Peekskill, N. Y. Mr. Rothers and wife recently toured to Philadelphia in eight hours on their "Big-5" and English sidecar

NEW MONARCH BORN AT OWEGO

Big Single Latest Ideal of Pioneer Builder —Has Conventional Lines Throughout—Big Twin Coming, Too.

Born of the ripe experience of one of the pioneer builders of the industry, and emerging from its lair, the plant of the Ives Motorcycle Corporation, Owego, N. Y., under the compelling title of Monarch Big 5, a new aspirant to the throne of motorcycledom has entered the jungle of competition. It is of the single-cylinder breed, rated at 5 horsepower, of standard construction throughout, and is priced at $200. Its dominant features are a loop frame, cartridge plunger double fork, vertical engine, mechanical valves, V-belt drive, magneto ignition, gravity and forced lubrication, clutch, grip control, 60-inch wheel base, and weight of 200 pounds. Radicalism is not a part of the design of the Monarch. Not a single feature may be said to be a striking departure from standard practice, which is in keeping with the aim of the builders to adhere strictly to the conventional in hatching the machine. Simplicity, accessibility, durability and reliability appear to have formed the nucleus of the builders' creed.

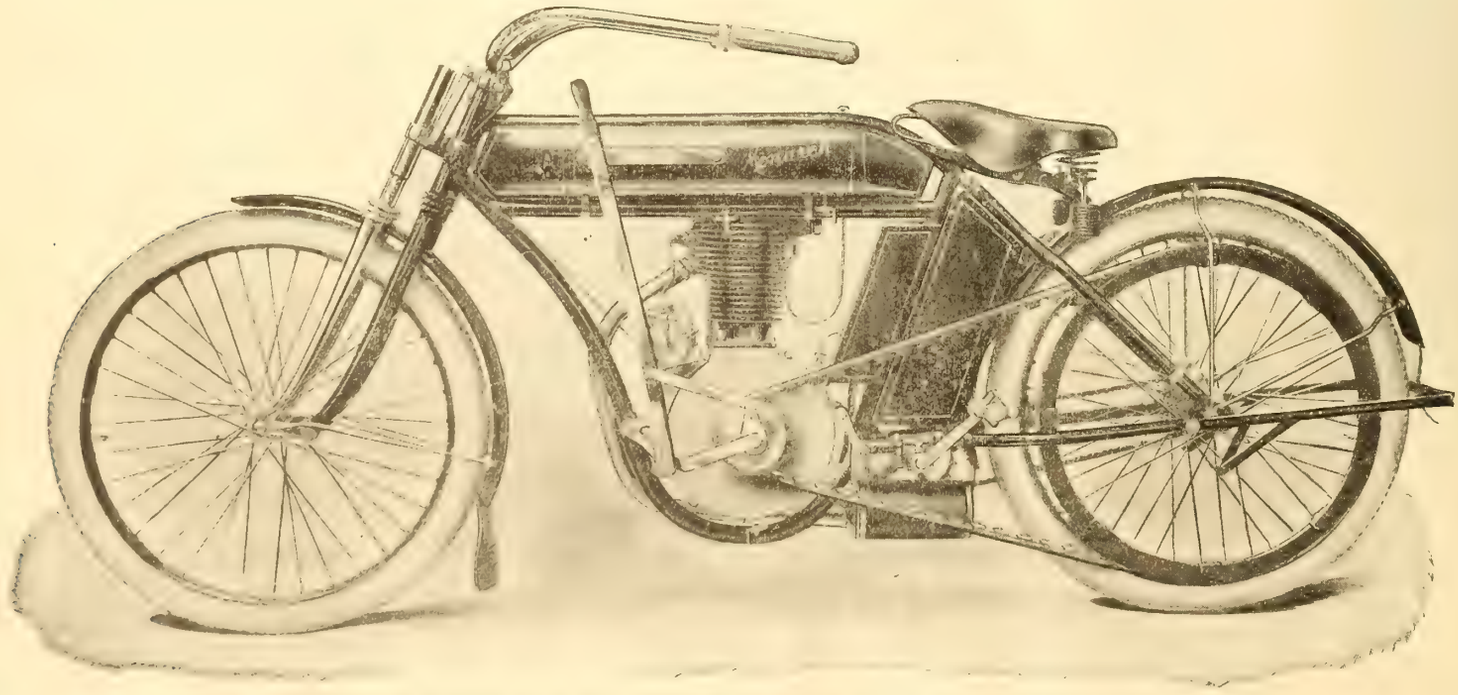
Compact and "clean," the motor has a two-point anchorage at the base. By disconnecting piping and control wires, and removing two anchor plates, the engine may be removed from the frame in 10 minutes. The cylinder is a unit casting, and has a bore and stroke of 3⅜x3¾ inches, respectively. All valves are mechanically operated, the inlet being of the overhead rocker type. The actuating rod of the inlet valve passes through the cylinder flanges, where it is amply protected from injury. Valve ports and valves are large, and the tappets are hardened and adjustable. They are capped with fibre to reduce the click. Bell crank jumpers riding on rollers trip the valves, a construction claimed to reduce noise and wear. There is an air space betwen the valve chamber and cylinder to accentuate cooling.

All motor shaft bearings run in Non-Gran bronze, a high quality metal which is claimed not to disintegrate and cut. Long shafts are used. Friction is reduced to a minimum by grinding all shafts and steel bearing surfaces in the motor. The flywheels weigh 22 pounds, the weight being concentrated largely in the rim.

Ignition is by Herz magneto only, the instrument being mounted in front of the cylinder, which permits the use of a very short high tension cable to the plug. A double lubricating system is used, the main supply flowing by gravity through a sight glass with adjustable feed. A transparent barrel hand pump is provided for meeting emergency demands for oil. A very large oil window in the motor base affords a level reading at a glance. The cylinder is charged through a Schebler carbureter.

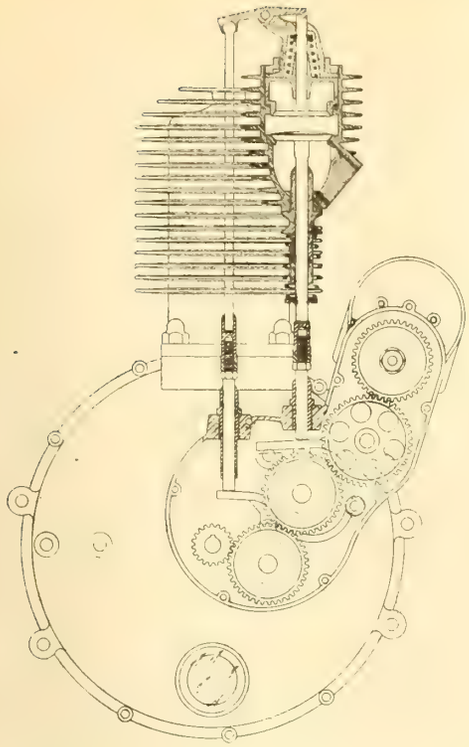
An oil-tight motor base is secured by the use of the tongue-and-groove construction at the joint. To secure maximum cooling efficiency the valve chamber, spark plug and exhaust tube are placed on the front side of the cylinder, where cool air plays on them constantly.

In the frame line, a gradual slope of the top bar rearward, gives the low saddle position now so popular. The frame is of 14 and 16 gauge tubing, with the head stems extending well into the tubes. The head is a forging Incidentally, President Ives claims to have introduced the loop frame construction in the early days of the industry, before it attained its present popularity.



For the fork, the compound type with cartridge plunger was selected. The fork members and rockers are sturdy and the springs large, and the head mounting looks thoroughly substantial.

Tanks are separate, the gasoline reservoir accommodating 2½ gallons, and the oil compartment 2 quarts. A needle shut-off valve is fitted to the gasoline tank. Under the saddle a large metal tool box, fitted with a Yale lock, is provided.



The control system is as follows: Double grip, through Bowden cables; right grip, compression release; left grip, spark advance; right finger latch, throttle. The Eclipse clutch is operated by hand lever working in a sector on the left side. Option of Eclipse or Corbin band brakes is offered.

Standard finish and equipment is interpreted as follows: Diamond or Empire tires, 28 x 2½; single clinch rims; 1⅛-inch Spartan V belt; Mesinger saddle; rough rider grips; swinging stand; wide fenders with front splasher; Standard pedals, and Eclipse knockout front axle.

Some interesting constructional details follow: The upper end of the inlet valve lift rod has a ball and socket seat in the rocker, to automatically compensate for wear. Capped nuts are used to hold down the cylinder, and on other parts. Castellated nuts and cotter pins are used at all important points to insure safety. As a test of the oil retention qualities of the motor, a base was filled with lubricant to the lower edge of the cam case, and the motor raced. At the conclusion of the test no oil was exuded on the exterior of the motor. By

ALTHOUGH A SINGLE THIS MONARCH WILL ROAM WITH THE TWINS—5 H. P.

SIDE ELEVATION OF MONARCH MOTOR

removing a nut the inlet valve can be taken out in 30 seconds. Both valves can be withdrawn from their cages in two minutes.

Very large valve springs are used. Easy starting is facilitated by the use of an independent compression release, permitting the magneto to be set at full advance, and the valve dropped when sufficient pedaling momentum is obtained. A priming cup is set in the top of the cylinder, and a drain cock is fitted to the under side of the tank. By connecting the two with a short length of rubber hose, the motor easily can be primed for starting in cold weather. Heavy grip control spiral sleeves are used. The cable fastening is such that a repair can be made on the road, if necessary, no solder being required.

Instead of the usual sheet steel, a 4-inch Shelby steel tube is used for the muffler body. No cut-out is fitted. The valves are operated by the magneto gears, a practice that appears to be gaining a foothold here.

Gliesman's Store Again Robbed.

For the fourth time this winter, the store of the Tiger Cycles and Aeroplane Co., 782 Eighth avenue, New York City, of which Harry A. Gliesman is proprietor, was broken into with burglarious intent early Sunday morning, March 10. Evidently the marauders were after cash, as none of the extensive stock of merchandise was disturbed, although on previous occasions bicycles and sundries of considerable value were taken. A handful of pennies was the net result in Gliesman's place, the cash register receipts having been cleared at the close of business hours. The store adjoining was not so fortunate, about $30 which was allowed to remain in the locked register was appropriated and the machine converted into a total wreck.

New Minneapolis Agencies.

Situated very advantageously at 816 South Spring street, Los Angeles, Cal., Guy W. Winnor, a prominent dealer of that city, will carry a complete stock of the Minneapolis motorcycles and parts. His territory will include all of Southern California.

The Boyd Motor Co., 27 Stanhope street, Boston, will in the future handle the Minneapolis in and about "The Hub."

Working under a distributor's contract, John P. Erich, 1409 Michigan avenue, has been allotted the sales privileges for the entire Minneapolis line in Chicago.

Greyhound Plant Not "On Block."

Reports that the plant of the Greyhound Motor Co., Buffalo, N. Y., manufacturer of Greyhound motorcycles, is "on the block," are denied vigorously by President Chadeayne. In his refutation of the canard he says: "We are not at the present time contemplating selling the business, but are manufacturing machines, and have the first lot of our 1912 product practically completed and ready for market."

Pope Facilities Increased at Los Angeles.

Los Angeles, March 6.—C. L. Smith, local agent for the Pope motorcycle, has spread out his establishment. More room has been taken on Eighth street, the additional space being devoted to increasing the sales and repair facilities.

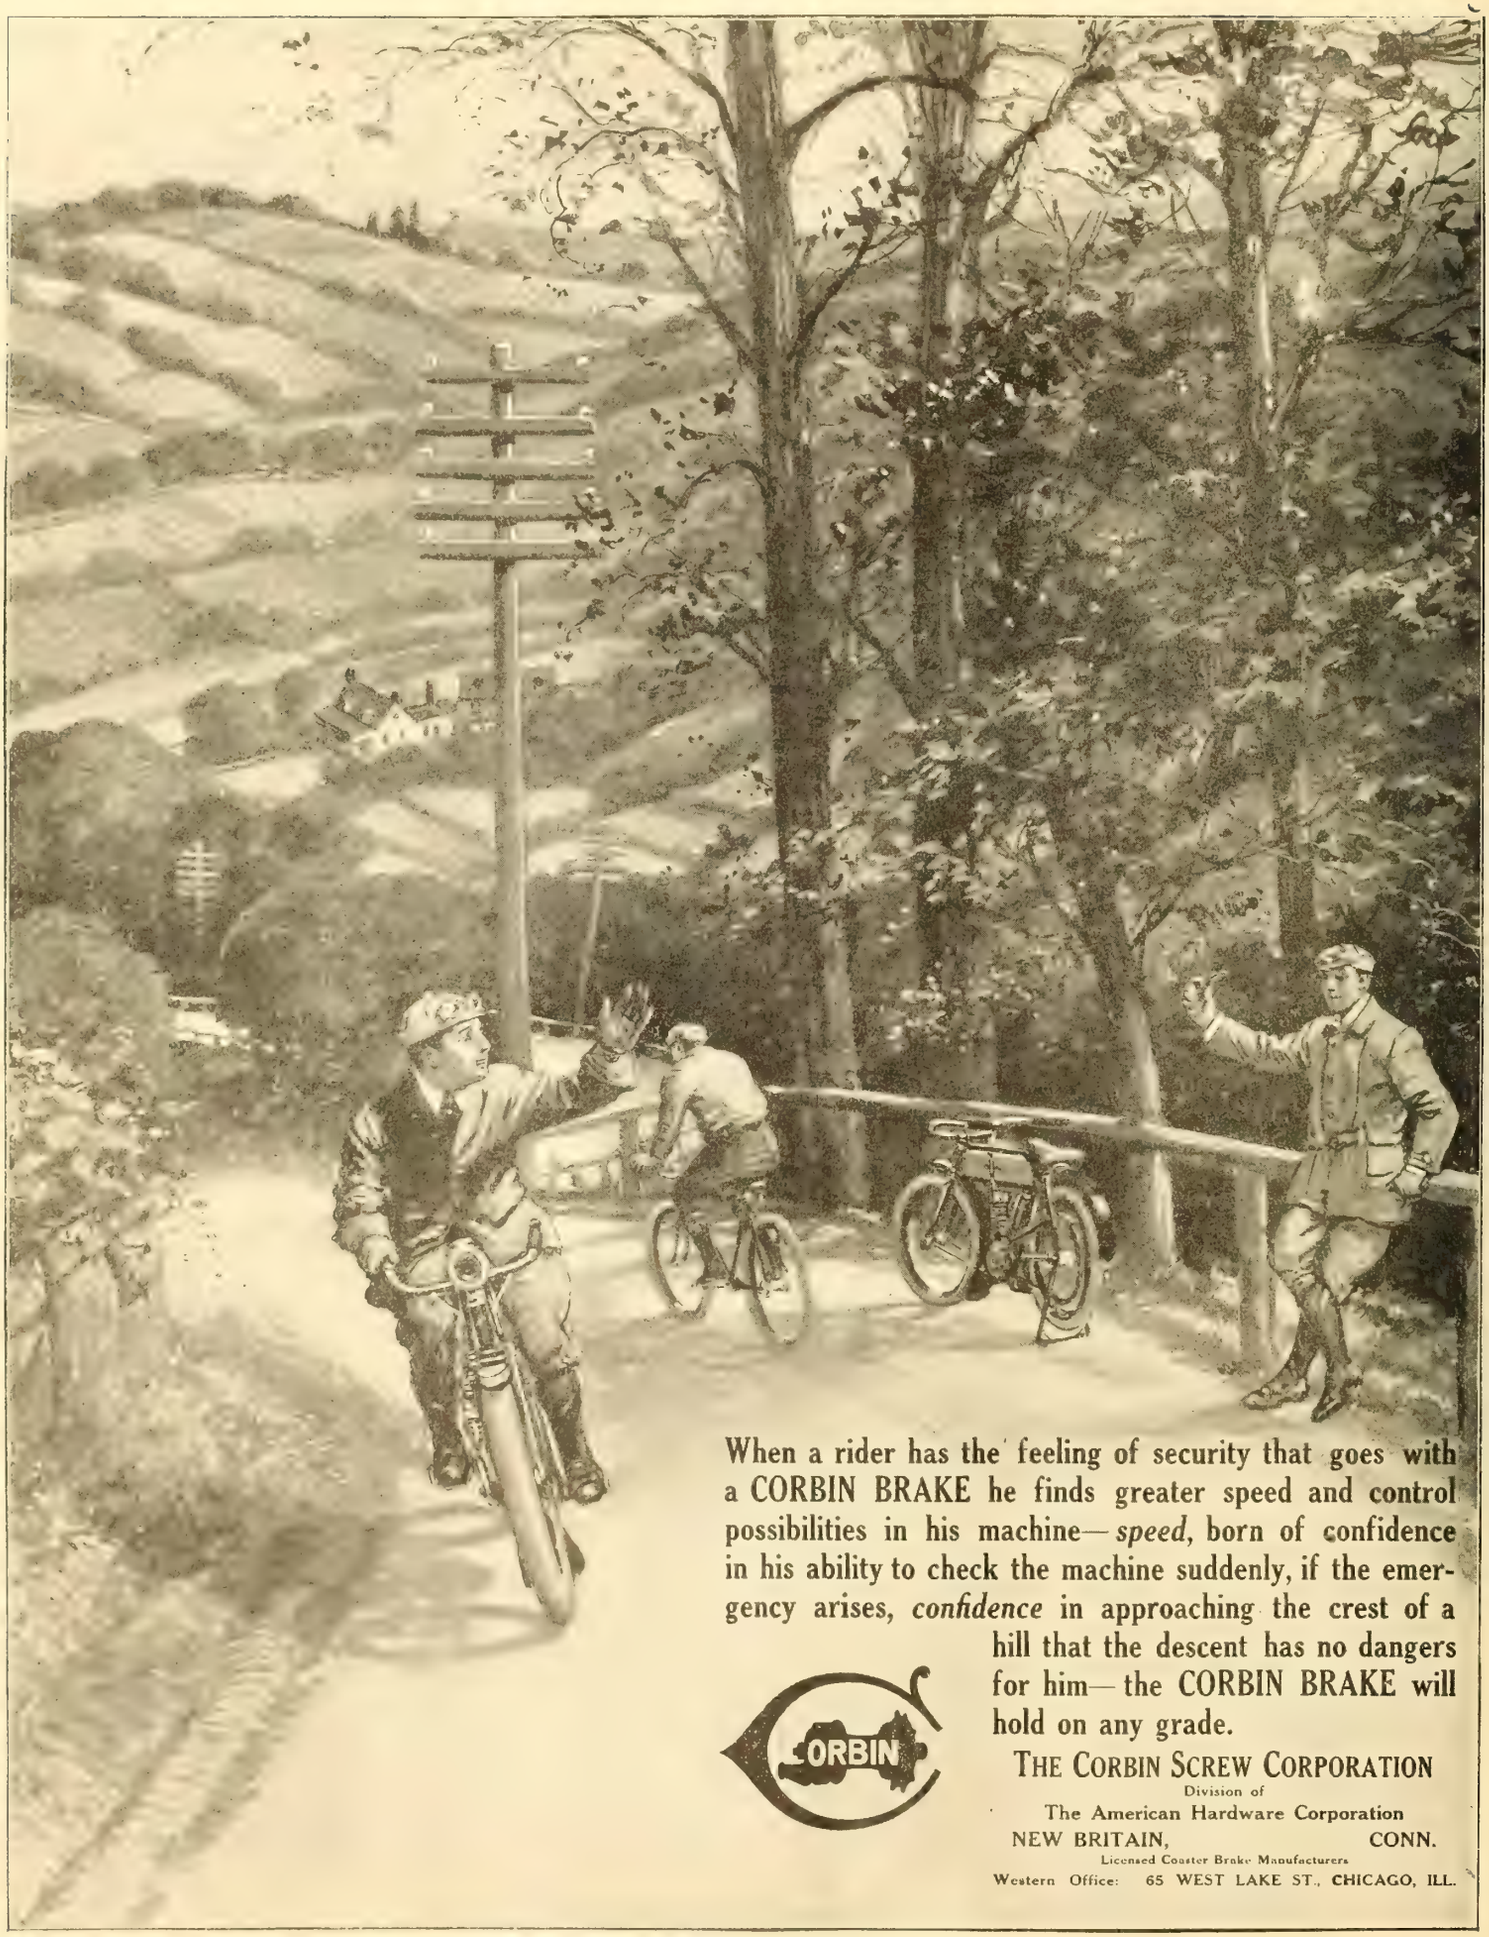
Chains and Clutch on Minneapolis Twin.

Announcement is made by the Minneapolis Motorcycle Co. that its De Luxe 10-horsepower twin wil be offered with clutch and chain drive. It will list at $285.

TARIFF RATES ON CHAINS

Chain Makers Ask Increase Instead of Proposed Reduction by Congress—Manufacturers' Determined Stand.

Indianapolis, March 12—President L. M. Wainwright, of the Diamond Chain and Mfg. Co., of this city, is taking a determined stand against a reduction of the present tariff rates of 45 per cent ad valorem on sprocket chains imported into this country. There is now pending before the House of Representatives at Washington a bill which proposes a reduction in tariff rates, and instead of a reduction Mr. Wainwright asserts that the tariff should be increased to 50 per cent.



He states that a reduction will prove disastrous to American makers of chains, as they will be unable to compete with foreign-made products on the basis of price, while a slight increase in the duty will help to develop and increase an industry employing largely skilled labor.

"So high is the cost of production," says Mr. Wainwright, in his statement to the Congressional Committee in charge of the bill, "that for many years we have not been able to sell our product in either England, France or Germany, as the export records will show. On the other hand, there is a very large quantity of sprocket chain imported from the above-named countries into the United States at a lower price than our cost of production."

The Whitney Mfg. Co., of Hartford, Conn.; the Duckworth Chain & Mfg. Co., of Springfield, Mass.; the Lefever Arms Co., of Syracuse, N. Y., and the Link Belt Co., of Indianapolis, are energetically supporting the Diamond Chain Co.

LATEST TYPE OF FRENCH SIDECAR AS SEEN IN SUBURBS OF PARIS

When a rider has the feeling of security that goes with a CORBIN BRAKE he finds greater speed and control possibilities in his machine—*speed*, born of confidence in his ability to check the machine suddenly, if the emergency arises, *confidence* in approaching the crest of a hill that the descent has no dangers for him—the CORBIN BRAKE will hold on any grade.

NEW YORK, MARCH 16, 1912.

Advent of the "Cyclecar."

In Great Britain there has developed a hybrid type of vehicle variously known as the monocar and duocar. It is a four wheel machine, with bathtub body, and passengers ride tandem in bucket seats. Motorcycle construction is used as far as possible and the engines range from 3 to 10 horsepower. The monocar is a single passenger vehicle, while the duocar accommodates two persons. By no stretch of imagination can these machines be designated other than automobiles.

Heretofore there has been no recognized classification for these vehicles, but they have competed in automobile and motorcycle contests in separate classes. Their ultimate fate in the contest realm was dubious, as neither the Royal Automobile Club or the Auto-Cycle Union was willing to take them under its wing. However, agitation on the part of the monocarists for recognition resulted in a conference between the R. A. C. and A.-C. U., the outcome of which was that the latter will take control of monocars and duocars and supervise their participation in contests. They hereafter will be known as cyclecars.

This action seems highly ludicrous from this distance, for it is exceedingly difficult to conceive how these machines can be classed as other than light automobiles. They are built on automobile lines throughout, they are four wheel vehicles, and under the automobile laws of Great Britain are classed as motor cars. It is possible that the R. A. C., which is composed of the blue bloods of Britain, and is immensely wealthy, does not consider the monocarists desirable socially and financially and are desirous of foisting them on the motorcyclists. On the other hand they are not motorcyclists in any sense of the term, and their machines are more expensive and entirely different types of vehicle.

Their place is with the automobilists unquestionably. If these vehicles ever attain popularity in this country, and the time arrives when their status must be defined, it is safe to say that they will flock with the automobilists as they should. The F. A. M. could not with dignity assume supervision of a vehicle which is nothing short of a light automobile.

Apropos of the Canadian Situation.

Despite the good offices of the Federation of American Motorcyclists in inviting its Canadian brethren to take membership within its fold, a movement which at one time looked as though it would meet with at least temporary success, we are advised through our Toronto correspondent in our news columns, that four of the largest clubs in the Dominion, at Toronto, Hamilton, London and Winnipeg, have decided to organize an association for the control of the sport on their side of the border.

From the above it would appear that the recent conference of the Canadian representatives with the F. A. M. officials at the time of the New York show had failed to produce a result as hoped for, and one of the chief bones of contention is said to have been the per capita tax that would have to be paid into the F. A. M. treasury. Last fall an official of the F. A. M. visited Canada for the purpose of inducing motorcyclists to organize an association of their own, but at that time the Canadians were disposed to join the F. A. M.

This sudden change of heart on the part of our Canadian brethren, is probably the natural result of a desire to conduct their own affairs. The F. A. M. is only interested to the extent of seeing a friendly organization developed that will co-operate with it in keeping the sport clean and working with it in harmony on other questions of vital interest to motorcycling in general.

Road Maps for F. A. M. Members.

President G. H. Hamilton and J. Leo Sauer, chairman of the legislative committee of the F. A. M., are conducting negotiations with the Touring Bureau of the American Automobile Association, with the object of securing for F. A. M. members special rates for the exceptionally fine series of road and route maps the A. A. A. has compiled and is adding to daily.

These maps embrace the latest and best information, and are prepared under the personal supervision of Manager Robert Bruce of the Touring Bureau, who is, without question, the best posted specialist on routes and highways in the country.

The F. A. M. will do a valuable service to its members if arrangements can be successfully concluded whereby this map service may be obtained.

Black Sheep Who Are in the Fold.

Here are two types of motorcycle dealers who should be in jail: One makes a practice of advertising "slightly used 1912 models" dirt cheap, and baiting green purchasers. The machines usually turn out to be five or six years old, and the buyer pays a mighty stiff price for his supposed "1912 model." The other villian is foxier. He recently received a 1912 machine which had been used but a short time and needed new bearings, the current ones having seized. He put in 1911 bearings, fitting them in a slipshod manner, and charging for them at the 1912 list prices. These are the sort of scamps who poison the unfortunates who fall into their clutches against motorcycles, and give their victims the impression that all motorcycle dealers are crooks.

Advantages of an Advanced Spark.

Many motorcycle operators do not know how to manipulate the spark control to secure the best results. To force a motor to work continuously with a retarded spark will cause it to overheat very quickly. A motor always should be run with the spark advanced as much as possible.

August 11, New York City—New England Wheelmen second annual bicycle marathon, Floral Park, L. I., open. Rain date, August 18.

August 25-28-September 1, Newark, N. J.—World's Bicycle Championships, Newark Velodrome.

September 8, New York City—100-mile record run; start and finish, Floral Park, L. I.; Eastern Division Century Road Club. Rain date, September 15.

September 22, New York City—Century Road Club of America, New York State Division, annual individual handicap 100 miles record run, start and finish, Floral Park, L. I. Rain date, September 29.

NEW MOTORDOME BUILDING CO.

Will Build Philadelphia and Cleveland Tracks—Has Facilities for Rapid and Satisfactory Construction.

Organized for the purposes of promoting, building and operating motordromes in various cities throughout the country, with offices at 540 West 21st street, New York City, and with a staff and equipment capable of building, if the occasion arises, 10 tracks simultaneously, the Motordrome Company of America states that it now has in course of construction the tracks at Cleveland and Philadelphia, a quarter-mile and third-mile, respectively.

The contracts call for a guarantee of sustaining a speed of over 100 miles per hour; this the builders assure they will do. Delivery of the Cleveland plant, finished, is specified for May 10, with an opening date on May 15. The Philadelphia bowl, on which work has commenced, will be delivered to the management in 21 working days.

Constructive ability of no small degree seems apparent in the personnel of the incorporators, which includes Arthur Jarvis and J. B. Ritchey, of the Coaster Construction Company, of Chicago, and George I. Kreamer, of Los Angeles, the latter being the moving spirit in the motordrome designing and promoting.

In addition to the two tracks mentioned, the company announces that several others are in contemplation in various cities where motorcycle clubs have become interested.

Two innovations of note are being introduced in the work now in progress. One obtains in ascertaining the degree of banking necessary for a given speed. This is done mathematically and not by rule of experiment, as has been the practice largely heretofore, and the requirements are guaranteed; another decided improvement lies in the approach to the track proper from the running board. Instead of the sharp corner in this angle where the track rises abruptly from the running board, the new track will have a gradually graded and curved approach or fillet extending entirely around the track. This fillet is so shaped that as the speed of the machine increases, the rider mounts automatically and without jar or noticable effort to the main floor of the track. This feature will appeal strongly to the beginner and no doubt will be conducive to a greatly enlarged crop of novices, as it eliminates one difficult feat.

Glasser Leaves R-S for Other Fields.

W. B. Glasser, assistant sales manager of the Reading Standard Co., Reading, Pa., has resigned. He will migrate to Denver, where other interests require his attention, but he hopes eventually to re-enter the motorcycle industry.

LATEST NEWS FROM "ACROSS THE POND"

English Riders Capture All Events at French Hill Climb — Makers' Association Refuses to Support Tourist Trophy Races — "Cyclecar" Competition Now Passes to Control of A. C. U.

London, March 1.—It was a spirited contest that the Auto Cycle Club of France promoted near Paris February 25. The event was a hill climb and a party of English motorcycle riders made the trip to participate in the different events. It is pleasing for an Englishman to record that his countrymen swept the board and won every class for which they entered. In fact, the Frenchmen were not even allowed to get a third in one of the classes. O. C. Godfrey rode a 3½ horsepower Indian in Class 3 and made the fastest time of the day, :44⅘, but a protest was lodged against him for using open ports, and he was disqualified. The summaries follow:

Class 1 (255 cc.)—Won by H. Hewey (Lewis two-stroke), time 1:05⅖; second, Brunet (Griffin), time, 2:02.

Class 2 (300 cc. single, 350 cc. twins)—Won by W. W. Douglas (Douglas), time, :56⅕; second, Rex Mundy (Singer), time, 1:04⅖; third, M. Grandpere (N. S. U.), time, 1:12⅘.

Class 3 (500 cc. singles, 650 cc. twins)—Won by Vernon Taylor (Rudge), time, :47⅕; second, Harry Reed (Dot), time, :52; A. P. Maurice(Premier), time, :52.

Class 4 (amateurs on formula)—Won by Vernon Taylor (Rudge); second, A. P. Maurice (Premier); third, De Trevals (Alcyon).

100 Miles Per Hour Possible.

Although Charlie Collier's 92 miles-per-hour record is up to the present by far the best performance, there are two or three crack riders who have freely expressed the opinion that this coming season would see 100 miles per hour being topped. There is at least one man who is at work on a large twin and he has hopes of touching the century. At any rate, it is only a matter of producing the machine capable of this phenomenal speed, for there are numerous riders who would gladly sit on a machine at this speed on Brooklands for the notoriety and kudos to be derived from accomplishing the feat.

Heavy Entry List for Spring Trial.

The entry list for the One-Day Spring Trial, to be held on March 2, closed on Saturday last, with the very satisfactory total of 70 machines, 19 of which are in the passenger class. Rudge-Whitworth, Triumph, Indian, Rover, Premier, James Bat, P & M, Ariel, Humber, B. S. A., New Hudson and Zenith are among the makes represented in the bicycle class, and the passenger class is mostly made up of 7 horsepower Indians, Clyno, A. J. S. and Chater-Lea machines, with side cars and A. C. Sociables and a Morgan runabout. The route, in order to prevent practising on the two timed hills, is being kept secret, but it is understood the ground covered will include the stiffest gradients and roads to be found between the metropolis and the south coast. Of all the machines entered, the three Triumphs are the only ones fitted with a single gear and free engine. All the others either have two or three speed or infinitely variable gears. This is really remarkable, for two or three years ago it was the exception rather than the rule to find a machine fitted with variable gear.

Chain versus Belt Drive.

Although this is a very hackneyed topic, yet the belt and chain supporters are once more waging war on each other. Years ago discussion as to the respective merits of belts and chains waxed strong, but the appearance of the V-belt inflicted a crushing defeat to the chain supporters for the time being, and only one maker of note continued to use this medium. The appearance of the Indian and its very successful career over here has, however, set others thinking, and three or four prominent firms have marketed chain drives recently which are eminently successful. To the mechanical eye the belt cannot appear but crude in the extreme, not to mention its attendant troubles in the way of slipping and fasteners pulling through. For many seasons many motorcyclists have experienced heart burning from these same troubles and have longed for the efficient chain or shaft drive, of which latter there is also a large body of supporters. However, it appears that the sole difficulty lies in the introduction of a satisfactory slipping medium and this apparently has been found by at least a few English makers.

The Trade and the T. T.

Contrary to general expectation, the manufacturers' union at a recent meeting decided to stand by the original decision of its members to abstain from competing in the Tourist Trophy races. The union does not, however, seem to be voicing the general opinion of the industry, and several firms are arranging with agents to enter their machines, which they are at liberty to do. At any rate "Billy Wells," of the Hendee Mfg. Co., has adopted this course, and O. C. Godfrey, last year winner of the senior, is certain to be in his colors on July 1. Up to the present writing the entries, mostly private owners, have been sent in for the senior race and for the junior. Up to the present writing, the entries number 25 for the senior and 12 for the junior.

The Advent of the "Cyclecar."

This may sound a queer term, but it is nevertheless the title given by the Royal Automobile Club and the Auto-Cycle Union to the type of vehicle variously known as monocars and duocars. As will be seen by referring to the illustration, these are a type of four-wheeled vehicle built to accommodate the passengers tandem fashion, and although by law anything having four wheels is a car, the R. A. C. appears to have refused to recognize them

GODFREY ON INDIAN MAKING BEST TIME AT FRENCH HILL CLIMB

as such. The A. C. U. was, of course, in a like position, as they are certainly not motorcycles and do not come within its category. However, as the result of deliberations between the two bodies it has been agreed to allow the A. C. U. to take control of this type of machine, which will be called "cyclecar," which is a cut between the words motorcycle and motorcar, and in future they will be eligible to enter all competitions held under A. C. U. rules. The engine capacity must not exceed 1,100 cc., and the chassis weight 600 pounds, including tires.

Within the past few months the presence of the monocar and duocar has made itself very much felt, and one of the most popular makes is the Bedelia. As will be seen, the machine has a very rakish appearance and the seats are arranged tandem fashion. The whole machine is built on motorcycle lines, and, in fact, is as near a cut between the two as it is possible to imagine. The frame is of ash, reinforced, sprung by two coil springs at the rear and one central spring in front. All the weight is unusually low, and consequently the machine is much more stable than would appear at first sight. The drive from the air-cooled engine, which may be discerned right forward under the sausage shaped petrol tank, is by chain to a countershaft, and thence by two V-belts to the back axle. Free engine is obtained by sliding the rear wheels forward, thus slackening the belts. An ingenious two-speed gear is embodied in these pulleys. When the belts are tightened beyond a certain degree the pulleys automatically expand when the belt falls on to a lower level in the pulleys. When it is desired to return to the high gear the belt tension is slacked, the engine momentarily races, and the pulley flanges close and are locked in the high gear position. Several models of this machine, which is manufactured in Paris, are marketed, ranging from 3½, 4½ and 5/6 horsepower single-cylinder machines to a 10 horsepower twin-cylinder model. The prices range from 56 guineas to 106 guineas. After personally taking a trip in one of these machines I can testify to their general handiness and comfort. They are also very speedy, the high-powered model being credited with a speed of over 60 miles per hour at Brooklands.

BEDELIA "CYCLECAR," ONE OF THE NEW TYPES OF FRENCH MANUFACTURE

Through Deep Snow on Canada Roads.

Toronto, March 11.—Three Indian riders of this city made a daring trip of 43 miles to Hamilton through the deep snow on Friday, March 8, the party consisting of Herb Kipp, the Canadian representative of the Hendee Mfg. Co., and Jack Booth, both of whom straddled sevens, and Jack Scott, who occupied a side car attached to Kipp's machine. It was found that the side-car attachment exactly fitted the sleigh ruts in the road, but considerable difficulty was encountered by the high snow in the centre, it being found necessary to remove the gas tank from under the "sociable" in order to give more clearance. Booth, riding alone, suffered a number of spills, but the machine came through unscathed on account of the soft snow. At the end of the journey each machine carried about 25 pounds of ice, but no mechanical trouble was experienced. After paying a short visit to Nelson Chahbers, the recently established Indian agent at Hamilton, the party undertook the return journey, covering the distance in exactly two hours.

Englewood Club's First Run of Season.

Chicago, March 10.—Starting from their headquarters at 348 West 55th street, the Englewood Motorcycle Club will open the season on St. Patrick's Day, March 17, with a club run to Crown Point, Ind., and return. Throughout the winter many social functions, such as dances, "stags" and smokers, have been held, giving pleasure to the members.

INTEREST IN WINDOW DISPLAY

Letters of Inquiry Show That Dealers Are Alive to the Possibilities of Increasing Their Business.

Competition is the life of trade and, judging from the many inquiries already sent in, the Window Display Competition now being promoted by the Bicycling World and Motorcycle Review, bids fair to be a lively and interesting contest up to and including the closing date, August 1, 1912. A contest of this kind cannot but help to inspire men to resort to even greater window attractions as a productive medium for advertising. The rules governing the competition are given in full in the paragraphs that follow:

1. Each photograph must be plainly marked on the back with the name and address of the dealer sending same, together with the date on which the picture was taken. Competitors may submit as many views as desired; no restrictions on numbers.

2. All photographs become the property of the Bicycling World Company, and must not be published in any other paper until after announcement of prize winners is made. Such premature publication of the photographs will bar the offending competitor from any rights to prize moneys.

3. Prize winners to be announced only in The Bicycling World and Motorcycle Review.

4. Photographs may show either motorcycles or bicycles, or both.

5. Publication of photographs will be made as they come into this office—or as soon thereafter as is posible.

6. Prizes will be awarded by a committee of men competent to judge in such matters, and who are not in any way associated in this field of business. Their names will be announced when prizes are awarded—not before.

7. Prizes for the competition will be awarded as follows:

First, $25.00 in gold.
Second, $15.00 in gold.
Third, $10.00 in gold.
Fourth, $5.00 in gold.
Next Five, 2 years' subscription to The Bicycling World and Motorcycle Review.
Next Ten, 1 year's subscription to The Bicycling World and Motorcycle Review.

8. Competition closes August 1, 1912.

A Very Light Replacement Record.

W. E. Strong, Owego, N. Y., agent for Harley-Davidson motorcycles, is proud of the maintenance record made by his machines last year. On 12 machines the total parts replacement was less than $5. Reckless riding on the part of the owner brought the upkeep on another machine considerably higher.

Latest F.A.M and Club News.

ESTABROOK'S WEEKLY BULLETIN

Work Progressing Satisfactorily in Many Parts of the Country—Repair Shop List Ready by April 15.

Bangor, Maine, March 11.—During the week that has just passed two new clubs were added to the F. A. M. membership list, as follows:

No. 229—Temple (Texas) Motorcycle Club, C. J. Mitchell, secretary; 20 members.

No. 230—Middleboro (Mass.) Motorcycle Club, L. W. Bryant, secretary, 64 Forest street; 18 members.

Satisfactory promotion work is being done by the following: H. L. Jennison, Farnsworth, Kan.; Chas. W. Von Parmelee, 408½ Breckenridge street, Helena, Mont.; W. P. Smallwood, Culebra, Canal Zone; L. A. Wetmore, 514 Fairchild avenue, Kent, Ohio.

Clubs having under consideration affiliation with the F. A. M. are announced as follows: Motorcycle Touring Club of Maryland, 3 East German street, Baltimore; Washington (D. C.) Motorcycle Club, C. G. Billard, secretary, 2445 18th street, N. W.; Black Hills Motorcycle Club, Philip Schoenberger, secretary, Deadwood, S. D.; Ithaca (N. Y.) Motorcycle Club, Levi C. Morris, secretary.

Repair shops added to the registered list during last week consisted of the following:

Girard Cycle Co., 140 North 14th street, Philadelphia; the Motorcycle Shop, 124 Pearl street, Trenton, N. J.; Piniare Bicycle Co., 917 East Douglass street, Wichita, Kan.; the Motoraid, 11 Jay street, Sacramento, Cal.; the Motor Shop, Seventh and Main streets, Grand Junction, Col.; Hyatt W. Norton, East Bloomfield, N. J.; Hall Garage, Fort Collins, Col.; Charles Z. Clements, 6004 Houston street, E. E., Pittsburgh, Pa.

Secretary Gibson announces that he expects to have the addresses of all registered shops corrected by March 30, and to begin mailing the printed list on April 15.

Chairman Thornley Returns Home.

New York, March 14.—Chairman Thornley, of the F. A. M. Competition Committee, returned this week from a three weeks' vacation spent at Jamaica, West Indies, and Atlantic City. He came back feeling quite rested and fit for the long and strenuous season before him.

Two checks, aggregating $1,000, have been deposited with the chairman of the F. A. M. Competition Committee by track promoters as first payments on franchises. The Point Breeze Motordrome Association, Philadelphia, put up $750, and the Eastern Racing Association, which will operate in Newark, N. J., posted $250. This money, together with all other franchise receipts, will go to the Legal Action Committee of the F. A. M., when contracts between the organization and promoters are consummated.

Frank Hart, the amateur champion, is getting about on crutches. His injured leg is knitting nicely and Hart very determinedly states that he will race this season.

Walter Goerke, another of the speed kings, also suffering from a fractured leg, is out again on crutches. He expects to undergo another operation shortly.

Cleveland Wants F. A. M. Assembly.

Guaranteeing to provide a board track as an inducement, the Cleveland (O.) Motorcycle Club is after the F. A. M. meet this year. That prominent business men of the city are in earnest in their desire to obtain the convention there is little doubt, as there was present at the above meeting a manager of one of the leading hotels, who offered the use of the committee and assembly rooms, gratis, if Cleveland is selected. He, together with Manager Bramley, of Luna Park, also volunteered to canvass the business men of the city, with the end in view of obtaining a guaranteed entertainment fund of $5,000. Application has been filed with the chairman of the competition committee. This makes three cities which want the meet, Columbus and Chicago also being active candidates.

Members May Soon Obtain Maps.

Negotiations are in progress between the F. A. M. and the American Automobile Association, with a view to having the latter supply the former with its maps for the use of motorcycle tourists. Robert Bruce, manager of the Touring Bureau of the A. A. A., reports many requests for maps from motorcyclists.

CANADIAN FEDERATION BORN

New Governing Body Determined Upon by Four Leading Clubs—Toronto Leads the Movement.

Toronto, March 11.—A Canadian motorcyclists' association is an actuality. After negotiating for months for the apparent purpose of arranging a working agreement with the Federation of American Motorcyclists, four of the leading clubs of the Dominion have come out openly with the announcement that they have entered into a "family compact" entirely independent of the States' governing body. The four leaders in the movement include the clubs at Winnipeg, London, Hamilton and Toronto, all of whom had previously acknowledged a desire for immediate connection with the F. A. M.

It appears that the Canadian clubs have double-crossed the American officials, inasmuch as the Dominion association seems to be in a perfected state of organization. Judging by appearances, the movement to form a Canadian body began several months ago—simultaneously with the formulation of plans to become a part of the F. A. M. The organizers, in several instances, were a party to the scheme to enter into an agreement with the F. A. M., but carried on the work of the development of the Canadian association secretly. Certain officers of the Toronto Motorcycle Club were the prime instigators of the movement to prevent the invasion of the F. A. M., causing two other clubs, at least, to call off negotiations with the American body. It is said that Winnipeg has already paid its dues to the new organization in the form of a lump sum, contributed for the purpose of completing details.

Speaking to the representative of the "Motorcycle Review" at Toronto, Secretary Tom Anderson,. of the Toronto Motorcycle Club, said: "You may as well know that we have formed a Canadian Motorcyclists' Association. All our stationery has already been printed. We expect to make an official announcement of the formation of the association in a short while. I have just returned from Hamilton, Ont., where I stopped the club there from further negotiations with the F. A. M."

The original intention was, it is said, to affiliate with the F. A. M. and continue in that body until such time as the Canadian clubs felt strong enough to go the whole distance alone. The latter saw, however, how rapidly the game was spreading, and decided to make the move immediately. The question of the payment of a per capita tax into the treasury of the F. A. M. also swayed the minds of the local enthusiasts and was a stumbling block in the scheme for F. A. M. affiliation.

The organization meeting of the new association will probably be held in the course of a few weeks.

New Uniforms for Rhode Islanders.

Providence, March 11.—At the regular monthly meeting of the Providence Motorcycle Club, held on March 8, a full attendance gave evidence that the club will be very much alive for the activities of the season. In making their runs this year, clad in the recently adopted uniform suit of olive fustian cloth, Norfolk style jacket and breeches, the club will present a most attractive appearance.

The first run of the club for the year was a trip to Summit, R. I., yesterday, through Washington Green. Several 1912 models of various makes were among the mounts ridden. The owners of the new machines all were in high feather and the resultant "kidding" alled to the zest of the trip.

Cincinnatians Enjoy a Club Luncheon.

Cincinnati, Ohio, March 11.—Just before the Queen City Motorcycle Club sat down for a luncheon at the Cincinnati Y. M. C. A. Building a few days since, the photographer's camera was ready, and the picture shown on this page is the result. The number of members present was 32, including all the officers of the club, who are: President, M. Fisher; vice-president, E. Buerger; secretary, Clarence Rossiter; treasurer, Walker S. Brown.

SYRACUSE MOTORCYCLE CLUB HAS SHOWN TASTE IN ITS CLUB FURNISHINGS

New Club Rooms for Syracusans.

Syracuse, N. Y., March 10.—Centrally located at 410 South Salina street, the main thoroughfare of the city, the new rooms of the Syracuse Motorcycle Club have become a very popular meeting place. As will be seen by the illustration on this page, the rooms are large, well lighted and artistically furnished. The location is practically within a stone's throw of all the dealers—another feature which tends toward their large and increasing popularity.

A cabinet is to be built to hold all the cups and other prizes won by the club's racing men. These have been donated to the club and will make a good showing, as they already number 25 or 30.

For the past year the club has been pursuing a conservative policy and saving its money. The result has been that the new club rooms have been furnished properly without running the organization into debt. Any suggestions other clubs may have to offer as to management will be greatly appreciated by the officials, as they are desirous of knowing the experience of others.

The club seems to be unable to secure a satisfactory track upon which to hold races. The State Fair Grounds course does not answer requirements. It is hoped by next year to build a half-mile dirt track that will answer the purpose.

QUEEN CITY MOTORCYCLE CLUB OF CINCINNATI ENJOYING A LUNCHEON

Hot Membership Campaign at Wichita.

Wichita, Kan., March 11.—For the purpose of bringing the membership of the Wichita Motorcycle Club up to 40, two teams were chosen among the members and a hot contest has ensued, which will last to the first of April. The beaten team has to pay the penalty of serving a banquet to the winning team, at the expense of the club.

Among the recent social happenings within the club was the 115-mile trip from Wichita to Winfield, returning by way of Augusta. This run was pulled off without any mishaps whatever, and was thoroughly enjoyed. On these trips the club treasury is drawn on for all expenses for food and other necessities of like nature.

The club has elected its officers for the year, who are: President, J. J. Branson; vice-president, Wm. Braitsch; secretary, G. E. Woodhull; treasurer, Henry Pinaire. Charles Sefton, Carl Blades and Robert Boggess have been made the directors of the organization. A motion made at one of the recent meetings to affiliate with the F. A. M. was passed unanimously.

BANQUET OF THE OAKLAND (CAL.) MOTORCYCLE CLUB AT KEY ROUTE INN

First Oakland Banquet a Great Success.

Oakland, Cal., March 11.—Social functions may come and go, but the first annual banquet and dance of the Oakland Motorcycle Club, recently held at the Key Route Inn, is one of those events which will long be remembered, especially by those in attendance. After a sumptuous banquet, W. G. Clough, president of the club, acting as toastmaster, called on several of the members for impromptu speeches, and then invited certain of the club's guests to say a few words All of the speakers dwelt on subjects of vital importance to the motorcycle rider and made the program of value as well as decidedly entertaining. Just before the party left the tables a flashlight was taken, which is published above and certainly shows a happy party, with a large representation of the fair sex in attendance at the gathering.

The remainder of the evening was given over to dancing and a royal social time. This affair was indeed a decided success, and much credit is due the officers and committees of the organization, all of whose efforts helped to produce such a pleasing affair.

Detroit Club Life Very Active.

Detroit, Mich., March 11.—As was announced in last week's issue, nearly all agencies and motorcycle concerns in Detroit have joined hands in forming a protective association to be known as the Detroit Motorcycle Dealers' Club. The objects of this club are to conduct race meets and to produce a more general interest in the motorcycle as a sport and as a business. May 20 has been selected as the date on which to hold the first race meet under the supervision of the club. There has also been planned, to take place March 18, a grand opening day for the dealer to display his latest models. With an executive committee to take charge of the club's affairs, and with Joseph Adcock as secretary and J. B. Trossel as treasurer, the success of the organization is assured.

Another motorcycle club has recently come into existence in Detroit—the Detroit Touring Club. This was the good work of 15 east side motorcycle enthusiasts, who are looking forward to some extensive as well as interesting runs now being planned by a committee in charge. The officers of the new club are: President, J. A. Wilkowski; vice-president, George Bachor; secretary, Leo Lybowski; treasurer, Joseph Less; captain, Rudolph Schultz.

Busy Times Planned by Bostonians.

Boston, Mach 11.—At a recent meeting of the Boston Motorcycle Club, the officers elected for the ensuing year were: President, Dr. R. L. Colsen; vice-president, F. W. Richardson; secretary, F. M. Wyman; treasurer, F. L. Durkee; captain, H. F. Smith; first lieutenant, F. M. Doyle; second lieutenant, H. S. Cummings. The two directors at large elected are F. A. Savage and Rollin Abell.

Captain Smith, with the help of his two able lieutenants, is planning out some very interesting tours, one of which will be through the White Mountains, with a visit to Portland, Maine, and to other attractive New England towns. The date of this trip is not yet definitely fixed, but will probably be around the Fourth of July.

To start the ball rolling, on April 19 the club's first run will occur. An invitation is very cordially given by the club to all motorcycle riders in and about Boston, not members, to join them on this ride. Further information may be obtained by writing to the president, Dr. R. L. Colsen, whose address is 673 Washington street.

Readingites Expect a Lively Session.

Reading, Pa., March 11.—One of the most active motorcycle clubs in the country—the Reading Motorcycle Club—is located right in this city. The headquarters, on the third floor of 517 Penn street, is always the scene of activity in the evenings, as many members are always on hand. The club has in prospect many novel features for the coming season that are now in preparation The officers of the club, all of whom are in the club photograph printed on this page, are: President, John Hartman; vice-president, Robert Henchen; recording secretary, Paul D. Eisenhower; financial secretary, Arthur Bruderick; treasurer, Charles Hart.

MEMBERS OF THE READING (PA.) MOTORCYCLE CLUB BEFORE THE CAMERA

Canadians Discuss Membership Eligibility.

Toronto, March 11.—What qualifications render a person eligible for membership in a motorcycle club is the question which took up considerable time at the regular meeting of the Toronto Motorcycle Club on Wednesday evening, March 7, which was attended by 47 riders. A number took the stand that only out and out riders should be admitted, but the result of the deliberation was that mere motorcycle enthusiasts could not be restrained from joining the club.

Preliminary steps were taken for the holding of the first race meet of the season on May 24, which is a holiday in Canada, and the remaining social events on the winter program were canceled to allow the officers to get down to business. A club crest was agreed upon, while the announcement was made that the club's solicitors were concluding the work of the incorporation of the organization into a joint stock company, with provincial charter. Six new members were obligated.

Long Tour Planned by Detroiters.

Detroit, Mich., March 11.—What promises to be one of the most interesting as well as profitable trips of the season is the tour projected by the West Side Motor Club, of this city. Boston will be the objective point, July 4-12 having been chosen as the date. It was decided that the route should be by way of Toledo, Cleveland, Buffalo, Rochester, Albany and then to Boston, the route for the return trip to be decided later.

Consisting of 15 young men living in the western part of the city, the West Side Motor Club has proven itself most progressive. Proceeds from a series of dances given during the winter are to build for them two club houses, one on the shore of Lake St. Claire and the other in the western part of the city. Their first excursion, which is to be an annual event, will be to Bois Blanc Island, June 10, 1912. Here races of all kinds will occur and liberal prizes will be offered.

Bushwick M. C. is Brooklyn's Latest.

Brooklyn, N. Y., March 11.—Showing that the motorcycle riders of Brooklyn see the marked advantages of organization, 20 enthusiasts recently met, and the Bushwick Motorcycle Club, with temporary headquarters at 1507 Bushwick avenue, was the outcome. Officers elected for the present year are: President, Walter Hoff; vice-president, Joseph W. Gildersleeve; secretary and treasurer, John J. Ward; captain, William Burman; lieutenant, John Schumacher.

Any male white person over 18 years of age who is interested in the advancement of motorcycling is eligible to membership in this newly formed club. Meetings are held regularly the first and third Mondays of every month at the club rooms. Applications for membership may be sent to John J. Ward, 1507 Bushwick avenue.

Topekans Gain Use of Club Rooms.

Topeka, Kan., March 11.—By affiliating with the Loyal Order of the Moose, the Topeka Motorcycle Club is given the use of a club room while it is still in its infancy and unable to maintain one itself. The club has a goodly number of enterprising men who have elected as their officers the following men: President, Geo. Rogers; vice-president, Guy Elliott; secretary and treasurer, J. C. McCreery.

A. A. STODDARD, FLORIDA MERKEL AGENT, BALANCING ON PABLO BEACH

Two Days of Endurance Runs for Buffalo.

Buffalo, N. Y., March 11.—At its last meeting the Buffalo Motorcycle Club decided to hold a two-day endurance run of approximately 500 miles. The first and second Sundays in July have been chosen as the dates. The first day's run will be: Starting from Buffalo, via East Aurora, Arcade, Olean, Salamanca, Randolph, Jamestown, Mayville, Westfield, Silver Creek, Angola, to Buffalo, covering about 190 miles. The second day's route will be: Starting from Buffalo, via Batavia, LeRoy, Caledonia, to Rochester; returning, via Churchville, Albion, Medina, Lockport, Lewiston, LaSalle and Tonawanda, to Buffalo, another trip of about 185 miles.

Riders will be divided into two classes, trade and private owners, the latter receiving a handicap of 50 points, thereby enabling them to secure a perfect score with 950 points. Gold, silver and bronze medals will be awarded those scoring the most points; the number and value of prizes will be announced later, as will the amount of entry fee and other particulars.

Committeemen in charge of these runs are: W. G. Schack, president; W. W. Cloudsley, captain; O. H. Peters and Chas. Logan. Howard Ganson will lay out the first day's route and Albert Meyer the route for the second day. The Diamond Rubber Co. will furnish markers for the course. These runs will be open to all motorists in good standing in the F. A. M.

The Buffalo Motorcycle Club is in a flourishing condition. President Schack has struck the right chord, his able and wise administration of the Buffalo Ramblers Bicycle Club in days gone by standing him in good stead in the conduct of the Buffalo Motorcycle Club's affairs.

Still Another Club for Baltimore.

Baltimore, March 11.—Puissant signs of approaching spring are being manifested in this city, for yet another motorcycle club has been formed here to add to the list of those already on the map. The infant is the Motorcycle Touring Club of Maryland, and it has started its life with a good pair of lungs. The organization will affiliate with the F. A. M. and will promote racing, hill climbing and other contests. Regular Saturday afternoon and Sunday runs will be held during the season, while tours will be promoted when the members find it convenient to get away from their work for their vacations.

The officers are: President, William C. Horn; vice-president, David W. Bridges; secretary treasurer, James M. Hepbron; captain, William D. Randall; mechanician Philip Sprecker. Sprecker has been connected with a motorcycle factory for nearly five years and he was obtained for the purpose of being along on the runs and tours so as to patch up any machine which drops by the wayside. The carrying of an official mechanician is somewhat of a novelty here.

DEROSIER HAS A BAD FALL

Collides With Balke's Machine After Latter Fell and Fractures Left Leg and Knee Cap.

Los Angeles, Cal., March 11.—Jacob B. DeRosier, champion motorcyclist, and who holds the record for bones broken in motorcycle race accidents, was the victim of the first serious smash-up on the new Stadium track yesterday afternoon. As a consequence he is in the Crocker street hospital with a fractured left thigh, a fractured left knee cap, a badly bruised body and a severe laceration on the left side of his head

The accident occurred in the last turn of the track in the last event of the day, when DeRosier and Balke were fighting it out, wheel lapped on wheel, for the deciding event of their match race, the first heat of which had been won by the Los Angeles boy, Balke.

As they sped across the tape and the big bell sounded the last lap of the race, less than a foot of space separated the two riders, with Balke holding his wheel as close as possible to the bottom edge of the banked track.

Within a hundred feet after passing the judges' stand Balke ran his motor off the course. As he came down onto the flat the tremendous speed—something like 90 miles an hour—upset him. The motor shot back upon the course on its side and directly in DeRosier's path. DeRosier collided with the fallen machine ahead. His front wheel was wrenched violently to the right and he dashed into the guardrail at the top. Then DeRosier and his motor turned several somersaults down the incline to the bottom.

DeRosier was thrown clear of the motor, but was unconscious when assistance arrived. The accident was the logical climax of the rough riding that had been indulged in by nearly all of the riders during the day's programme. Joe Wolters and Theodore Samuelson, both of whom pulled out of the long distance race of the day because of the seeming disregard on the part of other riders for the rules of the course, explained the accident as due to the strong wind which was blowing. Summaries:

Match race, best two in three, two-mile heats—Won by Charles Balke (Excelsior); second, J. DeRosier (Excelsior). Time, 1:23.

Two miles, professional, Class B—Won by W. E. Samuelson (Indian); second, L. I. Humiston (Indian); third, L. Finkelstein (Indian). Time, 1:28.

Three-mile, professional, Class A—Won by Charles Balke (Excelsior); second, Joe Wolters (Excelsior); third, J. DeRosier, Time, 2:04⅗.

Three miles, professional, Class B—Won by W. E. Samuelson (Indian); second, Hubert Kittle (Merkel); third, John Albright (Indian). Time, 2:08⅗.

Two miles, professional, Class A—Won by Charles Balke (Excelsior); second, Jake DeRosier (Excelsior); third, Joe Wolters (Excelsior). Time, 1:23⅘.

Four miles, professional, Class B—Won by W. E. Samuelson (Indian); second, Hubert Kittle (Merkel); third, John Albright (Indian). Time, 3:02⅖.

Two miles, professional, Class A—Won by J. DeRosier (Excelsior); second, Charles Balke (Excelsior). Time, 1:21⅗.

Six miles, free-for-all, professional—Won by Albert Ward (Indian); second, J. De Rosier (Excelsior); third, Charles Balke (Excelsior). Time, 4:06⅖.

Final heat, match race between DeRosier and Balke not finished. Both fell in last lap.

Prince Sells Interests at Los Angeles.

Los Angeles, March 4.—Jack Prince has sold his interest in the new Stadium track to Peter Young, erstwhile manager of aviators and promoter of flying meets. Young now is sole owner of the property. It appears that Austin McFadden, who was Prince's backer in the venture, and Paul Derkum, manager of the track, had differences which could not be smoothed over. Derkum threatened to quit, which would have been a serious blow to the track. Finally Prince had an opportunity to get out and wisely grasped it. Derkum will continue to manage the track, and general sporting events will be held in the arena, to vary the programs presented.

Prince now is talking of building a quarter mile track at San Diego in the fall. San Diego is down the coast very close to the Mexican line, and has developed fast of recent years. It is planned to run meets there on Wednesday nights, and cart the riders, officials and machines back and forth from Los Angeles in a special train. It listens good, but wait and see.

Roces at Montgomery's Spring Celebration.

Montgomery, Ala., March 10.—Motorcycle races formed part of the varied program at the spring celebration here last week. Local riders starred, and the events were exciting. Rain caused a postponement of some events scheduled. Summary:

Five mile free-for-all—Won by Cassiu (R-S); second, Todd (Indian). Time, 6:20.

Five mile open—Won by Horrel (Indian); second, Todd (Indian); third, Burgess (Thor).

Entry Blanks Soon for Invincibles.

Brooklyn, N. Y., March 13.—At the meeting of the Invincible Motorcycle Club last night the contest committee reported that entry blanks for the spring run, Sunday, May 5, will be ready next week. An elaborate design of medal will be awarded.

LATEST ABOUT BALTIMORE TRACK

Aviator Gill Wants to Take an Interest in the New Speed Bowl—Gus Heinz to Return Home.

Baltimore, March 11.—Howard W. Gill, of this city, who has gathered together a goodly lot of fame as an aviator, now holding the American endurance record for sustained flight, is greatly interested in the proposed motordrome for this city. He is now in Los Angeles, where he has been flying at the board track recently finished by Jack Prince. A night lettergram has just been received from him by Howard A French, in which Gill says he will start for home in ten days, and that he will bring plans of the Los Angeles bowl with him. He will stop off at Chicago and take a good look at the Riverview track and when he reaches here he expects to be able to figure out accurately just what the cost will be. He is ready, he announces, to put up a large share of the money necessary.

Gill is very familiar with motorcycle racing, having raced himself, and he has appeared on all the board tracks in this country. He hands French some good information on the proposition and says that night racing is more spectacular and thrilling than the sport in the day time.

Gus Heinz, of this city, who went out to the coast in January and located at Los Angeles, will return home in a few weeks He has gained a good deal of experience out there and when he returns he will be placed in the charge of the shop of Howard A. French & Co. He will also resume racing in this section, as he is considered a comer and a boy to be feared by even the best of them. The motorcyclists will welcome Heinz back with open arms, as he is quite a favorite among the local contingent.

San Diegans Enjoy Their Weekly Runs.

San Diego, Cal., March 11.—Through the most picturesque section of Southern California the Motorcycle Club of San Diego recently made a 135-mile run, with 40 of its members present. The course was from San Diego to Fallbrook and return, and, with good roads and a beautiful day, the trip was declared by all to be a complete success. Ramona was the objective point of another interesting trip made by the same club within the last few days.

100—Mile Race in Southern California.

Maricopa, Cal., March 10.—For an opening event this year, the West Side Motorcycle Club, on March 17, is going to run a 100-mile road race. Riders from all the leading clubs in California are expected to compete for valuable prizes, as a list has been very carefully selected by the committee in charge.

DATE SET FOR OLYMPIC TEAM ELIMINATION RACE

Saturday, May 25—Rain Date, June 1—Selected Course Over Northern New Jersey Roads, With 10 Mile Finish on New Velodrome—Proprietors Donate Use of Track and Proceeds to Fund.

Another week of big results marks the progress of the Olympic bicycle team campaign; one of the most auspicious of these is the generous offer of Messrs. Mihlon and Chapman, of the Newark Velodrome, of the use of the track for the running of the finish of the elimination race.

Their proposition to the bicycle team committee is, briefly: To give the use of the track and grounds on the day of the elimination race, gratis, the net proceeds to go to the team fund. A suitable approach will be constructed into the arena from the road and from the arena up on the track proper, so that the contestants may ride directly on the track from the road and finish the last ten miles of the trial thereon. All press notices also will be sent out by the Veledrome staff. It is also contemplated to secure the services of a number of the prominent professional riders and other athletes in short-distance events, in order that there will be no tedious waits for the appearance of the finishers, as it will be problematical as to just what time the men will arrive.

The Managers of Try-Out Races.

The date for the elimination race at the full distance of 200 miles has been set for Saturday, May 25. Rain date, June 1.

The New York City try-out race at 150 miles will be held on Sunday, May 5, with May 12 as rain date, thus allowing two weeks' rest before the elimination race.

The committee announces that all qualifants names must be forwarded to it from the various try-outs in the different cities not later than May 20.

All try-outs are under the direct supervision of the National Cycling Association representatives in the respective districts or the specially appointed delegate for the purpose. Those allotted so far are as follows:

St. Louis—O. F. Hassemer, 212 Board of Education Building.

Chicago—H. P. Hansen, 22 West Lake street.

Buffalo—Louis Debo, 280 Pearl street.

Boston—Howard G. Reynolds, care of "The Post," and Fred I. Perreault, 24 Wolcott street, Malden, Mass.

Funds Steadily and Surely Increasing.

The subscription list is growing steadily; among the contributions received this week are several from widely divergent sources.

Another Chicago supply house appears on the list in the contribution of $20 by the Beckley-Ralston Co., which, in addition to being one of the largest jobbers in the Middle West, is an extensive manufacturer of cycle and motor accessories and factory distributor.

Fred I. Perreault, of Malden, Mass., one of the most enthusiastic of the riders, sends in this week the result of his work among his friends on a popular cash-box contribution; it amounts to $32 and is by far the largest collected in this manner.

The Plainfield (N. J.) Cycling Club has also taken up the proposition along these lines, and is working industriously for contributions.

Charles L. Barr, treasurer of the St. Louis Cycling Club, states that the check to cover the club's subscription of $60 is forthcoming on demand.

The New York Division, which consists of the majority of the members of the old Eastern Division of the Century Road Club Association, by Sylvain Segal, chairman pro tem., states that it is the unanimous decision of the club that its subscription be continued on the list and that the supervision of the fund should be with the Bicycling World Co.

ADAM BEYERMAN
One of New York's favorite veteran amateur riders, whose friends are legion

A meeting of the executive committee of the Olympic Committee was held Monday, March 11, at the New York Athletic Club. In the absence of President Robert M. Thompson, Bartow S. Weeks acted as chairman. Mr. Weeks reported for the special committee on transportation that was appointed to take up the matter of chartering the Finland. The following committee was appointed to take charge of the matter of transportation: Bartow S. Weeks, Secretary James E. Sullivan and A. H. Curtis.

A telegram was received from Everett C. Brown, of Chicago, announcing that Ogden Armour had contributed $500 to the fund; the president of the Chicago Athletic Association has also contributed, and the leading colleges and clubs of the West have taken a great interest in the collection of the fund. Mr. Brown promises that in the next few weeks at least $10,000 will go forward to Treasurer Curtiss from Chicago.

President George F. Pawling, of the Middle Atlantic Association, A. A. U., yesterday forwarded a check for $150 to Julian W. Curtiss, treasurer of the American Olympic Committee. Mr. Pawling has started a vigorous campaign in Philadelphia for subscriptions to the Olympic Fund, and it is expected that the committee will receive about $5,000 from athletic enthusiasts of that city.

The next meeting of the committee will be held in Secretary Sullivan's office, 21 Warren street, New York City, Friday afternoon, March 22, at 4 o'clock.

Youngest Candidate in the Field.

How the campaign for funds and the discussion of an Olympic bicycle team is arousing a country wide interest in cycling among all classes is strikingly illustrated again this week in the publication herewith of the photograph of a youthful Chicago aspirant, who apparently is not daunted in the least by the illustrations in these columns of an impressive array of veteran talent. Writing under recent date this ambitious Chicagoan states that he has been riding for four years and often takes century rides, that he is now in training and will compete in the try-out race to be held in that city.

Trouble Over Canada's Olympic Team.

Toronto, March 11—The Canadian Wheelmen's Association was greatly surprised recently when Canadian Olympic Commit-

tee, in charge of the work of selecting an athletic team to represent the Dominion at the Swedish Olympic Festival, refused to endorse the association's selection of riders for the 200-mile grind around Lake Malar. The Olympic Committee intimated that it could not defray the team's expenses, although it is a fact that the government has made a grant of $20,000 toward the general Olympic fund. The incident has tended to reopen hostilities between the bicycling and athletic union factions in this country and the wheelmen are determined that they will not be frozen out.

G. L. MacKay, chairman of the racing board of the C. W. A., speaking to the representative of the "Bicycling World" here, declared that Canada has a great chance in the coming bicycle races. He placed great confidence in the ability of Walter Andrews, the Canadian champion, who rode sixth in the 62-mile race at London in 1908, after taking a bad tumble and riding over 40 miles with a 14-inch gash in his leg. Both Andrews and Gordon McMillan, another of Toronto's cracks, had vanquished all the crack American racers who had appeared at the local track. Other Canadian centers could also provide bicyclists.

22d Regiment Closed Bicycle Race.

J. Gross, Company K, with 100 yards start, was returned the winner in the closed two-mile handicap flat-floor bicycle race at the games of the 22d Regiment Engineers, held Wednesday evening, March 13, at the armory, New York City. Second position was taken by H. Lightfine, Company F, riding from scratch, in a close finish with W. J. Buckingham, Company F, also from the honor mark. Time, 5:11⅘.

K. J. MILLER
A Chicago lad who will enter the lists in the struggle for Olympic fame and glory

NEWARK AWAITS THE SPRING

April Will Witness Reopening of the Velodrome—$1,000 Grand Prize a Feature —Shanley Handicap Opening Card.

To start the season auspiciously at the Newark (N. J.) Velodrome, Manager John Chapman has arranged attractive cards for the opening meet of April 7, and the one that follows on April 14. The leading feature of the opening meet will be the Shanley handicap, at one mile, for professionals. This race has become a Vailsburgh classic and promises to uphold its reputation as a real contest from start to finish as usual. A two-mile open, a two-mile invitation and a 10-mile paced race are also on the professional program for the opening meet, and the amateurs will have for their share of the card a mile novice, a half-mile handicap and a five-mile open.

A star attraction is announced for the rest of the April meetings in the shape of the "Grand Prize of Newark," which consists of a purse of $1,000, divided as follows: $500, $200, $100 to winners of final. To the winner of each heat will be given $10, to the second man in each heat $5, and $5 to the winner of the repechage heat. The semi-final will pay the second man $15

and the third man $10. Heats are to be run April 14, the semi-final April 21 and the final April 28. In this race a special rule has been provided which will permit the referee, at his discretion, in case of accident, to order the race re-run or permit the riders to start in other heats. There will be but three riders in the final.

In addition to the heats which will be run on April 14, there will be a two-mile handicap, a two-mile invitation and a 15-mile motor-paced race for professionals, and the amateurs will ride a mile novice, a one-mile handicap and a three-mile open.

At the opening meet Comes, the French cyclist, who is said to be one of the headiest match race riders in the world, will make his first American appearance. He is one of Chapman's finds during his recent European trip, and it is said that Comes can perform all sorts of tricks on a wheel when jockeying for the lead. It will be interesting to watch him try to force Kramer to go to the front if he proves to be all that is claimed of him. Kramer is something of a general, and if Comes outwits him it will make the fans "sit up and take notice."

With Dupuy and Ellegaard possible contenders at the Velodrome before the season is over, Kramer will have the struggle of his life to retain his championship honors and win the world's title in the August meeting.

There will be a new referee at the Velodrome, succeeding Walter Bardgett, who has taken over the management of the Providence track for the coming season. The new official is Arthur Ross, well known in times gone by as one of the best men Newark has produced behind pace. He is thoroughly conversant with all the details of cycle racing, and has served for several years as a track official at the Velodrome with credit. He should make a very capable referee.

Doings of the Acme Wheelmen.

At the annual election of the Acme Wheelmen the following were chosen as officials for the ensuing term: President, Eugene Suykerbuyck; vice-president, Irving Higgins; secretary, Arthur J. W. Eberhardt; treasurer, Edward O. Spillane; captain, John Schmidt; lieutenants, Hal Kaiser and Bob Ford; handicapper, John De Bruyn.

As announced by the racing committee, the score in points of the 1911 club championships is as follows: Arthur J. W. Eberhardt, 29; Harry Kaiser, 18; Bob Ford, 11; John DeBruyn, 8, and Irving Higgins, 6.

Special trophy winners — Suykerbuyck Trophy, for the fastest unpaced mile at Guttenberg track, standing start: Jack Schmidt; time, 2:25. Spillane Trophy, for the fastest unpaced time for the Jerome avenue course, distance 6 1/10 miles: Harry Kaiser; time, 16 min. (record for the course, 15:43). Higgins Trophy, for the member taking first place in any open race of 10 miles or over: Harry Kaiser, in C. R. C. Association 10-mile handicap at Floral Park, L. I., November 12; also American Olympic Bicycle Race Committee Thanksgiving Day 15-mile race on Pelham Parkway, November 30.

The trophies for 1912 donated so far will be known as follows: Kaiser Trophy—To the member making the fastest unpaced time over a selected 10-mile course. The DeBruyn Trophy—To the member scoring the largest total in open races during the season. The Hutmacher Trophy—To the member first to win a race at the Newark Velodrome.

The annual reports of the secretary and of the treasurer showed the club to be in a very flourishing condition. All of the members are enthusiastic over the club's prospects and have constituted themselves a membership committee, with the avowed intention of placing the organization among the leaders of the metropolis.

Standing are Edward O. Spillane, John DeBruyn, Harry Kaiser, William Bullock, Charles Erwin, Irving Higgins, Harry Lilienthal. Kneeling are Bob Ford and Joseph D. Spillane

Jersey C. R. C. A. Bowlers Win Out.

On Monday evening, March 11, the bowling team of the New York Division, C. R. C. Association, journeyed over to Wake's Hall, Broadway and 46th street, Bayonne, N. J., where they met the Jaeger-Moore combination, representing the East New Jersey Division, in match of best two in three games. The line-up was as follows:

New York Division—A. Kaiser, captain; W. Thompson, H. W. Zarr, H. Baum and G. H. Segal.

East New Jersey Division—H. A. Jaeger, captain; D. A. Moore, H. A. Jaeger, O. L. Moore and C. E. Jaeger.

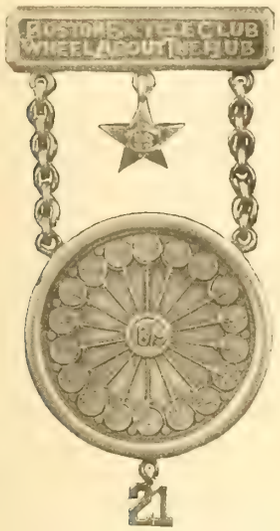
The Jerseyites had the first fabe apparently won when the New York Division anchor, Segal, succeeded in striking in the last frame, and then put two more in the same spot, and so saving the game for New York by 11 pins. Score: New York Division, 619; East New Jersey Division, 608. The other two games, and the match, were won by the Jersey boys by the scores of 693 to 621 and 662 to 614. For New Jersey C. E. Jaeger starred, with an average of 154⅔ and high score of the evening, 165; for New York A. Kaiser averaged 156⅔, his highest score being 161.

Mr. K. MacKenzie took the place of H. A. Jaeger in the last game, and scored 147.

A return match will be played in New York City on Tuesday, March 19, the place to be announced later.

Garden City Wheelmen Elect Officers.

San Jose, Cal., March 11.—At the semi-annual election of the Garden City Wheelmen, held recently, the following officers were chosen: President, L. LaHue; vice-president, F. Lannin; recording secretary, L. King; financial secretary, I. Eckman; captain, P. Castro; directors, C. Baxter, O. Baxter, R. Brown, O. Truisson, O. Inman.



The election and routine business dispensed with, the evening was very enjoyably concluded with a vocal and musical entertainment, followed by a repast.

La Porte, Ind., March 11.—The annual meeting of the La Porte County Motorcycle Club was held March 7.. Officers chosen for the ensuing year are: President, Earle McCurdy; vice-president, Don Miller; secretary, John J. Rauschenbach; treasurer, Edward Thompson; captain, Jay T. Kanney; first lieutenant, Lewis Paul; second lieutenant, Lawrence Wedow.

MEDALS FOR THE "WHEEL ABOUT"

Cyclists Who Have Participated in the Historic Run Are Given Souvenirs by the Boston Bicycle Club.

Bearing the date 1879, the year of the founding of the first bicycle run to be known as the "Wheel About the Hub" of the Boston Bicycle Club, the reproduction herewith is that of the medal given to all participants and is commemorative of their

TYPE OF THE MEDALS GIVEN

attendance on that far-famed three-days jaunt awheel through Boston's historic suburbs.

When first established, it was planned to make of it an annual affair, but it was allowed to lapse until 1884, when Frank W. ("Papa") Weston, now deceased, then consul for America of the Cyclists' Touring Club, revived the "Wheel About" and conducted it that year under the combined auspices of the two organizations.

Another lapse of eight years followed, until the fall of 1892, when was consummated the real revival of the "Wheel About," and it has been continued since as an annual function of the B. B. C. The restart and continuance of the run again was due to the persevering efforts of "Papa" Weston.

Of those who took part in the run of 1884 but three are alive today, Dr. W. G. Kendall, Will R. ("Happy Days") Pitman and Judge Josiah S. Dean.

The medal shown is that owned by "Happy Days" Pitman; on it will be seen the pendant number 21, significant of his having attended every run consecutively. The next highest score is that of Dr. Kendall, who attended every run except that of 1900, his having been on a visit to California on that occasion alone preventing his attendance.

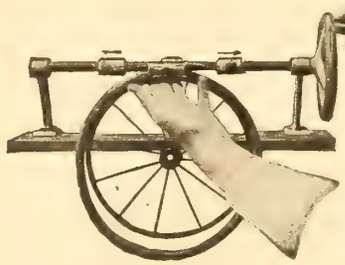
FRESH FLAT-FLOOR FIASCO

Past-Master Pedal-Artists, in Match Race, Become Peeved and Play Prominent Parts in Petty Proceedings.

Giving promise of being one of the most interesting contests that had been arranged during the indoor season just closing, the series of match races between William Van Den Dries, the veteran flat-floor star of the N. Y. A. C., and Eddie Goodwin, I.-A. A. C., who has shown phenomenal development at the game, in the first heat, at one mile, degenerated into one of those squabbles which all too frequently have punctuated the cycling events in metropolitan armories throughout the winter.



The match was scheduled on the program of the Mohawk A. C. games, held Saturday evening, March 9, at the 22d Regiment Armory, New York City, and was for the best two out of three heats—first heat, one mile, scratch; second, one mile, pursuit, and the style of the third, if necessary, to be decided by toss.

At the start of the mile, Goodwin went to the front with Van Den Dries trailing to the third lap, when the latter jumped and essayed to go by on the outside. Goodwin, so it is claimed by many of the observers, swung wide at the turn when he saw Van Den Dries coming and attempted to stall off the rush, and in so doing, it is alleged, rubbed his elbow against his opponent's thigh; Van Den Dries, however, continued, and swung into the pole—as claimed by Goodwin in his subsequent protest—before he had the clearance required by the rules, thus endangering Goodwin for a fall. Van Den Dries finished the remaining distance, approximately six laps, while Goodwin sat up and made his protest, which was sustained by the referee, W. L. Jones, who ordered the heat re-run.

When the heat was called, Van Den Dries refused to ride, and Goodwin rode an exhibition mile in 2:28. Thus was closed another display of doubtful sportsmanship where the reverse is a positive need.

ECLIPSE FACTORY IS RUSHED

Heavy Output Now, But Must be Increased to Meet Demands—Multiple Disc Clutch Patent Acquired.

Elmira, N. Y., March 11.—Trying to supply the demand of some 20 odd motorcycle manufacturers for clutches is proving a severe tax on the Eclipse Machine Co. At present 200 clutches a day are being shipped and some departments are being run all night. The working force is 300 men. It is hoped to raise the daily output to 300 clutches by April 1. It will be a surprise to not a few to learn that the company turns out 52 distinct models of motorcycle clutches.

Plans are now being made to deliver clutches suitable for attachment to 1911 chain drive machines by May 1. So great is the demand for clutches for 1912 machines that the purchasing agent of one factory made a special trip to Elmira last week and camped at the Eclipse plant two days to hurry shipments to his establishment. Several manufacturers also have placed standing orders for their clutches to be shipped by express, and are increasing the number of clutches contracted for earlier in the season.

Inasmuch as a very large proportion of the work done in the Eclipse plant is the production of turned parts, the company naturally has a tremendous assortment of automatic screw machines, and these are being driven to the limit. Bar stock up to 6½ inches is worked. One of the interesting features of the machine room is the flock of power saws of Eclipse make. These differ from the usual tool of this sort in that they revolve the work and present a fresh cutting surface to each stroke of the saw, giving a clean cut.

Indicative of the degree to which manufacturing has been brought as a science is the oil reclaiming apparatus. It is well known that owing to the high speeds at which they work, screw machines and turret lathes require large quantities of oil flowing on the tools steadily to prevent them burning. Naturally, in the course of a day hundreds of gallons of oil are used, and this falls from the tools into a drip pan with the chips of metal. These chips are collected and placed in a large steel pan, and a lid screwed on. The pan then is placed on a spider in a well, and the whole mass revolved at 2,000 revolutions per minute. The centrifugal force skims the oil from the chips in sheets, and after being run for a few minutes when a pan of chips is opened the chips are absolutely free from oil, which is used over again. Hundreds of gallons are reclaimed, and the saving is considerable. The chips are sold as scrap metal. Similar economies are exercised wherever possible.

Exacting standards prevail in the inspection room, one of the most important departments of the plant. Many parts are gauged to one-half thousandth. As is well known, other products of the plant include Eclipse and Morrow brakes and Eclipse free engine pulleys. These are coming through strong; in fact, the demand is rather surprising in its volume. The plant has a capacity of 1,000 brakes a day when the "forced draft" is applied.

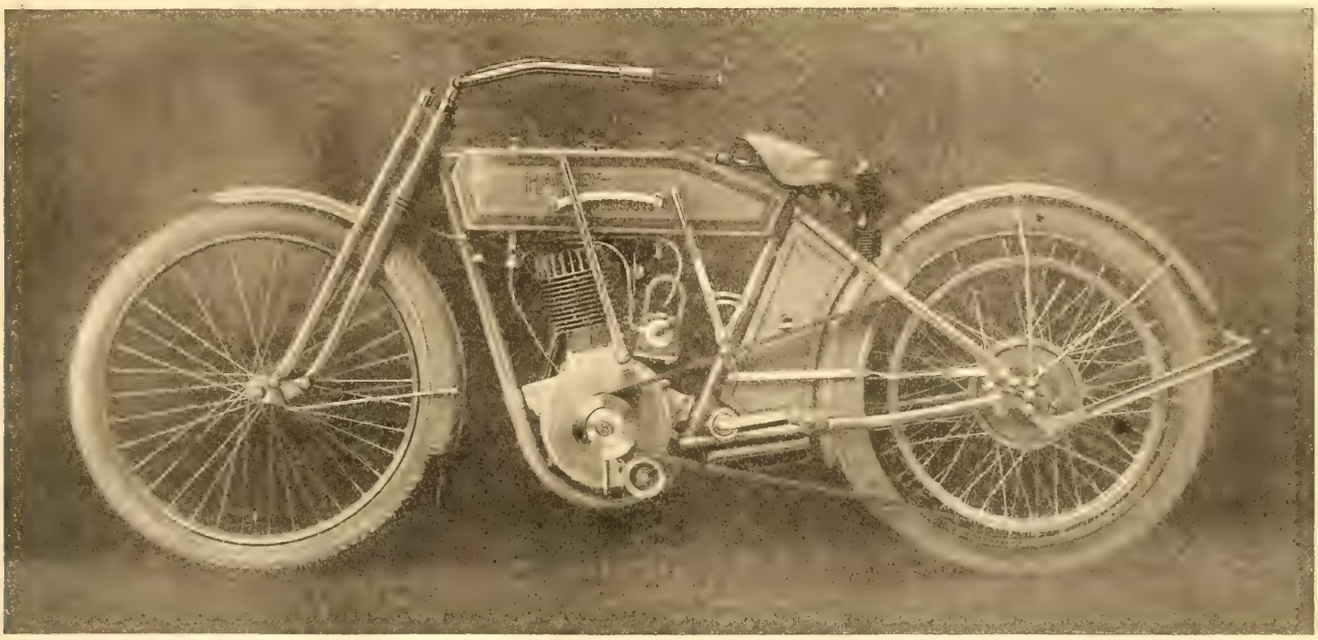
Sales Manager J. C. Ferguson attributes the present gratifying volume of business to the fact that the company anticipated the immense demand for clutches years ago, and prepared for it. The company has experimented with clutches for five years, and began their manufacture in commercial form three and one-half years ago.

Quite recently the company acquired very strong patents covering multiple disc clutches, which cover clutches applied either on the motor shaft, counter shaft or rear hub. This patent is in the nature of a master license, and infringing manufacturers were invited to "step up to the captain's office and make their peace." Having shown a hesitancy or disinclination to do so, the company now is preparing the institution of vigorous suits against offending makers.

Just returned from a western trip which took him as far as Denver, Ferguson expresses himself at agreeably surprised at conditions as he found them. Dealers generally are very optimistic over prospects for the season's business, and report more business now than was done all last season.

Gliesman Again Heads New York Dealers.

New York City, March 12.—At the annual meeting of the Motorcycle Dealers' Association of Greater New York, held to-day, the following officers were elected for the ensuing year: President, H. A. Gliesman; first vice-president, A. H. Patterson; second vice-president, T. J. Sixsmith; secretary, G. Rotholz; treasurer, E. C. Kicherer; directors, Charles Krebs, Geo. P. Jenkins, F. B. Widmayer.



In his annual report, President Gliesman, who succeeded himself in office, referred to the following as important accomplishments of the association during the past year: All eligible motorcycle dealers in Greater New York belong to the association; the membership includes seven out-of-town dealers, and other applications are pending; despite limited membership and heavy expenses, the association is in excellent financial health; the defeating of the proposal to subject motorcycles and handlers thereof to the provisions of the garage law, which would have been a heavy burden and expense on dealers; the expenditure of funds for co-operative advertising at race meets, in the local and trade press and at the six-day race and automobile show; the promoting of a "feast of friendship" to cement closer the social relations of the members; the promoting of a big trade dinner during automobile show week, which was well attended; the introduction of the time payment plan in the sale of motorcycles; the co-operative advertising campaign outlined for the coming season, and the work of the credit committee.

The report was well received and created new enthusiasm among the members over the activities planned by the association the coming year. The committee entrusted with arranging for the annual dinner reported a substantial balance, which will be turned over to the Olympic Fund as the association's contribution, in accordance with an agreement to that effect. Inclement weather affected the attendance.

BIDWELL TROPHY AN ANNUAL

Course Increased to 40 Miles—Prizes Enhanced in Value and Trophy Must Be Won Three Times.

New York, March 12.—Radical changes have been made in the plans for the Bidwell Trophy motorcycle road race, which will be run on the Long Island Motor Parkway, Sunday, April 14. The course has been increased to 40 miles, all but five or six miles being over paved road. The dirt stretch near Bethpage is loose and sandy in spots, and will afford a good test of machines, it is said. The start will be at Great Neck and the finish at Lake Ronkonkoma. The prizes have been changed and will be more expensive. The major prize will be a silver cup, valued at $50, donated by H. F. Bidwell, promoter of the race, and will be known as the Bidwell Trophy. It must be won three times to become the permanent property of the holder, and the winner of each race will have possession of it until the next time it is contested for, when it must be surrendered to the donor. In addition to the cup there will be three medals, gold, silver and bronze, which will be awarded to the first three men who finish. The race will be known as the Bidwell Trophy road race and will be an annual affair, to encourage stock machine racing. It will be a stock race exclusively, and contestants will be depended on to discover alleged stock machines which are special. All machines will be subject to protest, and any found not strictly stock in the sense of embodying attachments or constructions affecting the speed will be disqualified. There will be no entry fee, but contestants will be required to purchase their permits for admission to the course. The parkway now is cemented for about 35 miles. Many local riders already have signified their intention of entering the race. Entry blanks will be out soon, and all information can be obtained from H. F. Bidwell, 2142 Broadway, New York City.

What the 1912 Harley-Davidson Has Accomplished for Our Dealers

DURING the four weeks ending March 9th our dealers sent us orders for more than two and one-half times the number of machines they did for the same period one year ago.

Likewise, we shipped more than two and one-half times as many machines as we shipped in that period last year, all of which proves that our dealers are securing their share of the 1912 business and that we are backing them up with prompt deliveries.

Naturally we are satisfied because our dealers are enjoying what is rightfully theirs—and then some. They are satisfied because we are taking care of their orders. So everybody's happy.

Harley-Davidson Motor Company

184 C Street **Milwaukee, Wisconsin**

AUSTRALIAN TRANS-CONTINENTAL

Francis Birtles Pedals Across the "Island Continent," 3,077 Miles, in 31 Days, 10 Hours and 15 Minutes.

Starting with the avowed intention of pedaling across the "island continent" of Australia, a distance of 3,077 miles, in 30 days, Francis Birtles, artist, journalist, photographer and long-distance cyclist, left Freemantle, West Australia, at 7.45 A. M., on New Year's day and arrived in Sydney at 1 P. M., February 2, having completed a most remarkable journey in 31 days, 10 hours and 15 minutes.

Birtles' successful endeavor was inspired by the breaking of his former record for the ride by some three hours by F. White during last May. The latter's time was 36 days, 13 hours and 3 minutes.

After leaving the West Australia goldfields, Birtles made wonderful time, despite the sandy and heavy nature of the wild, trackless country traversed. At one stage the overlander did not see a human being for three and a half days. Adelaide, 1,930 miles, was reached at 10:30 P. M., January 21, the net time being 20 days 12 hours and 35 minutes, nearly five days better than his own record for this distance. The start for Melbourne was made at 2:30 P. M. of the following day, and the course lay via Wellington, the Coorong Desert, Kingston, Naracoorte, Coleraine and Cressy. Birtles arrived in Melbourne at 3.21 P. M., January 27, having riden the 579 miles from Adelaide in 120 hours, 51 minutes, and a total distance and time from the start, Freemantle, of 2,509 miles in 26 days, 5 hours and 36 minutes, some 5⅓ days better than F. White's record. While riding the section between Kingston and Naracoorte, on the narrow path alongside the railway, Birtles fell and rolled, wheel and all, down a 10-foot embankment. A sprained ankle was the net result of the injuries, but despite that he pushed on and made his destination for the night.

With less than 2 hours' stop at Melbourne the plucky rider got away on the last leg of the trip at 5 P. M., with the hope of making Sydney in time to have averaged 100 miles per day, a wonderful record to have stablished in a 'cross country ride in land in which much of the way is a trackless desert.

Birtles has cycled around the whole continent twice, and crossed it in all directions, covering a total distance of 60,000 miles in about six years, mostly over the wildest and roughest parts of Australia. In 1906 Birtles set out from Perth and twice made futile attempts to penetrate the desert between Leverton and Oodnadatta. On the second occasion he barely escaped with his life. Then he headed his machine southward and went east by way of the coastal route. After touching at Adelaide, Melbourne, Sydney and Brisbane, he rode to Darwin, and then followed the telegraph line practically all the way to Adelaide. He then rode on to Sydney to complete the round trip from that city. On that occasion he covered about 13,000 miles. In 1909 he cycled from Freemantle via Port Augusta and Broken Hill, to Sydney (3,056 miles) in 44 days, 22 hours and 30 minutes. Thirteen months ago he tackled D. Mackay's to Perth to Sydney record (via Adelaide and Melbourne) of 40 days 15 hours, as a finale to a 10,000-mile trip around Australia, and reduced it by three days.

After a rest of a few months Birtles was again awheel—bound for the wilds of Australia—on a cinematographing expedition for a leading French moving picture firm, and obtained a considerable number of interesting films of typical Australian subjects.

Strongly Guaranteed

Practically Perfect

The 1912 New Departure Coaster Brake

HAS IMPROVEMENTS THAT WILL PLEASE YOU

The New Departure policy is to improve. Our salesmen and demonstrators are instructed to carefully look into any complaints of the dealers. Such complaints are thoroughly investigated by a staff of expert mechanics at the factory and in this manner any faults existing are corrected and improvements are constantly being made. The 1912 model shows a greater number of such improvements than any previous model. Tests by ourselves and by dealers and riders justify us in claiming that the present model of New Departure coaster brake is practically perfect and perfectly practical, never failing to operate, strong beyond all requirements and better made, better finished than ever before.

We are not only giving you, Mr. Dealer, a vastly improved coaster brake, but our line of trade helps for 1912 is more extensive and expensive than previously offered. These trade helps are furnished free and we prepay transportation also. If you havn't already ordered an assortment, write in today.

Have you received the New Departure calendar for 1912? Sent only to dealers who write for it on their letter heads.

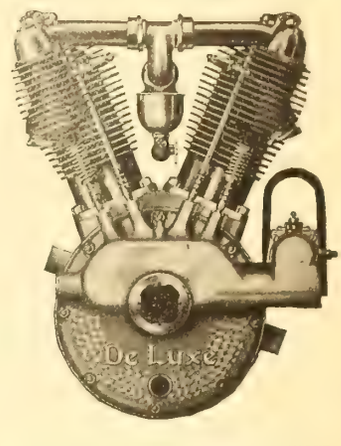
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One piece crank shaft.
One part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Quiet running motor.
Large Ball Bearings mounted in steel lined pockets.



Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

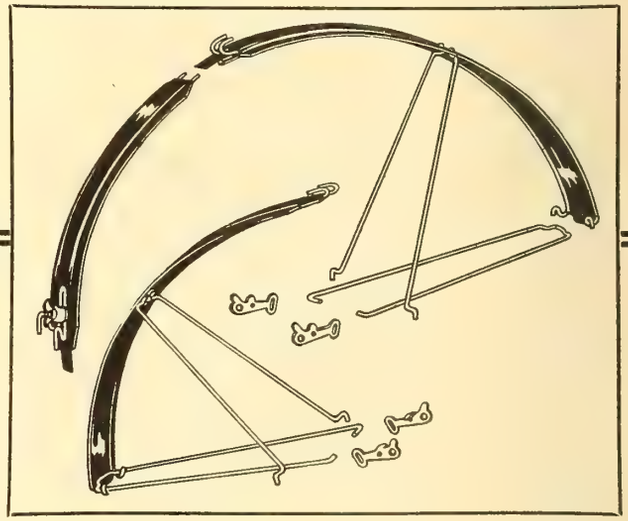
SPLITDORF
PLUGS

"Always There"

Hasha, riding an Indian, SPLITDORF equipped, smashed four world's motorcycle records at Los Angeles on February 12, when he rode one mile in 39⅗ seconds; two miles in 1:19⅘; three miles in 2:01⅗, and four miles in 2:40⅖. It proves SPLITDORF SUPERIORITY when a rider smashed one of the existing world's records—it is a result of a combination of the machine and equipment. Hasha uses SPLITDORF plugs because he knows them to be best. For his work he cannot afford to trifle with a spark plug that is not the best on the market.



The riders who know the difference in quality—the riders who are particular, who want the best, always use SPLITDORF spark plugs and magnetos. They stand for superiority.

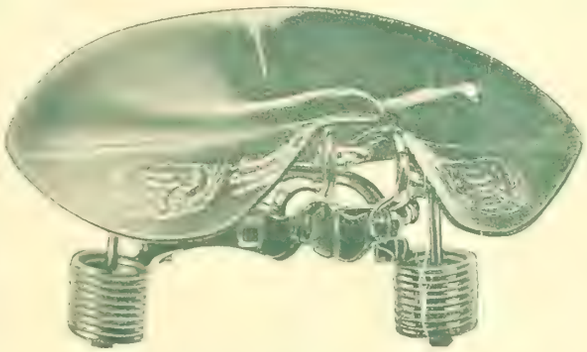
When Imitations Spring Up, Originals Must Be Good

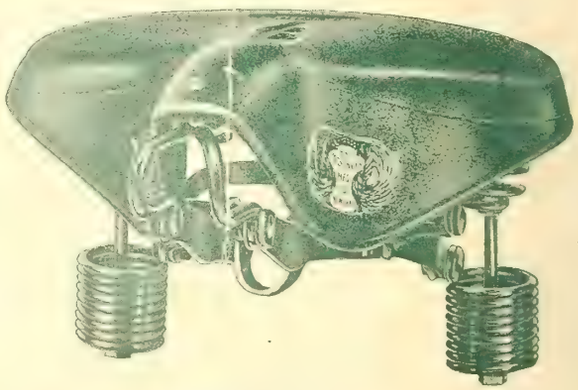


The Mesinger Cavalry

became popular through its MERITS and has steadily gained for eight years. It has been imitated and even the name Cavalry has been used to mislead the buyer. But poor imitations could not exist.

All Mesingers are stamped "MESINGER CAVALRY." They are all hand padded with CURLED HAIR and have many other distinct features, which are absolutely necessary for comfortable riding.

The Narrow Pommel on all Mesingers is another feature, which cannot be equaled. The sharp curve from the pommel to the seat prevents you from sliding back.



All Mesinger Saddles have front springs and the open front spring gives the lowest saddle position, without losing its flexibility. You need the spring in front, as well as in the rear, when you strike the rough roads.

MESINGER CAVALRY No. 4,
With Open Front

They can be imitated, but not equaled,

Be sure to have the name MESINGER on the Cavalry Saddle you buy or specify.

STANDARD No. 4,
Showing Open Front for Low Position

MESINGER MOTORCYCLE SADDLES

ARE NO EXPERIMENT—The Tops and Spring Parts Are Guaranteed for One Year

Proof of Saddle Stability

We make more Motorcycle Saddles than any other manufacturer.

Our Factory does not need a Repair Department.

Our Tops are stretched when formed, not afterward.

The Narrow Pommel, a special feature, cannot be equaled.

You avoid Saddle Troubles by specifying the Mesinger.

Mesinger Cavalry No. 4 cannot be Equaled for Touring.

WINNER OF MANY TOURIST TROPHIES
